Audited Annual Report

As at December 31, 2023

No subscriptions should be made on the basis of the financial report alone. Subscriptions should only be made on the basis of the current Prospectus supplemented by the latest Annual Report and the latest Semi-Annual Report, if published thereafter.

Performance data shown represents past performance and is not a guarantee of future results. More recent performance may be lower or higher. Principal value and returns fluctuate over time (including as a result of currency fluctuations) so that Shares, when redeemed, will be worth more or less than their original cost. Performance shown is net of all Fund expenses, but does not include the effect of sales charges or correspondent bank charges, and assumes reinvestment of distributions. If such charges were included, returns would have been lower. Performance for other Share classes will be more or less depending on differences in fees and sales charges. For periods when certain Share classes were unsubscribed or not yet created (the "inactive Share classes"), performance is imputed using the actual performance of the Fund's active Share class which has been determined by the management company as having the closest characteristics to such inactive Share class and adjusting it based on the difference in TERs and, where applicable, converting the net asset value of the active Share class into the currency of quotation of the inactive Share class. The quoted performance for such inactive Share class is the result of an indicative calculation.

Unless otherwise indicated, all defined terms used herein shall have the same meaning as set out in the Prospectus of the Fund.

Mirova Funds

Report to the Shareholders

Mirova Global Sustainable Equity Fund

Activities Report for the year ended December 31, 2023

1 Year Performance	
Fund I/A (EUR)	14.39 %
MSCI World Net Dividends Reinvested Index	19.60 %

Global equity markets posted a strong 2023 with the developed markets MSCI World Index returning nearly 24% in U.S. dollar terms. However, that strong return masks much of the volatility that equity market investors faced in different periods throughout the year. The year was marked by the continuation, and possibly the peak, of the most aggressive monetary policy tightening cycle in decades as central banks around the world sought to dampen inflation.

As of the end of December 2023, the Mirova Global Sustainable Equity Fund R/A (EUR) has underperformed the global markets (as represented by the MSCI World Index Net Total Return EUR) on a year-to-date basis. The Fund has gained 13.20% underperforming the MSCI World Index Net Total Return EUR, which gained 19.60%.

During the year, we exited positions in SVB Financial, Bright Horizons Family Solutions, Sunrun, Orsted and telecom company Verizon. We initiated positions in Air Liquide, Enphase Energy, WM (formerly Waste Management), AstraZeneca and Palto Alto Networks.

We have maintained our overweight to Europe in our global portfolios as we see more valuation opportunities compared to the U.S. and we continue to have a more balanced portfolio that we believe may do well in many different environments.

Focusing on specific areas of opportunity for 2024, we believe we may see a reversal or at least an easing of near-term headwinds for some sectors. In particular, certain renewable energy, health care and technology companies may be well positioned in 2024.

The Board of Directors

Luxembourg, March 22, 2024

Please see past performance disclosure on cover page.

Mirova Funds

Report to the Shareholders (continued)

Mirova US Sustainable Equity Fund

Activities Report for the year ended December 31, 2023

1 Year Performance	
Fund I/A (USD)	21.91 %
S&P 500 Net Dividends Reinvested Index	26.29 %

We have maintained our overweight to Europe as we see more valuation opportunities compared to the U.S. and we continue to have a more balanced portfolio that we believe may do well in many different environments. On one hand, we have strong exposure to more defensive areas like Utilities and Health Care, food production, and companies within Technology with strong recurring revenue streams that are resilient in difficult economic environments. However, we also have exposure to companies that are well-positioned for a more benign economic situation or a recovery in the economy such as renewable energy and auto and auto component manufacturers that focus on more efficient and electric mobility, for example. In general, we like high-quality companies and, especially when interest rates are high, know that companies with larger amounts of debt on their balance sheets and those that may need to refinance that debt will find it more difficult to generate strong earnings growth. Therefore, we continue to focus the portfolio on high-quality companies with strong balance sheets.

Focusing on specific areas of opportunity for 2024, we believe we may see a reversal or at least an easing of near-term headwinds for some sectors. In particular, certain renewable energy, health care and technology companies may be well positioned in 2024.

Mirova Funds

Report to the Shareholders (continued)

Mirova Europe Sustainable Equity Fund

Activities Report for the year ended December 31, 2023

1 Year Performance	
Fund I/A (EUR)	8.80 %
MSCI Europe Dividend Net Reinvested Index	15.83 %

The conflicts in Ukraine and Palestine, the latent tensions between the US and China, the difficulties of the real estate and the Chinese economy have not reduced the investors optimism: the European equity indices close on a strongly positive quarter with the hope of a decline in inflation combined with the good performance of global economic growth, the solidity of companies results, and the hopes of lower rates expected in 2024. Over the quarter, the positive contributions came mainly from the consumer staples, technology, and materials sectors. Over the past two months, the decline in rates has benefited long-term sectors, such as Real Estate, which has seen the largest increase but which we are not invested in as well as "Green Stocks" and Building & Construction segment, which would benefit from a recovery in the economy. Our absence from the oil sector also contributes positively to performance. The "barrel" is indeed under pressure because of the fear of an oversupply. The slowdown in US and European economies, potentially weak demand in China, weighs on demand while supply is growing at the same time (due to an increase in US crude stocks). Finally, the consumer base sector benefits from our absence from spirits manufacturers and Nestlé. Utilities rebounded, taking advantage of the relaxation observed on interest rates while semiconductors showed strong growth. Also noteworthy is the good performance of financials (Intesa, Aviva, Crédit Agricole, SEB). Among the industrials, Worldline set an unexpected profit warning while Alstom and Siemens Energy also reported significant difficulties in terms of cash flow generation, leading to sharp declines in their share price.

Mirova Funds

Report to the Shareholders (continued)

Mirova Euro Sustainable Equity Fund

Activities Report for the year ended December 31, 2023

1 Year Performance	
Fund I/A (EUR)	15.86 %
MSCI EMU Net Dividends Reinvested Index	18.79 %

For the 12 months ending December 31, 2023, the Mirova Euro Sustainable Equity Fund returned +15.86% at net asset value. The Fund underperformed its benchmark, the MSCI EMU Index NR, which returned 18.79%.

In Europe, the technology sectors (+34.1%) largely outperformed the market boosted by the Nasdaq rally (+53.8%) mainly driven by the Magnificent Seven, which constitute the 7 highest market capitalization in the index: nVidia +239%, Meta +194%, Tesla +102%, Amazon +75%, Alphabet +59%, Microsoft +57%, Apple +48%. The industrial, real estate and financial sectors have also benefited from investors appetite for cyclicals in the last part of the year. The continued easing of Chinese health measures and the opening of the border between Hong Kong and the rest of China have benefited the consumer sectors while semiconductors enjoyed from the enthusiasm around artificial intelligence and the consequent potential demand (BE Semiconductor +141.3%, ASM International +99.4%, STMicroelectronics +37.1%, ASML +35.3%, Infineon +33.0%).

Despite an uncertain macroeconomic and geopolitical context, equity markets achieved a remarkable 2023 performance, driven by expectations of easing monetary policies and the sharp decline in interest rates over the last 2 months of the year. Equity markets closed 2023 with a significant increase (MSCI EMU TR +18.78% and S&P 500 +24.2%, Nasdaq 100 +53.8%).

Mirova Funds

Report to the Shareholders (continued)

Mirova Climate Solutions Equity Fund⁽¹⁾

Activities Report for the year ended December 31, 2023

1 Year Performance	
Fund I/A (EUR)	(10.55) %
MSCI WORLD Net Dividends Reinvested in euro Index	19.60 %

During 2023, the Mirova Climate Solution Equity fund performance was -10.55% compared to a performance of +19.60% for the MSCI World Index (Net, EUR).

In that context, the main detractors to the portfolio performance during the year were Nextera Energy Partners (-54.38%), Enphase (-51.82%) and Wolfspeed (-51.26%).

On the other side, the main contributors to the portfolio performance were Bentley Systems (+36.98%), Saint-Gobain (+51.34%) and Ansys (+45.12%).

We initiated during the year a repositioning of the portfolio to lower the overall sensitivity of the fund to interest rates.

To that end, we reduced our exposure to pure renewable players and equipment providers. We notably sold our positions in Hannon Armstrong, Shoals Technologies and Orsted to favor within the renewable energy thematic integrated utilities and companies exposed to electric network and such as EDP and Quanta Services.

We also initiated positions in climate best practices companies, such as Munich Re and Astrazeneca, as we believe the energy transition will rely on the efforts of large companies across sectors to reduce their environmental impacts.

Geographically, at end of December 2023, majority of the fund's assets are invested in the US, which accounts for about 56% of the portfolio.

We believe the fundamentals of green technology providers should continue to improve during the next years, supported by government regulations to develop local and affordable energy production capacities. The surge in utility bills combined with concerns regarding energy security due to geopolitical tensions and to the multiplication of extreme weather events challenging the reliability of the general grid, should be major drivers to accelerate the development of alternative energy capacities and technologies over the long term.

In the short term, we expect the tightened credit conditions and the uncertain macro environment to continue to weigh on the volumes and prices of green equipment providers.

Mirova Europe Environmental Equity Fund

Activities Report for the year ended December 31, 2023

1 Year Performance	
Fund I/A (EUR)	3.03 %
MSCI Europe Net Dividends Reinvested Index	15.83 %

Most of the contribution came from Financials, Information Technology, Industrials sectors while Utilities and Health Care weighed.

Our top 5 contributors were Saint-Gobain, ASML, Schneider Electric, Infineon, Air Liquide.

Our top 5 detractors were Orsted, Alstom, Meyer Burger, Volitalia, Enphase.

We entered Iberdrola, Aalberts, Siemens, Neoen and Enphase while exiting Halma, Geberit, Michelin, Ecolab, Tomra, Orsted, Dassault Systemes, Sunrun and Forvia. Moreover, we did some add and trim to our existing positions for valuation and portfolio construction reasons.

Mirova Funds

Report to the Shareholders (continued)

Mirova Future of Food Fund

Activities Report for the year ended December 31, 2023

1 Year Performance	
Fund J-S1/A (USD)	2.27 %
MSCI WORLD Net Dividends Reinvested Index	23.79 %

Considering the Mirova Future of Food fund's area of focus around the resilience of the food system, the reduction of environmental pressure and the improvement in nutrition challenges, the portfolio has been unavoidably subject to sectoral overweight positions, especially within the materials, industrials, and consumer staples sectors. Those sectors have been under pressure due to the direct impact of increased interest rates and inflation on energy, transport and food sectors. However, the rebound of cyclical stocks linked to the expected easing interest rates environment has positively affected the fund's performance at the end of the year.

During the year we reduced the ingredients exposure through the disposal of IFF and the reduction of our DSM and Symrise positions. We disposed of lower weight micro-cap with no cash generation for the foreseeable future. While maintaining a high degree of selectivity to the sustainable future of food, we have increased Novozymes, introduced Zoetis which vaccines products and decreasing exposure towards antibiotics are in favor of a less intensive agriculture.

We have also geared our exposure towards water companies, increasing our exposure in Xylem and IDEX.

After a year of destocking and downgrading of the consumer, 2024 should demonstrate a stabilization or slight recovery in volumes.

Transitions for nature capital will remain at the forefront of investments to reduce pressures on biodiversity or climate.

Mirova Funds

Report to the Shareholders (continued)

Mirova Global Climate Ambition Equity Fund⁽¹⁾

Activities Report for the period ended September 13, 2023

Period Performance	
Fund I/A (EUR)	5.77%
MSCI World Net Dividends Reinvested	14.54 %

Market Environment

Equity markets closed 2023 sharply higher (Eurostoxx +18.5%, S&P 500 +25.6%, Nasdaq 100 +54.7%). Investors' pessimism and their positioning at the beginning of the year partly explain this very good performance despite a geopolitical context that has deteriorated throughout the year with the continuation of the war in Ukraine and a new conflict in the Middle East.

Indeed, equity markets have benefited from expectations of central bank rate cuts as inflation decelerates on both sides of the Atlantic and a resilient macro-environment, particularly in US. Over the period, the German 10-year lost -55bps to finish at 2.02% while the US 10-year stabilized at 3.88%. Credit spreads have tightened overall, by around 20bp for euro investment grade, after a turbulent start to the year following the SVB bank failure.

However, monetary policy tightening continued for much of the year. Thus, the Fed raised its rates by +100bps between the beginning of January and mid-July and then maintained them at these levels until the end of December (after +425bps of increase in 2022). At the last meeting in December, however, the Fed indicated that it was considering potential rate cuts. even before inflation reaches +2%, in order to preserve economic activity. As for the ECB, it paused its series of rate hikes in October without however deciding on a future cut (after having raised its key rate from 0% in spring 2022 to 4% in September 2023).

As mentioned above, on the economic front, the United States surprised positively with GDP growth of around 2.5%, driven by very robust household consumption. At the same time, disinflation continued, notably through a fall in energy prices. In the eurozone, economies have slowed down, particularly in Northern Europe, which has been hit by a manufacturing recession.

Relative performance contributions

Both sector allocation and stock picking contributed negatively this year. Overweight positions in utilities, industrials, real estate and healthcare were costly, as were underweight positions in consumer discretionary and techno. On the other hand, underweight positions in energy and materials and underweight positions in consumer staples were profitable.

In terms of stock picking, we note the negative contributions of companies linked to the renewable energies theme (Enphase Energy, Eversource energy, Sunrun, Orsted, Nextera Energy, Vestas Wind), the presence of the financial company SVB in the portfolio (impact of the order of -1% in terms of relative performance) and the absence or underweighting of companies qualified as magnificent 7s, with the exception of Nvidia (Apple, Amazon, Meta, Tesla, Alphabet).

On the other hand, positive contributions were made by companies such as Nvidia (as mentioned above), NEC Corp, Fluence Energy, Oracle, Toyota Motor, Eli Lilly and Adobe.

The Board of Directors

Luxembourg, March 22, 2024

Mirova Funds

Report to the Shareholders (continued)

Mirova Global Green Bond Fund

Activities Report for the year ended December 31, 2023

1 Year Performance	
Fund SI/A (EUR)	7.00 %
Bloomberg MSCI Global Green Bond Index (EUR Hedged)	7.07 %

2023 was expected to be a year for bonds, fueled by rapid inflation deceleration in a relatively robust economic momentum, and consequently by the anticipation of the end of the rate increase cycle.

However, it is only at the very end of the year that this outcome started to materialize and to gain traction: rates declined at the end of 2023, driving them back to levels matching those recorded as at end 2022.

Economic resilience and the hunt for yield benefited the credit markets.

The fund returned 7.42% gross of fees, vs. 7.07% for the benchmark.

Mirova Funds

Report to the Shareholders (continued)

Mirova Euro Green and Sustainable Bond Fund

Activities Report for the year ended December 31, 2023

1 Year Performance	
Fund SI/A (EUR)	8.34 %
Bloomberg Euro Aggregate 500MM Index	7.19 %

The performance of the fund through the Barclays Bloomberg performance attribution was +8.72%

- Allocation was positive due to the long position on corporates and agencies versus the short position on the government bucket as credit outperformed other asset classes.
- Selection was positive.
- Swap and government curves & duration positioning were positive. From mid-January to end of February we had a short duration position and yields increased. In June, we moved to a long duration position versus index and yield went down specially during the last quarter.

Green and Sustainable Bonds represented close to 90% of the nav end of December.

The Board of Directors

Luxembourg, March 22, 2024

Mirova Funds

Report to the Shareholders (continued)

Mirova Euro Green and Sustainable Corporate Bond Fund

Activities Report for the year ended December 31, 2023

1 Year Performance	
Fund SI/A (EUR)	8.06 %
Bloomberg Euro Aggregate Corporate Index	8.19 %

After the violent upheavals triggered by the difficulties at SVB and Crédit Suisse, the markets experienced a brief lull in the second quarter before a return to turbulence in the third, driven by good half-yearly corporate results and generally favorable macro-economic indicators. From the beginning of October, a form of euphoria began. For although the economy is slowing on both sides of the Atlantic, this is happening at a much slower pace than feared, with both employment and consumption holding up well in the US, while disinflation continues throughout the West. This disinflationary growth is due, if not above all, to the rebound in productivity gains in North America, where the industrial base is being rejuvenated. All this is enabling central bankers to prepare the ground for a cut in their key interest rates. The result? A quest for yield benefiting all asset classes.

US ten-year yields first rose by 0.43pp to almost 5% on October 19, before collapsing to end the year at less than 3.88%. German rates followed more or less the same trajectory, falling from 2.84% to 2.02% on December 29. Naturally, the LECPOAS index (European credit versus German rates) initially diverged, reaching 1.65%, before tightening to 1.38%, compared with 1.53% at the end of September. Over the year, the fund generated a net return of +7.39% (R/A (EUR) share), compared with 8.19% for its index.

Our portfolio remains in line with a global warming scenario of 1.5 degrees.

Mirova Funds

Report to the Shareholders (continued)

Mirova Euro High Yield Sustainable Bond Fund

Activities Report for the year ended December 31, 2023

1 Year Performance	
Fund EI/A NPF (EUR)	11.37 %
ICE BofA Merrill Lynch Euro High Yield BB-B Index	12.24 %

Following on from Q4-2022, 2023 was a year dominated by market volatility stemming from i) instability and rising rates against a backdrop of persistent inflation, and ii) the banking mishaps of a handful of US regional players, swiftly followed by the rescue of Credit Suisse. Despite this, with historically zero correlation to sovereign rates, high yields and resilience thanks to healthy margins and the use of these to reduce debt, the fundamentals of high-yield companies have improved significantly. Improved fundamentals, and consequently higher ratings, and dwindling supply against a backdrop of stabilization in various armed conflicts (still limited at the time), were strong positive catalysts for performance in the high yield segment, both in 2023 (>12%) and in Q4-23. In fact, the asset class was last year's top performer in the bond and corporate world.

The R/A unit recorded a net return of 6.29% in Q4-23, compared with 5.74% for its index. Previous (net) performances in Q2-23 and Q3-23 were 1.54% and 1.02% respectively.

Note that the R/A unit was created/launched on March 14, 2023.

The annual performance of the EI/A NPF (EUR) share was 11.37%.

The 100 or so companies in the portfolio generated interest income of 4.2% for a yield of almost 6%, in line with a global warming scenario of 1.5 degrees, thanks to a targeted approach to sectors that are naturally energy-efficient (recycling, water and waste treatment, green mobility, shared and efficient end-to-end construction) or offer alternatives to fossil fuels and/or significantly less energy-intensive solutions based on renewable energies.

Mirova Funds

Report to the Shareholders (continued)

Mirova Euro Short Term Sustainable Bond Fund

Activities Report for the year ended December 31, 2023

1 Year Performance	
Fund SI/A (EUR)	4.47 %
BLOOMBERG Euro Aggregate 1-3 Year Total Return Index	4.02 %

2023 was expected to be a year for bonds, fueled by rapid inflation deceleration in a relatively robust economic momentum, and consequently by the anticipation of the end of the rate increase cycle.

However, it is only at the very end of the year that this outcome started to materialize and to gain traction: rates declined at the end of 2023, driving them back to levels matching those recorded as at end 2022.

Economic resilience and the hunt for yield benefited the credit markets.

The fund returned 4.81% gross of fees, vs. 4.02% for the benchmark.

Mirova Funds

Report to the Shareholders (continued)

Mirova Europe Sustainable Economy Fund

Activities Report for the year ended December 31, 2023

1 Year Performance	
Fund I/A (EUR)	8.22 %
Composite Index: 50% MSCI Europe Net Dividend Reinvested + 50% Bloomberg Euro Aggregate Corporate Index	12.07 %

Net of fees fund performance from 31/12/2022 to 31/12/2023: Mirova Europe Sustainable Economy Fund I/A (EUR): 8.22%, Mirova Europe Sustainable Economy Fund R/A (EUR): 7.43%. Benchmark MSCI EUROPE DNR: 12.07%

Macro Environment

Equity markets closed 2023 sharply higher (Eurostoxx +18.5%, S&P 500 +25.6%, Nasdaq 100 +54.7%). Investors' pessimism and their positioning at the beginning of the year partly explain this very good performance despite a geopolitical context that has deteriorated throughout the year with the continuation of the war in Ukraine and a new conflict in the Middle East.

Indeed, equity markets have benefited from expectations of central bank rate cuts as inflation decelerates on both sides of the Atlantic and a resilient macro-environment, particularly in US. Over the period, the German 10-year lost -55bps to finish at 2.02% while the US 10-year stabilized at 3.88%. Credit spreads have tightened overall, by around 20bp for euro investment grade, after a turbulent start to the year following the SVB bank failure.

However, monetary policy tightening continued for much of the year. Thus, the Fed raised its rates by +100bps between the beginning of January and mid-July and then maintained them at these levels until the end of December (after +425bps of increase in 2022). At the last meeting in December, however, the Fed indicated that it was considering potential rate cuts. even before inflation reaches +2%, in order to preserve economic activity. As for the ECB, it paused its series of rate hikes in October without however deciding on a future cut (after having raised its key rate from 0% in spring 2022 to 4% in September 2023).

As mentioned above, on the economic front, the United States surprised positively with GDP growth of around 2.5%, driven by very robust household consumption. At the same time, disinflation continued, notably through a fall in energy prices. In the eurozone, economies have slowed down, particularly in Northern Europe, which has been hit by a manufacturing recession.

Fund Performance and positioning

The underperformance over 2023 is only due to negative selection effects in the equity sleeve. Other performance drivers (equity/bond allocation, equity sector allocation, credit picking and duration/curve positioning) have positively contributed to the relative return. In term of equity/bond allocation, we overweighted equities relative to bonds over the year (by around 4-5%), with the exception of the summer and September/October months when equities were slightly underweighted (-2%-3%). Important note: in this fund, equity index futures are only used on the sell side to hedge the portfolio in the event of a downturn. They cannot be used on the buy side, to avoid exposure to non ESG-eligible securities in broad indices.

Over the year the equity sleeve underperformed by about -6.5%. The absence of oil stocks, as well as the positive impact of overweight in technology and underexposure to consumer staples, contributed to the outperformance. However, negative contributions came mainly from players in the renewable energies sector (Orsted, Voltalia, Siemens Energy, Acciona Energias, Alfen, Vestas Wind, EDP), companies specializing in ingredients (DSM Firmenich, Croda, Symrise), or specific stocks such as Worldline, Alstom or Vodafone. Conversely, our exposure to the banking/insurance sector (Intesa, Crédit Agricole, Santander, AXA, Aviva...), to technology (STMicro, ASML, Cap Gemini), to stocks exposed to the building insulation theme (Saint Gobain, Kingspan) or to stocks such as RELX or L'Oreal contributed positively.

Audit report

To the Shareholders of
Mirova Funds

Our opinion

In our opinion, the accompanying financial statements give a true and fair view of the financial position of Mirova Funds (the “Fund”) and of each of its sub-funds as at 31 December 2023, and of the results of their operations and changes in their net assets for the year then ended in accordance with Luxembourg legal and regulatory requirements relating to the preparation and presentation of the financial statements.

What we have audited

The Fund’s financial statements comprise:

- the statement of net assets as at 31 December 2023;
- the statement of investments as at 31 December 2023;
- the statement of changes in net assets for the year then ended; and
- the notes to the financial statements, which include a summary of significant accounting policies.

Basis for opinion

We conducted our audit in accordance with the Law of 23 July 2016 on the audit profession (Law of 23 July 2016) and with International Standards on Auditing (ISAs) as adopted for Luxembourg by the “Commission de Surveillance du Secteur Financier” (CSSF). Our responsibilities under the Law of 23 July 2016 and ISAs as adopted for Luxembourg by the CSSF are further described in the “Responsibilities of the “Réviseur d’entreprises agréé” for the audit of the financial statements” section of our report.

We believe that the audit evidence we have obtained is sufficient and appropriate to provide a basis for our opinion.

We are independent of the Fund in accordance with the International Code of Ethics for Professional Accountants, including International Independence Standards, issued by the International Ethics Standards Board for Accountants (IESBA Code) as adopted for Luxembourg by the CSSF together with the ethical requirements that are relevant to our audit of the financial statements. We have fulfilled our other ethical responsibilities under those ethical requirements.

Other information

The Board of Directors of the Fund is responsible for the other information. The other information comprises the information stated in the annual report but does not include the financial statements and our audit report thereon.

Our opinion on the financial statements does not cover the other information and we do not express any form of assurance conclusion thereon.

In connection with our audit of the financial statements, our responsibility is to read the other information identified above and, in doing so, consider whether the other information is materially inconsistent with the financial statements or our knowledge obtained in the audit, or otherwise appears to be materially misstated. If, based on the work we have performed, we conclude that there is a material misstatement of this other information, we are required to report that fact. We have nothing to report in this regard.

Responsibilities of the Board of Directors of the Fund for the financial statements

The Board of Directors of the Fund is responsible for the preparation and fair presentation of the financial statements in accordance with Luxembourg legal and regulatory requirements relating to the preparation and presentation of the financial statements, and for such internal control as the Board of Directors of the Fund determines is necessary to enable the preparation of financial statements that are free from material misstatement, whether due to fraud or error.

In preparing the financial statements, the Board of Directors of the Fund is responsible for assessing the Fund's and each of its sub-funds' ability to continue as a going concern, disclosing, as applicable, matters related to going concern and using the going concern basis of accounting unless the Board of Directors of the Fund either intends to liquidate the Fund or close any of its sub-funds or to cease operations, or has no realistic alternative but to do so.

Responsibilities of the “Réviseur d’entreprises agréé” for the audit of the financial statements

The objectives of our audit are to obtain reasonable assurance about whether the financial statements as a whole are free from material misstatement, whether due to fraud or error, and to issue an audit report that includes our opinion. Reasonable assurance is a high level of assurance, but is not a guarantee that an audit conducted in accordance with the Law of 23 July 2016 and with ISAs as adopted for Luxembourg by the CSSF will always detect a material misstatement when it exists. Misstatements can arise from fraud or error and are considered material if, individually or in the aggregate, they could reasonably be expected to influence the economic decisions of users taken on the basis of these financial statements.

As part of an audit in accordance with the Law of 23 July 2016 and with ISAs as adopted for Luxembourg by the CSSF, we exercise professional judgment and maintain professional scepticism throughout the audit. We also:

- identify and assess the risks of material misstatement of the financial statements, whether due to fraud or error, design and perform audit procedures responsive to those risks, and obtain audit evidence that is sufficient and appropriate to provide a basis for our opinion. The risk of not detecting a material misstatement resulting from fraud is higher than for one resulting from error, as fraud may involve collusion, forgery, intentional omissions, misrepresentations, or the override of internal control;
- obtain an understanding of internal control relevant to the audit in order to design audit procedures that are appropriate in the circumstances, but not for the purpose of expressing an opinion on the effectiveness of the Fund's internal control;
- evaluate the appropriateness of accounting policies used and the reasonableness of accounting estimates and related disclosures made by the Board of Directors of the Fund;

- conclude on the appropriateness of the Board of Directors of the Fund's use of the going concern basis of accounting and, based on the audit evidence obtained, whether a material uncertainty exists related to events or conditions that may cast significant doubt on the Fund's or any of its sub-funds' ability to continue as a going concern. If we conclude that a material uncertainty exists, we are required to draw attention in our audit report to the related disclosures in the financial statements or, if such disclosures are inadequate, to modify our opinion. Our conclusions are based on the audit evidence obtained up to the date of our audit report. However, future events or conditions may cause the Fund or any of its sub-funds to cease to continue as a going concern;
- evaluate the overall presentation, structure and content of the financial statements, including the disclosures, and whether the financial statements represent the underlying transactions and events in a manner that achieves fair presentation.

We communicate with those charged with governance regarding, among other matters, the planned scope and timing of the audit and significant audit findings, including any significant deficiencies in internal control that we identify during our audit.

Mirova Funds

Notes to the Financial Statements

As at December 31, 2023

Note 1 – GENERAL

Mirova Funds (the "SICAV") is a Luxembourg Société Anonyme qualifying as Société d'Investissement à Capital Variable, composed of several separate sub-funds.

The SICAV's investment objective is to provide investors access to a diversified management expertise through a range of several separate sub-funds, each having its own investment objective and policy.

The SICAV was incorporated on 26 August 2009 under the name of "Impact". This name has been changed into "Impact Funds" by an extraordinary general meeting of the SICAV dated 9 September 2009 and further changed into "Mirova Funds" by an extraordinary general meeting of the SICAV dated 24 April 2013.

The SICAV is recorded in the Luxembourg Registre de Commerce et des Sociétés under number B 148004.

The SICAV qualifies as a UCITS under Part I of the Luxembourg law of 17 December 2010, as amended from time to time, relating to undertakings for collective investments.

As of December 31, 2023 shares are offered in fifteen sub-funds (each, a "Fund"):

- Mirova Global Sustainable Equity Fund,
- Mirova US Sustainable Equity Fund,
- Mirova Europe Sustainable Equity Fund,
- Mirova Euro Sustainable Equity Fund,
- Mirova Climate Solutions Equity Fund (formerly Mirova Global Environmental Equity Fund, change of name on February 24, 2023),
- Mirova Europe Environmental Equity Fund,
- Mirova Biodiversity Solutions Equity Fund (launched on December 13, 2023),
- Mirova Future of Food Fund,
- Mirova Women Leaders and Diversity Equity Fund (formerly Mirova Women Leaders Equity Fund, change of name on October 06, 2023),
- Mirova Global Green Bond Fund,
- Mirova Euro Green and Sustainable Bond Fund,
- Mirova Euro Green and Sustainable Corporate Bond Fund,
- Mirova Euro High Yield Sustainable Bond Fund,
- Mirova Euro Short Term Sustainable Bond Fund,
- Mirova Europe Sustainable Economy Fund.

On August 31, 2023, the Mirova US Climate Ambition Equity Fund was merged into Mirova Climate Solutions Equity Fund.

On September 6, 2023, the Mirova Europe Climate Ambition Equity Fund was merged into Mirova Climate Solutions Equity Fund.

On September 13, 2023, the Mirova Global Climate Ambition Equity Fund was merged into Mirova Climate Solutions Equity Fund.

The SICAV has appointed Natixis Investment Managers International (the "Management Company") as its management company and has delegated to the Management Company all powers related to the investment management, administration and distribution of the SICAV.

Natixis Investment Managers International is a *Société Anonyme* incorporated under French law on April 25, 1984 for an unlimited period of time, regulated by the French financial supervisory authority (AMF) and licensed as a Management Company in accordance with article L-532-9 of the French monetary and financial code.

Mirova Funds

Notes to the Financial Statements

As at December 31, 2023 (continued)

Note 1 – GENERAL (continued)

Each of the SICAV and any Fund has been established for an unlimited period of time.

Note 2 - SUMMARY OF SIGNIFICANT ACCOUNTING POLICIES

a) Presentation of financial statements

The financial statements are prepared in accordance with the Luxembourg regulations relating to Undertakings for Collective Investment.

Cross-Funds investments were not eliminated from the combined figures. At December 31, 2023, the total of cross-funds investments amounts to EUR 62,478,892 and therefore the total combined NAV at year-end without cross-investments would amount to EUR 11,252,126,760.

As at December 31, 2023, the cross-investments within the SICAV are as follow:

Fund	Cross investment	Amount (in EUR)
Mirova Europe Sustainable Equity Fund	Mirova Climate Solutions Equity Fund	6,070,538
Mirova Europe Sustainable Equity Fund	Mirova Euro Short Term Sustainable Bond Fund	1,601,703
Mirova Euro Sustainable Equity Fund	Mirova Euro Short Term Sustainable Bond Fund	20,940,780
Mirova Europe Environmental Equity Fund	Mirova Biodiversity Solutions Equity Fund	1,276,375
Mirova Europe Environmental Equity Fund	Mirova Climate Solutions Equity Fund	4,358,246
Mirova Women Leaders and Diversity Equity Fund	Mirova Euro Short Term Sustainable Bond Fund	1,160,759
Mirova Euro Green and Sustainable Bond Fund	Mirova Euro High Yield Sustainable Bond Fund	7,001,280
Mirova Euro Green and Sustainable Corporate Bond Fund	Mirova Euro High Yield Sustainable Bond Fund	6,733,800
Mirova Euro Green and Sustainable Corporate Bond Fund	Mirova Euro Short Term Sustainable Bond Fund	7,683,750
Mirova Euro Short Term Sustainable Bond Fund	Mirova Euro High Yield Sustainable Bond Fund	1,681,766
Mirova Europe Sustainable Economy Fund	Mirova Biodiversity Solutions Equity Fund	1,276,375
Mirova Europe Sustainable Economy Fund	Mirova Euro High Yield Sustainable Bond Fund	2,693,520
		62,478,892

b) Method of calculation

The value of each Fund's assets shall be determined as follows:

- Securities and money market instruments traded on exchanges and Regulated Markets* –valued at the last closing price unless the SICAV believes that an occurrence after the publication of the last market price and before any sub-fund next calculates its net asset value will materially affect the security's value. In that case, the security may be fair valued at the time the Administrative Agent determines its net asset value by or pursuant to procedures approved by the SICAV.
- Securities and money market instruments not traded on a Regulated Market (other than short-term money market instruments)* – based upon valuations provided by pricing vendors, which valuations are determined based on normal, institutional-size trading of such securities using market information, transactions for comparable securities and various relationships between securities which are generally recognized by institutional traders.

Mirova Funds

Notes to the Financial Statements

As at December 31, 2023 (continued)

Note 2 - SUMMARY OF SIGNIFICANT ACCOUNTING POLICIES (continued)

b) Method of calculation (continued)

- c. *Short-term money market instruments (with remaining maturity of less than 90 calendar days or less)* – valued with the principle of amortized cost (which approximates market value under normal conditions).
- d. *Futures, options and forwards* – unrealised gain or loss on the contract using current settlement price. When a settlement price is not used, future and forward contracts will be valued at their fair value as determined pursuant to procedures approved by the SICAV as used on a consistent basis.
- e. *Shares of open-ended funds* – last published net asset value.
- f. *Cash on hand or deposit, bills, demand notes, accounts receivable, prepaid expenses, cash dividends and interest declared or accrued and not yet received* – full amount, unless in any case such amount is unlikely to be paid or received in full, in which case the value thereof is arrived at after the Umbrella Fund or its agent makes such discount as it may consider appropriate in such case to reflect the true value thereof.
- g. *Credit Default Index Swaps (CDX)* – Swaps are marked to market based upon daily prices obtained from third party pricing agents and verified against the value from the counterparty. Realised appreciation/(depreciation) and change in unrealised appreciation/(depreciation) resulting there from are included in the statement of changes in net assets respectively under the heading “Net realised appreciation/(depreciation) on swaps” and “Change in net unrealised appreciation/(depreciation) on swaps”.
- h. *All other assets* – fair market value as determined pursuant to procedures approved by the Board of Directors of the SICAV.

c) Foreign exchange translation

The value of all assets and liabilities not expressed in the Reference Currency of a Fund will be converted into the Reference Currency of such Fund at rates last quoted by any major bank.

The exchange rate used as at December 31, 2023:

1 EUR = 1.104650 USD

d) Swing Pricing

Subscriptions and redemptions can potentially have a dilutive effect on the Funds’ Net Assets Values per share and be detrimental to long term investors as a result of the costs, bid-offer spreads or other losses that are incurred by the SICAV in relation to the trades undertaken by the Management Company. In order to protect the interest of existing shareholders, the Management Company may decide to introduce a Swing Pricing mechanism for any Fund.

If, for the Funds listed below, net subscriptions or net redemptions on any calculation day exceeds a certain threshold (“the Swing Threshold”), the net asset value per share will be adjusted respectively upwards or downwards by a Swing Factor. Swing Thresholds and Swing Factors are determined and reviewed on a periodic basis by the Management Company.

The Swing Factor will be set by the Management Company to reflect estimated dealing and other costs, and may not exceed 2% of the net asset value.

Mirova Funds

Notes to the Financial Statements

As at December 31, 2023 (continued)

Note 2 - SUMMARY OF SIGNIFICANT ACCOUNTING POLICIES (continued)

d) Swing Pricing (continued)

The volatility of the Funds' net asset values may not reflect the true portfolio performance, and therefore might deviate from the Funds' benchmark as a consequence of the application of the Swing Pricing mechanism.

Performance fees, if any, are calculated on the basis of the net asset value before the application of Swing Pricing adjustments.

The Swing Pricing Mechanism may be applied to the following Funds:

- Mirova Global Green Bond Fund;
- Mirova Euro Green and Sustainable Bond Fund;
- Mirova Euro Green and Sustainable Corporate Bond Fund;
- Mirova Euro High Yield Sustainable Bond Fund;
- Mirova Euro Short Term Sustainable Bond Fund.

During the year ended December 31, 2023, none of Funds applied swing pricing adjustments.

At the date of the report, no Swing Pricing was applied to the Net Assets Values of the Sub-Funds of the SICAV.

Note 3 – MANAGEMENT AND ADMINISTRATION FEES

Management fees comprise the aggregate amount of Management Company fees, Investment Managers fees and Distributors fees.

Administration fees comprise the fees due to the Depositary fees, the Administrative Agent, the Paying Agent, the Domiciliary and Corporate Agent and Registrar and Transfer Agent, the costs relating to the translation and printing of key information documents, prospectus and reports to shareholders, independent auditor's fees, outside counsels and other professionals as well as other administrative expenses.

The All-in Fee is defined as the aggregate of Management Fees and Administration Fees paid annually by each Fund, other than taxes (such as "Taxe d'abonnement") and expenses relating to the creation or liquidation of any Fund or Share Class. The All-in Fee shall not exceed such percentage of each Fund's average daily net asset value as indicated in each Fund's description.

If the yearly actual expenses paid by the Funds exceed the applicable All-in fee, the Management Company will support the difference; if the yearly actual expenses paid by the Fund are lower than the applicable All-in fee, the Management Company will keep the difference. The difference between the yearly actual expenses paid by the Funds and the applicable All-in fees is recorded in the management fees caption of the statement of operations.

The rates applicable as at December 31, 2023 are as follows:

Fund	Category of Share Classes	Management Fee	Administration Fee	Total (All-In fee)

Note 4 – PERFORMANCE FEES

The Management Company is entitled to receive a performance fee applicable to certain share class of certain Funds as disclosed in the SICAV's prospectus.

The performance fee is based on a comparison of the Valued Asset and the Reference Asset. The Valued Asset is defined as the portion of the net assets corresponding to a particular class of share, valued in accordance with the rules applicable to the assets and taking into account the All-in-Fee corresponding to the said share class.

The Reference Asset corresponds to the portion of the net assets related to a particular share class, adjusted to take into account the subscription/redemption amounts applicable to the said share class at each valuation, and valued in accordance with the performance of the Reference Rate of the said share class.

*The performance fee applies to all existing Share Classes of the Fund except for M and NPF Share Classes.

**The performance fee applies to all existing Share Classes of the Fund except for NPF Share Classes.

***The performance fee applies to all existing Share Classes of the Fund except for Q, G and NPF Share Classes.

****The performance fee applies to all existing Share Classes of the Fund except for M and Q Share Classes.

If, over the Observation Period, the Valued Asset of the Fund is higher than the Reference Asset defined above, the actual performance fee will be accrued with the applicable percentage of performance fee, applied on the difference between these two assets. The performance fee is calculated and accrued on each Valuation Day.

If, over the Observation Period, the Valued Asset of the Fund is lower than the Reference Asset, the performance fees will be zero.

Any underperformance of the Valued Asset of the Fund compared to the Reference Asset at the end of the relevant Observation Period should be clawed back before any performance fee becomes payable over years on a rolling basis, i.e. the Management Company should look back at the past 5 years for the purpose of compensating underperformances.

A reset will be implemented if:

- (i) an underperformance is not compensated and no longer relevant as this successive period of five years has elapsed,
- (ii) a performance fee is paid at any time during this successive period of five years.

In case the Valued Asset of the Fund has overperformed the Reference Asset on the last Valuation Day of the Observation Period, the Management Company should be able to crystallise the accrued performance fee over the Observation Period (subject to any clawback as indicated above). Such crystallized performance fee shall be payable within three months to the Management Company.

In case of redemption and/or closure/merger of the relevant Fund, the due share of performance fee portion corresponding to the number of shares which have been redeemed is definitely payable to the Management Company within three months as from the relevant Observation Period.

In application of the ESMA Guidelines on performance fees (ESMA34-39-992) and Circular CSSF 20/764, the table below displays the actual amount of performance fees charged by each relevant Share Class and the percentage of these fees based on the Share Class Net Asset Value ("NAV"). Only the Share Classes for which performance fees have been charged are shown below:

Mirova Funds

Notes to the Financial Statements

As at December 31, 2023 (continued)

Note 4 – PERFORMANCE FEES (continued)

Fund	Share Class	ISIN Code	Fund currency	Amount of performance fees and crystal perf fees as at 31/12/23 (in Fund currency)	Average NAV of the Share Class (in Fund currency)	% in the Share Class average NAV
Mirova Europe Sustainable Equity Fund	I/A (EUR)	LU0552643099	EUR	1	20,016,484	0.00
	N/A (EUR)	LU0914731517	EUR	8	3,756,075	0.00
Mirova Climate Solutions Equity Fund	R/A (EUR)	LU2193677676	EUR	211	2,916,047	0.01
Mirova Women Leaders and Diversity Equity Fund	I/A (EUR)	LU1956003500	EUR	3	25,064,524	0.00
	N/A (EUR)	LU1956003922	EUR	0	646,108	0.00
	R/A (EUR)	LU1956003765	EUR	44	35,257,930	0.00
				267		

The performance amounts of the above-table are those accrued from 1 January 2023 to 31 December 2023.

Note 5 – TAXATION

The SICAV is not subject to any Luxembourg tax on interest or dividends received by any Fund, any realised or unrealised capital appreciation of Fund assets or any distribution paid by any Fund to Shareholders. The SICAV is not subject to any Luxembourg stamp tax or other duty payable on the issuance of Shares. The SICAV is subject to the Luxembourg tax d'abonnement of 0.01% per year of each Fund's net asset value with respect to class "I" Shares, class "M" Shares, class "M1" Shares, class "Q" Shares, class "EI" Shares, class "SI" Shares, class "S1" Shares, class "Z" Shares, class "G" Shares and of 0.05% per year of each Fund's net asset value with respect to class "R" Shares, class "N" Shares, class "N1R" Shares, class "F" Shares, class "P" Shares, class "RE" Shares, and class "CT" Shares. These taxes are payable quarterly on the basis of the value of the aggregate net assets of the Funds at the end of the relevant calendar quarter. No tax is due on the assets held by the SICAV in other UCITS that are already subject to subscription tax in Luxembourg.

Note 6 – SECURITIES LENDING

As at December 31, 2023, the securities lending income generated by the Fund is as follows:

Fund	Ccy	Total Gross amount on securities lending income	Direct-indirect cost on securities lending income	Total net amount on securities lending income
Mirova Global Green Bond Fund	EUR	69,310	27,724	41,586
Mirova Euro Green and Sustainable Bond Fund	EUR	61,423	24,569	36,854
Mirova Euro Green and Sustainable Corporate Bond Fund	EUR	78,120	31,248	46,872

Note 17 – SUSTAINABLE FINANCIAL DISCLOSURE REGULATION

Information referred to in Article 11(2) of Regulation (EU) 2019/2088 for sub-funds classified as Article 8 and 9 on Sustainable Investment is available in the Additional Information (unaudited), Appendix III "Sustainable Finance Disclosure Regulation" section of these financial statements.

Mirova Funds

Appendix I

Additional Information (Unaudited)

Remuneration disclosure for Mirova Funds Annual Report
--

Remuneration policy

Mirova's Remuneration Policy is established in accordance with the AIFM Directive 2011/61/EU, the UCITS Directive 5 2014/91/EU, the MiFID II Directive 2014/65/EU, the Sustainable Finance Disclosure Regulation (SFDR) 2019/2088/EU on the publication of sustainability-related information in the financial services sector, the AMF (French Financial Markets Authority) Position 2013-11 "Remuneration Policy for Alternative Investment Fund Managers," as well as the Reference Texts of the Monetary and Financial Code and the Financial Markets Authority.

1. General Principles

The remuneration policy is a strategic element of Mirova's policy. As a tool for mobilizing and engaging employees, it ensures to be competitive and attractive in the light of market practices and within the framework of strict compliance with major financial balances and regulations.

Mirova's remuneration policy, which applies to all employees, incorporates the alignment of the interests of employees with those of investors in its fundamental principles:

- It is consistent and promotes sound and effective risk management and does not encourage risk-taking that would be incompatible with risk profiles, regulations or documents constituting managed products.
- It is consistent with the business strategy, objectives, values and interests of the management company and the products it manages and those of investors and includes measures to avoid conflicts of interest.

The remuneration policy includes all components of remuneration encompassing fixed remuneration and, if applicable, variable remuneration.

Fixed remuneration rewards skills, work experience and level of responsibility, taking into account market conditions.

Variable remuneration is based on the assessment of collective performance measured at both at the level of the management company and managed products, and by reference to individual performance. It takes into account quantitative and qualitative elements, which can be established on an annual or multi-year basis.

The objective and transparent assessment of annual and multi-year performance based on pre-defined objectives is the prerequisite for the implementation of Mirova's remuneration policy. It ensures fair and individualized treatment of employees. This assessment is shared between the employee and his or her manager during the annual performance review.

The contribution and level of performance of each employee are assessed in terms of his or her duties, assignments and level of responsibility within the management company.

Finally, the specific minimum criteria incorporating sustainability risks, i.e. social, environmental and governance issues, must be defined for all employees of management teams.

For each category of staff, all quantitative and qualitative objectives are defined and communicated individually at the beginning of the year, in line with Mirova's strategic objectives.

2. Remuneration Components

The remuneration policy ensures that a balanced proportion between fixed and variable remuneration is maintained, and the human resources department is responsible for this. The reassessment of fixed remuneration and the allocation of variable remuneration are studied once a year as part of the career promotion campaign.

Mirova Funds

Appendix I (continued)

Additional Information (Unaudited) (continued)

Remuneration disclosure for Mirova Funds Annual Report
--

Remuneration policy (continued)

2. Remuneration Components (continued)

a. Fixed Remuneration

Fixed remuneration rewards the skills and expertise expected in a function.

The positioning of fixed remuneration is studied periodically to ensure that it is in line with geographical and professional market practices.

Fixed remuneration level is reviewed once a year as part of the annual remuneration review. Outside of this period, increases are only awarded in the event of promotion, professional mobility or exceptional individual situation.

b. Variable Remuneration

Variable remuneration packages are defined according to Mirova annual results, but also on the basis of qualitative factors, such as competing companies' practices, the general market conditions in which the results were obtained, and factors that may have temporarily affected the performance of the business line.

Variable remuneration can be awarded where appropriate, for annual, collective and/or individual performance.

Mirova collective variable remuneration consists of an incentive and profit-sharing schemes combined with a corporate savings plan ("PEE") and a collective retirement savings plan (PERCOL). Under these plans, employees can benefit from a matching contributions scheme. These collective variable remunerations have no incentive effect on the risk management of Mirova and/or managed products, and do not fall within the scope of the AIFM or UCITS V directives.

In accordance with the overall variable remuneration packages, individual variable remuneration is awarded as part of the annual remuneration review in an objective discretionary manner, in relation to the individual performance assessment and how such performance is achieved.

The identified staff is subject to the specific obligations in respect of risk and compliance rules. Failure to comply with these obligations may result in a partial or total reduction in the allocation of individual variable remuneration.

For the unregulated staff, the remuneration is paid entirely in cash, it is allocated on a discretionary basis, and varies from one year to another depending on the assessment of performance criteria. The variable remuneration allocated to employees is impacted by the taking of a noncompliant level of risk or failure to comply with internal procedures over the year under review.

In the event of a significant loss or decrease in its profits, Mirova may also decide to reduce or even fully cancel the envelope allocated to individual variable remuneration, as well as, if necessary, the maturities in the process of acquisition for variable remuneration already allocated and deferred.

Similarly, if a major sustainability risk is realized, i.e., the occurrence of an environmental, social or governance event or situation that would have a significant and lasting negative impact on the value of funds/managed products, the envelope allocated to individual variable remuneration, as well as, if necessary, the maturities in the process of acquisition for variable remuneration already allocated and deferred, may be reduced or cancelled.

There is no contractual guarantee for variable remuneration.

Mirova Funds

Appendix I (continued)

Additional Information (Unaudited) (continued)

Remuneration disclosure for Mirova Funds Annual Report
--

Remuneration policy (continued)

2. Remuneration Components (continued)

c. Key Employee Retention Scheme

Mirova wishes to be able to guarantee its investors the stability of key employees through a retention system integrated into the remuneration policy, which makes it possible to allocate an additional amount of variable remuneration in the form of cash indexed to the performance of a set of products managed by Mirova and acquired in equal instalments over a period of at least three years. Thus, it allows to associate employees with the evolution of the results, subject to conditions of employees' attendance. The amounts are allocated in terms of performance evaluation and individual professional commitment over a given year. The envelope allocated to the retention scheme is contained in the overall budget allocated to variable remuneration.

d. Carried Interest

The carried interest represents the loyalty and alignment of the interests of the investors and employees concerned through a deferred payment. It is achieved by acquiring shares of the fund in order to take a minimum personal financial risk in relation to the size of the fund for the employees concerned. The remuneration of the acquired shares is then conditional on the creation of capital gains and a minimum positive return on the ordinary shares of the fund's investors. It is reserved for the employees who make up the investment team of the infrastructure fund activities.

3. Evaluation of Collective and Individual Performance

The contribution and the performance level of employees are assessed in relation to their duties, missions and level of responsibility in the company. There are several different categories of staff distinguished as follows:

- The Executive Committee is evaluated on its contribution to the definition and implementation of the company's strategy, and on its ability to develop performance of product and service offerings and financial results. Performance is assessed annually.
- The support and business development functions are assessed on their ability to achieve qualitative and quantitative objectives for business development functions. These quantitative targets are defined and communicated at the beginning of each year.
- The control functions, whose evaluation is based on the assessment of qualitative criteria defined annually, so as not to compromise their independence or create conflicts of interest.
- The management functions are evaluated differently, depending on the type of portfolio managed. The applied quantitative criteria reflect the development of management performance sought by investors, but do not allow excessive risk-taking that may affect Mirova's profile of risk and/or managed products.

4. Adaptation of the System Applicable to the Regulated Staff

a. Identification of the Regulated Staff

In accordance with regulatory provisions, at the beginning of the year, HRD and RCCI identify and formalize the list of the "regulated" staff corresponding to employees who, individually, may have a significant impact through their decisions on Mirova's risk profile and/or managed products. Members of the Executive Committee, the management functions of the support activities, the supervisory management functions (risks, compliance and control), the staff responsible for portfolio management, other risk takers, as well as employees who, in view of their overall remuneration, are in the same pay bracket as the general management and the risk takers, are systematically included in this staff.

The identification of the management and risk functions included in the scope of regulated functions is carried out annually by HRD and RCCI - responsible for compliance, internal control and risk on the basis of the mapping of management processes. Senior management validates the scope of the entire regulated staff.

Mirova Funds

Appendix I (continued)

Additional Information (Unaudited) (continued)

Remuneration disclosure for Mirova Funds Annual Report
--

Remuneration policy (continued)

4. Adaptation of the System Applicable to the Regulated Staff (continued)

b. Scheme Applicable to Variable Remuneration Allocated to the Regulated Staff

Variable remuneration and, where appropriate, the loyalty scheme of the regulated staff are allocated globally, half in cash and the other half in the form of a financial instrument equivalent. For the lowest variable remuneration, below an annually defined threshold, the deferred proportion does not apply. The list of employees concerned is validated by the RCCI - Director of Compliance, Internal Control and Risk. For the highest Mirova salaries, the deferred proportion in the form of a financial instrument equivalent can reach 60%.

The proportion of variable remuneration, which is deferred over 3 years, increases with the amount of variable remuneration allocated, and can reach 60% for the highest remuneration at Mirova.

The thresholds for triggering deferred variable remuneration are likely to change according to regulations or modifications in internal policies. In this case, the new thresholds are subject to the approval by the Executive Committee of Mirova and the Compensation Committee of Natixis.

In addition, a minimum of 50% of the variable remuneration is paid in financial instruments in the form of cash indexed to the performance of a set of products managed by Mirova.

The acquisition of the deferred portion of the variable remuneration is subject to conditions of presence, financial performance of the management company, relative performance of managed products in relation to benchmark market indices and the absence of any unusual behavior that may have an impact on Mirova's level of risk and/or managed products.

This acquisition is also subject to obligations in terms of compliance with risk and compliance rules. Failure to comply with these obligations may result in a partial or total decrease in the acquisition. Finally, it can be returned in whole or in part, in order to ensure a subsequent adjustment of the risks.

Employees benefiting from deferred variable remuneration are prohibited from using individual hedging or insurance strategies over the entire acquisition period.

The terms and conditions for determining, valuing, awarding, acquiring and paying deferred variable remuneration in financial instrument equivalent are detailed in Mirova Long Term Incentive Plan (LTIP).

c. Control System

At the end of each promotion campaign and before allocation of variable remuneration, the HRD formalizes a review of the adequacy and effectiveness of the remuneration policy for the regulated staff (the list of names, the amounts allocated, the distribution between immediate and deferred payments, and the cash and equivalent financial instrument). It is approved by the Executive Committee and Natixis Investment Managers.

The general and specific principles, application procedures and quantitative summary data for the remuneration policy including the regulated staff, as well as the annual remuneration envelope for directors, are provided to Mirova Board of Directors annually. As part of the promotion campaigns, individual proposals are validated by the human resources management and the Executive Management of Mirova, and then successively through the remuneration validation bodies of Natixis Investment Managers AM and Natixis. The CEO's remuneration is determined by the Executive Management of Natixis Investment Managers and Natixis and is presented to Natixis Appointments and Remuneration Committee.

Remuneration disclosure for Natixis Investment Managers International (NIMI) Annual Report

Remuneration policy

This Natixis Investment Managers International ("NIMI") remuneration policy consists of general principles applicable to all employees (see point I), specific principles applicable to employees identified by AIFM and UCITS V (see point II) and a governance mechanism applicable to all employees (see point III).

It falls within the framework of the remuneration policy defined by Natixis and is established in compliance with the provisions relating to remuneration stipulated in the following regulatory texts, as well as the guidelines of the European Securities and Markets Authority (ESMA) and the positions of the Autorité des Marchés Financiers (AMF, the French Financial Markets Authority) resulting therefrom:

- Directive 2011/61/EU of the European Parliament and of the Council of 8 June 2011 on Alternative Investment Fund Managers, transposed into the French Monetary and Financial Code by Order No. 2013-676 of 27 July 2013 (AIFM Directive)
- Directive 2014/91/EU of the European Parliament and of the Council of 23 July 2014 on undertakings for collective investment in transferable securities, transposed into the French Monetary and Financial Code by Order No. 2016-312 of 17 March 2016 (UCITS V Directive).
- Directive 2014/65/EU of the European Parliament and of the Council of 15 May 2014 on markets in financial instruments, transposed into the Monetary and Financial Code by Order No. 2016-827 of 23 June 2016, supplemented by the Delegated Regulation 2017/565/EU of 25 April 2016 (MiFID II Directive).
- Regulation (EU) 2019/2088 of the European Parliament and of the Council of 27 November 2019 on sustainability-related disclosures in the Financial Services sector

I. GENERAL PRINCIPLES OF THE REMUNERATION POLICY

The remuneration policy is a strategic aspect of the NIMI policy. As a tool to enhance employee motivation and commitment, it aims to be competitive and attractive in relation to the rest of the industry while fully complying with key financial indicators and regulations.

NIMI's remuneration policy, which applies to all employees, counts the alignment of employees' interests with those of investors among its fundamental principles:

- It is consistent and promotes sound and efficient risk management and does not encourage risk-taking that would be incompatible with the risk profiles, regulations or documents constituting the products managed.
- It is in line with the economic strategy, objectives, values and interests of the Management Company and the products it manages, as well as those of investors, and includes measures aimed at preventing conflicts of interest.

The remuneration policy covers all components of remuneration, which include fixed remuneration and, where applicable, variable remuneration.

Fixed remuneration rewards skills, professional experience and level of responsibility. It takes into account market conditions.

Variable remuneration depends on the assessment of collective performance – which is measured on the basis of Management Company performance and the performance of the products managed – and individual performance. It considers quantitative and qualitative elements, which may be established on an annual or multi-year basis.

Remuneration policy (continued)

I. GENERAL PRINCIPLES OF THE REMUNERATION POLICY (continued)

I-1. Definition of performance

The objective and transparent assessment of annual and multi-year performance based on predefined objectives is a prerequisite for applying the NIMI remuneration policy. It ensures the fair and selective treatment of employees. This assessment is shared between the employee and their manager during an individual appraisal interview.

The contribution and performance level of each employee are evaluated with regard to their duties, assignments and level of responsibility in the Management Company. In this context, the remuneration policy distinguishes several categories of staff:

- The Management Committee is assessed on its contribution to the definition and implementation of the Management Company's strategy, this strategy being part of that of the international distribution platform and that of Dynamic Solutions. The Management Committee is also assessed on its ability to expand the performance of product and service offerings, on the performance of the distribution activity and, more generally, on the development of the group's multi-boutique model, as well as on the risk-adjusted financial performance within its scope of supervision. For this category, performance is assessed annually through quantitative indicators linked to changes in NIMI's financial results and supervised activities, as well as a contribution to the overall performance of Natixis IM. Performance is also assessed through the achievement of qualitative objectives, such as the quality of management and/or responsibility for/contribution to cross-functional projects.
- Support functions are assessed on their ability to proactively support the strategic challenges of the Management Company. Individual performance is assessed annually through the achievement of qualitative objectives, such as the quality of recurring activities and/or the degree of participation in cross-functional projects or strategic/regulatory plans. These objectives are defined annually in accordance with those of NIMI, those of the international distribution platform and, where applicable, those of Dynamic Solutions.
- Assessment of the performance of control functions is based on the evaluation of qualitative criteria only, such as participation in cross-functional projects or in strategic/regulatory plans, defined annually, to avoid compromising their independence or creating conflicts of interest with the activities they control.
- The performance of management functions is assessed according to a quantitative criterion linked to the generation of value through allocation, supplemented by qualitative criteria.

This quantitative criterion reflects the aim of achieving the management performance sought by investors without causing excessive risk-taking, which may have an impact on the risk profile of NIMI and the products managed.

These quantitative criteria are calculated over a predefined period in line with the risk-adjusted performance horizon of the funds managed and of the Management Company.

Specific criteria incorporating risks related to sustainability, i.e. environmental, social and governance issues, must be defined for all management team employees.

Appendix I (continued)

Remuneration policy (continued)

I. GENERAL PRINCIPLES OF THE REMUNERATION POLICY (continued)

I-1. Definition of performance (continued)

- Assessment of the performance of real asset private debt management functions is based on two criteria (one quantitative, one qualitative), which if successfully met means that the interests of the Management Company and investor clients are both being served by the funds and strategies managed by the team. The quantitative criterion measures the amount of funds raised from investors and reflects each manager's involvement in the development of assets under management, which generate income for the business activity. The qualitative criterion is designed to ensure that investments made on behalf of clients have been made according to the strict application of the investment criteria defined with them. It also aims to ensure that the manager has performed an exhaustive and early analysis of the risk factors expected during the investment and throughout the entire holding period. In the event that any risk factor occurs, the relevance of the corrective measures, which are to be carried out diligently and in the sole interest of the investor, will be taken into account. In other words, this criterion does not penalise the manager for the occurrence of a credit event (credit risk is in fact inherent in this business activity). It aims to guarantee clients that an exhaustive analysis of the risks and their mitigation factors has been carried out ab initio, followed by a control process conducted for the duration of the holding period. This enables a well-considered and effective response in the event of a credit event in order to neutralise or limit the impact for investors.
- Assessment of the performance of the distribution functions is based on the evaluation of quantitative and qualitative criteria. The quantitative criteria are based on gross inflows, net inflows, turnover, the profitability of assets under management and how these change. The qualitative criteria include the diversification and development of the business (new clients, new affiliates, new expertise, etc.) and the joint consideration of the interests of NIMI and those of clients.

For all categories of staff, the performance assessment incorporates qualitative criteria.

These qualitative criteria always include compliance with the regulations and NIMI's internal procedures in terms of risk management and compliance.

They may also include the quality of the relationship with clients, including the level of expertise and advice provided, improving the reliability of a process, participating in a cross-disciplinary project, participating in the development of new expertise, contributing to the development of operational efficiencies or any other aspects defined by the strategic objectives set out by NIMI.

For each category of staff, all quantitative and qualitative objectives are defined and communicated individually at the start of the year, in line with NIMI's strategic objectives.

I-2. Remuneration components

I-2.1. Fixed remuneration

NIMI strives to maintain a level of fixed remuneration that sufficiently remunerates employees for their professional activity.

Fixed remuneration rewards the skills, professional experience and level of responsibility expected of an employee when performing their duties.

Mirova Funds

Appendix I (continued)

Additional Information (Unaudited) (continued)

Remuneration disclosure for Natixis Investment Managers International (NIMI) Annual Report
--

Remuneration policy (continued)

I. GENERAL PRINCIPLES OF THE REMUNERATION POLICY (continued)

I-2. Remuneration components (continued)

I-2.1. Fixed remuneration (continued)

The positioning of fixed remuneration is reviewed periodically to ensure its consistency with regard to geographical and professional market practices.

Fixed salaries are reviewed once a year as part of the annual remuneration review. Outside that period, only promotions, internal job moves or exceptional changes to individual circumstances may lead to a review.

I-2.2. Variable remuneration

The variable remuneration packages are defined based on the annual results of NIMI, the international distribution platform and Dynamic Solutions, and also by reference to qualitative elements, such as the practices of competitor companies, the general market conditions applicable at the time the results were obtained and any factors that may have temporarily influenced the business line's performance.

Variable remuneration, where awarded, is paid to reward an individual annual performance achieved as part of a collective performance. NIMI's collective variable remuneration consists of mandatory and optional profit-sharing and incentive schemes, together with a company savings plan (plan d'épargne d'entreprise, PEE) and a company collective retirement savings plan (plan d'épargne pour la retraite collectif, PERCO). Employees can benefit from a matching scheme under these plans.

This collective variable remuneration has no incentive impact on the risk management of NIMI and/or the managed products and does not fall within the scope of the AIFM or UCITS V directives.

In compliance with the overall variable remuneration packages, individual variable remuneration is allocated as part of the annual remuneration review in an objective discretionary manner with regard to the assessment of individual performance and the way in which performance is achieved. Variable remuneration awarded to employees is affected by inappropriate risk and compliance management or non-compliance with regulations and internal procedures over the year considered (see I-1. above).

Identified employees are subject to specific obligations in terms of adherence to the rules on risks and compliance. A breach of these obligations may result in the partial reduction or removal of the individual variable remuneration awarded.

In the event of a loss or a significant fall in its profits, NIMI may also decide to reduce or entirely cancel the amount allocated to individual variable remuneration, together with any deferred instalments of variable remuneration previously awarded and in the process of vesting.

Similarly, in the event that a major sustainability-related risk materialises, i.e. an ESG event or situation occurs that would have a material and lasting adverse impact on the value of the funds/products under management, the package allocated to individual variable remuneration may be reduced or even cancelled, as may the

Remuneration policy (continued)

I. GENERAL PRINCIPLES OF THE REMUNERATION POLICY (continued)

I-2. Remuneration components (continued)

I-2.2. Variable remuneration (continued)

maturities in the process of vesting and related to the variable remuneration already awarded and deferred, if applicable.

There are no contractual guarantees for variable remuneration, with the occasional exception of variable remuneration awarded for the first year of work within the framework of external recruitment.

"Golden parachute" agreements are forbidden. Payments related to the early termination of an employment contract are defined in accordance with legal provisions (legal and contractual indemnities) and the performance of the beneficiary, the area of the business to which they belong and the performance of the entire Management Company over the period. They are designed to avoid rewarding failure.

Variable remuneration is not paid through instruments or methods that facilitate circumvention of the requirements established in the regulations.

I-2.3. Key employee retention scheme

NIMI wants to ensure that its investors have confidence in the stability of its teams.

In order to achieve this, a deferred remuneration system has been incorporated into its remuneration policies.

Beyond a certain variable threshold, this scheme leads to the allocation of a proportion of the variable remuneration in the form of a cash payment indexed to changes in the consolidated financial performance of Natixis IM measured by its earnings before tax (EBT), recorded each year over a minimum period of three years. The proportion of variable remuneration thus deferred is vested in equal tranches for a period of at least three years and gives employees a stake in the performance of Natixis IM. The deferred variable remuneration rate is calculated by applying a deferred remuneration table.

This scheme is subject to the employee meeting conditions relating to continued employment and the absence of conduct inconsistent with the company's standards that may have an impact on NIMI's level of risk. Vesting of these tranches may be subject to a repayment commitment, either in full or in part, in order to ensure ex-post risk adjustment.

I-2.4. Balance between fixed and variable remuneration

NIMI ensures that there is an appropriate balance between the fixed and variable components of overall remuneration and that the fixed component represents a sufficiently high proportion of overall remuneration so that a fully flexible policy can be exercised with regard to variable components of remuneration, including the option of not paying a variable component. All individual situations for which variable remuneration represents more than 100% of fixed remuneration and that can be explained by market practice and/or an exceptional level of responsibility, performance and behavior, are documented by the Human Resources Department as part of the annual remuneration review.

Appendix I (continued)

Additional Information (Unaudited) (continued)

Remuneration disclosure for Natixis Investment Managers International (NIMI) Annual Report
--

Remuneration policy (continued)

II- IMPLEMENTATION OF THE SCHEME APPLICABLE TO EMPLOYEES IDENTIFIED UNDER AIFM AND/OR UCITS V

II-1. Employees identified

In accordance with regulatory provisions, NIMI's identified employees include the categories of employee, including executive managers, risk-takers and those exercising a control function, as well as any employee who, based on their total remuneration, is in the same remuneration bracket as executive managers and risk-takers, whose employment activities have a material impact on the risk profile of the Management Company and/or the products managed by the Management Company. These persons are identified based on their employment activities, their level of responsibility or their overall level of remuneration.

To maintain consistency and alignment, NIMI has decided to implement the system applicable to identified employees across the full scope of products managed (mandates, UCITS and AIFs).

The following employee categories are identified:

- Members of the management body
- Members of staff responsible for portfolio management
- Managers of control functions (risk, compliance and internal control)
- Managers of support or administrative activities
- Other risk-takers
- Employees who, given their overall remuneration, are in the same remuneration bracket as general management and risk-takers

Each year, prior to the annual remuneration review, the Human Resources Department draws up and formally records the identification methodology and scope of NIMI's identified employees, in conjunction with the Director of Permanent Controls.

The names of all identified employees are then validated by NIMI's General Management and sent for approval to the Board of Directors in its supervisory function, before being provided to the Natixis Remuneration Committee.

The entire identification process is documented and archived by the Human Resources Department. The employees concerned are also informed of their status.

II-2. Scheme applicable to variable remuneration allocated to identified employees

In accordance with regulations and in order to ensure alignment between employees and investors and the Management Company, where the variable remuneration of identified employees exceeds a certain threshold, it is partly deferred and partly awarded in the form of a financial instrument vesting over a period of at least three years, acquired pro rata temporis.

The proportion of variable remuneration, which is deferred over three years, increases with the amount of variable remuneration awarded and may reach 60% for those with the highest remuneration at NIMI. Currently, the application methods for the deferred payment are as follows:

- Up to €199,000 in variable remuneration: no deferral
- Between €200,000 and €499,000: 50% of the amount deferred from the first euro

Mirova Funds

Appendix I (continued)

Additional Information (Unaudited) (continued)

Remuneration disclosure for Natixis Investment Managers International (NIMI) Annual Report
--

Remuneration policy (continued)

II- IMPLEMENTATION OF THE SCHEME APPLICABLE TO EMPLOYEES IDENTIFIED UNDER AIFM AND/OR UCITS V (continued)

II-2. Scheme applicable to variable remuneration allocated to identified employees (continued)

- From €500,000: 60% of the amount deferred from the first euro

The thresholds for triggering deferred variable remuneration are subject to change depending on regulations or changes to internal policies. In this case, the new thresholds are subject to approval by NIMI's Management Committee and the Natixis Remuneration Committee.

A minimum of 50% of variable remuneration is also awarded in financial instruments in the form of indexed cash payments:

- For teams directly involved in portfolio management, with the exception of those managing real asset private debt, on the basis of the performance of a selection of products managed by NIMI.
- For teams that are not directly involved in portfolio management and teams managing real asset private debt, on the basis of changes in NATIXIS IM's consolidated financial performance measured by its earnings before tax (EBT), recorded each year over a minimum period of three years.

The vesting of the deferred portion of variable remuneration is subject to the employee meeting certain conditions relating to continued employment and to Natixis IM's consolidated financial performance as well as the absence of conduct inconsistent with the company's standards that may have an impact on the level of risk for NIMI and/or the products managed.

This vesting is also subject to obligations in terms of adherence to the rules on risks and compliance. Failure to comply with these obligations may result in a partial or total decrease in the vesting. It may also be subject to a full or partial repayment commitment in order to ensure ex-post risk adjustment.

Employees benefiting from deferred variable remuneration are prohibited from using individual hedging or insurance strategies over the entire vesting period.

The terms and conditions for determining, valuing, awarding, vesting and paying deferred variable remuneration as an equivalent financial instrument are detailed in the NIMI and Natixis IM Long-Term Incentive Plan (LTIP).

III- GOVERNANCE

The general and specific principles of the remuneration policy are drawn up and formally documented by NIMI's Human Resources Department in line with the policy applicable to the global distribution platform.

NIMI's Permanent Controls Department and Risk Department have an active role in the development, ongoing monitoring and assessment of the remuneration policy. They are thus involved in determining the overall strategy applicable to the Management Company to promote the development of effective risk management. As such, they are involved in determining the scope of identified employees. They are also responsible for assessing the impact of the variable remuneration structure on the risk profile of managers.

NIMI's remuneration policy is approved by the NIMI Board of Directors in its supervisory function.

Mirova Funds

Appendix I (continued)

Additional Information (Unaudited) (continued)

Remuneration disclosure for Natixis Investment Managers International (NIMI) Annual Report
--

Remuneration policy (continued)

III- GOVERNANCE (continued)

The general and specific principles, the application methods and quantified data of the remuneration policy, including details of identified employees and the highest levels of remuneration, are approved in turn and in detail by the members of NIMI's Management Committee, then by an Intermediary Committee established at Federation level that encompasses all of the distribution, support and control functions of the Natixis IM Group and incorporates NIMI, in particular. This Intermediary Committee brings together the General Management teams of NIMI and Natixis IM. It then submits the above information in summary form for the approval of Natixis' General Management and then finally the Natixis Remuneration Committee.

NIMI does not have its own remuneration committee but, as a member of the Natixis Group, reports to the Natixis Remuneration Committee.

The NATIXIS Remuneration Committee was established and acts in accordance with regulations⁽¹⁾:

⁽¹⁾ For more details on the composition and role of the Natixis Remuneration Committee, see the company's Registration Document.

- Both in its composition: the independence and expertise of its members, the majority of whom, like its Chairman, do not perform executive functions within NIMI, are external to the NATIXIS Group and are therefore completely independent
- And in the exercise of its duties, which in management companies more specifically includes the following roles:
 - Advice and assistance to the Board of Directors for the development and implementation of the Management Company's remuneration policy
 - Assistance to the Board of Directors in overseeing the development and operation of the Management Company's remuneration system
 - Particular attention is paid to the assessment of the mechanisms adopted to ensure that the remuneration system considers all the categories of risk, liquidity and level of assets under management in an appropriate manner and to ensure compatibility of the remuneration policy with the economic strategy, objectives, values and interests of the Management Company and the products managed, as well as with those of investors

In this context, the general and specific principles, the compliance of NIMI's remuneration policy with the applicable regulations, and the application methods and summary figures of the remuneration policy, including details of identified employees and the highest levels of remuneration, are submitted to the Natixis Remuneration Committee for a final review, before being approved by its Board of Directors in its supervisory function.

The remuneration of NIMI's Chief Executive Officer is set by the General Management teams of Natixis IM and Natixis, then presented to the Natixis Remuneration Committee.

The remuneration of NIMI's Risk and Compliance Directors is reviewed, as part of the independent reviews carried out by the risk and compliance functions, by Natixis IM's Risk and Compliance Directors. They are then submitted to the Natixis Remuneration Committee.

In short, all roles assigned to remuneration committees and set out in the regulatory texts are, in practice, performed by the Intermediary Committee established at Federation level, which incorporates NIMI, and/or by the Natixis Remuneration Committee.

Mirova Funds

Appendix I (continued)

Additional Information (Unaudited) (continued)

Remuneration disclosure for Natixis Investment Managers International (NIMI) Annual Report

Remuneration policy (continued)

III- GOVERNANCE (continued)

The general and specific principles of the remuneration policy are communicated internally to all employees and members of the Works Council. NIMI also complies with all its obligations in terms of external advertising.

This entire review, validation and communication process takes place every year. It includes any regulatory and contextual changes and is consistent with the Natixis remuneration policy.

Finally, the entire NIMI remuneration policy is subject to a centralised and independent annual review by Natixis IM's Internal Audit Department.

When NIMI delegates the financial management of one of the portfolios that it manages to another management company, it ensures that this delegated company complies with the regulations in force.

Remuneration paid during the last financial year

Fixed remuneration is inclusive of actual 2023 base salary paid to employees. Variable remuneration consists of 2023 cash bonus and long term incentive payouts, as well as the grant value of outstanding long term incentive awards.

Total remuneration of staff involved in the AIF activities is as follows:

Fixed Remuneration*	€ 1,265,488
Variable Remuneration	€ 2,227,231
Total	€ 3,492,719
Number of beneficiaries:	9

For the purpose of this disclosure, the total remuneration has been allocated based on the assets under management of the Mirova Funds in comparison with total assets under management of the AIFs (or funds) managed by NIMI.

In addition, the aggregate amount of remuneration is further broken down as follows:

Senior Management*	€ 1,296,097
Other members having a material impact on risk profile of AIF	€ 1,402,440
Total Remuneration	€ 2,671,537
Number of beneficiaries:	10

*Senior Management includes:

De Poncharra, Florian
Horsfall, Patricia
Lanne, Christophe
Mouraret, Marine

Mirova Funds

Appendix II

Additional Information (Unaudited) (continued)

Securities Financing Transaction Regulation ("SFTR") introduces reporting requirements for securities financing transactions ("SFTs") and Total Return Rate Swaps.

A Securities Financing Transaction (SFT) is defined as per Article 3(11) of the SFTR as:

- a repurchase/reverse repurchase agreement
- securities or commodities lending and securities or commodities borrowing
- a buy-sell back transaction or sell-buy back transaction, or
- a margin lending transaction

As at December 31, 2023 there were no securities held as type of instrument under the scope of the SFTR.

Information referred to in Article 11(2) of Regulation (EU) 2019/2088 for sub-funds classified as Article 8 and 9 on Sustainable Investment is available in the Additional unaudited information SFDR (Sustainable Finance Disclosure Regulation) section.

Global exposure calculation method

The following sub-funds use the commitment approach in order to monitor and measure the global market risk exposure:

- Mirova Global Sustainable Equity Fund
- Mirova US Sustainable Equity Fund
- Mirova Europe Sustainable Equity Fund
- Mirova Euro Sustainable Equity Fund
- Mirova Climate Solutions Equity Fund (formerly Mirova Global Environmental Equity Fund)
- Mirova Europe Environmental Equity Fund
- Mirova Future of Food Fund
- Mirova Women Leaders and Diversity Equity Fund (formerly Mirova Leaders Equity Fund)
- Mirova Global Green Bond Fund
- Mirova Euro Green and Sustainable Bond Fund
- Mirova Euro Green and Sustainable Corporate Bond Fund
- Mirova Euro High Yield Sustainable Bond Fund
- Mirova Euro Short Term Sustainable Bond Fund
- Mirova Europe Sustainable Economy Fund

Mirova Funds

Sustainable Financial Disclosure Regulation

Information referred to in Article 11(2) of Regulation (EU) 2019/2088 for sub-funds classified as Article 8 and 9 on Sustainable Investment is available in this Additional unaudited information on SFDR (Sustainable Finance Disclosure Regulation) section.

NB: all figures related to sustainability/ taxonomy are calculated as an average of the values of the 4 quarter ends of the reference period.

Template periodic disclosure for the financial products referred to in Article 9, paragraphs 1 to 4a, of Regulation (EU) 2019/2088 and Article 5, first paragraph, of Regulation (EU) 2020/852

Product Name : MIROVA FUNDS - Mirova Global Sustainable Equity Fund
Legal Entity Identifier : 5493 00YFL5N62BE1F 89

Sustainable investment objective

Did this financial product have a sustainable investment objective?

Yes

No

It made **sustainable investments with an environmental objective: 36.09%**

in economic activities that qualify as environmentally sustainable under the EU Taxonomy

in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

It made **sustainable investments with a social objective: 61.05%**

It **promoted Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of ___% of sustainable investments

with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with a social objective

It promoted E/S characteristics, **but did not make any sustainable investments**

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

To what extent was the sustainable investment objective of this financial product met?

The sustainable investment objective of the Fund is to allocate the capital towards companies that contribute positively through their products, services and/or practices to the achievement of one or more of the United Nations Sustainable Development Goals (the "SDGs").

The fund Sustainable Investment (SI) objectives were the following : 90% in sustainable investment, with an objective of 25% in SIE (Sustainable Investment Environmental) and 25% in SIS (Sustainable Investment Social).

Sustainability indicators measure how the sustainable objectives of this financial product are achieved.

The percentage of non-SI at any given time is expected to be the weight of cash & cash equivalents ('cash') in the Fund. As the level of cash in the Fund as a percentage of total assets was higher at the end of 2023 than at the end of 2022, the percentage of SI was therefore lower as a percentage of total assets at the end of 2023 compared to the end of 2022. The change in the percentage of cash may also partly explain the changes in the percentage of SIE and SIS. Changes in the percentage of SIE and SIS may also be a result of portfolio transactions (positions in companies added, sold, increased, or decreased during the period) and/or performance of individual stocks over the period leading to higher or lower weights in the Fund.

Alignment with the EU Taxonomy was slightly higher from the prior year due to the aforementioned factors as well. More specifically, the addition of Enphase Energy, whose activities are 100% EU Taxonomy aligned, as well as Waste Management, to the portfolio in 2023, partly contributed to the slight increase in Taxonomy alignment year-over-year.

97.15% of the Fund's net assets were aligned with sustainable investment objectives on average during the reference period. Alignment with EU Taxonomy amounted to 8.24%. The indicators have not been subject to an assurance provided by an auditor or a review by a third party.

● ***How did the sustainability indicators perform?***

Benchmark: MSCI WORLD INDEX NTR €. The benchmark is not intended to be aligned with environmental and social ambitions as promoted by the fund.

The fund followed the KPIs described hereafter. The figures are the average result of the 4 quarterly reports.

As a result of the Fund investing only in assets that meet the criteria to be included in the Fund investment universe and evaluated as having a positive impact (i.e. assessed as having high, moderate or low impact as per the Investment Manager's sustainability opinion methodology), the Fund was able to achieve the objective of allocating capital towards companies that contribute positively through their products, services and/or practices to the achievement of one or more of the United Nations Sustainable Development Goals (100% of equity holdings).

- Regarding the contribution to the various SDG themes, this is a product of the broader bottom-up stock picking approach. As a result of more granular impact tracking beginning in 2023, particularly on positive impact from companies' advanced practices, the Fund demonstrates robust exposure to impact on the diversity & inclusion pillar in particular compared to the prior year as many of the companies that are held in the portfolio exhibit exemplary diversity and inclusion practices.
- The Fund also aims to represent an economy that is expected to result in global temperature rise of no more than 2 degrees Celsius this century; the Fund maintained this alignment for the period, with no significant changes from the prior period.
- The natural consequence of the approach is a much better sustainability impact and global temperature rise scenario than the reference index

Fund maintained this alignment for the period, with no significant changes from the prior period.

- As in the prior period, the Fund demonstrates a better overall sustainability impact and global temperature rise scenario than the reference index, a natural consequence of our stock picking approach.

How did the sustainable investments not cause significant harm to any sustainable investment objective?

The sustainability analysis aims to identify the relevant residual environmental and social risks originating from companies' activities and practices and assesses the quality of the company's measures to mitigate these risks (the "DNSH test"). Such analysis considers notably the degree of exposure of the investee company to certain sectors or activities that may be considered to be damaging for the environment and/or the society and exposure to relevant environmental or social controversies. As a result of this qualitative analysis, the Investment Manager issues a binding opinion based on which companies whose economic activities or practices are deemed to have a significant negative impact on the achievement of one or more of the UN SDGs are systematically excluded from the investment universe regardless of their otherwise positive contribution. As a consequence, over the reporting period, all investment in the Fund were complying with the Investment Manager's DNSH criteria.

How were the indicators for adverse impacts on sustainability factors taken into account?

As part of the analysis of residual ESG risks conducted on each investee company, the Fund systematically assesses and monitors indicators that are deemed to indicate the presence of principal adverse impact (including consideration of data relating to the mandatory PAI indicators referred to in the consolidated Regulatory Technical Standards for assessment of sustainable investment in accordance with art. 2 (17) SFDR). When the data necessary for the calculation of certain PAI indicators are not available, the Investment Manager may use qualitative or quantitative proxies that cover themes similar to the PAI indicators in question. Adverse impacts are prioritized according to the specificities of sectors and business models of companies considered for investment by using a combination of criteria based on:

- analysis of the company's exposure to environmental impacts based on science-based data from international organisations (e.g. energy intensity, impacts on biodiversity, etc),
- analysis of the company's exposure to fundamental rights and employee matters through its locations, business model and supply chain organization (e.g. exposure to health and safety risks, exposure to countries with specific human rights risks, etc),
- analysis of the company's footprint on local communities and consumers,
- screening of on-going or potential controversies.

Where the Investment Manager deems the investee company's processes and practices are insufficient to mitigate environmental, social and governance risks, notably with regards to the relevant PAIs, the company's impact is deemed as negative which makes it ineligible for investment.

Further details can be found in the table hereunder, which lists the main indicators taken into account by Mirova when taking PAIs into account.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

	Adverse Sustainability indicator	How PAIs are taken into account by Mirova
Greenhouse gas emissions	1. GHG emissions	Exclusion of the most carbon intensive entities and companies with no or insufficient plans to reduce GHG emissions Systematic integration in qualitative internal analysis
	2. Carbon footprint	
	3. GHG intensity of investee companies	
	4. Exposure to companies active in the fossil fuel sector	Exclusion of companies active in the fossil fuel sector For companies involved in fossil fuel extraction, processing/refining, and trading, exclusion applies to companies with: • >5% of revenues from coal or oil, including unconventional oil, • >10% of revenues from unconventional gas. For companies that produce dedicated equipment/services for the fossil fuel sector, exclusion applies to companies with >20% of revenues from these equipment/services. For companies involved in electricity production (<10% of sales related to electricity production), exclusion applies to companies with a generation mix dominated by coal, with a carbon intensity >350 gCO ₂ /MWh.
	5. Share of non-renewable energy consumption and production	Integration in qualitative internal analysis when relevant
	6. Energy consumption intensity per high impact climate sector	Integration in qualitative internal analysis when relevant
Biodiversity	7. Activities negatively affecting biodiversity-sensitive areas	Exclusion of companies or projects significantly harming biodiversity sensitive areas. Systematic integration in qualitative internal analysis. Part of controversy analysis
Water	8. Emissions to water	Integration in qualitative internal analysis when relevant
Waste	9. Hazardous waste and radioactive waste ratio	Integration in qualitative internal analysis when relevant
Social and Employee matters	10. Violations of UNGC principles and OECD guidelines for Multinational Enterprises	Exclusion of companies violating UNGC and OECD principles Systematic integration in qualitative internal analysis Part of controversy analysis
	11. Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises	Exclusion for large companies, case-by-case for small companies or projects Systematic integration in qualitative internal analysis Engagement plans / ESAP with investees when relevant
	12. Unadjusted gender pay gap	Systematic integration of gender equality in qualitative internal analysis Engagement plans / ESAP with investees
	13. Board gender diversity	Systematic integration of gender equality in qualitative internal analysis Engagement plans / ESAP with investees
Additional PAI indicators	14. Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)	Exclusion (0% sales threshold)
	4. Investments in companies without carbon emission reduction initiatives	Exclusion of the most carbon intensive entities and companies with no or insufficient plans to reduce GHG emissions Systematic integration in qualitative internal analysis
	14. Number of identified cases of severe human rights issues and incidents	Exclusion of companies with severe human rights issues and incidents. Systematic integration in qualitative internal analysis Part of controversy analysis
	17. Number of convictions and amount of fines for violation of anti-corruption and anti-bribery laws	Exclusion of companies severely violating anti-corruption and anti-bribery laws Systematic integration in qualitative internal analysis Part of controversy analysis

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The investment manager screens investee companies against adherence with OECD Guidelines for Mul. national Enterprises and UN Guiding Principles on Business and Human Rights. The investment manager continuously reviews companies' track records and news flows to identify significant controversies. Companies' involvement and resolving measures are taken into account. Risks of potential breach may be monitored through engagement to obtain additional assurance. Companies determined by the investment manager to be in serious breach of OECD Guidelines for Multinational Enterprises or UN Guiding Principles on Business and Human Rights are recognized as doing significant harm and are therefore rendered non-eligible. Therefore, over the reporting period, all investments were considered to be respectful of the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights.

This indicator is systematically monitored by our external service provider, as well as by a constant watch on controversies and regular meetings between Management and the Research team. Any severe and repeated breach of OECD

guidelines will be excluded from our investment universe. OCDE guideline and human rights

Mirova's investment universes are monitored with a special focus on controversies. The aim is to detect the presence of violations of the UN Covenant and the OECD Guidelines.

The action plan for dealing with a controversy will depend on the severity, as well as the corrective measures already announced by the company. Actions include :

- Direct individual engagement,
- Exercising voting rights,
- Collaborative engagement
- Divestment

How did this financial product consider principal adverse impacts on sustainability factors?

PAI indicators are incorporated into the sustainability analysis framework and the results are part of the DNSH test. As described above, the DNSH test's result is a binding opinion based on which companies whose economic activities or practices are deemed to have a significant negative impact on the achievement of one or more of the UN SDGs are systematically excluded from the investment universe regardless of their otherwise positive contribution. PAI indicators are therefore continuously considered by these financial products.

In 2023, there was no significant controversy during the year that could cause a divestment of the portfolio.

What were the top investments of this financial product?

Largest Investments	Sector	% Assets	Country
MICROSOFT CORP UW USD	Software	4.84	United States
MASTERCARD INC - A UN USD	Transaction Processing Services	4.82	Denmark

The percentages displayed represent the average of the 4 quarter ends of the reference period.

The displayed country is the country of risk, i.e. the country where the security is domiciled.

The list includes the investments constituting the **greatest proportion of investments** of the financial product during the reference period which is: 02/01/2023-29/12/2023

What was the proportion of sustainability-related investments?

The Fund aims at investing only in sustainable investments as defined in Article 2(17) SFDR. 97.15% of the Fund's net assets have been aligned with sustainable investment objectives on average during the reference period. The Fund may use derivatives for hedging and investment purposes (authorised but very rarely used).

● What was the asset allocation?

#1 Sustainable covers sustainable investments with environmental or social objectives.

#2 Not sustainable includes investments which do not qualify as sustainable investments.

● In which economic sectors were the investments made?

SECTOR BREAKDOWN (%)	Fund	Reference Index
Information Technology	25.5	22.1
Health Care	21.3	12.1
Financials	14.3	15.2
Consumer Discretionary	9.4	11.0

Energy	-	4.5
Real Estate	-	2.5
Cash & cash equivalent	3.2	-

MSCI Breakdown

Breakdown : as of 31/12/2023

To what extent were sustainable investments with an environmental objective aligned with the EU Taxonomy?

To comply with the EU Taxonomy, the criteria for **fossil gas**

include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are economic activities for which low-carbon alternatives are not yet available and that have greenhouse gas emission levels corresponding to the best performance.

Taxonomy-aligned activities are expressed as a share of:

- **Turnover** reflecting the share of revenue from green activities of investee companies,
- **Capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **Operational expenditure** (OpEx) reflecting green operational

As a result of its sustainable objective, this Fund may make investments in economic activities that contribute to the environmental objectives set out in the Article 9 of the Regulation (EU) 2020/852 (the “Taxonomy Regulation”) : (a) climate change mitigation and climate change adaptation, (b) sustainable use and protection of water and marine resources, (c) the transition to a circular economy, (d) pollution prevention and control, (e) the protection and restoration of biodiversity and ecosystems. The alignment of the economic activities of each company with the above objectives is identified and measured to the extent that data is available to the Investment Manager and of an adequate quality. They may also stem from estimations in case when certain amount of information is missing. The estimations are performed under conditions defined by the regulations and respect the principle of prudence. As a result, the alignment percentage provided is conservative. 8.24% of the Fund’s net assets are aligned with the EU taxonomy on average during the reference period.

As an example, the fund invested in ENPHASE ENERGY INC, whose activities are 100% aligned with the European Taxonomy, according to information available as of February 2023. Enphase Energy provides equipment for solar power generation, including microinverters, monitoring, and storage devices. Its predominant product is solar microinverters, which convert direct current generated by a single solar module to alternating current, effectively connecting them to the grid. Use of microinverters can improve power yield from solar energy systems, as well as facilitate small solar power systems (i.e. residential). The company is now moving towards providing technological solutions for small-scale solar energy systems, including residential solar, residential power management/storage, energy management technology for homes, small commercial solar, and off-grid solar/storage.

The company therefore contributes significantly mitigating climate change by promoting renewable energy sources and the transition towards a more sustainable energy system. Increasing its offerings in off-grid solar/storage could also expand access to energy in developing and energy impoverished regions, with solutions including solar water pumps, air coolers, and standalone solar power generation systems. Its grid and power management solutions may also help to develop smart grids and decentralized electricity generation/storage.

ENPHASE ENERGY INC's activities are 100% aligned with the European Taxonomy, according to information available as of February 2023.

Enphase Energy provides equipment for solar power generation, including microinverters, monitoring, and storage devices. Its predominant product is solar microinverters, which convert direct current generated by a single solar module to alternating current, effectively connecting them to the grid. Use of microinverters can improve power yield from solar energy systems, as well as facilitate small solar power systems (i.e. residential). The company is now moving towards providing technological solutions for small-scale solar energy systems, including residential solar, residential power management/storage, energy management technology for homes, small commercial solar, and off-grid solar/storage.

The company therefore contributes significantly mitigating climate change by promoting renewable energy sources and the transition towards a more sustainable energy system. Increasing its offerings in off-grid solar/storage could also expand access to energy in developing and energy impoverished regions, with solutions including solar water pumps, air coolers, and standalone solar power generation systems. Its grid and power management solutions may also help to develop smart grids and decentralized electricity generation/storage.

NB : the results presented hereafter may differ slightly from the aggregate result presented in the Asset Allocation graphical representation.

This is explained by a difference of data source: the figures detailed below are based on estimates from data providers (**or data reported by the issuer and collected by data providers**), while the aggregate result presented in the Asset Allocation graphical representation may rely (for certain issuers) on estimate made by the investment manager.

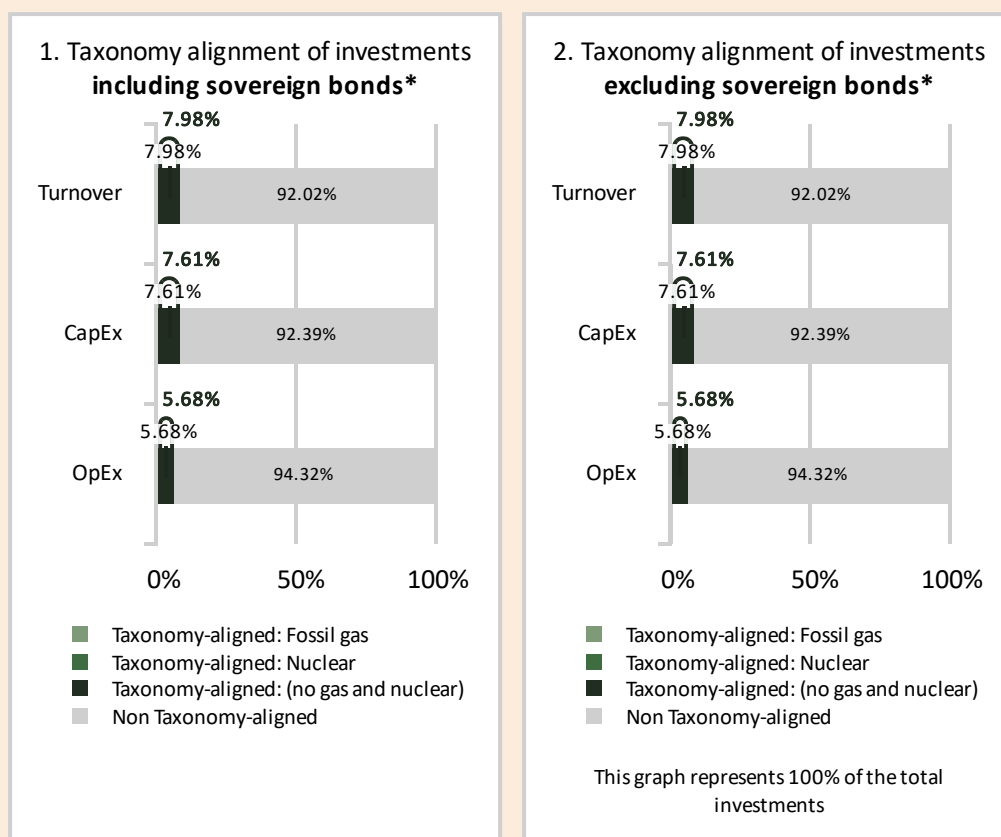

Please note that any estimated data comes from either the data providers or the investment manager (only for the aggregated data in the Asset Allocation graphical representation).

● ***Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy ¹ ?***

Yes:
 In fossil gas In nuclear energy
 No

1. Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objectives - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

*For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures.

● **What was the share of investments made in transitional and enabling activities?**

The share of investments in transitional and enabling activities was 4.13%.

● **How did the percentage of investments aligned with the EU Taxonomy compare with previous reference periods?**

The percentage of investments aligned with the EU taxonomy for this new reference period cannot be compared with that of the previous reference period due to methodological changes: calculation of an end-of-period snapshot versus average of quarters in the new reference period, calculation previously based solely on

estimated data versus calculation combining both estimates and directly reported data.

However, there was a slight increase of share of investments made in transitional and enabling activities from the prior period, due to a combination of factors, including the addition of Enphase Energy, as 100% of the company's revenues are from enabling activities (provides equipment for solar power generation, including microinverters, monitoring, and storage devices), as well as an increase in weight in Vestas Wind Systems which also has a high share of these activities.

are

sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

What was the share of sustainable investments with an environmental objective that were not aligned with the EU Taxonomy?

The Fund has invested 36.09% in sustainable investments with an environmental objective, including 27.85% sustainable investments that are not aligned with the EU taxonomy. The Investment Manager's sustainable impact assessment framework identifies certain activities that are not currently covered by the EU Taxonomy or considered as making a substantial contribution to environmental Taxonomy objectives. This is affected by performing an overall sustainability assessment on each investee company, which includes a review of positive impacts regarding three environmental themes: Climate Stability, Biodiversity and Circular Economy. These themes aim at identifying companies which activities or practices:

- help develop low carbon energy, eco-efficiency, clean transportation, green building or align with an advanced decarbonation strategy; or
- support sustainable land use, land preservation and sustainable water management or align with an advanced biodiversity preservation strategy; or
- foster sustainable waste management or circular business model.

The Fund does not commit to a minimum share of sustainable investments with an environmental objective that are not aligned to the EU Taxonomy.

As an example, the fund invested in BALL CORP, considered as generating positive impact on climate change mitigation, thanks to its virtuous climate-risk mitigation practices which include science-based target for 55% reduction in full scope GHG emissions by 2030 against a 2017 baseline. The plan includes support to local aluminum collection sorting and recycling in all vending locations worldwide which account for half of the decarbonization effort. The company also targets 75% renewable energy supply from 28% now, selection of low carbon virgin aluminum suppliers and electrification of processes. The credibility of the plan is supported by a progress in increased recycled content amounting now to 66% in a journey to 85% target. While the company's eligibility for the taxonomy is 87%, the final alignment analysis is 0%. This figure regarding alignment is mainly explained by the lack of reporting shared by the company, preventing from the collection of data points necessary to validate the DNSH and Minimum Standards pillars.

What was the share of socially sustainable investments?

The Fund has invested 61.05% in companies that contribute to tackling inequality or that foster social cohesion, social integration and labor relations, or an investment in human capital or economically or socially disadvantaged communities, provided that such investments do not significantly harm any of the environmental/social objectives and that the investee companies follow good governance practices, in particular with respect to sound management structures, employee relations, remuneration of staff and tax compliance. This is affected by performing an overall sustainability assessment on each investee company, which includes a review of positive impacts regarding three social themes: Socio-economic development, Health wellness and Diversity inclusion. These themes aim at identifying companies which activities or practices:

- help foster access to basic and sustainable services, local impact or promote advanced working conditions;
- support the development of healthcare, healthy nutrition, knowledge, education or safety;
- promote diversity and inclusion through dedicated products and services or through advanced practices targeting the workforce.

As an example, we invest in companies that we believe will have significant impact on global health. Eli Lilly & Co. engages in the discovery, development, manufacture and sale of pharmaceutical products including diabetes and obesity. They are therefore not aligned with the European taxonomy which only identifies solutions providers for environmental issues.

What investments were included under “not sustainable”, what was their purpose and were there any minimum environmental or social safeguards?

The Fund aims at investing only in equity securities qualifying as sustainable investment. For technical or hedging purposes, the Fund may hold cash or cash equivalents and derivatives for currency risk management purposes up to 10% of its net assets. Due to the technical and neutral nature of the asset, such instruments are not considered as investments and thus no minimum safeguards have been put in place.

What actions have been taken to attain the sustainable investment objective during the reference period?

Engagement activity forms an integral part of Mirova's responsible investment approach. Mirova's engagement strategy seeks to monitor and thrive to improve companies' products and practices from an environmental, social, and governance point of view. As a result, one of the core functions of the Sustainability Research team is engagement, both on individual and collaborative levels:

- Individual engagement: in which Mirova's ESG analysts interact one-on-one with the companies to monitor performance and progress on ESG topics, and to encourage improvement in their sustainability practices. The purpose of individual engagement is not only to ensure responsible practices in line with our standards, but also to promote better ESG practices and encourage the development of solutions for the major environmental and social challenges associated with each sector. Mirova conducted one-on-one engagements with companies on various topics throughout the year. Notably, Mirova engaged with pharmaceutical companies involved in the GLP-1 class of drugs to address concerns of off-label marketing/promotion of obesity and diabetes drugs. After several engagements with the companies, and based on the information currently available, we believe that measures implemented to address these risks, for example measures implemented with regard to sales trainings, audits and remuneration schemes, risks related to social media promotions by individual public personalities, etc., are aligned with our ethical standards and common practices in the industry. As the products continue to penetrate the market, our team will continue to monitor signals around potential misuse, safety concerns, and accessibility matters.
- Collaborative engagement: Mirova joins with other investors and representatives of civil society to identify controversial practices, encourage greater transparency and demand, where necessary, that companies change their practices. Additionally, Mirova leverages its voting rights to further push companies towards the development of more sustainable portfolios and the adoption of best practices, by systematically exercising their voting rights based on an in-house voting policy that largely embeds the concepts of a sustainable-at-core, stakeholder-oriented governance. Proxy voting is used to convey messages during pre/post vote dialogue and via opposition to ad hoc items. Where possible, Mirova may co-sign or lead the filing of shareholder items.

Mirova also engage with regulators to share its vision of sustainable investment to improve standards and regulations across the financial sector and to foster sustainable investment. Mirova is committed to promoting regulations, including legislative changes, standards or labels, and practices that support sustainable investment and create long-term value. Further information in relation to engagement priorities and engagement policy carried out by Mirova can be found on the website at <https://www.mirova.com/en/research/voting-and-engagement>.

How did this financial product perform compared to the reference sustainable benchmark?

Not applicable.

- ***How did the reference benchmark differ from a broad market index?***
Not applicable.
- ***How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the sustainable investment objective?***
Not applicable.
- ***How did this financial product perform compared with the reference benchmark?***
Not applicable.
- ***How did this financial product perform compared with the broad market index?***
Not applicable.

Reference benchmarks are indexes to measure whether the financial product attains the sustainable objective.

NB: all figures related to sustainability/ taxonomy are calculated as an average of the values of the 4 quarter ends of the reference period.

Template periodic disclosure for the financial products referred to in Article 9, paragraphs 1 to 4a, of Regulation (EU) 2019/2088 and Article 5, first paragraph, of Regulation (EU) 2020/852

Product Name : MIROVA FUNDS - Mirova US Sustainable Equity Fund
 Legal Entity Identifier : 2221 00UM7LJSGHLKZ0 42

Sustainable investment objective

Did this financial product have a sustainable investment objective?

Yes

No

It made **sustainable investments with an environmental objective: 33.48%**

in economic activities that qualify as environmentally sustainable under the EU Taxonomy

in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

It made **sustainable investments with a social objective: 61.93%**

It **promoted Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of ___% of sustainable investments

with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with a social objective

It promoted E/S characteristics, **but did not make any sustainable investments**

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

To what extent was the sustainable investment objective of this financial product met?

The sustainable investment objective of the Fund is to allocate the capital towards companies that contribute positively through their products, services and/or practices to the achievement of one or more of the United Nations Sustainable Development Goals (the "SDGs").

The fund sustainable investment objectives were the following : 90% in Sustainable Investment (SI), with an objective of 25% in SIE (Sustainable Investment Environmental) and 25% in SIS (Sustainable Investment Social).

Sustainability indicators measure how the sustainable objectives of this financial product are achieved.

The percentage of non-SI at any given time is expected to be the weight of cash & cash equivalents ('cash') in the Fund. As the level of cash in the Fund as a percentage of total assets was higher at the end of 2023 than at the end of 2022, the percentage of SI was therefore lower as a percentage of total assets at the end of 2023 compared to the end of 2022. The change in the percentage of cash may also partly explain the changes in the percentage of SIE and SIS. Changes in the percentage of SIE and SIS may also be a result of portfolio transactions (positions in companies added, sold, increased, or decreased during the period) and/or performance of individual stocks over the period leading to higher or lower weights in the Fund. More specifically, the percentage of SIS was higher, while the percentage of SIE was lower, compared to the prior period; this was driven by the sale of three companies in 2023 that were SIE, while the largest addition to the portfolio in 2023 was in a company that is an SIS.

Alignment with the EU Taxonomy was slightly lower from the prior year due to the aforementioned factors as well, however the difference from the prior year is marginal.

95.41% of the Fund's net assets were aligned with sustainable investment objectives on average during the reference period. Alignment with EU Taxonomy amounted to 9.69%. The indicators have not been subject to an assurance provided by an auditor or a review by a third party.

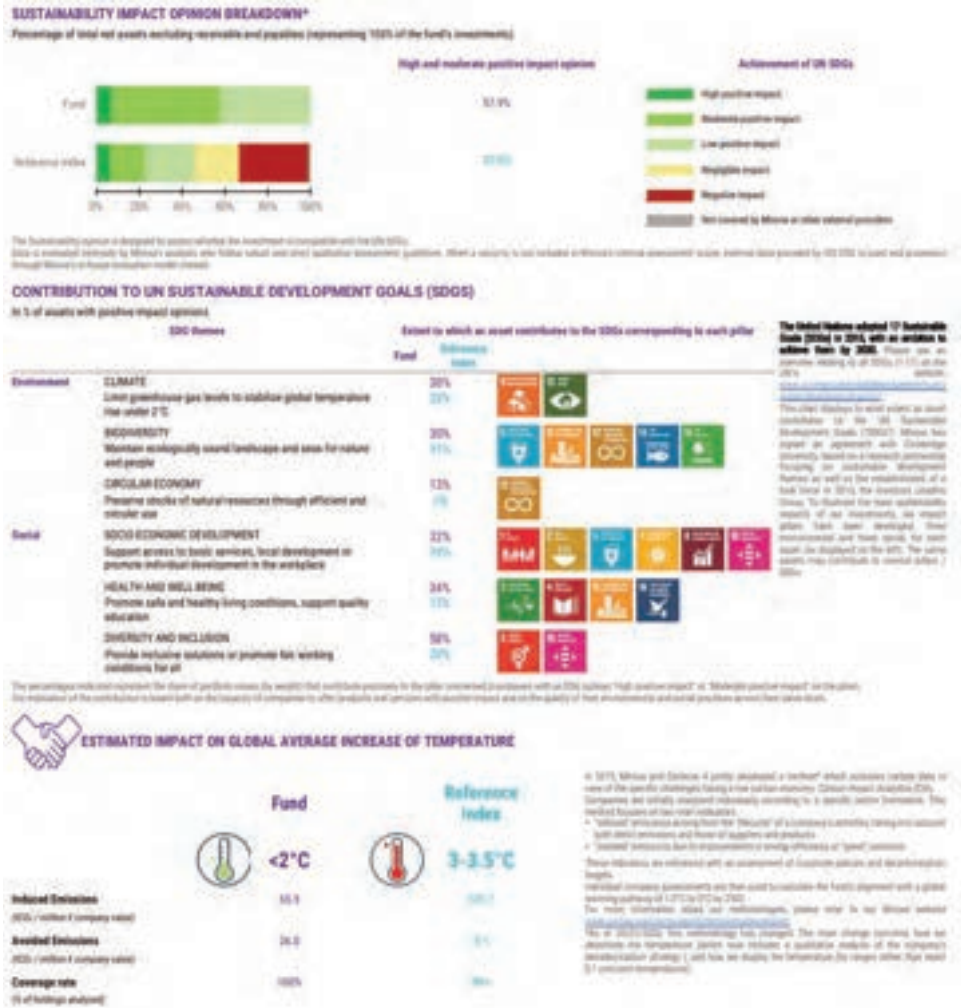

● ***How did the sustainability indicators perform?***

Benchmark :S&P 500 TOTAL RETURN EUR. The benchmark is not intended to be aligned with environmental and social ambitions as promoted by the fund.

The fund followed the KPIs described hereafter. The figures are the average result of the 4 quarterly reports.

Overall comment on this year's performance:

- As a result of the Fund investing only in assets that meet the criteria to be included in the Fund investment universe and evaluated as having a positive impact (i.e. assessed as having high, moderate or low impact as per the Investment Manager's sustainability opinion methodology), the Fund was able to achieve the objective of allocating capital towards companies that contribute positively through their products, services and/or practices to the achievement of one or more of the United Nations Sustainable Development Goals (100% of equity holdings).
- Regarding the contribution to the various SDG themes, this is a product of the broader bottom-up stock picking approach. In particular, the Fund demonstrates robust exposure to impact on the diversity & inclusion pillar as many of the companies that are held in the portfolio exhibit exemplary diversity and inclusion practices.
- The Fund also aims to represent an economy that is expected to result in global temperature rise of no more than 2 degrees Celsius this century; the Fund maintained this alignment for the period as a result of our portfolio construction approach which incorporates a targeted alignment to 2 degrees Celsius or better (lower).
- The natural consequence of our stock picking approach is a much better sustainability impact and global temperature rise scenario than the reference index.

● **... and compared to previous periods?**

A comparison of the performance of sustainability indicators with the previous period cannot be made due to the application of the new requirements for the new reference period and the enhancement of our methodology. For the previous period, the indicators were calculated on the basis of a snapshot at the end of the period, whereas they are now calculated as an average over the quarters of the reference period.

However, as a result of the Fund investing only in assets that meet the criteria to be included in the Fund investment universe and evaluated as having a positive impact (i.e. assessed as having high, moderate or low impact as per the Investment Manager's sustainability opinion methodology), the Fund was able to achieve the objective of allocating capital towards companies that contribute positively through their products, services and/or practices to the achievement of one or more of the United Nations Sustainable Development Goals (100% of equity holdings).

- Regarding the contribution to the various SDG themes, this is a product of the broader bottom-up stock picking approach. As a result of more granular impact tracking beginning in 2023, particularly on positive impact from companies' advanced practices, the Fund demonstrates robust exposure to impact on the diversity & inclusion pillar in particular compared to the prior year as many of the companies that are held in the portfolio exhibit exemplary diversity and inclusion practices.
- The Fund also aims to represent an economy that is expected to result in global temperature rise of no more than 2 degrees Celsius this century; the

Fund maintained this alignment for the period, with no significant changes from the prior period.

- As in the prior period, the Fund demonstrates a better overall sustainability impact and global temperature rise scenario than the reference index, a natural consequence of our stock picking approach.

How did the sustainable investments not cause significant harm to any sustainable investment objective?

The sustainability analysis aims to identify the relevant residual environmental and social risks originating from companies' activities and practices and assesses the quality of the company's measures to mitigate these risks (the "DNSH test"). Such analysis considers notably the degree of exposure of the investee company to certain sectors or activities that may be considered to be damaging for the environment and/or the society and exposure to relevant environmental or social controversies. As a result of this qualitative analysis, the Investment Manager issues a binding opinion based on which companies whose economic activities or practices are deemed to have a significant negative impact on the achievement of one or more of the UN SDGs are systematically excluded from the investment universe regardless of their otherwise positive contribution. Therefore, over the reporting period, all investments in the Fund were complying with the Investment Manager's DNSH criteria.

How were the indicators for adverse impacts on sustainability factors taken into account?

As part of the analysis of residual ESG risks conducted on each investee company, the Fund systematically assesses and monitors indicators that are deemed to indicate the presence of principal adverse impact (including consideration of data relating to the mandatory PAI indicators referred to in the consolidated Regulatory Technical Standards for assessment of sustainable investment in accordance with art. 2 (17) SFDR). When the data necessary for the calculation of certain PAI indicators are not available, the Investment Manager may use qualitative or quantitative proxies that cover themes similar to the PAI indicators in question. Adverse impacts are prioritized according to the specificities of sectors and business models of companies considered for investment by using a combination of criteria based on:

- analysis of the company's exposure to environmental impacts based on science-based data from international organisations (e.g. energy intensity, impacts on biodiversity, etc),
- analysis of the company's exposure to fundamental rights and employee matters through its locations, business model and supply chain organization (e.g. exposure to health and safety risks, exposure to countries with specific human rights risks, etc),
- analysis of the company's footprint on local communities and consumers,
- screening of on-going or potential controversies.

Where the Investment Manager deems the investee company's processes and practices are insufficient to mitigate environmental, social and governance risks, notably with regards to the relevant PAIs, the company's impact is deemed as negative which makes it ineligible for investment.

Further details can be found in the table hereunder, which lists the main indicators taken into account by Mirova when taking PAIs into account.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

	Adverse Sustainability indicator	How PAIs are taken into account by Mirova
Greenhouse gas emissions	1. GHG emissions	Exclusion of the most carbon intensive entities and companies with no or insufficient plans to reduce GHG emissions Systematic integration in qualitative internal analysis
	2. Carbon footprint	
	3. GHG intensity of investee companies	
	4. Exposure to companies active in the fossil fuel sector	Exclusion of companies active in the fossil fuel sector For companies involved in fossil fuel extraction, processing/refining, and trading, exclusion applies to companies with: • >5% of revenues from coal or oil, including unconventional oil, • >10% of revenues from unconventional gas. For companies that produce dedicated equipment/services for the fossil fuel sector, exclusion applies to companies with >20% of revenues from these equipment/services. For companies involved in electricity production (>10% of sales related to electricity production), exclusion applies to companies with a generation mix dominated by coal, with a carbon intensity >350 gCO ₂ /MWh.
	5. Share of non-renewable energy consumption and production	Integration in qualitative internal analysis when relevant
	6. Energy consumption intensity per high impact climate sector	Integration in qualitative internal analysis when relevant
Biodiversity	7. Activities negatively affecting biodiversity-sensitive areas	Exclusion of companies or projects significantly harming biodiversity sensitive areas. Systematic integration in qualitative internal analysis. Part of controversy analysis
Water	8. Emissions to water	Integration in qualitative internal analysis when relevant
Waste	9. Hazardous waste and radioactive waste ratio	Integration in qualitative internal analysis when relevant
Social and Employee matters	10. Violations of UN Global Compact principles and OECD guidelines for Multinational Enterprises	Exclusion of companies violating UNGC and OECD principles Systematic integration in qualitative internal analysis Part of controversy analysis
	11. Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises	Exclusion for large companies, case-by-case for small companies or projects Systematic integration in qualitative internal analysis Engagement plans / ESAP with investees when relevant
	12. Unadjusted gender pay gap	Systematic integration of gender equality in qualitative internal analysis Engagement plans / ESAP with investees
	13. Board gender diversity	Systematic integration of gender equality in qualitative internal analysis Engagement plans / ESAP with investees
Additional PAI indicators	14. Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)	Exclusion (0% sales threshold)
	4. Investments in companies without carbon emission reduction initiatives	Exclusion of the most carbon intensive entities and companies with no or insufficient plans to reduce GHG emissions Systematic integration in qualitative internal analysis
	14. Number of identified cases of severe human rights issues and incidents	Exclusion of companies with severe human rights issues and incidents. Systematic integration in qualitative internal analysis Part of controversy analysis
	17. Number of convictions and amount of fines for violation of anti-corruption and anti-bribery laws	Exclusion of companies severely violating anti-corruption and anti-bribery laws Systematic integration in qualitative internal analysis Part of controversy analysis

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The Investment Manager screens investee companies against adherence with OECD Guidelines for Mul. national Enterprises and UN Guiding Principles on Business and Human Rights. The Investment Manager continuously reviews companies' track records and news flows to identify significant controversies. Companies' involvement and resolving measures are taken into account. Risks of potential breach may be monitored through engagement to obtain additional assurance. Companies determined by the Investment Manager to be in serious breach of OECD Guidelines for Multinational Enterprises or UN Guiding Principles on Business and Human Rights are recognized as doing significant harm and are therefore rendered non-eligible. As a consequence, over the reporting period, all investments were considered to be respectful with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights.

This indicator is systematically monitored by our external service provider, as well as by a constant watch on controversies and regular meetings between Management and the Research team. Any severe and repeated breach of OECD guidelines will be excluded from our investment universe. Mirova's investment

universes are monitored with a special focus on controversies. The aim is to detect the presence of violations of the UN Covenant and the OECD Guidelines. The action plan for dealing with a controversy will depend on the severity, as well as the corrective measures already announced by the company. Actions include :

- Direct individual engagement,
- Exercising voting rights,
- Collaborative engagement
- Divestment.

How did this financial product consider principal adverse impacts on sustainability factors?

PAI indicators are incorporated into the sustainability analysis framework and the results are part of the DNSH test. As described above, the DNSH test's result is a binding opinion based on which companies whose economic activities or practices are deemed to have a significant negative impact on the achievement of one or more of the UN SDGs are systematically excluded from the investment universe regardless of their otherwise positive contribution. PAI indicators are therefore continuously considered by these financial products. In 2023, there was no significant controversy during the year that could cause a divestment of the portfolio.

What were the top investments of this financial product?

Largest Investments	Sector	% Assets	Country
MICROSOFT CORP UW USD	Software	8.60	United States
NVIDIA CORP UW USD	Semiconductors	7.41	United States
THERMO FISHER SCIENTIFIC INC UN USD	Medical Equipment	5.20	United States

The percentages displayed represent the average of the 4 quarter ends of the reference period.

The displayed country is the country of risk, i.e. the country where the security is domiciled.

What was the proportion of sustainability-related investments?

The list includes the investments constituting the greatest proportion of investments of the financial product during the reference period which is: 02/01/2023-29/12/2023

The Fund aims at investing only in sustainable investments as defined in Article 2(17) SFDR. 95.41% of the Fund's net assets have been aligned with sustainable investment objectives on average during the reference period. The Fund may use derivatives for hedging and investment purposes (authorised but very rarely used).

Asset allocation describes the share of investments in specific assets.

● **What was the asset allocation?**

#1 Sustainable covers sustainable investments with environmental or social objectives.

#2 Not sustainable includes investments which do not qualify as sustainable investments.

● **In which economic sectors were the investments made?**

SECTOR BREAKDOWN (%)	Fund	Reference Index
Information Technology	37.5	28.5
Health Care	17.3	12.6
Industrials	12.8	9.1
Financials	7.5	13.0
Utilities	5.8	2.3
Materials	5.5	2.4
Consumer Discretionary	4.8	10.9
Consumer Staples	2.7	6.2
Communication Services	-	8.6
Energy	-	3.9
Real Estate	-	2.5
Cash & cash equivalent	6.0	-

MSCI Breakdown

Sector breakdown : as of 31/12/2023.

To what extent were sustainable investments with an environmental objective aligned with the EU Taxonomy?

As a result of its sustainable objective, this Fund may make investments in economic activities that contribute to the environmental objectives set out in the Article 9 of the Regulation (EU) 2020/852 (the "Taxonomy Regulation"): (a) climate change mitigation and climate change

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and

switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are economic activities for which low-carbon alternatives are not yet available and that have greenhouse gas emission levels corresponding to the best performance.

Taxonomy-aligned activities are expressed as a share of:

- **Turnover** reflecting the share of revenue from green activities of investee companies,
- **Capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **Operational expenditure** (OpEx) reflecting green operational

adapta. on, (b) sustainable use and protection of water and marine resources, (c) the transition to a circular economy, (d) pollution prevention and control, (e) the protection and restoration of biodiversity and ecosystems. The alignment of the economic activities of each company with the above objectives is identified and measured to the extent that data is available to the Investment Manager and of an adequate quality. They may also stem from estimations in case when certain amount of information is missing. The estimations are performed under conditions defined by the regulations and respect the principle of prudence. The methodology for collecting alignment data and the quality of available data are being improved. As a result, the alignment percentage provided is conservative. 9.69% of the Fund's net assets are aligned with the EU taxonomy on average during the reference period.

As an example, the fund invested in ENPHASE ENERGY INC, whose activities are 100% aligned with the European Taxonomy, according to information available as of December 2023.

Enphase Energy provides equipment for solar power generation, including microinverters, monitoring, and storage devices. Its predominant product is solar microinverters, which convert direct current generated by a single solar module to alternating current, effectively connecting them to the grid. Use of microinverters can improve power yield from solar energy systems, as well as facilitate small solar power systems (i.e. residential). The company is now moving towards providing technological solutions for small-scale solar energy systems, including residential solar, residential power management/storage, energy management technology for homes, small commercial solar, and off-grid solar/storage.

The company therefore contributes significantly mitigating climate change by promoting renewable energy sources and the transition towards a more sustainable energy system. Increasing its offerings in off-grid solar/storage could also expand access to energy in developing and energy impoverished regions, with solutions including solar water pumps, air coolers, and standalone solar power generation systems. Its grid and power management solutions may also help to develop smart grids and decentralized electricity generation/storage.

NB : the results presented hereafter may differ slightly from the aggregate result presented in the Asset Allocation graphical representation.

This is explained by a difference of data source: the figures detailed below are based on estimates from data providers (or data reported by the issuer and collected by data providers), while the aggregate result presented in the Asset Allocation graphical representation may rely (for certain issuers) on estimate made by the investment manager.

Please note that any estimated data comes from either the data providers or the investment manager (only for the aggregated data in the Asset Allocation graphical representation).

● **Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy ¹ ?**

Yes:
 In fossil gas In nuclear energy
 No

1. Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objectives - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.*

*For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures.

● **What was the share of investments made in transitional and enabling activities?**

The share of investments in transitional and enabling activities was 5.68%.

● **How did the percentage of investments aligned with the EU Taxonomy compare with previous reference periods?**

The percentage of investments aligned with the EU taxonomy for this new reference period cannot be compared with that of the previous reference period due to methodological changes: calculation of an end-of-period snapshot versus average of quarters in the new reference period, calculation previously based solely on estimated data versus calculation combining both estimates and directly reported data.

However, there was an increase in the share of investments made in transitional and enabling activities from the prior period, due to a combination of factors, including the addition of Enphase Energy, as 100% of the company's revenues are from enabling activities (provides equipment for solar power generation, including microinverters, monitoring, and storage devices).

are

sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

What was the share of sustainable investments with an environmental objective that were not aligned with the EU Taxonomy?

The Fund has invested 33.48% in sustainable investments with an environmental objective, including 23.79% sustainable investments that are not aligned with the EU taxonomy. The Investment Manager's sustainable impact assessment framework identifies certain activities that are not currently covered by the EU Taxonomy or considered as making a substantial contribution to environmental Taxonomy objectives. This is affected by performing an overall sustainability assessment on each investee company, which includes a review of positive impacts regarding three environmental themes: Climate Stability, Biodiversity and Circular Economy. These themes aim at identifying companies which activities or practices:

- help develop low carbon energy, eco-efficiency, clean transportation, green building or align with an advanced decarbonation strategy; or
- support sustainable land use, land preservation and sustainable water management or align with an advanced biodiversity preservation strategy; or
- foster sustainable waste management or circular business model. The Fund does not commit to a minimum share of sustainable investments with an environmental objective that are not aligned to the EU Taxonomy.

As an example, the fund invests in BALL CORP, considered as generating positive impact on climate change mitigation thanks to its virtuous climate-risk mitigation practices which include science-based target for 55% reduction in full scope GHG emissions by 2030 against a 2017 baseline. The plan includes support to local aluminum collection sorting and recycling in all vending locations worldwide which account for half of the decarbonization effort. The company also targets 75% renewable energy supply from 28% now, selection of low carbon virgin aluminum suppliers and electrification of processes. The credibility of the plan is supported by a progress in increased recycled content amounting now to 66% in a journey to 85% target. While the company's eligibility for the taxonomy is 87%, the final alignment analysis is 0%. This figure regarding alignment is mainly explained by the lack of reporting shared by the company, preventing from the collection of data points necessary to validate the DNSH and Minimum Standards pillars.

What was the share of socially sustainable investments?

The Fund has invested 61.93% in companies that contribute to tackling inequality or that foster social cohesion, social integration and labor relations, or an investment in human capital or economically or socially disadvantaged communities, provided that such investments do not significantly harm any of the environmental/social objectives and that the investee companies follow good governance practices, in particular with respect to sound management structures, employee relations, remuneration of staff and tax compliance. This is affected by performing an overall sustainability assessment on each investee company, which includes a review of positive impacts regarding three social themes: Socio-economic development, Health wellness and Diversity inclusion. These themes aim at identifying companies which activities or practices:

- help foster access to basic and sustainable services, local impact or promote advanced working conditions;
- support the development of healthcare, healthy nutrition, knowledge, education or safety;
- promote diversity and inclusion through dedicated products and services or through advanced practices targeting the workforce.

For example, we invest in companies that we believe will have significant impact on global health. Eli Lilly & Co. engages in the discovery, development, manufacture and sale of

pharmaceutical products including diabetes and obesity. They are therefore not aligned with the European taxonomy which only identifies solutions providers for environmental issues.

What investments were included under “not sustainable”, what was their purpose and were there any minimum environmental or social safeguards?

The Fund aims at investing only in securities qualifying as sustainable investment. For technical or hedging purposes, the Fund may hold cash or cash equivalents and derivatives for currency risk management purposes. Due to the technical and neutral nature of the asset, such instruments are not considered as investments and thus no minimum safeguards have been put in place.

What actions have been taken to attain the sustainable investment objective during the reference period?

Engagement activity forms an integral part of Mirova's responsible investment approach. Mirova's engagement strategy seeks to monitor and thrive to improve companies' products and practices from an environmental, social, and governance point of view. As a result, one of the core functions of the Sustainability Research team is engagement, both on individual and collaborative levels:

- Individual engagement: in which Mirova's ESG analysts interact one-on-one with the companies to monitor performance and progress on ESG topics, and to encourage improvement in their sustainability practices. The purpose of individual engagement is not only to ensure responsible practices in line with our standards, but also to promote better ESG practices and encourage the development of solutions for the major environmental and social challenges associated with each sector
 - For example, Mirova conducted one-on-one engagements with companies on various topics throughout the year. Notably, Mirova engaged with pharmaceutical companies involved in the GLP-1 class of drugs to address concerns of off-label marketing/promotion of obesity and diabetes drugs. After several engagements with the companies, and based on the information currently available, we believe that measures implemented to address these risks, for example measures implemented with regard to sales trainings, audits and remuneration schemes, risks related to social media promotions by individual public personalities, etc., are aligned with our ethical standards and common practices in the industry. As the products continue to penetrate the market, our team will continue to monitor signals around potential misuse, safety concerns, and accessibility matters.
- Collaborative engagement: Mirova joins with other investors and representatives of civil society to identify controversial practices, encourage greater transparency and demand, where necessary, that companies change their practices. Additionally, Mirova leverages its voting rights to further push companies towards the development of more sustainable portfolios and the adoption of best practices, by systematically exercising their voting rights based on an in-house voting policy that largely embeds the concepts of a sustainable-at-core, stakeholder-oriented governance. Proxy voting is used to convey messages during pre/post vote dialogue and via opposition to ad hoc items. Where possible, Mirova may co-sign or lead the filing of shareholder items.

Mirova also engage with regulators to share its vision of sustainable investment to improve standards and regulations across the financial sector and to foster sustainable investment. Mirova is committed to promoting regulations, including legislative changes, standards or labels, and practices that support sustainable investment and create long-term value.

Further information in relation to engagement priorities and engagement policy carried out by Mirova can be found on the website at <https://www.mirova.com/en/research/voting-and-engagement>.

How did this financial product perform compared to the reference sustainable benchmark?

Not applicable.

- ***How did the reference benchmark differ from a broad market index?***
Not applicable.
- ***How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the sustainable investment objective?***
Not applicable.
- ***How did this financial product perform compared with the reference benchmark?***
Not applicable.
- ***How did this financial product perform compared with the broad market index?***
Not applicable.

Reference benchmarks are indexes to measure whether the financial product achieves the sustainable objective.

Template periodic disclosure for the financial products referred to in Article 9, paragraphs 1 to 4a, of Regulation (EU) 2019/2088 and Article 5, first paragraph, of Regulation (EU) 2020/852

Product Name : MIROVA FUNDS - Mirova Europe Sustainable Equity Fund
 Legal Entity Identifier : 5493 00NFW1DEW38PIO 76

Sustainable investment objective

Did this financial product have a sustainable investment objective?

Yes

No

It made **sustainable investments with an environmental objective: 52.36%**

in economic activities that qualify as environmentally sustainable under the EU Taxonomy

in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

It made **sustainable investments with a social objective: 44.94%**

It **promoted Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of ___% of sustainable investments

with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with a social objective

It promoted E/S characteristics, **but did not make any sustainable investments**

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

To what extent was the sustainable investment objective of this financial product met?

The sustainable investment objective of the Fund is to invest in bonds and/or equity securities issued by companies:

- that address opportunities linked to major sustainable themes such as biodiversity, climate, diversity human capital, health human development, and
- whose economic activities contribute positively through their products, services and/or practices to the achievement of one or more of the United Nations Sustainable

Sustainability indicators measure how the sustainable objectives of this financial product are achieved.

Development Goals (the “SDGs”). The Fund aims at contributing to keeping the maximum global temperature rise to a maximum 2 degrees Celsius.

The fund sustainable investment objectives were the following : 90% in Sustainable Investment (SI), with an objective of 25% in SIE (Sustainable Investment Environmental) and 25% in SIS (Sustainable Investment Social).

97.30% of the Fund's net assets were aligned with sustainable investment objectives on average during the reference period. Alignment with EU Taxonomy amounted to 12.83%. The indicators have not been subject to an assurance provided by an auditor or a review by a third party.

The change in the percentage of cash may partly explain the changes in the percentage of SIE and SIS. Changes in the percentage of SIE and SIS may also be a result of portfolio transactions (positions in companies added, sold, increased, or decreased during the period) and/or performance of individual stocks over the period leading to higher or lower weights in the Fund. More specifically, the percentage of SIS was higher, while the percentage of SIE was lower, compared to the prior period; As a whole, Mirova Euro Sustainable Equities Fund is well above the sustainable investment objectives with a total alignment of 97.30% with sustainable investment objectives on average during the reference period (versus 90% targeted). The fund show strong results in both SIE (Sustainable Investment Environmental) and in SIS (Sustainable Investment Social) with 52.36% and 44.94% respectively (versus target of 25% in SIE and 25% in SIS).

Alignment with the EU Taxonomy is also better than expectations (12.83% versus 8% expected).

● **How did the sustainability indicators perform?**

Benchmark: 50.00%: MSCI EUROPE NET TOTAL RETURN EUR INDEX + 50.00%: BLOOMBERG EURO AGGREGATE CORPORATE TOTAL RETURN INDEX VALUE UNHEDGED EUR. The benchmark is not intended to be aligned with environmental and social ambitions as promoted by the fund.

The fund followed the KPIs described hereafter. The figures are the average result of the 4 quarterly reports.

Despite a very challenging 2023 year for companies linked to renewable energies (Utilities for instance) which had very low financial performances (like Voltalia showing an underperformance of -39% or Orsted at -40%), the fund achieved strong sustainability indicators both in terms of high and moderate positive impact percentage versus the index and also in the carbon avoided emissions.

● **... and compared to previous periods?**

A comparison of the performance of sustainability indicators with the previous period cannot be made due to the applica. on of the new requirements for the new reference period and the enhancement of our methodology. For the previous period, the indicators were calculated on the basis of a snapshot at the end of the period, whereas they are now calculated as an average over the quarters of the reference period.

However, regarding the contribution to the various SDG themes, the Fund demonstrates robust exposure to impact on Climate, Biodiversity and Diversity & Inclusion pillars in particular compared to the prior year as many of the companies that are held in the portfolio exhibit exemplary diversity and inclusion practices. The Fund also aims to represent an economy that is expected to result in global temperature rise of no more than 2 degrees Celsius this century; the Fund maintained this alignment for the period, with no significant changes from the prior period.

As in the prior period, the Fund demonstrates a better overall sustainability impact and global temperature rise scenario than the reference index, a natural consequence of our stock picking approach.

● **How did the sustainable investments not cause significant harm to any sustainable investment objective?**

The sustainability analysis aims to identify the relevant residual environmental and social risks originating from companies' activities and practices and assesses the quality of the company's measures to mitigate these risks (the "DNSH test"). Such

analysis considers notably the degree of exposure of the investee company to certain sectors or activities that may be considered to be damaging for the environment and/or the society and exposure to relevant environmental or social controversies. As a result of this qualitative analysis, the Investment Manager issues a binding opinion based on which companies whose economic activities or practices are deemed to have a significant negative impact on the achievement of one or more of the UN SDGs are systematically excluded from the investment universe regardless of their otherwise positive contribution. Therefore, over the reporting period, all investments in the Fund were complying with the Investment Manager's DNSH criteria.

— *How were the indicators for adverse impacts on sustainability factors taken into account?*

As part of the analysis of residual ESG risks conducted on each investee company, the Fund systematically assesses and monitors indicators that are deemed to indicate the presence of principal adverse impact (including consideration of data relating to the mandatory PAI indicators referred to in the consolidated Regulatory Technical Standards for assessment of sustainable investment in accordance with art. 2 (17) SFDR). When the data necessary for the calculation of certain PAI indicators are not available, the Investment Manager may use qualitative or quantitative proxies that cover themes similar to the PAI indicators in question. Adverse impacts are prioritized according to the specificities of sectors and business models of companies considered for investment by using a combination of criteria based on:

- analysis of the company's exposure to environmental impacts based on science-based data from international organisations (e.g. energy intensity, impacts on biodiversity, etc),
- analysis of the company's exposure to fundamental rights and employee matters through its locations, business model and supply chain organization (e.g. exposure to health and safety risks, exposure to countries with specific human rights risks, etc),
- analysis of the company's footprint on local communities and consumers,
- screening of on-going or potential controversies.

Where the Investment Manager deems the investee company's processes and practices are insufficient to mitigate environmental, social and governance risks, notably with regards to the relevant PAIs, the company's impact is deemed as negative which makes it ineligible for investment. Further details can be found in the table hereunder, which lists the main indicators taken into account by Mirova when taking PAIs into account.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

	Adverse Sustainability indicator	How PAIs are taken into account by Mirova
Greenhouse gas emissions	1. GHG emissions	Exclusion of the most carbon intensive entities and companies with no or insufficient plans to reduce GHG emissions Systematic integration in qualitative internal analysis
	2. Carbon footprint	
	3. GHG intensity of investee companies	
	4. Exposure to companies active in the fossil fuel sector	Exclusion of companies active in the fossil fuel sector For companies involved in fossil fuel extraction, processing/refining, and trading, exclusion applies to companies with: • >5% of revenues from coal or oil, including unconventional oil, • >10% of revenues from unconventional gas. For companies that produce dedicated equipment/services for the fossil fuel sector, exclusion applies to companies with >20% of revenues from these equipment/services. For companies involved in electricity production (>10% of sales related to electricity production), exclusion applies to companies with a generation mix dominated by coal, with a carbon intensity >350 gCO ₂ /MWh.
	5. Share of non-renewable energy consumption and production	Integration in qualitative internal analysis when relevant
	6. Energy consumption intensity per high impact climate sector	Integration in qualitative internal analysis when relevant
Biodiversity	7. Activities negatively affecting biodiversity-sensitive areas	Exclusion of companies or projects significantly harming biodiversity sensitive areas. Systematic integration in qualitative internal analysis. Part of controversy analysis
Water	8. Emissions to water	Integration in qualitative internal analysis when relevant
Waste	9. Hazardous waste and radioactive waste ratio	Integration in qualitative internal analysis when relevant
Social and Employee matters	10. Violations of UN Global Compact principles and OECD guidelines for Multinational Enterprises	Exclusion of companies violating UNGC and OECD principles Systematic integration in qualitative internal analysis Part of controversy analysis
	11. Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises	Exclusion for large companies, case-by-case for small companies or projects Systematic integration in qualitative internal analysis Engagement plans / ESAP with investees when relevant
	12. Unadjusted gender pay gap	Systematic integration of gender equality in qualitative internal analysis Engagement plans / ESAP with investees
	13. Board gender diversity	Systematic integration of gender equality in qualitative internal analysis Engagement plans / ESAP with investees
Additional PAI indicators	14. Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)	Exclusion (0% sales threshold)
	14. Investments in companies without carbon emission reduction initiatives	Exclusion of the most carbon intensive entities and companies with no or insufficient plans to reduce GHG emissions Systematic integration in qualitative internal analysis
	14. Number of identified cases of severe human rights issues and incidents	Exclusion of companies with severe human rights issues and incidents. Systematic integration in qualitative internal analysis Part of controversy analysis
	17. Number of convictions and amount of fines for violation of anti-corruption and anti-bribery laws	Exclusion of companies severely violating anti-corruption and anti-bribery laws Systematic integration in qualitative internal analysis Part of controversy analysis

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The Investment Manager screens investee companies against adherence with OECD Guidelines for Mul. national Enterprises and UN Guiding Principles on Business and Human Rights. The Investment Manager continuously reviews companies' track records and news flows to identify significant controversies. Companies' involvement and resolving measures are taken into account. Risks of potential breach may be monitored through engagement to obtain additional assurance. Companies determined by the Investment Manager to be in serious breach of OECD Guidelines for Multinational Enterprises or UN Guiding Principles on Business and Human Rights are recognized as doing significant harm and are therefore rendered non-eligible. As a consequence, over the reporting period, all investments were considered to be respectful with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights.

This indicator is systematically monitored by our external service provider, as well as by a constant watch on controversies and regular meetings between Management and the Research team. Any severe and repeated breach of OECD guidelines will be excluded from our investment universe. Mirova's investment

universes are monitored with a special focus on controversies. The aim is to detect the presence of violations of the UN Covenant and the OECD Guidelines.

The action plan for dealing with a controversy will depend on the severity, as well as the corrective measures already announced by the company. Actions include :

- Direct individual engagement,
- Exercising voting rights,
- Collaborative engagement
- Divestment

How did this financial product consider principal adverse impacts on sustainability factors?

PAI indicators are incorporated into the sustainability analysis framework and the results are part of the DNSH test. As described above, the DNSH test's result is a binding opinion based on which companies whose economic activities or practices are deemed to have a significant negative impact on the achievement of one or more of the UN SDGs are systematically excluded from the investment universe regardless of their otherwise positive contribution. PAI indicators are therefore continuously considered by these financial products.

In 2023, there was no significant controversy during the year that could cause a divestment of the portfolio.

What were the top investments of this financial product?

The percentages displayed represent the average of the 4 quarter ends of the reference period.

The displayed country is the country of risk, i.e. the country where the security is domiciled.

What was the proportion of sustainability-related investments?

The list includes the investments constituting the greatest proportion of investments of the financial product during the reference period which is: 02/01/2023-29/12/2023

The Fund aims at investing only in sustainable investments as defined in Article 2(17) SFDR. 97.30% of the Fund's net assets have been aligned with sustainable investment objectives on average during the reference period. The Fund may use derivatives for hedging and investment purposes (authorised but very rarely used).

Asset allocation describes the share of investments in specific assets.

● **What was the asset allocation?**

#1 Sustainable covers sustainable investments with environmental or social objectives.

#2 Not sustainable includes investments which do not qualify as sustainable investments.

● **In which economic sectors were the investments made?**

SECTOR BREAKDOWN (%)	Fund	Reference Index

Cash & cash equivalent	4.7	-

MSCI Breakdown

Sector Breakdown : as of 31/12/2023.

To what extent were sustainable investments with an environmental objective aligned with the EU Taxonomy?

As a result of its sustainable objective, this Fund may make investments in economic activities that contribute to the environmental objectives set out in the Article 9 of the Regulation (EU)

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations

on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are economic activities for which low-carbon alternatives are not yet available and that have greenhouse gas emission levels corresponding to the best performance.

Taxonomy-aligned activities are expressed as a share of:

- **Turnover** reflecting the share of revenue from green activities of investee companies,
- **Capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **Operational expenditure** (OpEx) reflecting green operational

2020/852 (the "Taxonomy Regula. on"): (a) climate change mitigation and climate change adaptation, (b) sustainable use and protection of water and marine resources, (c) the transition to a circular economy, (d) pollution prevention and control, (e) the protection and restoration of biodiversity and ecosystems. The alignment of the economic activities of each company with the above objectives is identified and measured to the extent that data is available to the Investment Manager and of an adequate quality. They may also stem from estimations in case when certain amount of information is missing. The estimations are performed under conditions defined by the regulations and respect the principle of prudence. The methodology for collecting alignment data and the quality of available data are being improved. As a result, the alignment percentage provided is conservative. 12.83% of the Fund's net assets are aligned with the EU taxonomy on average during the reference period. As an example, the fund invested in Alfen. The company designs, assembles, produces, installs, and maintains smart grid solutions, energy storage, and electric vehicle chargers. In 2022, Alfen generated more than half of its revenues from its "EV charging equipment" segment (domestic, business, and public EV chargers, load balancing, and smart charging solutions), around one third from its "Smart grid solutions" segment (substations for electricity distribution, microgrids for renewable energy, and grid automation), and the remainder from "Energy storage systems" (stationary and mobile battery-based storage solutions for load balancing, peak shaving, grid frequency control and energy trading). All of the company's revenues thus contribute to the transition towards a low-carbon energy system. As renewable energy expands, decentralized distribution models become more commonplace, and storage becomes more integrated in the grid, Alfen is well-positioned to take advantage of these trends.

Alfen reported that 99.2% of its revenue in 2022 were aligned with the EU taxonomy, split between 31.7% for Smart grid solutions, 57.2% for EV charging equipment, and 10.3% for Energy storage systems.

NB : the results presented hereafter may differ slightly from the aggregate result presented in the Asset Allocation graphical representation.

This is explained by a difference of data source: the figures detailed below are based on estimates from data providers (or data reported by the issuer and collected by data providers), while the aggregate result presented in the Asset Allocation graphical representation may rely (for certain issuers) on estimate made by the investment manager.

Please note that any estimated data comes from either the data providers or the investment manager (only for the aggregated data in the Asset Allocation graphical representation).

● **Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy¹ ?**

Yes:

In fossil gas In nuclear energy

No

1. Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objectives - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.*

● **What was the share of investments made in transitional and enabling activities?**

The share of investments in transitional and enabling activities was 7.57%.

● **How did the percentage of investments aligned with the EU Taxonomy compare with previous reference periods?**

The percentage of investments aligned with the EU taxonomy for this new reference period cannot be compared with that of the previous reference period due to methodological changes: calculation of an end-of-period snapshot versus average of quarters in the new reference period, calculation previously based solely on estimated data versus calculation combining both estimates and directly reported data.

However, reallocation within sectors and companies led to a higher Taxonomy rate from 10.55% in 2022 to 12.83% this year. This Taxonomy rate is well above our internal targets.

 are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

What was the share of sustainable investments with an environmental objective that were not aligned with the EU Taxonomy?

The Fund has invested 52.36% in sustainable investments with an environmental objective, including 39.53% sustainable investments that are not aligned with the EU taxonomy. The Investment Manager's sustainable impact assessment framework identifies certain activities that are not currently covered by the EU Taxonomy or considered as making a substantial contribution to environmental Taxonomy objectives. This is affected by performing an overall sustainability assessment on each investee company, which includes a review of positive impacts regarding three environmental themes: Climate Stability, Biodiversity and Circular Economy. These themes aim at identifying companies which activities or practices:

- help develop low carbon energy, eco-efficiency, clean transportation, green building or align with an advanced decarbonation strategy; or
- support sustainable land use, land preservation and sustainable water management or align with an advanced biodiversity preservation strategy; or
- foster sustainable waste management or circular business model.

As an example, the fund invested in ASML HOLDING NV. The company's technology has enabled the ICT industry to maintain its energy consumption despite significant growth in applications and workloads. The company has also implemented a comprehensive decarbonization strategy. These companies are considered by Mirova to have a key role in maintaining the energy consumption of the digital sector. Indeed, they allow the use of smaller and efficient electronic chips. However, being very upstream of the value chain, they still have difficulty in targeting their end markets, making them automatically not aligned with the Taxonomy.

What was the share of socially sustainable investments?

The Fund has invested 44.94% in companies that contribute to tackling inequality or that foster social cohesion, social integration and labor relations, or an investment in human capital or economically or socially disadvantaged communities, provided that such investments do not significantly harm any of the environmental/social objectives and that the investee companies follow good governance practices, in particular with respect to sound management structures, employee relations, remuneration of staff and tax compliance. This is affected by performing an overall sustainability assessment on each investee company, which includes a review of positive impacts regarding three social themes: Socio-economic development, Health wellness and Diversity inclusion. These themes aim at identifying companies which activities or practices:

- help foster access to basic and sustainable services, local impact or promote advanced working conditions;
- support the development of healthcare, healthy nutrition, knowledge, education or safety;
- promote diversity and inclusion through dedicated products and services or through advanced practices targeting the workforce.

For example, we invest in companies that we believe will have significant impact on global health. Novo Nordisk engages in the discovery, development, manufacture and sale of pharmaceutical products including diabetes and obesity. They are therefore not aligned with the European taxonomy which only identifies solutions providers for environmental issues.

What investments were included under “not sustainable”, what was their purpose and were there any minimum environmental or social safeguards?

The Fund aims at investing only in securities qualifying as sustainable investment. For technical or hedging purposes, the Fund may hold cash or cash equivalents and derivatives for currency risk management purposes. Due to the technical and neutral nature of the asset, such instruments are not considered as investments and thus no minimum safeguards have been put in place.

What actions have been taken to attain the sustainable investment objective during the reference period?

Engagement activity forms an integral part of Mirova's responsible investment approach. Mirova's engagement strategy seeks to monitor and thrive to improve companies' products and practices from an environmental, social, and governance point of view. As a result, one of the core functions of the Sustainability Research team is engagement, both on individual and collaborative levels:

- Individual engagement: in which Mirova's ESG analysts interact one-on-one with the companies to monitor performance and progress on ESG topics, and to encourage improvement in their sustainability practices. The purpose of individual engagement is not only to ensure responsible practices in line with our standards, but also to promote better ESG practices and encourage the development of solutions for the major environmental and social challenges associated with each sector.
 - As part of our broader engagement priorities for 2023, we identified Novo Nordisk and targeted engagement, notably to address concerns of off-label marketing/promotion of obesity and diabetes drugs. After several engagements with the companies, and based on the information currently available, we believe that measures implemented to address these risks are aligned with our ethical standards and common practices in the industry. As information continues to emerge, we acknowledge an existing residual risk on drug pricing (as obesity is considered as an unmet need and the reimbursement system in the US tends to encourage price increases), on potential individual misbehaviors from local salespersons, on weight rebound effect if the patient decides to stop using the drug (obesity is a chronic disease) and patient safety (depression and suicidal thoughts reported, potential interference with surgeries etc. But, at this stage of the engagement, we are reassured that neither Novo Nordisk seems to be actively and systematically promoting their drugs for “weight loss” or aesthetic use.
- Collaborative engagement: Mirova joins with other investors and representatives of civil society to identify controversial practices, encourage greater transparency and demand, where necessary, that companies change their practices. Additionally, Mirova leverages its voting rights to further push companies towards the development of more sustainable portfolios and the adoption of best practices, by systematically exercising their voting rights based on an in-house voting policy that largely embeds the concepts of a sustainable-at-core, stakeholder-oriented governance. Proxy voting is used to convey messages during pre/post vote dialogue and via opposition to ad hoc items. Where possible, Mirova may co-sign or lead the filing of shareholder items.

Mirova also engage with regulators to share its vision of sustainable investment to improve standards and regulations across the financial sector and to foster sustainable investment. Mirova is committed to promoting regulations, including legislative changes, standards or labels, and practices that support sustainable investment and create long-term value. Further information in relation to engagement priorities and engagement policy carried out by Mirova can be found on the website at <https://www.mirova.com/en/research/voting-and-engagement>.

How did this financial product perform compared to the reference sustainable benchmark?

Not applicable.

- ***How did the reference benchmark differ from a broad market index?***
Not applicable.
- ***How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the sustainable investment objective?***
Not applicable.
- ***How did this financial product perform compared with the reference benchmark?***
Not applicable.
- ***How did this financial product perform compared with the broad market index?***
Not applicable.

Reference benchmarks are indexes to measure whether the financial product achieves the sustainable objective.

NB: all figures related to sustainability/ taxonomy are calculated as an average of the values of the 4 quarter ends of the reference period.

Template periodic disclosure for the financial products referred to in Article 9, paragraphs 1 to 4a, of Regulation (EU) 2019/2088 and Article 5, first paragraph, of Regulation (EU) 2020/852

Product Name : MIROVA FUNDS - Mirova Euro Sustainable Equity Fund
 Legal Entity Identifier : 5493 00JITG573M7F6 83

Sustainable investment objective

Did this financial product have a sustainable investment objective?

Yes

No

It made **sustainable investments with an environmental objective: 44.80%**

in economic activities that qualify as environmentally sustainable under the EU Taxonomy

in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

It made **sustainable investments with a social objective: 52.51%**

It **promoted Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of ___% of sustainable investments

with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with a social objective

It promoted E/S characteristics, **but did not make any sustainable investments**

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

To what extent was the sustainable investment objective of this financial product met?

The sustainable investment objective of the Fund is to allocate the capital towards companies:

- that address opportunities linked to major sustainable themes such as biodiversity, climate, diversity human capital, health human development, and
- whose economic activities contribute positively through their products, services and/or practices to the achievement of one or more of the United Nations Sustainable Development Goals (the "SDGs").

Sustainability indicators measure how the sustainable objectives of this financial product are attained.

The fund sustainable investment objectives were the following : 90% in Sustainable Investment (SI), with an objective of 25% in SIE (Sustainable Investment Environmental) and 25% in SIS (Sustainable Investment Social).

97.31% of the Fund's net assets were aligned with sustainable investment objectives on average during the reference period. Alignment with EU Taxonomy amounted to 7.76%. The indicators have not been subject to an assurance provided by an auditor or a review by a third party.

The Mirova Euro Sustainable Equities Fund is well above the sustainable investment objectives with a total alignment of 97.31% with sustainable investment objectives on average during the reference period (versus 90% targeted). The fund shows strong results in both SIE (Sustainable Investment Environmental) and in SIS (Sustainable Investment Social) with 44.80% and 52.51% respectively (versus target of 25% in SIE and 25% in SIS).

● ***How did the sustainability indicators perform?***

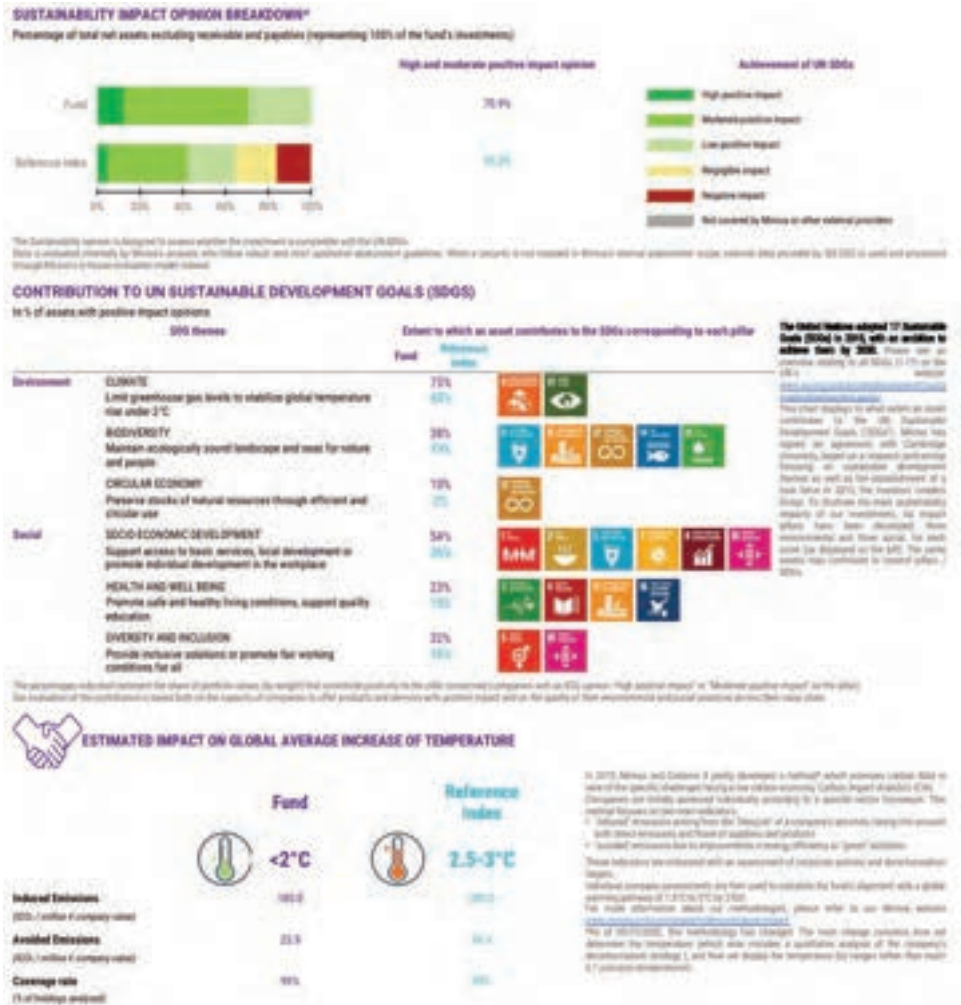

Benchmark: MSCI EMU DNR €. The benchmark is not intended to be aligned with environmental and social ambitions as promoted by the fund.

The fund followed the KPIs described hereafter. The figures are the average result of the 4 quarterly reports.

70.9% of the portfolio is invested in high and moderate positive impact versus 42.3% for the index.

The fund seeks to invest in companies which have a positive impact on the SDGs (Sustainable Development Goals) : 73% of our investments have a positive impact on the climate versus 45% for the index and 38% of our investments have a positive impact on the Biodiversity versus 19% for the benchmark.

Thanks to our exposure to green and sustainable companies (for instance, in Utilities or Industrials that bring solutions to sustainable development), our fund is well aligned with a 2 °C global warming scenario, well under the reference index which is between 2.5-3.0 °C.

... and compared to previous periods?

A comparison of the performance of sustainability indicators with the previous period cannot be made due to the application of the new requirements for the new reference period and the enhancement of our methodology. For the previous period, the indicators were calculated on the basis of a snapshot at the end of the period, whereas they are now calculated as an average over the quarters of the reference period.

However, despite a very challenging 2023 year for companies linked to renewable energies (Utilities for instance) which had very low financial performances (like Voltalia showing an underperformance of -39%), the fund succeeded to achieve strong sustainability indicators both in terms of high and moderate positive impact percentage versus the index and also in the carbon avoided emissions.

How did the sustainable investments not cause significant harm to any sustainable investment objective?

The sustainability analysis aims to identify the relevant residual environmental and social risks originating from companies' activities and practices and assesses the quality of the company's measures to mitigate these risks (the "DNSH test"). Such analysis considers notably the degree of exposure of the investee company to certain sectors or activities that may be considered to be damaging for the environment and/or the society and exposure to relevant environmental or social controversies. As a result of this qualitative analysis, the Investment Manager issues a binding opinion based on which companies whose economic activities or practices are deemed to have a significant negative impact on the achievement of one or more of the UN

SDGs are systematically excluded from the investment universe regardless of their otherwise positive contribution.

Therefore, over the reporting period, all investments in the Fund were complying with the Investment Manager's DNSH criteria.

— *How were the indicators for adverse impacts on sustainability factors taken into account?*

As part of the analysis of residual ESG risks conducted on each investee company, the Fund systematically assesses and monitors indicators that are deemed to indicate the presence of principal adverse impact (including consideration of data relating to the mandatory PAI indicators referred to in the consolidated Regulatory Technical Standards for assessment of sustainable investment in accordance with art. 2 (17) SFDR). When the data necessary for the calculation of certain PAI indicators are not available, the Investment Manager may use qualitative or quantitative proxies that cover themes similar to the PAI indicators in question. Adverse impacts are prioritized according to the specificities of sectors and business models of companies considered for investment by using a combination of criteria based on:

- analysis of the company's exposure to environmental impacts based on science-based data from international organizations (e.g. energy intensity, impacts on biodiversity, etc),
- analysis of the company's exposure to fundamental rights and employee matters through its locations, business model and supply chain organization (e.g. exposure to health and safety risks, exposure to countries with specific human rights risks, etc),
- analysis of the company's footprint on local communities and consumers,
- screening of on-going or potential controversies.

Where the Investment Manager deems the investee company's processes and practices are insufficient to mitigate environmental, social and governance risks, notably with regards to the relevant PAIs, the company's impact is deemed as negative which makes it ineligible for investment.

Further details can be found in the table hereunder, which lists the main indicators taken into account by Mirova when taking PAIs into account.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

	Adverse Sustainability indicator	How PAIs are taken into account by Mirova
Greenhouse gas emissions	1. GHG emissions	Exclusion of the most carbon intensive entities and companies with no or insufficient plans to reduce GHG emissions Systematic integration in qualitative internal analysis
	2. Carbon footprint	
	3. GHG intensity of investee companies	
	4. Exposure to companies active in the fossil fuel sector	Exclusion of companies active in the fossil fuel sector For companies involved in fossil fuel extraction, processing/refining, and trading, exclusion applies to companies with: • >5% of revenues from coal or oil, including unconventional oil, • >10% of revenues from unconventional gas. For companies that produce dedicated equipment/services for the fossil fuel sector, exclusion applies to companies with >20% of revenues from these equipment/services. For companies involved in electricity production (<10% of sales related to electricity production), exclusion applies to companies with a generation mix dominated by coal, with a carbon intensity >350 gCO ₂ /MWh.
	5. Share of non-renewable energy consumption and production	Integration in qualitative internal analysis when relevant
	6. Energy consumption intensity per high impact climate sector	Integration in qualitative internal analysis when relevant
Biodiversity	7. Activities negatively affecting biodiversity-sensitive areas	Exclusion of companies or projects significantly harming biodiversity sensitive areas Systematic integration in qualitative internal analysis Part of controversy analysis
Water	8. Emissions to water	Integration in qualitative internal analysis when relevant
Waste	9. Hazardous waste and radioactive waste ratio	Integration in qualitative internal analysis when relevant
Social and Employee matters	10. Violations of UN Global Compact principles and OECD guidelines for Multinational Enterprises	Exclusion of companies violating UNGC and OECD principles Systematic integration in qualitative internal analysis Part of controversy analysis
	11. Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises	Exclusion for large companies, case-by-case for small companies or projects Systematic integration in qualitative internal analysis Engagement plans / ESAP with investees when relevant
	12. Unadjusted gender pay gap	Systematic integration of gender equality in qualitative internal analysis Engagement plans / ESAP with investees
	13. Board gender diversity	Systematic integration of gender equality in qualitative internal analysis Engagement plans / ESAP with investees
Additional PAI indicators	14. Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)	Exclusion (0% sales threshold)
	4. Investments in companies without carbon emission reduction initiatives	Exclusion of the most carbon intensive entities and companies with no or insufficient plans to reduce GHG emissions Systematic integration in qualitative internal analysis
	14. Number of identified cases of severe human rights issues and incidents	Exclusion of companies with severe human rights issues and incidents Systematic integration in qualitative internal analysis Part of controversy analysis
	17. Number of convictions and amount of fines for violation of anti-corruption and anti-bribery laws	Exclusion of companies severely violating anti-corruption and anti-bribery laws Systematic integration in qualitative internal analysis Part of controversy analysis

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The investment manager screens investee companies against adherence with OECD Guidelines for Mul. national Enterprises and UN Guiding Principles on Business and Human Rights. The investment manager continuously reviews companies' track records and news flows to identify significant controversies. Companies' involvement and resolving measures are taken into account. Risks of potential breach may be monitored through engagement to obtain additional assurance. MSCI Breakdown

Sector breakdown : as of 31/12/2023.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or

To what extent were sustainable investments with an environmental objective aligned with the EU Taxonomy?

As a result of its sustainable objective, this Fund may make investments in economic activities that contribute to the environmental objectives set out in the Article 9 of the Regulation (EU) 2020/852 (the “Taxonomy Regulation”) : (a) climate change mitigation and climate change adaptation, (b) sustainable use and protection of water and marine resources, (c) the transition to a circular economy, (d) pollution prevention and control, (e) the protection and

low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are economic activities for which low-carbon alternatives are not yet available and that have greenhouse gas emission levels corresponding to the best performance.

Taxonomy-aligned activities are expressed as a share of:

- **Turnover** reflecting the share of revenue from green activities of investee companies,
- **Capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **Operational expenditure** (OpEx) reflecting green operational activities of investee companies.

restoration of biodiversity and ecosystems. The alignment of the economic activities of each company with the above objectives is identified and measured to the extent that data is available to the Investment Manager and of an adequate quality. They may also stem from estimations in case when certain amount of information is missing. The estimations are performed under conditions defined by the regulations and respect the principle of prudence. As a result, the alignment percentage provided is conservative. 7.76% of the Fund's net assets are aligned with the EU taxonomy on average during the reference period.

ERG SPA is an example of a 100% aligned company. ERG SpA engages in the generation and distribution of electricity from renewable sources. Following the disposal of the Hydro and Thermoelectric businesses, the company has become a pure player of wind & solar energy. The Wind segment operates wind farms in Italy, France, Germany, Poland, Romania, and Bulgaria and the UK. The Solar segment focuses on photovoltaic plants located in Italy and France. Over the last decade, ERG has successfully shifted its focus from downstream oil to operation of renewable electricity generation assets, thus creating substantial, positive climate benefit.

NB : the results presented hereafter may differ slightly from the aggregate result presented in the Asset Allocation graphical representation.

This is explained by a difference of data source: the figures detailed below are based on estimates from data providers (or data reported by the issuer and collected by data providers), while the aggregate result presented in the Asset Allocation graphical representation may rely (for certain issuers) on estimate made by the investment manager. Please note that any estimated data comes from either the data providers or the investment manager (only for the aggregated data in the Asset Allocation graphical representation).

● ***Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy¹ ?***

Yes:

In fossil gas In nuclear energy

No

1. Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objectives - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

*For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures.

● **What was the share of investments made in transitional and enabling activities?**

The share of investments in transitional and enabling activities was 3.98% (3.95% for Transition and 0.03% for Enabling).

● **How did the percentage of investments aligned with the EU Taxonomy compare with previous reference periods?**

The percentage of investments aligned with the EU taxonomy for this new reference period cannot be compared with that of the previous reference period due to methodological changes: calculation of an end-of-period snapshot versus average of quarters in the new reference period, calculation previously based solely on estimated data versus calculation combining both estimates and directly reported data.

 are sustainable investments with an

What was the share of sustainable investments with an environmental objective that were not aligned with the EU Taxonomy?

environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

The Fund has invested 44.80% in sustainable investments with an environmental objective, including 37.04% sustainable investments that are not aligned with the EU taxonomy. The Investment Manager's sustainable impact assessment framework identifies certain activities that are not currently covered by the EU Taxonomy or considered as making a substantial contribution to environmental Taxonomy objectives. This is affected by performing an overall sustainability assessment on each investee company, which includes a review of positive impacts regarding three environmental themes: Climate Stability, Biodiversity and Circular Economy. These themes aim at identifying companies which activities or practices:

- help develop low carbon energy, eco-efficiency, clean transportation, green building or align with an advanced decarbonation strategy; or
- support sustainable land use, land preservation and sustainable water management or align with an advanced biodiversity preservation strategy; or
- foster sustainable waste management or circular business model.

As an example, the fund invested in ASML HOLDING NV. The company's technology has enabled the ICT industry to maintain its energy consumption despite significant growth in applications and workloads. The company has also implemented a comprehensive decarbonization strategy. These companies are considered by Mirova to have a key role in maintaining the energy consumption of the digital sector. Indeed, they allow the use of smaller and efficient electronic chips. However, being very upstream of the value chain, they still have difficulty in targeting their end markets, making them automatically not aligned with the Taxonomy.

What was the share of socially sustainable investments?

The Fund has invested 52.51% in companies that contribute to tackling inequality or that foster social cohesion, social integration and labor relations, or an investment in human capital or economically or socially disadvantaged communities, provided that such investments do not significantly harm any of the environmental/social objectives and that the investee companies follow good governance practices, in particular with respect to sound management structures, employee relations, remuneration of staff and tax compliance. This is affected by performing an overall sustainability assessment on each investee company, which includes a review of positive impacts regarding three social themes: Socio-economic development, Health wellness and Diversity inclusion. These themes aim at identifying companies which activities or practices:

- help foster access to basic and sustainable services, local impact or promote advanced working conditions;
- support the development of healthcare, healthy nutrition, knowledge, education or safety;
- promote diversity and inclusion through dedicated products and services or through advanced practices targeting the workforce.

As an example, the fund invested in EssilorLuxottica SA. The company engages in the design, manufacture, and sales of ophthalmic lenses and instruments. EssilorLuxottica produces optical and UV-protective lenses and equipment and provides solutions for visually impaired patients, which is considered as having a moderate positive impact on health and wellbeing. They are therefore not aligned with the European taxonomy which only identifies solutions providers for environmental issues.

What investments were included under “not sustainable”, what was their purpose and were there any minimum environmental or social safeguards?

The Fund aims at investing only in equity securities qualifying as sustainable investment. For technical or hedging purposes, the Fund may hold cash or cash equivalents and derivatives for currency risk management purposes. Due to the technical and neutral nature of the asset,

such instruments are not considered as investments and thus no minimum safeguards have been put in place.

What actions have been taken to attain the sustainable investment objective during the reference period?

Engagement activity forms an integral part of Mirova's responsible investment approach. Mirova's engagement strategy seeks to monitor and thrive to improve companies' products and practices from an environmental, social, and governance point of view. As a result, one of the core functions of the Sustainability Research team is engagement, both on individual and collaborative levels:

- Individual engagement: in which Mirova's ESG analysts interact one-on-one with the companies to monitor performance and progress on ESG topics, and to encourage improvement in their sustainability practices. The purpose of individual engagement is not only to ensure responsible practices in line with our standards, but also to promote better ESG practices and encourage the development of solutions for the major environmental and social challenges associated with each sector.
- Collaborative engagement: Mirova joins with other investors and representatives of civil society to identify controversial practices, encourage greater transparency and demand, where necessary, that companies change their practices. Additionally, Mirova leverages its voting rights to further push companies towards the development of more sustainable portfolios and the adoption of best practices, by systematically exercising their voting rights based on an in-house voting policy that largely embeds the concepts of a sustainable-at-core, stakeholder-oriented governance. Proxy voting is used to convey messages during pre/post vote dialogue and via opposition to ad hoc items. Where possible, Mirova may co-sign or lead the filing of shareholder items.

Mirova also engage with regulators to share its vision of sustainable investment to improve standards and regulations across the financial sector and to foster sustainable investment. Mirova is committed to promoting regulations, including legislative changes, standards or labels, and practices that support sustainable investment and create long-term value.

Further information in relation to engagement priorities and engagement policy carried out by Mirova can be found on the website at <https://www.mirova.com/en/research/voting-and-engagement>.

Example of the funds' engagement : in 2023, Mirova together with a group of sixteen European investors representing 1.5% of Engie's issued share capital filed a shareholder resolution at the company's 2023 AGM with the two-fold aim to i) obtain sufficient information to assess the company's current strategy with a 1.5°C scenario across its entire scopes, and 2) request the company to commit to adding a triennial "Say on Climate" advisory vote to the general meeting's agenda. The resolution was successful in gathering 25% favorable votes.

In the course of filing the resolution, numerous discussions between the investors and Engie took place. We are pleased with a number of steps taken by the company in response to the dialogue. This includes an addendum to the company's TCFD report published on 14 April 2023 with increased disclosure on forward-looking CAPEX and on the classification investments according to the EU Taxonomy. This additional information further enables investors to understand how Engie plans on implementing its transition. We further welcomed the Board's commitment to facilitate a 'Say on Climate' every three years, as requested by the shareholder proposal. The company is considering an annual progress vote on ENGIE's climate strategy. Finally, the company offered a dedicated Q&A session during the AGM, which is rare opportunity to discuss systemic issues in a public forum.

How did this financial product perform compared to the reference sustainable benchmark?

Not Applicable.

- ***How did the reference benchmark differ from a broad market index?***

Not Applicable.

- ***How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the sustainable investment objective?***

Not applicable.

- ***How did this financial product perform compared with the reference benchmark?***

Not applicable.

- ***How did this financial product perform compared with the broad market index?***

Not applicable.

Reference benchmarks are indexes to measure whether the financial product aligns the sustainable objective.

NB: all figures related to sustainability/ taxonomy are calculated as an average of the values of the 4 quarter ends of the reference period.

Template periodic disclosure for the financial products referred to in Article 9, paragraphs 1 to 4a, of Regulation (EU) 2019/2088 and Article 5, first paragraph, of Regulation (EU) 2020/852

Product Name : MIROVA FUNDS - Mirova Climate Solutions Equity Fund
 Legal Entity Identifier : 5493 00ZE017F2I3ZBL 80

Sustainable investment objective

Did this financial product have a sustainable investment objective?

Yes

No

It made **sustainable investments with an environmental objective: 84.21%**

in economic activities that qualify as environmentally sustainable under the EU Taxonomy

in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

It made **sustainable investments with a social objective: 11.29%**

It **promoted Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of ___% of sustainable investments

with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with a social objective

It promoted E/S characteristics, **but did not make any sustainable investments**

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

To what extent was the sustainable investment objective of this financial product met?

The sustainable investment objective of the Fund is to allocate the capital towards companies:

- that deliver ecological solutions and green technologies that favor the environmental transition and address key sustainable themes: renewable energy, industrial energy efficiency, sustainable waste and water management, sustainable land use, clean transportation, green building, and

Sustainability indicators measure how the sustainable objectives of this financial product are achieved.

- whose economic activities contribute positively through their products, services and/or practices to the achievement of one or more of the United Nations Sustainable Development Goals (the “SDGs”). The Fund aims at contributing to keeping the maximum global temperature rise to a maximum 2 degrees Celsius.

The construction of the investment universe is based on a sustainability impact analysis of companies to ensure the consistency of the portfolio with its sustainable objective. To be eligible to the portfolio investment universe each potential investment goes through a sustainability review to assess their impact on environmental challenges and their contribution in the fight against global warming. Based on this sustainability analysis, the Investment Manager controls the alignment of potential investments with its sustainable objective and monitors the exposure of its portfolio to sustainable investments with an environmental objective on a daily basis. As a thematic fund aiming for a positive impact on Climate, the portfolio remains mainly invested in companies with an environmental objective with an average exposure of 84% over 2023, significantly above its target of 65%. Within this sustainability theme, the portfolio kept a relatively balanced exposure to mainly three key solutions: renewable energy, clean transportation and energy efficiency. Including investments whose main contribution is linked to a social objective, on average over 2023, 95.5% of the fund net asset were aligned with a sustainable objective.

The European taxonomy framework further provides an indicator of the alignment of the portfolio companies towards key climate solutions and is integrated in the environmental sustainability analysis of companies included in the investment universe. The Investment Managers conduct pre-trade analysis of the impact of potential investment decisions on the portfolio taxonomy alignment and monitor daily this indicator to ensure a continuous respect of its sustainable objective. The EU taxonomy alignment of the portfolio of 33.4% on average over 2023 is above its objective of 20% and validates the positioning of the portfolio on environmental challenges.

The fund sustainable investment objectives were the following : 90% in Sustainable Investment (SI), with an objective of 65% in SIE (Sustainable Investment Environmental) and 1% in SIS (Sustainable Investment Social).

95.50% of the Fund's net assets were aligned with sustainable investment objectives on average during the reference period. Alignment with EU Taxonomy amounted to 33.40%. The indicators have not been subject to an assurance provided by an auditor or a review by a third party.

● ***How did the sustainability indicators perform?***

Benchmark: MSCI WORLD NET TOTAL RETURN EUR INDEX. The benchmark is not intended to be aligned with environmental and social ambitions as promoted by the fund.

The fund followed the KPIs described hereafter. The figures are the average result of the 4 quarterly reports.

During 2023, the portfolio sustainability indicators relative to its objective to have a positive impact on the environment significantly outperformed the benchmark, validating the thematic construction of the portfolio.

In line with its investment philosophy the portfolio is exclusively invested in companies providing a Positive Impact and look to favour companies with a High and Moderate Positive Impact which represented 78.7% of the portfolio on average in 2023 compared to 26.5% for its benchmark the MSCI World Index.

The alignment of the portfolio with its sustainable objective is illustrated through the contribution of portfolio companies to Environmental Sustainable Development Goals with an exposure to Climate SDGs of 96% significantly above its benchmark of 24% and an exposure to Biodiversity SDGs of 66% compared to only 12% for the index which is

not intended to be aligned with environmental and social ambi. ons as promoted by the fund.

As portfolio companies provide green solutions to fight global warming the portfolio assets enables to avoid emissions globally, leading to higher intensity of avoided emission than the benchmark. Unlike the MSCI World Index, the fund is aligned with the Paris objective of contributing to keeping the maximum global temperature rise to a maximum 2 degrees Celsius.

... and compared to previous periods?

A comparison of the performance of sustainability indicators with the previous period cannot be made due to the application of the new requirements for the new reference period and the enhancement of our methodology. For the previous period, the indicators were calculated on the basis of a snapshot at the end of the period, whereas they are now calculated as an average over the quarters of the reference period. Due to changes in the Sustainability impact assessment methodology during 2023, the Sustainability impact opinion breakdown lack comparability with the previous reference period. The portfolio remained mostly invested in company with a high and positive impact and made no significant change to its exposure to high impact companies over the year 2023. The portfolio share of companies contributing to Climate SDGs increased slightly during the year, leading to a stable outperformance of this indicator compared to the benchmark.

During 2023 the portfolio continued to be aligned with the objective of limiting the global temperature rise with an average estimated impact of 1.5 degrees celsius in 2023, in line with last reported period.

How did the sustainable investments not cause significant harm to any sustainable investment objective?

The sustainability analysis aims to identify the relevant residual environmental and social risks originating from companies' activities and practices and assesses the quality of the company's measures to mitigate these risks (the "DNSH test"). Such analysis considers notably the degree of exposure of the investee company to certain sectors or activities that may be considered to be damaging for the environment and/or the society and exposure to relevant environmental or social controversies. As a result of this qualitative analysis, the Investment Manager issues a binding opinion based on which companies whose economic activities or practices are deemed to have a significant negative impact on the achievement of one or more of the UN SDGs are systematically excluded from the investment universe regardless of their otherwise positive contribution. Therefore, over the reporting period, all investments in the Fund were complying with the Investment Manager's DNSH criteria.

How were the indicators for adverse impacts on sustainability factors taken into account?

As part of the analysis of residual ESG risks conducted on each investee company, the Fund systematically assesses and monitors indicators that are deemed to indicate the presence of principal adverse impact (including consideration of data relating to the mandatory PAI indicators referred to in the consolidated Regulatory Technical Standards for assessment of sustainable investment in accordance with art. 2 (17) SFDR). When the data necessary for the calculation of certain PAI indicators are not available, the Investment Manager may use qualitative or quantitative proxies that cover themes similar to the PAI indicators in question. Adverse impacts are prioritized according to the specificities of sectors and business models of companies considered for investment by using a combination of criteria based on:

- analysis of the company's exposure to environmental impacts based on science-based data from international organisations (e.g. energy intensity, impacts on biodiversity, etc),
- analysis of the company's exposure to fundamental rights and employee matters through its locations, business model and supply chain organization (e.g. exposure to health and safety risks, exposure to countries with specific human rights risks, etc),
- analysis of the company's footprint on local communities and consumers,
- screening of on-going or potential controversies.

Where the Investment Manager deems the investee company's processes and practices are insufficient to mitigate environmental, social and governance risks, notably with regards to the relevant PAIs, the company's impact is deemed as negative which makes it ineligible for investment.

Further details can be found in the table hereunder, which lists the main indicators taken into account by Mirova when taking PAIs into account.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

	Adverse Sustainability indicator	How PAIs are taken into account by Mirova
Greenhouse gas emissions	1. GHG emissions	Exclusion of the most carbon intensive entities and companies with no or insufficient plans to reduce GHG emissions Systematic integration in qualitative internal analysis
	2. Carbon footprint	
	3. GHG intensity of investee companies	
	4. Exposure to companies active in the fossil fuel sector	Exclusion of companies active in the fossil fuel sector For companies involved in fossil fuel extraction, processing/refining, and trading, exclusion applies to companies with: • >5% of revenues from coal or oil, including unconventional oil, • >10% of revenues from unconventional gas. For companies that produce dedicated equipment/services for the fossil fuel sector, exclusion applies to companies with >20% of revenues from these equipment/services. For companies involved in electricity production (>10% of sales related to electricity production), exclusion applies to companies with a generation mix dominated by coal, with a carbon intensity >350 gCO ₂ /MWh.
	5. Share of non-renewable energy consumption and production	Integration in qualitative internal analysis when relevant
	6. Energy consumption intensity per high impact climate sector	Integration in qualitative internal analysis when relevant
Biodiversity	7. Activities negatively affecting biodiversity-sensitive areas	Exclusion of companies or projects significantly harming biodiversity sensitive areas Systematic integration in qualitative internal analysis Part of controversy analysis
Water	8. Emissions to water	Integration in qualitative internal analysis when relevant
Waste	9. Hazardous waste and radioactive waste ratio	Integration in qualitative internal analysis when relevant
Social and Employee matters	10. Violations of UN Global Compact principles and OECD guidelines for Multinational Enterprises	Exclusion of companies violating UNGC and OECD principles Systematic integration in qualitative internal analysis Part of controversy analysis
	11. Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises	Exclusion for large companies, case-by-case for small companies or projects Systematic integration in qualitative internal analysis Engagement plans / ESAP with investees when relevant
	12. Unadjusted gender pay gap	Systematic integration of gender equality in qualitative internal analysis Engagement plans / ESAP with investees
	13. Board gender diversity	Systematic integration of gender equality in qualitative internal analysis Engagement plans / ESAP with investees
Additional PAI indicators	14. Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)	Exclusion (0% sales threshold)
	4. Investments in companies without carbon emission reduction initiatives	Exclusion of the most carbon intensive entities and companies with no or insufficient plans to reduce GHG emissions Systematic integration in qualitative internal analysis
	14. Number of identified cases of severe human rights issues and incidents	Exclusion of companies with severe human rights issues and incidents Systematic integration in qualitative internal analysis Part of controversy analysis
	17. Number of convictions and amount of fines for violation of anti-corruption and anti-bribery laws	Exclusion of companies severely violating anti-corruption and anti-bribery laws Systematic integration in qualitative internal analysis Part of controversy analysis

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The Investment Manager screens investee companies against adherence with OECD Guidelines for Mul. national Enterprises and UN Guiding Principles on Business and Human Rights. The Investment Manager continuously reviews companies' track records and news flows to identify significant controversies. Companies' involvement and resolving measures are taken into account. Risks of potential breach may be monitored through engagement to obtain additional assurance. Companies determined by the Investment Manager to be in serious breach of OECD Guidelines for Multinational Enterprises or UN Guiding Principles on Business and Human Rights are recognized as doing significant harm and are therefore rendered non-eligible. As a consequence, over the reporting period, all investments were considered to be respectful with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights.

This indicator is systematically monitored by our external service provider, as well as by a constant watch on controversies and regular meetings between Management and the Research team. Any severe and repeated breach of OECD guidelines will be excluded from our investment universe. Mirova's investment

universes are monitored with a special focus on controversies. The aim is to detect the presence of violations of the UN Covenant and the OECD Guidelines.

The action plan for dealing with a controversy will depend on the severity, as well as the corrective measures already announced by the company. Actions include :

- Direct individual engagement,
- Exercising voting rights,
- Collaborative engagement
- Divestment.

How did this financial product consider principal adverse impacts on sustainability factors?

PAI indicators are incorporated into the sustainability analysis framework and the results are part of the DNSH test. As described above, the DNSH test's result is a binding opinion based on which companies whose economic activities or practices are deemed to have a significant negative impact on the achievement of one or more of the UN SDGs are systematically excluded from the investment universe regardless of their otherwise positive contribution. PAI indicators are therefore continuously considered by these financial products.

In 2023, there was no significant controversy during the year that could cause a divestment of the portfolio Mirova Climate Solutions Equity Fund.

What were the top investments of this financial product?

Largest Investments	Sector	% Assets	Country
TRIMBLE INC UW USD	Electronic Equipment: Gauges and Meters	3.84	United States
TETRA TECH INC UW USD	Engineering and Contracting Services	3.37	United States

The list includes the investments constituting the greatest proportion of investments of the financial product during the reference period which is: 02/01/2023-29/12/2023

The percentages displayed represent the average of the 4 quarter ends of the reference period.

The displayed country is the country of risk, i.e. the country where the security is domiciled.

What was the proportion of sustainability-related investments?

The Fund aims at investing only in sustainable investments as defined in Article 2(17) SFDR. 95.50% of the Fund's net assets have been aligned with sustainable investment objectives on average during the reference period. The Fund may use derivatives for hedging and investment purposes (authorised but very rarely used).

● What was the asset allocation?

#1 Sustainable covers sustainable investments with environmental or social objectives.

#2 Not sustainable includes investments which do not qualify as sustainable investments.

● In which economic sectors were the investments made?

SECTOR BREAKDOWN (%)	Fund	Reference Index
Industrials	38.2	11.9
Information Technology	20.7	22.1
Consumer Discretionary	8.2	11.0
Financials	6.8	15.2

Communication Services	-	7.2
Energy	-	4.5
Cash & cash equivalent	4.7	-

MSCI Breakdown

Sector breakdown : as of 31/12/2023.

To what extent were sustainable investments with an environmental objective aligned with the EU Taxonomy?

As a result of its sustainable objective, this Fund may make investments in economic activities that contribute to the environmental objectives set out in the Article 9 of the Regulation (EU) 2020/852 (the "Taxonomy Regulation"): (a) climate change mitigation and climate change adaptation, (b) sustainable use and protection of water and marine resources, (c) the transition to a circular economy, (d) pollution prevention and control, (e) the protection and restoration of biodiversity and ecosystems. The alignment of the economic activities of each company with the above objectives is identified and measured to the extent that data is available to the Investment Manager and of an adequate quality. They may also stem from estimations in case when certain amount of information is missing. The estimations are performed under conditions defined by the regulations and respect the principle of prudence. The methodology for collecting alignment data and the quality of available data are being improved. As a result, the alignment percentage provided is conservative. 4.95% of the Fund's net assets are aligned with the EU taxonomy on average during the reference period.

As an example, the Fund invested in ENPHASE ENERGY INC UQ USD. The company is 100% aligned with the European Taxonomy, according to information available as of February 2023. Enphase Energy provides equipment for solar power generation, including microinverters, monitoring, and storage devices. Its predominant product is solar microinverters, which convert direct current generated by a single solar module to alternating current, effectively connecting them to the grid. Use of microinverters can improve power yield from solar energy systems, as well as facilitate small solar power systems (i.e. residential). The company is now moving towards providing technological solutions for small-scale solar energy systems, including residential solar, residential power management/storage, energy management technology for homes, small commercial solar, and off-grid solar/storage.

The company therefore contributes significantly mitigating climate change by promoting renewable energy sources and the transition towards a more sustainable energy system. Increasing its offerings in off-grid solar/storage could also expand access to energy in developing and energy impoverished regions, with solutions including solar water pumps, air coolers, and standalone solar power generation systems. Its grid and power management solutions may also help to develop smart grids and decentralized electricity generation/storage.

NB : the results presented hereafter may differ slightly from the aggregate result presented in the Asset Allocation graphical representation.

This is explained by a difference of data source: the figures detailed below are based on estimates from data providers (or data reported by the issuer and collected by data providers), while the aggregate result presented in the Asset Allocation graphical representation may rely (for certain issuers) on estimate made by the investment manager.

Please note that any estimated data comes from either the data providers or the investment manager (only for the aggregated data in the Asset Allocation graphical representation).

● **Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy¹ ?**

- Yes:
 - In fossil gas In nuclear energy
- No

1. Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objectives - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are economic activities for which low-carbon alternatives are not yet available and that have greenhouse gas emission levels corresponding to the best performance.

Taxonomy-aligned activities are expressed as a share of:

- **Turnover** reflecting the share of revenue from green activities of investee companies,
- **Capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for

a transi. on to a green economy.

- **Operational expenditure (OpEx)** reflecting green operational activities of investee companies.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.*

*For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures.

● **What was the share of investments made in transitional and enabling activities?**

The share of investments in transitional and enabling activities was 18.27%.

● **How did the percentage of investments aligned with the EU Taxonomy compare with previous reference periods?**

The percentage of investments aligned with the EU taxonomy for this new reference period cannot be compared with that of the previous reference period due to methodological changes: calculation of an end-of-period snapshot versus average of quarters in the new reference period, calculation previously based solely on estimated data versus calculation combining both estimates and directly reported data.

However, the share of investment aligned with the taxonomy remain relatively stable during the year as the thematic bias of the portfolio leads to a significant exposure to companies providing solutions and enabling the energy transition. The reported share of taxonomy aligned investment slightly increased mainly due to the improvement in the reporting of companies and collection of data to assess the alignment of companies' activities.

are

sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

What was the share of sustainable investments with an environmental objective that were not aligned with the EU Taxonomy?

The Fund has invested 84.21% in sustainable investments with an environmental objective, including 50.80% sustainable investments that are not aligned with the EU taxonomy. The Investment Manager's sustainable impact assessment framework identifies certain activities that are not currently covered by the EU Taxonomy or considered as making a substantial contribution to environmental Taxonomy objectives. This is affected by performing an overall sustainability assessment on each investee company, which includes a review of positive impacts regarding three environmental themes: Climate Stability, Biodiversity and Circular Economy. These themes aim at identifying companies which activities or practices:

- help develop low carbon energy, eco-efficiency, clean transportation, green building or align with an advanced decarbonation strategy; or
- support sustainable land use, land preservation and sustainable water management or align with an advanced biodiversity preservation strategy; or
- foster sustainable waste management or circular business model.

As an example, the fund invests in Sunrun. The fund being a global fund, there is an important exposure to American companies that have environmental objectives and activities, but which do not publish an alignment with the EU Taxonomy. An example is Sunrun whose activities focus on development, installation and maintenance of solar photovoltaic systems for the residential market in the United States. On top of being the market leader in its field, the company is well positioned on the diversity and inclusion pillar, notably with a Female CEO, and 50% of women representation in the Executive Management team. The company is committed to and achieved 100% gender pay parity for its employees in 2018 and have 100% pay parity since 2018 and have up to 8 weeks of paid parental leave for all employees.

What was the share of socially sustainable investments?

The Fund has invested 11.29% in companies that contribute to tackling inequality or that foster social cohesion, social integration and labor relations, or an investment in human capital or economically or socially disadvantaged communities, provided that such investments do not significantly harm any of the environmental/social objectives and that the investee companies follow good governance practices, in particular with respect to sound management structures, employee relations, remuneration of staff and tax compliance. This is affected by performing an overall sustainability assessment on each investee company, which includes a review of positive impacts regarding three social themes: Socio-economic development, Health wellness and Diversity inclusion. These themes aim at identifying companies which activities or practices:

- help foster access to basic and sustainable services, local impact or promote advanced working conditions;
- support the development of healthcare, healthy nutrition, knowledge, education or safety;
- promote diversity and inclusion through dedicated products and services or through advanced practices targeting the workforce.

As an example, the fund invested in AstraZeneca. The company's product portfolio provides considerable positive impact to tackle global health challenges. AstraZeneca's medical portfolio offers a substantial contribution to public health and a sustainable social development by providing treatments, vaccines and medicines in three main therapy areas: oncology (35% of total revenues at the end of 2022); Biopharmaceuticals (45%); Rare disease (16%). Overall, AZ is one of the industry leaders in terms of sustainability performance and transparency. AstraZeneca has also implemented a robust climate strategy. The company has implemented targets on all three scopes, offers a very compelling climate reduction strategy

with near and medium term milestones including energy consump. on, renewable energy, transition to an electric vehicle fleet and tackle site fluorinated Gas emissions, reduction targets at suppliers of goods & services level. Alongside its direct positive impact on health related issues, Mirova has also value the ability of the company to decarbonize its activities and its supply chain. Practices are however not included in the European Taxonomy.

What investments were included under “not sustainable”, what was their purpose and were there any minimum environmental or social safeguards?

The Fund aims at investing only in securities qualifying as sustainable investment. For technical or hedging purposes, the Fund may hold cash or cash equivalents and derivatives for currency risk management purposes. Due to the technical and neutral nature of the asset, such instruments are not considered as investments and thus no minimum safeguards have been put in place.

What actions have been taken to attain the sustainable investment objective during the reference period?

Engagement activity forms an integral part of Mirova's responsible investment approach. Mirova's engagement strategy seeks to monitor and thrive to improve companies' products and practices from an environmental, social, and governance point of view. As a result, one of the core functions of the Sustainability Research team is engagement, both on individual and collaborative levels:

- Individual engagement: in which Mirova's ESG analysts interact one-on-one with the companies to monitor performance and progress on ESG topics, and to encourage improvement in their sustainability practices. The purpose of individual engagement is not only to ensure responsible practices in line with our standards, but also to promote better ESG practices and encourage the development of solutions for the major environmental and social challenges associated with each sector
 - As an exemple, our ongoing engagement with Panasonic on supply-chain management. Mirova has been meeting with management regularly to push for more transparency and better audit practices. The engagement is delivering results: Panasonic initiated self-assessment risk monitoring based on industry standards and made some progress in the structuration of its supply-chain management, which is the first step to increase its audit capacity. Mirova continues the dialogue with the company to keep track on its progress.
- Collaborative engagement: Mirova joins with other investors and representatives of civil society to identify controversial practices, encourage greater transparency and demand, where necessary, that companies change their practices. Additionally, Mirova leverages its voting rights to further push companies towards the development of more sustainable portfolios and the adoption of best practices, by systematically exercising their voting rights based on an in-house voting policy that largely embeds the concepts of a sustainable-at-core, stakeholder-oriented governance. Proxy voting is used to convey messages during pre/post vote dialogue and via opposition to ad hoc items. Where possible, Mirova may co-sign or lead the filing of shareholder items. Mirova also engage with regulators to share its vision of sustainable investment to improve standards and regulations across the financial sector and to foster sustainable investment.

Mirova is committed to promoting regulations, including legislative changes, standards or labels, and practices that support sustainable investment and create long-term value. Further information in relation to engagement priorities and engagement policy carried out by Mirova can be found on the website at <https://www.mirova.com/en/research/voting-and-engagement>.

How did this financial product perform compared to the reference sustainable benchmark?

Not applicable.

- ***How did the reference benchmark differ from a broad market index?***
Not applicable.
- ***How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the sustainable investment objective?***
Not applicable.
- ***How did this financial product perform compared with the reference benchmark?***
Not applicable.
- ***How did this financial product perform compared with the broad market index?***
Not applicable.

Reference benchmarks are indexes to measure whether the financial product achieves the sustainable objective.

NB: all figures related to sustainability/ taxonomy are calculated as an average of the values of the 4 quarter ends of the reference period.

Template periodic disclosure for the financial products referred to in Article 9, paragraphs 1 to 4a, of Regulation (EU) 2019/2088 and Article 5, first paragraph, of Regulation (EU) 2020/852

Product Name : MIROVA EUROPE ENVIRONMENTAL EQUITY FUND
Legal Entity Identifier : 2221 005Z7F3MH7JCPB 87

Sustainable investment objective

Did this financial product have a sustainable investment objective?

Yes

No

It made **sustainable investments with an environmental objective: 79.36%**

in economic activities that qualify as environmentally sustainable under the EU Taxonomy

in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

It made **sustainable investments with a social objective: 18.79%**

It **promoted Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of ___% of sustainable investments

with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with a social objective

It promoted E/S characteristics, **but did not make any sustainable investments**

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

To what extent was the sustainable investment objective of this financial product met?

The sustainable investment objective of the Fund is to allocate the capital towards companies:

- that provide positive innovative solutions to tackle issues related to key environmental themes: renewable energy, industrial energy efficiency, sustainable waste and water management, sustainable land use, clean transportation, green building, and
- whose economic activities contribute positively through their products, services and/or practices to the achievement of one or more of the United Nations Sustainable

Sustainability indicators measure how the sustainable objectives of this financial product are achieved.

Development Goals (the “SDGs”). The Fund aims at contributing to keeping the maximum global temperature rise to a maximum 2 degrees Celsius.

The Regulation (EU) 2020/852 (the “Taxonomy Regulation”) aims to establish the criteria for determining whether an economic activity is considered environmentally sustainable. This Fund may make investments in economic activities that contribute to the environmental objectives set out in the Article 9 of the Taxonomy Regulation: (a) climate change mitigation and climate change adaptation, (b) sustainable use and protection of water and marine resources, (c) the transition to a circular economy, (d) pollution prevention and control, (e) the protection and restoration of biodiversity and ecosystems. The alignment of the economic activities of each company with the above objectives is identified and measured to the extent that data is available to the Investment Manager and of an adequate quality. Depending on the investment opportunities available, the Fund may contribute to any of the above environmental objectives and may not at all times contribute to all of the objectives. No reference benchmark has been designated for the purpose of aligning the sustainable investment objective.

The fund sustainable investment objectives were the following : 90% in Sustainable Investment (SI), with an objective of 60% in SIE (Sustainable Investment Environmental) and 1% in SIS (Sustainable Investment Social).

98.15% of the Fund's net assets were aligned with sustainable investment objectives on average during the reference period. Alignment with the EU taxonomy was 21.37% The indicators have not been subject to an assurance provided by an auditor or a review by a third party.

● ***How did the sustainability indicators perform?***

Benchmark: MSCI EUROPE NET RETURN EUR INDEX. The benchmark is not intended to be aligned with environmental and social ambitions as promoted by the fund.

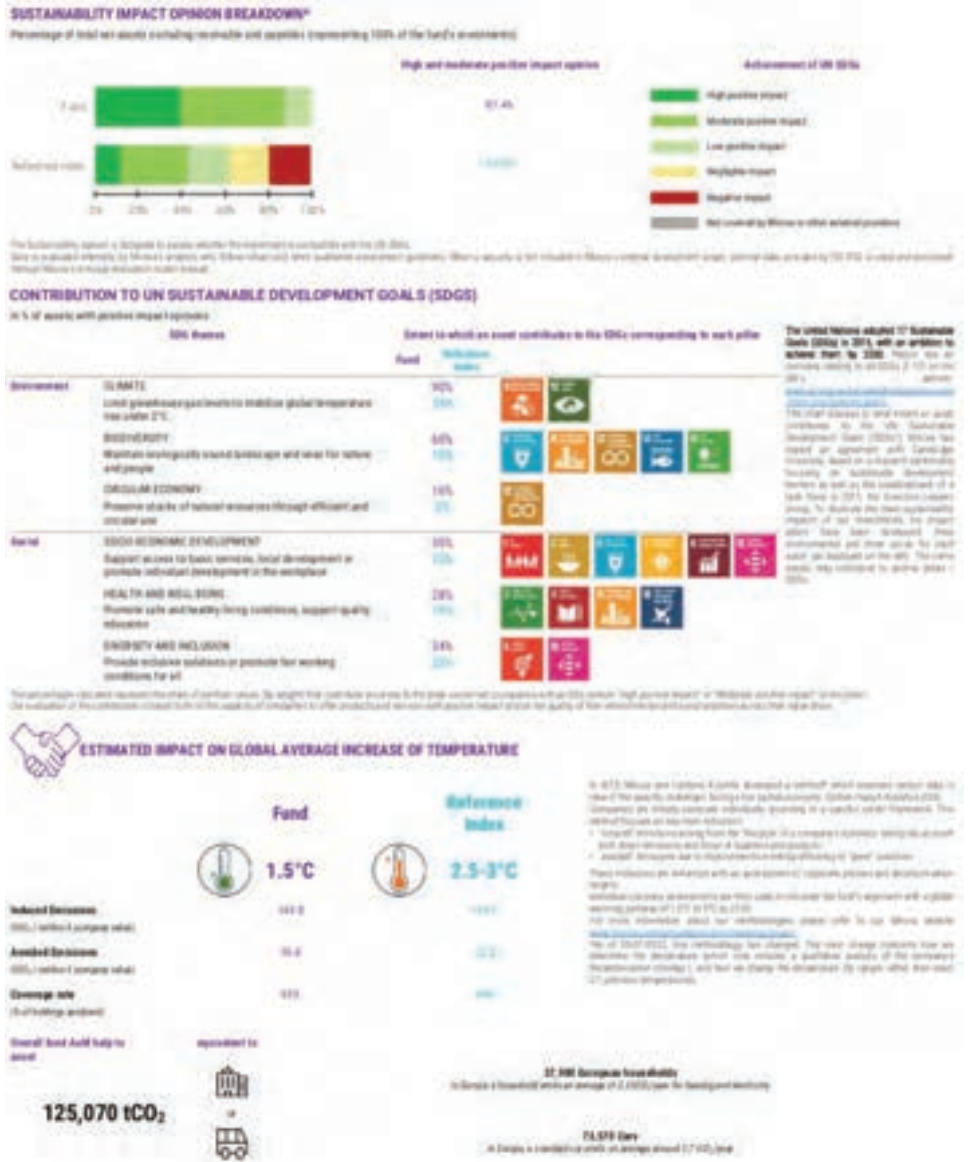

The fund followed the KPIs described hereafter. The figures are the average result of the 4 quarterly reports.

During 2023, the portfolio sustainability indicators relative to its objective have a positive impact on the environment significantly outperformed the benchmark, validating the thematic construction of the portfolio.

In the line with its investment philosophy, the portfolio is exclusively invested in companies providing a positive impact and looks to favour companies with a High and Moderate Positive Impact which represents 87.4% of the portfolio on average in 2023 compared to 42.8% for its benchmark the MSCI Europe Index.

The alignment of the portfolio with its sustainable objectives is illustrated through the contribution of portfolio companies to Environmental Sustainable Development Goals with an exposure to Climate SDGs of 90% significantly above its benchmark of 35% and an exposure to Biodiversity SDGs of 60% compared to only 16% for the index which is not intended to be aligned with environmental or social ambitions as promoted by the fund.

As portfolio companies provide green solutions to fight global warming, the portfolio assets enable to avoid emissions globally, leading to higher intensity of avoided emissions than the benchmark. Unlike the MSCI Europe Index, the fund is aligned with the Paris objectives of contributing to keeping the maximum global temperature rise to a maximum of 2 degrees Celsius.

● ... and compared to previous periods?

The percentage of investments aligned with the EU taxonomy for this new reference period cannot be compared with that of the previous reference period due to methodological changes: calculation of an end-of-period snapshot versus average of quarters in the new reference period, calculation previously based solely on estimated data versus calculation combining both estimates and directly reported data.

Due to changes in the Sustainability impact assessment methodology during 2023, the Sustainability impact opinion breakdown lack comparability with the previous reference period. The portfolio is exclusively invested in companies providing a Positive Impact and favours companies with a High and Medium Positive Impact which represent the overwhelming majority of the fund.

In line with its sustainable objective, the majority of the portfolio assets continue to be invested in companies contributing to Climate Sustainable Development Goals with an average exposure of 90% over the period.

As portfolio companies provide green solutions to fight global warming the portfolio assets enables to avoid emissions globally, leading to higher avoided emissions than the benchmark. The Fund, with its alignment to a 1.5 degrees Celsius global warming

trajectory, is aligned with the Paris objective of contributing to keeping the maximum global temperature rise to a maximum 2 degrees Celsius.

How did the sustainable investments not cause significant harm to any sustainable investment objective?

The sustainability analysis aims to identify the relevant residual environmental and social risks originating from companies' activities and practices and assesses the quality of the company's measures to mitigate these risks (the "DNSH test"). Such analysis considers notably the degree of exposure of the investee company to certain sectors or activities that may be considered to be damaging for the environment and/or the society and exposure to relevant environmental or social controversies. As a result of this qualitative analysis, the Investment Manager issues a binding opinion based on which companies whose economic activities or practices are deemed to have a significant negative impact on the achievement of one or more of the UN SDGs are systematically excluded from the investment universe regardless of their otherwise positive contribution. Therefore, over the reporting period, all investment in the Fund were complying with the Investment Manager's DNSH criteria.

How were the indicators for adverse impacts on sustainability factors taken into account?

As part of the analysis of residual ESG risks conducted on each investee company, the Fund systematically assesses and monitors indicators that are deemed to indicate the presence of principal adverse impact (including consideration of data relating to the mandatory PAI indicators referred to in the consolidated Regulatory Technical Standards for assessment of sustainable investment in accordance with art. 2 (17) SFDR). When the data necessary for the calculation of certain PAI indicators are not available, the Investment Manager may use qualitative or quantitative proxies that cover themes similar to the PAI indicators in question. Adverse impacts are prioritized according to the specificities of sectors and business models of companies considered for investment by using a combination of criteria based on:

- analysis of the company's exposure to environmental impacts based on science-based data from international organisations (e.g. energy intensity, impacts on biodiversity, etc),
- analysis of the company's exposure to fundamental rights and employee matters through its locations, business model and supply chain organization (e.g. exposure to health and safety risks, exposure to countries with specific human rights risks, etc),
- analysis of the company's footprint on local communities and consumers,
- screening of on-going or potential controversies.

Where the Investment Manager deems the investee company's processes and practices are insufficient to mitigate environmental, social and governance risks, notably with regards to the relevant PAIs, the company's impact is deemed as negative which makes it ineligible for investment.

Further details can be found in the table hereunder, which lists the main indicators taken into account by Mirova when taking PAIs into account.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

	Adverse Sustainability indicator	How PAIs are taken into account by Mirova
Greenhouse gas emissions	1. GHG emissions	Exclusion of the most carbon intensive entities and companies with no or insufficient plans to reduce GHG emissions Systematic integration in qualitative internal analysis
	2. Carbon footprint	
	3. GHG intensity of investee companies	
	4. Exposure to companies active in the fossil fuel sector	Exclusion of companies active in the fossil fuel sector For companies involved in fossil fuel extraction, processing/refining, and trading, exclusion applies to companies with: • >5% of revenues from coal or oil, including unconventional oil, • >10% of revenues from unconventional gas. For companies that produce dedicated equipment/services for the fossil fuel sector, exclusion applies to companies with >20% of revenues from these equipment/services. For companies involved in electricity production (<10% of sales related to electricity production), exclusion applies to companies with a generation mix dominated by coal, with a carbon intensity >350 gCO ₂ /MWh.
	5. Share of non-renewable energy consumption and production	Integration in qualitative internal analysis when relevant
	6. Energy consumption intensity per high impact climate sector	Integration in qualitative internal analysis when relevant
Biodiversity	7. Activities negatively affecting biodiversity-sensitive areas	Exclusion of companies or projects significantly harming biodiversity sensitive areas. Systematic integration in qualitative internal analysis. Part of controversy analysis
Water	8. Emissions to water	Integration in qualitative internal analysis when relevant
Waste	9. Hazardous waste and radioactive waste ratio	Integration in qualitative internal analysis when relevant
Social and Employee matters	10. Violations of UNGC principles and OECD guidelines for Multinational Enterprises	Exclusion of companies violating UNGC and OECD principles Systematic integration in qualitative internal analysis Part of controversy analysis
	11. Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises	Exclusion for large companies, case-by-case for small companies or projects Systematic integration in qualitative internal analysis Engagement plans / ESAP with investees when relevant
	12. Unadjusted gender pay gap	Systematic integration of gender equality in qualitative internal analysis Engagement plans / ESAP with investees
	13. Board gender diversity	Systematic integration of gender equality in qualitative internal analysis Engagement plans / ESAP with investees
Additional PAI indicators	14. Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)	Exclusion (0% sales threshold)
	4. Investments in companies without carbon emission reduction initiatives	Exclusion of the most carbon intensive entities and companies with no or insufficient plans to reduce GHG emissions Systematic integration in qualitative internal analysis
	14. Number of identified cases of severe human rights issues and incidents	Exclusion of companies with severe human rights issues and incidents. Systematic integration in qualitative internal analysis Part of controversy analysis
	17. Number of convictions and amount of fines for violation of anti-corruption and anti-bribery laws	Exclusion of companies severely violating anti-corruption and anti-bribery laws Systematic integration in qualitative internal analysis Part of controversy analysis

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The Investment Manager screens investee companies against adherence with OECD Guidelines for Mul. national Enterprises and UN Guiding Principles on Business and Human Rights. The Investment Manager continuously reviews companies' track records and news flows to identify significant controversies. Companies' involvement and resolving measures are taken into account. Risks of potential breach may be monitored through engagement to obtain additional assurance. Companies determined by the Investment Manager to be in serious breach of OECD Guidelines for Multinational Enterprises or UN Guiding Principles on Business and Human Rights are recognized as doing significant harm and are therefore rendered non-eligible. Therefore, over the reporting period, all investments were considered to be respectful with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights.

This indicator is systematically monitored by our external service provider, as well as by a constant watch on controversies and regular meetings between Management and the Research team. Any severe and repeated breach of OECD

guidelines will be excluded from our investment universe. The aim is to detect the presence of violations of the UN Covenant and the OECD Guidelines.

The action plan for dealing with a controversy will depend on the severity, as well as the corrective measures already announced by the company. Actions include :

- Direct individual engagement,
- Exercising voting rights,
- Collaborative engagement
- Divestment

How did this financial product consider principal adverse impacts on sustainability factors?

PAI indicators are incorporated into the sustainability analysis framework and the results are part of the DNSH test. As described above, the DNSH test's result is a binding opinion based on which companies whose economic activities or practices are deemed to have a significant negative impact on the achievement of one or more of the UN SDGs are systematically excluded from the investment universe regardless of their otherwise positive contribution. PAI indicators are therefore continuously considered by these financial products.

In 2023, there was no significant controversy during the year that could cause a divestment of the portfolio Mirova Europe Environmental Equity Fund.

What were the top investments of this financial product?

Largest Investments	Sector	% Assets	Country
AIR LIQUIDE SA FP EUR	Specialty Chemicals	4.94	France
COMPAGNIE DE SAINT GOBAIN FP EUR	Building Materials: Other	4.54	France

The percentages displayed represent the average of the 4 quarter ends of the reference period.

The displayed country is the country of risk, i.e. the country where the security is domiciled.

What was the proportion of sustainability-related investments?

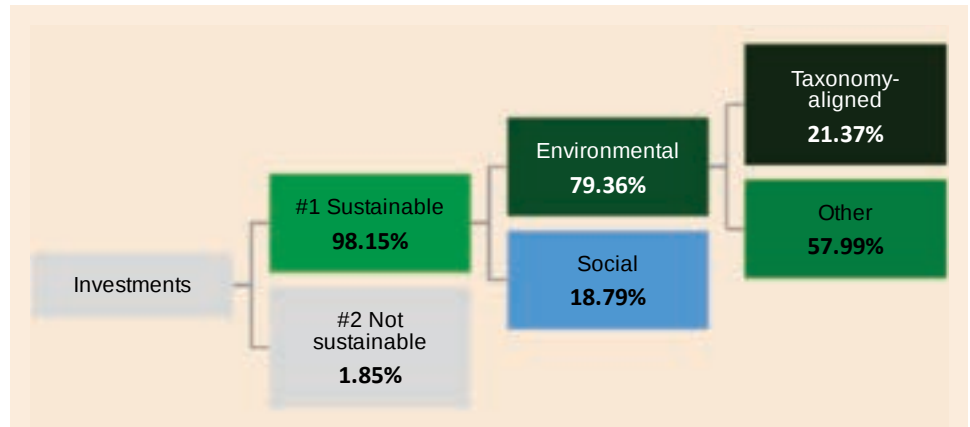

The list includes the investments constituting the greatest proportion of investments of the financial product during the reference period which is: 02/01/2023-29/12/2023

The Fund aims at investing only in sustainable investments as defined in Article 2(17) SFDR. 98.15% of the fund's net assets on average during the reference period were aligned with the Sustainable Investment Goals. The Fund may use derivatives for hedging purposes.

Asset allocation describes the share of investments in specific assets.

● **What was the asset allocation?**

#1 Sustainable covers sustainable investments with environmental or social objectives.

#2 Not sustainable includes investments which do not qualify as sustainable investments.

● **In which economic sectors were the investments made?**

SECTOR BREAKDOWN (%)	Fund	Reference Index
Industrials	27.8	18.1
Materials	20.1	7.2
Utilities	17.9	4.3
Financials	11.2	18.0
Information Technology	7.4	4.5
Health Care	6.0	15.3
Consumer Discretionary	3.0	11.3
Consumer Staples	2.5	11.6
Energy	1.0	5.7
Communication Services	-	3.1
Real Estate	-	0.9
Mutual Funds	0.3	-
Cash & cash equivalent	2.8	-

MSCI Breakdown

Sector breakdown : as of 31/12/2023

To what extent were sustainable investments with an environmental objective aligned with the EU Taxonomy?

As a result of its sustainable objective, this Fund may make investments in economic activities that contribute to the environmental objectives set out in the Article 9 of the Regulation (EU) 2020/852 (the "Taxonomy Regulation") : (a) climate change mitigation and climate change

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and

switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are economic activities for which low-carbon alternatives are not yet available and that have greenhouse gas emission levels corresponding to the best performance.

Taxonomy-aligned activities are expressed as a share of:

- **Turnover** reflecting the share of revenue from green activities of investee companies,
- **Capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **Operational expenditure** (OpEx) reflecting green operational

adapta. on, (b) sustainable use and protection of water and marine resources, (c) the transition to a circular economy, (d) pollution prevention and control, (e) the protection and restoration of biodiversity and ecosystems. The alignment of the economic activities of each company with the above objectives is identified and measured to the extent that data is available to the Investment Manager and of an adequate quality. They may also stem from estimations in case when certain amount of information is missing. The estimations are performed under conditions defined by the regulations and respect the principle of prudence. The methodology for collecting alignment data and the quality of available data are being improved. As a result, the alignment percentage provided is conservative. 21.37% of the Fund's net assets are aligned with EU Taxonomy on average during the reference period.

As an example, the fund invested in ENPHASE ENERGY INC UQ USD. The company is 100% aligned with the European Taxonomy, according to information available as of February 2023. Enphase Energy provides equipment for solar power generation, including microinverters, monitoring, and storage devices. Its predominant product is solar microinverters, which convert direct current generated by a single solar module to alternating current, effectively connecting them to the grid. Use of microinverters can improve power yield from solar energy systems, as well as facilitate small solar power systems (i.e. residential). The company is now moving towards providing technological solutions for small-scale solar energy systems, including residential solar, residential power management/storage, energy management technology for homes, small commercial solar, and off-grid solar/storage.

The company therefore contributes significantly mitigating climate change by promoting renewable energy sources and the transition towards a more sustainable energy system. Increasing its offerings in off-grid solar/storage could also expand access to energy in developing and energy impoverished regions, with solutions including solar water pumps, air coolers, and standalone solar power generation systems. Its grid and power management solutions may also help to develop smart grids and decentralized electricity generation/storage.

NB: the results presented hereafter may differ slightly from the aggregate result presented in the Asset Allocation graphical representation.

This is explained by a difference of data source: the figures detailed below are based on estimates from data providers (or data reported by the issuer and collected by data providers), while the aggregate result presented in the Asset Allocation graphical representation may rely (for certain issuers) on estimate made by the investment manager.

Please note that any estimated data comes from either the data providers or the investment manager (only for the aggregated data in the Asset Allocation graphical representation).

● **Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy¹ ?**

Yes:
 In fossil gas In nuclear energy
 No

1. Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objectives - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.*

● **What was the share of investments made in transitional and enabling activities?**

The share of investments in transitional and enabling activities was 12.37%.

● **How did the percentage of investments aligned with the EU Taxonomy compare with previous reference periods?**

The percentage of investments aligned with the EU taxonomy for this new reference period cannot be compared with that of the previous reference period due to methodological changes: calculation of an end-of-period snapshot versus average of quarters in the new reference period, calculation previously based solely on estimated data versus calculation combining both estimates and directly reported data.

However, the share of investment aligned with the taxonomy has increased during the year as the thematic of the portfolio leads to a significant exposure to companies providing solutions and enabling the energy transition. The reported share of taxonomy aligned investment slightly increased mainly due to the improvement in the reporting of companies and collection of data to assess the alignment of companies' activities.

 are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

What was the share of sustainable investments with an environmental objective that were not aligned with the EU Taxonomy?

The Fund has invested 79.36% in sustainable investments with an environmental objective, including 57.99% sustainable investments that are not aligned with the EU taxonomy. The Investment Manager's sustainable impact assessment framework identifies certain activities that are not currently covered by the EU Taxonomy or considered as making a substantial contribution to environmental Taxonomy objectives. This is affected by performing an overall sustainability assessment on each investee company, which includes a review of positive impacts regarding three environmental themes: Climate Stability, Biodiversity and Circular Economy. These themes aim at identifying companies which activities or practices:

- help develop low carbon energy, eco-efficiency, clean transportation, green building or align with an advanced decarbonation strategy; or
- support sustainable land use, land preservation and sustainable water management or align with an advanced biodiversity preservation strategy; or
- foster sustainable waste management or circular business model.

As an example, the Fund invests in Novozymes. The company is a world leader in enzyme-based applications, offers innovative alternatives to petroleum-based products. Its range of environmentally friendly solutions significantly reduces CO2 emissions and preserves the earth's ecosystems. The group's products and solutions apply to both domestic and industrial uses.

The Danish group is an undisputed player in the preservation and optimization of resources and is strongly connected with its strategic customers (DSM, Unilever, Syngenta, etc.). Innovation is at the heart of its strategy (R&D 13% of sales).

The innovative enzyme-based solutions for sustainable consumption, and superior performance in detergents, food & beverage, animal nutrition, textile treatments, organic farming, plant-based dairy products.

What was the share of socially sustainable investments?

The Fund has invested 18.79% in companies that help to combat inequality or promote social cohesion, social integration and working relationships, or investment in human capital or in economically or socially disadvantaged communities, by ensuring that these investments do not significantly adversely affect any of the environmental/social objectives and that the recipient companies follow good governance practices, particularly with regard to healthy management structures, employee relations, staff compensation and tax compliance. This is driven by a comprehensive sustainability assessment on each recipient society, which includes a review of positive impacts on three social themes: socio-economic development, health and well-being, and inclusion in diversity. These topics are intended to identify companies that practice or practice:

- foster access to basic and sustainable services, local impact or promote advanced working conditions
- support the development of health care, healthy nutrition, knowledge education, or safety
- promote diversity and inclusion through dedicated products and services or advanced workforce-targeted practices.

As an example, the fund invested in Roche. Roche's positive impact is driven by its diversified exposure to a broad range of highly innovative therapeutic areas (validated by next-generation products and breakthrough designations) and its exposure to unmet needs. Roche operates as a healthcare company through two main segments: Diagnostics (about 28% of the company's sales at the end of 2022) and Pharmaceuticals (abt 72%). Regarding biodiversity, Roche has demonstrated advanced performance in terms of reduction of the

impact of products. Roche measures its “total environmental impact” using an eco-balance metric, a system of points allocated to environmental parameters (from the consumption of energy and resources to the emission of by-products and waste from business activities). Roche set a 10-year target (2029) to reach a 50% reduction of total environmental impact (eco-balance for operations and product stewardship score for products). The company has implemented various other relevant environmental targets. Such targets consist in improving the Product Stewardship Score of 30 selected products by 25% by 2025, phasing out halogenated hydrocarbons for refrigeration, reducing waste, water consumption etc. Yet, it is unclear how this strategy is integrated in a larger environmental scenario. The company also has an environmental risk-management strategy to minimize the impact of antibiotic manufacturing discharge and thus reduce AMR. The company is also involved in fostering research into new antibiotics, and through its Diagnostics division it provides a response to antibiotic overuse. Thus, alongside its direct positive impact on health related issues, Mirova has also valued the ability of the company to reduce its pressure on biodiversity and resources. Practices are however not included in the European Taxonomy.

What investments were included under “not sustainable”, what was their purpose and were there any minimum environmental or social safeguards?

The Fund aims at investing only in equity securities qualifying as sustainable investment. For technical or hedging purposes, the Fund may hold cash or cash equivalents and derivatives for currency risk management purposes. Due to the technical and neutral nature of the asset, such instruments are not considered as investments and thus no minimum safeguards have been put in place.

What actions have been taken to attain the sustainable investment objective during the reference period?

Engagement activity forms an integral part of Mirova's responsible investment approach. Mirova's engagement strategy seeks to monitor and thrive to improve companies' products and practices from an environmental, social, and governance point of view. As a result, one of the core functions of the Sustainability Research team is engagement, both on individual and collaborative levels:

- Individual engagement: in which Mirova's ESG analysts interact one-on-one with the companies to monitor performance and progress on ESG topics, and to encourage improvement in their sustainability practices. The purpose of individual engagement is not only to ensure responsible practices in line with our standards, but also to promote better ESG practices and encourage the development of solutions for the major environmental and social challenges associated with each sector. As part of the Mirova Europe Environmental Equity fund, the commitment figures for the year 2023 are as follows:
 - 29 specific engagements, including 13 related to the environment, 16 related to social issues, and 20 related to governance.
 - Mirova engages regularly with Mercedes Benz, at their annual ESG conference with the next one being on the 20th of March 2024. Mirova conducted an engagement with Mercedes Benz in 2023 to target their climate as well as their EV strategy overall, notably due to the fact that the company has pushed back their EV targets for 2025 twice in a row.
 - Mirova also put a particular emphasis on the fact that the company has the ambition to go towards a more luxury brand with indication of -25% of sales in 2026 of entry level cars.; however it is important for Mirova that everyone has access to BEVs and not just a certain population class. Mercedes Benz responded that they were never an entry segment company but that does not mean that they are leaving it, as controversially discussed in the newspaper.
 - On the topic of supply chain, Mirova reengaged with the company on the importance of transparency and questioned Mercedes Benz on how they will

ensure that “in the future, raw materials for battery components only from IRMA certified-mines” as stated in their Roadshow. Mercedes Benz recently launched the 2nd edition of their raw material report with an update on 15 materials and more content, in line with the German Due Diligence Law that came into application in January 2024. Mercedes Benz mentioned how they are working with dedicated consultancies to help them assess Tier-1 and Tier-2 suppliers, and are working with IRMA on engagement with new mining companies.

- o Concerning battery recycling, which is a future core element for the EV sector for Mirova, we wished to know more about Mercedes Benz current project in China and how they will scale it for the future notably with currently two different battery chemistry, NMC and LFP. The automaker replied that signed a memorandum of understanding in February 2023 with CATL to reintegrate recycled material in a closed loop system of the supply chain. They wish to certify this process by a 3rd party audit in the coming years. They currently recycled 344 tons of materials.
- Collaborative engagement: Mirova joins with other investors and representatives of civil society to identify controversial practices, encourage greater transparency and demand, where necessary, Mirova also engage with regulators to share its vision of sustainable investment to improve standards and regulations across the financial sector and to foster sustainable investment. Mirova is committed to promoting regulations, including legislative changes, standards or labels, and practices that support sustainable investment and create long-term value. Additionally, Mirova leverages its voting rights to further push companies towards the development of more sustainable portfolios and the adoption of best practices, by systematically exercising their voting rights based on an in-house voting policy that largely embeds the concepts of a sustainable-at-core, stakeholder-oriented governance. Proxy voting is used to convey messages during pre/post vote dialogue and via opposition to ad hoc items. Where possible, Mirova may co-sign or lead the filing of shareholder items.

Mirova also engage with regulators to share its vision of sustainable investment to improve standards and regulations across the financial sector and to foster sustainable investment. Mirova is committed to promoting regulations, including legislative changes, standards or labels, and practices that support sustainable investment and create long-term value. Further information in relation to engagement priorities and engagement policy carried out by Mirova can be found on the website at <https://www.mirova.com/en/research/voting-and-engagement>.

How did this financial product perform compared to the reference sustainable benchmark?

Not applicable.

- **How did the reference benchmark differ from a broad market index?**
Not applicable.
- **How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the sustainable investment objective?**
Not applicable.
- **How did this financial product perform compared with the reference benchmark?**
Not applicable.

Reference benchmarks are indexes to measure whether the financial product attains the sustainable objective.

- ***How did this financial product perform compared with the broad market index?***

Not applicable.

NB: all figures related to sustainability/ taxonomy are calculated as an average of the values of the 4 quarter ends of the reference period.

Template periodic disclosure for the financial products referred to in Article 9, paragraphs 1 to 4a, of Regulation (EU) 2019/2088 and Article 5, first paragraph, of Regulation (EU) 2020/852

Product Name : Mirova Biodiversity Solutions Equity Fund
 Legal Entity Identifier : 6367 001EX52546LSRU 43

Sustainable investment objective

Did this financial product have a sustainable investment objective?

Yes

No

It made **sustainable investments with an environmental objective: 66.54%**

in economic activities that qualify as environmentally sustainable under the EU Taxonomy

in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

It made **sustainable investments with a social objective: 27.00%**

It **promoted Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of ___% of sustainable investments

with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with a social objective

It promoted E/S characteristics, **but did not make any sustainable investments**

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

To what extent was the sustainable investment objective of this financial product met?

The sustainable investment objective of the Fund is to allocate the capital towards companies:

- contributing to the protection and restoration of biodiversity and ecosystems through their products, services or practices; and
- contributing positively to the achievement of one or more of the United Nations Sustainable Development Goals (the "SDGs") notably those focusing on environmental and social challenges: SDG 9 (industry innovation and infrastructure), SDG 13 (climate

Sustainability indicators measure how the sustainable objectives of this financial product are attained.

ac. on), SDG 14 (life below water), SDG 15 (Life on Land), SDG 6 (clean water and sanitation), SDG 3 (good health and well-being), and SDG 12 (responsible consumption and purchase).

Furthermore, considering the importance of a stable climate and thriving ecosystem services, the Investment Manager aims at building an investment portfolio which represents an economy in which the world is expected to warm up by no more than 2 degrees Celsius, in line with the 2015 Paris agreement and that contributes to the conservation of biological diversity and the sustainable use of its components. The Investment Manager's proprietary sustainability research framework has been developed to assess the overall impact of assets on sustainability and to retain investments targets that contribute to the SDGs while having no significant negative impact on any other SDGs.

The objective of the Fund were the following: 90% in Sustainable Investment (SI), 65% in Sustainable Investment Environmental (SIE), and 1% in Sustainable Investment Social (SIS). Taxonomy alignment objective were 5%. The sustainable investment strategy of the Fund seeks to mitigate biodiversity loss by investing in companies contributing to reducing negative impact on biodiversity through products and services, as well as companies transitioning into more sustainable practices.

It employs a thematic approach based on investing in every-step of major value chains to address biodiversity loss :

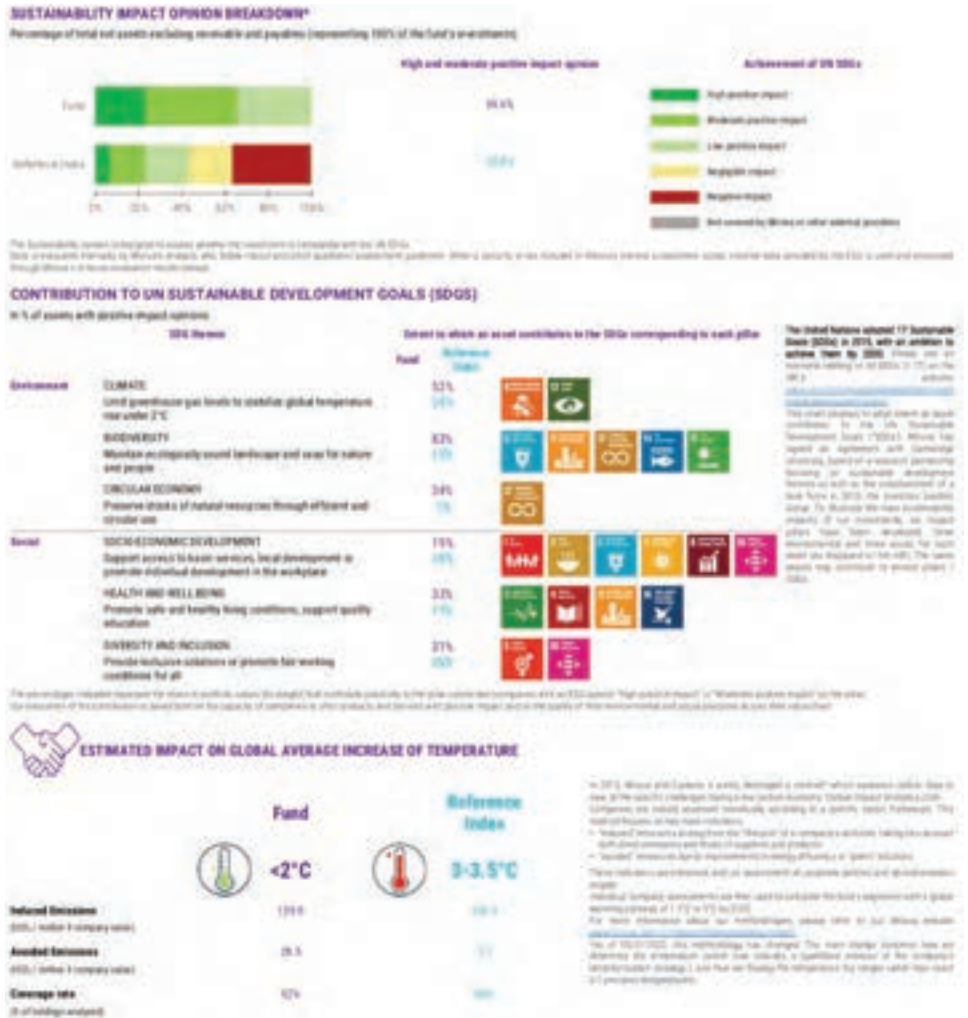

- Sustainable Land Use: Sustainable agricultural and forestry practices, Sustainable food system
- Sustainable Water Management: Water use efficiency, sustainable water management, marine resources management
- Waste and Circular Economy: Waste management, circular economy
- Climate Solutions: renewable energy, energy & industry efficiency, clean transportation
- Enablers and best-practices companies.

93.54% of the Fund's net assets were aligned with sustainable investment objectives on average during the reference period. Alignment with EU Taxonomy amounted to 5.09% %. The indicators have not been subject to an assurance provided by an auditor or a review by a third party.

● **How did the sustainability indicators perform?**

Benchmark: 50.00%: MSCI WORLD NET TOTAL RETURN EUR INDEX. The benchmark is not intended to be aligned with environmental and social ambitions as promoted by the fund. The fund followed the KPIs described hereafter. The figures are the average result of the 4 quarterly reports.

During the period, we outperformed our reference index with 65.6% of high and moderate positive impact opinion investments. We invest in long-term structural growth opportunities driven by the companies that can respond to reduce the pressures on biodiversity, which translates into our 83% contribution to the Biodiversity SDG themes. During the period , we continued to be aligned with our <2°C temperature target and the fund's contribution to UN Sustainable development goals outperformed the index in 2023. Our contribution to the SDG themes such as biodiversity was particularly positive compared to the index, in line with our investment strategy that seeks to mitigate biodiversity loss.

... and compared to previous periods?

No comparison can be done from last year's performance, because the fund was launched on mid-December 2023.

How did the sustainable investments not cause significant harm to any sustainable investment objective?

The sustainability analysis aims to identify the relevant residual environmental and social risks originating from companies' activities and practices and assesses the quality of the company's measures to mitigate these risks (the "DNSH test"). Such analysis considers notably the degree of exposure of the investee company to certain sectors or activities that may be considered to be damaging for the environment and/or the society and exposure to relevant environmental or social controversies. As a result of this qualitative analysis, the Investment Manager issues a binding opinion based on which companies whose economic activities or practices are deemed to have a significant negative impact on the achievement of one or more of the UN SDGs are systematically excluded from the investment universe regardless of their otherwise positive contribution. Therefore, over the reporting period, all investments in the Fund were complying with the Investment Manager's DNSH criteria.

How were the indicators for adverse impacts on sustainability factors taken into account?

Principal adverse impacts are the most significant

negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

As part of the analysis of residual ESG risks conducted on each investee company, the Fund systematically assesses and monitors indicators that are deemed to indicate the presence of principal adverse impact (including consideration of data relating to the mandatory PAI indicators referred to in the consolidated Regulatory Technical Standards for assessment of sustainable investment in accordance with art. 2 (17) SFDR). When the data necessary for the calculation of certain PAI indicators are not available, the Investment Manager may use qualitative or quantitative proxies that cover themes similar to the PAI indicators in question. Adverse impacts are prioritized according to the specificities of sectors and business models of companies considered for investment by using a combination of criteria based on:

- analysis of the company's exposure to environmental impacts based on science-based data from international organisations (e.g. energy intensity, impacts on biodiversity, etc),
- analysis of the company's exposure to labour rights and employee matters through its locations, business model and supply chain organization (e.g. exposure to health and safety risks, exposure to countries with specific human rights risks, etc),
- analysis of the company's footprint on local communities and consumers,
- screening of on-going or potential controversies.

Where the Investment Manager deems the investee company's processes and practices as insufficient to mitigate environmental, social and governance risks, notably with regards to the relevant PAIs, the company's impact is deemed as negative which makes it ineligible for investment. Further details can be found in the table hereunder, which lists the main indicators taken into account by Mirova when taking PAIs into account. PAI indicators support the due diligence on the company risk mitigation process in terms of materiality of risks (magnitude of the PAI) and effectiveness of mitigation measures (year on year trend). They can support engagement with the company on risk mitigation.

	Adverse Sustainability indicator	How PAIs are taken into account by Mirova
Greenhouse gas emissions	1. GHG emissions	<p>Exclusion of the most carbon intensive entities and companies with no or insufficient plans to reduce GHG emissions</p> <p>Systematic integration in qualitative internal analysis</p> <p>Exclusion of companies active in the fossil fuel sector</p> <p>For companies involved in fossil fuel extraction, processing/refining, and trading, exclusion applies to companies with:</p> <ul style="list-style-type: none"> >5% of revenues from coal or oil, including unconventional oil, >10% of revenues from unconventional gas. <p>For companies that produce dedicated equipment/services for the fossil fuel sector, exclusion applies to companies with >20% of revenues from these equipment/services.</p> <p>For companies involved in electricity production (>10% of sales related to electricity production), exclusion applies to companies with a generation mix dominated by coal, with a carbon intensity >350 gCO₂/MWh.</p> <p>Integration in qualitative internal analysis when relevant</p> <p>Integration in qualitative internal analysis when relevant</p>
	2. Carbon footprint	
	3. GHG intensity of investee companies	
	4. Exposure to companies active in the fossil fuel sector	
	5. Share of non-renewable energy consumption and production	
	6. Energy consumption intensity per high impact climate sector	
Biodiversity	7. Activities negatively affecting biodiversity-sensitive areas	<p>Exclusion of companies or projects significantly harming biodiversity sensitive areas</p> <p>Systematic integration in qualitative internal analysis</p> <p>Part of controversy analysis</p>
Water	8. Emissions to water	Integration in qualitative internal analysis when relevant

Investments in companies without carbon emission reduction initiatives	<p>Exclusion of the most carbon intensive entities and companies with no or insufficient plans to reduce GHG emissions</p> <p>Systematic integration in qualitative internal analysis</p> <p>Exclusion of companies with severe human rights issues and incidents</p> <p>Systematic integration in qualitative internal analysis</p> <p>Part of controversy analysis</p> <p>Exclusion of companies severely violating anti-corruption and anti-bribery laws</p> <p>Systematic integration in qualitative internal analysis</p> <p>Part of controversy analysis</p>
	14. Number of identified cases of severe human rights issues and incidents	
	17. Number of convictions and amount of fines for violation of anti-corruption and anti-bribery laws	

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The Investment Manager screens investee companies against adherence with OECD Guidelines for Mul. national Enterprises and UN Guiding Principles on Business and Human Rights. The Investment Manager continuously reviews companies' track records and news flows to identify significant controversies. Companies' involvement and resolving measures are taken into account. Risks of potential breach may be monitored through engagement to obtain additional assurance. This indicator is systematically monitored by our external service provider, as well as by a constant watch on controversies and regular meetings between Management and the Research team. Any severe and repeated breach of OECD guidelines will be excluded from our investment universe. Any severe and repeated breach of OECD guidelines by a company in portfolio will induce classification as high ESG risk and immediate engagement with the company on deployment of remediation measures. Lack of effectiveness of such measures would then induce ESG rating downgrade and possibly exclusion of the allowed investment category As a consequence, over the reporting period, all investments

were considered to be compliant with the OECD Guidelines for Mul. national Enterprises and the UN Guiding Principles on Business and Human Rights.

Mirova's investment universes are monitored with a special focus on controversies. The aim is to detect the presence of violations of the UN Covenant and the OECD Guidelines.

The action plan for dealing with a controversy will depend on the severity, as well as the corrective measures already announced by the company. Actions include :

- Direct individual engagement,
- Exercising voting rights,
- Collaborative engagement
- Divestment.

How did this financial product consider principal adverse impacts on sustainability factors?

PAI indicators are incorporated into the sustainability analysis framework and the results are part of the DNSH test. As described above, the DNSH test's result is a binding opinion based on which companies whose economic activities or practices are deemed to have a significant negative impact on the achievement of one or more of the UN SDGs are systematically excluded from the investment universe regardless of their otherwise positive contribution. PAI indicators are therefore continuously considered by these financial products. To illustrate this companies, companies manufacturing biodiversity solutions but displaying negative climate trends would be subject to priority engagement to align with our minimal standards on Scope 1 & 2.

In 2023, there was no significant controversy during the year that could cause a divestment of the portfolio Mirova Biodiversity Equity Fund.

What were the top investments of this financial product?

Largest Investments	Sector	% Assets	Country
XYLEM INC UN USD	Electronic Equipment: Pollution Control	4.62	United States
NOVOZYMES A/S-B SHARES DC DKK	Biotechnology	4.03	Denmark

Largest Investments	Sector	% Assets	Country
BADGER METER INC UN USD	Electronic Equipment: Gauges and Meters	2.44	United States
TRIMBLE INC UW USD	Electronic Equipment: Gauges and Meters	2.44	United States

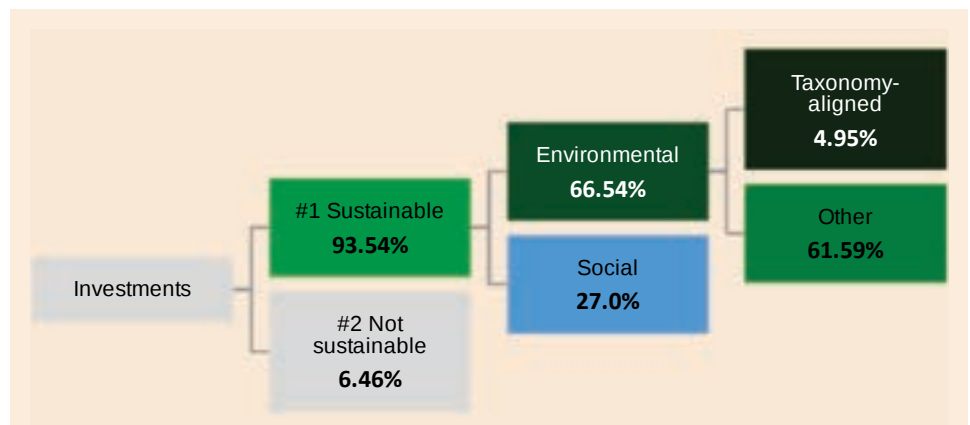

The percentages displayed represent the results as of 29/12/2023. The fund does not have enough history to provide results based on quarterly average.

The displayed country is the country of risk, i.e. the country where the security is domiciled.

What was the proportion of sustainability-related investments?

The Fund aims at investing only in sustainable investments as defined in Article 2(17) SFDR. 93.54% of the Fund's net assets have been aligned with sustainable investment objectives on average during the reference period. The Fund may use derivatives for hedging and investment purposes (authorised but very rarely used).

● What was the asset allocation?

#1 Sustainable covers sustainable investments with environmental or social objectives.

#2 Not sustainable includes investments which do not qualify as sustainable investments.

● In which economic sectors were the investments made?

Asset allocation describes the share of investments in specific assets.

SECTOR BREAKDOWN (%)	Fund	Reference Index
Industrials	34.8	11.4

MSCI Breakdown

Sector Breakdown : as of 31/12/2023.

To what extent were sustainable investments with an environmental objective aligned with the EU Taxonomy?

As a result of its sustainable objective, this Fund may make investments in economic activities that contribute to the environmental objectives set out in the Article 9 of the Regulation (EU) 2020/852 (the “Taxonomy Regulation”):

- (a) climate change mitigation and climate change adaptation,
- (b) sustainable use and protection of water and marine resources,
- (c) the transition to a circular economy,
- (d) pollution prevention and control,
- (e) the protection and restoration of biodiversity and ecosystems.

The alignment of the economic activities of each company with the above objectives is identified and measured to the extent that data is available to the Investment Manager and of an adequate quality. They may also stem from estimations in case when certain amount of information is missing. The estimations are performed under conditions defined by the regulations and respect the principle of prudence. The methodology for collecting alignment data and the quality of available data are being improved. As a result, the alignment percentage provided is conservative. 4.95% of the Fund’s net assets are aligned with the EU taxonomy on average during the reference period.

As an example, the fund invested in Tetra Tech, whose sustainability Opinion is Moderate Positive Impact

The company generates positive impact on biodiversity thanks to its activities of engineering consulting, infrastructure design services. The contribution of these services to global sustainability objectives depends on end use. About 10% of sales are related to water and wastewater infrastructure services, water circularity and aquifer replenishment for both public administrations and corporate but also nature-based solutions enhancing climate resilience such as river flood expansion areas as well as biodiversity conservation through dams’ fish scale design enhancing migratory fishes’ reproduction capacity ; forest management design and monitoring in developing countries ; and landfill sites engineering reducing water pollutions through leachate reduction. The company also generates positive impact on social development by easing access to essential water services in the developing world.

The company adequately mitigates risks related to its activity, with limited exposure anyways considering its activity as engineering consultant. Regarding climate change, the company has set SBTi approved targets. . Regarding data privacy; the The company has a an adequate policy in place. Regarding ethics risk mitigation – with respect to intense government

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are economic activities for which low-carbon alternatives are not yet available and that have greenhouse gas emission levels corresponding to

the best performance.

Taxonomy-aligned activities are expressed as a share of:

- **Turnover** reflecting the share of revenue from green activities of investee companies,
- **Capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **Operational expenditure** (OpEx) reflecting green operational activities of investee companies.

procurement activity – the company has established a comprehensive code of conduct covering all relevant aspects almost entirely in detail. Compliance with this code is supported by confidential and anonymous reporting channels, general whistleblower protection measures and compliance trainings.

Note : the results presented hereafter may differ slightly from the aggregate result presented in the Asset Allocation graphical representation.

This is explained by a difference of data source: the figures detailed below are based on estimates from data providers (or data reported by the issuer and collected by data providers), while the aggregate result presented in the Asset Allocation graphical representation may rely (for certain issuers) on estimate made by the investment manager. Please note that any estimated data comes from either the data providers or the investment manager (only for the aggregated data in the Asset Allocation graphical representation).

● ***Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy¹ ?***

Yes:

In fossil gas In nuclear energy

No

1. Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objectives - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

*For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures.

● **What was the share of investments made in transitional and enabling activities?**

The share of investments in transi. onal and enabling activities was 0.50%.

● **How did the percentage of investments aligned with the EU Taxonomy compare with previous reference periods?**

Not applicable - The fund was launched in 2023.

What was the share of sustainable investments with an environmental objective that were not aligned with the EU Taxonomy?

The Fund has invested 66.54% in sustainable investments with an environmental objective, including 61.59% sustainable investments that are not aligned with the EU taxonomy. The Investment Manager's sustainable impact assessment framework identifies certain activities that are not currently covered by the EU Taxonomy or considered as making a substantial contribution to environmental Taxonomy objectives. This is affected by performing an overall sustainability assessment on each investment, which includes a review of positive impacts regarding three environmental themes: Climate Stability, Biodiversity and Circular Economy.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally

These themes aim at identifying issuers whose activities or practices (or use of proceeds bonds which aim at financing projects):

- help develop low carbon energy, eco-efficiency, clean transportation, green building or align with an advanced decarbonation strategy; or
- support sustainable land use, land preservation and sustainable water management or align with an advanced biodiversity preservation strategy; or
- foster sustainable waste management or circular business model.

As an example, the fund invests in Trimble, whose sustainability opinion is Low Positive Impact

Trimble offers a variety of solutions based on hard- and software as well as services. Products include 3D conceptual design and modelling, precision equipment and data collection and tracking systems particularly relevant for precision agriculture supporting soil testing, a key enabler of regenerative agriculture transition ; The company's solutions can be applied in such a way that they help to reduce emissions, waste and resource consumption and improve employee safety in various end-markets: civil construction, precision agriculture, fleet management and water management. While those businesses in aggregate represent over 40% of total revenues according to Trimble, only part of these revenues actually come from sustainably beneficial applications. We estimate the exposure at 15% and expect the company to materialize these benefits in the future.

The company adequately mitigates risks related to its activity thanks to low materiality as Trimble is mostly a software company developing a limited amount of electronic equipment. Additionally, the group remains relatively small and has therefore limited means to properly report on their sustainability. To address responsible supply chain management and responsible sourcing of conflict minerals, the company has joined the Responsible Business Alliance (RBA) and adopted their standards. It should be noted that the company has a small exposure to the military industry. Regarding energy use the company target is 100% renewable energy by 2025.

What was the share of socially sustainable investments?

The Fund has invested 27% in companies that contribute to tackling inequality or that foster social cohesion, social integration and labor relations, or an investment in human capital or economically or socially disadvantaged communities, provided that such investments do not significantly harm any of the environmental/social objectives and that the investee companies follow good governance practices, in particular with respect to sound management structures, employee relations, remuneration of staff and tax compliance. This is affected by performing an overall sustainability assessment on each investee company, which includes a review of positive impacts regarding three social themes: Socio-economic development, Health wellness and Diversity inclusion. These themes aim at identifying companies whose activities or practices:

- help foster access to basic and sustainable services, local impact or promote advanced working conditions;
- support the development of healthcare, healthy nutrition, knowledge, education or safety;
- promote diversity and inclusion through dedicated products and services or through advanced practices targeting the workforce.*

As an example, the fund invested in Hermes International SCA, whose sustainability Opinion is Moderate Positive Impact

Hermès is a luxury goods manufacturer specializing in leather goods, accessories, ready-to-wear, and silk textiles. The company promotes sustainability certification of its supply chain: by 2024, Hermes aims at obtaining a sustainable management accreditation on all raw materials which will be auditable by an external third party. The company also promotes circular economy. Overall 96% of used skins are food by-products. To reduce pressure on biodiversity, the company also considers the analysis of the skin usage rate as an indicator of

workshop management and has developed a Good Cu. ng Practices repository at each site. The brand "Petit H" is dedicated to the production of objects from Hermes materials that have not been used in the process which is a good circular economy practice. As the company produces luxury goods, its products tend to be of higher quality and used for a longer time, in contrast to fast fashion products. The company has taken reasonable measures to extend useful product life, such as choosing high quality raw materials and providing repair services for some product groups.

The company adequately mitigates the risks related to its activity. Leather processing is a very resource intensive process, with a strong water footprint. The group set the goal of reducing its water consumption by 5% per year in intensity over the period 2018 to 2023, and the performance is on track. The company committed to fully source from tanneries performing "chrome-free" tanning by 2024 which is a good practice. The company improves standard related to crocodiles farming through the International Crocodilian Farmers Association. Otherwise, social impacts are considered a properly managed over the supply chain.

What investments were included under "not sustainable", what was their purpose and were there any minimum environmental or social safeguards?

The Fund aims at investing only in securities qualifying as sustainable investment. For technical or hedging purposes, the Fund may hold cash or cash equivalents and derivatives for risk management purposes. Due to the technical and neutral nature of the asset, such instruments are not considered as investments and thus no minimum safeguards have been put in place.

What actions have been taken to attain the sustainable investment objective during the reference period?

Engagement activity forms an integral part of Mirova's responsible investment approach. Mirova's engagement strategy seeks to monitor and thrive to improve companies' products and practices from an environmental, social, and governance point of view. As a result, one of the core functions of the Sustainability Research team is engagement, both on individual and collaborative levels:

- Individual engagement: in which Mirova's ESG analysts interact one-on-one with the companies to monitor performance and progress on ESG topics, and to encourage improvement in their sustainability practices. The purpose of individual engagement is not only to ensure responsible practices in line with our standards, but also to promote better ESG practices and encourage the development of solutions for the major environmental and social challenges associated with each sector. Mirova engaged with Xylem, a water solutions company on (i) setting water use reduction target aligned with the science based target for nature. This engagement requires assessment of high water risk sites, coordination with local communities, assessment of baseline water use for each site target etting, reporting on progress and possibly certification of sites according to the AWS Standard. (ii) setting scope 3 downstream targets in order to account for the use phase of products as they constitute 90% of company's footprint – in order to incentivize the company on energy efficiency of products. The company is currently applying for approval of targets by SBTi (iii) improving the circularity of products in order to reduce reliance on virgin material resources for products production – the company could benefit from good practices of its subsidiary Evoqua. (iv) Accelerating development of PFAS filtering solutions for public water distribution utilities in order to meet US government priorities for improved water quality for poor communities.
- Collaborative engagement: Mirova joins with other investors and representatives of civil society to identify controversial practices, encourage greater transparency and demand, where necessary, that companies change their practices. Additionally, Mirova leverages its voting rights to further push companies towards the development

of more sustainable portfolios and the adoption of best practices, by systematically exercising their voting rights based on an in-house voting policy that largely embeds the concepts of a sustainable-at-core, stakeholder-oriented governance. Proxy voting is used to convey messages during pre/post vote dialogue and via opposition to ad hoc items. Where possible, Mirova may co-sign or lead the filing of shareholder items. Mirova also engage with regulators to share its vision of sustainable investment to improve standards and regulations across the financial sector and to foster sustainable investment.

Mirova is committed to promoting regulations, including legislative changes, standards or labels, and practices that support sustainable investment and create long-term value. Further information in relation to engagement priorities and engagement policy carried out by Mirova can be found on the website at <https://www.mirova.com/en/research/voting-and-engagement>.

How did this financial product perform compared to the reference sustainable benchmark?

Not applicable.

- ***How did the reference benchmark differ from a broad market index?***
Not applicable.
- ***How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the sustainable investment objective?***
Not applicable.
- ***How did this financial product perform compared with the reference benchmark?***
Not applicable.
- ***How did this financial product perform compared with the broad market index?***
Not applicable.

Reference benchmarks are indexes to measure whether the financial product attains the sustainable objective.

NB: all figures related to sustainability/ taxonomy are calculated as an average of the values of the 4 quarter ends of the reference period.

Template periodic disclosure for the financial products referred to in Article 9, paragraphs 1 to 4a, of Regulation (EU) 2019/2088 and Article 5, first paragraph, of Regulation (EU) 2020/852

Product Name : MIROVA FUNDS - Future of Food Fund
 Legal Entity Identifier : 5493 00DKBADCMOLZCL 48

Sustainable investment objective

Did this financial product have a sustainable investment objective?

Yes

No

It made **sustainable investments with an environmental objective: 76.18%**

in economic activities that qualify as environmentally sustainable under the EU Taxonomy

in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

It made **sustainable investments with a social objective: 2144%**

It **promoted Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of ___% of sustainable investments

with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with a social objective

It promoted E/S characteristics, **but did not make any sustainable investments**

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

To what extent was the sustainable investment objective of this financial product met?

The sustainable investment objective of the Fund is to allocate the capital towards companies:

- that deliver solutions to address environmental and nutritional challenges within the sustainable food value chain and address key sustainable themes: food production, Ingredient and bioscience, food technology, water technology, retail and logistics and sustainable packaging, and

Sustainability indicators measure how the sustainable objectives of this financial product are attained.

- whose economic activities contribute positively through their products, services and/or practices to the achievement of one or more of the United Nations Sustainable Development Goals (the “SDGs”) The Fund aims at contributing to keeping the maximum global temperature rise to a maximum 2 degrees Celsius.

The Regulation (EU) 2020/852 (the “Taxonomy Regulation”) aims to establish the criteria for determining whether an economic activity is considered environmentally sustainable. This Fund may make investments in economic activities that contribute to the environmental objectives set out in the Article 9 of the Taxonomy Regulation: (a) climate change mitigation and climate change adaptation, (b) sustainable use and protection of water and marine resources, (c) the transition to a circular economy, (d) pollution prevention and control, (e) the protection and restoration of biodiversity and ecosystems. To date, only two of the environmental objectives have been defined and only a limited number of activities are eligible to be screened against the EU technical screening criteria. The alignment of the economic activities of each company with the above objectives is identified and measured to the extent that data is available to the Investment Manager and of an adequate quality. Depending on the investment opportunities available, the Fund may contribute to any of the above environmental objectives and may not at all times contribute to all of the objectives. No reference benchmark has been designated for the purpose of attaining the sustainable investment objective.

The fund sustainable investment objectives were the following : 90% in Sustainable Investment (SI), with an objective of 60% in SIE (Sustainable Investment Environmental) and 1% in SIS (Sustainable Investment Social).

97.62% of the Fund's net assets were aligned with sustainable investment objectives on average during the reference period. Alignment with EU Taxonomy amounted to 6.18%. During the year, we continued to invest in companies with leading sustainable solutions and sound strategies that can benefit from the food transition. We believe that new technologies, such as precision agriculture, plant-based protein extraction, natural ingredients, fermentation and enzymes, digital water and recycling technologies will be key for the food sector transformation. The indicators have not been subject to an assurance provided by an auditor or a review by a third party.

● ***How did the sustainability indicators perform?***

Benchmark:MSCI WORLD NET RETURN USD. The benchmark is not intended to be aligned with environmental and social ambitions as promoted by the fund.

The fund followed the KPIs described hereafter. The figures are the average result of the 4 quarterly reports.

During the period, we outperformed our reference index with 72.3% of high and moderate positive impact opinion investments and contributed positively to UN Sustainable development goals. As a thematic fund, we invest in long-term structural growth opportunities driven by the transition of the food system to be more resilient, have a reduced environmental impact and improve the health of society.

SUSTAINABILITY IMPACT OPINION BREAKDOWN*

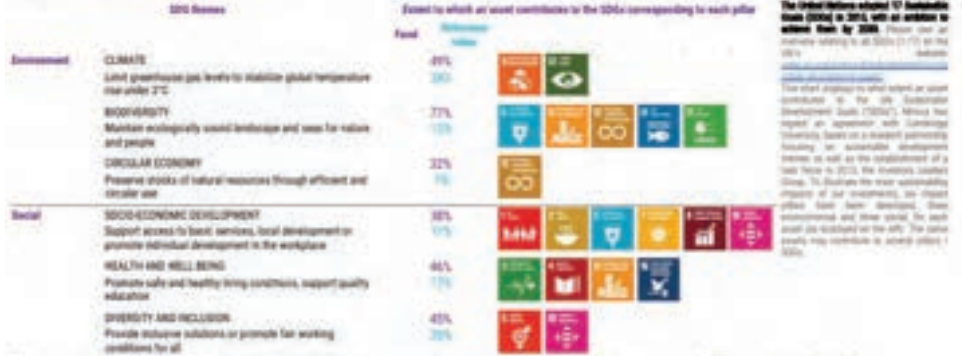

Percentage of total net assets excluding leaseholds and positions (representing 100% of the fund's investments)

The Sustainability opinion is designed to assess whether the investment or companies with the UN SDGs. SDG is indicated intensity by filter's opinion with filter about our third sustainable development guidelines. When a security is not covered by filter's general assessment stage, external data provided by ESG DDB is used and processed through filter's environmental assessment model.

CONTRIBUTION TO UN SUSTAINABLE DEVELOPMENT GOALS (SDGS)

In % of assets with positive impact opinion

The percentage values represent the share of portfolio value by weight that contributes to the UN SDG under "high positive impact" or "moderate positive impact" or "low positive impact". The contribution is calculated with an intensity of investment in other products and assets with positive impact risk on the quality of their environmental and social progress scores from their data points.

ESTIMATED IMPACT ON GLOBAL AVERAGE INCREASE OF TEMPERATURE

... and compared to previous periods?

A comparison of the performance of sustainability indicators with the previous period cannot be made due to the applica. on of the new requirements for the new reference period and the enhancement of our methodology. For the previous period, the indicators were calculated on the basis of a snapshot at the end of the period, whereas they are now calculated as an average over the quarters of the reference period.

However, during the period, our sustainability methodology evolved, we only invest in companies with a low, moderate or high positive impact opinion. We continued to be aligned with our <2°C temperature target and the fund's contribution to UN Sustainable development goals outperformed the index in 2023. Our contribution to the SDG themes such as circular economy, health and well being and Biodiversity were particularly positive compared to the index, explained by our sustainable investments in the transition of the food system.

How did the sustainable investments not cause significant harm to any sustainable investment objective?

The sustainability analysis aims to identify the relevant residual environmental and social risks originating from companies' activities and practices and assesses the quality of the company's measures to mitigate these risks (the "DNSH test"). Such analysis considers notably the degree of exposure of the investee company to certain sectors or activities that may be considered to be damaging for the environment and/or the society and exposure to relevant environmental or social controversies. As a result of this qualitative analysis, the Investment Manager issues a binding opinion

based on which companies whose economic activities or practices are deemed to have a significant negative impact on the achievement of one or more of the UN SDGs are systematically excluded from the investment universe regardless of their otherwise positive contribution. Therefore, over the reporting period, all investments in the Fund were complying with the Investment Manager's DNSH criteria.

— *How were the indicators for adverse impacts on sustainability factors taken into account?*

As part of the analysis of residual ESG risks conducted on each investee company, the Fund systematically assesses and monitors indicators that are deemed to indicate the presence of principal adverse impact (including consideration of data relating to the mandatory PAI indicators referred to in the consolidated Regulatory Technical Standards for assessment of sustainable investment in accordance with art. 2 (17) SFDR). When the data necessary for the calculation of certain PAI indicators are not available, the Investment Manager may use qualitative or quantitative proxies that cover themes similar to the PAI indicators in question. Adverse impacts are prioritized according to the specificities of sectors and business models of companies considered for investment by using a combination of criteria based on:

- analysis of the company's exposure to environmental impacts based on science-based data from international organisations (e.g. energy intensity, impacts on biodiversity, etc),
- analysis of the company's exposure to fundamental rights and employee matters through its locations, business model and supply chain organization (e.g. exposure to health and safety risks, exposure to countries with specific human rights risks, etc),
- analysis of the company's footprint on local communities and consumers,
- screening of on-going or potential controversies. Where the Investment Manager deems the investee company's processes and practices are insufficient to mitigate environmental, social and governance risks, notably with regards to the relevant PAIs, the company's impact is deemed as negative which makes it ineligible for investment.

Further details can be found in the table hereunder, which lists the main indicators taken into account by Mirova when taking PAIs into account. .

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

	Adverse Sustainability indicator	How PAIs are taken into account by Mirova
Greenhouse gas emissions	1. GHG emissions	Exclusion of the most carbon intensive entities and companies with no or insufficient plans to reduce GHG emissions Systematic integration in qualitative internal analysis
	2. Carbon footprint	
	3. GHG intensity of investee companies	
	4. Exposure to companies active in the fossil fuel sector	Exclusion of companies active in the fossil fuel sector For companies involved in fossil fuel extraction, processing/refining, and trading, exclusion applies to companies with: • >5% of revenues from coal or oil, including unconventional oil, • >10% of revenues from unconventional gas. For companies that produce dedicated equipment/services for the fossil fuel sector, exclusion applies to companies with >20% of revenues from these equipment/services. For companies involved in electricity production (<10% of sales related to electricity production), exclusion applies to companies with a generation mix dominated by coal, with a carbon intensity >350 gCO ₂ /MWh.
	5. Share of non-renewable energy consumption and production	Integration in qualitative internal analysis when relevant
	6. Energy consumption intensity per high impact climate sector	Integration in qualitative internal analysis when relevant
Biodiversity	7. Activities negatively affecting biodiversity-sensitive areas	Exclusion of companies or projects significantly harming biodiversity sensitive areas. Systematic integration in qualitative internal analysis. Part of controversy analysis
Water	8. Emissions to water	Integration in qualitative internal analysis when relevant
Waste	9. Hazardous waste and radioactive waste ratio	Integration in qualitative internal analysis when relevant
Social and Employee matters	10. Violations of UNGC principles and OECD guidelines for Multinational Enterprises	Exclusion of companies violating UNGC and OECD principles Systematic integration in qualitative internal analysis Part of controversy analysis
	11. Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises	Exclusion for large companies, case-by-case for small companies or projects Systematic integration in qualitative internal analysis Engagement plans / ESAP with investees when relevant
	12. Unadjusted gender pay gap	Systematic integration of gender equality in qualitative internal analysis Engagement plans / ESAP with investees
	13. Board gender diversity	Systematic integration of gender equality in qualitative internal analysis Engagement plans / ESAP with investees
Additional PAI indicators	14. Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)	Exclusion (0% sales threshold)
	4. Investments in companies without carbon emission reduction initiatives	Exclusion of the most carbon intensive entities and companies with no or insufficient plans to reduce GHG emissions Systematic integration in qualitative internal analysis
	14. Number of identified cases of severe human rights issues and incidents	Exclusion of companies with severe human rights issues and incidents. Systematic integration in qualitative internal analysis Part of controversy analysis
	17. Number of convictions and amount of fines for violation of anti-corruption and anti-bribery laws	Exclusion of companies severely violating anti-corruption and anti-bribery laws Systematic integration in qualitative internal analysis Part of controversy analysis

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The Investment Manager screens investee companies against adherence with OECD Guidelines for Mul. national Enterprises and UN Guiding Principles on Business and Human Rights. The Investment Manager continuously reviews companies' track records and news flows to identify significant controversies. Companies' involvement and resolving measures are taken into account. Risks of potential breach may be monitored through engagement to obtain additional assurance. Companies determined by the Investment Manager to be in serious breach of OECD Guidelines for Multinational Enterprises or UN Guiding Principles on Business and Human Rights are recognized as doing significant harm and are therefore rendered non-eligible. As a consequence, over the reporting period, all investments were considered to be respectful with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights.

This indicator is systematically monitored by our external service provider, as well as by a constant watch on controversies and regular meetings between Management and the Research team. Any severe and repeated breach of OECD guidelines will be excluded from our investment universe. Mirova's investment

universes are monitored with a special focus on controversies. The aim is to detect the presence of violations of the UN Covenant and the OECD Guidelines.

The action plan for dealing with a controversy will depend on the severity, as well as the corrective measures already announced by the company. Actions include :

- Direct individual engagement,
- Exercising voting rights,
- Collaborative engagement
- Divestment.

How did this financial product consider principal adverse impacts on sustainability factors?

PAI indicators are incorporated into the sustainability analysis framework and the results are part of the DNSH test. As described above, the DNSH test's result is a binding opinion based on which companies whose economic activities or practices are deemed to have a significant negative impact on the achievement of one or more of the UN SDGs are systematically excluded from the investment universe regardless of their otherwise positive contribution. PAI indicators are therefore continuously considered by these financial products.

In 2023, there was no significant controversy during the year that could cause a divestment of the portfolio Mirova Future of Food.

What were the top investments of this financial product?

Largest Investments	Sector	% Assets	Country
WASTE MANAGEMENT INC UN USD	Waste and Disposal Services	4.29	United States
VEOLIA ENVIRONNEMENT FP EUR	Water	4.21	France
TRIMBLE INC UW USD	Electronic Equipment: Gauges and Meters	3.96	United States

The list includes the investments constituting the greatest proportion of investments of the financial product during the reference period which is: 02/01/2023-29/12/2023

The percentages displayed represent the average of the 4 quarter ends of the reference period.

The displayed country is the country of risk, i.e. the country where the security is domiciled.

What was the proportion of sustainability-related investments?

The Fund aims at investing only in sustainable investments as defined in Article 2(17) SFDR. 97.62% of the Fund's net assets have been aligned with sustainable investment objectives on average during the reference period. The Fund may use derivatives for hedging and investment purposes (authorised but very rarely used).

● What was the asset allocation?

#1 Sustainable covers sustainable investments with environmental or social objectives.

#2 Not sustainable includes investments which do not qualify as sustainable investments.

● In which economic sectors were the investments made?

SECTOR BREAKDOWN (%)	Fund	Reference Index
Industrials	30.4	11.4
Materials	27.4	4.1
Consumer Staples	12.2	6.8
Health Care	7.9	12.1
Utilities	7.4	2.6
Information Technology	5.7	22.6

Financials	2.2	15.2
Communication Services	-	7.2
Energy	-	4.5
Real Estate	-	2.5
Cash & cash equivalent	2.9	-

MSCI Breakdown

Breakdown : as of 31/12/2023.

To what extent were sustainable investments with an environmental objective aligned with the EU Taxonomy?

As a result of its sustainable objective, this Fund may make investments in economic activities that contribute to the environmental objectives set out in the Article 9 of the Regulation (EU) 2020/852 (the "Taxonomy Regulation"): (a) climate change mitigation and climate change adaptation, (b) sustainable use and protection of water and marine resources, (c) the transition to a circular economy, (d) pollution prevention and control, (e) the protection and restoration of biodiversity and ecosystems. The alignment of the economic activities of each company with the above objectives is identified and measured to the extent that data is available to the Investment Manager and of an adequate quality. They may also stem from estimations in case when certain amount of information is missing. The estimations are performed under conditions defined by the regulations and respect the principle of prudence. The methodology for collecting alignment data and the quality of available data are being improved. As a result, the alignment percentage provided is conservative. 6.18% of the Fund's net assets are aligned with the EU taxonomy on average during the reference period.

As an example, the fund invested in GEA Group, whose sustainability Opinion is Moderate Positive Impact

GEA's industrial processing machineries generate a positive impact on biodiversity topics by enabling the sustainable processed food industry (plant-based proteins and sustainable dairy producers) improve production quality and efficiency thanks to fermenting and plant nutrients extraction tools but also equipment increasing material circularity thanks to steam reuse, elimination of water pollution thanks to wastewater sludge and biogas recovery, cardboard packaging sealing machines limiting the use of plastics and reducing food wastage by limiting oxidation, but also wet scrubbers reducing air pollution. The company positively contributes to food industry climate warming reduction thanks to energy efficient products and commitment to become climate neutral by 2040 including scope 3- SBTi approved. The company properly mitigates manufacturing risks thanks to credible risk management plans as illustrated by the increasing share of ISO environmentally certified sites. The company regularly engages with the workforce on employees satisfaction level and provides competitive compensation packages.

NB : the results presented hereafter may differ slightly from the aggregate result presented in the Asset Allocation graphical representation.

This is explained by a difference of data source: the figures detailed below are based on estimates from data providers (or data reported by the issuer and collected by data providers), while the aggregate result presented in the Asset Allocation graphical representation may rely (for certain issuers) on estimate made by the investment manager.

Please note that any estimated data comes from either the data providers or the investment manager (only for the aggregated data in the Asset Allocation graphical representation).

● **Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy¹ ?**

Yes:

In fossil gas In nuclear energy

No

1. Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objectives - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are economic activities for which low-carbon alternatives are not yet available and that have greenhouse gas emission levels corresponding to the best performance.

Taxonomy-aligned activities are expressed as a share of:

- **Turnover** reflecting the share of revenue from green activities of investee companies,
- **Capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for

a transi. on to a green economy.

- **Operational expenditure (OpEx)** reflecting green operational activities of investee companies.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.*

● **What was the share of investments made in transitional and enabling activities?**

The share of investments in transitional and enabling activities was 1.47%.

● **How did the percentage of investments aligned with the EU Taxonomy compare with previous reference periods?**

The percentage of investments aligned with the EU taxonomy for this new reference period cannot be compared with that of the previous reference period due to methodological changes: calculation of an end-of-period snapshot versus average of quarters in the new reference period, calculation previously based solely on estimated data versus calculation combining both estimates and directly reported data. However, during the period, our alignment with EU Taxonomy has been relatively stable compared to the previous reference period. To date, a limited number of activities are eligible to be screened against the EU technical screening criteria and our alignment percentage provided is conservative.

What was the share of sustainable investments with an environmental objective that were not aligned with the EU Taxonomy?

 are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

The Fund has invested 76.18% in sustainable investments with an environmental objective, including 70.00% sustainable investments that are not aligned with the EU taxonomy. The Investment Manager's sustainable impact assessment framework identifies certain activities that are not currently covered by the EU Taxonomy or considered as making a substantial contribution to environmental Taxonomy objectives. This is affected by performing an overall sustainability assessment on each investee company, which includes a review of positive impacts regarding three environmental themes: Climate Stability, Biodiversity and Circular Economy. These themes aim at identifying companies which activities or practices:

- help develop low carbon energy, eco-efficiency, clean transportation, green building or align with an advanced decarbonation strategy; or
- support sustainable land use, land preservation and sustainable water management or align with an advanced biodiversity preservation strategy; or
- foster sustainable waste management or circular business model. The Fund does not commit to a minimum share of sustainable investments with an environmental objective that are not aligned to the EU Taxonomy.

As an example, the fund invested in KUBOTA CORP, whose sustainability Opinion is Low Positive Impact. The company generates positive impact on human development thanks to the supply of small sized tractors in developing economies of Asia which results in increased land productivity thereby increasing food security. This is a material topic as more than half of people affected by undernutrition are in Asia and most of world farms are smaller than 2 ha and lack access to modern equipment, illustrating improvement margin. Company's ambition in developing precision agriculture solutions is promising – so is the planned commissioning of a new tractor factory in the US that could support small scale farming there enabling restorative agroecological agriculture as a substitute to intensive agriculture - This is material as in the US the average farm is 180 ha wide.

The company adequately mitigates the risks related to its activity or is not exposed to material risks. To illustrate this, the company is not exposed to significant supply chain risks due to the kind of commodities it sources (steel). The company increasingly certifies factories according to ISO safety standards. Kubota mitigates injuries risk in machinery use phase thanks to quality audits and also expands its parts supply business to enhance reparability of its products, mostly in developed countries. Regarding direct environmental impacts the company has set a -50% GHG emissions reduction target by 2030 against 2014 in Scope 1 & 2.

What was the share of socially sustainable investments?

The Fund has invested 21.44% in companies that contribute to tackling inequality or that foster social cohesion, social integration and labor relations, or an investment in human capital or economically or socially disadvantaged communities, provided that such investments do not significantly harm any of the environmental/social objectives and that the investee companies follow good governance practices, in particular with respect to sound management structures, employee relations, remuneration of staff and tax compliance. This is affected by performing an overall sustainability assessment on each investee company, which includes a review of positive impacts regarding three social themes: Socio-economic development, Health wellness and Diversity inclusion. These themes aim at identifying companies which activities or practices:

- help foster access to basic and sustainable services, local impact or promote advanced working conditions;
- support the development of healthcare, healthy nutrition, knowledge, education or safety;
- promote diversity and inclusion through dedicated products and services or through advanced practices targeting the workforce.

As an example, the fund invests in SweetGreen, whose sustainability Opinion is Low Positive Impact

The company offers some vegetarian main dishes (15% of them) that generate positive impact both on health and biodiversity sustainability dimensions as they substitute to animal proteins dishes and also meet demand from flexitarian consumers for more healthy products. This is a significant contribution as sustainable food scenarios require -50% red meat intake. While the company also offers a few organic products, yet it is not a clear focus of company's sustainability strategy.

The company adopts positive climate practices thanks to a target covering all scopes for climate neutrality by 2027 - yet there is a lack of clarity on whether the target are approved by SBTi. The company deployed a data platform dedicated to Supplier (farmers) Carbon Assessments, a relevant initiative considering the weight of scope 3 emission from sourcing in global footprint.

The company adequately mitigate most risks including ban on PFAS in packaging, food safety management, code of conduct containing environmental and social clauses.

What investments were included under “not sustainable”, what was their purpose and were there any minimum environmental or social safeguards?

The Fund aims at investing only in securities qualifying as sustainable investment. For technical or hedging purposes, the Fund may hold cash or cash equivalents and derivatives for currency risk management purposes. Due to the technical and neutral nature of the asset, such instruments are not considered as investments and thus no minimum safeguards have been put in place.

What actions have been taken to attain the sustainable investment objective during the reference period?

Engagement activity forms an integral part of Mirova's responsible investment approach. Mirova's engagement strategy seeks to monitor and thrive to improve companies' products and practices from an environmental, social, and governance point of view. As a result, one of the core functions of the Sustainability Research team is engagement, both on individual and collaborative levels:

- Individual engagement: in which Mirova's ESG analysts interact one-on-one with the companies to monitor performance and progress on ESG topics, and to encourage improvement in their sustainability practices. The purpose of individual engagement is not only to ensure responsible practices in line with our standards, but also to promote better ESG practices and encourage the development of solutions for the major environmental and social challenges associated with each sector. To illustrate individual engagement, Ecolab, a chemicals company was targeted in 2023 on 4 main sustainability topics yielding positive outcome as shown below
 - First request : Use a transparent methodology for assessing the environmental benefits of its solutions rather than an internal methodology. Result: The company has made progress on these points by setting up a pilot with TNFD, of which Mirova is a partner. It has thus tested an impact assessment software whose methodology is public.
 - Second request : Disclose their overall chemical footprint and assess the long-term effect and cocktail effect of substances used in products. Result: On this point, already implemented by the company in 2022, results are positive, showing on 2% products containing substances of very high concern. We expect this number to continue to decline as new products are phased out in the coming years.
 - Third request : Prioritize research and development in sectors that contribute significantly to sustainable transition such as agri-food. Result: From this perspective, Ecolab has renewed its partnership with Cargill to accelerate investing in innovative agri-food startups in 2022 with Techstars.
 - Fourth request : Reduce the risks associated with detergents in the livestock sector (with a recent acquisition of their subsidiary CID lines) by prioritizing

preven. on. As a result, the company participates in the European Biosecure project (aligned with the EU OneHealth policy), with Biocheck software. This tool for livestock farmers enables them to conduct their self-assessment to improve the prevention of risks and zoonoses

- Collaborative engagement: Mirova joins with other investors and representatives of civil society to identify controversial practices, encourage greater transparency and demand, where necessary, that companies change their practices. Additionally, Mirova leverages its voting rights to further push companies towards the development of more sustainable portfolios and the adoption of best practices, by systematically exercising their voting rights based on an in-house voting policy that largely embeds the concepts of a sustainable-at-core, stakeholder-oriented governance. Proxy voting is used to convey messages during pre/post vote dialogue and via opposition to ad hoc items. Where possible, Mirova may co-sign or lead the filing of shareholder items.

Mirova also engage with regulators to share its vision of sustainable investment to improve standards and regulations across the financial sector and to foster sustainable investment. Mirova is committed to promoting regulations, including legislative changes, standards or labels, and practices that support sustainable investment and create long-term value. Further information in relation to engagement priorities and engagement policy carried out by Mirova can be found on the website at <https://www.mirova.com/en/research/voting-and-engagement>.

How did this financial product perform compared to the reference sustainable benchmark?

Not applicable.

- ***How did the reference benchmark differ from a broad market index?***
Not applicable.
- ***How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the sustainable investment objective?***
Not applicable.
- ***How did this financial product perform compared with the reference benchmark?***
Not applicable.
- ***How did this financial product perform compared with the broad market index?***
Not applicable.

Reference benchmarks are indexes to measure whether the financial product attains the sustainable objective.

NB: all figures related to sustainability/ taxonomy are calculated as an average of the values of the 4 quarter ends of the reference period.

Periodic disclosure for the financial products referred to in Article 9, paragraphs 1 to 4a, of Regulation (EU) 2019/2088 and Article 5, first paragraph, of Regulation (EU) 2020/852

Product Name : Mirova Women Leaders and Diversity Equity Fund
 Legal Entity Identifier : 5493 00P39BSWLFKWZM 30

Sustainable investment objective

Did this financial product have a sustainable investment objective?

Yes

No

It made **sustainable investments with an environmental objective: 27.13%**

in economic activities that qualify as environmentally sustainable under the EU Taxonomy

in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

It made **sustainable investments with a social objective: 68.48%**

It **promoted Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of ___% of sustainable investments

with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with a social objective

It promoted E/S characteristics, **but did not make any sustainable investments**

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

To what extent was the sustainable investment objective of this financial product met?

The sustainable investment objective of the Fund is to allocate the capital towards companies:

- that address opportunities related to diversity and human capital with a focus on gender diversity and women empowerment, and
- whose economic activities contribute positively through their products, services and/or practices to the achievement of one or more of the United Nations Sustainable Development Goals (the "SDGs").

Sustainability indicators measure how the sustainable objectives of this financial product are achieved.

The fund sustainable investment objectives were the following : 90% in Sustainable Investment (SI), with an objective of 5% in SIE (Sustainable Investment Environmental) and 35% in SIS (Sustainable Investment Social).

95.61% of the Fund's net assets were aligned with sustainable investment objectives on average during the reference period. Alignment with EU Taxonomy amounted to 7.96%.

The indicators have not been subject to an assurance provided by an auditor or a review by a third party. Some securities selected according to the approach to Impact and ESG assessments in effect before 29/12/2023 meet the criteria for managing the risks of obstruction to the SDGs (DNSH test) and good governance practices but may have a positive contribution assessed as low or unquantifiable. As the analysis framework has been enhanced to date, the positive contribution of certain securities has been reviewed. An adjustment of the portfolios under the conditions set out in the investment process has been made.

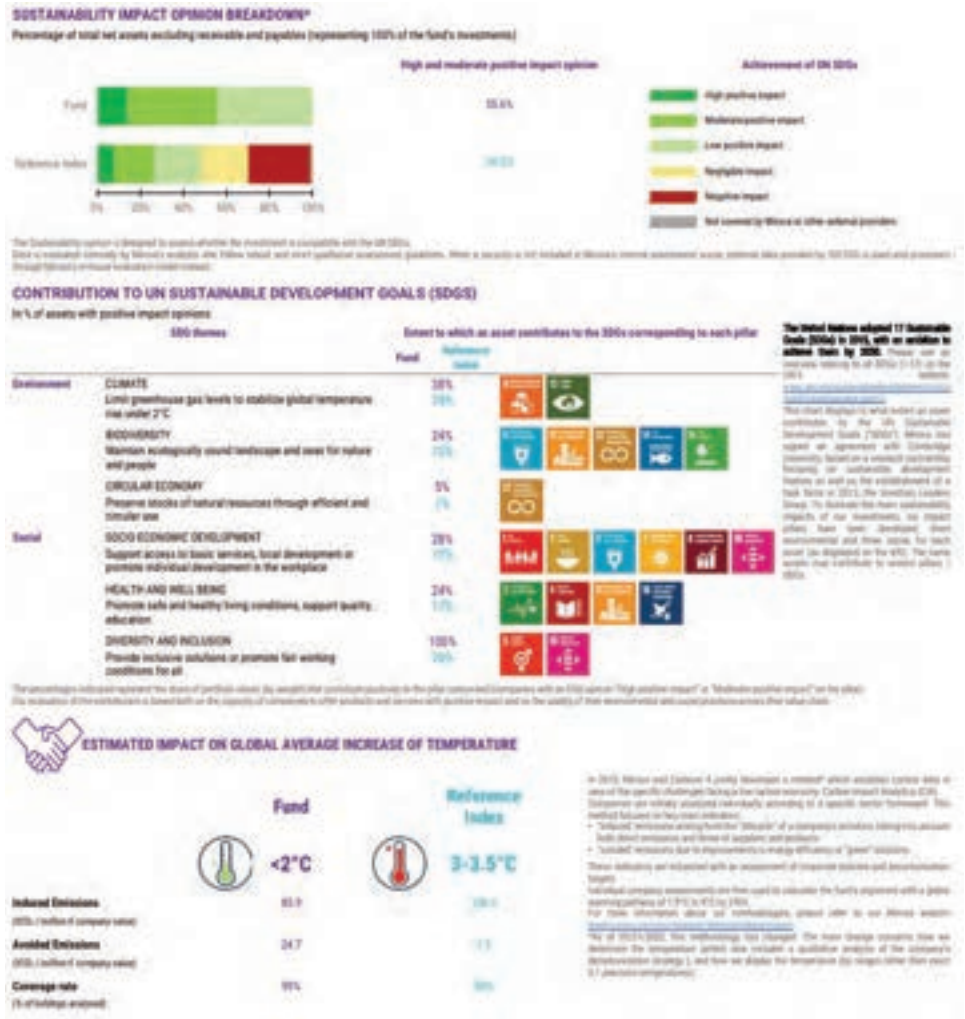

In order to select the companies we will invest in, first we look at companies that will contribute positively to the SDG thanks to their products and / or their practices. From that group of companies we will select only those which promote gender diversities throughout the organisation. In order to do so we have both quantitative & qualitative criteria diversity & inclusion criteria.

● ***How did the sustainability indicators perform?***

Benchmark: MSCI WORLD NET TOTAL RETURN EUR INDEX. The benchmark is not intended to be aligned with environmental and social ambitions as promoted by the fund.

The fund followed the KPIs described hereafter. The figures are the average result of the 4 quarterly reports.

We only invest in companies that will contribute positively on the SDG and companies that also promote gender diversities at the company level thanks to quantitative & qualitative criteria. Hence our sustainability breakdown with companies having low, moderate or high impact. When we construct the portfolio we also make sure that we are aligned with a 2°C scenario. So indeed the idea is to have both environmental & social impact.

... and compared to previous periods?

A comparison of the performance of sustainability indicators with the previous period cannot be made due to the applica. on of the new requirements for the new reference period and the enhancement of our methodology. For the previous period, the indicators were calculated on the basis of a snapshot at the end of the period, whereas they are now calculated as an average over the quarters of the reference period.

Our methodology has evolved and we now have a breakdown that is slightly different from last year. However, the selectivity is still the same. We are also still aligned with a 2°C scenario and this does not change vs last year

How did the sustainable investments not cause significant harm to any sustainable investment objective?

The sustainability analysis aims to identify the relevant residual environmental and social risks originating from companies' activities and practices and assesses the quality of the company's measures to mitigate these risks (the "DNSH test"). Such analysis considers notably the degree of exposure of the investee company to certain sectors or activities that may be considered to be damaging for the environment and/or the society and exposure to relevant environmental or social controversies. As a result of this qualitative analysis, the Investment Manager issues a binding opinion based on which companies whose economic activities or practices are deemed to have a significant negative impact on the achievement of one or more of the UN SDGs are systematically excluded from the investment universe regardless of their

otherwise positive contribution. Therefore, over the reporting period, all investments in the Fund were complying with the Investment Manager's DNSH criteria.

Mirova's investment universes are monitored with a special focus on controversies. The aim is to detect the presence of violations of the UN Covenant and the OECD Guidelines.

The action plan for dealing with a controversy will depend on the severity, as well as the corrective measures already announced by the company. Actions include :

- Direct individual engagement,
- Exercise of voting rights,
- Collaborative engagement
- Divestment.

— *How were the indicators for adverse impacts on sustainability factors taken into account?*

As part of the analysis of residual ESG risks conducted on each investee company, the Fund systematically assesses and monitors indicators that are deemed to indicate the presence of principal adverse impact (including consideration of data relating to the mandatory PAI indicators referred to in the consolidated Regulatory Technical Standards for assessment of sustainable investment in accordance with art. 2 (17) SFDR). When the data necessary for the calculation of certain PAI indicators are not available, the Investment Manager may use qualitative or quantitative proxies that cover themes similar to the PAI indicators in question. Adverse impacts are prioritized according to the specificities of sectors and business models of companies considered for investment by using a combination of criteria based on:

- analysis of the company's exposure to environmental impacts based on science-based data from international organisations (e.g. energy intensity, impacts on biodiversity, etc),
- analysis of the company's exposure to fundamental rights and employee matters through its locations, business model and supply chain organization (e.g. exposure to health and safety risks, exposure to countries with specific human rights risks, etc),
- analysis of the company's footprint on local communities and consumers,
- screening of on-going or potential controversies. Where the Investment Manager deems the investee company's processes and practices are insufficient to mitigate environmental, social and governance risks, notably with regards to the relevant PAIs, the company's impact is deemed as negative which makes it ineligible for investment.

Further details can be found in the table hereunder, which lists the main indicators taken into account by Mirova when taking PAIs into account.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

	Adverse Sustainability indicator	How PAIs are taken into account by Mirova
Greenhouse gas emissions	1. GHG emissions	Exclusion of the most carbon intensive entities and companies with no or insufficient plans to reduce GHG emissions Systematic integration in qualitative internal analysis
	2. Carbon footprint	
	3. GHG intensity of investee companies	
	4. Exposure to companies active in the fossil fuel sector	Exclusion of companies active in the fossil fuel sector For companies involved in fossil fuel extraction, processing/refining, and trading, exclusion applies to companies with: • >5% of revenues from coal or oil, including unconventional oil, • >10% of revenues from unconventional gas. For companies that produce dedicated equipment/services for the fossil fuel sector, exclusion applies to companies with >20% of revenues from these equipment/services. For companies involved in electricity production (<10% of sales related to electricity production), exclusion applies to companies with a generation mix dominated by coal, with a carbon intensity >350 gCO ₂ /MWh.
	5. Share of non-renewable energy consumption and production	Integration in qualitative internal analysis when relevant
	6. Energy consumption intensity per high impact climate sector	Integration in qualitative internal analysis when relevant
Biodiversity	7. Activities negatively affecting biodiversity-sensitive areas	Exclusion of companies or projects significantly harming biodiversity sensitive areas. Systematic integration in qualitative internal analysis. Part of controversy analysis
Water	8. Emissions to water	Integration in qualitative internal analysis when relevant
Waste	9. Hazardous waste and radioactive waste ratio	Integration in qualitative internal analysis when relevant
Social and Employee matters	10. Violations of UNGC principles and OECD guidelines for Multinational Enterprises	Exclusion of companies violating UNGC and OECD principles Systematic integration in qualitative internal analysis Part of controversy analysis
	11. Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises	Exclusion for large companies, case-by-case for small companies or projects Systematic integration in qualitative internal analysis Engagement plans / ESAP with investees when relevant
	12. Unadjusted gender pay gap	Systematic integration of gender equality in qualitative internal analysis Engagement plans / ESAP with investees
	13. Board gender diversity	Systematic integration of gender equality in qualitative internal analysis Engagement plans / ESAP with investees
	14. Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)	Exclusion (0% sales threshold)
Additional PAI indicators	4. Investments in companies without carbon emission reduction initiatives	Exclusion of the most carbon intensive entities and companies with no or insufficient plans to reduce GHG emissions Systematic integration in qualitative internal analysis
	14. Number of identified cases of severe human rights issues and incidents	Exclusion of companies with severe human rights issues and incidents. Systematic integration in qualitative internal analysis Part of controversy analysis
	17. Number of convictions and amount of fines for violation of anti-corruption and anti-bribery laws	Exclusion of companies severely violating anti-corruption and anti-bribery laws Systematic integration in qualitative internal analysis Part of controversy analysis

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The Investment Manager screens investee companies against adherence with OECD Guidelines for Mul. national Enterprises and UN Guiding Principles on Business and Human Rights. The Investment Manager continuously reviews companies' track records and news flows to identify significant controversies. Companies' involvement and resolving measures are taken into account. Risks of potential breach may be monitored through engagement to obtain additional assurance. Companies determined by the Investment Manager to be in serious breach of OECD Guidelines for Multinational Enterprises or UN Guiding Principles on Business and Human Rights are recognized as doing significant harm and are therefore rendered non-eligible. As a consequence, over the reporting period, all investments were considered to be respectful with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights.

This indicator is systematically monitored by our external service provider, as well as by a constant watch on controversies and regular meetings between Management and the Research team. Any severe and repeated breach of OECD guidelines will be excluded from our investment universe.

How did this financial product consider principal adverse impacts on sustainability factors?

PAI indicators are incorporated into the sustainability analysis framework and the results are part of the DNSH test. As described above, the DNSH test's result is a binding opinion based on which companies whose economic activities or practices are deemed to have a significant negative impact on the achievement of one or more of the UN SDGs are systematically excluded from the investment universe regardless of their otherwise positive contribution. PAI indicators are therefore continuously considered by these financial products.

In 2023, there was no significant controversy during the year that could cause a divestment of the portfolio.

What were the top investments of this financial product?

The percentages displayed represent the average of the 4 quarter ends of the reference period.

The displayed country is the country of risk, i.e. the country where the security is domiciled.

What was the proportion of sustainability-related investments?

The Fund aims at investing only in sustainable investments as defined in Article 2(17) SFDR. 95.61% of the Fund's net assets have been aligned with sustainable investment objectives on average during the reference period. The Fund may use derivatives for hedging and investment purposes (authorized but very rarely used).

● *What was the asset allocation?*

The list includes the investments constituting the **greatest proportion of investments** of the financial product during the reference period which is: 02/01/2023-29/12/2023

Asset allocation describes the share

of investments in specific assets.

#1 Sustainable covers sustainable investments with environmental or social objec. ves.

#2 Not sustainable includes investments which do not qualify as sustainable investments.

● **In which economic sectors were the investments made?**

SECTOR BREAKDOWN (%)	Fund	Reference Index
Information Technology	21.1	22.1
Health Care	15.6	12.1
Financials	14.5	15.2
Materials	11.3	4.1
Industrials	11.0	11.9
Consumer Discretionary	8.7	11.0

Energy	-	4.5
Real Estate	-	2.5
Mutual Funds	0.5	-
Cash & cash equivalent	1.3	-

MSCI Breakdown

Sector breakdown : as of 31/12/2023.

To what extent were sustainable investments with an environmental objective aligned with the EU Taxonomy?

As a result of its sustainable objective, this Fund may make investments in economic activities that contribute to the environmental objectives set out in the Article 9 of the Regulation (EU) 2020/852 (the “Taxonomy Regulation”): (a) climate change mitigation and climate change adaptation, (b) sustainable use and protection of water and marine resources, (c) the transition to a circular economy, (d) pollution prevention and control, (e) the protection and restoration of biodiversity and ecosystems. The alignment of the economic activities of each company with the above objectives is identified and measured to the extent that data is available to the Investment Manager and of an adequate quality. They may also stem from estimations in case when certain amount of information is missing. The estimations are

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the

criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are economic activities for which low-carbon alternatives are not yet available and that have greenhouse gas emission levels corresponding to the best performance.

Taxonomy-aligned activities are expressed as a share of:

- **Turnover** reflecting the share of revenue from green activities of investee companies,
- **Capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **Operational expenditure** (OpEx) reflecting green operational activities of investee companies.

performed under conditions defined by the regulations and respect the principle of prudence. The methodology for collecting alignment data and the quality of available data are being improved. As a result, the alignment percentage provided is conservative. 7.96% of the Fund's net assets are aligned with the EU taxonomy on average during the reference period. As an example, the portfolio invested in Michelin. Michelin is a very committed player in automotive industry to have a role in ecological transition of transport, whether by offering green tires, by improving logistics or by investing in new electric vehicles technologies related to hydrogen-powered systems. The company has 13% of its sales derived from tires with class A and B rolling resistance ratings aligned with the specifications in the Delegated Act of the Taxonomy Regulation restricting tires to the two highest rolling resistance classes on the market. In addition, Michelin champions a corporate culture where the inclusion of diversity is seen as important and a source of strength, which starts by the 36% female representation in their executive committee. The company has established ambitious targets, with the objective to "Aim to set the gender balance benchmark in our industry" and achieve gender balance among Group senior executives and managers by 2030. They measure their progress through different indicators such as their IMDI indicator (Inclusion and Diversities Management Index), on which they aim to achieve 80 out of 100 by 2030 (up from a baseline score of 50/100 in 2019). This indicator covers five areas: Gender, Identity, representative nationality of management, Disabled workers and Equal Opportunity. Another level for Michelin is to inculcate a culture of diversity and inclusion within their organisation is to help each individual become aware of their own perceptual biases. Since 2020, all the Group's managers have benefited from a half-day of awareness training on bias and stereotypes, with 3000 new participants trained in 2022. They also have an employee group, Women Forward, to advance the topic of gender parity by organising mentoring as well as diagnostics and networking events.

NB : the results presented hereafter may differ slightly from the aggregate result presented in the Asset Allocation graphical representation.

This is explained by a difference of data source: the figures detailed below are based on estimates from data providers (or data reported by the issuer and collected by data providers), while the aggregate result presented in the Asset Allocation graphical representation may rely (for certain issuers) on estimate made by the investment manager. Please note that any estimated data comes from either the data providers or the investment manager (only for the aggregated data in the Asset Allocation graphical representation).

● **Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy¹ ?**

Yes:

In fossil gas In nuclear energy

No

1. Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objectives - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.*

*For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures.

● **What was the share of investments made in transitional and enabling activities?**

The share of investments in transi. onal and enabling activities was 2.85%.

● **How did the percentage of investments aligned with the EU Taxonomy compare with previous reference periods?**

The percentage of investments aligned with the EU taxonomy for this new reference period cannot be compared with that of the previous reference period due to methodological changes: calculation of an end-of-period snapshot versus average of quarters in the new reference period, calculation previously based solely on estimated data versus calculation combining both estimates and directly reported data.

The difference between the % of investment aligned with the taxonomy can also be explained by 1) evolution of the share price of the stocks concerned (for example Sunrun, is very volatile) 2) buy / sell / add & trim (we for example sold our exposure to Orsted in H2 24, we've done some add & trim during the year on some of the renewables names like Sunrun... 3) level of cash in the portfolio 4) increased disclosure of the company in the portfolio on the taxonomy alignment

 are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

What was the share of sustainable investments with an environmental objective that were not aligned with the EU Taxonomy?

The Fund has invested 27.13% in sustainable investments with an environmental objective, including 19.18% sustainable investments that are not aligned with the EU taxonomy. The Investment Manager's sustainable impact assessment framework identifies certain activities that are not currently covered by the EU Taxonomy or considered as making a substantial contribution to environmental Taxonomy objectives. This is affected by performing an overall sustainability assessment on each investee company, which includes a review of positive impacts regarding three environmental themes: Climate Stability, Biodiversity and Circular Economy. These themes aim at identifying companies which activities or practices:

- help develop low carbon energy, eco-efficiency, clean transportation, green building or align with an advanced decarbonation strategy; or
- support sustainable land use, land preservation and sustainable water management or align with an advanced biodiversity preservation strategy; or
- foster sustainable waste management or circular business model. The Fund does not commit to a minimum share of sustainable investments with an environmental objective that are not aligned to the EU Taxonomy.

The Women Leaders and Diversity Equity fund being a global fund, there is an important exposure to American companies that have environmental objectives and activities, but which do not publish an alignment with the EU Taxonomy. An example is Sunrun whose activities focus on development, installation and maintenance of solar photovoltaic systems for the residential market in the United States. On top of being the market leader in its field, the company is well positioned on the diversity and inclusion pillar, notably with a Female CEO, and 50% of women representation in the Executive Management team. The company is committed to and achieved 100% gender pay parity for its employees in 2018 have 100% pay parity since 2018 and have up to 8 weeks of paid parental leave for all employees.

What was the share of socially sustainable investments?

The Fund has invested 68.48% in companies that contribute to tackling inequality or that foster social cohesion, social integration and labor relations, or an investment in human capital or economically or socially disadvantaged communities, provided that such investments do not significantly harm any of the environmental/social objectives and that the investee companies follow good governance practices, in particular with respect to sound management structures, employee relations, remuneration of staff and tax compliance. This is affected by performing an overall sustainability assessment on each investee company, which includes a review of positive impacts regarding three social themes: Socio-economic development, Health wellness and Diversity inclusion. These themes aim at identifying companies which activities or practices:

- help foster access to basic and sustainable services, local impact or promote advanced working conditions;
- support the development of healthcare, healthy nutrition, knowledge, education or safety;
- promote diversity and inclusion through dedicated products and services or through advanced practices targeting the workforce.

Eli Lilly is an American pharmaceutical company founded in 1876, therefore does not have any green taxonomy aligned activity but is eligible on the social pillar. The firm has been a member of the Women Leaders and Diversity Equity fund since its launch in 2019. Eli Lilly's has ambitions to increase the representation of women within their workforce and has put diversity and inclusion policies in place over the last few years which have proved to be successful. The results are reflected in improved diversity metrics. For example, between the

end of 2017 and the end of 2023, the number of women in management positions at Eli Lilly rose from 41% to over 51% worldwide. The company currently meets two of our three quantitative criteria. Today, a third of the members of its Executive Committee are women (four out of thirteen). They hold positions that are critical in the sector, such as Chief Financial Officer and Executive Vice-President of Global Quality. This proportion is higher than the average for the pharmaceutical industry, where women account for an average of only 24% of executive committee members.

What investments were included under “not sustainable”, what was their purpose and were there any minimum environmental or social safeguards?

The Fund aims at investing only in securities qualifying as sustainable investment. For technical or hedging purposes, the Fund may hold cash or cash equivalents and derivatives for currency risk management purposes. Due to the technical and neutral nature of the asset, such instruments are not considered as investments and thus no minimum safeguards have been put in place.

What actions have been taken to attain the sustainable investment objective during the reference period?

Engagement activity forms an integral part of Mirova's responsible investment approach. Mirova's engagement strategy seeks to monitor and thrive to improve companies' products and practices from an environmental, social, and governance point of view. As a result, one of the core functions of the Sustainability Research team is engagement, both on individual and collaborative levels:

- Individual engagement: in which Mirova's ESG analysts interact one-on-one with the companies to monitor performance and progress on ESG topics, and to encourage improvement in their sustainability practices. The purpose of individual engagement is not only to ensure responsible practices in line with our standards, but also to promote better ESG practices and encourage the development of solutions for the major environmental and social challenges associated with each sector.
 - In 2023, Mirova's ESG analyst dedicated to the Women Leader and Diversity Equity fund did an overall engagement campaign to collect all the potential qualitative information concerning D&I of the companies within the fund as well as targeted engagement for all companies who did not meet any quantitative criteria anymore, notably Cyberark and Eurazeo. Companies were sent a personalized Excel file to complete where information was missing, and complimentary calls were done with over 20 companies during the year.
- Collaborative engagement: Mirova joins with other investors and representatives of civil society to identify controversial practices, encourage greater transparency and demand, where necessary, that companies change their practices, notably Mirova is part of the 30% Club since 2019. Additionally, Mirova leverages its voting rights to further push companies towards the development of more sustainable portfolios and the adoption of best practices, by systematically exercising their voting rights based on an in-house voting policy that largely embeds the concepts of a sustainable-at-core, stakeholder-oriented governance. Proxy voting is used to convey messages during pre/post vote dialogue and via opposition to ad hoc items. Where possible, Mirova may co-sign or lead the filing of shareholder items.

Mirova also engage with regulators to share its vision of sustainable investment to improve standards and regulations across the financial sector and to foster sustainable investment.

Mirova is committed to promoting regulations, including legislative changes, standards or labels, and practices that support sustainable investment and create long-term value. Further information in relation to engagement priorities and engagement policy carried out by Mirova can be found on the website at <https://www.mirova.com/en/research/voting-and-engagement>.

How did this financial product perform compared to the reference sustainable benchmark?

Reference

benchmarks are indexes to measure whether the financial product attains the sustainable objective.

NB: all figures related to sustainability/ taxonomy are calculated as an average of the values of the 4 quarter ends of the reference period.

Template periodic disclosure for the financial products referred to in Article 9, paragraphs 1 to 4a, of Regulation (EU) 2019/2088 and Article 5, first paragraph, of Regulation (EU) 2020/852

Product Name : MIROVA FUNDS - Mirova Global Green Bond Fund
Legal Entity Identifier : 2221 002Y14BV82OF3N 65

Sustainable investment objective

Did this financial product have a sustainable investment objective?

Yes

No

It made **sustainable investments with an environmental objective: 91.96%**

in economic activities that qualify as environmentally sustainable under the EU Taxonomy

in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

It made **sustainable investments with a social objective: 5.16%**

It **promoted Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of ___% of sustainable investments

with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with a social objective

It promoted E/S characteristics, **but did not make any sustainable investments**

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

To what extent was the sustainable investment objective of this financial product met?

The sustainable investment objective of the Fund is to invest in:

- green bonds, (and/or social, green and social bonds) issued by corporate issuers, banks, supranational entities, development banks, agencies, regions and states whose purpose is to finance projects with a positive environmental and/or social impacts; and/or
- bonds issued by corporate issuers whose economic activities contribute to the sustainable transition throughout their activities or services (i.e. pure players in green

Sustainability indicators measure how the sustainable objectives of this financial product are achieved.

and social projects) and to the achievement of one or more of the United Nations Sustainable Development Goals (the “SDGs”).

Green bonds are bonds that have an environmental impact insofar as they finance projects related to the environmental transition. Social bonds are use of proceeds bonds that raise funds for new and existing socially sound and sustainable projects that achieve greater social benefits. The qualification of a green or social bond is the result of an internal analysis process by the Investment Manager based on four criteria, derived from both Green Bonds Principles and Social as defined by the ICMA (International Capital Market Association) :

- use of the proceeds: the legal documentation when issuing the bond must specify that use of the funds will enable the financing or refinancing of projects with environmental/ social benefits.
- process for project evaluation and selection: the issuer should communicate the environmental / social sustainability objectives of the projects and the eligibility criteria.
- management of proceeds: The net proceeds of the Green / Social Bond, or an amount equal to these net proceeds, should be credited to a sub-account, moved to a sub-portfolio or otherwise tracked by the issuer in an appropriate manner, and allocated to by the issuer in a formal internal process linked to the issuer's lending and investment operations for green / social projects.
- reporting: The issuer must undertake to provide regular reporting on the use of the funds in order for the bond to be considered green / social. In addition to the above analysis, the Investment Manager uses additional criteria to define eligibility of Green / Social Bonds which include notably :
- evaluation of the company's general practices or environmental and social risk management throughout the life cycle of the financed projects;
- assessment of the environmental impact of the project aiming at identifying and investing only in project with significant positive environmental impact.

The Fund aims at contributing to keeping the maximum global temperature rise to a maximum 2 degrees Celsius. The Regulation (EU) 2020/852 (the “Taxonomy Regulation”) aims to establish the criteria for determining whether an economic activity is considered environmentally sustainable.

No reference benchmark has been designated for the purpose of attaining the sustainable investment objective. 97.12% of the Fund's net assets were aligned with sustainable investment objectives on average during the reference period. Alignment with EU Taxonomy amounted to 11.20%. The indicators have not been subject to an assurance provided by an auditor or a review by a third party.

The fund sustainable investment objectives were the following : 90% in Sustainable Investment (SI), with an objective of 75% in SIE (Sustainable Investment Environmental) and none in SIS (Sustainable Investment Social).

● ***How did the sustainability indicators perform?***

There is no reference index for this fund. The fund followed the KPIs described hereafter. The figures are the average result of the 4 quarterly reports.

The fund sticks to its core strategy: funding companies designing, producing, and marketing the services and products adapted to the low-carbon economy. On average, more than 80% were invested in climate stability projects to limit global warming under 2° (SDG 9 and 13). 62% were invested in projects that contributes to healthy eco-systems (SDG 14 and 15) and 43% of the fund financed projects that bring solutions to resources through efficient and circular use of natural resources. The fund is in accordance with the 1.5-degree scenario.

To achieve such a high level of environmental impact we apply our own methodology in order to select green and sustainability bonds with high positive and moderate

positive impact and exclude issues with negligible or negative impact. This bottom-up approach is at the first step of our process.

... and compared to previous periods?

A comparison of the performance of sustainability indicators with the previous period cannot be made due to the application of the new requirements for the new reference period and the enhancement of our methodology. For the previous period, the indicators were calculated on the basis of a snapshot at the end of the period, whereas they are now calculated as an average over the quarters of the reference period.

However, compared to last year, the fund had more positive rated issuances but less committed issuances and no neutral. In terms of SDG the fund was more focused on environmental projects rather than social projects, this can be explained by the increase in weight of the credit exposure versus sovereigns.

How did the sustainable investments not cause significant harm to any sustainable investment objective?

The sustainability analysis aims to identify the relevant residual environmental and social risks originating from issuers' activities and practices and assesses the quality of the issuer's measures to mitigate these risks (the "DNSH test"). Such analysis

considers notably the degree of exposure of the investee company to certain sectors or activities that may be considered to be damaging for the environment and/or the society and exposure to relevant environmental or social controversies. As a result of this qualitative analysis, the Investment Manager issues a binding opinion based on which green bonds financing economic activities are deemed to have a significant negative impact on the achievement of one or more of the UN SDGs are systematically excluded from the investment universe regardless of their otherwise positive contribution. Therefore, over the reporting period, all investments in the Fund were complying with the Investment Manager's DNSH criteria.

— *How were the indicators for adverse impacts on sustainability factors taken into account?*

As part of the analysis of residual ESG risks conducted on each investee company, the Fund systematically assesses and monitors indicators that are deemed to indicate the presence of principal adverse impact (including consideration of data relating to the mandatory PAI indicators referred to in the consolidated Regulatory Technical Standards for assessment of sustainable investment in accordance with art. 2 (17) SFDR). When the data necessary for the calculation of certain PAI indicators are not available, the Investment Manager may use qualitative or quantitative proxies that cover themes similar to the PAI indicators in question. Adverse impacts are prioritized according to the specificities of sectors of each issuer or project financed by the green bond considered for investment by using a combination of criteria based on:

- analysis of the issuer's exposure or project financed by the bond to environmental impacts based on science-based data from international organisations (e.g. energy intensity, impacts on biodiversity, etc),
- analysis of the issuer's exposure or project financed by the bond to fundamental rights and employee matters through its locations, business model and supply chain organization (e.g. exposure to health and safety risks, exposure to countries with specific human rights risks, etc),
- analysis of the issuer's footprint (or footprint of the project financed by the bond) on local communities and consumers,
- screening of on-going or potential controversies.

Mirova's investment universes are followed with a special focus on controversies. The aim is to detect violations of the UN Compact and the OECD Guidelines. The action plan to deal with a controversy will depend on the severity, as well as the corrective measures already announced by the company. The actions are:

- Direct individual engagement,
- Exercising the right to vote,
- Collaborative engagement
- Divestment

Where the Investment Manager deems the issuer's processes and practices are insufficient to mitigate environmental, social and governance risks, notably with regards to the relevant PAIs, the investment's impact is deemed as negative which makes it ineligible for investment.

Further details can be found in the table hereunder, which lists the main indicators taken into account by Mirova when taking PAIs into account.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

	Adverse Sustainability indicator	How PAIs are taken into account by Mirova
Greenhouse gas emissions	1. GHG emissions	Exclusion of the most carbon intensive entities and companies with no or insufficient plans to reduce GHG emissions Systematic integration in qualitative internal analysis
	2. Carbon footprint	
	3. GHG intensity of investee companies	
	4. Exposure to companies active in the fossil fuel sector	Exclusion of companies active in the fossil fuel sector For companies involved in fossil fuel extraction, processing/refining, and trading, exclusion applies to companies with: • >5% of revenues from coal or oil, including unconventional oil, • >10% of revenues from unconventional gas. For companies that produce dedicated equipment/services for the fossil fuel sector, exclusion applies to companies with >20% of revenues from these equipment/services. For companies involved in electricity production (>10% of sales related to electricity production), exclusion applies to companies with a generation mix dominated by coal, with a carbon intensity >350 gCO ₂ /MWh.
	5. Share of non-renewable energy consumption and production	Integration in qualitative internal analysis when relevant
	6. Energy consumption intensity per high impact climate sector	Integration in qualitative internal analysis when relevant
Biodiversity	7. Activities negatively affecting biodiversity-sensitive areas	Exclusion of companies or projects significantly harming biodiversity sensitive areas. Systematic integration in qualitative internal analysis. Part of controversy analysis
Water	8. Emissions to water	Integration in qualitative internal analysis when relevant
Waste	9. Hazardous waste and radioactive waste ratio	Integration in qualitative internal analysis when relevant
Social and Employee matters	10. Violations of UNGC principles and OECD guidelines for Multinational Enterprises	Exclusion of companies violating UNGC and OECD principles Systematic integration in qualitative internal analysis Part of controversy analysis
	11. Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises	Exclusion for large companies, case-by-case for small companies or projects Systematic integration in qualitative internal analysis Engagement plans / ESAP with investees when relevant
	12. Unadjusted gender pay gap	Systematic integration of gender equality in qualitative internal analysis Engagement plans / ESAP with investees
	13. Board gender diversity	Systematic integration of gender equality in qualitative internal analysis Engagement plans / ESAP with investees
Additional PAI indicators	14. Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)	Exclusion (0% sales threshold)
	4. Investments in companies without carbon emission reduction initiatives	Exclusion of the most carbon intensive entities and companies with no or insufficient plans to reduce GHG emissions Systematic integration in qualitative internal analysis
	14. Number of identified cases of severe human rights issues and incidents	Exclusion of companies with severe human rights issues and incidents. Systematic integration in qualitative internal analysis Part of controversy analysis
	17. Number of convictions and amount of fines for violation of anti-corruption and anti-bribery laws	Exclusion of companies severely violating anti-corruption and anti-bribery laws Systematic integration in qualitative internal analysis Part of controversy analysis

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The Investment Manager screens investee companies against adherence with OECD Guidelines for Mul. national Enterprises and UN Guiding Principles on Business and Human Rights. The Investment Manager continuously reviews companies' track records and news flows to identify significant controversies. Companies' involvement and resolving measures are taken into account. Risks of potential breach may be monitored through engagement to obtain additional assurance. Companies determined by the Investment Manager to be in serious breach of OECD Guidelines for Multinational Enterprises or UN Guiding Principles on Business and Human Rights are recognized as doing significant harm and are therefore rendered non-eligible. As a consequence, over the reporting period, all investments were considered to be respectful with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights.

In 2023, there was no significant controversy during the year that could cause a divestment of the portfolio Mirova Global Green Bond Fund.

How did this financial product consider principal adverse impacts on sustainability factors?

PAI indicators are incorporated into the sustainability analysis framework and the results are part of the DNSH test. As described above, the DNSH test's result is a binding opinion based on which companies whose economic activities or practices are deemed to have a significant negative impact on the achievement of one or more of the UN SDGs are systematically excluded from the investment universe regardless of their otherwise positive contribution. PAI indicators are therefore continuously considered by these financial products.

What were the top investments of this financial product?

Largest Investments	Sector	% Assets	Country

The percentages displayed represent the average of the 4 quarter ends of the reference period.

The displayed country is the country of risk, i.e. the country where the security is domiciled.

*Green Bonds.

What was the proportion of sustainability-related investments?

The Fund aims at investing only in sustainable investments as defined in Article 2(17) SFDR. 97.12% of the Fund's net assets have been aligned with sustainable investment objectives on average during the reference period. The Fund may use derivatives for hedging and investment purposes (authorised but very rarely used).

● What was the asset allocation?

The list includes the investments constituting the greatest proportion of investments of the financial product during the reference period which is: 02/01/2023-29/12/2023

Asset allocation describes the share of investments in specific assets.

#1 Sustainable covers sustainable investments with environmental or social objec. ves.

#2 Not sustainable includes investments which do not qualify as sustainable investments.

● **In which economic sectors were the investments made?**

SECTOR BREAKDOWN (%)	Fund	Reference Index
Information Technology	25.5	22.1
Health Care	21.3	12.1
Financials	14.3	15.2
Consumer Discretionary	9.4	11.0

Communication Services	-	7.2
Energy	-	4.5
Real Estate	-	2.5
Cash & cash equivalent	3.2	-

MSCI Breakdown

Sector breakdown: as of 31/12/2023

To what extent were sustainable investments with an environmental objective aligned with the EU Taxonomy?

As a result of its sustainable objective, this Fund may make investments in economic activities that contribute to the environmental objectives set out in the Article 9 of the Regulation (EU) 2020/852 (the “Taxonomy Regulation”): (a) climate change mitigation and climate change adaptation, (b) sustainable use and protection of water and marine resources, (c) the transition to a circular economy, (d) pollution prevention and control, (e) the protection and restoration of biodiversity and ecosystems. The alignment of the economic activities of each company with the above objectives is identified and measured to the extent that data is available to the Investment Manager and of an adequate quality. They may also stem from estimations in case when certain amount of information is missing. The estimations are performed under conditions defined by the regulations and respect the principle of prudence. The methodology for collecting alignment data and the quality of available data are being

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste

management rules.

Enabling activities

directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities

are economic activities for which low-carbon alternatives are not yet available and that have greenhouse gas emission levels corresponding to the best performance.

Taxonomy-aligned activities are expressed as a share of:

- **Turnover** reflecting the share of revenue from green activities of investee companies,

- **Capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.

- **Operational expenditure** (OpEx) reflecting green operational activities of investee companies.

improved. As a result, the alignment percentage provided is conservative. 11.20% of the Fund's net assets are aligned with the EU taxonomy on average during the reference period.

As an example, the fund invested in Orsted, whose sustainability opinion is : High positive impact

Ørsted A/S engages in the provision of renewable energy solutions. It operates through the following business segments: Wind Power, Bioenergy & Thermal Power, Distribution & Customer Solutions and Other Activities.

Mirova considers that the company contributes positively to the realisation of climate mitigation therefore the company is given an ESG opinion of "High positive impact".

According to Mirova's data provider, Orsted taxonomy alignment corresponds to 73% at corporate level. In addition, Orsted's green bonds present high environmental benefits and are clearly in line with the company's strategy. Moreover, the company provides good risk management for its projects and has a comprehensive impact assessment of the projects financed.

NB: the results presented hereafter may differ slightly from the aggregate result presented in the Asset Allocation graphical representation.

This is explained by a difference of data source: the figures detailed below are based on estimates from data providers (or data reported by the issuer and collected by data providers), while the aggregate result presented in the Asset Allocation graphical representation may rely (for certain issuers) on estimate made by the investment manager.

Please note that any estimated data comes from either the data providers or the investment manager (only for the aggregated data in the Asset Allocation graphical representation).

● **Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy ¹ ?**

Yes:

In fossil gas In nuclear energy

No

1. Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objectives - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

*For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures.

● **What was the share of investments made in transitional and enabling activities?**

The share of investments in transi. onal and enabling activities was 4.55%.

● **How did the percentage of investments aligned with the EU Taxonomy compare with previous reference periods?**

The percentage of investments aligned with the EU taxonomy for this new reference period cannot be compared with that of the previous reference period due to methodological changes: calculation of an end-of-period snapshot versus average of quarters in the new reference period, calculation previously based solely on estimated data versus calculation combining both estimates and directly reported data.

However, the alignment to the EU taxonomy is estimated at 11.2%. during the year the fund was maintained above its objective of 10%. The fluctuations come from buy/sell in the portfolio and changes in the calculation methodology.

What was the share of sustainable investments with an environmental objective that were not aligned with the EU Taxonomy?

 are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

The Fund has invested 91.96% in sustainable investments with an environmental objective, including 80.76% sustainable investments that are not aligned with the EU taxonomy. The Investment Manager's sustainable impact assessment framework identifies certain activities that are not currently covered by the EU Taxonomy or considered as making a substantial contribution to environmental Taxonomy objectives. This is affected by performing an overall sustainability assessment on each investment, which includes a review of positive impacts regarding three environmental themes: Climate Stability, Biodiversity and Circular Economy. These themes aim at identifying project financing activities (or issuers which activities or practices):

- help develop low carbon energy, eco-efficiency, clean transportation, green building or align with an advanced decarbonation strategy; or
- support sustainable land use, land preservation and sustainable water management or align with an advanced biodiversity preservation strategy; or
- foster sustainable waste management or circular business model.

As an example, the fund invested in a Chile Green Bond, whose sustainability opinion is : High positive impact

The Chilean government green bond framework allocates capital to highly impactful projects of which the most important is the developing of metro lines in Santiago. In particular, renovation or extension of infrastructures and subsidies or incentives to promote public transports. Mirova's ESG framework has given an ESG opinion as "high positive impact" because this projects clearly contribute to climate change mitigation. The transaction is not taxonomy aligned as the GB from Chile was printed in 2019 before the official EU green taxonomy has entered into force.

The Fund does not commit to a minimum share of sustainable investments with an environmental objective that are not aligned to the EU Taxonomy. .

What was the share of socially sustainable investments?

The Fund has invested 5.16% in bonds financing activities that contribute to tackling inequality or that foster social cohesion, social integration and labor relations, or an investment in human capital or economically or socially disadvantaged communities, provided that such investments do not significantly harm any of the environmental/social objectives and that the issuance or issuer follow good governance practices, in particular with respect to sound management structures, employee relations, remuneration of staff and tax compliance. This is affected by performing an overall sustainability assessment on each investee company, which includes a review of positive impacts regarding three social themes: Socio-economic development, Health wellness and Diversity inclusion. These themes aim at identifying project financing activities (or issuers which activities or practices):

- help foster access to basic and sustainable services, local impact or promote advanced working conditions;
- support the development of healthcare, healthy nutrition, knowledge, education or safety;
- promote diversity and inclusion through dedicated products and services or through advanced practices targeting the workforce.

As an example, the fund invested in a MEXIQUE GSB Opinion, whose sustainable opinion is: High positive impact

The government of Mexico aims to further their 2030 Agenda on sustainability. Most of the use of proceeds are allocated to social projects. The eligible social projects are relevant for the issues they currently face as a country such as: access to basic services – health, education, and water, access to basic infrastructure, food security, and poverty reduction.

The Mexican government has deployed a sound governance structure for the SDG bond framework allowing all the different ministries and agencies to coordinate. Mirova opinion on the impact and integrity of the transaction is high positive.

What investments were included under “not sustainable”, what was their purpose and were there any minimum environmental or social safeguards?

The Fund aims at investing only in securities qualifying as sustainable investment. For technical or hedging purposes, the Fund may hold cash or cash equivalents and derivatives for currency risk management purposes. Due to the technical and neutral nature of the asset, such instruments are not considered as investments and thus no minimum safeguards have been put in place.

What actions have been taken to attain the sustainable investment objective during the reference period?

Engagement activity forms an integral part of Mirova's responsible investment approach. Mirova's engagement strategy seeks to monitor and thrive to improve companies' products and practices from an environmental, social, and governance point of view. As a result, one of the core functions of the Sustainability Research team is engagement, both on individual and collaborative levels:

- Individual engagement: in which Mirova's ESG analysts interact one-on-one with the companies to monitor performance and progress on ESG topics, and to encourage improvement in their sustainability practices. The purpose of individual engagement is not only to ensure responsible practices in line with our standards, but also to promote better ESG practices and encourage the development of solutions for the major environmental and social challenges associated with each sector.
 - As an example, the fund engaged with Stora Enso Green Bond, whose opinion is: Moderate positive impact
During 2023 Mirova engaged with Stora Enso on several topics on diversity and inclusion issues, human capital, and green bonds impact reporting it's clear that the green bond program has been used to finance “Sustainable Forest Management” which is a critical aspect of Stora Enso's value chain.
Mirova considers the green bond transaction fully aligned with the issuer strategy to ensure sustainable forest resources for their activities. Moreover, the issuer has used 100% of the proceeds to finance new activities (90% CAPEX).
In addition, Stora Enso has launched a new strategy for biodiversity and has developed a KPI and an action plan related to this issue. Mirova expects the issuer to improve report transparency with regards to the methodology of calculation of the impact indicators and having their report verified by a third-party
- Collaborative engagement: Mirova joins with other investors and representatives of civil society to identify controversial practices, encourage greater transparency and demand, where necessary, that companies change their practices. Additionally, Mirova leverages its voting rights to further push companies towards the development of more sustainable portfolios and the adoption of best practices, by systematically exercising their voting rights based on an in-house voting policy that largely embeds the concepts of a sustainable-at-core, stakeholder-oriented governance. Proxy voting is used to convey messages during pre/post vote dialogue and via opposition to ad hoc items. Where possible, Mirova may co-sign or lead the filing of shareholder items. Mirova also engage with regulators to share its vision of sustainable investment to improve standards and regulations across the financial sector and to foster sustainable investment.

Mirova is committed to promoting regulations, including legislative changes, standards or labels, and practices that support sustainable investment and create long-term value. Further information in relation to engagement priorities and engagement policy carried out by Mirova can be found on the website at <https://www.mirova.com/en/research/voting-and-engagement>.

How did this financial product perform compared to the reference sustainable benchmark?

Not applicable.

- ***How did the reference benchmark differ from a broad market index?***

Not applicable.

Reference

benchmarks are indexes to measure whether the financial product attains the sustainable objective.

NB: all figures related to sustainability/ taxonomy are calculated as an average of the values of the 4 quarter ends of the reference period.

Template periodic disclosure for the financial products referred to in Article 9, paragraphs 1 to 4a, of Regulation (EU) 2019/2088 and Article 5, first paragraph, of Regulation (EU) 2020/852

Product Name : MIROVA FUNDS - Mirova Euro Green & Sustainable Bond Fund
Legal Entity Identifier : 5493 00MAEYDPR2I2EW 45

Sustainable investment objective

Did this financial product have a sustainable investment objective?

Yes

No

It made **sustainable investments with an environmental objective: 83.06%**

in economic activities that qualify as environmentally sustainable under the EU Taxonomy

in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

It made **sustainable investments with a social objective: 12.80%**

It **promoted Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of ___% of sustainable investments

with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with a social objective

It promoted E/S characteristics, **but did not make any sustainable investments**

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

To what extent was the sustainable investment objective of this financial product met?

The sustainable investment objective of the Fund is to invest in:

- use of proceeds bonds issued by corporate issuers, sovereign, or agencies whose purpose is to finance projects with a positive environmental and/or social impacts (green, social, green and social bonds); and/or
- conventional bonds from corporate issuers whose economic activities contribute positively through their products, services and/or practices to the achievement of one or more of the United Nations Sustainable Development Goals (the "SDGs").

Sustainability indicators measure how the sustainable objectives of this financial product are achieved.

The fund objectives were 90% of Sustainable Investment (SI), 50% of Sustainable Investment Environmental (SIE), and 1% of Sustainable Investment Social (SIS).

The first step in our management process is ESG analysis, carried out by our dedicated team. It defines whether or not an issuer or issue is equitable. This team guarantees a high level of Sustainable Investment. The change in Sustainable Investment since 2022 (i.e.: 96.1% in 2022, and 95.8% in 2023) is linked to all Mirova's investable bonds, whether green or conventional. The change in the Sustainable Investment figure is explained by changes in the fund's liquidity. 95.87% of the Fund's net assets were aligned with sustainable investment objectives on average during the reference period. Alignment with EU Taxonomy amounted to 7.51%. The indicators have not been subject to an assurance provided by an auditor or a review by a third party.

The Fund aims at contributing to keeping the maximum global temperature rise to a maximum 2 degrees Celsius. The Regulation (EU) 2020/852 (the "Taxonomy Regulation") aims to establish the criteria for determining whether an economic activity is considered environmentally sustainable. This Fund may make investments in bonds issued by corporates or in use-of proceeds bonds which proceeds will be applied to finance economic activities that contribute to the environmental objectives set out in the Article 9 of the Taxonomy Regulation: (a) climate change mitigation and climate change adaptation, (b) sustainable use and protection of water and marine resources, (c) the transition to a circular economy, (d) pollution prevention and control, (e) the protection and restoration of biodiversity and ecosystems.

The alignment of the economic activities of the issuer or the project to be financed by the use of proceeds bonds with the above objectives is identified and measured to the extent that data is available to the Investment Manager and of an adequate quality. Depending on the investment opportunities available, the Fund may contribute to any of the above environmental objectives and may not at all times contribute to all of the objectives.

No reference benchmark has been designated for the purpose of attaining the sustainable investment objective.

● ***How did the sustainability indicators perform?***

Benchmark: BLOOMBERG EUROAGG 500 TOTAL RETURN INDEX VALUE UNHEDGED EUR. The benchmark is not intended to be aligned with environmental and social ambitions as promoted by the fund.

The fund sticks to its core strategy: funding companies designing, producing, and marketing the services and products adapted to the low-carbon economy. 77% were invested in climate stability projects to limit global warming under 2° (SDG 9 and 13). 56 % were invested in projects that contribute to healthy eco-systems (SDG 14 and 15) and 36% of the fund financed projects that bring solutions to resources through efficient and circular use of natural resources. We increased the weight of Green and Sustainable Bonds in our Fund from 82% In December 2022 to 90% in December 2023. The fund is in accordance with the 1.5-degree scenario compared to 2/2.5 for our index (Carbone 4 methodology).

We continue to exclude issues with negligible or negative impact and clearly favor issues with high positive and moderate positive impact.

*The Sustainability opinion is shared to provide whether the investment is considered to be aligned with the UN SDGs. This is intended primarily for internal analysis and does not constitute an investment recommendation. Please refer to the prospectus for a detailed description of the investment strategy and the fund's investment objectives.

CONTRIBUTION TO UN SUSTAINABLE DEVELOPMENT GOALS (SDGS)

In % of assets with positive impact options

SDG Areas	Contribution to which an asset contributes to the SDGs corresponding to each pillar
	ESG Pillars
Environment	
CLIMATE	77%
Limit greenhouse gas levels to stabilize global temperature rise under 2°C	77%
BIODIVERSITY	56%
Maintain ecologically sound landscapes and areas for nature and people	56%
CIRCULAR ECONOMY	36%
Promote use of natural resources through efficient and circular use	36%
Social	
GOOD ECONOMIC DEVELOPMENT	13%
Support services to basic services, local development or promote individual development in the workplace	13%
HEALTHY AND WELL-BEING	12%
Promote safe and healthy living conditions, support quality education	12%
DIVERSITY AND INCLUSION	6%
Promote inclusive solutions or promote fair working conditions for all	6%

The United Nations selected 17 Sustainable Goals (SDGs) in 2015, with an ambition to achieve them by 2030. These goals are central to the UN's 2030 Agenda for Sustainable Development.

The impact approach to which assets are aligned contributes to the UN Sustainable Development Goals (SDGs) through the impact approach with targeted screening based on a research gathering relevant and sustainable development factors, as well as the implementation of a last look in 2023. The investor actively aims to further increase sustainable impact of our investments via active policy dialog, divestment, and divestment of the fund. The data source is based on the data of the last year. This continues to expand data.

The percentage selected represent a number of portfolio assets. As weight, this percentage does not reflect the total investment. Companies with an ESG rating of "High and moderate" or "Medium-impact" or "Low-impact" or "Impacts" or "Neutral" or "Not covered by/Other or other external positive" are included. The percentage of assets with positive impact options is based on the use of the impact approach to which assets are aligned to and does not reflect the quality of the investments and asset performance over the period.

... and compared to previous periods?

A comparison of the performance of sustainability indicators with the previous period cannot be made due to the applica. on of the new requirements for the new reference period and the enhancement of our methodology. For the previous period, the indicators were calculated on the basis of a snapshot at the end of the period, whereas they are now calculated as an average over the quarters of the reference period.

Mirova sticks to its core strategy: funding companies designing, producing, and marketing the services and products adapted to the low-carbon economy. 77% as last year where invested in climate stability projects to limit global warming under 2° (SDG 9 and 13). 56% versus 42% last year were invested in projects that contributes to healthy eco-systems (SDG 14 and 15) and 36% versus 34% of the fund financed projects that bring solutions to resources through efficient and circular use of natural resources.

Green and Sustainable Bonds represented close to 90% of the nav end of December 2023. Changes in breakdown are due to opportunities in the market.

How did the sustainable investments not cause significant harm to any sustainable investment objective?

The sustainability analysis aims to identify the relevant residual environmental and social risks originating from issuers' activities and practices and assesses the quality of the issuer's measures to mitigate these risks (the "DNSH test"). Such analysis considers notably the degree of exposure of the investee company to certain sectors or activities that may be considered to be damaging for the environment and/or the society and exposure to relevant environmental or social controversies. As a result of this qualitative analysis, the Investment Manager issues a binding opinion based on which issuers whose economic activities are deemed to have a significant negative impact on the achievement of one or more of the UN SDGs are systematically excluded from the investment universe regardless of their otherwise positive contribution. Therefore, over the reporting period, all investments in the Fund were complying with the Investment Manager's DNSH criteria.

— *How were the indicators for adverse impacts on sustainability factors taken into account?*

As part of the analysis of residual ESG risks conducted on each investee company, the Fund systematically assesses and monitors indicators that are deemed to indicate the presence of principal adverse impact (including consideration of data relating to the mandatory PAI indicators referred to in the consolidated Regulatory Technical Standards for assessment of sustainable investment in accordance with art. 2 (17) SFDR). When the data necessary for the calculation of certain PAI indicators are not available, the Investment Manager may use qualitative or quantitative proxies that cover themes similar to the PAI indicators in question. Adverse impacts are prioritized according to the specificities of sectors and business models of issuers or project financed by the use of proceeds bond considered for investment by using a combination of criteria based on:

- analysis of the issuer's exposure or project financed by the bond to environmental impacts based on science-based data from international organisations (e.g. energy intensity, impacts on biodiversity, etc),
- analysis of the issuer's exposure or project financed by the bond to fundamental rights and employee matters through its locations, business model and supply chain organization (e.g. exposure to health and safety risks, exposure to countries with specific human rights risks, etc),
- analysis of the issuer's footprint (or footprint of the project financed by the bond) on local communities and consumers,
- screening of on-going or potential controversies.

Where the Investment Manager deems the issuer's processes and practices are insufficient to mitigate environmental, social and governance risks, notably with regards to the relevant PAIs, the investment's impact is deemed as negative which makes it ineligible for investment.

The action plan for dealing with a controversy will depend on its severity, as well as the corrective measures already announced by the company. Actions include:

- Direct individual engagement,
- Exercise of voting rights,
- Collaborative engagement
- Divestment

In 2023, there were no significant controversies during the year that could lead to disinvestment in the portfolio.

Further details can be found in the table hereunder, which lists the main indicators taken into account by Mirova when taking PAIs into account.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

	Adverse Sustainability indicator	How PAIs are taken into account by Mirova
Greenhouse gas emissions	1. GHG emissions	Exclusion of the most carbon intensive entities and companies with no or insufficient plans to reduce GHG emissions Systematic integration in qualitative internal analysis
	2. Carbon footprint	
	3. GHG intensity of investee companies	
	4. Exposure to companies active in the fossil fuel sector	Exclusion of companies active in the fossil fuel sector For companies involved in fossil fuel extraction, processing/refining, and trading, exclusion applies to companies with: • >5% of revenues from coal or oil, including unconventional oil, • >10% of revenues from unconventional gas. For companies that produce dedicated equipment/services for the fossil fuel sector, exclusion applies to companies with >50% of revenues from these equipment/services. For companies involved in electricity production (>10% of sales related to electricity production), exclusion applies to companies with a generation mix dominated by coal, with a carbon intensity >350 gCO ₂ /MWh.
	5. Share of non-renewable energy consumption and production	Integration in qualitative internal analysis when relevant
	6. Energy consumption intensity per high impact climate sector	Integration in qualitative internal analysis when relevant
Biodiversity	7. Activities negatively affecting biodiversity-sensitive areas	Exclusion of companies or projects significantly harming biodiversity sensitive areas. Systematic integration in qualitative internal analysis. Part of controversy analysis
Water	8. Emissions to water	Integration in qualitative internal analysis when relevant
Waste	9. Hazardous waste and radioactive waste ratio	Integration in qualitative internal analysis when relevant
Social and Employee matters	10. Violations of UNGC principles and OECD guidelines for Multinational Enterprises	Exclusion of companies violating UNGC and OECD principles Systematic integration in qualitative internal analysis Part of controversy analysis
	11. Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises	Exclusion for large companies, case-by-case for small companies or projects Systematic integration in qualitative internal analysis Engagement plans / ESAP with investees when relevant
	12. Unadjusted gender pay gap	Systematic integration of gender equality in qualitative internal analysis Engagement plans / ESAP with investees
	13. Board gender diversity	Systematic integration of gender equality in qualitative internal analysis Engagement plans / ESAP with investees
	14. Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)	Exclusion (0% sales threshold)
Additional PAI indicators	4. Investments in companies without carbon emission reduction initiatives	Exclusion of the most carbon intensive entities and companies with no or insufficient plans to reduce GHG emissions Systematic integration in qualitative internal analysis
	14. Number of identified cases of severe human rights issues and incidents	Exclusion of companies with severe human rights issues and incidents. Systematic integration in qualitative internal analysis Part of controversy analysis
	17. Number of convictions and amount of fines for violation of anti-corruption and anti-bribery laws	Exclusion of companies severely violating anti-corruption and anti-bribery laws Systematic integration in qualitative internal analysis Part of controversy analysis

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The Investment Manager screens investee companies against adherence with OECD Guidelines for Mul. national Enterprises and UN Guiding Principles on Business and Human Rights. The Investment Manager continuously reviews companies' track records and news flows to identify significant controversies. Companies' involvement and resolving measures are taken into account. Risks of potential breach may be monitored through engagement to obtain additional assurance. Companies determined by the Investment Manager to be in serious breach of OECD Guidelines for Multinational Enterprises, or UN Guiding Principles on Business and Human Rights are recognized as doing significant harm and are therefore rendered non-eligible. As a consequence, over the reporting period, all investments were considered to be respectful with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights.

Mirova's investment universes are monitored with a special focus on controversies. The aim is to detect the presence of violations of the UN Covenant and the OECD Guidelines.

How did this financial product consider principal adverse impacts on sustainability factors?

PAI indicators are incorporated into the sustainability analysis framework and the results are part of the DNSH test. As described above, the DNSH test's result is a binding opinion based on which companies whose economic activities or practices are deemed to have a significant negative impact on the achievement of one or more of the UN SDGs are systematically excluded from the investment universe regardless of their otherwise positive contribution. PAI indicators are therefore continuously considered by these financial products.

What were the top investments of this financial product?

The percentages displayed represent the average of the 4 quarter ends of the reference period.

The displayed country is the country of risk, i.e. the country where the security is domiciled.

*Green Bonds

What was the proportion of sustainability-related investments?

The Fund aims at investing only in sustainable investments as defined in Article 2(17) SFDR. 95.87% of the Fund's net assets have been aligned with sustainable investment objectives on average during the reference period. The Fund may use derivatives for hedging and investment purposes (authorised but very rarely used).

● What was the asset allocation?

The list includes the investments constituting the greatest proportion of investments of the financial product during the reference period which is: 02/01/2023-29/12/2023

Asset allocation describes the share of investments in specific assets.

#1 Sustainable covers sustainable investments with environmental or social objec. ves.

#2 Not sustainable includes investments which do not qualify as sustainable investments.

● **In which economic sectors were the investments made?**

BREAKDOWN BY TYPE OF ISSUER	Fund	Index	Fund	Index

Sector breakdown : as of 31/12/2023

To what extent were sustainable investments with an environmental objective aligned with the EU Taxonomy?

As a result of its sustainable objective, this Fund may make investments in economic activities that contribute to the environmental objectives set out in the Article 9 of the Regulation (EU) 2020/852 (the “Taxonomy Regulation”): (a) climate change mitigation and climate change adaptation, (b) sustainable use and protection of water and marine resources, (c) the transition to a circular economy, (d) pollution prevention and control, (e) the protection and restoration of biodiversity and ecosystems. The alignment of the economic activities of each company with the above objectives is identified and measured to the extent that data is available to the Investment Manager and of an adequate quality. They may also stem from estimations in case when certain amount of information is missing. The estimations are performed under conditions defined by the regulations and respect the principle of prudence. The methodology for collecting alignment data and the quality of available data are being improved. As a result, the alignment percentage provided is conservative. 7.51% of the Fund’s net assets are aligned with the EU taxonomy on average during the reference period. As an example, the fund Mirova Euro Green and Sustainable Bond Fund invested in Orsted – whose sustainability opinion is : High positive impact

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities

directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are economic activities for which low-carbon alternatives are not yet available and that have greenhouse gas emission levels corresponding to the best performance.

Taxonomy-aligned activities are expressed as a share of:

- **Turnover** reflecting the share of revenue from green activities of investee companies,
- **Capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **Operational expenditure** (OpEx) reflecting green operational activities of investee companies.

Ørsted A/S engages in the provision of renewable energy solu. ons. It operates through the following business segments: Wind Power, Bioenergy & Thermal Power, Distribution & Customer Solutions and Other Activities. Mirova considers that the company contributes positively to the realisation of climate mitigation therefore the company is given an ESG opinion of "High positive impact".

According to Mirova's data provider, Orsted taxonomy alignment corresponds to 73% at corporate level. In addition, Orsted's green bonds present high environmental benefits and are clearly in line with the company's strategy. Moreover, the company provides good risk management for its projects and has a comprehensive impact assessment of the projects financed.

NB: the results presented hereafter may differ slightly from the aggregate result presented in the Asset Allocation graphical representation.

This is explained by a difference of data source: the figures detailed below are based on estimates from data providers (or data reported by the issuer and collected by data providers), while the aggregate result presented in the Asset Allocation graphical representation may rely (for certain issuers) on estimate made by the investment manager.

Please note that any estimated data comes from either the data providers or the investment manager (only for the aggregated data in the Asset Allocation graphical representation).

● **Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy¹ ?**

Yes:

In fossil gas In nuclear energy

No

1. Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objectives - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

*For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures.

NB: we invest via green bonds.

We invest in bonds issued by u. lities. But in that case we only invest in green bonds that exclude fossil gaz. We do not have position in breen bonds that finance nuclear activities As the SFDR appendices convey a very strict definition of fossil gas and/or nuclear energy investments, we would like to highlight that , in our opinion, we do not invest because our analysis is based on the bond and the activity of the project financed. However, via the invested bond, we enable companies exposed to fossil fuels.

● **What was the share of investments made in transitional and enabling activities?**

The share of investments in transitional and enabling activities was 3.36%.

● **How did the percentage of investments aligned with the EU Taxonomy compare with previous reference periods?**

The percentage of investments aligned with the EU taxonomy for this new reference period cannot be compared with that of the previous reference period due to methodological changes: calculation of an end-of-period snapshot versus average of quarters in the new reference period, calculation previously based solely on estimated data versus calculation combining both estimates and directly reported data.

Changes in the Taxonomy alignment percentage of this fund (i.e.: 8.80% of alignment at end 2022, and 7% at end 2023) can also be explained by a portfolio rebalancing, the lack of availability of Taxonomy alignment data at the level of projects financed by GBs, as Mirova's bond management team depends on data providers.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

What was the share of sustainable investments with an environmental objective that were not aligned with the EU Taxonomy?

The Fund has invested 83.06% in sustainable investments with an environmental objective, including 75.55% sustainable investments that are not aligned with the EU taxonomy. The Investment Manager's sustainable impact assessment framework identifies certain activities that are not currently covered by the EU Taxonomy or considered as making a substantial contribution to environmental Taxonomy objectives. This is affected by performing an overall sustainability assessment on each investment, which includes a review of positive impacts regarding three environmental themes: Climate Stability, Biodiversity and Circular Economy. These themes aim at identifying project financing activities (or issuers which activities or practices):

- help develop low carbon energy, eco-efficiency, clean transportation, green building or align with an advanced decarbonation strategy; or
- support sustainable land use, land preservation and sustainable water management or align with an advanced biodiversity preservation strategy; or
- foster sustainable waste management or circular business model.

Mirova's portfolio may include debt issuers that are positively rated for their contribution to the environmental SDGs, but whose business model is not fully aligned with EU green taxonomy criteria. For example, conventional bonds issued by electricity-generating companies implementing a robust, effective and credible transition plan have their place in Mirova's fixed-income portfolios. As an example, the fund invested in Chile Green Bond, whose sustainability opinion is: High positive impact.

The Chilean government green bond framework allocates capital to highly impactful projects of which the most important is the developing of metro lines in Santiago. In particular, renovation or extension of infrastructures and subsidies or incentives to promote public transports. Mirova's ESG framework has given an ESG opinion as "high positive impact" because this projects clearly contribute to climate change mitigation. The transaction is not taxonomy aligned as the GB from Chile was printed in 2019 before the official EU green taxonomy has entered into force.

The Fund does not commit to a minimum share of sustainable investments with an environmental objective that are not aligned to the EU Taxonomy.

What was the share of socially sustainable investments?

The Fund has invested 12.80% in projects or issuers that contribute to tackling inequality or that foster social cohesion, social integration and labor relations, or an investment in human capital or economically or socially disadvantaged communities, provided that such investments do not significantly harm any of the environmental/social objectives and that the issuance or issuer follow good governance practices, in particular with respect to sound management structures, employee relations, remuneration of staff and tax compliance. This is affected by performing an overall sustainability assessment on each investee company, which includes a review of positive impacts regarding three social themes: Socio-economic development, Health wellness and Diversity inclusion. These themes aim at identifying issuers which activities or practices (or use of proceeds bonds which aim at financing projects):

- help foster access to basic and sustainable services, local impact or promote advanced working conditions;
- support the development of healthcare, healthy nutrition, knowledge, education or safety;

- promote diversity and inclusion through dedicated products and services or through advanced practices targeting the workforce.

Bonds responding to social themes are subject to an in-depth analysis by the ESG research team in order to identify the contribution to the SDGs linked to societal themes. Today, there is no possible alignment with a social taxonomy.

As an example, the fund invested in KBC Group whose sustainability opinion is Low positive impact. The company is a major Belgian financial institution. The current level of taxonomy alignment is not disclosed as financial sector companies and in particular banks will disclose taxonomy alignment data from 2024 onwards. Under Mirova's ESG framework KBC sustainability's main objective is determined social as the company delivers positive impact thanks to advanced practices on job quality.

What investments were included under “not sustainable”, what was their purpose and were there any minimum environmental or social safeguards?

The Fund aims at investing only in securities qualifying as sustainable investment. For technical or hedging purposes, the Fund may hold cash or cash equivalents and derivatives for currency risk management purposes. Due to the technical and neutral nature of the asset, such instruments are not considered as investments and thus no minimum safeguards have been put in place.

What actions have been taken to attain the sustainable investment objective during the reference period?

Engagement activity forms an integral part of Mirova's responsible investment approach. Mirova's engagement strategy seeks to monitor and thrive to improve companies' products and practices from an environmental, social, and governance point of view. As a result, one of the core functions of the Sustainability Research team is engagement, both on individual and collaborative levels:

- Individual engagement: in which Mirova's ESG analysts interact one-on-one with the companies to monitor performance and progress on ESG topics, and to encourage improvement in their sustainability practices. The purpose of individual engagement is not only to ensure responsible practices in line with our standards, but also to promote better ESG practices and encourage the development of solutions for the major environmental and social challenges associated with each sector. For example, Mirova engaged with Tennet, Tennet (GB 2022 program).
 - With renewable sources accounting for only 26% of electricity generated in the Netherlands in 2020, and 44% in Germany, there seemed to be a gap between Tennet's target and the country's renewable capacity, which Mirova asked about when it signed up with Tennet. The answers were detailed and appeared to be in line with best practice compared to other operators. The framework included three categories, but in the end, 100% of the funds were allocated to connection services, enabling 100% renewable energy to be transported. They didn't invest in the network aspect because they couldn't guarantee that it would only carry clean energy. What they can do, however, is act on the construction of the grid and the infrastructure to bring renewable electricity onto that grid. This is what they are doing with connection services. These activities seem very positive to us, and we confirm the moderate positive impact rating. GB has been removed from the watch list.
 - Social bond issued by Mexico : when defining an obligation, we look at two things: the identification of a beneficiary population, and the implementation of activities with a high societal impact. In the context of the social obligation issued by Mexico, we found that beneficiaries were not sufficiently identified for each category of intervention. As a result, Mexico's biggest challenge is to provide impact measurements

on the specific target population; the allocation process is also more difficult, and measurements are not strict. Mexico plans to work on more measures around 2025, and to follow Mirova's recommendations. This is why Mirova has decided to keep the issuer on the watch list for 2024, to check whether the suggested changes in terms of greater KPI transparency are followed by Mexico. If not, the issue's rating will be downgraded.

- Collaborative engagement: Mirova joins with other investors and representatives of civil society to identify controversial practices, encourage greater transparency and demand, where necessary, that companies change their practices. Additionally, Mirova leverages its voting rights to further push companies towards the development of more sustainable portfolios and the adoption of best practices, by systematically exercising their voting rights based on an in-house voting policy that largely embeds the concepts of a sustainable-at-core, stakeholder-oriented governance. Proxy voting is used to convey messages during pre/post vote dialogue and via opposition to ad hoc items. Where possible, Mirova may co-sign or lead the filing of shareholder items.

Mirova also engage with regulators to share its vision of sustainable investment to improve standards and regulations across the financial sector and to foster sustainable investment. Mirova is committed to promoting regulations, including legislative changes, standards or labels, and practices that support sustainable investment and create long-term value. Further information in relation to engagement priorities and engagement policy carried out by Mirova can be found on the website at <https://www.mirova.com/en/research/voting-and-engagement>.

How did this financial product perform compared to the reference sustainable benchmark?

Not applicable.

- ***How did the reference benchmark differ from a broad market index?***
Not applicable.
- ***How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the sustainable investment objective?***
Not applicable.
- ***How did this financial product perform compared with the reference benchmark?***
Not applicable.
- ***How did this financial product perform compared with the broad market index?***
Not applicable.

Reference benchmarks are indexes to measure whether the financial product attains the sustainable objective.

NB: all figures related to sustainability/ taxonomy are calculated as an average of the values of the 4 quarter ends of the reference period.

Template periodic disclosure for the financial products referred to in Article 9, paragraphs 1 to 4a, of Regulation (EU) 2019/2088 and Article 5, first paragraph, of Regulation (EU) 2020/852

Product Name : MIROVA FUNDS - Mirova Euro Green & Sustainable Corporate Bond Fund
Legal Entity Identifier : 5493 00NGBY43BJCJ2T 38

Sustainable investment objective

Did this financial product have a sustainable investment objective?

Yes

No

It made **sustainable investments with an environmental objective: 63.23%**

in economic activities that qualify as environmentally sustainable under the EU Taxonomy

in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

It made **sustainable investments with a social objective: 33.71%**

It **promoted Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of ___% of sustainable investments

with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with a social objective

It promoted E/S characteristics, **but did not make any sustainable investments**

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

To what extent was the sustainable investment objective of this financial product met?

The sustainable investment objective of the Fund is to invest in bonds from corporate issuers:
 The sustainable investment objective of the Fund is to invest in bonds from corporate issuers:

- whose economic activities contribute, or are to risingly contribute, positively through their products, services and/or practices to the achievement of one or more of the United Nations Sustainable Development Goals (the “SDGs”), and/or
- use of proceeds bonds whose purpose is to finance projects with a positive environmental and/or social impacts (green, social, green and social bonds). The Fund

Sustainability indicators measure how the sustainable objectives of this financial product are achieved.

aims at contributing to keeping the maximum global temperature rise to a maximum 2 degrees Celsius.

The Regulation (EU) 2020/852 (the “Taxonomy Regulation”) aims to establish the criteria for determining whether an economic activity is considered environmentally sustainable.

The fund sustainable investment objectives were the following : 90% in Sustainable Investment (SI), with an objective of 35% in SIE (Sustainable Investment Environmental) and 10% in SIS (Sustainable Investment Social).

96.95% of the Fund's net assets were aligned with sustainable investment objectives on average during the reference period. Alignment with EU Taxonomy amounted to 10.65%. The indicators have not been subject to an assurance provided by an auditor or a review by a third party. Some securities selected according to the approach to Impact and ESG assessments in effect before 29/12/2023 meet the criteria for managing the risks of obstruction to the SDGs (DNSH test) and good governance practices but may have a positive contribution assessed as low or unquantifiable. As the analysis framework has been enhanced to date, the positive contribution of certain securities has been reviewed. An adjustment of the portfolios under the conditions set out in the investment process has been made.

● ***How did the sustainability indicators perform?***

Benchmark: BLOOMBERG EURO AGGREGATE CORPORATE TOTAL RETURN INDEX VALUE UNHEDGED EUR. The benchmark is not intended to be aligned with environmental and social ambitions as promoted by the fund.

The fund followed the KPIs described hereafter. The figures are the average result of the 4 quarterly reports.

Mirova sticks to its core strategy: funding companies designing, producing, and marketing the services and products adapted to the low-carbon economy. 67% were invested in climate stability projects to limit global warming under 2° (SDG 9 and 13). 38% were directed to projects that contribute to healthy eco-systems (notably through SDG 14 and 15, inter alia) and 21% of the fund supported projects that bring solutions to resources through efficient and circular use of natural resources.

Green and Sustainable Bonds amounted to 30% of holdings end of December. Our fund is in accordance with the 1.5-degree scenario compared to 2.5-3°C for our index (Carbone 4 methodology).

SUSTAINABILITY IMPACT OPINION BREAKDOWN*

Percentage of investment assets excluding negative and positive exposures exceeding 10% of the fund's investments

*The Sustainability opinion is defined as a positive opinion for investment assets exceeding the 10% SDGs. Assets in an adverse category for 10% or more SDGs will follow these but not positive exposure guidelines. Adverse assets are for assets in adverse or high negative exposure range. Assets in the adverse or high negative exposure range are not covered by MiFID or other external providers.

CONTRIBUTION TO UN SUSTAINABLE DEVELOPMENT GOALS (SDGS)

In % of assets with positive-impact exposure

SDG focus	Assets to which an asset contributed to the SDGs corresponding to each pillar	Contribution (%)
Environment	Climate Change: Limit greenhouse gas levels to stabilize global temperature rise under 1.5°C	97%
	Biodiversity: Maintain ecologically sound landscapes and care for nature and people	38%
	Circular Economy: Promote circular models of material resources through efficient and creative use	21%
Social	Socio-economic development: Support entities to boost structure, local development or provide individual development in the workplace	22%
	Health and well-being: Promote safe and healthy living conditions, support quality education	1%
	Energy and inclusion: Provide equitable solutions or promote fair working conditions for all	14%

*This percentage indicates the share of portfolio assets that contribute to the SDGs. It is not a guarantee for compliance with an ESG score. High negative impact is a negative impact on the SDGs. The percentage of assets contributing to the SDGs is not a guarantee for compliance with an ESG score. High negative impact is a negative impact on the SDGs.

ESTIMATED IMPACT ON GLOBAL AVERAGE INCREASE OF TEMPERATURE

... and compared to previous periods?

A comparison of the performance of sustainability indicators with the previous period cannot be made due to the applica. on of the new requirements for the new reference period and use of a new methodology. For the previous period, the indicators were calculated on the basis of an end-of-period snapshot, whereas they are now calculated as an average of the quarters in the reference period. On the climate stability SDG contribution reporting, we can however indicate that our performance improved from 54% to 67%, and the fund is still in accordance with the 1.5°C scenario compared to 2.5-3°C for index.

How did the sustainable investments not cause significant harm to any sustainable investment objective?

The sustainability analysis aims to identify the relevant residual environmental and social risks originating from issuers' activities and practices and assesses the quality of the issuer's measures to mitigate these risks (the "DNSH test"). Such analysis considers notably the degree of exposure of the investee company to certain sectors or activities that may be considered to be damaging for the environment and/or the society and exposure to relevant environmental or social controversies. As a result of this qualitative analysis, the Investment Manager issues a binding opinion based on

which the issuers whose economic activities or practices are deemed to have a significant negative impact on the achievement of one or more of the UN SDGs are systematically excluded from the investment universe regardless of their otherwise positive contribution. Therefore, over the reporting period, all investments in the Fund were complying with the Investment Manager's DNSH criteria.

— *How were the indicators for adverse impacts on sustainability factors taken into account?*

As part of the analysis of residual ESG risks conducted on each investee company, the Fund systematically assesses and monitors indicators that are deemed to indicate the presence of principal adverse impact (including consideration of data relating to the mandatory PAI indicators referred to in the consolidated Regulatory Technical Standards for assessment of sustainable investment in accordance with art. 2 (17) SFDR). When the data necessary for the calculation of certain PAI indicators are not available, the Investment Manager may use qualitative or quantitative proxies that cover themes similar to the PAI indicators in question. Adverse impacts are prioritized according to the specificities of sectors and business models of issuers or project financed by the use of proceeds bond considered for investment by using a combination of criteria based on:

- analysis of the issuer's exposure or project financed by the bond to environmental impacts based on science-based data from international organisations (e.g. energy intensity, impacts on biodiversity, etc),
- analysis of the issuer's exposure or project financed by the bond to fundamental rights and employee matters through its locations, business model and supply chain organization (e.g. exposure to health and safety risks, exposure to countries with specific human rights risks, etc),
- analysis of the issuer's footprint (or footprint of the project financed by the bond) on local communities and consumers,
- screening of on-going or potential controversies.

Mirova's investment universes are followed with a special focus on controversies. The aim is to detect violations of the UN Compact and the OECD Guidelines. The action plan to deal with a controversy will depend on the severity, as well as the corrective measures already announced by the company. The actions are:

- Direct individual engagement,
- Exercising the right to vote,
- Collaborative engagement
- Divestment.

Where the Investment Manager deems the issuer's processes and practices are insufficient to mitigate environmental, social and governance risks, notably with regards to the relevant PAIs, the investment's impact is deemed as negative which makes it ineligible for investment. Further details can be found in the table hereunder, which lists the main indicators taken into account by Mirova when taking PAIs into account.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

	Adverse Sustainability indicator	How PAIs are taken into account by Mirova
Greenhouse gas emissions	1. GHG emissions	Exclusion of the most carbon intensive entities and companies with no or insufficient plans to reduce GHG emissions Systematic integration in qualitative internal analysis
	2. Carbon footprint	
	3. GHG intensity of investee companies	
	4. Exposure to companies active in the fossil fuel sector	Exclusion of companies active in the fossil fuel sector For companies involved in fossil fuel extraction, processing/refining, and trading, exclusion applies to companies with: • >5% of revenues from coal or oil, including unconventional oil, • >10% of revenues from unconventional gas. For companies that produce dedicated equipment/services for the fossil fuel sector, exclusion applies to companies with >20% of revenues from these equipment/services. For companies involved in electricity production (<10% of sales related to electricity production), exclusion applies to companies with a generation mix dominated by coal, with a carbon intensity >350 gCO ₂ /MWh.
	5. Share of non-renewable energy consumption and production	Integration in qualitative internal analysis when relevant
	6. Energy consumption intensity per high impact climate sector	Integration in qualitative internal analysis when relevant
Biodiversity	7. Activities negatively affecting biodiversity-sensitive areas	Exclusion of companies or projects significantly harming biodiversity sensitive areas. Systematic integration in qualitative internal analysis. Part of controversy analysis
Water	8. Emissions to water	Integration in qualitative internal analysis when relevant
Waste	9. Hazardous waste and radioactive waste ratio	Integration in qualitative internal analysis when relevant
Social and Employee matters	10. Violations of UNGC principles and OECD guidelines for Multinational Enterprises	Exclusion of companies violating UNGC and OECD principles Systematic integration in qualitative internal analysis Part of controversy analysis
	11. Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises	Exclusion for large companies, case-by-case for small companies or projects Systematic integration in qualitative internal analysis Engagement plans / ESAP with investees when relevant
	12. Unadjusted gender pay gap	Systematic integration of gender equality in qualitative internal analysis Engagement plans / ESAP with investees
	13. Board gender diversity	Systematic integration of gender equality in qualitative internal analysis Engagement plans / ESAP with investees
Additional PAI indicators	14. Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)	Exclusion (0% sales threshold)
	4. Investments in companies without carbon emission reduction initiatives	Exclusion of the most carbon intensive entities and companies with no or insufficient plans to reduce GHG emissions Systematic integration in qualitative internal analysis
	14. Number of identified cases of severe human rights issues and incidents	Exclusion of companies with severe human rights issues and incidents. Systematic integration in qualitative internal analysis Part of controversy analysis
	17. Number of convictions and amount of fines for violation of anti-corruption and anti-bribery laws	Exclusion of companies severely violating anti-corruption and anti-bribery laws Systematic integration in qualitative internal analysis Part of controversy analysis

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The Investment Manager screens investee companies against adherence with OECD Guidelines for Mul. national Enterprises and UN Guiding Principles on Business and Human Rights. The Investment Manager continuously reviews companies' track records and news flows to identify significant controversies. Companies' involvement and resolving measures are taken into account. Risks of potential breach may be monitored through engagement to obtain additional assurance. Companies determined by the Investment Manager to be in serious breach of OECD Guidelines for Multinational Enterprises or UN Guiding Principles on Business and Human Rights are recognized as doing significant harm and are therefore rendered non-eligible. As a consequence, over the reporting period, all investments were considered to be respectful with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights.

This indicator is systematically monitored by our external service provider, as well as by a constant watch on controversies and regular meetings between Management and the Research team. Any severe and repeated breach of OECD guidelines will be excluded from our investment universe.

In 2023, there was no significant controversy during the year that could cause a divestment of the por. olio Mirova Euro Green & Sustainable Corporate Bond Fund.

How did this financial product consider principal adverse impacts on sustainability factors?

PAI indicators are incorporated into the sustainability analysis framework and the results are part of the DNSH test. As described above, the DNSH test's result is a binding opinion based on which companies whose economic activities or practices are deemed to have a significant negative impact on the achievement of one or more of the UN SDGs are systematically excluded from the investment universe regardless of their otherwise positive contribution. PAI indicators are therefore continuously considered by these financial products.

The percentages displayed represent the average of the 4 quarter ends of the reference period.

The displayed country is the country of risk, i.e. the country where the security is domiciled.

*Green Bonds.

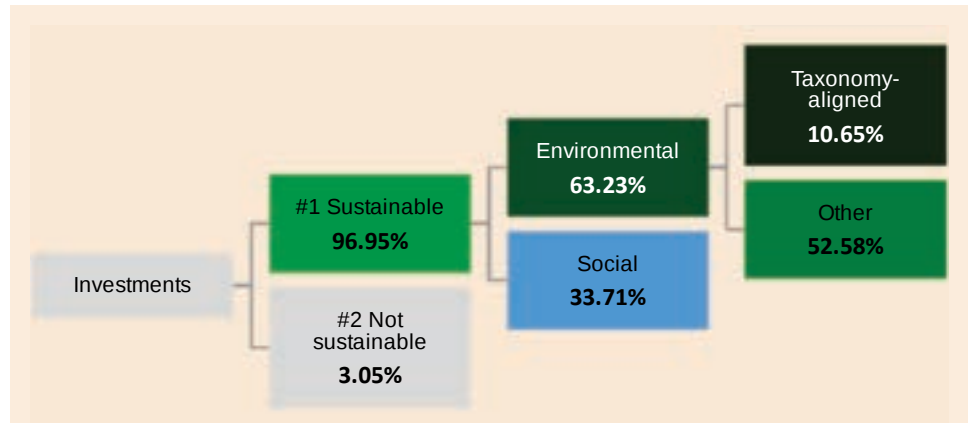

What was the proportion of sustainability-related investments?

The Fund aims at investing only in sustainable investments as defined in Article 2(17) SFDR. 96.95% of the Fund's net assets have been aligned with sustainable investment objectives on average during the reference period. The Fund may use derivatives for hedging and investment purposes (authorised but very rarely used).

The list includes the investments constituting the greatest proportion of investments of the financial product during the reference period which is: 02/01/2023-29/12/2023

Asset allocation describes the share of investments in specific assets.

● **What was the asset allocation?**

#1 Sustainable covers sustainable investments with environmental or social objec. ves.

#2 Not sustainable includes investments which do not qualify as sustainable investments.

● **In which economic sectors were the investments made?**

BREAKDOWN BY TYPE OF ISSUER		Fund	Fund

BCLASS Nomenclature. Bond futures are embedded in government bonds

Breakdown: as of 31/12/2023

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive

To what extent were sustainable investments with an environmental objective aligned with the EU Taxonomy?

As a result of its sustainable objective, this Fund may make investments in economic activities that contribute to the environmental objectives set out in the Article 9 of the Regulation (EU) 2020/852 (the “Taxonomy Regulation”): (a) climate change mitigation and climate change adaptation, (b) sustainable use and protection of water and marine resources, (c) the transition to a circular economy, (d) pollution prevention and control, (e) the protection and restoration of biodiversity and ecosystems. The alignment of the economic activities of each company with the above objectives is identified and measured to the extent that data is available to the Investment Manager and of an adequate quality. They may also stem from estimations in case when certain amount of information is missing. The estimations are performed under conditions defined by the regulations and respect the principle of prudence. The methodology for collecting alignment data and the quality of available data are being

safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are economic activities for which low-carbon alternatives are not yet available and that have greenhouse gas emission levels corresponding to the best performance.

Taxonomy-aligned activities are expressed as a share of:

- **Turnover** reflecting the share of revenue from green activities of investee companies,
- **Capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **Operational expenditure** (OpEx) reflecting green operational activities of investee companies.

improved. As a result, the alignment percentage provided is conservative. 10.65% of the Fund's net assets are aligned with the EU taxonomy on average during the reference period. As an example, the fund invested in EDP whose sustainability opinion is: High positive impact. EDP's green bond framework is designed to allocate funds for financing or refinancing assets within the renewable energy category, with a specific focus on energy generation facilities such as wind and solar energies. According to Mirova's taxonomy data set, EDP alignment equals 49% of sales. In coherence with the issuer's environmental strategy, EDP has established a robust decarbonization plan with concrete short-term targets. For instance, the company aims to achieve an all-green status by 2030 and be coal-free by 2025. To support these targets, EDP has committed to a substantial EUR 19 billion investment program, which is expected to deliver up to 20 GW of clean energy capacity by 2025. These actions are projected to reduce CO2 emissions (scope 1 and 2) by 70% compared to 2015 levels. Because of the quality of assets and the coherence with the decarbonization strategy the transaction is classified as high positive impact.

NB: the results presented hereafter may differ slightly from the aggregate result presented in the Asset Allocation graphical representation.

This is explained by a difference of data source: the figures detailed below are based on estimates from data providers (or data reported by the issuer and collected by data providers), while the aggregate result presented in the Asset Allocation graphical representation may rely (for certain issuers) on estimate made by the investment manager. Please note that any estimated data comes from either the data providers or the investment manager (only for the aggregated data in the Asset Allocation graphical representation).

● **Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy ¹ ?**

Yes:

In fossil gas In nuclear energy

No

1. Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objectives - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.*

**For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures.*

● **What was the share of investments made in transitional and enabling activities?**

The share of investments in transi. onal and enabling activities was 3.17%.

● **How did the percentage of investments aligned with the EU Taxonomy compare with previous reference periods?**

Taxonomy alignment refers to an eligible economic activity that is making a substantial contribution to at least one of the climate and environmental objectives, while also doing no significant harm to the remaining objectives and meeting minimum standards on human rights and labour standards. Taxonomy alignment represents the percentage of investment of the net assets of the Fund in companies whose economic activities are aligned with one or more of the environmental objectives defined by the EU Taxonomy.

Any deviation (upwards or downwards) in terms of taxonomy alignment or any other KPIs coincides with investment-decision for portfolio construction purposes. Reallocation within sectors and companies led to a change from 8.23% to 7.96%. In that very specific case, the fund still complies with targets set at the beginning of the year, which we reiterate for the next year.

are

sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

What was the share of sustainable investments with an environmental objective that were not aligned with the EU Taxonomy?

The Fund has invested 63.23% in sustainable investments with an environmental objective, including 52.58% sustainable investments that are not aligned with the EU taxonomy. The Investment Manager's sustainable impact assessment framework identifies certain activities that are not currently covered by the EU Taxonomy or considered as making a substantial contribution to environmental Taxonomy objectives. This is affected by performing an overall sustainability assessment on each investment, which includes a review of positive impacts regarding three environmental themes: Climate Stability, Biodiversity and Circular Economy. These themes aim at identifying issuers which activities or practices (or use of proceeds bonds which aim at financing projects):

- help develop low carbon energy, eco-efficiency, clean transportation, green building or align with an advanced decarbonation strategy; or
- support sustainable land use, land preservation and sustainable water management or align with an advanced biodiversity preservation strategy; or
- foster sustainable waste management or circular business model.

For example, the fund invested in Seche Environment, whose sustainability Opinion is Moderate positive impact.

Seche Environment offers waste management and treatment services and advices. The company transports, sorts, incinerates and disposes of household waste and collects, processes and disposes of hazardous industrial waste.

Mirova considers the company as moderate positive impact because the company business model addresses key circular economy challenges, Séché Environnement provides recovery and treatment of waste products for local authorities and industrial customers primarily in France. In addition, the company is specialized in the treatment of hazardous waste (~60% of total revenues), decontamination and rehabilitation of PCB transformers and rare materials valorisation, for which the environmental benefit is stronger.

The company is also strongly involved in energy recovery (biogas, typically). Furthermore, Seche Environment takes advantage of its former landfill sites to operate solar energy farms. Today and according to Mirova's data provider the level of taxonomy alignment is zero.

The Fund does not commit to a minimum share of sustainable investments with an environmental objective that are not aligned to the EU Taxonomy.

What was the share of socially sustainable investments?

The Fund has invested 33.71% in issuances or issuers that contribute to tackling inequality or that foster social cohesion, social integration and labor relations, or an investment in human capital or economically or socially disadvantaged communities, provided that such investments do not significantly harm any of the environmental/social objectives and that the issuance or issuer follow good governance practices, in particular with respect to sound management structures, employee relations, remuneration of staff and tax compliance. This is affected by performing an overall sustainability assessment on each investee company, which includes a review of positive impacts regarding three social themes: Socio-economic development, Health wellness and Diversity inclusion. These themes aim at identifying issuers which activities or practices (or use of proceeds bonds which aim at financing projects):

- help foster access to basic and sustainable services, local impact or promote advanced working conditions;
- support the development of healthcare, healthy nutrition, knowledge, education or safety;
- promote diversity and inclusion through dedicated products and services or through advanced practices targeting the workforce.

For example, the fund invested in KBC Group, whose sustainability Opinion is Low positive impact

The company is a major Belgian financial institution. The current level of taxonomy alignment is not disclosed as financial sector companies and in particular banks will disclose taxonomy alignment data from 2024 onwards.

Under Mirova's ESG framework KBC sustainability's main objective is determined social as the company delivers positive impact thanks to advanced practices on job quality.

What investments were included under “not sustainable”, what was their purpose and were there any minimum environmental or social safeguards?

The Fund aims at investing only in securities qualifying as sustainable investment. For technical or hedging purposes, the Fund may hold cash or cash equivalents and derivatives for currency risk management purposes. Due to the technical and neutral nature of the asset, such instruments are not considered as investments and thus no minimum safeguards have been put in place.

What actions have been taken to attain the sustainable investment objective during the reference period?

Engagement activity forms an integral part of Mirova's responsible investment approach. Mirova's engagement strategy seeks to monitor and thrive to improve companies' products and practices from an environmental, social, and governance point of view. As a result, one of the core functions of the Sustainability Research team is engagement, both on individual and collaborative levels:

Individual engagement: in which Mirova's ESG analysts interact one-on-one with the companies to monitor performance and progress on ESG topics, and to encourage improvement in their sustainability practices. The purpose of individual engagement is not only to ensure responsible practices in line with our standards, but also to promote better ESG practices and encourage the development of solutions for the major environmental and social challenges associated with each sector. Within the framework of this fund, a commitment has been made with Tennet GB 2022, whose sustainability Opinion is Moderate positive impact. With renewable sources accounting for only 26% of electricity generated in the Netherlands in 2020, and 44% in Germany, there seemed to be a gap between Tennet's target and the country's renewable capacity, which Mirova asked about when it signed up with Tennet. The answers were detailed and appeared to be in line with best practice compared to other operators. The framework included three categories, but in the end, 100% of the funds were allocated to connection services, enabling 100% renewable energy to be transported. They didn't invest in the network aspect because they couldn't guarantee that it would only carry clean energy. What they can do, however, is act on the construction of the grid and the infrastructure to bring renewable electricity onto that grid. This is what they are doing with connection services. These activities seem very positive to us, and we confirm the moderate positive impact rating. GB has been removed from the watch list.

- **Collaborative engagement:** Mirova joins with other investors and representatives of civil society to identify controversial practices, encourage greater transparency and demand, where necessary, that companies change their practices. Additionally, Mirova leverages its voting rights to further push companies towards the development of more sustainable portfolios and the adoption of best practices, by systematically exercising their voting rights based on an in-house voting policy that largely embeds the concepts of a sustainable-at-core, stakeholder-oriented governance. Proxy voting is used to convey messages during pre/post vote dialogue and via opposition to ad hoc items. Where possible, Mirova may co-sign or lead the filing of shareholder items.

Mirova also engage with regulators to share its vision of sustainable investment to improve standards and regulations across the financial sector and to foster sustainable investment.

Mirova is committed to promoting regulations, including legislative changes, standards or labels, and practices that support sustainable investment and create long-term value. Further information in relation to engagement priorities and engagement policy carried out by Mirova can be found on the website at <https://www.mirova.com/en/research/voting-and-engagement>.

Reference

benchmarks are indexes to measure whether the financial product attains the sustainable objective.

NB: all figures related to sustainability/ taxonomy are calculated as an average of the values of the 4 quarter ends of the reference period.

Template periodic disclosure for the financial products referred to in Article 9, paragraphs 1 to 4a, of Regulation (EU) 2019/2088 and Article 5, first paragraph, of Regulation (EU) 2020/852

Product Name : MIROVA FUNDS - Mirova Euro High Yield Sustainable Bond Fund
Legal Entity Identifier : 5493 00UDCKPF3YTNRZ 12

Sustainable investment objective

Did this financial product have a sustainable investment objective?

Yes

No

It made **sustainable investments with an environmental objective: 65.52%**

in economic activities that qualify as environmentally sustainable under the EU Taxonomy

in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

It made **sustainable investments with a social objective: 31.97%**

It **promoted Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of ___% of sustainable investments

with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with a social objective

It promoted E/S characteristics, **but did not make any sustainable investments**

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

To what extent was the sustainable investment objective of this financial product met?

The sustainable investment objective of the Fund is to invest in bonds from corporate issuers whose:

- whose economic activities contribute, or are to risingly contribute, positively through their products, services and/or practices to the achievement of one or more of the United Nations Sustainable Development Goals (the “SDGs”), and/or
- use of proceeds bonds whose purpose is to finance projects with a positive environmental and/or social impacts (green, social, green and social bonds).

Sustainability indicators measure how the sustainable objectives of this financial product are achieved.

The fund sustainable investment objectives were the following : 90% in Sustainable Investment (SI), with an objective of 35% in SIE (Sustainable Investment Environmental) and 10% in SIS (Sustainable Investment Social).

97.49% of the Fund's net assets were aligned with sustainable investment objectives on average during the reference period. 65.5% of the Funds' net assets were aligned with SIE. Alignment with EU Taxonomy amounted to 7.96%.

Any fluctuations may arise from transaction in the portfolio and changes as a result of the calculation methodology from portfolio's construction.

The indicators have not been subject to an assurance provided by an auditor or a review by a third party.

● ***How did the sustainability indicators perform?***

Benchmark:ICE BOFA MERRILL LYNCH EUR HY BB-B TOTAL RETURN EUR

The benchmark is not intended to be aligned with environmental and social ambitions as promoted by the fund.

The fund followed the KPIs described hereafter. The figures are the average result of the 4 quarterly reports.

Mirova sticks to its core strategy: funding companies designing, producing, and marketing the services and products adapted to the low-carbon economy. 60% were invested in climate stability projects to limit global warming under 2° (SDG 9 and 13). 39% were directed to projects that contributes to healthy eco-systems (SDG 14 and 15, inter alia) and 22% of the fund supported projects that bring solutions to resources through efficient and circular use of natural resources.

Green and Sustainable Bonds amounted to 30% of holdings end of December. Our fund is in accordance with the 1.5-degree scenario compared to 2/2.5 for our index (Carbone 4 methodology).

... and compared to previous periods?

A comparison of the performance of sustainability indicators with the previous period cannot be made due to the applica. on of the new requirements for the new reference period and the enhancement of our methodology. For the previous period, the indicators were calculated on the basis of a snapshot at the end of the period, whereas they are now calculated as an average over the quarters of the reference period.

On the climate stability SDG contribution reporting, we can however indicate that our performance improved from 52% to 60 %, and the fund is still in accordance with the 1.5°C scenario compared to 2.5/3°C for index.

How did the sustainable investments not cause significant harm to any sustainable investment objective?

The sustainability analysis aims to identify the relevant residual environmental and social risks originating from issuers' activities and practices and assesses the quality of the issuer's measures to mitigate these risks (the "DNSH test"). Such analysis considers notably the degree of exposure of the investee company to certain sectors or activities that may be considered to be damaging for the environment and/or the society and exposure to relevant environmental or social controversies. As a result of

this qualitative analysis, the Investment Manager issues a binding opinion based on which the issuers whose economic activities are deemed to have a significant negative impact on the achievement of one or more of the UN SDGs are systematically excluded from the investment universe regardless of their otherwise positive contribution. Therefore, over the reporting period, all investments in the Fund were complying with the Investment Manager's DNSH criteria.

— *How were the indicators for adverse impacts on sustainability factors taken into account?*

As part of the analysis of residual ESG risks conducted on each investee company, the Fund systematically assesses and monitors indicators that are deemed to indicate the presence of principal adverse impact (including consideration of data relating to the mandatory PAI indicators referred to in the consolidated Regulatory Technical Standards for assessment of sustainable investment in accordance with art. 2 (17) SFDR). When the data necessary for the calculation of certain PAI indicators are not available, the Investment Manager may use qualitative or quantitative proxies that cover themes similar to the PAI indicators in question. Adverse impacts are prioritized according to the specificities of sectors of each issuer or project financed by the use of proceeds bond considered for investment by using a combination of criteria based on:

- analysis of the issuer's exposure or project financed by the bond to environmental impacts based on science-based data from international organisations (e.g. energy intensity, impacts on biodiversity, etc),
- analysis of the issuer's exposure or project financed by the bond to fundamental rights and employee matters through its locations, business model and supply chain organization (e.g. exposure to health and safety risks, exposure to countries with specific human rights risks, etc),
- analysis of the issuer's footprint (or footprint of the project financed by the bond) on local communities and consumers,
- screening of on-going or potential controversies.

Mirova's investment universes are followed with a special focus on controversies. The aim is to detect violations of the UN Compact and the OECD Guidelines. The action plan to deal with a controversy will depend on the severity, as well as the corrective measures already announced by the company. The actions are:

- Direct individual engagement,
- Exercising the right to vote,
- Collaborative engagement
- Divestment

Where the Investment Manager deems the issuer's processes and practices are insufficient to mitigate environmental, social and governance risks, notably with regards to the relevant PAIs, the investment's impact is deemed as negative which makes it ineligible for investment.

Further details can be found in the table hereunder, which lists the main indicators taken into account by Mirova when taking PAIs into account.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

	Adverse Sustainability indicator	How PAIs are taken into account by Mirova
Greenhouse gas emissions	1. GHG emissions	Exclusion of the most carbon intensive entities and companies with no or insufficient plans to reduce GHG emissions Systematic integration in qualitative internal analysis
	2. Carbon footprint	
	3. GHG intensity of investee companies	
	4. Exposure to companies active in the fossil fuel sector	Exclusion of companies active in the fossil fuel sector For companies involved in fossil fuel extraction, processing/refining, and trading, exclusion applies to companies with: • >5% of revenues from coal or oil, including unconventional oil, • >10% of revenues from unconventional gas. For companies that produce dedicated equipment/services for the fossil fuel sector, exclusion applies to companies with >50% of revenues from these equipment/services. For companies involved in electricity production (>10% of sales related to electricity production), exclusion applies to companies with a generation mix dominated by coal, with a carbon intensity >350 gCO ₂ /MWh.
	5. Share of non-renewable energy consumption and production	Integration in qualitative internal analysis when relevant
	6. Energy consumption intensity per high impact climate sector	Integration in qualitative internal analysis when relevant
Biodiversity	7. Activities negatively affecting biodiversity-sensitive areas	Exclusion of companies or projects significantly harming biodiversity sensitive areas. Systematic integration in qualitative internal analysis. Part of controversy analysis
Water	8. Emissions to water	Integration in qualitative internal analysis when relevant
Waste	9. Hazardous waste and radioactive waste ratio	Integration in qualitative internal analysis when relevant
Social and Employee matters	10. Violations of UN Guiding Principles and OECD guidelines for Multinational Enterprises	Exclusion of companies violating UN Guiding Principles and OECD principles Systematic integration in qualitative internal analysis Part of controversy analysis
	11. Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises	Exclusion for large companies, case-by-case for small companies or projects Systematic integration in qualitative internal analysis Engagement plans / ESAP with investees when relevant
	12. Unadjusted gender pay gap	Systematic integration of gender equality in qualitative internal analysis Engagement plans / ESAP with investees
	13. Board gender diversity	Systematic integration of gender equality in qualitative internal analysis Engagement plans / ESAP with investees
Additional PAI indicators	14. Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)	Exclusion (0% sales threshold)
	4. Investments in companies without carbon emission reduction initiatives	Exclusion of the most carbon intensive entities and companies with no or insufficient plans to reduce GHG emissions Systematic integration in qualitative internal analysis
	14. Number of identified cases of severe human rights issues and incidents	Exclusion of companies with severe human rights issues and incidents. Systematic integration in qualitative internal analysis Part of controversy analysis
	17. Number of convictions and amount of fines for violation of anti-corruption and anti-bribery laws	Exclusion of companies severely violating anti-corruption and anti-bribery laws Systematic integration in qualitative internal analysis Part of controversy analysis

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The Investment Manager screens investee companies against adherence with OECD Guidelines for Mul. national Enterprises and UN Guiding Principles on Business and Human Rights. The Investment Manager continuously reviews companies' track records and news flows to identify significant controversies. Companies' involvement and resolving measures are taken into account. Risks of potential breach may be monitored through engagement to obtain additional assurance. Companies determined by the Investment Manager to be in serious breach of OECD Guidelines for Multinational Enterprises or UN Guiding Principles on Business and Human Rights are recognized as doing significant harm and are therefore rendered non-eligible. As a consequence, over the reporting period, all investments were considered to be respectful with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights.

In 2023, there was no significant controversy during the year that could cause a divestment of the portfolio Mirova Euro High Yield Sustainable Bond Fund.

How did this financial product consider principal adverse impacts on sustainability factors?

PAI indicators are incorporated into the sustainability analysis framework and the results are part of the DNSH test. As described above, the DNSH test's result is a binding opinion based on which companies whose economic activities or practices are deemed to have a significant negative impact on the achievement of one or more of the UN SDGs are systematically excluded from the investment universe regardless of their otherwise positive contribution. PAI indicators are therefore continuously considered by these financial products.

*Green Bonds.

What was the proportion of sustainability-related investments?

The Fund aims at investing only in sustainable investments as defined in Article 2(17) SFDR. 97.49% of the Fund's net assets have been aligned with sustainable investment objectives on average during the reference period. The Fund may use derivatives for hedging and investment purposes (authorised but very rarely used).

● What was the asset allocation?

The list includes the investments constituting the greatest proportion of investments of the financial product during the reference period which is: 02/01/2023-29/12/2023

Asset allocation describes the share

of investments in specific assets.

#1 Sustainable covers sustainable investments with environmental or social objec. ves.

#2 Not sustainable includes investments which do not qualify as sustainable investments.

NB: Investments considered non-sustainable refer to the portfolio's liquid assets.

● **In which economic sectors were the investments made?**

BCLASS Nomenclature. Bond futures are embedded in government bonds

Sector breakdown: as of 31/12/2023

To what extent were sustainable investments with an environmental objective aligned with the EU Taxonomy?

As a result of its sustainable objective, this Fund may make investments in economic activities that contribute to the environmental objectives set out in the Article 9 of the Regulation (EU) 2020/852 (the "Taxonomy Regulation"): (a) climate change mitigation and climate change adaptation, (b) sustainable use and protection of water and marine resources, (c) the transition to a circular economy, (d) pollution prevention and control, (e) the protection and restoration of biodiversity and ecosystems. The alignment of the economic activities of each company with the above objectives is identified and measured to the extent that data is available to the Investment Manager and of an adequate quality. They may also stem from estimations in case when certain amount of information is missing. The estimations are performed under conditions defined by the regulations and respect the principle of prudence. The methodology for collecting alignment data and the quality of available data are being improved. As a result, the alignment percentage provided is conservative. 7.96% of the Fund's net assets are aligned with the EU taxonomy on average during the reference period. As an example, the fund invested in EDP whose sustainability opinion is High positive impact. EDP's green bond framework is designed to allocate funds for financing or refinancing assets within the renewable energy category, with a specific focus on energy generation facilities such as wind and solar energies. According to Mirova's taxonomy data set, EDP alignment

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a

substantial contribution to an environmental objective.

Transitional activities are economic activities for which low-carbon alternatives are not yet available and that have greenhouse gas emission levels corresponding to the best performance.

Taxonomy-aligned activities are expressed as a share of:

- **Turnover** reflecting the share of revenue from green activities of investee companies,
- **Capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **Operational expenditure** (OpEx) reflecting green operational activities of investee companies.

equals 49% of sales. In coherence with the issuer's environmental strategy, EDP has established a robust decarbonization plan with concrete short-term targets. For instance, the company aims to achieve an all-green status by 2030 and be coal-free by 2025. To support these targets, EDP has committed to a substantial EUR 19 billion investment program, which is expected to deliver up to 20 GW of clean energy capacity by 2025. These actions are projected to reduce CO2 emissions (scope 1 and 2) by 70% compared to 2015 levels. Because of the quality of assets and the coherence with the decarbonization strategy the transaction is classified as high positive impact.

NB: the results presented hereafter may differ slightly from the aggregate result presented in the Asset Allocation graphical representation.

This is explained by a difference of data source: the figures detailed below are based on estimates from data providers (or data reported by the issuer and collected by data providers), while the aggregate result presented in the Asset Allocation graphical representation may rely (for certain issuers) on estimate made by the investment manager. Please note that any estimated data comes from either the data providers or the investment manager (only for the aggregated data in the Asset Allocation graphical representation).

● ***Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy¹ ?***

Yes:

In fossil gas In nuclear energy

No

1. Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objectives - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.*

**For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures.*

● **What was the share of investments made in transitional and enabling activities?**

The share of investments in transi. onal and enabling activities was 4.89%.

● **How did the percentage of investments aligned with the EU Taxonomy compare with previous reference periods?**

The percentage of investments aligned with the EU taxonomy for this new reference period cannot be compared with that of the previous reference period due to methodological changes: calculation of an end-of-period snapshot versus average of quarters in the new reference period, calculation previously based solely on estimated data versus calculation combining both estimates and directly reported data.

Taxonomy alignment refers to an eligible economic activity that is making a substantial contribution to at least one of the climate and environmental objectives, while also doing no significant harm to the remaining objectives and meeting minimum standards on human rights and labour standards. Taxonomy alignment represents the percentage of investment of the net assets of the Fund in companies whose economic activities are aligned with one or more of the environmental objectives defined by the EU Taxonomy.

However, apart from methodology, any deviation (upwards or downwards) in terms of taxonomy alignment or any other KPIs coincides with investment-decision for portfolio construction purposes. Reallocation within sectors and companies led to a change from 8.23% to 7.96%. In that very specific case, the fund still complies with targets set at the beginning of the year, which we reiterate for the next year.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

What was the share of sustainable investments with an environmental objective that were not aligned with the EU Taxonomy?

The Fund has invested 65.52% in sustainable investments with an environmental objective, including 57.55% sustainable investments that are not aligned with the EU taxonomy. The Investment Manager's sustainable impact assessment framework identifies certain activities that are not currently covered by the EU Taxonomy or considered as making a substantial contribution to environmental Taxonomy objectives. This is affected by performing an overall sustainability assessment on each investment, which includes a review of positive impacts regarding three environmental themes: Climate Stability, Biodiversity and Circular Economy. These themes aim at identifying issuers which activities or practices (or use of proceeds bonds which aim at financing projects):

- help develop low carbon energy, eco-efficiency, clean transportation, green building or align with an advanced decarbonation strategy; or
- support sustainable land use, land preservation and sustainable water management or align with an advanced biodiversity preservation strategy; or
- foster sustainable waste management or circular business model.

As an example, the fund invested in Seche Environment, whose sustainability opinion is Moderate positive impact.

Seche Environment offers waste management and treatment services and advices. The company transports, sorts, incinerates and disposes of household waste and collects, processes and disposes of hazardous industrial waste. Mirova considers the company as moderate positive impact because the company business model addresses key circular economy challenges, Séché Environnement provides recovery and treatment of waste products for local authorities and industrial customers primarily in France. In addition, the company is specialized in the treatment of hazardous waste (~60% of total revenues), decontamination and rehabilitation of PCB transformers and rare materials valorisation, for which the environmental benefit is stronger.

The company is also strongly involved in energy recovery (biogas, typically). Furthermore, Seche Environment takes advantage of its former landfill sites to operate solar energy farms. Today and according to Mirova's data provider the level of taxonomy alignment is zero.

The Fund does not commit to a minimum share of sustainable investments with an environmental objective that are not aligned to the EU Taxonomy.

What was the share of socially sustainable investments?

The Fund has invested 31.97% in issuances or issuers that contribute to tackling inequality or that foster social cohesion, social integration and labor relations, or an investment in human capital or economically or socially disadvantaged communities, provided that such investments do not significantly harm any of the environmental/social objectives and that the issuances or issuers follow good governance practices, in particular with respect to sound management structures, employee relations, remuneration of staff and tax compliance. This is affected by performing an overall sustainability assessment on each investee company, which includes a review of positive impacts regarding three social themes: Socio-economic development, Health wellness and Diversity inclusion. These themes aim at identifying companies which activities or practices (or use of proceeds bonds which aim at financing projects):

- help foster access to basic and sustainable services, local impact or promote advanced working conditions;
- support the development of healthcare, healthy nutrition, knowledge, education or safety;
- promote diversity and inclusion through dedicated products and services or through advanced practices targeting the workforce.

As an example, the fund invested in Organon, whose sustainability opinion is Moderate positive impact

Organon & Co. is a science based global pharmaceutical company that develops and delivers innovative health solutions through a portfolio of prescription therapies within women's health, biosimilars and established brands.

Roughly 15% of the company's revenues comes from contraceptives. The company thus contributes to sustainable development both in the field of health and gender equality. Some products marketed in the USA are covered by affordability measures such as patient assistance programs.

What investments were included under “not sustainable”, what was their purpose and were there any minimum environmental or social safeguards?

The Fund aims at investing only in securities qualifying as sustainable investment. For technical or hedging purposes, the Fund may hold cash or cash equivalents and derivatives for currency risk management purposes. Due to the technical and neutral nature of the asset, such instruments are not considered as investments and thus no minimum safeguards have been put in place.

What actions have been taken to attain the sustainable investment objective during the reference period?

Engagement activity forms an integral part of Mirova's responsible investment approach. Mirova's engagement strategy seeks to monitor and thrive to improve companies' products and practices from an environmental, social, and governance point of view. As a result, one of the core functions of the Sustainability Research team is engagement, both on individual and collaborative levels:

- Individual engagement: in which Mirova's ESG analysts interact one-on-one with the companies to monitor performance and progress on ESG topics, and to encourage improvement in their sustainability practices. The purpose of individual engagement is not only to ensure responsible practices in line with our standards, but also to promote better ESG practices and encourage the development of solutions for the major environmental and social challenges associated with each sector.
 - Within the framework of this fund, a commitment has been made with Iberdola in the course of 2023. The use of Iberdola's funds is expected to have a significant positive impact on the transition to clean energy and the optimization of power grids. They are divided into the following categories: "Access to energy", renewable capacity and energy efficiency. The projects included in this framework are part of sustainable activities as defined in the final report of the European Commission's technical expert group on EU taxonomy. The company stressed that all transmission and distribution infrastructure in systems that are on a full decarbonization trajectory are eligible, with the exception of infrastructure that connects generation plants with a CO₂ intensity greater than 100 gCO₂ e/kWh. It is important that action plans are consistent and directly linked to the company's activities and its decarbonization strategy. The Group is committed to further reducing its emissions intensity to below 70 gCO₂ /kWh by 2025 (80 GW). It is also worth noting that, since 2020, Iberdola has closed all its coal-related activities and set SBTi-approved targets to reduce absolute GHG emissions from scopes 1, 2

and 3 by 65% by 2030 compared with the 2020 base year. The issuer has undertaken to report annually on the allocation of the proceeds of this emission, together with impact indicators to measure the benefits of the projects. These data will be reviewed by a third party when the funds are allocated. The evaluation and selection of eligible projects will be carried out by Iberdrola's Finance and Treasury Department, which will be supported by representatives from several departments. Projects must comply with Iberdrola's sustainable development policies, and the absence of any potential ESG issues will be verified by the Sustainable Development and Corporate Social Responsibility teams throughout the project life cycle.

- Collaborative engagement: Mirova joins with other investors and representatives of civil society to identify controversial practices, encourage greater transparency and demand, where necessary, that companies change their practices. Additionally, Mirova leverages its voting rights to further push companies towards the development of more sustainable portfolios and the adoption of best practices, by systematically exercising their voting rights based on an in-house voting policy that largely embeds the concepts of a sustainable-at-core, stakeholder-oriented governance. Proxy voting is used to convey messages during pre/post vote dialogue and via opposition to ad hoc items. Where possible, Mirova may co-sign or lead the filing of shareholder items. Mirova also engage with regulators to share its vision of sustainable investment to improve standards and regulations across the financial sector and to foster sustainable investment.

Mirova is committed to promoting regulations, including legislative changes, standards or labels, and practices that support sustainable investment and create long-term value. Further information in relation to engagement priorities and engagement policy carried out by Mirova can be found on the website at <https://www.mirova.com/en/research/voting-and-engagement>.

How did this financial product perform compared to the reference sustainable benchmark?

Not applicable.

- **How did the reference benchmark differ from a broad market index?**
Not applicable.
- **How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the sustainable investment objective?**
Not applicable.
- **How did this financial product perform compared with the reference benchmark?**
Not applicable.
- **How did this financial product perform compared with the broad market index?**
Not applicable.

Reference benchmarks are indexes to measure whether the financial product attains the sustainable objective.

NB: all figures related to sustainability/ taxonomy are calculated as an average of the values of the 4 quarter ends of the reference period.

Template periodic disclosure for the financial products referred to in Article 9, paragraphs 1 to 4a, of Regulation (EU) 2019/2088 and Article 5, first paragraph, of Regulation (EU) 2020/852

Product Name : MIROVA FUNDS - Mirova Euro Short Term Sustainable Bond Fund
Legal Entity Identifier : 5493 00NWRGV486AUWX 65

Sustainable investment objective

Did this financial product have a sustainable investment objective?

Yes

No

It made **sustainable investments with an environmental objective: 82.72%**

in economic activities that qualify as environmentally sustainable under the EU Taxonomy

in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

It made **sustainable investments with a social objective: 14.52%**

It **promoted Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of ___% of sustainable investments

with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with a social objective

It promoted E/S characteristics, **but did not make any sustainable investments**

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

To what extent was the sustainable investment objective of this financial product met?

The sustainable investment objective of the Fund is to invest in:

- use of proceeds bonds issued by corporate issuers, sovereign or agencies whose purpose is to finance projects with a positive environmental and/or social impacts (green, social, green and social bonds); and/or
- conventional bonds from corporate issuers whose economic activities contribute positively through their products, services and/or practices to the achievement of one or more of the United Nations Sustainable Development Goals (the "SDGs").

Sustainability indicators measure how the sustainable objectives of this financial product are achieved.

The alignment of the economic activities of the issuer or the project to be financed by the use of proceeds bonds with the above objectives is identified and measured to the extent that data is available to the Investment Manager and of an adequate quality. Depending on the investment opportunities available, The Fund may contribute to any of the above environmental objectives and may not at all times contribute to all of the objectives. No reference benchmark has been designated for the purpose of aligning the sustainable investment objective.

The fund sustainable investment objectives were the following : 90% in Sustainable Investment (SI), with an objective of 50% in SIE (Sustainable Investment Environmental) and 1% in SIS (Sustainable Investment Social).

97.24% of the Fund's net assets were aligned with sustainable investment objectives on average during the reference period. Alignment with EU Taxonomy amounted to 17.85%.

The alignment to the EU taxonomy is estimated at 18.70%. during the year the fund was maintained above its objective of 15%.

The fluctuations come from buy/sell in the portfolio and changes in the calculation methodology.

The indicators have not been subject to an assurance provided by an auditor or a review by a third party.

● ***How did the sustainability indicators perform?***

Benchmark: BLOOMBERG EUROAGG 1-3 YEAR TOTAL RETURN INDEX VALUE UNHEDGED EUR The benchmark is not intended to be aligned with environmental and social ambitions as promoted by the fund.

The fund followed the KPIs described hereafter. The figures are the average result of the 4 quarterly reports.

85.6% of the portfolio is invested in high and moderate positive impact versus 11% for the index.

The fund seek to invest in high environmental projects or companies: 74% of our investments have a positive impact on the climate versus 9% for the index.

Thanks to our exposure to green and sustainable bonds and to conventional issuers that bring solution to sustainable development, our fund is aligned with a 1.5 °C global warming scenario.

... and compared to previous periods?

A comparison of the performance of sustainability indicators with the previous period cannot be made due to the applica. on of the new requirements for the new reference period and the enhancement of our methodology. For the previous period, the indicators were calculated on the basis of a snapshot at the end of the period, whereas they are now calculated as an average over the quarters of the reference period.

However, compared to 2022, our investments are still dedicated to environmental impact. Investments with a positive impact on climate stability are higher versus a proportion slightly lower for healthy eco-systems and ressource security. Concerning the social pillar, thanks to our investment on sustainable bonds, we have a higher proportion with a positive impact on basic needs. The fund is still aligned to a 1.5°C global warming scenario.

How did the sustainable investments not cause significant harm to any sustainable investment objective?

The sustainability analysis aims to identify the relevant residual environmental and social risks originating from issuers' activities and practices and assesses the quality of the issuer's measures to mitigate these risks (the "DNSH test"). Such analysis

considers notably the degree of exposure of the investee company to certain sectors or activities that may be considered to be damaging for the environment and/or the society and exposure to relevant environmental or social controversies. As a result of this qualitative analysis, the Investment Manager issues a binding opinion based on which issuer whose economic activities are deemed to have a significant negative impact on the achievement of one or more of the UN SDGs are systematically excluded from the investment universe regardless of their otherwise positive contribution. Therefore, over the reporting period, all investments in the Fund were complying with the Investment Manager's DNSH criteria.

— *How were the indicators for adverse impacts on sustainability factors taken into account?*

As part of the analysis of residual ESG risks conducted on each investee company, the Fund systematically assesses and monitors indicators that are deemed to indicate the presence of principal adverse impact (including consideration of data relating to the mandatory PAI indicators referred to in the consolidated Regulatory Technical Standards for assessment of sustainable investment in accordance with art. 2 (17) SFDR). When the data necessary for the calculation of certain PAI indicators are not available, the Investment Manager may use qualitative or quantitative proxies that cover themes similar to the PAI indicators in question. Adverse impacts are prioritized according to the specificities of sectors of each issuer or project financed by the use of proceeds bond considered for investment by using a combination of criteria based on:

- analysis of the issuer's exposure or project financed by the bond to environmental impacts based on science-based data from international organisations (e.g. energy intensity, impacts on biodiversity, etc),
- analysis of the issuer's exposure or project financed by the bond to fundamental rights and employee matters through its locations, business model and supply chain organization (e.g. exposure to health and safety risks, exposure to countries with specific human rights risks, etc),
- analysis of the issuer's footprint (or footprint of the project financed by the bond) on local communities and consumers,
- screening of on-going or potential controversies.

Mirova's investment universes are followed with a special focus on controversies. The aim is to detect violations of the UN Compact and the OECD Guidelines. The action plan to deal with a controversy will depend on the severity, as well as the corrective measures already announced by the company. The actions are:

- Direct individual engagement,
- Exercising the right to vote,
- Collaborative engagement
- Divestment

Where the Investment Manager deems the issuer's processes and practices are insufficient to mitigate environmental, social and governance risks, notably with regards to the relevant PAIs, the investment's impact is deemed as negative which makes it ineligible for investment.

Further details can be found in the table hereunder, which lists the main indicators taken into account by Mirova when taking PAIs into account.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

	Adverse Sustainability indicator	How PAIs are taken into account by Mirova
Greenhouse gas emissions	1. GHG emissions	Exclusion of the most carbon intensive entities and companies with no or insufficient plans to reduce GHG emissions Systematic integration in qualitative internal analysis
	2. Carbon footprint	
	3. GHG intensity of investee companies	
	4. Exposure to companies active in the fossil fuel sector	Exclusion of companies active in the fossil fuel sector For companies involved in fossil fuel extraction, processing/refining, and trading, exclusion applies to companies with: • >5% of revenues from coal or oil, including unconventional oil, • >10% of revenues from unconventional gas. For companies that produce dedicated equipment/services for the fossil fuel sector, exclusion applies to companies with >20% of revenues from these equipment/services. For companies involved in electricity production (>10% of sales related to electricity production), exclusion applies to companies with a generation mix dominated by coal, with a carbon intensity >350 gCO ₂ /MWh.
	5. Share of non-renewable energy consumption and production	Integration in qualitative internal analysis when relevant
	6. Energy consumption intensity per high impact climate sector	Integration in qualitative internal analysis when relevant
Biodiversity	7. Activities negatively affecting biodiversity-sensitive areas	Exclusion of companies or projects significantly harming biodiversity sensitive areas Systematic integration in qualitative internal analysis Part of controversy analysis
Water	8. Emissions to water	Integration in qualitative internal analysis when relevant
Waste	9. Hazardous waste and radioactive waste ratio	Integration in qualitative internal analysis when relevant
Social and Employee matters	10. Violations of UN Guiding Principles and OECD guidelines for Multinational Enterprises	Exclusion of companies violating UN Guiding Principles and OECD principles Systematic integration in qualitative internal analysis Part of controversy analysis
	11. Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises	Exclusion for large companies, case-by-case for small companies or projects Systematic integration in qualitative internal analysis Engagement plans / ESAP with investees when relevant
	12. Unadjusted gender pay gap	Systematic integration of gender equality in qualitative internal analysis Engagement plans / ESAP with investees
	13. Board gender diversity	Systematic integration of gender equality in qualitative internal analysis Engagement plans / ESAP with investees
Additional PAI indicators	14. Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)	Exclusion (0% sales threshold)
	4. Investments in companies without carbon emission reduction initiatives	Exclusion of the most carbon intensive entities and companies with no or insufficient plans to reduce GHG emissions Systematic integration in qualitative internal analysis
	14. Number of identified cases of severe human rights issues and incidents	Exclusion of companies with severe human rights issues and incidents Systematic integration in qualitative internal analysis Part of controversy analysis
	17. Number of convictions and amount of fines for violation of anti-corruption and anti-bribery laws	Exclusion of companies severely violating anti-corruption and anti-bribery laws Systematic integration in qualitative internal analysis Part of controversy analysis

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The Investment Manager screens investee companies against adherence with OECD Guidelines for Mul. national Enterprises and UN Guiding Principles on Business and Human Rights. The Investment Manager continuously reviews companies' track records and news flows to identify significant controversies. Companies' involvement and resolving measures are taken into account. Risks of potential breach may be monitored through engagement to obtain additional assurance. Companies determined by the Investment Manager to be in serious breach of OECD Guidelines for Multinational Enterprises or UN Guiding Principles on Business and Human Rights are recognized as doing significant harm and are therefore rendered non-eligible. As a consequence, over the reporting period, all investments were considered to be respectful with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights.

In 2023, there was no significant controversy during the year that could cause a divestment of the portfolio Mirova Euro Short Term Sustainable Bond Fund.

How did this financial product consider principal adverse impacts on sustainability factors?

PAI indicators are incorporated into the sustainability analysis framework and the results are part of the DNSH test. As described above, the DNSH test's result is a binding opinion based on which companies whose economic activities or practices are deemed to have a significant negative impact on the achievement of one or more of the UN SDGs are systematically excluded from the investment universe regardless of their otherwise positive contribution. PAI indicators are therefore continuously considered by these financial products.

What were the top investments of this financial product?

Largest Investments	Sector	% Assets	Country
BUNDESOBL-120 0% 10-10-25	Sovereign	13.74	Germany

The percentages displayed represent the average of the 4 quarter ends of the reference period.

The displayed country is the country of risk, i.e. the country where the security is domiciled.

*Green Bonds.

What was the proportion of sustainability-related investments?

The Fund aims at investing only in sustainable investments as defined in Article 2(17) SFDR. 97.24% of the Fund's net assets have been aligned with sustainable investment objectives on average during the reference period. The Fund may use derivatives for hedging and investment purposes (authorised but very rarely used).

● What was the asset allocation?

The list includes the investments constituting the **greatest proportion of investments** of the financial product during the reference period which is: 02/01/2023-29/12/2023

Asset allocation describes the share

of investments in specific assets.

#1 Sustainable covers sustainable investments with environmental or social objec. ves.

#2 Not sustainable includes investments which do not qualify as sustainable investments.

NB: Investments considered non-sustainable refer to the portfolio's liquid assets.

● **In which economic sectors were the investments made?**

BREAKDOWN BY TYPE OF ISSUER	Fund	Reference Index	Fund	Reference Index
	%	%	Modified duration	
Government	18.2	50.2	0.5	0.9

Cash & cash equivalent	1.3	-	0.0	-

BCLASS Nomenclature. Bond futures are embedded in government bonds

Sector breakdown: as of 31/12/2023.

To what extent were sustainable investments with an environmental objective aligned with the EU Taxonomy?

As a result of its sustainable objective, this Fund may make investments in economic activities that contribute to the environmental objectives set out in the Article 9 of the Regulation (EU) 2020/852 (the "Taxonomy Regulation"):

- (a) climate change mitigation and climate change adaptation,
- (b) sustainable use and protection of water and marine resources, (
- c) the transition to a circular economy,
- (d) pollution prevention and control,
- (e) the protection and restoration of biodiversity and ecosystems.

The alignment of the economic activities of each company with the above objectives is identified and measured to the extent that data is available to the Investment Manager and

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include

comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are economic activities for which low-carbon alternatives are not yet available and that have greenhouse gas emission levels corresponding to the best performance.

Taxonomy-aligned activities are expressed as a share of:

- **Turnover** reflecting the share of revenue from green activities of investee companies,
- **Capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **Operational expenditure** (OpEx) reflecting green operational activities of investee companies.

of an adequate quality. They may also stem from estimations in case when certain amount of information is missing. The estimations are performed under conditions defined by the regulations and respect the principle of prudence. The methodology for collecting alignment data and the quality of available data are being improved. As a result, the alignment percentage provided is conservative. 17.85% of the Fund's net assets are aligned with the EU taxonomy on average during the reference period.

The fund invested in Orsted, whose sustainability opinion is high positive impact.

Ørsted A/S engages in the provision of renewable energy solutions. It operates through the following business segments: Wind Power, Bioenergy & Thermal Power, Distribution & Customer Solutions and Other Activities.

Mirova considers that the company contributes positively to the realisation of climate mitigation therefore the company is given an ESG opinion of "High positive impact".

According to Mirova's data provider, Orsted taxonomy alignment corresponds to 100%. In additions Orsted's green bonds present high environmental benefits and are clearly in line with the company's strategy. Moreover, the company provides good risk management for its projects and has a comprehensive impact assessment of the projects financed.

NB: the results presented hereafter may differ slightly from the aggregate result presented in the Asset Allocation graphical representation.

This is explained by a difference of data source: the figures detailed below are based on estimates from data providers (or data reported by the issuer and collected by data providers), while the aggregate result presented in the Asset Allocation graphical representation may rely (for certain issuers) on estimate made by the investment manager.

Please note that any estimated data comes from either the data providers or the investment manager (only for the aggregated data in the Asset Allocation graphical representation).

● ***Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy¹ ?***

Yes:

In fossil gas In nuclear energy

No

1. Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objectives - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

*For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures.

● **What was the share of investments made in transitional and enabling activities?**

The share of investments in transi. onal and enabling activities was 2.72%.

● **How did the percentage of investments aligned with the EU Taxonomy compare with previous reference periods?**

The percentage of investments aligned with the EU taxonomy for this new reference period cannot be compared with that of the previous reference period due to methodological changes: calculation of an end-of-period snapshot versus average of quarters in the new reference period, calculation previously based solely on estimated data versus calculation combining both estimates and directly reported data.

The alignment to the EU taxonomy is estimated at 18.70%. during the year the fund was maintained above its objective of 15%. The fluctuations come from buy/sell in the portfolio and changes in the calculation methodology.

What was the share of sustainable investments with an environmental objective that were not aligned with the EU Taxonomy?

investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

The Fund has invested 82.72% in sustainable investments with an environmental objective, including 64.87% sustainable investments that are not aligned with the EU taxonomy. The Investment Manager's sustainable impact assessment framework identifies certain activities that are not currently covered by the EU Taxonomy or considered as making a substantial contribution to environmental Taxonomy objectives. This is affected by performing an overall sustainability assessment on each investment, which includes a review of positive impacts regarding three environmental themes: Climate Stability, Biodiversity and Circular Economy. These themes aim at identifying project financing activities (or issuers which activities or practices):

- help develop low carbon energy, eco-efficiency, clean transportation, green building or align with an advanced decarbonation strategy; or
- support sustainable land use, land preservation and sustainable water management or align with an advanced biodiversity preservation strategy; or
- foster sustainable waste management or circular business model.

The fund invested in Ecolab INC, whose sustainability opinion is Moderate positive impact. As a detergents and digital water services supplier to various industries, Ecolab contributes to sustainability as an enabler of industry stewardship through water savings from efficient washing and digital monitoring, energy savings in processing.

According to Mirova's research the company generates positive impact on biodiversity thanks to the deployment of outstanding processes whereby the company certifies sites located in water-stressed water basins to advanced water stewardship certification for high risk sites ensuring demonstrable benefits in regards of relationships with customers, increased investor confidence, strengthened social license to operate, and dialogue with regulators and policy makers. Currently the taxonomy alignment for this company is zero.

The Fund does not commit to a minimum share of sustainable investments with an environmental objective that are not aligned to the EU Taxonomy. .

What was the share of socially sustainable investments?

The Fund has invested 14.52% in projects or issuers that contribute to tackling inequality or that foster social cohesion, social integration and labor relations, or an investment in human capital or economically or socially disadvantaged communities, provided that such investments do not significantly harm any of the environmental/social objectives and that the issuance or issuer follow good governance practices, in particular with respect to sound management structures, employee relations, remuneration of staff and tax compliance. This is affected by performing an overall sustainability assessment on each investee company, which includes a review of positive impacts regarding three social themes: Socio-economic development, Health wellness and Diversity inclusion. These themes aim at identifying project financing activities (or issuers which activities or practices):

- help foster access to basic and sustainable services, local impact or promote advanced working conditions;
- support the development of healthcare, healthy nutrition, knowledge, education or safety;
- promote diversity and inclusion through dedicated products and services or through advanced practices targeting the workforce.

As an example, the fund invested in KBC Group, whose sustainability opinion is Low positive impact

The company is a major Belgian financial institution. The current level of taxonomy alignment is not disclosed as financial sector companies and in particular banks will disclose taxonomy alignment data from 2024 onwards.

Under Mirova's ESG framework KBC sustainability's main objective is determined social as the company delivers positive impact thanks to advanced practices on job quality.

What investments were included under “not sustainable”, what was their purpose and were there any minimum environmental or social safeguards?

The Fund aims at investing only in securities qualifying as sustainable investment. For technical or hedging purposes, the Fund may hold cash or cash equivalents and derivatives for currency risk management purposes. Due to the technical and neutral nature of the asset, such instruments are not considered as investments and thus no minimum safeguards have been put in place.

What actions have been taken to attain the sustainable investment objective during the reference period?

Engagement activity forms an integral part of Mirova's responsible investment approach. Mirova's engagement strategy seeks to monitor and thrive to improve companies' products and practices from an environmental, social, and governance point of view. As a result, one of the core functions of the Sustainability Research team is engagement, both on individual and collaborative levels:

- Individual engagement: in which Mirova's ESG analysts interact one-on-one with the companies to monitor performance and progress on ESG topics, and to encourage improvement in their sustainability practices. The purpose of individual engagement is not only to ensure responsible practices in line with our standards, but also to promote better ESG practices and encourage the development of solutions for the major environmental and social challenges associated with each sector. A commitment has been made with Iberdrola in the course of 2023.
 - The use of Iberdrola's funds is expected to have a significant positive impact on the transition to clean energy and the optimization of power grids. They are divided into the following categories: "Access to energy", renewable capacity and energy efficiency. The projects included in this framework are part of sustainable activities as defined in the final report of the European Commission's technical expert group on EU taxonomy. The company stressed that all transmission and distribution infrastructure in systems that are on a full decarbonization trajectory are eligible, with the exception of infrastructure that connects generation plants with a CO₂ intensity greater than 100 gCO₂ e/kWh. It is important that action plans are coherent and directly linked to the company's activities and decarbonization strategy. The Group is committed to further reducing its emissions intensity to below 70 gCO₂ /kWh by 2025 (80 GW). It is also worth noting that, since 2020, Iberdrola has closed all its coal-related activities and set SBTi-approved targets to reduce absolute GHG emissions from scopes 1, 2 and 3 by 65% by 2030 compared with the 2020 base year. The Group is committed to further reducing its emissions intensity to less than 70 gCO₂ /kWh by 2025 (80 GW). It should also be noted that, since 2020, Iberdrola has closed all its coal-related activities and set SBTi-approved targets to reduce absolute GHG emissions from scopes 1, 2 and 3 by 65% by 2030 compared with the 2020 base year. The issuer has undertaken to report annually on the allocation of the proceeds of this emission, together with impact indicators to measure the benefits of the projects. These data will be reviewed by a third party when the funds are allocated. The evaluation and selection of eligible projects will be carried out by Iberdrola's Finance and Treasury Department, which will be supported by representatives from several departments. Projects must comply with Iberdrola's sustainable development policies, and the absence of any potential ESG issues will be verified by the Sustainable Development and Corporate Social Responsibility teams throughout the project life cycle.
- Collaborative engagement: Mirova joins with other investors and representatives of civil society to identify controversial practices, encourage greater transparency and demand, where necessary, that companies change their practices. Additionally,

Mirova leverages its voting rights to further push companies towards the development of more sustainable portfolios and the adoption of best practices, by systematically exercising their voting rights based on an in-house voting policy that largely embeds the concepts of a sustainable-at-core, stakeholder-oriented governance. Proxy voting is used to convey messages during pre/post vote dialogue and via opposition to ad hoc items. Where possible, Mirova may co-sign or lead the filing of shareholder items. Mirova also engage with regulators to share its vision of sustainable investment to improve standards and regulations across the financial sector and to foster sustainable investment.

Mirova is committed to promoting regulations, including legislative changes, standards or labels, and practices that support sustainable investment and create long-term value. Further information in relation to engagement priorities and engagement policy carried out by Mirova can be found on the website at <https://www.mirova.com/en/research/voting-and-engagement>.

How did this financial product perform compared to the reference sustainable benchmark?

Not applicable.

- ***How did the reference benchmark differ from a broad market index?***
Not applicable.
- ***How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the sustainable investment objective?***
Not applicable.
- ***How did this financial product perform compared with the reference benchmark?***
Not applicable.
- ***How did this financial product perform compared with the broad market index?***
Not applicable.

Reference benchmarks are indexes to measure whether the financial product attains the sustainable objective.

NB: all figures related to sustainability/ taxonomy are calculated as an average of the values of the 4 quarter ends of the reference period.

Template periodic disclosure for the financial products referred to in Article 9, paragraphs 1 to 4a, of Regulation (EU) 2019/2088 and Article 5, first paragraph, of Regulation (EU) 2020/852

Product Name : MIROVA FUNDS - Mirova Europe Sustainable Economy Fund
Legal Entity Identifier : 5493 00TVT6YRMQR4DO 33

Sustainable investment objective

Did this financial product have a sustainable investment objective?

Yes

No

It made **sustainable investments with an environmental objective: 56.78%**

in economic activities that qualify as environmentally sustainable under the EU Taxonomy

in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

It made **sustainable investments with a social objective: 42.26%**

It **promoted Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of ___% of sustainable investments

with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with a social objective

It promoted E/S characteristics, **but did not make any sustainable investments**

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

To what extent was the sustainable investment objective of this financial product met?

The sustainable investment objective of the Fund is to invest in bonds and/or equity securities issued by companies:

- that address opportunities linked to major sustainable themes such as biodiversity, climate, diversity human capital, health human development, and
- whose economic activities contribute positively through their products, services and/or practices to the achievement of one or more of the United Nations Sustainable

Sustainability indicators measure how the sustainable objectives of this financial product are achieved.

Development Goals (the “SDGs”). The Fund aims at contributing to keeping the maximum global temperature rise to a maximum 2 degrees Celsius.

The fund sustainable investment objectives were the following : 90% in sustainable investment, with an objective of 30% in SIE (Sustainable Investment Environmental) and 20% in SIS (Sustainable Investment Social).

In practice, we have more than achieved our objectives, since the percentage of sustainable investments equal to 99.3% is above the 90% threshold, and our sustainable investments with an environmental objective representing 54.4% of the portfolio on the one hand, and our sustainable investments with a social objective representing 44.9% on the other, far exceed the required limit of 30% and 20% respectively.

99.04% of the Fund's net assets were aligned with sustainable investment objectives on average during the reference period. Alignment with EU Taxonomy amounted to 11.16%. The indicators have not been subject to an assurance provided by an auditor or a review by a third party.

● ***How did the sustainability indicators perform?***

Benchmark: 50.00%: MSCI EUROPE NET TOTAL RETURN EUR INDEX + 50.00%: BLOOMBERG EURO AGGREGATE CORPORATE TOTAL RETURN INDEX VALUE UNHEDGED EUR. The benchmark is not intended to be aligned with environmental and social ambitions as promoted by the fund.

The fund followed the KPIs described hereafter. The figures are the average result of the 4 quarterly reports.

As you can see, all the companies in our portfolio have a positive environmental and/or social impact. According to our internal methodology, which ranks these positive impacts from low to moderate to high, we can affirm that 72.9% of our portfolio is invested in companies rated moderate or high positive impact.

In terms of positive contribution to achieving sustainable development objectives, the company's contributions to climate, biodiversity and socio-economic development are particularly noteworthy

So it comes as no surprise that we are aligned with a 2° global warming scenario.

SUSTAINABILITY IMPACT OPINION BREAKDOWN*

Percentage of total net assets excluding non-viable and positive (representing 100% of the fund's investment)

*The Sustainability opinion is designed to assess whether the investment is compatible with the UN SDGs. Data is provided quarterly by MSCI's proprietary ESG Risk Rating and ESG Quality Assessment processes. When a security is not included in MSCI's scoring treatment scope, national data provided by ISS ESG is used and processed through MSCI's national exclusion framework.

CONTRIBUTION TO UN SUSTAINABLE DEVELOPMENT GOALS (SDGS)

% of assets with positive impact opinions

SDG themes	Extent to which an asset contributes to the SDGs corresponding to each pillar	
	Fund	Reference Index
Environment		
CLIMATE Limit greenhouse gas levels to stabilize global temperature rise under 2°C	69%	33%
BIODIVERSITY Maintain ecologically sound landscapes and seas for future and people	40%	11%
CIRCULAR ECONOMY Preserve stocks of natural resources through efficient and circular use	16%	5%
Social		
SOCIO-ECONOMIC DEVELOPMENT Support access to basic services, local development or promote individual development in the workplace	26%	19%
HEALTH AND WELL BEING Promote safe and healthy living conditions, support quality education	23%	18%
DIVERSITY AND INCLUSION Provide inclusive solutions or promote fair working conditions for all	27%	15%

The percentage contribution represents the share of portfolio assets (by weight) that were then considered to be "aligned" (with an ESG score "High positive impact" or "Moderate positive impact") on the pillar. The evaluation of the contribution is based both on the capacity of companies to fulfil governance and process with positive implications on the quality of their environmental and social management (the "DNSH test").

ESTIMATED IMPACT ON GLOBAL AVERAGE INCREASE OF TEMPERATURE

... and compared to previous periods?

The ESG impact of the por. olio has been strengthened compared to last year. This is due to a change in methodology and a clear improvement in the environmental contribuāon, with the score for the climate pillar rising from 6 3% to 69%. All securiāes in the porāolio are categorized as having a posiāve impact, and the porāolio is aligned with a 2°C global warming scenario.

How did the sustainable investments not cause significant harm to any sustainable investment objective?

The sustainability analysis aims to identify the relevant residual environmental and social risks originating from companies' activities and practices and assesses the quality of the company's measures to mitigate these risks (the "DNSH test"). Such analysis considers notably the degree of exposure of the investee company to certain sectors or activities that may be considered to be damaging for the environment and/or the society and exposure to relevant environmental or social controversies. As a result of this qualitative analysis, the Investment Manager issues a binding opinion based on which companies whose economic activities or practices are deemed to have a significant negative impact on the achievement of one or more of the UN SDGs are systematically excluded from the investment universe regardless of their otherwise positive contribution. Therefore, over the reporting period, all investments in the Fund were complying with the Investment Manager's DNSH criteria.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

How were the indicators for adverse impacts on sustainability factors taken into account?

As part of the analysis of residual ESG risks conducted on each investee company, the Fund systematically assesses and monitors indicators that are deemed to indicate the presence of principal adverse impact (including consideration of data relating to the mandatory PAI indicators referred to in the consolidated Regulatory Technical Standards for assessment of sustainable investment in accordance with art. 2 (17) SFDR). When the data necessary for the calculation of certain PAI indicators are not available, the Investment Manager may use qualitative or quantitative proxies that cover themes similar to the PAI indicators in question. Adverse impacts are prioritized according to the specificities of sectors and business models of companies considered for investment by using a combination of criteria based on:

- analysis of the company's exposure to environmental impacts based on science-based data from international organisations (e.g. energy intensity, impacts on biodiversity, etc),
- analysis of the company's exposure to fundamental rights and employee matters through its locations, business model and supply chain organization (e.g. exposure to health and safety risks, exposure to countries with specific human rights risks, etc),
- analysis of the company's footprint on local communities and consumers,
- screening of on-going or potential controversies.

Mirova's investment universes are monitored with a special focus on controversies. The aim is to detect the presence of violations of the UN Covenant and the OECD Guidelines.

The action plan for dealing with a controversy will depend on its severity, as well as the corrective measures already announced by the company. Actions include:

- Direct individual engagement,
- Exercise of voting rights,
- Collaborative engagement
- Divestment

Where the Investment Manager deems the investee company's processes and practices are insufficient to mitigate environmental, social and governance risks, notably with regards to the relevant PAIs, the company's impact is deemed as negative which makes it ineligible for investment. Further details can be found in the table hereunder, which lists the main indicators taken into account by Mirova when taking PAIs into account.

	Adverse Sustainability indicator	How PAIs are taken into account by Mirova
Greenhouse gas emissions	1. GHG emissions	Exclusion of the most carbon intensive entities and companies with no or insufficient plans to reduce GHG emissions Systematic integration in qualitative internal analysis
	2. Carbon footprint	
	3. GHG intensity of investee companies	
	4. Exposure to companies active in the fossil fuel sector	Exclusion of companies active in the fossil fuel sector For companies involved in fossil fuel extraction, processing/refining, and trading, exclusion applies to companies with: • >5% of revenues from coal or oil, including unconventional oil, • >10% of revenues from unconventional gas. For companies that produce dedicated equipment/services for the fossil fuel sector, exclusion applies to companies with >20% of revenues from these equipment/services. For companies involved in electricity production (<10% of sales related to electricity production), exclusion applies to companies with a generation mix dominated by coal, with a carbon intensity >350 gCO ₂ /MWh.
	5. Share of non-renewable energy consumption and production	Integration in qualitative internal analysis when relevant
	6. Energy consumption intensity per high impact climate sector	Integration in qualitative internal analysis when relevant
Biodiversity	7. Activities negatively affecting biodiversity-sensitive areas	Exclusion of companies or projects significantly harming biodiversity sensitive areas Systematic integration in qualitative internal analysis Part of controversy analysis
Water	8. Emissions to water	Integration in qualitative internal analysis when relevant
Waste	9. Hazardous waste and radioactive waste ratio	Integration in qualitative internal analysis when relevant
Social and Employee matters	10. Violations of UN Global Compact principles and OECD guidelines for Multinational Enterprises	Exclusion of companies violating UNGC and OECD principles Systematic integration in qualitative internal analysis Part of controversy analysis
	11. Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises	Exclusion for large companies, case-by-case for small companies or projects Systematic integration in qualitative internal analysis Engagement plans / ESAP with investees when relevant
	12. Unadjusted gender pay gap	Systematic integration of gender equality in qualitative internal analysis Engagement plans / ESAP with investees
	13. Board gender diversity	Systematic integration of gender equality in qualitative internal analysis Engagement plans / ESAP with investees
Additional PAI indicators	14. Investments in companies without carbon emission reduction initiatives	Exclusion of the most carbon intensive entities and companies with no or insufficient plans to reduce GHG emissions Systematic integration in qualitative internal analysis
	14. Number of identified cases of severe human rights issues and incidents	Exclusion of companies with severe human rights issues and incidents Systematic integration in qualitative internal analysis Part of controversy analysis
	17. Number of convictions and amount of fines for violation of anti-corruption and anti-bribery laws	Exclusion of companies severely violating anti-corruption and anti-bribery laws Systematic integration in qualitative internal analysis Part of controversy analysis

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The Investment Manager screens investee companies against adherence with OECD Guidelines for Mul. national Enterprises and UN Guiding Principles on Business and Human Rights. The Investment Manager continuously reviews companies' track records and news flows to identify significant controversies. Companies' involvement and resolving measures are taken into account. Risks of potential breach may be monitored through engagement to obtain additional assurance. Companies determined by the Investment Manager to be in serious breach of OECD Guidelines for Multinational Enterprises or UN Guiding Principles on Business and Human Rights are recognized as doing significant harm and are therefore rendered non-eligible. As a consequence, over the reporting period, all investments were considered to be respectful with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights.

This indicator is systematically monitored by our external service provider, as well as by a constant watch on controversies and regular meetings between Management and the Research team. Any severe and repeated breach of OECD guidelines will be excluded from our investment universe.

In 2023, there was no significant controversy during the year that could cause a divestment of the portfolio.

However, a number of securities have been removed from the portfolio for ESG reasons and replaced by higher-rated securities. These include Kerry or Grifols which have been replaced by UCB or MedinCell.

How did this financial product consider principal adverse impacts on sustainability factors?

PAI indicators are incorporated into the sustainability analysis framework and the results are part of the DNSH test. As described above, the DNSH test's result is a binding opinion based on which companies whose economic activities or practices are deemed to have a significant negative impact on the achievement of one or more of the UN SDGs are systematically excluded from the investment universe regardless of their otherwise positive contribution. PAI indicators are therefore continuously considered by these financial products.

What were the top investments of this financial product?

Largest Investments	Sector	% Assets	Country
ASTRAZENECA PLC LN GBp	Pharmaceuticals	2.19	United Kingdom
ASML HOLDING NV NA EUR	Production Technology Equipment	1.85	Netherlands

The percentages displayed represent the average of the 4 quarter ends of the reference period.

The displayed country is the country of risk, i.e. the country where the security is domiciled.

What was the proportion of sustainability-related investments?

The Fund aims at investing only in sustainable investments as defined in Article 2(17) SFDR. 99.04% of the Fund's net assets have been aligned with sustainable investment objectives on average during the reference period. The Fund may use derivatives for hedging and investment purposes (authorised but very rarely used).

● What was the asset allocation?

Asset allocation describes the share of investments in specific assets.

● **In which economic sectors were the investments made?**

SECTOR BREAKDOWN (%)	Fund	Reference Index
Corporates	38.6	50.0
Financial	17.4	21.6
Defensive	13.2	15.3
Cyclical	8.0	13.1

Other Products	54.0	50.0
Cash & cash equivalent	0.6	-

BCLASS Nomenclature. Bond futures are embedded in government bonds

Sector Breakdown : as of 31/12/2023.

To what extent were sustainable investments with an environmental objective aligned with the EU Taxonomy?

As a result of its sustainable objective, this Fund may make investments in economic activities that contribute to the environmental objectives set out in the Article 9 of the Regulation (EU) 2020/852 (the “Taxonomy Regulation”): (a) climate change mitigation and climate change adaptation, (b) sustainable use and protection of water and marine resources, (c) the transition to a circular economy, (d) pollution prevention and control, (e) the protection and restoration of biodiversity and ecosystems. The alignment of the economic activities of each company with the above objectives is identified and measured to the extent that data is available to the Investment Manager and of an adequate quality. They may also stem from estimations in case when certain amount of information is missing. The estimations are performed under conditions defined by the regulations and respect the principle of prudence. The methodology for collecting alignment data and the quality of available data are being improved. As a result, the alignment percentage provided is conservative. 11.16% of the Fund’s net assets are aligned with the EU taxonomy on average during the reference period.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are economic activities for which low-carbon alternatives are not yet available and that have greenhouse gas emission levels corresponding to the best performance.

Taxonomy-aligned activities are expressed as a share of:

- **Turnover** reflecting the share of revenue from green activities of investee companies,
- **Capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **Operational expenditure** (OpEx) reflecting green operational activities of investee companies.

As an example, the Fund invested in Signify, whose Sustainability Opinion is Moderate positive impact

The company develops, manufactures, and sells lighting products worldwide. Signify contributes to a global reduction of energy consumption by providing energy efficient LED solutions and continuously increasing their share in its overall product portfolio. According to Mirova’s ESG framework the company is given an ESG opinion as “Moderate positive impact”. According to the company’s 2022 annual report, there was a 83% of “eligible” turnover under the EU Taxonomy whereas the exact alignment corresponded to 11% of total sales.

NB: the results presented hereafter may differ slightly from the aggregate result presented in the Asset Allocation graphical representation.

This is explained by a difference of data source: the figures detailed below are based on estimates from data providers (or data reported by the issuer and collected by data providers), while the aggregate result presented in the Asset Allocation graphical representation may rely (for certain issuers) on estimate made by the investment manager. Please note that any estimated data comes from either the data providers or the investment manager (only for the aggregated data in the Asset Allocation graphical representation).

● **Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy ¹ ?**

Yes:
 In fossil gas In nuclear energy
 No

1. Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objectives - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

*For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures.

● **What was the share of investments made in transitional and enabling activities?**

The share of investments in transi. onal and enabling activities was 5.10%.

● **How did the percentage of investments aligned with the EU Taxonomy compare with previous reference periods?**

The percentage of investments aligned with the EU taxonomy for this new reference period cannot be compared with that of the previous reference period due to methodological changes: calculation of an end-of-period snapshot versus average of quarters in the new reference period, calculation previously based solely on estimated data versus calculation combining both estimates and directly reported data. However, the % of investment aligned with the taxonomy has increased from 9.18% to 11%.

What was the share of sustainable investments with an environmental objective that were not aligned with the EU Taxonomy?

are sustainable investments with an

environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

The Fund has invested 56.78% in sustainable investments with an environmental objective, including 45.62% sustainable investments that are not aligned with the EU taxonomy. The Investment Manager's sustainable impact assessment framework identifies certain activities that are not currently covered by the EU Taxonomy or considered as making a substantial contribution to environmental Taxonomy objectives. This is affected by performing an overall sustainability assessment on each investee company, which includes a review of positive impacts regarding three environmental themes: Climate Stability, Biodiversity and Circular Economy. These themes aim at identifying companies which activities or practices:

- help develop low carbon energy, eco-efficiency, clean transportation, green building or align with an advanced decarbonation strategy; or
- support sustainable land use, land preservation and sustainable water management or align with an advanced biodiversity preservation strategy; or
- foster sustainable waste management or circular business model.

As an example, the fund invested in Seche Environment, whose Sustainability Opinion is Moderate positive impact

Seche Environment offers waste management and treatment services and advices. The company transports, sorts, incinerates and disposes of household waste and collects, processes and disposes of hazardous industrial waste.

Mirova considers the company as moderate positive impact because the company business model adresses key circular economy challenges, Séché Environnement provides recovery and treatment of waste products for local authorities and industrial customers primarily in France. In addition, the company is specialized in the treatment of hazardous waste (~60% of total revenues), decontamination and rehabilitation of PCB transformers and rare materials valorisation, for which the environmental benefit is stronger.

The company is also strongly involved in energy recovery (biogas, typically). Furthermore, Seche Environment takes advantage of its formers landfill sites to operate solar energy farms. Today and according to Mirova's data provider the level of taxonomy alignment is zero.

What was the share of socially sustainable investments?

The Fund has invested 42.26% in companies that contribute to tackling inequality or that foster social cohesion, social integration and labor relations, or an investment in human capital or economically or socially disadvantaged communities, provided that such investments do not significantly harm any of the environmental/social objectives and that the investee companies follow good governance practices, in particular with respect to sound management structures, employee relations, remuneration of staff and tax compliance. This is affected by performing an overall sustainability assessment on each investee company, which includes a review of positive impacts regarding three social themes: Socio-economic development, Health wellness and Diversity inclusion. These themes aim at identifying companies which activities or practices:

- help foster access to basic and sustainable services, local impact or promote advanced working conditions;
- support the development of healthcare, healthy nutrition, knowledge, education or safety;
- promote diversity and inclusion through dedicated products and services or through advanced practices targeting the workforce.

The fund invested in Credit Agricole, whose sustainability Opinion is Low positive impact

The company is a major French financial institution. The current level of taxonomy alignment is not disclosed as financial sector companies and in particular banks will disclose taxonomy alignment data from 2024 onwards.

Credit Agricole is well addressing the issues pertaining to the integration of environmental and social aspects within both its lending and investing activities. The group has advanced

commitments in terms of climate policy but that remain to be implemented concretely for non-coal fossil fuels

Credit Agricole sustainability objective is social as the company delivers positive impact thanks to advanced practices on job quality.

What investments were included under “not sustainable”, what was their purpose and were there any minimum environmental or social safeguards?

The Fund aims at investing only in securities qualifying as sustainable investment. For technical or hedging purposes, the Fund may hold cash or cash equivalents and derivatives for currency risk management purposes. Due to the technical and neutral nature of the asset, such instruments are not considered as investments and thus no minimum safeguards have been put in place.

What actions have been taken to attain the sustainable investment objective during the reference period?

Engagement activity forms an integral part of Mirova's responsible investment approach. Mirova's engagement strategy seeks to monitor and thrive to improve companies' products and practices from an environmental, social, and governance point of view. As a result, one of the core functions of the Sustainability Research team is engagement, both on individual and collaborative levels:

- Individual engagement: in which Mirova's ESG analysts interact one-on-one with the companies to monitor performance and progress on ESG topics, and to encourage improvement in their sustainability practices. The purpose of individual engagement is not only to ensure responsible practices in line with our standards, but also to promote better ESG practices and encourage the development of solutions for the major environmental and social challenges associated with each sector. The fund engaged with Tennet GB 2022, whose opinion is Moderate positive impact :
 - With renewable sources accounting for only 26% of electricity generated in the Netherlands in 2020, and 44% in Germany, there seemed to be a gap between Tennet's target and the country's renewable capacity, which Mirova asked about when it signed up with Tennet. The answers were detailed and appeared to be in line with best practice compared to other operators. The framework included three categories, but in the end, 100% of the funds were allocated to connection services, enabling 100% renewable energy to be transported. They didn't invest in the network aspect because they couldn't guarantee that it would only carry clean energy. What they can do, however, is act on the construction of the grid and the infrastructure to bring renewable electricity onto that grid. This is what they are doing with connection services. These activities seem very positive to us, and we confirm the moderate positive impact rating. GB has been removed from the watch list.
- Collaborative engagement: Mirova joins with other investors and representatives of civil society to identify controversial practices, encourage greater transparency and demand, where necessary, that companies change their practices. Additionally, Mirova leverages its voting rights to further push companies towards the development of more sustainable portfolios and the adoption of best practices, by systematically exercising their voting rights based on an in-house voting policy that largely embeds the concepts of a sustainable-at-core, stakeholder-oriented governance. Proxy voting is used to convey messages during pre/post vote dialogue and via opposition to ad hoc items. Where possible, Mirova may co-sign or lead the filing of shareholder items. Mirova also engage with regulators to share its vision of sustainable investment to improve standards and regulations across the financial sector and to foster sustainable investment.

Mirova is committed to promoting regulations, including legislative changes, standards or labels, and practices that support sustainable investment and create long-term value. Further information in relation to engagement priorities and engagement policy carried out by Mirova can be found on the website at <https://www.mirova.com/en/research/voting-and-engagement>.

How did this financial product perform compared to the reference sustainable benchmark?

Not applicable.

- ***How did the reference benchmark differ from a broad market index?***
Not applicable.
- ***How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the sustainable investment objective?***
Not applicable.
- ***How did this financial product perform compared with the reference benchmark?***
Not applicable.
- ***How did this financial product perform compared with the broad market index?***
Not applicable.

Reference benchmarks are indexes to measure whether the financial product attains the sustainable objective.
