¹⁷ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

corresponding to the best performance.

 are sustainable investments with an environmental objective that do not take into account the criteria for environmentally sustainable economic activities under the EU Taxonomy.

What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?

The Sub-fund intends to make sustainable investments, measured as positive scores via Robeco's SDG Framework. Among those could be investments with environmental objectives that do not qualify as Taxonomy-aligned. The environmental objectives of the Sub-fund are attained by investing in companies that score positively on SDG 12 (Responsible consumption and production), SDG 13 (Climate action), SDG 14 (Life below water), and SDG 15 (Life on land) in Robeco's SDG Framework. While the sum of sustainable investments with an environmental objective and socially sustainable investments always adds up to the Sub-fund's minimum proportion of 50% sustainable investments, we do not commit to a minimum share of sustainable investments with an environmental objective because the Sub-fund's investment strategy does not have a specific environmental investment objective. Therefore, the minimum share of sustainable investments with an environmental objective is 0%.

What is the minimum share of socially sustainable investments?

The Sub-fund intends to make sustainable investments, measured as positive scores via Robeco's SDG Framework. Among those could be investments with social objectives. The social objectives of the Sub-fund are attained by investing in companies that score positively on SDG 1 (No poverty), SDG 2 (Zero hunger), SDG 3 (Good health and well-being), SDG 4 (Quality education), SDG 5 (Gender equality), SDG 6 (Clean water and sanitation), SDG 7 (Affordable and clean energy), SDG 8 (Decent work and economic growth), SDG 9 (Industry, innovation and infrastructure), SDG 10 (Reduced inequalities), SDG 11 (Sustainable cities and communities), SDG 16 (Peace, justice and strong institutions) and SDG 17 (Partnerships for the goals), in Robeco's SDG Framework. While the sum of socially sustainable investments and sustainable investments with an environmental objective always adds up to the Sub-fund's minimum proportion of sustainable investments, we do not commit to a minimum share of socially sustainable investments because the Sub-fund's investment strategy does not have a specific socially sustainable investment objective. Therefore, the minimum share of socially sustainable investments is 0%.

What investments are included under "#2 Other", what is their purpose and are there any minimum environmental or social safeguards?

The type of instruments included under "#2 Other" and their purpose are outlined in Annex I of this Prospectus under the header 'Financial instruments and investment restrictions'. They include cash, cash equivalents, as well as investment funds and eligible asset classes (other than bonds and equities) that do not specifically promote E/S characteristics. As indicated above, the Sub-fund does not make use of derivatives to attain the environmental or social characteristics promoted. The Sub-fund may make use of derivatives, which thus always fall under the category "#2 Other", for hedging, liquidity management and efficient portfolio management as well as investment purposes. Exchange traded and over-the-counter derivatives are permitted, including but not limited to futures, swaps, options and currency forwards. In case the Sub-fund uses derivatives, the underlying shall comply with the investment policy. Where relevant, minimum environmental or social safeguards are taken into account, by, for example, applying Robeco's Exclusion Policy for any single security derivative.

Is a specific index designated as a reference benchmark to determine whether this financial product is aligned with the environmental and/or social characteristics that it promotes?

Not applicable.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

What environmental and/or social characteristics are promoted by this financial product?

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

The Sub-fund has the following E/S characteristics:

1. The Sub-fund promotes certain minimum environmental and social safeguards through applying exclusion criteria with regards to products and business practices that Robeco believes are detrimental to society and incompatible with sustainable investment strategies, such as exposure to controversial behaviour, controversial weapons, and fossil fuels.
2. The Sub-fund promotes having a lower environmental footprint than the general market index referred to in Appendix VI – Benchmarks (the "General Market Index"), through reduction in carbon, water and waste footprints.
3. The Sub-fund promotes adherence to and conducting business activities in accordance with the United Nations Universal Declaration of Human Rights, the International Labor Organization's (ILO) labor standards, the United Nations Guiding Principles for Business and Human Rights (UNGPs), the United Nations Global Compact (UNGC) and the OECD Guidelines for Multinational Enterprises, by scrutinizing companies that violate these principles.
4. The Sub-fund promotes having a weighted average ESG score that is better than that of the General Market Index.
5. The Sub-fund promotes having a larger share of companies with a positive SDG score (1,2,3) in the portfolio than the General Market Index.

There is no reference benchmark designated for the purpose of attaining the environmental or social characteristics promoted by the Sub-fund.

What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?

The Sub-fund has the following sustainability indicators:

1. The % of investments in securities that are on Robeco's Exclusion list as result of the application of Robeco's Exclusion Policy.
2. The Sub-fund's weighted carbon, water and waste footprint score compared to the General Market Index.
3. The number of companies that are in violation of the ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises and hence are a part of the Enhanced Engagement program.
4. The Sub-fund's weighted average ESG score compared to the General Market Index.
5. The Sub-fund's weight in companies with a positive SDG score (1,2,3) compared to the General Market Index weight in companies with a positive SDG score (1,2,3).

What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?

The sustainable investments aim to contribute to the UN Sustainable Development Goals ("SDGs"), that have both social and environmental objectives. These are 17 goals that are globally recognised and include environmental goals such as climate action, clean water, life on land and water and social goals such as zero hunger, gender equality, education, etc. Robeco has developed a proprietary framework based on the UN SDGs through which an issuer's contribution to such SDGs is determined through a 3-step process. This process starts with a sector baseline on which a company's products are analysed to examine contribution to the society and environment. Further, the operational processes involved in creating such products is checked along with any controversies/litigation claims and remediation actions taken which are perused before a final SDG score is determined. The final score ranges between high negative (-3) to high positive (+3) and only those issuers which achieve positive SDG scores (+1, +2 and +3) are regarded as Sustainable Investments.

How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?

The sustainable investments do no significant harm to any environmental or social sustainable investment objective by considering a principal adverse impact and aligning with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights. In addition, sustainable investments score positively on Robeco's SDG Framework, and therefore do not cause significant harm.

How have the indicators for adverse impacts on sustainability factors been taken into account?

Mandatory principal adverse impact indicators are considered through Robeco's SDG Framework, either directly or indirectly, when identifying sustainable investments for the Sub-fund. In addition, voluntary environmental and social indicators are taken into account, depending on their relevance for measuring impacts on the SDGs and the availability of data. A detailed description of the incorporation of principal adverse impacts is available via Robeco's Principal Adverse Impact Statement published on the Robeco website (<https://www.robeco.com/files/docm/docu-principal-adverse-impact-statement-summary-entity-level.pdf>). In this statement, Robeco sets out its approach to identifying and prioritizing principal adverse impacts, and how principal adverse impacts are considered as part of Robeco's investment due diligence process and procedures relating to research and analysis, exclusions and restrictions and/or voting and engagement. This description also explains how principal adverse impact indicators are considered by the SDG Framework.

How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The sustainable investments are aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights via both Robeco's Exclusion Policy and Robeco's SDG Framework.

Robeco's Exclusion Policy includes an explanation of how Robeco acts in accordance with the International Labor Organization (ILO) standards, United Nations Guiding Principles (UNGPs), United Nations Global Compact (UNGC) Principles and the Organization for Economic Co-operation and Development (OECD) Guidelines for Multinational Enterprises and is guided by these international treaties to assess the behavior of companies. Robeco continuously screens its investments for breaches of these principles. In case of a breach, the company will be excluded or engaged with, and is not considered a sustainable investment.

Robeco's SDG Framework screens for breaches on these principles in the final step of the framework. In this step, Robeco checks whether the company concerned has been involved in any controversies. Involvement in any controversy will result in a negative SDG score for the company, meaning it is not a sustainable investment.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

Does this financial product consider principal adverse impacts on sustainability factors?

Yes, _____

The Sub-fund considers principal adverse impacts on sustainability factors as referred to in Annex I of the SFDR Delegated Act.

Pre-investment, the following principal adverse impacts on sustainability factors are considered:

- Via the applied normative and activity-based exclusions, the following PAIs are considered:
 - Exposure to companies active in the fossil fuel sector (PAI 4, Table 1)
 - Violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1)
 - Activities negatively affecting biodiversity-sensitive areas (PAI 7, Table 1). The consideration of this PAI is currently restricted to applying exclusions to palm oil producing companies and for any breaches to the UNGC, UNGP and OECD Guidelines for Multinational Enterprises in relation to biodiversity.
 - Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons (PAI 14, Table 1)
- Via the environmental footprint performance targets of the Sub-fund, the following PAIs are considered:
 - Carbon footprint (PAI 2, Table 1)
 - Water and waste indicators (PAI 7-9, Table 1). Robeco will use on water and waste footprint until data quality and coverage of the PAIs will improve.

Post-investment, the following principal adverse impacts on sustainability factors are taken into account:

- Via Robeco's entity engagement program, the following PAIs are considered:
 - All indicators related to Climate and other environment-related indicators (PAI 1-9, Table 1)
 - Violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1)
 - In addition, based on a yearly review of Robeco's performance on all mandatory and selected voluntary indicators, holdings of the Sub-fund that cause adverse impact might be selected for engagement.

More information is available via Robeco's Principal Adverse Impact Statement, published on Robeco's website. The Sub-fund will periodically report how it has considered the principal adverse impacts of its investments in the Company's annual report, which will be made available each year on or before 30 April at the Sub-fund page highlighted in final section of this document.

No

What investment strategy does this financial product follow?

Robeco QI Customized Emerging Markets Enhanced Index Equities I is an actively managed fund that invests in stocks of companies in emerging markets. The selection of these stocks is based on a

The investment strategy guides investment decisions based on factors such as investment objectives and risk tolerance.

quantitative model as described in the Investment policy strategy paragraph in Appendix I of this Prospectus. The strategy integrates sustainability indicators on a continuous basis as part of the stock selection process. Amongst others, the Sub-fund applies norms-based and activity-based exclusions, Robeco's good governance policy, Robeco's SDG framework and considers Principal Adverse Impacts in the investment process. More product-specific information can be found on our website and the links provided in the final question of this disclosure.

● ***What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?***

The Sub-fund has the following binding elements:

1. The Sub-fund's portfolio complies with Robeco's Exclusion Policy (<https://www.robeco.com/files/docm/docu-exclusion-policy.pdf>), that is based on exclusion criteria with regards to products and business practices that Robeco believes are detrimental to society and incompatible with sustainable investment strategies. This means that the Sub-fund has 0% exposure to excluded securities, taking into account a grace period. Information with regards to the effects of the exclusions on the Sub-fund's universe can be found at <https://www.robeco.com/files/docm/docu-exclusion-list.pdf>
2. The Sub-fund's weighted carbon, water and waste footprint score is a better than that of the General Market Index.
3. The Sub-fund scrutinizes investment in companies that are in breach of the ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises. If a company in the portfolio breaches one of the international guidelines during the investment period, the company will become part of the Enhanced Engagement program. When engagement is deemed highly unlikely to succeed, the company might be excluded directly.
4. The Sub-fund's weighted average ESG score is better than that of the General Market Index.
5. The Sub-fund's weight in companies with a positive SDG score (1,2,3) is better than that of the General Market Index.

● ***What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?***

The Sub-fund does not commit to a minimum rate to reduce the scope of investments prior to the application of the investment strategy.

● ***What is the policy to assess good governance practices of the investee companies?***

Robeco has a Good Governance policy to assess governance practices of companies. The policy describes how Robeco determines if and when a company does not follow good governance practices and is therefore excluded from the initial investment universe for Article 8 and 9 products. Robeco's Good Governance policy applies to the Sub-fund and tests on a set of governance criteria that reflect widely recognized industry established norms and include topics as employee relations, management structure, tax compliance and remuneration.

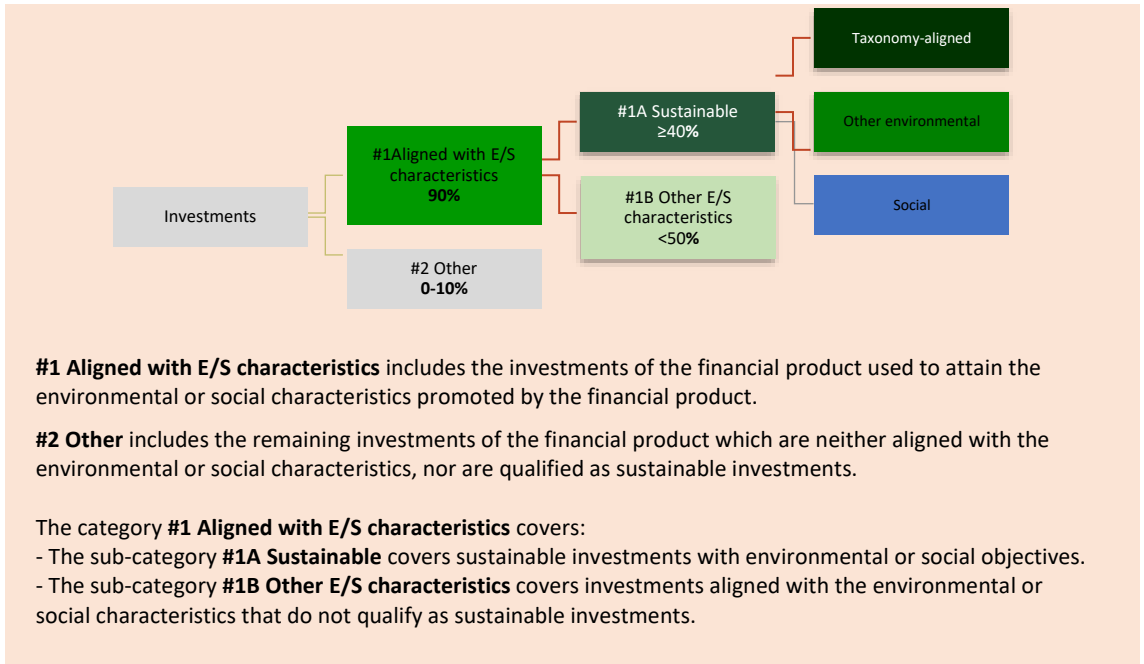

The Good Governance test consists of criteria on such topics that are examined for investee companies and further explained in Robeco's Good Governance policy <https://www.robeco.com/files/docm/docu-robeco-good-governance-policy.pdf>. Additionally, the companies that do not pass the good governance test are reflected in the exclusion list that can be accessed here - <https://www.robeco.com/files/docm/docu-exclusion-list.pdf>.

Good governance practices include sound management structures, employee relations, remuneration of staff and tax compliance.

What is the asset allocation planned for this financial product?

At least 90% of the investments are aligned with the E/S characteristics of the Sub-fund. The Sub-fund plans to make a minimum of 40% sustainable investments, measured by positive scores via Robeco's SDG Framework. The investments in the category Other, estimated between 0-10%, are mostly in cash, cash equivalents and derivatives as further described below. The planned asset allocation is monitored continuously, and evaluated on a yearly basis.

How does the use of derivatives attain the environmental or social characteristics promoted by the financial product?

The Sub-fund does not make use of derivatives to attain the environmental or social characteristics promoted by the financial product. The Sub-fund may make use of derivatives for hedging, liquidity management and efficient portfolio management as well as investment purposes. Exchange traded and over-the-counter derivatives are permitted, including but not limited to futures, swaps, options and currency forwards. Whilst the Sub-fund may use derivatives both for investment purposes as well as for hedging and efficient portfolio management, it does not utilize derivatives for such purposes outside the intended share of investments allocated to the 'Other' category.

In case the Sub-fund uses derivatives, the underlying shall comply with the investment policy. Where relevant, minimum environmental or social safeguards are taken into account as described below.

To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

0%. The Sub-fund does not intend to make Taxonomy-aligned investments. It cannot be excluded that among the Sub-fund's holdings certain investments are Taxonomy aligned. The Sub-fund will report on Taxonomy-aligned investment in the periodic disclosures. In the future, once data-availability in relation to the EU Taxonomy will improve, Robeco might consider setting a target based on turnover or CAPEX. Robeco currently relies on third-party data, including data in relation to companies that do not disclose on the EU Taxonomy alignment of their activities. EU Taxonomy-alignment data is not yet subject to a review by third parties. The Sub-fund only makes investments in equity and therefore it does not have sovereign exposures. The expected level of alignment with and without sovereign bonds is the same.

Asset allocation describes the share of investments in specific assets.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

● **Does the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy?¹⁸**

Yes

In fossil gas In nuclear energy

No

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.*

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

** As the investments are not Taxonomy-aligned, the exclusion of sovereign bonds has no impact on the graph and therefore no such percentage is shown here.

● **What is the minimum share of investments in transitional and enabling activities?**

0%.

 are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities

What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?

The Sub-fund intends to make sustainable investments, measured as positive scores via Robeco's SDG Framework. Among those could be investments with environmental objectives that do not qualify as Taxonomy-aligned. The environmental objectives of the Sub-fund are attained by investing in companies that score positively on SDG 12 (Responsible consumption and production), SDG 13 (Climate action), SDG 14 (Life below water), and SDG 15 (Life on land) in Robeco's SDG Framework. While the sum of sustainable investments with an environmental objective and socially sustainable investments always adds up to the Sub-fund's minimum proportion of 40% sustainable investments, we do not commit to a minimum share of sustainable investments with an environmental objective because the Sub-fund's

¹⁸ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

under the EU
Taxonomy.

investment strategy does not have a specific environmental investment objective. Therefore, the minimum share of sustainable investments with an environmental objective is 0%.

What is the minimum share of socially sustainable investments?

The Sub-fund intends to make sustainable investments, measured as positive scores via Robeco's SDG Framework. Among those could be investments with social objectives. The social objectives of the Sub-fund are attained by investing in companies that score positively on SDG 1 (No poverty), SDG 2 (Zero hunger), SDG 3 (Good health and well-being), SDG 4 (Quality education), SDG 5 (Gender equality), SDG 6 (Clear water and sanitation), SDG 7 (Affordable and clean energy), SDG 8 (Decent work and economic growth), SDG 9 (Industry, innovation and infrastructure), SDG 10 (Reduced inequalities), SDG 11 (Sustainable cities and communities), SDG 16 (Peace, justice and strong institutions) and SDG 17 (Partnerships for the goals), in Robeco's SDG Framework. While the sum of socially sustainable investments and sustainable investments with an environmental objective always adds up to the Sub-fund's minimum proportion of sustainable investments, we do not commit to a minimum share of socially sustainable investments because the Sub-fund's investment strategy does not have a specific socially sustainable investment objective. Therefore, the minimum share of socially sustainable investments is 0%.

What investments are included under "#2 Other", what is their purpose and are there any minimum environmental or social safeguards?

The type of instruments included under "#2 Other" and their purpose are outlined in Annex I of this Prospectus under the header 'Financial instruments and investment restrictions'. They include cash, cash equivalents, as well as investment funds and eligible asset classes (other than bonds and equities) that do not specifically promote E/S characteristics. As indicated above, the Sub-fund does not make use of derivatives to attain the environmental or social characteristics promoted. The Sub-fund may make use of derivatives, which thus always fall under the category "#2 Other", for hedging, liquidity management and efficient portfolio management as well as investment purposes. Exchange traded and over-the-counter derivatives are permitted, including but not limited to futures, swaps, options and currency forwards. In case the Sub-fund uses derivatives, the underlying shall comply with the investment policy. Where relevant, minimum environmental or social safeguards are taken into account, by, for example, applying Robeco's Exclusion Policy for any single security derivative.

Is a specific index designated as a reference benchmark to determine whether this financial product is aligned with the environmental and/or social characteristics that it promotes?

Not applicable.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

q) Robeco QI Global Quality Equities

Pre-contractual disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Product name: Robeco QI Global Quality Equities

Legal entity identifier: 2138007QXX6VPXTZMR14

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Environmental and/or social characteristics

Does this financial product have a sustainable investment objective?

Yes
 No

<p><input type="checkbox"/> It will make a minimum of sustainable investments with an environmental objective: ___%</p> <ul style="list-style-type: none"> <input type="checkbox"/> in economic activities that qualify as environmentally sustainable under the EU Taxonomy <input type="checkbox"/> in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy <p><input type="checkbox"/> It will make a minimum of sustainable investments with a social objective: ___%</p>	<p><input checked="" type="checkbox"/> It promotes Environmental/Social (E/S) characteristics and while it does not have as its objective a sustainable investment, it will have a minimum proportion of 50% of sustainable investments</p> <ul style="list-style-type: none"> <input type="checkbox"/> with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy <input type="checkbox"/> with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy <input checked="" type="checkbox"/> with a social objective <p><input type="checkbox"/> It promotes E/S characteristics, but will not make any sustainable investments</p>

What environmental and/or social characteristics are promoted by this financial product?

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

The Sub-fund has the following E/S characteristics:

1. The Sub-fund promotes good governance and sustainable corporate practices through proxy voting, which contributes to long-term shareholder value creation. This includes taking an active stance on social and environmental topics through Robeco's proxy voting policy.
2. The Sub-fund promotes certain minimum environmental and social safeguards through applying exclusion criteria with regards to products and business practices that Robeco believes are detrimental to society and incompatible with sustainable investment strategies, such as exposure to controversial behaviour, controversial weapons, and fossil fuels.
3. The Sub-fund promotes having a lower environmental footprint than the general market index referred to in Appendix VI – Benchmarks (the "General Market Index"), through reduction in carbon, water and waste footprints.
4. The Sub-fund promotes adherence to and conducting business activities in accordance with the United Nations Universal Declaration of Human Rights, the International Labor Organization's (ILO) labor standards, the United Nations Guiding Principles for Business and Human Rights (UNGPs), the United Nations Global Compact (UNGC) and the OECD Guidelines for Multinational Enterprises, by scrutinizing companies that violate these principles.
5. The Sub-fund promotes having a weighted average ESG score that is better than that of the General Market Index.
6. The Sub-fund promotes having a larger share of companies with a positive SDG score (1,2,3) in the portfolio than the General Market Index.

There is no reference benchmark designated for the purpose of attaining the environmental or social characteristics promoted by the Sub-fund.

What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?

The Sub-fund has the following sustainability indicators:

1. The number of holdings and agenda items voted.
2. The % of investments in securities that are on Robeco's Exclusion list as result of the application of Robeco's Exclusion Policy.
3. The Sub-fund's weighted carbon, water and waste footprint score compared to the General Market Index.
4. The number of companies that are in violation of the ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises and hence are a part of the Enhanced Engagement program.
5. The Sub-fund's weighted average ESG score compared to the General Market Index.
6. The Sub-fund's weight in companies with a positive SDG score (1,2,3) compared to the General Market Index weight in companies with a positive SDG score (1,2,3).

What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?

The sustainable investments aim to contribute to the UN Sustainable Development Goals ("SDGs"), that have both social and environmental objectives. These are 17 goals that are globally recognised and include environmental goals such as climate action, clean water, life on land and water and social goals such as zero hunger, gender equality, education, etc. Robeco has developed a proprietary framework based on the UN SDGs through which an issuer's contribution to such SDGs is determined through a 3-step process. This process starts with a sector baseline on which a company's products are analysed to examine contribution to the society and environment. Further, the operational processes involved in creating such products is checked along with any controversies/litigation claims and remediation actions taken which are perused before a final SDG score is determined. The final score ranges between high

negative (-3) to high positive (+3) and only those issuers which achieve positive SDG scores (+1, +2 and +3) are regarded as Sustainable Investments.

How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?

The sustainable investments do no significant harm to any environmental or social sustainable investment objective by considering a principal adverse impact and aligning with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights. In addition, sustainable investments score positively on Robeco's SDG Framework, and therefore do not cause significant harm.

How have the indicators for adverse impacts on sustainability factors been taken into account?

Mandatory principal adverse impact indicators are considered through Robeco's SDG Framework, either directly or indirectly, when identifying sustainable investments for the Sub-fund. In addition, voluntary environmental and social indicators are taken into account, depending on their relevance for measuring impacts on the SDGs and the availability of data. A detailed description of the incorporation of principal adverse impacts is available via Robeco's Principal Adverse Impact Statement published on the Robeco website (<https://www.robeco.com/files/docm/docu-principal-adverse-impact-statement-summary-entity-level.pdf>). In this statement, Robeco sets out its approach to identifying and prioritizing principal adverse impacts, and how principal adverse impacts are considered as part of Robeco's investment due diligence process and procedures relating to research and analysis, exclusions and restrictions and/or voting and engagement. This description also explains how principal adverse impact indicators are considered by the SDG Framework.

How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The sustainable investments are aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights via both Robeco's Exclusion Policy and Robeco's SDG Framework.

Robeco's Exclusion Policy includes an explanation of how Robeco acts in accordance with the International Labor Organization (ILO) standards, United Nations Guiding Principles (UNGPs), United Nations Global Compact (UNGC) Principles and the Organization for Economic Co-operation and Development (OECD) Guidelines for Multinational Enterprises and is guided by these international treaties to assess the behavior of companies. Robeco continuously screens its investments for breaches of these principles. In case of a breach, the company will be excluded or engaged with, and is not considered a sustainable investment.

Robeco's SDG Framework screens for breaches on these principles in the final step of the framework. In this step, Robeco checks whether the company concerned has been involved in any controversies. Involvement in any controversy will result in a negative SDG score for the company, meaning it is not a sustainable investment.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

Does this financial product consider principal adverse impacts on sustainability factors?

Yes, _____

The Sub-fund considers principal adverse impacts on sustainability factors as referred to in Annex I of the SFDR Delegated Act.

Pre-investment, the following principal adverse impacts on sustainability factors are considered:

- Via the applied normative and activity-based exclusions, the following PAIs are considered:
 - Exposure to companies active in the fossil fuel sector (PAI 4, Table 1)
 - Violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1)
 - Activities negatively affecting biodiversity-sensitive areas (PAI 7, Table 1). The consideration of this PAI is currently restricted to applying exclusions to palm oil producing companies and for any breaches to the UNGC, UNGP and OECD Guidelines for Multinational Enterprises in relation to biodiversity.
 - Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons (PAI 14, Table 1)
- Via the environmental footprint performance targets of the Sub-fund, the following PAIs are considered:
 - Carbon footprint (PAI 2, Table 1)
 - Water and waste indicators (PAI 7-9, Table 1). Robeco will use on water and waste footprint until data quality and coverage of the PAIs will improve.

Post-investment, the following principal adverse impacts on sustainability factors are taken into account:

- Via the application of the voting policy, the following PAIs are considered:
 - All indicators related to GHG emissions (PAI 1-6, Table 1)
 - Indicators related to social and employee matters (PAI 10-13, Table 1; PAI 5-8, Table 3)
- Via Robeco's entity engagement program, the following PAIs are considered:
 - All indicators related to Climate and other environment-related indicators (PAI 1-9, Table 1)

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

- Violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1)
- In addition, based on a yearly review of Robeco's performance on all mandatory and selected voluntary indicators, holdings of the Sub-fund that cause adverse impact might be selected for engagement.

More information is available via Robeco's Principal Adverse Impact Statement, published on Robeco's website. The Sub-fund will periodically report how it has considered the principal adverse impacts of its investments in the Company's annual report, which will be made available each year on or before 30 April at the Sub-fund page highlighted in final section of this document.

No

What investment strategy does this financial product follow?

Robeco QI Global Quality Equities is an actively managed fund that invests in stocks in developed and emerging countries across the world. The selection of these stocks is based on a quantitative model as described in the Investment policy strategy paragraph in Appendix I of this Prospectus. The strategy integrates sustainability indicators on a continuous basis as part of the stock selection process. Amongst others, the Sub-fund applies norms-based and activity-based exclusions, Robeco's good governance policy, Robeco's SDG framework and considers Principal Adverse Impacts in the investment process. More product-specific information can be found on our website and the links provided in the final question of this disclosure.

The investment strategy guides investment decisions based on factors such as investment objectives and risk tolerance.

What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?

The Sub-fund has the following binding elements:

1. All equity holdings have a granted right to vote and Robeco exerts that right by voting according to Robeco's Proxy Voting Policy, unless impediments occur (e.g. share blocking or when not considered cost efficient). Robeco's Proxy Voting Policy can be found at <https://www.robeco.com/files/docm/docu-robeco-stewardship-policy.pdf>.
2. The Sub-fund's portfolio complies with Robeco's Exclusion Policy (<https://www.robeco.com/files/docm/docu-exclusion-policy.pdf>), that is based on exclusion criteria with regards to products and business practices that Robeco believes are detrimental to society and incompatible with sustainable investment strategies. This means that the Sub-fund has 0% exposure to excluded securities, taking into account a grace period. Information with regards to the effects of the exclusions on the Sub-fund's universe can be found at <https://www.robeco.com/files/docm/docu-exclusion-list.pdf>
3. The Sub-fund's weighted carbon, water and waste footprint score is a better than that of the General Market Index.
4. The Sub-fund scrutinizes investment in companies that are in breach of the ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises. If a company in the portfolio breaches one of the international guidelines during the investment period, the company will become part of the Enhanced Engagement program. When engagement is deemed highly unlikely to succeed, the company might be excluded directly.
5. The Sub-fund's weighted average ESG score is better than that of the General Market Index.
6. The Sub-fund's weight in companies with a positive SDG score (1,2,3) is better than that of the General Market Index.

What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?

The Sub-fund does not commit to a minimum rate to reduce the scope of investments prior to the application of the investment strategy.

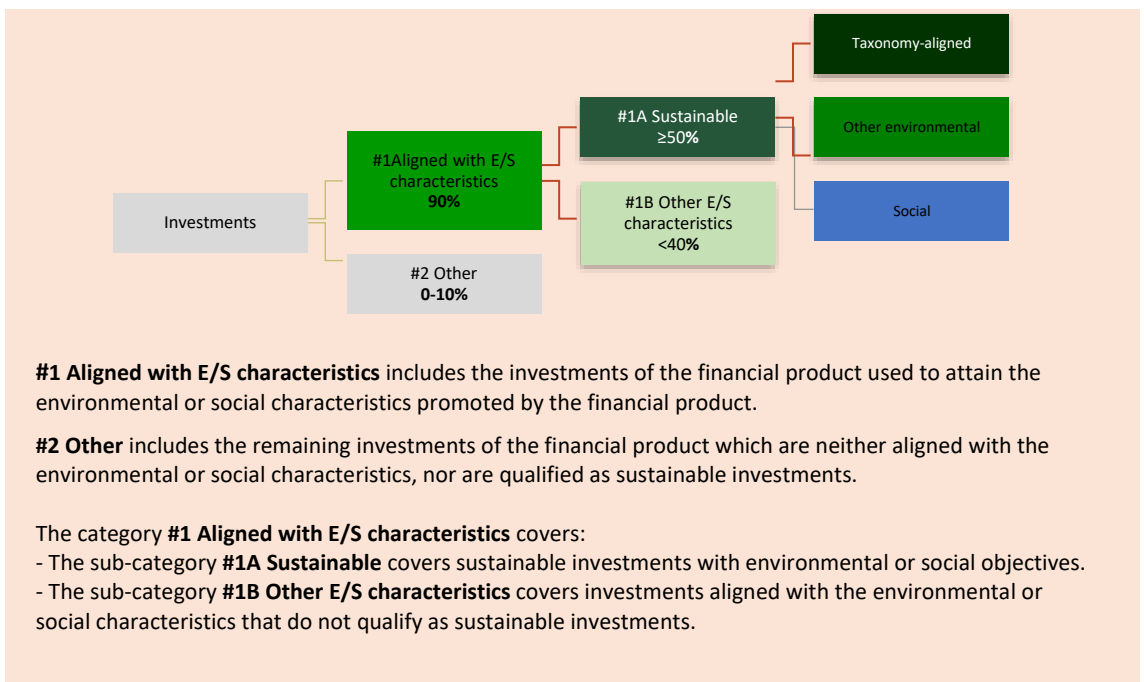

What is the policy to assess good governance practices of the investee companies?

Robeco has a Good Governance policy to assess governance practices of companies. The policy describes how Robeco determines if and when a company does not follow good governance practices and is therefore excluded from the initial investment universe for Article 8 and 9 products. Robeco’s Good Governance policy applies to the Sub-fund and tests on a set of governance criteria that reflect widely recognized industry established norms and include topics as employee relations, management structure, tax compliance and remuneration.

The Good Governance test consists of criteria on such topics that are examined for investee companies and further explained in Robeco’s Good Governance policy <https://www.robeco.com/files/docm/docu-robeco-good-governance-policy.pdf>. Additionally, the companies that do not pass the good governance test are reflected in the exclusion list that can be accessed here - <https://www.robeco.com/files/docm/docu-exclusion-list.pdf>.

What is the asset allocation planned for this financial product?

At least 90% of the investments are aligned with the E/S characteristics of the Sub-fund. The Sub-fund plans to make a minimum of 50% sustainable investments, measured by positive scores via Robeco’s SDG Framework. The investments in the category Other, estimated between 0-10%, are mostly in cash, cash equivalents and derivatives as further described below. The planned asset allocation is monitored continuously, and evaluated on a yearly basis.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers sustainable investments with environmental or social objectives.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

How does the use of derivatives attain the environmental or social characteristics promoted by the financial product?

Good governance practices include sound management structures, employee relations, remuneration of staff and tax compliance.

Asset allocation describes the share of investments in specific assets. Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

The Sub-fund does not make use of derivatives to attain the environmental or social characteristics promoted by the financial product. The Sub-fund may make use of derivatives for hedging, liquidity management and efficient portfolio management as well as investment purposes. Exchange traded and over-the-counter derivatives are permitted, including but not limited to futures, swaps, options and currency forwards. Whilst the Sub-fund may use derivatives both for investment purposes as well as for hedging and efficient portfolio management, it does not utilize derivatives for such purposes outside the intended share of investments allocated to the 'Other' category.

In case the Sub-fund uses derivatives, the underlying shall comply with the investment policy. Where relevant, minimum environmental or social safeguards are taken into account as described below.

To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

0%. The Sub-fund does not intend to make Taxonomy-aligned investments. It cannot be excluded that among the Sub-fund's holdings certain investments are Taxonomy aligned. The Sub-fund will report on Taxonomy-aligned investment in the periodic disclosures. In the future, once data-availability in relation to the EU Taxonomy will improve, Robeco might consider setting a target based on turnover or CAPEX. Robeco currently relies on third-party data, including data in relation to companies that do not disclose on the EU Taxonomy alignment of their activities. EU Taxonomy-alignment data is not yet subject to a review by third parties. The Sub-fund only makes investments in equity and therefore it does not have sovereign exposures. The expected level of alignment with and without sovereign bonds is the same.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to renewable power

Does the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy?¹⁹

- Yes
 - In fossil gas
 - In nuclear energy
- No

¹⁹ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

or low-carbon fuels by the end of 2035. For nuclear energy, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

** As the investments are not Taxonomy-aligned, the exclusion of sovereign bonds has no impact on the graph and therefore no such percentage is shown here.

● **What is the minimum share of investments in transitional and enabling activities?**

0%.

What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?

The Sub-fund intends to make sustainable investments, measured as positive scores via Robeco's SDG Framework. Among those could be investments with environmental objectives that do not qualify as Taxonomy-aligned. The environmental objectives of the Sub-fund are attained by investing in companies that score positively on SDG 12 (Responsible consumption and production), SDG 13 (Climate action), SDG 14 (Life below water), and SDG 15 (Life on land) in Robeco's SDG Framework. While the sum of sustainable investments with an environmental objective and socially sustainable investments always adds up to the Sub-fund's minimum proportion of 50% sustainable investments, we do not commit to a minimum share of sustainable investments with an environmental objective because the Sub-fund's investment strategy does not have a specific environmental investment objective. Therefore, the minimum share of sustainable investments with an environmental objective is 0%.

What is the minimum share of socially sustainable investments?

The Sub-fund intends to make sustainable investments, measured as positive scores via Robeco's SDG Framework. Among those could be investments with social objectives. The social objectives of the Sub-fund are attained by investing in companies that score positively on SDG 1 (No poverty), SDG 2 (Zero hunger), SDG 3 (Good health and well-being), SDG 4 (Quality education), SDG 5 (Gender equality), SDG 6 (Clean water and sanitation), SDG 7 (Affordable and clean energy), SDG 8 (Decent work and economic growth), SDG 9 (Industry, innovation and infrastructure), SDG 10 (Reduced inequalities), SDG 11 (Sustainable cities and communities), SDG 16 (Peace, justice and strong institutions) and SDG 17 (Partnerships for the goals), in Robeco's SDG Framework. While the sum of socially sustainable investments and sustainable investments with an environmental objective always adds up to the Sub-fund's minimum proportion of sustainable investments, we do not commit to a minimum share of socially sustainable investments because the Sub-fund's investment strategy does not have a specific socially sustainable investment objective. Therefore, the minimum share of socially sustainable investments is 0%.

What investments are included under "#2 Other", what is their purpose and are there any minimum environmental or social safeguards?

The type of instruments included under "#2 Other" and their purpose are outlined in Annex I of this Prospectus under the header 'Financial instruments and investment restrictions'. They include cash, cash equivalents, as well as investment funds and eligible asset classes (other than bonds and equities) that do not specifically promote E/S characteristics. As indicated above, the Sub-fund does not make use of derivatives to attain the environmental or social characteristics promoted. The Sub-fund may make use of derivatives, which thus always fall under the category "#2 Other", for hedging, liquidity management and efficient portfolio management as well as investment purposes. Exchange traded and over-the-counter derivatives are permitted, including but not limited to futures, swaps, options and currency forwards. In case the Sub-fund uses derivatives, the underlying shall comply with the investment policy. Where relevant, minimum environmental or social safeguards are taken into account, by, for example, applying Robeco's Exclusion Policy for any single security derivative.

Is a specific index designated as a reference benchmark to determine whether this financial product is aligned with the environmental and/or social characteristics that it promotes?

Not applicable.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

Where can I find more product specific information online?

r) RobecoSAM QI Global SDG & Climate Conservative Equities

Pre-contractual disclosure for the financial products referred to in Article 9, paragraphs 1 to 4a, of Regulation (EU) 2019/2088 and Article 5, first paragraph, of Regulation (EU) 2020/852

Product name: RobecoSAM QI Global SDG & Climate Conservative Equities

Legal entity identifier: 213800BVPSWSGDFYVC36

Sustainable investment objective

Does this financial product have a sustainable investment objective?

Yes

No

It will make a minimum of **sustainable investments with an environmental objective: 50%**

in economic activities that qualify as environmentally sustainable under the EU Taxonomy

in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

It will make a minimum of **sustainable investments with a social objective: 10%**

It **promotes Environmental/Social (E/S) characteristics** and while it does not have as its objective a sustainable investment, it will have a minimum proportion of ___% of sustainable investments

with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with a social objective

It promotes E/S characteristics, but **will not make any sustainable investments**

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

What is the sustainable investment objective of this financial product?

Sustainability indicators measure how the sustainable objectives of this financial product are attained.

The Sub-fund advances the United Nation's Sustainable Development Goals (SDGs) and the Sub-fund aims to reduce the carbon footprint of the portfolio and thereby contribute towards the goals of the Paris agreement to keep the maximum global temperature rise well-below 2°C. The Sub-fund has a carbon-reduction objective and uses the MSCI All Country World EU PAB Overlay Index to monitor the carbon profile of the Sub-fund.

A part of the investments made by the Sub-fund contribute to the environmental objective of Climate Mitigation under the EU Taxonomy regulation.

What sustainability indicators are used to measure the attainment of the sustainable investment objective of this financial product?

The Sub-fund has the following sustainability indicators:

1. The number of holdings and agenda items voted.
2. The Sub-fund's weighted carbon footprint score compared to the Paris-Aligned Benchmark.
3. The Sub-fund's weighted environmental footprint score compared to the general market index referred to in Appendix VI – Benchmarks (the "General Market Index").
4. The % of investments in securities that are on Robeco's Exclusion list as result of the application of Robeco's Exclusion Policy.
5. The % of holdings that are in violation of the ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises.
6. The proportion of companies that hold a high or medium negative SDG score (-3 or -2) based on the internally developed SDG Framework.
7. The Sub-fund's weighted average ESG score compared to the General Market Index.
8. The Sub-fund's weight in companies with a positive SDG score (1,2,3) compared to the General Market Index weight in companies with a positive SDG score (1,2,3).

How do sustainable investments not cause significant harm to any environmental or social sustainable investment objective?

The sustainable investments do no significant harm to any environmental or social sustainable investment objective by considering a principal adverse impact and aligning with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights. In addition, sustainable investments made through the Paris-Aligned Benchmark follow eligibility requirements as per Article 12 of the EU regulation EU Paris-aligned Benchmarks and sustainability-related disclosures for benchmarks and follows Robeco's Exclusion policy. In accordance with Robeco's SDG framework, any off benchmark investments are only considered by the Sub-fund when they have a positive contribution to the UN SDGs and therefore not cause significant harm to any environmental or social sustainable investment objective.

How have the indicators for adverse impacts on sustainability factors been taken into account?

Sustainable investments can be constituents of Paris-Aligned Benchmark. The benchmark methodology directly assesses the following PAI indicators:

- Table 1, PAI 2 (Carbon Footprint)
- Table 1, PAI 4 (Exposure to companies in the fossil fuel sector)
- Table 1, PAI 10 (Violations of the UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises)
- Table 1, PAI 14 (Exposure to controversial weapons)

Post-investment, the Sub-fund assesses the performance on all mandatory PAI indicators on a regular basis.

Sustainable investments that are not constituents of Paris-Aligned Benchmark, should all have a positive score on Robeco's SDG Framework. Robeco's SDG Framework assesses the contribution of companies to the Sustainable Development Goals (SDGs). Many PAI indicators are either directly or indirectly included in the SDG Framework to determine whether a company has significant impacts on the SDGs related to the PAI indicators. A detailed description of the incorporation of principal adverse impacts is available via Robeco's Principal Adverse Impact Statement published on the Robeco website (<https://www.robeco.com/files/docm/docu-principal-adverse-impact-statement-summary-entity-level.pdf>).

How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights?

The sustainable investments are aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights via Robeco's Exclusion Policy, Robeco's SDG Framework, and the methodology of the benchmark provider.

Does this financial product consider principal adverse impacts on sustainability factors?

Yes, _____

The Sub-fund considers principal adverse impacts on sustainability factors as referred to in Annex 1 of the SFDR Delegated Act.

Pre-investment, the following principal adverse impacts on sustainability factors are considered:

- Via the applied normative and activity-based exclusions, the following PAIs are considered:
 - Exposure to companies active in the fossil fuel sector (PAI 4, Table 1)
 - Violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1)
 - Activities negatively affecting biodiversity-sensitive areas (PAI 7, Table 1). The consideration of this PAI is currently restricted to applying exclusions to palm oil producing companies and for any breaches to the UNGC, UNGP and OECD Guidelines for Multinational Enterprises in relation to biodiversity.
 - Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons (PAI 14, Table 1)
- Via the environmental footprint performance targets of the Sub-fund, the following PAIs are considered:
 - Carbon footprint (PAI 2, Table 1), via the Paris-Aligned Benchmark
 - Water and waste indicators (PAI 8-9, Table 1). Robeco will use on water and waste footprint until data quality and coverage of the PAIs will improve.

Post-investment, the following principal adverse impacts on sustainability factors are taken into account:

- Via the application of the voting policy, the following PAIs are considered:
 - All indicators related to GHG emissions (PAI 1-6, Table 1)

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

- Indicators related to social and employee matters (PAI 10-13, Table 1; PAI 5-8, Table 3)
- o Via Robeco's entity engagement program, the following PAIs are considered:
 - All indicators related to Climate and other environment-related indicators (PAI 1-9, Table 1)
 - Violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1)
 - Activities negatively affecting biodiversity sensitive areas (PAI 7, Table 1). The consideration of this PAI is currently restricted to applying exclusions to palm oil producing companies and for any breaches to the UNGC, UNGP and OECD Guidelines for Multinational Enterprises in relation to biodiversity.
 - In addition, based on a yearly review of Robeco's performance on all mandatory and selected voluntary indicators, holdings of the Sub-fund that cause adverse impact might be selected for engagement.

More information is available via Robeco's Principal Adverse Impact Statement, published on Robeco's website. The Sub-fund will periodically report how it has considered the principal adverse impacts of its investments in the Company's annual report, which will be made available each year on or before 30 April at the Sub-fund page highlighted in final section of this document.

■ No

What investment strategy does this financial product follow?

RobecoSAM QI Global SDG & Climate Conservative Equities is an actively managed fund that invests globally in low-volatility stocks of companies that advance the United Nations Sustainable Development Goals (SDGs) and contribute to maintaining the global temperature rise below 2°C. The Sub-fund's long-term aim is to achieve returns equal to, or greater than, those on global equity markets with lower expected downside risk. The selection of these stocks is based on a quantitative model as described in the Investment policy strategy paragraph in Appendix I of this Prospectus. The strategy integrates sustainability indicators on a continuous basis as part of the stock selection process. Amongst others, the Sub-fund applies norms-based and activity-based exclusions, Robeco's good governance policy, Robeco's SDG framework and considers Principal Adverse Impacts in the investment process. More product-specific information can be found on our website and the links provided in the final question of this disclosure.

What are the binding elements of the investment strategy used to select the investments to attain the sustainable investment objective?

The Sub-fund has the following binding elements:

1. All equity holdings have a granted right to vote and Robeco exerts that right by voting according to Robeco's Proxy Voting Policy, unless impediments occur (e.g. share blocking or when not considered cost efficient). Robeco's Proxy Voting Policy can be found at <https://www.robeco.com/files/docm/docu-robeco-stewardship-policy.pdf>.
2. The Sub-fund's weighted carbon footprint score is better than that of the Paris aligned benchmark.
3. The Sub-fund's weighted water and waste footprint score is at least 20% better than that of the General Market Index.
4. The Sub-fund fully complies with activity based exclusions with regards to products (including controversial weapons, tobacco, palm oil, and thermal coal, upstream oil and gas and electricity producers in line with Article 12 of the EU regulation Climate Transition Benchmarks, EU Paris-aligned Benchmarks and sustainability-related disclosures for benchmarks). In addition, the Sub-fund's portfolio complies with Robeco's Exclusion Policy (<https://www.robeco.com/files/docm/docu-exclusion-policy.pdf>), that is based on exclusion criteria with regards to products and business practices that Robeco believes are detrimental

The investment strategy guides investment decisions based on factors such as investment objectives and risk tolerance.

to society and incompatible with sustainable investment strategies. This means that the Sub-fund has 0% exposure to excluded securities, taking into account a grace period. Information with regards to the effects of the exclusions on the Sub-fund's universe can be found at <https://www.robeco.com/files/docm/docu-exclusion-list.pdf>

5. The Sub-fund avoids investment in companies that are in breach of the ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises. Companies that breach the international norms will be excluded from the investment universe.
6. The Sub-fund excludes all high or medium negative SDG scores (-3 or -2).
7. The Sub-fund's weighted average ESG score is at least 10% better than that of the General Market Index.
8. The Sub-fund's weight in companies with a positive SDG score (1,2,3) is at least 20% better than that of the General Market Index, measured as a ratio.

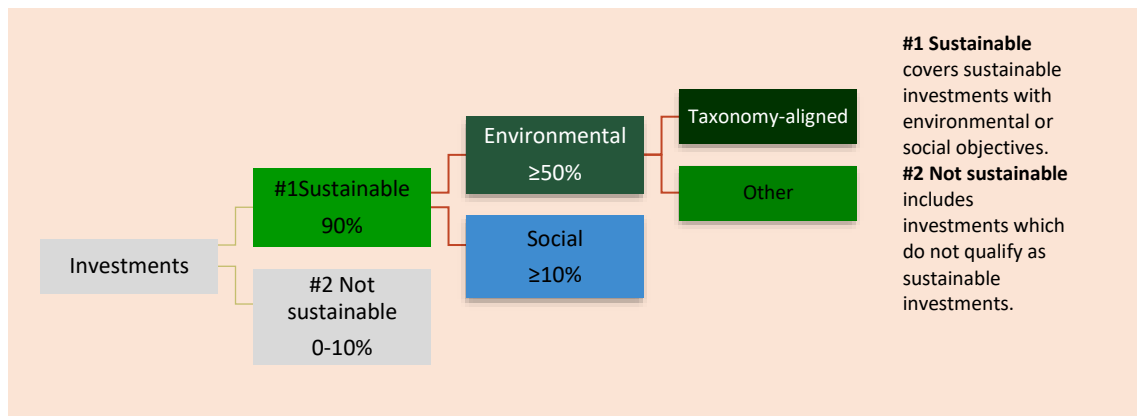

What is the policy to assess good governance practices of the investee companies?

Robeco has a Good Governance policy to assess governance practices of companies. The policy describes how Robeco determines if and when a company does not follow good governance practices and is therefore excluded from the initial investment universe for Article 8 and 9 products. Robeco's Good Governance policy applies to the Sub-fund and tests on a set of governance criteria that reflect widely recognized industry established norms and include topics as employee relations, management structure, tax compliance and remuneration.

The Good Governance test consists of criteria on such topics that are examined for investee companies and further explained in Robeco's Good Governance policy <https://www.robeco.com/files/docm/docu-robeco-good-governance-policy.pdf>. Additionally, the companies that do not pass the good governance test are reflected in the exclusion list that can be accessed here - <https://www.robeco.com/files/docm/docu-exclusion-list.pdf>.

What is the asset allocation and the minimum share of sustainable investments?

The Sub-fund plans to make a minimum of 90% sustainable investments, measured by positive scores via Robeco's SDG Framework. The investments in the category non-sustainable, estimated between 0-10%, are in cash and cash equivalents. The planned asset allocation is monitored continuously, and evaluated on a yearly basis.

How does the use of derivatives attain the sustainable investment objective?

The Sub-fund does not make use of derivatives to attain the sustainable objective promoted by the financial product. The Sub-fund may make use of derivatives for hedging and liquidity management. This includes the usage of derivatives to manage currency and market exposures in a cost-effective manner. To that purpose exchange traded and over-the-counter derivatives linked to equity indices and currencies are permitted.

Good governance practices include sound management structures, employee relations, remuneration of staff and tax compliance.

Asset allocation describes the share of investments in specific assets. Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.

- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

In case the Sub-fund uses derivatives, the underlying shall comply with the investment policy. Where relevant, minimum environmental or social safeguards are taken into account.

To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

The Sub-fund intends to contribute to the climate change mitigation objective under the EU Taxonomy. The Sub-fund commits to a minimum share of 0% of Taxonomy-aligned activities. The Sub-fund intends to increase the minimum share of Taxonomy aligned activities for the Sub-fund once data availability in relation to the EU Taxonomy improves and stabilises.

The Sub-fund will report on Taxonomy-aligned investment in the periodic disclosures. In the future, once data-availability in relation to the EU Taxonomy will improve, Robeco might consider setting a target based on turnover or CAPEX. Robeco currently relies on third-party data in relation to the EU Taxonomy, including data in relation to companies that do not disclose on the EU Taxonomy alignment of their activities. EU Taxonomy-alignment data is not yet subject to a review by third parties. The Sub-fund only makes investments in equity and therefore it does not have sovereign exposures. The expected level of alignment with and without sovereign bonds is the same.

Does the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy²⁰?

Yes:

In fossil gas

In nuclear energy

No

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power

²⁰ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

 are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

*** For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures**
**** As the investments are not Taxonomy-aligned, the exclusion of sovereign bonds has no impact on the graph and therefore no such percentage is shown here.**

What is the minimum share of investments in transitional and enabling activities?

0%.

What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?

The Sub-fund makes sustainable investments with environmental objectives that do not qualify as Taxonomy-aligned. Given the Sub-fund's investment strategy and the specific environmental investment objective, the Sub-fund commits to a minimum share of sustainable investments of 50% with an environmental objective. The environmental objectives of the Sub-fund are attained by investing in companies, in line with a low carbon scenario stipulated by the Paris aligned benchmark methodology.

In addition, the Sub-fund intends to make sustainable investments off-benchmark, measured as positive scores via Robeco's SDG Framework. Among those could be sustainable investments with environmental objectives which are companies that score positively on SDG 12 (Responsible consumption and production), SDG 13 (Climate action), SDG 14 (Life below water), and SDG 15 (Life on land) in Robeco's SDG Framework.

The sum of sustainable investments with an environmental objective and socially sustainable investments will always add up to the Sub-fund's minimum proportion of 90% sustainable investments.

What is the minimum share of sustainable investments with a social objective?

Within the off-benchmark holdings (i.e. holdings that are not part of the Paris Aligned Benchmark), the Sub-fund intends to make sustainable investments with a social objective. Given the Sub-fund's investment strategy and the specific social investment objective, the Sub-fund commits to a minimum share of sustainable investments of 10% with a social objective, measured by off-benchmark holdings that have a positive score via Robeco's SDG Framework. The social objectives of the Sub-fund are attained by investing in companies that score positively on SDG 1 (No poverty), SDG 2 (Zero hunger), SDG 3 (Good health and well-being), SDG 4 (Quality education), SDG 5 (Gender equality), SDG 6 (Clear water and sanitation), SDG 7 (Affordable and clean energy), SDG 8 (Decent work and economic growth), SDG 9 (Industry, innovation and infrastructure), SDG 10 (Reduced inequalities), SDG 11 (Sustainable cities and communities), SDG 16 (Peace, justice and strong institutions) and SDG 17 (Partnerships for the goals), in Robeco's SDG Framework.

The sum of socially sustainable investments and sustainable investments with an environmental objective will always add up to the Sub-fund's minimum proportion of 90% sustainable investments.

What investments are included under "#2 Not sustainable", what is their purpose and are there any minimum environmental or social safeguards?

The type of instruments included under "#2 Not Sustainable" and their purpose are outlined in Annex I of this Prospectus under the header 'Financial instruments and investment restrictions'. They include cash, cash equivalents, as well as investment funds and eligible asset classes (other than bonds and equities) that do not specifically promote E/S characteristics. As indicated above, the Sub-fund does not make use of derivatives to attain its sustainable objective. The Sub-fund may make use of derivatives for hedging and liquidity management. This includes the usage of derivatives to manage currency and market exposures in a cost-effective manner. For the management of currency exposure FX Forwards are allowed. The exchange traded derivatives linked to equity indices, such as equity index futures covering the market universe, are permitted for cash equitization. In case the Sub-fund uses such index market derivatives, these shall be temporary positions as defined by the investment restrictions. Where relevant, minimum environmental or social safeguards are taken into account by monitoring and performing suitability tests on index futures constituents following Robeco's Exclusion Policy.

Is a specific index designated as a reference benchmark to meet the sustainable investment objective?

Yes, the Sub-fund uses the MSCI All Country World EU PAB Overlay Index as a reference index to meet the carbon footprint reduction objective of the Sub-fund and thereby keeping the maximum global temperature rise well-below 2°C.

How does the reference benchmark take into account sustainability factors in a way that is continuously aligned with the sustainable investment objective?

The MSCI EU PAB Overlay Indices are constructed from their corresponding Parent Indexes using an optimization-based approach and aim to:

- Reduce the weighted average greenhouse gas intensity by 50% compared to the underlying investment universe.
- Reduce the weighted average greenhouse gas (GHG) intensity by 7% on an annualized basis.
- Achieve a modest tracking error compared to the Parent Index and low turnover.

Reference benchmarks are indexes to measure whether the financial product attains the sustainable investment objective.

- Exclude companies based on the following criteria: Companies involved in Controversial Weapons businesses, Very Severe ESG Controversies, Severe Environmental Controversies, Tobacco Manufacturing, Thermal Coal, Oil & Gas and Fossil Fuel-based power generation.

● ***How is the alignment of the investment strategy with the methodology of the index ensured on a continuous basis?***

The methodology of the reference index follows rebalancing rules which ensures alignment with the investment strategy and objective of the Sub-fund. The index uses data such as MSCI Climate Change Metrics, MSCI ESG Controversies and MSCI Business Involvement Screening Research) as of the end of the month, preceding the Index Reviews, for the rebalancing of the index.

The Sub-fund follows a rebalancing strategy which ensures that the carbon footprint of the Sub-fund is better than that of the reference index. This in turn ensures that the investment strategy of the Sub-fund aligns with the methodology of the reference index. The methodology of the reference index takes into account a decarbonization trajectory of at least 7% GHG intensity per annum along with specific sector or activity exclusions and including involvement in controversial weapons.

● ***How does the designated index differ from a relevant broad market index?***

The benchmark differs from a broad general market index in that the latter does not take into account in its methodology any criteria on the carbon reduction objective and carbon footprint of companies.

● ***Where can the methodology used for the calculation of the designated index be found?***

The index methodology can be found on the relevant webpages by the index provider: <https://www.msci.com>

Where can I find more product specific information online?

More product-specific information can be found on the website:

s) Robeco QI Global Developed Enhanced Index Equities

Pre-contractual disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Product name: Robeco QI Global Developed Enhanced Index Equities

Legal entity identifier: 213800W6NOMU3QTJAP16

Environmental and/or social characteristics

Does this financial product have a sustainable investment objective?

Yes

No

It will make a minimum of **sustainable investments with an environmental objective:** ___%

in economic activities that qualify as environmentally sustainable under the EU Taxonomy

in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

It will make a minimum of **sustainable investments with a social objective:** ___%

It promotes **Environmental/Social (E/S) characteristics** and while it does not have as its objective a sustainable investment, it will have a minimum proportion of 50% of sustainable investments

with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with a social objective

It promotes E/S characteristics, but **will not make any sustainable investments**

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

What environmental and/or social characteristics are promoted by this financial product?

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

The Sub-fund has the following E/S characteristics:

1. The Sub-fund promotes certain minimum environmental and social safeguards through applying exclusion criteria with regards to products and business practices that Robeco believes are detrimental to society and incompatible with sustainable investment strategies, such as exposure to controversial behaviour, controversial weapons, and fossil fuels.
2. The Sub-fund promotes having a lower environmental footprint than the general market index referred to in Appendix VI – Benchmarks (the "General Market Index"), through reduction in carbon, water and waste footprints.
3. The Sub-fund promotes adherence to and conducting business activities in accordance with the United Nations Universal Declaration of Human Rights, the International Labor Organization's (ILO) labor standards, the United Nations Guiding Principles for Business and Human Rights (UNGPs), the United Nations Global Compact (UNGC) and the OECD Guidelines for Multinational Enterprises, by scrutinizing companies that violate these principles.
4. The Sub-fund promotes having a weighted average ESG score that is better than that of the General Market Index.
5. The Sub-fund promotes having a larger share of companies with a positive SDG score (1,2,3) in the portfolio than the General Market Index.

There is no reference benchmark designated for the purpose of attaining the environmental or social characteristics promoted by the Sub-fund.

What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?

The Sub-fund has the following sustainability indicators:

1. The % of investments in securities that are on Robeco's Exclusion list as result of the application of Robeco's Exclusion Policy.
2. The Sub-fund's weighted carbon, water and waste footprint score compared to the General Market Index.
3. The number of companies that are in violation of the ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises and hence are a part of the Enhanced Engagement program.
4. The Sub-fund's weight in companies with a positive SDG score (1,2,3) compared to the General Market Index weight in companies with a positive SDG score (1,2,3).

The Sub-fund's weighted average ESG score compared to the General Market Index.

What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?

The sustainable investments aim to contribute to the UN Sustainable Development Goals ("SDGs"), that have both social and environmental objectives. These are 17 goals that are globally recognised and include environmental goals such as climate action, clean water, life on land and water and social goals such as zero hunger, gender equality, education, etc. Robeco has developed a proprietary framework based on the UN SDGs through which an issuer's contribution to such SDGs is determined through a 3-step process. This process starts with a sector baseline on which a company's products are analysed to examine contribution to the society and environment. Further, the operational processes involved in creating such products is checked along with any controversies/litigation claims and remediation actions taken which are perused before a final SDG score is determined. The final score ranges between high negative (-3) to high positive (+3) and only those issuers which achieve positive SDG scores (+1, +2 and, +3) are regarded as Sustainable Investments.

● ***How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?***

The sustainable investments do no significant harm to any environmental or social sustainable investment objective by considering a principal adverse impact and aligning with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights. In addition, sustainable investments score positively on Robeco's SDG Framework, and therefore do not cause significant harm.

How have the indicators for adverse impacts on sustainability factors been taken into account?

Mandatory principal adverse impact indicators are considered through Robeco's SDG Framework, either directly or indirectly, when identifying sustainable investments for the Sub-fund. In addition, voluntary environmental and social indicators are taken into account, depending on their relevance for measuring impacts on the SDGs and the availability of data. A detailed description of the incorporation of principal adverse impacts is available via Robeco's Principal Adverse Impact Statement published on the Robeco website (<https://www.robeco.com/files/docm/docu-principal-adverse-impact-statement-summary-entity-level.pdf>). In this statement, Robeco sets out its approach to identifying and prioritizing principal adverse impacts, and how principal adverse impacts are considered as part of Robeco's investment due diligence process and procedures relating to research and analysis, exclusions and restrictions and/or voting and engagement. This description also explains how principal adverse impact indicators are considered by the SDG Framework.

How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The sustainable investments are aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights via both Robeco's Exclusion Policy and Robeco's SDG Framework.

Robeco's Exclusion Policy includes an explanation of how Robeco acts in accordance with the International Labor Organization (ILO) standards, United Nations Guiding Principles (UNGPs), United Nations Global Compact (UNGC) Principles and the Organization for Economic Co-operation and Development (OECD) Guidelines for Multinational Enterprises and is guided by these international treaties to assess the behavior of companies. Robeco continuously screens its investments for breaches of these principles. In case of a breach, the company will be excluded or engaged with, and is not considered a sustainable investment.

Robeco's SDG Framework screens for breaches on these principles in the final step of the framework. In this step, Robeco checks whether the company concerned has been involved in any controversies. Involvement in any controversy will result in a negative SDG score for the company, meaning it is not a sustainable investment.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

Does this financial product consider principal adverse impacts on sustainability factors?

Yes, _____

The Sub-fund considers principal adverse impacts on sustainability factors as referred to in Annex I of the SFDR Delegated Act.

Pre-investment, the following principal adverse impacts on sustainability factors are considered:

- Via the applied normative and activity-based exclusions, the following PAIs are considered:
 - Exposure to companies active in the fossil fuel sector (PAI 4, Table 1)
 - Violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1)
 - Activities negatively affecting biodiversity-sensitive areas (PAI 7, Table 1). The consideration of this PAI is currently restricted to applying exclusions to palm oil producing companies and for any breaches to the UNGC, UNGP and OECD Guidelines for Multinational Enterprises in relation to biodiversity.
 - Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons (PAI 14, Table 1)
- Via the environmental footprint performance targets of the Sub-fund, the following PAIs are considered:
 - Carbon footprint (PAI 2, Table 1)
 - Water and waste indicators (PAI 7-9, Table 1). Robeco will use on water and waste footprint until data quality and coverage of the PAIs will improve.

Post-investment, the following principal adverse impacts on sustainability factors are taken into account:

- Via Robeco's entity engagement program, the following PAIs are considered:
 - All indicators related to Climate and other environment-related indicators (PAI 1-9, Table 1)
 - Violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1)
 - In addition, based on a yearly review of Robeco's performance on all mandatory and selected voluntary indicators, holdings of the Sub-fund that cause adverse impact might be selected for engagement.

More information is available via Robeco's Principal Adverse Impact Statement, published on Robeco's website. The Sub-fund will periodically report how it has considered the principal adverse impacts of its investments in the Company's annual report, which will be made available each year on or before 30 April at the Sub-fund page highlighted in final section of this document.

No

What investment strategy does this financial product follow?

Robeco QI Global Developed Enhanced Index Equities is an actively managed fund that invests in stocks of companies in developed markets. The selection of these stocks is based on a quantitative model as

The investment strategy guides investment decisions based on factors such as investment objectives and risk tolerance.

described in the Investment policy strategy paragraph in Appendix I of this Prospectus. The strategy integrates sustainability indicators on a continuous basis as part of the stock selection process. Amongst others, the Sub-fund applies norms-based and activity-based exclusions, Robeco's good governance policy, Robeco's SDG framework and considers Principal Adverse Impacts in the investment process. More product-specific information can be found on our website and the links provided in the final question of this disclosure.

● ***What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?***

The Sub-fund has the following binding elements:

1. The Sub-fund's portfolio complies with Robeco's Exclusion Policy (<https://www.robeco.com/files/docm/docu-exclusion-policy.pdf>), that is based on exclusion criteria with regards to products and business practices that Robeco believes are detrimental to society and incompatible with sustainable investment strategies. This means that the Sub-fund has 0% exposure to excluded securities, taking into account a grace period. Information with regards to the effects of the exclusions on the Sub-fund's universe can be found at <https://www.robeco.com/files/docm/docu-exclusion-list.pdf>
2. The Sub-fund's weighted carbon, water and waste footprint score is a better than that of the General Market Index.
3. The Sub-fund scrutinizes investment in companies that are in breach of the ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises. If a company in the portfolio breaches one of the international guidelines during the investment period, the company will become part of the Enhanced Engagement program. When engagement is deemed highly unlikely to succeed, the company might be excluded directly.
4. The Sub-fund's weighted average ESG score is better than that of the General Market Index.
5. The Sub-fund's weight in companies with a positive SDG score (1,2,3) is better than that of the General Market Index.

● ***What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?***

The Sub-fund does not commit to a minimum rate to reduce the scope of investments prior to the application of the investment strategy.

● ***What is the policy to assess good governance practices of the investee companies?***

Robeco has a Good Governance policy to assess governance practices of companies. The policy describes how Robeco determines if and when a company does not follow good governance practices and is therefore excluded from the initial investment universe for Article 8 and 9 products. Robeco's Good Governance policy applies to the Sub-fund and tests on a set of governance criteria that reflect widely recognized industry established norms and include topics as employee relations, management structure, tax compliance and remuneration.

The Good Governance test consists of criteria on such topics that are examined for investee companies and further explained in Robeco's Good Governance policy <https://www.robeco.com/files/docm/docu-robeco-good-governance-policy.pdf>. Additionally, the companies that do not pass the good governance test are reflected in the exclusion list that can be accessed here - <https://www.robeco.com/files/docm/docu-exclusion-list.pdf>.

Good governance practices include sound management structures, employee relations, remuneration of staff and tax compliance.

What is the asset allocation planned for this financial product?

At least 90% of the investments are aligned with the E/S characteristics of the Sub-fund. The Sub-fund plans to make a minimum of 50% sustainable investments, measured by positive scores via Robeco's SDG Framework. The investments in the category Other, estimated between 0-10%, are mostly in cash, cash equivalents and derivatives as further described below. The planned asset allocation is monitored continuously, and evaluated on a yearly basis.

Asset allocation

describes the share of investments in specific assets.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

How does the use of derivatives attain the environmental or social characteristics promoted by the financial product?

The Sub-fund does not make use of derivatives to attain the environmental or social characteristics promoted by the financial product. The Sub-fund may make use of derivatives for hedging, liquidity management and efficient portfolio management as well as investment purposes. Exchange traded and over-the-counter derivatives are permitted, including but not limited to futures, swaps, options and currency forwards. Whilst the Sub-fund may use derivatives both for investment purposes as well as for hedging and efficient portfolio management, it does not utilize derivatives for such purposes outside the intended share of investments allocated to the 'Other' category. In case the Sub-fund uses derivatives, the underlying shall comply with the investment policy. Where relevant, minimum environmental or social safeguards are taken into account as described below.

To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

0%. The Sub-fund does not intend to make Taxonomy-aligned investments. It cannot be excluded that among the Sub-fund's holdings certain investments are Taxonomy aligned. The Sub-fund will report on Taxonomy-aligned investment in the periodic disclosures. In the future, once data-availability in relation to the EU Taxonomy will improve, Robeco might consider setting a target based on turnover or CAPEX. Robeco currently relies on third-party data, including data in relation to companies that do not disclose on the EU Taxonomy alignment of their activities. EU Taxonomy-alignment data is not yet subject to a

review by third parties. The Sub-fund only makes investments in equity and therefore it does not have sovereign exposures. The expected level of alignment with and without sovereign bonds is the same.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

 are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

● **Does the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy?**²¹

- Yes
 - In fossil gas
 - In nuclear energy
- No

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.*

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures
 ** As the investments are not Taxonomy-aligned, the exclusion of sovereign bonds has no impact on the graph and therefore no such percentage is shown here.

● **What is the minimum share of investments in transitional and enabling activities?**

0%.

What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?

The Sub-fund intends to make sustainable investments, measured as positive scores via Robeco's SDG Framework. Among those could be investments with environmental objectives that do not qualify as Taxonomy-aligned. The environmental objectives of the Sub-fund are attained by investing in companies that score positively on SDG 12 (Responsible consumption and production), SDG 13 (Climate action), SDG 14 (Life below water), and SDG 15 (Life on land) in Robeco's SDG Framework. While the sum of sustainable investments with an environmental objective and socially sustainable investments always adds up to the Sub-fund's minimum proportion of 50% sustainable investments, we do not commit to a minimum share of sustainable investments with an environmental objective because the Sub-fund's

²¹ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

investment strategy does not have a specific environmental investment objective. Therefore, the minimum share of sustainable investments with an environmental objective is 0%.

What is the minimum share of socially sustainable investments?

The Sub-fund intends to make sustainable investments, measured as positive scores via Robeco's SDG Framework. Among those could be investments with social objectives. The social objectives of the Sub-fund are attained by investing in companies that score positively on SDG 1 (No poverty), SDG 2 (Zero hunger), SDG 3 (Good health and well-being), SDG 4 (Quality education), SDG 5 (Gender equality), SDG 6 (Clear water and sanitation), SDG 7 (Affordable and clean energy), SDG 8 (Decent work and economic growth), SDG 9 (Industry, innovation and infrastructure), SDG 10 (Reduced inequalities), SDG 11 (Sustainable cities and communities), SDG 16 (Peace, justice and strong institutions) and SDG 17 (Partnerships for the goals), in Robeco's SDG Framework. While the sum of socially sustainable investments and sustainable investments with an environmental objective always adds up to the Sub-fund's minimum proportion of sustainable investments, we do not commit to a minimum share of socially sustainable investments because the Sub-fund's investment strategy does not have a specific socially sustainable investment objective. Therefore, the minimum share of socially sustainable investments is 0%.

What investments are included under "#2 Other", what is their purpose and are there any minimum environmental or social safeguards?

The type of instruments included under "#2 Other" and their purpose are outlined in Annex I of this Prospectus under the header 'Financial instruments and investment restrictions'. They include cash, cash equivalents, as well as investment funds and eligible asset classes (other than bonds and equities) that do not specifically promote E/S characteristics. As indicated above, the Sub-fund does not make use of derivatives to attain the environmental or social characteristics promoted. The Sub-fund may make use of derivatives, which thus always fall under the category "#2 Other", for hedging, liquidity management and efficient portfolio management as well as investment purposes. Exchange traded and over-the-counter derivatives are permitted, including but not limited to futures, swaps, options and currency forwards. In case the Sub-fund uses derivatives, the underlying shall comply with the investment policy. Where relevant, minimum environmental or social safeguards are taken into account, by, for example, applying Robeco's Exclusion Policy for any single security derivative.

Is a specific index designated as a reference benchmark to determine whether this financial product is aligned with the environmental and/or social characteristics that it promotes?

Not applicable.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

t) Robeco Sustainable Emerging Stars Equities

Pre-contractual disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Product name: Robeco Sustainable Emerging Stars Equities

Legal entity identifier: 2138000ZKXE3LA1XDP06

Environmental and/or social characteristics

Does this financial product have a sustainable investment objective?

Yes

No

It will make a minimum of **sustainable investments with an environmental objective: ___%**

in economic activities that qualify as environmentally sustainable under the EU Taxonomy

in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

It will make a minimum of **sustainable investments with a social objective: ___%**

It promotes **Environmental/Social (E/S) characteristics** and while it does not have as its objective a sustainable investment, it will have a minimum proportion of 50% of sustainable investments

with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with a social objective

It promotes E/S characteristics, but **will not make any sustainable investments**

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

What environmental and/or social characteristics are promoted by this financial product?

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

The Sub-fund has the following E/S characteristics:

1. The Sub-fund promotes certain minimum environmental and social safeguards through applying exclusion criteria with regards to products and business practices that Robeco believes are detrimental to society and incompatible with sustainable investment strategies, such as exposure to controversial behaviour, controversial weapons, and fossil fuels.
2. The Sub-fund promotes adherence to and conducting business activities in accordance with the United Nations Universal Declaration of Human Rights, the International Labor Organization's (ILO) labor standards, the United Nations Guiding Principles for Business and Human Rights (UNGPs), the United Nations Global Compact (UNGC) and the OECD Guidelines for Multinational Enterprises, by scrutinizing companies that violate these principles.
3. The Sub-fund promotes good governance and sustainable corporate practices through proxy voting, which contributes to long-term shareholder value creation. This includes taking an active stance on social and environmental topics through Robeco's proxy voting policy.
4. The Sub-fund promotes having a substantially lower environmental footprint than the general market index referred to in Appendix VI – Benchmarks (the "General Market Index").
5. The Sub-fund promotes having a weighted average ESG score that is better than that of the General Market Index.
6. The Sub-fund limits investing in companies with an elevated sustainability risk based on ESG risk scores whereas all such investments require separate approval of a dedicated committee that oversees that all investments are substantiated and eligible based on a fundamental review on the sustainability risk.

There is no reference benchmark designated for the purpose of attaining the environmental or social characteristics promoted by the Sub-fund.

What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?

The Sub-fund has the following sustainability indicators:

1. The % of investments in securities that are on Robeco's Exclusion list as result of the application of Robeco's Exclusion Policy.
2. The number of companies that are in violation of the ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises and hence are a part of the Enhanced Engagement program.
3. The number of holdings and agenda items voted.
4. The Sub-fund's weighted carbon, water and waste footprint score compared to the General Market Index.
5. The Sub-fund's weighted average ESG score compared to the General Market Index.
6. The % of holdings with an elevated sustainability risk profile.

What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?

The sustainable investments aim to contribute to the UN Sustainable Development Goals ("SDGs"), that have both social and environmental objectives. These are 17 goals that are globally recognised and include environmental goals such as climate action, clean water, life on land and water and social goals such as zero hunger, gender equality, education, etc. Robeco has developed a proprietary framework based on the UN SDGs through which an issuer's contribution to such SDGs is determined through a 3-step process. This process starts with a sector baseline on which a company's products are analysed to examine contribution to the society and environment. Further, the operational processes involved in creating such products is checked along with any controversies/litigation claims and remediation actions

taken which are perused before a final SDG score is determined. The final score ranges between high negative (-3) to high positive (+3) and only those issuers which achieve positive SDG scores (+1, +2 and +3) are regarded as Sustainable Investments.

● ***How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?***

The sustainable investments do no significant harm to any environmental or social sustainable investment objective by considering a principal adverse impact and aligning with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights. In addition, sustainable investments score positively on Robeco's SDG Framework, and therefore do not cause significant harm.

How have the indicators for adverse impacts on sustainability factors been taken into account?

Mandatory principal adverse impact indicators are considered through Robeco's SDG Framework, either directly or indirectly, when identifying sustainable investments for the Sub-fund. In addition, voluntary environmental and social indicators are taken into account, depending on their relevance for measuring impacts on the SDGs and the availability of data. A detailed description of the incorporation of principal adverse impacts is available via Robeco's Principal Adverse Impact Statement published on the Robeco website (<https://www.robeco.com/files/docm/docu-principal-adverse-impact-statement-summary-entity-level.pdf>). In this statement, Robeco sets out its approach to identifying and prioritizing principal adverse impacts, and how principal adverse impacts are considered as part of Robeco's investment due diligence process and procedures relating to research and analysis, exclusions and restrictions and/or voting and engagement. This description also explains how principal adverse impact indicators are considered by the SDG Framework.

How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The sustainable investments are aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights via both Robeco's Exclusion Policy and Robeco's SDG Framework.

Robeco's Exclusion Policy includes an explanation of how Robeco acts in accordance with the International Labor Organization (ILO) standards, United Nations Guiding Principles (UNGPs), United Nations Global Compact (UNGC) Principles and the Organization for Economic Co-operation and Development (OECD) Guidelines for Multinational Enterprises and is guided by these international treaties to assess the behavior of companies. Robeco continuously screens its investments for breaches of these principles. In case of a breach, the company will be excluded or engaged with, and is not considered a sustainable investment.

Robeco's SDG Framework screens for breaches on these principles in the final step of the framework. In this step, Robeco checks whether the company concerned has been involved in any controversies. Involvement in any controversy will result in a negative SDG score for the company, meaning it is not a sustainable investment.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

Does this financial product consider principal adverse impacts on sustainability factors?

Yes, _____

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

The Sub-fund considers principal adverse impacts on sustainability factors as referred to in Annex I of the SFDR Delegated Act.

Pre-investment, the following principal adverse impacts on sustainability factors are considered:

- Via the applied normative and activity-based exclusions, the following PAIs are considered:
 - Exposure to companies active in the fossil fuel sector (PAI 4, Table 1)
 - Violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1)
 - Activities negatively affecting biodiversity-sensitive areas (PAI 7, Table 1). The consideration of this PAI is currently restricted to applying exclusions to palm oil producing companies and for any breaches to the UNGC, UNGP and OECD Guidelines for Multinational Enterprises in relation to biodiversity.
 - Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons (PAI 14, Table 1)
- Via the ESG integration process, as part of the investment due diligence policies and procedures, the following PAIs are considered:
 - All indicators related to GHG emissions, as part of the required Climate Risk analysis (PAI 1-6, Table 1, PAI 4, Table 2)
 - Biodiversity, water and waste indicators (PAI 7-9, Table 1) when relevant for the sector
 - Board gender diversity (PAI 13, Table 1)
- Via the environmental footprint performance targets of the Sub-fund, the following PAIs are considered:
 - Carbon footprint (PAI 2, Table 1)
 - Water and waste indicators (PAI 7-9, Table 1). Robeco will use on water and waste footprint until data quality and coverage of the PAIs will improve.

Post-investment, the following principal adverse impacts on sustainability factors are taken into account:

- Via the application of the voting policy, the following PAIs are considered:
 - All indicators related to GHG emissions (PAI 1-6, Table 1)
 - Indicators related to social and employee matters (PAI 10-13, Table 1; PAI 5-8, Table 3)
- Via Robeco's entity engagement program, the following PAIs are considered:
 - All indicators related to Climate and other environment-related indicators (PAI 1-9, Table 1)
 - Violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1)

- In addition, based on a yearly review of Robeco's performance on all mandatory and selected voluntary indicators, holdings of the Sub-fund that cause adverse impact might be selected for engagement.

More information is available via Robeco's Principal Adverse Impact Statement, published on Robeco's website. The Sub-fund will periodically report how it has considered the principal adverse impacts of its investments in the Company's annual report, which will be made available each year on or before 30 April at the Sub-fund page highlighted in final section of this document.

No

What investment strategy does this financial product follow?

Robeco Sustainable Emerging Stars Equities is an actively managed fund that invests in equities in emerging countries across the world. The selection of these stocks is based on fundamental analysis as described in the Investment policy strategy paragraph in Appendix I of this Prospectus. The strategy integrates sustainability indicators on a continuous basis as part of the stock selection process. Amongst others, the Sub-fund applies norms-based and activity-based exclusions, Robeco's good governance policy, Robeco's SDG framework and considers Principal Adverse Impacts in the investment process. More product-specific information can be found on our website and the links provided in the final question of this disclosure.

The investment strategy guides investment decisions based on factors such as investment objectives and risk tolerance.

What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?

The Sub-fund has the following binding elements:

1. The Sub-fund's portfolio complies with Robeco's Exclusion Policy (<https://www.robeco.com/files/docm/docu-exclusion-policy.pdf>), that is based on exclusion criteria with regards to products and business practices that Robeco believes are detrimental to society and incompatible with sustainable investment strategies. This means that the Sub-fund has 0% exposure to excluded securities, taking into account a grace period. Information with regards to the effects of the exclusions on the Sub-fund's universe can be found at <https://www.robeco.com/files/docm/docu-exclusion-list.pdf>
2. The Sub-fund avoids investment in companies that are in breach of the ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises. Companies that breach the international norms will be excluded from the investment universe.
3. All equity holdings have a granted right to vote and Robeco exerts that right by voting according to Robeco's Proxy Voting Policy, unless impediments occur (e.g. share blocking or when not considered cost efficient). Robeco's Proxy Voting Policy can be found at <https://www.robeco.com/files/docm/docu-robeco-stewardship-policy.pdf>.
4. The Sub-fund's weighted carbon, water and waste footprint score is 20% better than that of the General Market Index.
5. The Sub-fund's weighted average ESG score is better than that of the General Market Index.
6. Investments with an elevated sustainability risk are defined by Robeco as companies with an ESG Risk Rating of 40 and higher (the ESG Risk Rating is explained in the sustainability risk policy which can be accessed via <https://www.robeco.com/files/docm/docu-robeco-sustainability-risk-policy.pdf>). The Sub-fund is limited to a maximum exposure of 5% to investments with an elevated sustainability risk, based on the market weight in the portfolio taking into account regional differences and benchmark. Each investment with an ESG Risk rating of higher than 40 requires separate approval by a dedicated committee of sustainable investment specialists, compliance and risk management that oversees the bottom-up sustainability analysis.

- ***What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?***

The Sub-fund does not commit to a minimum rate to reduce the scope of investments prior to the application of the investment strategy.

- ***What is the policy to assess good governance practices of the investee companies?***

Robeco has a Good Governance policy to assess governance practices of companies. The policy describes how Robeco determines if and when a company does not follow good governance practices and is therefore excluded from the initial investment universe for Article 8 and 9 products. Robeco's Good Governance policy applies to the Sub-fund and tests on a set of governance criteria that reflect widely recognized industry established norms and include topics as employee relations, management structure, tax compliance and remuneration.

The Good Governance test consists of criteria on such topics that are examined for investee companies and further explained in Robeco's Good Governance policy <https://www.robeco.com/files/docm/docu-robeco-good-governance-policy.pdf>. Additionally, the companies that do not pass the good governance test are reflected in the exclusion list that can be accessed here - <https://www.robeco.com/files/docm/docu-exclusion-list.pdf>.

What is the asset allocation planned for this financial product?

At least 90% of the investments are aligned with the E/S characteristics of the Sub-fund. The Sub-fund plans to make a minimum of 50% sustainable investments, measured by positive scores via Robeco's SDG Framework. The investments in the category Other, estimated between 0-10%, are mostly in cash, cash equivalents and derivatives as further described below. The planned asset allocation is monitored continuously, and evaluated on a yearly basis.

Good governance practices include sound management structures, employee relations, remuneration of staff and tax compliance.

Asset allocation describes the share of investments in specific assets.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers sustainable investments with environmental or social objectives.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

● **How does the use of derivatives attain the environmental or social characteristics promoted by the financial product?**

The Sub-fund does not make use of derivatives to attain the environmental or social characteristics promoted by the financial product. The Sub-fund may make use of derivatives for hedging, liquidity management and efficient portfolio management as well as investment purposes. Exchange traded and over-the-counter derivatives are permitted, including but not limited to futures, swaps, options and currency forwards. Whilst the Sub-fund may use derivatives both for investment purposes as well as for hedging and efficient portfolio management, it does not utilize derivatives for such purposes outside the intended share of investments allocated to the 'Other' category.

In case the Sub-fund uses derivatives, the underlying shall comply with the investment policy. Where relevant, minimum environmental or social safeguards are taken into account as described below.

To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

0%. The Sub-fund does not intend to make Taxonomy-aligned investments. It cannot be excluded that among the Sub-fund's holdings certain investments are Taxonomy aligned. The Sub-fund will report on Taxonomy-aligned investment in the periodic disclosures. In the future, once data-availability in relation to the EU Taxonomy will improve, Robeco might consider setting a target based on turnover or CAPEX. Robeco currently relies on third-party data, including data in relation to companies that do not disclose on the EU Taxonomy alignment of their activities. EU Taxonomy-alignment data is not yet subject to a review by third parties. The Sub-fund only makes investments in equity and therefore it does not have sovereign exposures. The expected level of alignment with and without sovereign bonds is the same.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

 are sustainable investments with an environmental objective that **do not take into account the criteria for environmentally sustainable economic activities under the EU Taxonomy.**

● **Does the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy?²²**

Yes

In fossil gas In nuclear energy

No

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.*

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures
 ** As the investments are not Taxonomy-aligned, the exclusion of sovereign bonds has no impact on the graph and therefore no such percentage is shown here.

● **What is the minimum share of investments in transitional and enabling activities?**

0%.

What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?

The Sub-fund intends to make sustainable investments, measured as positive scores via Robeco's SDG Framework. Among those could be investments with environmental objectives that do not qualify as Taxonomy-aligned. The environmental objectives of the Sub-fund are attained by investing in companies that score positively on SDG 12 (Responsible consumption and production), SDG 13 (Climate action), SDG 14 (Life below water), and SDG 15 (Life on land) in Robeco's SDG Framework. While the sum of sustainable investments with an environmental objective and socially sustainable investments always adds up to the Sub-fund's minimum proportion of 50% sustainable investments, we do not commit to a minimum share of sustainable investments with an environmental objective because the Sub-fund's investment strategy does not have a specific environmental investment objective. Therefore, the minimum share of sustainable investments with an environmental objective is 0%.

²² Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

What is the minimum share of socially sustainable investments?

The Sub-fund intends to make sustainable investments, measured as positive scores via Robeco's SDG Framework. Among those could be investments with social objectives. The social objectives of the Sub-fund are attained by investing in companies that score positively on SDG 1 (No poverty), SDG 2 (Zero hunger), SDG 3 (Good health and well-being), SDG 4 (Quality education), SDG 5 (Gender equality), SDG 6 (Clear water and sanitation), SDG 7 (Affordable and clean energy), SDG 8 (Decent work and economic growth), SDG 9 (Industry, innovation and infrastructure), SDG 10 (Reduced inequalities), SDG 11 (Sustainable cities and communities), SDG 16 (Peace, justice and strong institutions) and SDG 17 (Partnerships for the goals), in Robeco's SDG Framework. While the sum of socially sustainable investments and sustainable investments with an environmental objective always adds up to the Sub-fund's minimum proportion of sustainable investments, we do not commit to a minimum share of socially sustainable investments because the Sub-fund's investment strategy does not have a specific socially sustainable investment objective. Therefore, the minimum share of socially sustainable investments is 0%.

What investments are included under "#2 Other", what is their purpose and are there any minimum environmental or social safeguards?

The type of instruments included under "#2 Other" and their purpose are outlined in Annex I of this Prospectus under the header 'Financial instruments and investment restrictions'. They include cash, cash equivalents, as well as investment funds and eligible asset classes (other than bonds and equities) that do not specifically promote E/S characteristics. As indicated above, the Sub-fund does not make use of derivatives to attain the environmental or social characteristics promoted. The Sub-fund may make use of derivatives, which thus always fall under the category "#2 Other", for hedging, liquidity management and efficient portfolio management as well as investment purposes. Exchange traded and over-the-counter derivatives are permitted, including but not limited to futures, swaps, options and currency forwards. In case the Sub-fund uses derivatives, the underlying shall comply with the investment policy. Where relevant, minimum environmental or social safeguards are taken into account, by, for example, applying Robeco's Exclusion Policy for any single security derivative.

Is a specific index designated as a reference benchmark to determine whether this financial product is aligned with the environmental and/or social characteristics that it promotes?

Not applicable.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

Where can I find more product specific information online?

More product-specific information can be found on the website:

u) Robeco QI Emerging Markets Sustainable Enhanced Index Equities

Pre-contractual disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Product name: Robeco QI Emerging Markets Sustainable Enhanced Index Equities

Legal entity identifier: 213800F1WPR2PVBY1880

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Environmental and/or social characteristics

What environmental and/or social characteristics are promoted by this financial product?

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

The Sub-fund has the following E/S characteristics:

1. The Sub-fund promotes good governance and sustainable corporate practices through proxy voting, which contributes to long-term shareholder value creation. This includes taking an active stance on social and environmental topics through Robeco's proxy voting policy.
2. The Sub-fund promotes having a substantially lower environmental footprint than the general market index referred to in Appendix VI – Benchmarks (the "General Market Index").
3. The Sub-fund promotes certain minimum environmental and social safeguards through applying exclusion criteria with regards to products and business practices that Robeco believes are detrimental to society and incompatible with sustainable investment strategies, such as exposure to controversial behaviour, controversial weapons, and fossil fuels.
4. The Sub-fund promotes adherence to and conducting business activities in accordance with the United Nations Universal Declaration of Human Rights, the International Labor Organization's (ILO) labor standards, the United Nations Guiding Principles for Business and Human Rights (UNGPs), the United Nations Global Compact (UNGC) and the OECD Guidelines for Multinational Enterprises.
5. The Sub-fund promotes investment in a portfolio that avoid significant harm to the Sustainable Development Goals (SDGs).
6. The Sub-fund has a substantially better weighted average ESG score than the General Market Index.
7. The Sub-fund promotes having a substantially larger share of companies with a positive SDG score (1,2,3) in the portfolio than the General Market Index.

There is no reference benchmark designated for the purpose of attaining the environmental or social characteristics promoted by the Sub-fund.

What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?

The Sub-fund has the following sustainability indicators:

1. The number of holdings and agenda items voted.
2. The Sub-fund's weighted carbon, water and waste footprint score compared to the General Market Index.
3. The % of investments in securities that are on Robeco's Exclusion list as result of the application of Robeco's Exclusion Policy.
4. The % of holdings that are in violation of the ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises.
5. The proportion of companies that hold a high or medium negative SDG score (-3 or -2) based on the internally developed SDG Framework.
6. The Sub-fund's weighted average ESG score compared to the General Market Index.
7. The Sub-fund's weight in companies with a positive SDG score (1,2,3) compared to the General Market Index weight in companies with a positive SDG score (1,2,3).

What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?

The sustainable investments aim to contribute to the UN Sustainable Development Goals ("SDGs"), that have both social and environmental objectives. These are 17 goals that are globally recognised and include environmental goals such as climate action, clean water, life on land and water and social goals such as zero hunger, gender equality, education, etc. Robeco has developed a proprietary framework based on the UN SDGs through which an issuer's contribution to such SDGs is determined through a 3-step process. This process starts with a sector baseline on which a company's products are analysed to examine contribution to the society and environment. Further, the operational processes involved in creating such products is checked along with any controversies/litigation claims and remediation actions taken which are perused before a final SDG score is determined. The final score ranges between high

negative (-3) to high positive (+3) and only those issuers which achieve positive SDG scores (+1, +2 and +3) are regarded as Sustainable Investments.

● ***How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?***

The sustainable investments do no significant harm to any environmental or social sustainable investment objective by considering a principal adverse impact and aligning with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights. In addition, sustainable investments score positively on Robeco's SDG Framework, and therefore do not cause significant harm.

How have the indicators for adverse impacts on sustainability factors been taken into account?

Mandatory principal adverse impact indicators are considered through Robeco's SDG Framework, either directly or indirectly, when identifying sustainable investments for the Sub-fund. In addition, voluntary environmental and social indicators are taken into account, depending on their relevance for measuring impacts on the SDGs and the availability of data. A detailed description of the incorporation of principal adverse impacts is available via Robeco's Principal Adverse Impact Statement published on the Robeco website (<https://www.robeco.com/files/docm/docu-principal-adverse-impact-statement-summary-entity-level.pdf>). In this statement, Robeco sets out its approach to identifying and prioritizing principal adverse impacts, and how principal adverse impacts are considered as part of Robeco's investment due diligence process and procedures relating to research and analysis, exclusions and restrictions and/or voting and engagement. This description also explains how principal adverse impact indicators are considered by the SDG Framework.

How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The sustainable investments are aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights via both Robeco's Exclusion Policy and Robeco's SDG Framework.

Robeco's Exclusion Policy includes an explanation of how Robeco acts in accordance with the International Labor Organization (ILO) standards, United Nations Guiding Principles (UNGPs), United Nations Global Compact (UNGC) Principles and the Organization for Economic Co-operation and Development (OECD) Guidelines for Multinational Enterprises and is guided by these international treaties to assess the behavior of companies. Robeco continuously screens its investments for breaches of these principles. In case of a breach, the company will be excluded or engaged with, and is not considered a sustainable investment.

Robeco's SDG Framework screens for breaches on these principles in the final step of the framework. In this step, Robeco checks whether the company concerned has been involved in any controversies. Involvement in any controversy will result in a negative SDG score for the company, meaning it is not a sustainable investment.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

Does this financial product consider principal adverse impacts on sustainability factors?

Yes, _____

The Sub-fund considers principal adverse impacts on sustainability factors as referred to in Annex I of the SFDR Delegated Act.

Pre-investment, the following principal adverse impacts on sustainability factors are considered:

- Via the applied normative and activity-based exclusions, the following PAIs are considered:
 - Exposure to companies active in the fossil fuel sector (PAI 4, Table 1)
 - Violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1)
 - Activities negatively affecting biodiversity-sensitive areas (PAI 7, Table 1). The consideration of this PAI is currently restricted to applying exclusions to palm oil producing companies and for any breaches to the UNGC, UNGP and OECD Guidelines for Multinational Enterprises in relation to biodiversity.
 - Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons (PAI 14, Table 1)
- Via the environmental footprint performance targets of the Sub-fund, the following PAIs are considered:
 - Carbon footprint (PAI 2, Table 1)
 - Water and waste indicators (PAI 7-9, Table 1). Robeco will use on water and waste footprint until data quality and coverage of the PAIs will improve.

Post-investment, the following principal adverse impacts on sustainability factors are taken into account:

- Via the application of the voting policy, the following PAIs are considered:
 - All indicators related to GHG emissions (PAI 1-6, Table 1)
 - Indicators related to social and employee matters (PAI 10-13, Table 1; PAI 5-8, Table 3)

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

- Via Robeco's entity engagement program, the following PAIs are considered:
 - All indicators related to Climate and other environment-related indicators (PAI 1-9, Table 1)
 - Violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1)
 - In addition, based on a yearly review of Robeco's performance on all mandatory and selected voluntary indicators, holdings of the Sub-fund that cause adverse impact might be selected for engagement.

More information is available via Robeco's Principal Adverse Impact Statement, published on Robeco's website. The Sub-fund will periodically report how it has considered the principal adverse impacts of its investments in the Company's annual report, which will be made available each year on or before 30 April at the Sub-fund page highlighted in final section of this document.

No

What investment strategy does this financial product follow?

Robeco QI Emerging Markets Sustainable Enhanced Index Equities is an actively managed fund that invests in stocks of companies in emerging markets. The selection of these stocks is based on a quantitative model as described in the Investment policy strategy paragraph in Appendix I of this Prospectus. The Sub-fund uses a stock selection strategy which ranks stocks on their expected future relative performance using three factors: valuation, quality and momentum. The strategy integrates sustainability indicators on a continuous basis as part of the stock selection process. Amongst others, the Sub-fund applies norms-based and activity-based exclusions, Robeco's good governance policy, Robeco's SDG framework and considers Principal Adverse Impacts in the investment process. More product-specific information can be found on our website and the links provided in the final question of this disclosure.

The investment strategy guides investment decisions based on factors such as investment objectives and risk tolerance.

What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?

The Sub-fund has the following binding elements:

1. All equity holdings have a granted right to vote and Robeco exerts that right by voting according to Robeco's Proxy Voting Policy, unless impediments occur (e.g. share blocking or when not considered cost efficient). Robeco's Proxy Voting Policy can be found at <https://www.robeco.com/files/docm/docu-robeco-stewardship-policy.pdf>.
2. The Sub-fund's weighted water and waste footprint score is at least 20% better than that of the General Market Index. The Sub-fund's weighted carbon footprint score is at least 30% better than that of the General Market Index.
3. The Sub-fund's portfolio complies with Robeco's Exclusion Policy (<https://www.robeco.com/files/docm/docu-exclusion-policy.pdf>), that is based on exclusion criteria with regards to products and business practices that Robeco believes are detrimental to society and incompatible with sustainable investment strategies. This means that the Sub-fund has 0% exposure to excluded securities, taking into account a grace period. Information with regards to the effects of the exclusions on the Sub-fund's universe can be found at <https://www.robeco.com/files/docm/docu-exclusion-list.pdf>.
4. The Sub-fund avoids investment in companies that are in breach of the ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises. Companies that breach the international norms will be excluded from the investment universe.
5. The Sub-fund excludes all high or medium negative SDG scores (-3 or -2) based on the internally developed SDG Framework.

6. The Sub-fund's weighted average ESG score is at least 10% better than that of the General Market Index.
7. The Sub-fund's weight in companies with a positive SDG score (1,2,3) is at least 10% better than that of the General Market Index, measured as a ratio.

● **What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?**

The Sub-fund does not commit to a minimum rate to reduce the scope of investments prior to the application of the investment strategy.

● **What is the policy to assess good governance practices of the investee companies?**

Robeco has a Good Governance policy to assess governance practices of companies. The policy describes how Robeco determines if and when a company does not follow good governance practices and is therefore excluded from the initial investment universe for Article 8 and 9 products. Robeco's Good Governance policy applies to the Sub-fund and tests on a set of governance criteria that reflect widely recognized industry established norms and include topics as employee relations, management structure, tax compliance and remuneration.

The Good Governance test consists of criteria on such topics that are examined for investee companies and further explained in Robeco's Good Governance policy <https://www.robeco.com/files/docm/docu-robeco-good-governance-policy.pdf>. Additionally, the companies that do not pass the good governance test are reflected in the exclusion list that can be accessed here - <https://www.robeco.com/files/docm/docu-exclusion-list.pdf>.

● **What is the asset allocation planned for this financial product?**

At least 90% of the investments are aligned with the E/S characteristics of the Sub-fund. The Sub-fund plans to make a minimum of 50% sustainable investments, measured by positive scores via Robeco's SDG Framework. The investments in the category Other, estimated between 0-10%, are mostly in cash, cash equivalents and derivatives as further described below. The planned asset allocation is monitored continuously, and evaluated on a yearly basis.

Good governance practices include sound management structures, employee relations, remuneration of staff and tax compliance.

Asset allocation describes the share of investments in specific assets.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

How does the use of derivatives attain the environmental or social characteristics promoted by the financial product?

The Sub-fund does not make use of derivatives to attain the environmental or social characteristics promoted by the financial product. The Sub-fund may make use of derivatives for hedging, liquidity management and efficient portfolio management as well as investment purposes. Exchange traded and over-the-counter derivatives are permitted, including but not limited to futures, swaps, options and currency forwards. Whilst the Sub-fund may use derivatives both for investment purposes as well as for hedging and efficient portfolio management, it does not utilize derivatives for such purposes outside the intended share of investments allocated to the 'Other' category.

In case the Sub-fund uses derivatives, the underlying shall comply with the investment policy. Where relevant, minimum environmental or social safeguards are taken into account as described below.

To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

0%. The Sub-fund does not intend to make Taxonomy-aligned investments. It cannot be excluded that among the Sub-fund's holdings certain investments are Taxonomy aligned. The Sub-fund will report on Taxonomy-aligned investment in the periodic disclosures. In the future, once data-availability in relation to the EU Taxonomy will improve, Robeco might consider setting a target based on turnover or CAPEX. Robeco currently relies on third-party data, including data in relation to companies that do not disclose on the EU Taxonomy alignment of their activities. EU Taxonomy-alignment data is not yet subject to a review by third parties. The Sub-fund only makes investments in equity and therefore it does not have sovereign exposures. The expected level of alignment with and without sovereign bonds is the same.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

 are sustainable investments with an environmental objective that **do not take into account the criteria for environmentally sustainable economic activities under the EU Taxonomy.**

● **Does the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy?²³**

Yes

In fossil gas

In nuclear energy

No

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.*

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures
 ** As the investments are not Taxonomy-aligned, the exclusion of sovereign bonds has no impact on the graph and therefore no such percentage is shown here.

● **What is the minimum share of investments in transitional and enabling activities?**

0%.

What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?

The Sub-fund intends to make sustainable investments, measured as positive scores via Robeco's SDG Framework. Among those could be investments with environmental objectives that do not qualify as Taxonomy-aligned. The environmental objectives of the Sub-fund are attained by investing in companies that score positively on SDG 12 (Responsible consumption and production), SDG 13 (Climate action), SDG 14 (Life below water), and SDG 15 (Life on land) in Robeco's SDG Framework. While the sum of sustainable investments with an environmental objective and socially sustainable investments always adds up to the Sub-fund's minimum proportion of 50% sustainable investments, we do not commit to a minimum share of sustainable investments with an environmental objective because the Sub-fund's investment strategy does not have a specific environmental investment objective. Therefore, the minimum share of sustainable investments with an environmental objective is 0%.

²³ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

What is the minimum share of socially sustainable investments?

The Sub-fund intends to make sustainable investments, measured as positive scores via Robeco's SDG Framework. Among those could be investments with social objectives. The social objectives of the Sub-fund are attained by investing in companies that score positively on SDG 1 (No poverty), SDG 2 (Zero hunger), SDG 3 (Good health and well-being), SDG 4 (Quality education), SDG 5 (Gender equality), SDG 6 (Clean water and sanitation), SDG 7 (Affordable and clean energy), SDG 8 (Decent work and economic growth), SDG 9 (Industry, innovation and infrastructure), SDG 10 (Reduced inequalities), SDG 11 (Sustainable cities and communities), SDG 16 (Peace, justice and strong institutions) and SDG 17 (Partnerships for the goals), in Robeco's SDG Framework. While the sum of socially sustainable investments and sustainable investments with an environmental objective always adds up to the Sub-fund's minimum proportion of sustainable investments, we do not commit to a minimum share of socially sustainable investments because the Sub-fund's investment strategy does not have a specific socially sustainable investment objective. Therefore, the minimum share of socially sustainable investments is 0%.

What investments are included under "#2 Other", what is their purpose and are there any minimum environmental or social safeguards?

The type of instruments included under "#2 Other" and their purpose are outlined in Annex I of this Prospectus under the header 'Financial instruments and investment restrictions'. They include cash, cash equivalents, as well as investment funds and eligible asset classes (other than bonds and equities) that do not specifically promote E/S characteristics. As indicated above, the Sub-fund does not make use of derivatives to attain the environmental or social characteristics promoted. The Sub-fund may make use of derivatives, which thus always fall under the category "#2 Other", for hedging, liquidity management and efficient portfolio management as well as investment purposes. Exchange traded and over-the-counter derivatives are permitted, including but not limited to futures, swaps, options and currency forwards. In case the Sub-fund uses derivatives, the underlying shall comply with the investment policy. Where relevant, minimum environmental or social safeguards are taken into account, by, for example, applying Robeco's Exclusion Policy for any single security derivative.

Is a specific index designated as a reference benchmark to determine whether this financial product is aligned with the environmental and/or social characteristics that it promotes?

Not applicable.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

v) RobecoSAM Global SDG Equities

Pre-contractual disclosure for the financial products referred to in Article 9, paragraphs 1 to 4a, of Regulation (EU) 2019/2088 and Article 5, first paragraph, of Regulation (EU) 2020/852

Product name: RobecoSAM Global SDG Equities

Legal entity identifier: 213800NVKQZ6814DWL83

Sustainable investment objective

Does this financial product have a sustainable investment objective?

Yes

 No

<p><input checked="" type="checkbox"/> It will make a minimum of sustainable investments with an environmental objective: 1%</p> <ul style="list-style-type: none"> <input type="checkbox"/> in economic activities that qualify as environmentally sustainable under the EU Taxonomy <input checked="" type="checkbox"/> in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy <p><input checked="" type="checkbox"/> It will make a minimum of sustainable investments with a social objective: 50%</p>	<p><input type="checkbox"/> It promotes Environmental/Social (E/S) characteristics and while it does not have as its objective a sustainable investment, it will have a minimum proportion of ___% of sustainable investments</p> <ul style="list-style-type: none"> <input type="checkbox"/> with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy <input type="checkbox"/> with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy <input type="checkbox"/> with a social objective <p><input type="checkbox"/> It promotes E/S characteristics, but will not make any sustainable investments</p>
-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------	------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

What is the sustainable investment objective of this financial product?

Sustainability indicators measure how the sustainable objectives of this financial product are attained.

The Sub-fund's sustainable investment objective is to advance the United Nations Sustainable Development Goals (UN SDGs) by investing in companies whose business models and operational practices are aligned with targets defined by the 17 UN SDGs.

Sub-fund does not have a carbon-reduction objective and there is no reference benchmark designated for the purpose of attaining the sustainable objective promoted by the Sub-fund.

● ***What sustainability indicators are used to measure the attainment of the sustainable investment objective of this financial product?***

The Sub-fund has the following sustainability indicators:

1. The number of companies with a positive SDG score based on the internally developed SDG Framework.
2. The % of investments in securities that are on Robeco's Exclusion list as result of the application of Robeco's Exclusion Policy.
3. The % of holdings that are in violation of the ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises.
4. The number of holdings and agenda items voted.

● ***How do sustainable investments not cause significant harm to any environmental or social sustainable investment objective?***

The sustainable investments do no significant harm to any environmental or social sustainable investment objective by considering a principal adverse impact and aligning with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights. In addition, sustainable investments score positively on Robeco's SDG Framework, and therefore do not cause significant harm.

How have the indicators for adverse impacts on sustainability factors been taken into account?

Mandatory principal adverse impact indicators are considered through Robeco's SDG Framework, either directly or indirectly, when identifying sustainable investments for the Sub-fund. In addition, voluntary environmental and social indicators are taken into account, depending on their relevance for measuring impacts on the SDGs and the availability of data. A detailed description of the incorporation of principal adverse impacts is available via Robeco's Principal Adverse Impact Statement published on the Robeco website (<https://www.robeco.com/files/docm/docu-principal-adverse-impact-statement-summary-entity-level.pdf>). In this statement, Robeco sets out its approach to identifying and prioritizing principal adverse impacts, and how principal adverse impacts are considered as part of Robeco's investment due diligence process and procedures relating to research and analysis, exclusions and restrictions and/or voting and engagement. This description also explains how principal adverse impact indicators are considered by the SDG Framework.

How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights?

The sustainable investments are aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights via both Robeco's Exclusion Policy and Robeco's SDG Framework.

Does this financial product consider principal adverse impacts on sustainability factors?

Yes, _____

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

The Sub-fund considers principal adverse impacts on sustainability factors as referred to in Annex I of the SFDR Delegated Act.

Pre-investment, Robeco's SDG Framework assesses companies' positive and negative contributions to the Sustainable Development Goals (SDGs). Robeco's SDG Framework directly and/or indirectly screens companies on many of the topics considered by the PAI indicators.

Post-investment, the following principal adverse impacts on sustainability factors are taken into account:

- Via the application of the voting policy, the following PAIs are considered:
 - All indicators related to GHG emissions (PAI 1-6, Table 1)
 - Indicators related to social and employee matters (PAI 10-13, Table 1; PAI 5-8, Table 3)
- Via Robeco's entity engagement program, the following PAIs are considered:
 - All indicators related to Climate and other environment-related indicators (PAI 1-9, Table 1)
 - Violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1). On an ongoing basis, the investment universe is scanned for controversial behavior in relation to the aforementioned principles and guidelines.
 - In addition, based on a yearly review of Robeco's performance on all mandatory and selected voluntary indicators, holdings of the Sub-fund that cause adverse impact might be selected for engagement.

More information is available via Robeco's Principal Adverse Impact Statement, published on Robeco's website. The Sub-fund will periodically report how it has considered the principal adverse impacts of its investments in the Company's annual report, which will be made available each year on or before 30 April at the Sub-fund page highlighted in final section of this document.

No

The investment strategy guides investment decisions based on factors such as investment objectives and risk tolerance.

What investment strategy does this financial product follow?

RobecoSAM Global SDG Equities is an actively managed fund that invests globally in companies that take action to advance the UN Sustainable Development Goals. The selection of these stocks is based on fundamental analysis as described in the Investment policy strategy paragraph in Appendix I of this Prospectus. The strategy integrates sustainability indicators on a continuous basis as part of the stock selection process. Amongst others, the Sub-fund applies norms-based and activity-based exclusions, Robeco's good governance policy, Robeco's SDG framework and considers Principal Adverse Impacts in the investment process. More product-specific information can be found on our website and the links provided in the final question of this disclosure.

What are the binding elements of the investment strategy used to select the investments to attain the sustainable investment objective?

The Sub-fund has the following binding elements:

1. The Sub-fund solely invests in companies with a positive SDG score.
2. The Sub-fund's portfolio complies with Robeco's Exclusion Policy (<https://www.robeco.com/files/docm/docu-exclusion-policy.pdf>), excluding investments in companies that are exposed to controversial behavior and controversial products. This means that the Sub-fund has 0% exposure to excluded securities, taking into account a grace period. Information with regards to the effects of the exclusions on the Sub-fund's universe can be found at <https://www.robeco.com/files/docm/docu-exclusion-list.pdf>.
3. The Sub-fund avoids investment in companies that are in breach of the ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises. Companies that breach the international norms will be excluded from the investment universe.
4. All equity holdings have a granted right to vote and Robeco exerts that right by voting according to Robeco's Proxy Voting Policy, unless impediments occur (e.g. share blocking or when not considered cost efficient). Robeco's Proxy Voting Policy can be found at <https://www.robeco.com/files/docm/docu-robeco-stewardship-policy.pdf>.

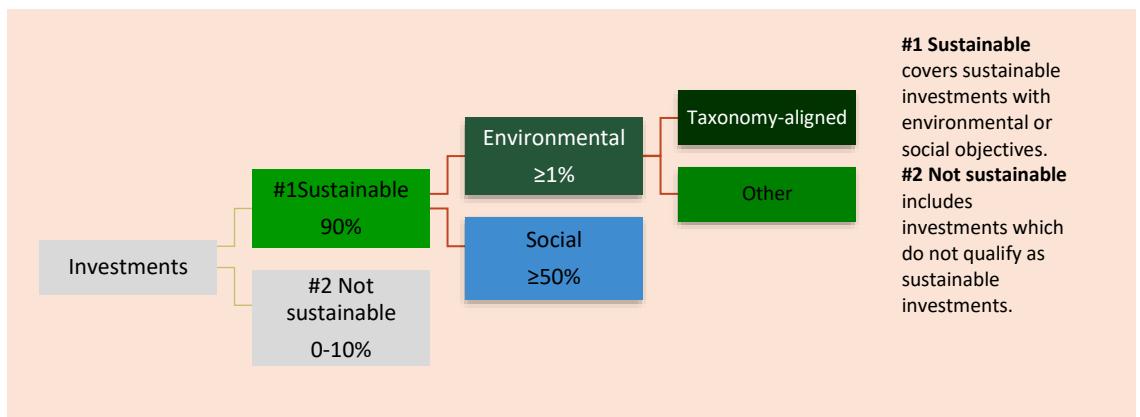

What is the policy to assess good governance practices of the investee companies?

Robeco has a Good Governance policy to assess governance practices of companies. The policy describes how Robeco determines if and when a company does not follow good governance practices and is therefore excluded from the initial investment universe for Article 8 and 9 products. Robeco's Good Governance policy applies to the Sub-fund and tests on a set of governance criteria that reflect widely recognized industry established norms and include topics as employee relations, management structure, tax compliance and remuneration.

The Good Governance test consists of criteria on such topics that are examined for investee companies and further explained in Robeco's Good Governance policy <https://www.robeco.com/files/docm/docu-robeco-good-governance-policy.pdf>. Additionally, the companies that do not pass the good governance test are reflected in the exclusion list that can be accessed here - <https://www.robeco.com/files/docm/docu-exclusion-list.pdf>.

What is the asset allocation and the minimum share of sustainable investments?

The Sub-fund plans to make a minimum of 90% sustainable investments, measured by positive scores via Robeco's SDG Framework. The investments in the category non-sustainable, estimated between 0-10%, are in cash and cash equivalents. The planned asset allocation is monitored continuously, and evaluated on a yearly basis.

Good governance practices include sound management structures, employee relations, remuneration of staff and tax compliance.

Asset allocation describes the share of investments in specific assets.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies

- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.

- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

● **How does the use of derivatives attain the sustainable investment objective?**

The Sub-fund does not make use of derivatives to attain the sustainable objective promoted by the financial product. The Sub-fund may make use of derivatives for hedging and liquidity management. This includes the usage of derivatives to manage currency and market exposures in a cost-effective manner. To that purpose exchange traded and over-the-counter derivatives linked to equity indices and currencies are permitted. In case the Sub-fund uses derivatives, the underlying shall comply with the investment policy. Where relevant, minimum environmental or social safeguards are taken into account.

● **To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?**

The Sub-fund does not intend to make Taxonomy-aligned investments. It cannot be excluded that among the Sub-fund's holdings certain investments are Taxonomy aligned. The Sub-fund will report on Taxonomy-aligned investment in the periodic disclosures, this will be done based on turnover. In the future, once data-availability in relation to the EU Taxonomy will improve, Robeco might consider setting a target based on turnover or CAPEX. Robeco currently relies on third-party data in relation to the EU Taxonomy, including data in relation to companies that do not disclose on the EU Taxonomy alignment of their activities. EU Taxonomy-alignment data is not yet subject to a review by third parties. The Sub-fund only makes investments in equity and therefore it does not have sovereign exposures. The expected level of alignment with and without sovereign bonds is the same.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power

● **Does the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy²⁴?**

Yes:

In fossil gas In nuclear energy

No

²⁴ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

 are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

*** For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures**
**** As the investments are not Taxonomy-aligned, the exclusion of sovereign bonds has no impact on the graph and therefore no such percentage is shown here.**

What is the minimum share of investments in transitional and enabling activities?

0%.

What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?

The Sub-fund intends to make sustainable investments, measured as positive scores via Robeco's SDG Framework. Among those could be investments with environmental objectives that do not qualify as Taxonomy-aligned. The Sub-fund commits to a minimum share of sustainable investments of 1% with an environmental objective because the Sub-fund's investment strategy does have an environmental investment objective. The environmental objectives of the Sub-fund are attained by investing in companies that score positively on SDG 12 (Responsible consumption and production), SDG 13 (Climate action), SDG 14 (Life below water), and SDG 15 (Life on land) in Robeco's SDG Framework. The sum of sustainable investments with an environmental objective and socially sustainable investments always add up to the Sub-fund's minimum proportion of 90% sustainable investments.

What is the minimum share of sustainable investments with a social objective?

The Sub-fund intends to make sustainable investments, measured as positive scores via Robeco's SDG Framework. The Sub-fund commits to a minimum share of socially sustainable investments of 50% because the Sub-fund's investment strategy does have a specific social investment objective. The social objectives of the Sub-fund are attained by investing in companies that score positively on SDG 1 (No poverty), SDG 2 (Zero hunger), SDG 3 (Good health and well-being), SDG 4 (Quality education), SDG 5 (Gender equality), SDG 6 (Clean water and sanitation), SDG 7 (Affordable and clean energy), SDG 8

(Decent work and economic growth), SDG 9 (Industry, innovation and infrastructure), SDG 10 (Reduced inequalities), SDG 11 (Sustainable cities and communities), SDG 16 (Peace, justice and strong institutions) and SDG 17 (Partnerships for the goals), in Robeco's SDG Framework. The sum of socially sustainable investments and sustainable investments with an environmental objective always add up to the Sub-fund's minimum proportion of 90% sustainable investments.

What investments are included under "#2 Not sustainable", what is their purpose and are there any minimum environmental or social safeguards?

The type of instruments included under "#2 Not Sustainable" and their purpose are outlined in Annex I of this Prospectus under the header 'Financial instruments and investment restrictions'. They include cash, cash equivalents, as well as investment funds and eligible asset classes (other than bonds and equities) that do not specifically promote E/S characteristics. As indicated above, the Sub-fund does not make use of derivatives to attain its sustainable objective. The Sub-fund may make use of derivatives for hedging and liquidity management. This includes the usage of derivatives to manage currency and market exposures in a cost-effective manner. For the management of currency exposure FX Forwards are allowed. The exchange traded derivatives linked to equity indices, such as equity index futures covering the market universe, are permitted for cash equitization. In case the Sub-fund uses such index market derivatives, these shall be temporary positions as defined by the investment restrictions. Where relevant, minimum environmental or social safeguards are taken into account by monitoring and performing suitability tests on index futures constituents following Robeco's Exclusion Policy.

Is a specific index designated as a reference benchmark to meet the sustainable investment objective?

Not applicable.

Reference benchmarks are indexes to measure whether the financial product attains the sustainable investment objective.

Where can I find more product specific information online?

More product-specific information can be found on the website:

w) RobecoSAM Global SDG Engagement Equities

Pre-contractual disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Product name: RobecoSAM Global SDG Engagement Equities

Legal entity identifier: 2138007Y9W8ZMOEUOL93

Environmental and/or social characteristics

Does this financial product have a sustainable investment objective?

Yes

No

It will make a minimum of **sustainable investments with an environmental objective:** ____%

in economic activities that qualify as environmentally sustainable under the EU Taxonomy

in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

It will make a minimum of **sustainable investments with a social objective:** ____%

It promotes **Environmental/Social (E/S) characteristics** and while it does not have as its objective a sustainable investment, it will have a minimum proportion of 40% of sustainable investments

with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with a social objective

It promotes E/S characteristics, but **will not make any sustainable investments**

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

What environmental and/or social characteristics are promoted by this financial product?

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

The Sub-fund has the following E/S characteristics:

1. The Sub-fund promotes investment in a portfolio that avoid significant harm, and aim to improve their contribution, to the Sustainable Development Goals (SDGs).
2. The Sub-fund promotes driving a clear and measurable improvement in a company's contribution to the United Nations Sustainable Development Goals (SDGs) over three to five years by performing engagement.
3. The Sub-fund promotes certain minimum environmental and social safeguards through applying exclusion criteria with regards to products and business practices that Robeco believes are detrimental to society and incompatible with sustainable investment strategies, such as exposure to controversial behaviour, controversial weapons, and fossil fuels.
4. The Sub-fund promotes adherence to and conducting business activities in accordance with the United Nations Universal Declaration of Human Rights, the International Labor Organization's (ILO) labor standards, the United Nations Guiding Principles for Business and Human Rights (UNGPs), the United Nations Global Compact (UNGC) and the OECD Guidelines for Multinational Enterprises, by scrutinizing companies that violate these principles.
5. The Sub-fund promotes good governance and sustainable corporate practices through proxy voting, which contributes to long-term shareholder value creation. This includes taking an active stance on social and environmental topics through Robeco's proxy voting policy.

There is no reference benchmark designated for the purpose of attaining the environmental or social characteristics promoted by the Sub-fund.

What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?

The Sub-fund has the following sustainability indicators:

1. The number of companies with a SDG score of -1, 0 (zero) or +1 based on the internally developed SDG Framework.
2. The number of companies actively engaged.
3. The % of investments in securities that are on Robeco's Exclusion list as result of the application of Robeco's Exclusion Policy.
4. The % of holdings that are in violation of the ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises.
5. The number of holdings and agenda items voted.

What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?

The sustainable investments aim to contribute to the UN Sustainable Development Goals ("SDGs"), that have both social and environmental objectives. These are 17 goals that are globally recognised and include environmental goals such as climate action, clean water, life on land and water and social goals such as zero hunger, gender equality, education, etc. Robeco has developed a proprietary framework based on the UN SDGs through which an issuer's contribution to such SDGs is determined through a 3-step process. This process starts with a sector baseline on which a company's products are analysed to examine contribution to the society and environment. Further, the operational processes involved in creating such products is checked along with any controversies/litigation claims and remediation actions taken which are perused before a final SDG score is determined. The final score ranges between high negative (-3) to high positive (+3) and only those issuers which achieve positive SDG scores (+1, +2 and +3) are regarded as Sustainable Investments.

● ***How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?***

The sustainable investments do no significant harm to any environmental or social sustainable investment objective by considering a principal adverse impact and aligning with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights. In addition, sustainable investments score positively on Robeco's SDG Framework, and therefore do not cause significant harm.

How have the indicators for adverse impacts on sustainability factors been taken into account?

Mandatory principal adverse impact indicators are considered through Robeco's SDG Framework, either directly or indirectly, when identifying sustainable investments for the Sub-fund. In addition, voluntary environmental and social indicators are taken into account, depending on their relevance for measuring impacts on the SDGs and the availability of data. A detailed description of the incorporation of principal adverse impacts is available via Robeco's Principal Adverse Impact Statement published on the Robeco website (<https://www.robeco.com/files/docm/docu-principal-adverse-impact-statement-summary-entity-level.pdf>). In this statement, Robeco sets out its approach to identifying and prioritizing principal adverse impacts, and how principal adverse impacts are considered as part of Robeco's investment due diligence process and procedures relating to research and analysis, exclusions and restrictions and/or voting and engagement. This description also explains how principal adverse impact indicators are considered by the SDG Framework.

How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The sustainable investments are aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights via both Robeco's Exclusion Policy and Robeco's SDG Framework.

Robeco's Exclusion Policy includes an explanation of how Robeco acts in accordance with the International Labor Organization (ILO) standards, United Nations Guiding Principles (UNGPs), United Nations Global Compact (UNGC) Principles and the Organization for Economic Co-operation and Development (OECD) Guidelines for Multinational Enterprises and is guided by these international treaties to assess the behavior of companies. Robeco continuously screens its investments for breaches of these principles. In case of a breach, the company will be excluded or engaged with, and is not considered a sustainable investment.

Robeco's SDG Framework screens for breaches on these principles in the final step of the framework. In this step, Robeco checks whether the company concerned has been involved in any controversies. Involvement in any controversy will result in a negative SDG score for the company, meaning it is not a sustainable investment.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

Does this financial product consider principal adverse impacts on sustainability factors?

Yes, _____

The Sub-fund considers principal adverse impacts on sustainability factors as referred to in Annex I of the SFDR Delegated Act.

Pre-investment, the following principal adverse impacts on sustainability factors are considered:

- Via the applied normative and activity-based exclusions, the following PAIs are considered:
 - Exposure to companies active in the fossil fuel sector (PAI 4, Table 1)
 - Violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1)
 - Activities negatively affecting biodiversity-sensitive areas (PAI 7, Table 1). The consideration of this PAI is currently restricted to applying exclusions to palm oil producing companies and for any breaches to the UNGC, UNGP and OECD Guidelines for Multinational Enterprises in relation to biodiversity.
 - Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons (PAI 14, Table 1)
- Via the ESG integration process, as part of the investment due diligence policies and procedures, the following PAIs are considered:
 - All indicators related to GHG emissions, as part of the required Climate Risk analysis (PAI 1-6, Table 1, PAI 4, Table 2)
 - Biodiversity, water and waste indicators (PAI 7-9, Table 1)
 - Board gender diversity (PAI 13, Table 1)

Post-investment, the following principal adverse impacts on sustainability factors are taken into account:

- Via the application of the voting policy, the following PAIs are considered:
 - All indicators related to GHG emissions (PAI 1-6, Table 1)

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

- Indicators related to social and employee matters (PAI 10-13, Table 1; PAI 5-8, Table 3)
- o Via Robeco's entity engagement program, the following PAIs are considered:
 - All indicators related to Climate and other environment-related indicators (PAI 1-9, Table 1)
 - Violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1). On an ongoing basis, the investment universe is scanned for controversial behavior in relation to the aforementioned principles and guidelines.
 - In addition, based on a yearly review of Robeco's performance on all mandatory and selected voluntary indicators, holdings of the Sub-fund that cause adverse impact might be selected for engagement.

More information is available via Robeco's Principal Adverse Impact Statement, published on Robeco's website. The Sub-fund will periodically report how it has considered the principal adverse impacts of its investments in the Company's annual report, which will be made available each year on or before 30 April at the Sub-fund page highlighted in final section of this document.

No

What investment strategy does this financial product follow?

RobecoSAM Global SDG Engagement Equities is an actively managed fund that invests in a concentrated selection of global stocks. Stock selection is based on fundamental analysis to invest in companies that are best able to have a clear and measurable improvement in their contribution to the United Nations Sustainable Development Goals (UN SDGs) over three to five years via active engagement, as described in the Investment policy strategy paragraph in Appendix I of this Prospectus. The strategy integrates sustainability indicators on a continuous basis as part of the stock selection process. Amongst others, the Sub-fund applies norms-based and activity-based exclusions, Robeco's good governance policy, Robeco's SDG framework and considers Principal Adverse Impacts in the investment process. More product-specific information can be found on our website and the links provided in the final question of this disclosure.

What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?

The Sub-fund has the following binding elements:

1. The Sub-fund is solely invested in companies that hold a -1, 0 (zero) or positive SDG score. The Sub-fund excludes all high or medium negative SDG scores (-3 or -2) and all high or medium positive SDG scores (+3 or +2) for selection of new investment cases based on the internally developed SDG Framework.
 - The Sub-fund can only hold high or medium positive SDG scores (+3 and +2) when a company receives an upgrade of their SDG score after successfully completed engagement that started with an initial -1, 0 or +1 SDG score at investment. The Sub-fund can hold up to 20% of such holdings that are rated SDG (+3 and +2) after engagement has been successful for a period of 6 months.
 - (Successfully completed engagement: When a company progresses on the targets identified and fulfills the key performance indicators as established at the start of the engagement. Such targets can be linked with internal frameworks like the SDG framework).

The investment strategy guides investment decisions based on factors such as investment objectives and risk tolerance.

2. The Sub-fund actively engages with 100% of the corporate holdings in the portfolio, typically for a period of 3 to 5 years. The engagement trajectories are assessed annually, considering the progress of pre-determined objectives that focus on contributing to specific sub targets of the SDGs. Once the company in scope falls out of the universe as a result of (a) a successful engagement (resulting in higher SDG scores) or (b) an unsuccessful engagement, then a selling strategy will be designed for divestment.
3. The Sub-fund's portfolio complies with Robeco's Exclusion Policy (<https://www.robeco.com/files/docm/docu-exclusion-policy.pdf>) excluding investments in companies that are exposed to controversial behavior and controversial products. This means that the Sub-fund has 0% exposure to excluded securities, taking into account a grace period. Information with regards to the effects of the exclusions on the Sub-fund's universe can be found at <https://www.robeco.com/files/docm/docu-exclusion-list.pdf>.
4. The Sub-fund avoids investment in companies that are in breach of the ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises. Companies that breach the international norms will be excluded from the investment universe.
5. All equity holdings have a granted right to vote and Robeco exerts that right by voting according to Robeco's Proxy Voting Policy, unless impediments occur (e.g. share blocking or when not considered cost efficient). Robeco's Proxy Voting Policy can be found at <https://www.robeco.com/files/docm/docu-robeco-stewardship-policy.pdf>.

● **What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?**

The Sub-fund does not commit to a minimum rate to reduce the scope of investments prior to the application of the investment strategy.

● **What is the policy to assess good governance practices of the investee companies?**

Robeco has a Good Governance policy to assess governance practices of companies. The policy describes how Robeco determines if and when a company does not follow good governance practices and is therefore excluded from the initial investment universe for Article 8 and 9 products. Robeco's Good Governance policy applies to the Sub-fund and tests on a set of governance criteria that reflect widely recognized industry established norms and include topics as employee relations, management structure, tax compliance and remuneration.

The Good Governance test consists of criteria on such topics that are examined for investee companies and further explained in Robeco's Good Governance policy <https://www.robeco.com/files/docm/docu-robeco-good-governance-policy.pdf>. Additionally, the companies that do not pass the good governance test are reflected in the exclusion list that can be accessed here - <https://www.robeco.com/files/docm/docu-exclusion-list.pdf>.

What is the asset allocation planned for this financial product?

At least 90% of the investments are aligned with the E/S characteristics of the Sub-fund. The Sub-fund plans to make a minimum of 40% sustainable investments, measured by positive scores via Robeco's SDG Framework. The investments in the category Other, estimated between 0-10%, are mostly in cash, cash equivalents and derivatives as further described below. The planned asset allocation is monitored continuously, and evaluated on a yearly basis.

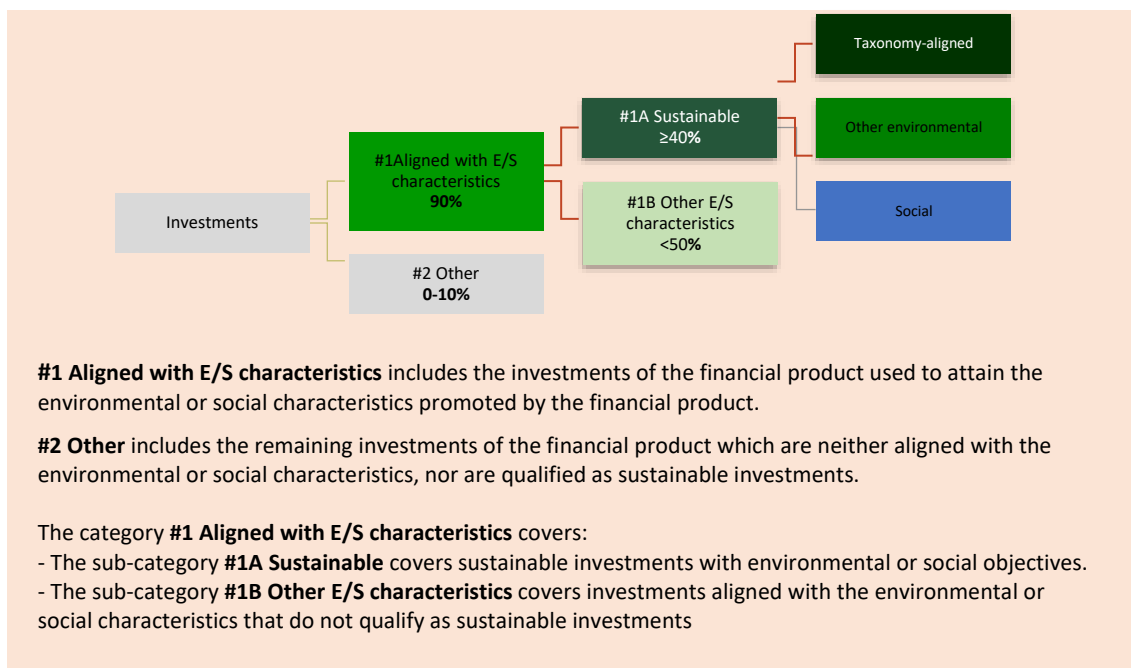

Good governance practices include sound management structures, employee relations, remuneration of staff and tax compliance.

Asset allocation describes the share of investments in specific assets.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure (CapEx)** showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure (OpEx)** reflecting green operational activities of investee companies.

● **How does the use of derivatives attain the environmental or social characteristics promoted by the financial product?**

The Sub-fund does not make use of derivatives to attain the environmental or social characteristics promoted by the financial product. The Sub-fund may make use of derivatives for hedging, liquidity management and efficient portfolio management as well as investment purposes. Exchange traded and over-the-counter derivatives are permitted, including but not limited to futures, swaps, options and currency forwards. Whilst the Sub-fund may use derivatives both for investment purposes as well as for hedging and efficient portfolio management, it does not utilize derivatives for such purposes outside the intended share of investments allocated to the 'Other' category.

In case the Sub-fund uses derivatives, the underlying shall comply with the investment policy. Where relevant, minimum environmental or social safeguards are taken into account as described below.

● **To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?**

0%. The Sub-fund does not intend to make Taxonomy-aligned investments. It cannot be excluded that among the Sub-fund's holdings certain investments are Taxonomy aligned. The Sub-fund will report on Taxonomy-aligned investment in the periodic disclosures. In the future, once data-availability in relation to the EU Taxonomy will improve, Robeco might consider setting a target based on turnover or CAPEX. Robeco currently relies on third-party data, including data in relation to companies that do not disclose on the EU Taxonomy alignment of their activities. EU Taxonomy-alignment data is not yet subject to a review by third parties. The Sub-fund only makes investments in equity and therefore it does not have sovereign exposures. The expected level of alignment with and without sovereign bonds is the same.

To comply with the EU Taxonomy, the

● **Does the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy?²⁵**

²⁵ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

criteria for **fossil gas** include limitations on emissions and switching to renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

 are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

- Yes
- In fossil gas
- In nuclear energy
- No

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.*

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

** As the investments are not Taxonomy-aligned, the exclusion of sovereign bonds has no impact on the graph and therefore no such percentage is shown here.

What is the minimum share of investments in transitional and enabling activities?

0%.

What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?

The Sub-fund intends to make sustainable investments, measured as positive scores via Robeco's SDG Framework. Among those could be investments with environmental objectives that do not qualify as Taxonomy-aligned. The environmental objectives of the Sub-fund are attained by investing in companies that score positively on SDG 12 (Responsible consumption and production), SDG 13 (Climate action), SDG 14 (Life below water), and SDG 15 (Life on land) in Robeco's SDG Framework. While the sum of sustainable investments with an environmental objective and socially sustainable investments always adds up to the Sub-fund's minimum proportion of 40% sustainable investments, we do not commit to a minimum share of sustainable investments with an environmental objective because the Sub-fund's investment strategy does not have a specific environmental investment objective. Therefore, the minimum share of sustainable investments with an environmental objective is 0%.

What is the minimum share of socially sustainable investments?

The Sub-fund intends to make sustainable investments, measured as positive scores via Robeco's SDG Framework. Among those could be investments with social objectives. The social objectives of the Sub-fund are attained by investing in companies that score positively on SDG 1 (No poverty), SDG 2 (Zero hunger), SDG 3 (Good health and well-being), SDG 4 (Quality education), SDG 5 (Gender equality), SDG 6 (Clear water and sanitation), SDG 7 (Affordable and clean energy), SDG 8 (Decent work and economic growth), SDG 9 (Industry, innovation and infrastructure), SDG 10 (Reduced inequalities), SDG 11 (Sustainable cities and communities), SDG 16 (Peace, justice and strong institutions) and SDG 17

(Partnerships for the goals), in Robeco's SDG Framework. While the sum of socially sustainable investments and sustainable investments with an environmental objective always adds up to the Sub-fund's minimum proportion of sustainable investments, we do not commit to a minimum share of socially sustainable investments because the Sub-fund's investment strategy does not have a specific socially sustainable investment objective. Therefore, the minimum share of socially sustainable investments is 0%.

What investments are included under "#2 Other", what is their purpose and are there any minimum environmental or social safeguards?

The type of instruments included under "#2 Other" and their purpose are outlined in Annex I of this Prospectus under the header 'Financial instruments and investment restrictions'. They include cash, cash equivalents, as well as investment funds and eligible asset classes (other than bonds and equities) that do not specifically promote E/S characteristics. As indicated above, the Sub-fund does not make use of derivatives to attain the environmental or social characteristics promoted. The Sub-fund may make use of derivatives, which thus always fall under the category "#2 Other", for hedging, liquidity management and efficient portfolio management as well as investment purposes. Exchange traded and over-the-counter derivatives are permitted, including but not limited to futures, swaps, options and currency forwards. In case the Sub-fund uses derivatives, the underlying shall comply with the investment policy. Where relevant, minimum environmental or social safeguards are taken into account, by, for example, applying Robeco's Exclusion Policy for any single security derivative.

Is a specific index designated as a reference benchmark to determine whether this financial product is aligned with the environmental and/or social characteristics that it promotes?

Not applicable.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

x) Robeco QI Emerging Markets Sustainable Enhanced Index Equities II

Pre-contractual disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Product name: Robeco QI Emerging Markets Sustainable Enhanced Index Equities II

Legal entity identifier: 213800G3D5YDMZG9Z661

Environmental and/or social characteristics

Does this financial product have a sustainable investment objective?

Yes

No

It will make a minimum of **sustainable investments with an environmental objective: ___%**

- in economic activities that qualify as environmentally sustainable under the EU Taxonomy
- in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

It will make a minimum of **sustainable investments with a social objective: ___%**

It promotes **Environmental/Social (E/S) characteristics** and while it does not have as its objective a sustainable investment, it will have a minimum proportion of 60% of sustainable investments

- with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy
- with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy
- with a social objective

It promotes E/S characteristics, but **will not make any sustainable investments**

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

What environmental and/or social characteristics are promoted by this financial product?

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

The Sub-fund has the following E/S characteristics:

1. The Sub-fund promotes good governance and sustainable corporate practices through proxy voting, which contributes to long-term shareholder value creation. This includes taking an active stance on social and environmental topics through Robeco's proxy voting policy.
2. The Sub-fund promotes having a substantially lower environmental footprint than the general market index referred to in Appendix VI – Benchmarks (the "General Market Index").
3. The Sub-fund promotes certain minimum environmental and social safeguards through applying exclusion criteria with regards to products and business practices that Robeco believes are detrimental to society and incompatible with sustainable investment strategies, such as exposure to controversial behaviour, controversial weapons, and fossil fuels.
4. The Sub-fund promotes adherence to and conducting business activities in accordance with the United Nations Universal Declaration of Human Rights, the International Labor Organization's (ILO) labor standards, the United Nations Guiding Principles for Business and Human Rights (UNGPs), the United Nations Global Compact (UNGC) and the OECD Guidelines for Multinational Enterprises.
5. The Sub-fund promotes investment in a portfolio that avoid significant harm to the Sustainable Development Goals (SDGs).
6. The Sub-fund has a substantially better weighted average ESG score than the General Market Index.

There is no reference benchmark designated for the purpose of attaining the environmental or social characteristics promoted by the Sub-fund.

What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?

The Sub-fund has the following sustainability indicators:

1. The number of holdings and agenda items voted.
2. The Sub-fund's weighted carbon, water and waste footprint score compared to the General Market Index.
3. The % of investments in securities that are on Robeco's Exclusion list as result of the application of Robeco's Exclusion Policy.
4. The % of holdings that are in violation of the ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises.
5. The proportion of companies that hold a high or medium negative SDG score (-3 or -2) based on the internally developed SDG Framework.
6. The Sub-fund's weighted average ESG score compared to the General Market Index.

What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?

The sustainable investments aim to contribute to the UN Sustainable Development Goals ("SDGs"), that have both social and environmental objectives. These are 17 goals that are globally recognised and include environmental goals such as climate action, clean water, life on land and water and social goals such as zero hunger, gender equality, education, etc. Robeco has developed a proprietary framework based on the UN SDGs through which an issuer's contribution to such SDGs is determined through a 3-step process. This process starts with a sector baseline on which a company's products are analysed to examine contribution to the society and environment. Further, the operational processes involved in creating such products is checked along with any controversies/litigation claims and remediation actions taken which are perused before a final SDG score is determined. The final score ranges between high negative (-3) to high positive (+3) and only those issuers which achieve positive SDG scores (+1, +2 and +3) are regarded as Sustainable Investments.

● ***How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?***

The sustainable investments do no significant harm to any environmental or social sustainable investment objective by considering a principal adverse impact and aligning with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights. In addition, sustainable investments score positively on Robeco's SDG Framework, and therefore do not cause significant harm.

How have the indicators for adverse impacts on sustainability factors been taken into account?

Mandatory principal adverse impact indicators are considered through Robeco's SDG Framework, either directly or indirectly, when identifying sustainable investments for the Sub-fund. In addition, voluntary environmental and social indicators are taken into account, depending on their relevance for measuring impacts on the SDGs and the availability of data. A detailed description of the incorporation of principal adverse impacts is available via Robeco's Principal Adverse Impact Statement published on the Robeco website (<https://www.robeco.com/files/docm/docu-principal-adverse-impact-statement-summary-entity-level.pdf>). In this statement, Robeco sets out its approach to identifying and prioritizing principal adverse impacts, and how principal adverse impacts are considered as part of Robeco's investment due diligence process and procedures relating to research and analysis, exclusions and restrictions and/or voting and engagement. This description also explains how principal adverse impact indicators are considered by the SDG Framework.

How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The sustainable investments are aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights via both Robeco's Exclusion Policy and Robeco's SDG Framework.

Robeco's Exclusion Policy includes an explanation of how Robeco acts in accordance with the International Labor Organization (ILO) standards, United Nations Guiding Principles (UNGPs), United Nations Global Compact (UNGC) Principles and the Organization for Economic Co-operation and Development (OECD) Guidelines for Multinational Enterprises and is guided by these international treaties to assess the behavior of companies. Robeco continuously screens its investments for breaches of these principles. In case of a breach, the company will be excluded or engaged with, and is not considered a sustainable investment.

Robeco's SDG Framework screens for breaches on these principles in the final step of the framework. In this step, Robeco checks whether the company concerned has been involved in any controversies. Involvement in any controversy will result in a negative SDG score for the company, meaning it is not a sustainable investment.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

Does this financial product consider principal adverse impacts on sustainability factors?

Yes, _____

The Sub-fund considers principal adverse impacts on sustainability factors as referred to in Annex I of the SFDR Delegated Act.

Pre-investment, the following principal adverse impacts on sustainability factors are considered:

- Via the applied normative and activity-based exclusions, the following PAIs are considered:
 - Exposure to companies active in the fossil fuel sector (PAI 4, Table 1)
 - Violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1)
 - Activities negatively affecting biodiversity-sensitive areas (PAI 7, Table 1). The consideration of this PAI is currently restricted to applying exclusions to palm oil producing companies and for any breaches to the UNGC, UNGP and OECD Guidelines for Multinational Enterprises in relation to biodiversity.
 - Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons (PAI 14, Table 1)
- Via the environmental footprint performance targets of the Sub-fund, the following PAIs are considered:
 - Carbon footprint (PAI 2, Table 1)
 - Water and waste indicators (PAI 7-9, Table 1). Robeco will use on water and waste footprint until data quality and coverage of the PAIs will improve.

Post-investment, the following principal adverse impacts on sustainability factors are taken into account:

- Via the application of the voting policy, the following PAIs are considered:
 - All indicators related to GHG emissions (PAI 1-6, Table 1)
 - Indicators related to social and employee matters (PAI 10-13, Table 1; PAI 5-8, Table 3)
- Via Robeco's entity engagement program, the following PAIs are considered:

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

- All indicators related to Climate and other environment-related indicators (PAI 1-9, Table 1)
- Violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1)
- In addition, based on a yearly review of Robeco's performance on all mandatory and selected voluntary indicators, holdings of the Sub-fund that cause adverse impact might be selected for engagement.

More information is available via Robeco's Principal Adverse Impact Statement, published on Robeco's website. The Sub-fund will periodically report how it has considered the principal adverse impacts of its investments in the Company's annual report, which will be made available each year on or before 30 April at the Sub-fund page highlighted in final section of this document.

No

What investment strategy does this financial product follow?

Robeco QI Emerging Markets Sustainable Enhanced Index Equities II is an actively managed fund that invests in stocks of companies in emerging markets. The selection of these stocks is based on a quantitative model as described in the Investment policy strategy paragraph in Appendix I of this Prospectus. The Sub-fund uses a stock selection strategy which ranks stocks on their expected future relative performance using three factors: valuation, quality and momentum. The strategy integrates sustainability indicators on a continuous basis as part of the stock selection process. Amongst others, the Sub-fund applies norms-based and activity-based exclusions, Robeco's good governance policy, Robeco's SDG framework and considers Principal Adverse Impacts in the investment process. More product-specific information can be found on our website and the links provided in the final question of this disclosure.

The investment strategy guides investment decisions based on factors such as investment objectives and risk tolerance.

What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?

The Sub-fund has the following binding elements:

1. All equity holdings have a granted right to vote and Robeco exerts that right by voting according to Robeco's Proxy Voting Policy, unless impediments occur (e.g. share blocking or when not considered cost efficient). Robeco's Proxy Voting Policy can be found at <https://www.robeco.com/files/docm/docu-robeco-stewardship-policy.pdf>.
2. The Sub-fund's weighted water and waste footprint score is at least 20% better than that of the General Market Index. The Sub-fund's weighted carbon footprint score is at least 30% better than that of the General Market Index.
3. The Sub-fund's portfolio complies with Robeco's Exclusion Policy (<https://www.robeco.com/files/docm/docu-exclusion-policy.pdf>), that is based on exclusion criteria with regards to products and business practices that Robeco believes are detrimental to society and incompatible with sustainable investment strategies. This means that the Sub-fund has 0% exposure to excluded securities, taking into account a grace period. Information with regards to the effects of the exclusions on the Sub-fund's universe can be found at <https://www.robeco.com/files/docm/docu-exclusion-list.pdf>.
4. The Sub-fund avoids investment in companies that are in breach of the ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises. Companies that breach the international norms will be excluded from the investment universe.

5. The Sub-fund excludes all high or medium negative SDG scores (-3 or -2) based on the internally developed SDG Framework.
6. The Sub-fund's weighted average ESG score is at least 10% better than that of the General Market Index.

● **What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?**

The Sub-fund does not commit to a minimum rate to reduce the scope of investments prior to the application of the investment strategy.

● **What is the policy to assess good governance practices of the investee companies?**

Robeco has a Good Governance policy to assess governance practices of companies. The policy describes how Robeco determines if and when a company does not follow good governance practices and is therefore excluded from the initial investment universe for Article 8 and 9 products. Robeco's Good Governance policy applies to the Sub-fund and tests on a set of governance criteria that reflect widely recognized industry established norms and include topics as employee relations, management structure, tax compliance and remuneration.

The Good Governance test consists of criteria on such topics that are examined for investee companies and further explained in Robeco's Good Governance policy <https://www.robeco.com/files/docm/docu-robeco-good-governance-policy.pdf>. Additionally, the companies that do not pass the good governance test are reflected in the exclusion list that can be accessed here - <https://www.robeco.com/files/docm/docu-exclusion-list.pdf>.

What is the asset allocation planned for this financial product?

At least 90% of the investments are aligned with the E/S characteristics of the Sub-fund. The Sub-fund plans to make a minimum of 60% sustainable investments, measured by positive scores via Robeco's SDG Framework. The investments in the category Other, estimated between 0-10%, are mostly in cash, cash equivalents and derivatives as further described below. The planned asset allocation is monitored continuously, and evaluated on a yearly basis.

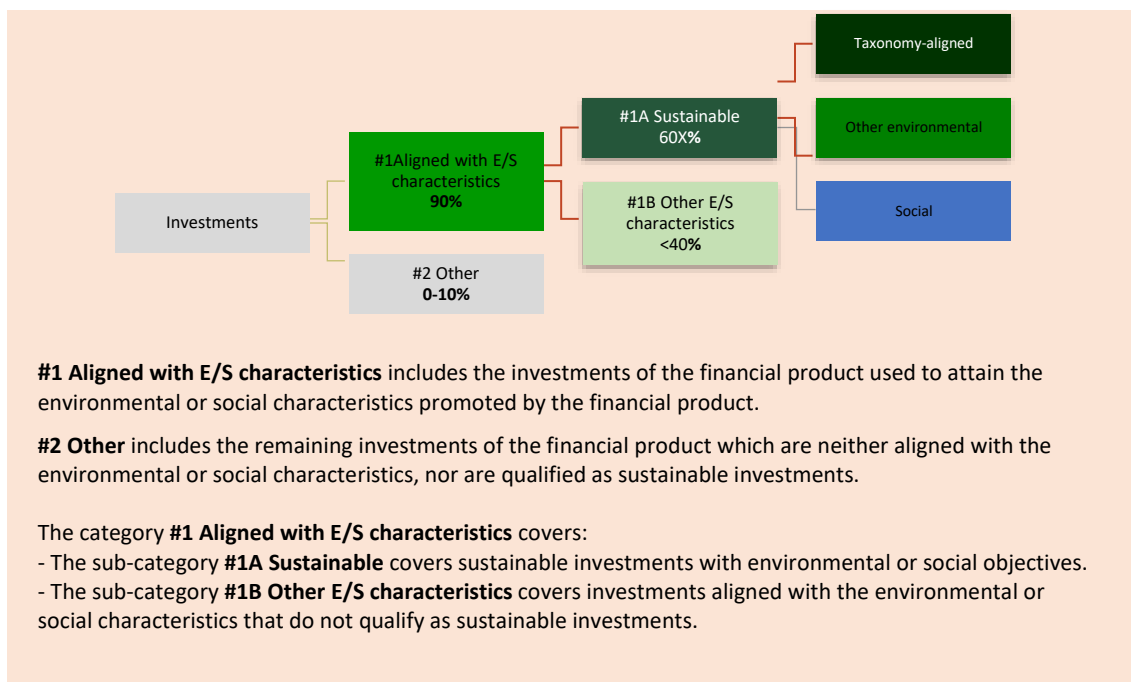

Good governance practices include sound management structures, employee relations, remuneration of staff and tax compliance.

Asset allocation describes the share of investments in specific assets.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers sustainable investments with environmental or social objectives.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

● **How does the use of derivatives attain the environmental or social characteristics promoted by the financial product?**

The Sub-fund does not make use of derivatives to attain the environmental or social characteristics promoted by the financial product. The Sub-fund may make use of derivatives for hedging, liquidity management and efficient portfolio management as well as investment purposes. Exchange traded and over-the-counter derivatives are permitted, including but not limited to futures, swaps, options and currency forwards. Whilst the Sub-fund may use derivatives both for investment purposes as well as for hedging and efficient portfolio management, it does not utilize derivatives for such purposes outside the intended share of investments allocated to the 'Other' category.

In case the Sub-fund uses derivatives, the underlying shall comply with the investment policy. Where relevant, minimum environmental or social safeguards are taken into account as described below.

● **To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?**

0%. The Sub-fund does not intend to make Taxonomy-aligned investments. It cannot be excluded that among the Sub-fund's holdings certain investments are Taxonomy aligned. The Sub-fund will report on Taxonomy-aligned investment in the periodic disclosures. In the future, once data-availability in relation to the EU Taxonomy will improve, Robeco might consider setting a target based on turnover or CAPEX. Robeco currently relies on third-party data, including data in relation to companies that do not disclose on the EU Taxonomy alignment of their activities. EU Taxonomy-alignment data is not yet subject to a review by third parties. The Sub-fund only makes investments in equity and therefore it does not have sovereign exposures. The expected level of alignment with and without sovereign bonds is the same.

To comply with the EU Taxonomy, the

● **Does the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy?²⁶**

²⁶ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

criteria for **fossil gas** include limitations on emissions and switching to renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

 are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

- Yes
- In fossil gas
- In nuclear energy
- No

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.*

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

** As the investments are not Taxonomy-aligned, the exclusion of sovereign bonds has no impact on the graph and therefore no such percentage is shown here.

What is the minimum share of investments in transitional and enabling activities?

0%.

What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?

The Sub-fund intends to make sustainable investments, measured as positive scores via Robeco's SDG Framework. Among those could be investments with environmental objectives that do not qualify as Taxonomy-aligned. The environmental objectives of the Sub-fund are attained by investing in companies that score positively on SDG 12 (Responsible consumption and production), SDG 13 (Climate action), SDG 14 (Life below water), and SDG 15 (Life on land) in Robeco's SDG Framework. While the sum of sustainable investments with an environmental objective and socially sustainable investments always adds up to the Sub-fund's minimum proportion of 60% sustainable investments, we do not commit to a minimum share of sustainable investments with an environmental objective because the Sub-fund's investment strategy does not have a specific environmental investment objective. Therefore, the minimum share of sustainable investments with an environmental objective is 0%.

What is the minimum share of socially sustainable investments?

The Sub-fund intends to make sustainable investments, measured as positive scores via Robeco's SDG Framework. Among those could be investments with social objectives. The social objectives of the Sub-fund are attained by investing in companies that score positively on SDG 1 (No poverty), SDG 2 (Zero hunger), SDG 3 (Good health and well-being), SDG 4 (Quality education), SDG 5 (Gender equality), SDG 6 (Clear water and sanitation), SDG 7 (Affordable and clean energy), SDG 8 (Decent work and economic

growth), SDG 9 (Industry, innovation and infrastructure), SDG 10 (Reduced inequalities), SDG 11 (Sustainable cities and communities), SDG 16 (Peace, justice and strong institutions) and SDG 17 (Partnerships for the goals), in Robeco's SDG Framework. While the sum of socially sustainable investments and sustainable investments with an environmental objective always adds up to the Sub-fund's minimum proportion of sustainable investments, we do not commit to a minimum share of socially sustainable investments because the Sub-fund's investment strategy does not have a specific socially sustainable investment objective. Therefore, the minimum share of socially sustainable investments is 0%.

What investments are included under "#2 Other", what is their purpose and are there any minimum environmental or social safeguards?

The type of instruments included under "#2 Other" and their purpose are outlined in Annex I of this Prospectus under the header 'Financial instruments and investment restrictions'. They include cash, cash equivalents, as well as investment funds and eligible asset classes (other than bonds and equities) that do not specifically promote E/S characteristics. As indicated above, the Sub-fund does not make use of derivatives to attain the environmental or social characteristics promoted. The Sub-fund may make use of derivatives, which thus always fall under the category "#2 Other", for hedging, liquidity management and efficient portfolio management as well as investment purposes. Exchange traded and over-the-counter derivatives are permitted, including but not limited to futures, swaps, options and currency forwards. In case the Sub-fund uses derivatives, the underlying shall comply with the investment policy. Where relevant, minimum environmental or social safeguards are taken into account, by, for example, applying Robeco's Exclusion Policy for any single security derivative.

Is a specific index designated as a reference benchmark to determine whether this financial product is aligned with the environmental and/or social characteristics that it promotes?

Not applicable.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

y) RobecoSAM QI Global SDG & Climate Beta Equities

Pre-contractual disclosure for the financial products referred to in Article 9, paragraphs 1 to 4a, of Regulation (EU) 2019/2088 and Article 5, first paragraph, of Regulation (EU) 2020/852

Product name: RobecoSAM QI Global SDG & Climate Beta Equities

Legal entity identifier: 213800PTYQMOZRCQMR91

Sustainable investment objective

Does this financial product have a sustainable investment objective?

Yes

No

It will make a minimum of **sustainable investments with an environmental objective: 50%**

in economic activities that qualify as environmentally sustainable under the EU Taxonomy

in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

It will make a minimum of **sustainable investments with a social objective: 10%**

It promotes **Environmental/Social (E/S) characteristics** and while it does not have as its objective a sustainable investment, it will have a minimum proportion of ___% of sustainable investments

with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with a social objective

It promotes E/S characteristics, but **will not make any sustainable investments**

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

What is the sustainable investment objective of this financial product?

Sustainability indicators measure how the sustainable objectives of this financial product are attained.

The Sub-fund advances the United Nation's Sustainable Development Goals (SDGs) and the Sub-fund aims to reduce the carbon footprint of the portfolio and thereby contribute towards the goals of the Paris agreement to keep the maximum global temperature rise well-below 2°C. The Sub-fund has a carbon-reduction objective and uses the MSCI All Country World EU PAB Overlay Index to monitor the carbon profile of the Sub-fund.

A part of the investments made by the Sub-fund contribute to the environmental objective of Climate Mitigation under the EU Taxonomy regulation.

What sustainability indicators are used to measure the attainment of the sustainable investment objective of this financial product?

The Sub-fund has the following sustainability indicators:

1. The number of holdings and agenda items voted.
2. The Sub-fund's weighted carbon footprint score compared to the Paris aligned benchmark.
3. The Sub-fund's weighted environmental footprint score compared to the general market index referred to in Appendix VI – Benchmarks (the "General Market Index").
4. The % of investments in securities that are on Robeco's Exclusion list as result of the application of Robeco's Exclusion Policy.
5. The % of holdings that are in violation of the ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises.
6. The proportion of companies that hold a high or medium negative SDG score (-3 or -2) based on the internally developed SDG Framework.
7. The Sub-fund's weighted average ESG score compared to the General Market Index.
8. The Sub-fund's weight in companies with a positive SDG score (1,2,3) compared to the General Market Index weight in companies with a positive SDG score (1,2,3).

How do sustainable investments not cause significant harm to any environmental or social sustainable investment objective?

The sustainable investments do no significant harm to any environmental or social sustainable investment objective by considering a principal adverse impact and aligning with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights. In addition, sustainable investments made through the Paris Aligned Benchmark follow eligibility requirements as per Article 12 of the EU regulation Paris-aligned Benchmarks and sustainability-related disclosures for benchmarks and follows Robeco's Exclusion policy. In accordance with Robeco's SDG framework, any off benchmark investments are only considered by the Sub-fund when they have a positive contribution to the UN SDGs and therefore not cause significant harm to any environmental or social sustainable investment objective.

How have the indicators for adverse impacts on sustainability factors been taken into account?

Sustainable investments can be constituents of Paris-Aligned Benchmark. The benchmark methodology directly assesses the following PAI indicators:

- Table 1, PAI 2 (Carbon Footprint)
- Table 1, PAI 4 (Exposure to companies in the fossil fuel sector)
- Table 1, PAI 10 (Violations of the UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises)
- Table 1, PAI 14 (Exposure to controversial weapons)

Post-investment, the Sub-fund assesses the performance on all mandatory PAI indicators on a regular basis.

Sustainable investments that are not constituents of Paris-Aligned Benchmark, should all have a positive score on Robeco's SDG Framework. Robeco's SDG Framework assesses the contribution of companies to the Sustainable Development Goals (SDGs). Many PAI indicators are either directly or indirectly included in the SDG Framework to determine whether a company has significant impacts on the SDGs related to the PAI indicators. A detailed description of the incorporation of principal adverse impacts is available via Robeco's Principal Adverse Impact Statement published on the Robeco website (<https://www.robeco.com/files/docm/docu-principal-adverse-impact-statement-summary-entity-level.pdf>).

How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights?

The sustainable investments are aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights via Robeco's Exclusion Policy, Robeco's SDG Framework, and the methodology of the benchmark provider.

Does this financial product consider principal adverse impacts on sustainability factors?

Yes, _____

The Sub-fund considers principal adverse impacts on sustainability factors as referred to in Annex 1 of the SFDR Delegated Act.

Pre-investment, the following principal adverse impacts on sustainability factors are considered:

- Via the applied normative and activity-based exclusions, the following PAIs are considered:
 - Exposure to companies active in the fossil fuel sector (PAI 4, Table 1)
 - Violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1)
 - Activities negatively affecting biodiversity-sensitive areas (PAI 7, Table 1). The consideration of this PAI is currently restricted to applying exclusions to palm oil producing companies and for any breaches to the UNGC, UNGP and OECD Guidelines for Multinational Enterprises in relation to biodiversity.
 - Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons (PAI 14, Table 1)
- Via the environmental footprint performance targets of the Sub-fund, the following PAIs are considered:
 - Carbon footprint (PAI 2, Table 1), via the Paris-Aligned Benchmark
 - Water and waste indicators (PAI 8-9, Table 1). Robeco will use on water and waste footprint until data quality and coverage of the PAIs will improve.

Post-investment, the following principal adverse impacts on sustainability factors are taken into account:

- Via the application of the voting policy, the following PAIs are considered:
 - All indicators related to GHG emissions (PAI 1-6, Table 1)
 - Indicators related to social and employee matters (PAI 10-13, Table 1; PAI 5-8, Table 3)

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

- Via Robeco's entity engagement program, the following PAIs are considered:
 - All indicators related to Climate and other environment-related indicators (PAI 1-9, Table 1)
 - Violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1)
 - Activities negatively affecting biodiversity sensitive areas (PAI 7, Table 1). The consideration of this PAI is currently restricted to applying exclusions to palm oil producing companies and for any breaches to the UNGC, UNGP and OECD Guidelines for Multinational Enterprises in relation to biodiversity.

In addition, based on a yearly review of Robeco's performance on all mandatory and selected voluntary indicators, holdings of the Sub-fund that cause adverse impact might be selected for engagement.

More information is available via Robeco's Principal Adverse Impact Statement, published on Robeco's website. The Sub-fund will periodically report how it has considered the principal adverse impacts of its investments in the Company's annual report, which will be made available each year on or before 30 April at the Sub-fund page highlighted in final section of this document.

No

What investment strategy does this financial product follow?

RobecoSAM QI Global SDG & Climate Beta Equities is an actively managed fund that invests globally in stocks of companies that advance the United Nations Sustainable Development Goals (SDGs) and contribute to maintaining the global temperature rise below 2° C. Beta stands for the investment management approach of the Sub-fund that follows the performance of MSCI All Country World Index, allowing for the expression of both

positive and negative views on companies by overweighting and underweighting stocks in the MSCI All Country World Index with the sole purpose of pursuing the sustainable investment objectives of the Sub-fund. The selection of these stocks is based on a quantitative model as described in the Investment policy strategy paragraph in Appendix I of this Prospectus. The strategy integrates sustainability indicators on a continuous basis as part of the stock selection process. Amongst others, the Sub-fund applies norms-based and activity-based exclusions, Robeco's good governance policy, Robeco's SDG framework and considers Principal Adverse Impacts in the investment process. More product-specific information can be found on our website and the links provided in the final question of this disclosure.

What are the binding elements of the investment strategy used to select the investments to attain the sustainable investment objective?

The Sub-fund has the following binding elements:

1. All equity holdings have a granted right to vote and Robeco exerts that right by voting according to Robeco's Proxy Voting Policy, unless impediments occur (e.g. share blocking or when not considered cost efficient). Robeco's Proxy Voting Policy can be found at <https://www.robeco.com/files/docm/docu-robeco-stewardship-policy.pdf>.
2. The Sub-fund's weighted carbon footprint score is better than that of the Paris aligned benchmark.
3. The Sub-fund's weighted water and waste footprint score is at least 20% better than that of the General Market Index.
4. The Sub-fund fully complies with activity based exclusions with regards to products (including controversial weapons, tobacco, palm oil, and thermal coal, upstream oil and gas and electricity producers in line with Article 12 of the EU regulation Climate Transition Benchmarks, EU Paris-aligned Benchmarks and sustainability-related disclosures for benchmarks). In addition, the Sub-fund's portfolio complies with Robeco's Exclusion Policy

The investment strategy guides investment decisions based on factors such as investment objectives and risk tolerance.

(<https://www.robeco.com/files/docm/docu-exclusion-policy.pdf>), that is based on exclusion criteria with regards to products and business practices that Robeco believes are detrimental to society and incompatible with sustainable investment strategies. This means that the Sub-fund has 0% exposure to excluded securities, taking into account a grace period. Information with regards to the effects of the exclusions on the Sub-fund's universe can be found at <https://www.robeco.com/files/docm/docu-exclusion-list.pdf>

5. The Sub-fund avoids investment in companies that are in breach of the ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises. Companies that breach the international norms will be excluded from the investment universe.
6. Sub-fund excludes all high or medium negative SDG scores (-3 or -2).
7. The Sub-fund's weighted average ESG score is at least 10% better than that of the General Market Index.
8. The Sub-fund's weight in companies with a positive SDG score (1,2,3) is at least 20% better than that of the General Market Index, measured as a ratio.

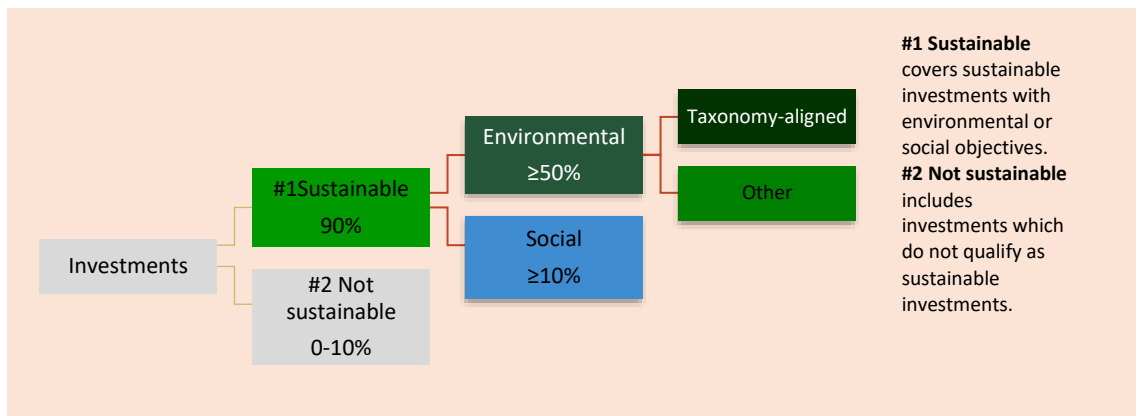

What is the policy to assess good governance practices of the investee companies?

Robeco has a Good Governance policy to assess governance practices of companies. The policy describes how Robeco determines if and when a company does not follow good governance practices and is therefore excluded from the initial investment universe for Article 8 and 9 products. Robeco's Good Governance policy applies to the Sub-fund and tests on a set of governance criteria that reflect widely recognized industry established norms and include topics as employee relations, management structure, tax compliance and remuneration.

The Good Governance test consists of criteria on such topics that are examined for investee companies and further explained in Robeco's Good Governance policy <https://www.robeco.com/files/docm/docu-robeco-good-governance-policy.pdf>. Additionally, the companies that do not pass the good governance test are reflected in the exclusion list that can be accessed here - <https://www.robeco.com/files/docm/docu-exclusion-list.pdf>.

What is the asset allocation and the minimum share of sustainable investments?

The Sub-fund plans to make a minimum of 90% sustainable investments, measured either by holdings that are part of the Paris Aligned Index or holdings that have a positive score via Robeco's SDG Framework. The investments in the category non-sustainable, estimated between 0-10%, are in cash and cash equivalents. The planned asset allocation is monitored continuously, and evaluated on a yearly basis.

How does the use of derivatives attain the sustainable investment objective?

Good governance practices include sound management structures, employee relations, remuneration of staff and tax compliance.

Asset allocation describes the share of investments in specific assets.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure** (CapEx) showing the green

investments made by investee companies, e.g. for a transition to a green economy.

- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

The Sub-fund does not make use of derivatives to attain the sustainable objective promoted by the financial product. The Sub-fund may make use of derivatives for hedging and liquidity management. This includes the usage of derivatives to manage currency and market exposures in a cost-effective manner. To that purpose exchange traded and over-the-counter derivatives linked to equity indices and currencies are permitted.

In case the Sub-fund uses derivatives, the underlying shall comply with the investment policy. Where relevant, minimum environmental or social safeguards are taken into account.

To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

The Sub-fund intends to contribute to the climate change mitigation objective under the EU Taxonomy. The Sub-fund commits to a minimum share of 0% of Taxonomy-aligned activities. The Sub-fund intends to increase the minimum share of Taxonomy aligned activities for the Sub-fund once data availability in relation to the EU Taxonomy improves and stabilises.

The Sub-fund will report on Taxonomy-aligned investment in the periodic disclosures. In the future, once data-availability in relation to the EU Taxonomy will improve, Robeco might consider setting a target based on turnover or CAPEX. Robeco currently relies on third-party data in relation to the EU Taxonomy, including data in relation to companies that do not disclose on the EU Taxonomy alignment of their activities. EU Taxonomy-alignment data is not yet subject to a review by third parties. The Sub-fund only makes investments in equity and therefore it does not have sovereign exposures. The expected level of alignment with and without sovereign bonds is the same.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power

● **Does the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy²⁷?**

Yes:

In fossil gas In nuclear energy

No

²⁷ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

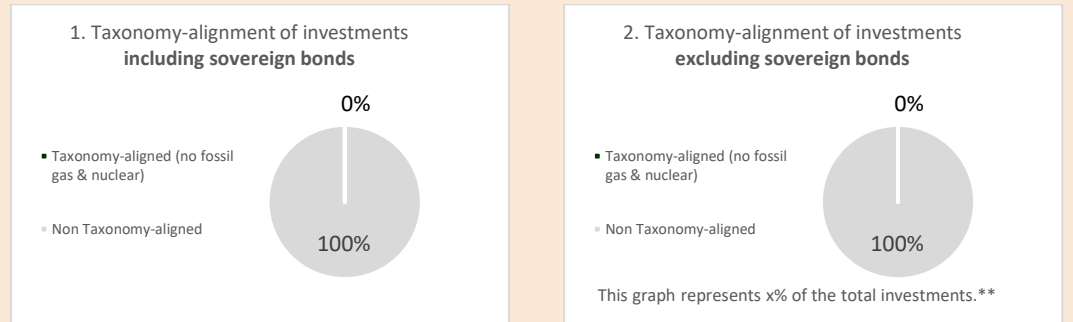

or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

 are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

*** For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures**
**** As the investments are not Taxonomy-aligned, the exclusion of sovereign bonds has no impact on the graph and therefore no such percentage is shown here.**

What is the minimum share of investments in transitional and enabling activities?

0%.

What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?

The Sub-fund makes sustainable investments with environmental objectives that do not qualify as Taxonomy-aligned. Given the Sub-fund's investment strategy and the specific environmental investment objective, the Sub-fund commits to a minimum share of sustainable investments of 50% with an environmental objective. The environmental objectives of the Sub-fund are attained by investing in companies, in line with a low carbon scenario stipulated by the Paris aligned benchmark methodology.

In addition, the Sub-fund intends to make sustainable investments off-benchmark, measured as positive scores via Robeco's SDG Framework. Among those could be sustainable investments with environmental objectives which are companies that score positively on SDG 12 (Responsible consumption and production), SDG 13 (Climate action), SDG 14 (Life below water), and SDG 15 (Life on land) in Robeco's SDG Framework.

The sum of sustainable investments with an environmental objective and socially sustainable investments will always add up to the Sub-fund's minimum proportion of 90% sustainable investments.

What is the minimum share of sustainable investments with a social objective?

Within the off-benchmark holdings (i.e. holdings that are not part of the Paris Aligned Benchmark), the Sub-fund intends to make sustainable investments with a social objective. Given the Sub-fund's investment strategy and the specific social investment objective, the Sub-fund commits to a minimum share of sustainable investments of 10% with a social objective, measured by off-benchmark holdings that have a positive score via Robeco's SDG Framework. The social objectives of the Sub-fund are

attained by investing in companies that score positively on SDG 1 (No poverty), SDG 2 (Zero hunger), SDG 3 (Good health and well-being), SDG 4 (Quality education), SDG 5 (Gender equality), SDG 6 (Clean water and sanitation), SDG 7 (Affordable and clean energy), SDG 8 (Decent work and economic growth), SDG 9 (Industry, innovation and infrastructure), SDG 10 (Reduced inequalities), SDG 11 (Sustainable cities and communities), SDG 16 (Peace, justice and strong institutions) and SDG 17 (Partnerships for the goals), in Robeco's SDG Framework.

The sum of socially sustainable investments and sustainable investments with an environmental objective will always add up to the Sub-fund's minimum proportion of 90% sustainable investments.

What investments are included under "#2 Not sustainable", what is their purpose and are there any minimum environmental or social safeguards?

The type of instruments included under "#2 Not Sustainable" and their purpose are outlined in Annex I of this Prospectus under the header 'Financial instruments and investment restrictions'. They include cash, cash equivalents, as well as investment funds and eligible asset classes (other than bonds and equities) that do not specifically promote E/S characteristics. As indicated above, the Sub-fund does not make use of derivatives to attain its sustainable objective. The Sub-fund may make use of derivatives for hedging and liquidity management. This includes the usage of derivatives to manage currency and market exposures in a cost-effective manner. For the management of currency exposure FX Forwards are allowed. The exchange traded derivatives linked to equity indices, such as equity index futures covering the market universe, are permitted for cash equitization. In case the Sub-fund uses such index market derivatives, these shall be temporary positions as defined by the investment restrictions. Where relevant, minimum environmental or social safeguards are taken into account by monitoring and performing suitability tests on index futures constituents following Robeco's Exclusion Policy.

Is a specific index designated as a reference benchmark to meet the sustainable investment objective?

Yes, the Sub-fund uses the MSCI All Country World EU PAB Overlay Index as a reference index to meet the carbon footprint reduction objective of the Sub-fund and thereby keeping the maximum global temperature rise well-below 2°C.

Reference benchmarks are indexes to measure whether the financial product attains the sustainable investment objective.

How does the reference benchmark take into account sustainability factors in a way that is continuously aligned with the sustainable investment objective?

The MSCI EU PAB Overlay Indices are constructed from their corresponding Parent Indexes using an optimization-based approach and aim to:

- Reduce the weighted average greenhouse gas intensity by 50% compared to the underlying investment universe.
- Reduce the weighted average greenhouse gas (GHG) intensity by 7% on an annualized basis.
- Achieve a modest tracking error compared to the Parent Index and low turnover.
- Exclude companies based on the following criteria: Companies involved in Controversial Weapons businesses, Very Severe ESG Controversies, Severe Environmental Controversies, Tobacco Manufacturing, Thermal Coal, Oil & Gas and Fossil Fuel-based power generation.

How is the alignment of the investment strategy with the methodology of the index ensured on a continuous basis?

The methodology of the reference index follows rebalancing rules which ensures alignment with the investment strategy and objective of the Sub-fund. The index uses data such as MSCI Climate Change Metrics, MSCI ESG Controversies and MSCI Business Involvement Screening Research) as of the end of the month, preceding the Index Reviews, for the rebalancing of the index.

The Sub-fund follows a rebalancing strategy which ensures that the carbon footprint of the Sub-fund is better than that of the reference index. This in turn ensures that the investment strategy of the Sub-fund aligns with the methodology of the reference index. The methodology of the reference index takes into account a decarbonization trajectory of at least 7% GHG intensity per annum along with specific sector or activity exclusions and including involvement in controversial weapons.

- **How does the designated index differ from a relevant broad market index?**

The benchmark differs from a broad general market index in that the latter does not take into account in its methodology any criteria on the carbon reduction objective and carbon footprint of companies.

- **Where can the methodology used for the calculation of the designated index be found?**

The index methodology can be found on the relevant webpages by the index provider: <https://www.msci.com>

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

What environmental and/or social characteristics are promoted by this financial product?

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

The Sub-fund has the following E/S characteristics:

1. The Sub-fund promotes certain minimum environmental and social safeguards through applying exclusion criteria with regards to products and business practices that Robeco believes are detrimental to society and incompatible with sustainable investment strategies, such as exposure to controversial behaviour, controversial weapons, and fossil fuels.
2. The Sub-fund promotes adherence to and conducting business activities in accordance with the United Nations Universal Declaration of Human Rights, the International Labor Organization's (ILO) labor standards, the United Nations Guiding Principles for Business and Human Rights (UNGPs), the United Nations Global Compact (UNGC) and the OECD Guidelines for Multinational Enterprises, by scrutinizing companies that violate these principles.
3. The Sub-fund promotes good governance and sustainable corporate practices through proxy voting, which contributes to long-term shareholder value creation. This includes taking an active stance on social and environmental topics through Robeco's proxy voting policy.
4. The Sub-fund promotes having a lower environmental footprint than the general market index referred to in Appendix VI – Benchmarks (the "General Market Index"), through reduction in carbon, water and waste footprints.
5. The Sub-fund promotes having a weighted average ESG score that is better than that of the General Market Index.

There is no reference benchmark designated for the purpose of attaining the environmental or social characteristics promoted by the Sub-fund.

What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?

The Sub-fund has the following sustainability indicators:

1. The % of investments in securities that are on Robeco's Exclusion list as result of the application of Robeco's Exclusion Policy.
2. The number of companies that are in violation of the ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises and hence are a part of the Enhanced Engagement program.
3. The number of holdings and agenda items voted.
4. The Sub-fund's weighted carbon, water and waste footprint score compared to the General Market Index.
5. The Sub-fund's weighted average ESG score compared to the General Market Index.

What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?

The sustainable investments aim to contribute to the UN Sustainable Development Goals ("SDGs"), that have both social and environmental objectives. These are 17 goals that are globally recognised and include environmental goals such as climate action, clean water, life on land and water and social goals such as zero hunger, gender equality, education, etc. Robeco has developed a proprietary framework based on the UN SDGs through which an issuer's contribution to such SDGs is determined through a 3-step process. This process starts with a sector baseline on which a company's products are analysed to examine contribution to the society and environment. Further, the operational processes involved in creating such products is checked along with any controversies/litigation claims and remediation actions taken which are perused before a final SDG score is determined. The final score ranges between high negative (-3) to high positive (+3) and only those issuers which achieve positive SDG scores (+1, +2 and +3) are regarded as Sustainable Investments.

How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?

The sustainable investments do no significant harm to any environmental or social sustainable investment objective by considering a principal adverse impact and aligning with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights. In addition, sustainable investments score positively on Robeco's SDG Framework, and therefore do not cause significant harm.

How have the indicators for adverse impacts on sustainability factors been taken into account?

Mandatory principal adverse impact indicators are considered through Robeco's SDG Framework, either directly or indirectly, when identifying sustainable investments for the Sub-fund. In addition, voluntary environmental and social indicators are taken into account, depending on their relevance for measuring impacts on the SDGs and the availability of data. A detailed description of the incorporation of principal adverse impacts is available via Robeco's Principal Adverse Impact Statement published on the Robeco website (<https://www.robeco.com/files/docm/docu-principal-adverse-impact-statement-summary-entity-level.pdf>). In this statement, Robeco sets out its approach to identifying and prioritizing principal adverse impacts, and how principal adverse impacts are considered as part of Robeco's investment due diligence process and procedures relating to research and analysis, exclusions and restrictions and/or voting and engagement. This description also explains how principal adverse impact indicators are considered by the SDG Framework.

How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The sustainable investments are aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights via both Robeco's Exclusion Policy and Robeco's SDG Framework.

Robeco's Exclusion Policy includes an explanation of how Robeco acts in accordance with the International Labor Organization (ILO) standards, United Nations Guiding Principles (UNGPs), United Nations Global Compact (UNGC) Principles and the Organization for Economic Co-operation and Development (OECD) Guidelines for Multinational Enterprises and is guided by these international treaties to assess the behavior of companies. Robeco continuously screens its investments for breaches of these principles. In case of a breach, the company will be excluded or engaged with, and is not considered a sustainable investment.

Robeco's SDG Framework screens for breaches on these principles in the final step of the framework. In this step, Robeco checks whether the company concerned has been involved in any controversies. Involvement in any controversy will result in a negative SDG score for the company, meaning it is not a sustainable investment.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

Does this financial product consider principal adverse impacts on sustainability factors?

Yes, _____

The Sub-fund considers principal adverse impacts on sustainability factors as referred to in Annex I of the SFDR Delegated Act.

Pre-investment, the following principal adverse impacts on sustainability factors are considered:

- Via the applied normative and activity-based exclusions, the following PAIs are considered:
 - Exposure to companies active in the fossil fuel sector (PAI 4, Table 1)
 - Violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1)
 - Activities negatively affecting biodiversity-sensitive areas (PAI 7, Table 1). The consideration of this PAI is currently restricted to applying exclusions to palm oil producing companies and for any breaches to the UNGC, UNGP and OECD Guidelines for Multinational Enterprises in relation to biodiversity.
 - Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons (PAI 14, Table 1)
- Via the ESG integration process, as part of the investment due diligence policies and procedures, the following PAIs are considered:
 - All indicators related to GHG emissions, as part of the required Climate Risk analysis (PAI 1-6, Table 1, PAI 4, Table 2)
 - Biodiversity, water and waste indicators (PAI 7-9, Table 1)
 - Board gender diversity (PAI 13, Table 1)

Post-investment, the following principal adverse impacts on sustainability factors are taken into account:

- Via the application of the voting policy, the following PAIs are considered:
 - All indicators related to GHG emissions (PAI 1-6, Table 1)
 - Indicators related to social and employee matters (PAI 10-13, Table 1; PAI 5-8, Table 3)
- Via Robeco's entity engagement program, the following PAIs are considered:
 - All indicators related to Climate and other environment-related indicators (PAI 1-9, Table 1)
 - Violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1). On an ongoing basis, the investment universe is scanned for controversial behavior in relation to the aforementioned principles and guidelines.
 - In addition, based on a yearly review of Robeco's performance on all mandatory and selected voluntary indicators, holdings of the Sub-fund that cause adverse impact might be selected for engagement.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

More information is available via Robeco's Principal Adverse Impact Statement, published on Robeco's website. The Sub-fund will periodically report how it has considered the principal adverse impacts of its investments in the Company's annual report, which will be made available each year on or before 30 April at the Sub-fund page highlighted in final section of this document.

No

What investment strategy does this financial product follow?

Robeco Quantum Equities is an actively managed fund that invests in stocks mainly in developed markets. The selection of these stocks is based on quantitative model as described in the Investment policy strategy paragraph in Appendix I of this Prospectus. Quantum' stands for the investment management approach of the Sub-fund that incorporates novel datasets, machine learning techniques and smart algorithms. The strategy integrates sustainability indicators on a continuous basis as part of the stock selection process. Amongst others, the Sub-fund applies norms-based and activity-based exclusions, Robeco's good governance policy, Robeco's SDG framework and considers Principal Adverse Impacts in the investment process. More product-specific information can be found on our website and the links provided in the final question of this disclosure.

The investment strategy guides investment decisions based on factors such as investment objectives and risk tolerance.

What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?

The Sub-fund has the following binding elements:

1. The Sub-fund's portfolio complies with Robeco's Exclusion Policy (<https://www.robeco.com/files/docm/docu-exclusion-policy.pdf>), that is based on exclusion criteria with regards to products and business practices that Robeco believes are detrimental to society and incompatible with sustainable investment strategies. This means that the Sub-fund has 0% exposure to excluded securities, taking into account a grace period. Information with regards to the effects of the exclusions on the Sub-fund's universe can be found at <https://www.robeco.com/files/docm/docu-exclusion-list.pdf>.
2. The Sub-fund scrutinizes investment in companies that are in breach of the ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises. If a company in the portfolio breaches one of the international guidelines during the investment period, the company will become part of the Enhanced Engagement program.
3. All equity holdings have a granted right to vote and Robeco exerts that right by voting according to Robeco's Proxy Voting Policy, unless impediments occur (e.g. share blocking or when not considered cost efficient). Robeco's Proxy Voting Policy can be found at <https://www.robeco.com/files/docm/docu-robeco-stewardship-policy.pdf>.
4. The Sub-fund's weighted carbon, water and waste footprint score is better than that of the General Market Index.
5. The Sub-fund's weighted average ESG score is better than that of the General Market Index.

What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?

The Sub-fund does not commit to a minimum rate to reduce the scope of investments prior to the application of the investment strategy.

What is the policy to assess good governance practices of the investee companies?

Robeco has a Good Governance policy to assess governance practices of companies. The policy describes how Robeco determines if and when a company does not follow good governance practices and is therefore excluded from the initial investment universe for Article 8 and 9 products. Robeco's Good Governance policy applies to the Sub-fund and tests on a set of governance criteria that reflect widely

Good governance practices include sound management structures, employee

relations, remuneration of staff and tax compliance.

recognized industry established norms and include topics as employee relations, management structure, tax compliance and remuneration.

The Good Governance test consists of criteria on such topics that are examined for investee companies and further explained in Robeco's Good Governance policy <https://www.robeco.com/files/docm/docu-robeco-good-governance-policy.pdf>. Additionally, the companies that do not pass the good governance test are reflected in the exclusion list that can be accessed here - <https://www.robeco.com/files/docm/docu-exclusion-list.pdf>.

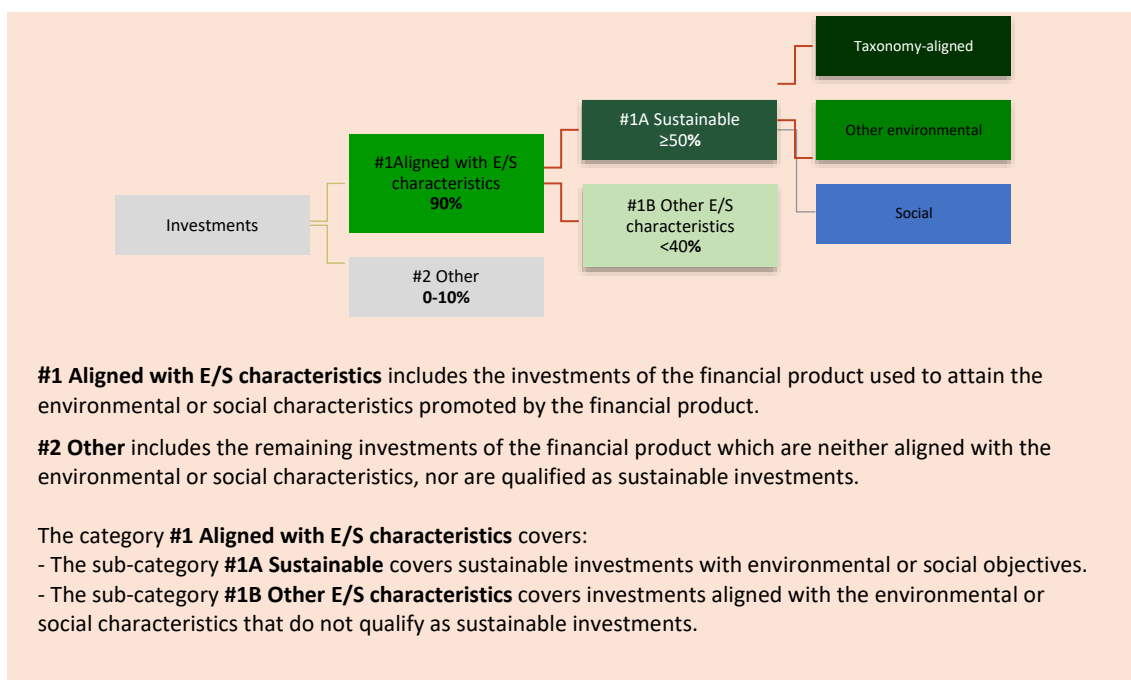

What is the asset allocation planned for this financial product?

At least 90% of the investments are aligned with the E/S characteristics of the Sub-fund. The Sub-fund plans to make a minimum of 50% sustainable investments, measured by positive scores via Robeco's SDG Framework. The investments in the category Other, estimated between 0-10%, are mostly in cash, cash equivalents and derivatives as further described below. The planned asset allocation is monitored continuously, and evaluated on a yearly basis.

Asset allocation describes the share of investments in specific assets.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

● **How does the use of derivatives attain the environmental or social characteristics promoted by the financial product?**

The Sub-fund does not make use of derivatives to attain the environmental or social characteristics promoted by the financial product. The Sub-fund may make use of derivatives for hedging, liquidity management and efficient portfolio management as well as investment purposes. Exchange traded and over-the-counter derivatives are permitted, including but not limited to futures, swaps, options and currency forwards. Whilst the Sub-fund may use derivatives both for investment purposes as well as for hedging and efficient portfolio management, it does not utilize derivatives for such purposes outside the intended share of investments allocated to the 'Other' category.

In case the Sub-fund uses derivatives, the underlying shall comply with the investment policy. Where relevant, minimum environmental or social safeguards are taken into account as described below.

To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

0%. The Sub-fund does not intend to make Taxonomy-aligned investments. It cannot be excluded that among the Sub-fund's holdings certain investments are Taxonomy aligned. The Sub-fund will report on Taxonomy-aligned investment in the periodic disclosures. In the future, once data-availability in relation to the EU Taxonomy will improve, Robeco might consider setting a target based on turnover or CAPEX. Robeco currently relies on third-party data, including data in relation to companies that do not disclose on the EU Taxonomy alignment of their activities. EU Taxonomy-alignment data is not yet subject to a review by third parties. The Sub-fund only makes investments in equity and therefore it does not have sovereign exposures. The expected level of alignment with and without sovereign bonds is the same.

Does the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy?²⁸

- Yes
 - In fossil gas
 - In nuclear energy
- No

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.*

*** For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures**
**** As the investments are not Taxonomy-aligned, the exclusion of sovereign bonds has no impact on the graph and therefore no such percentage is shown here.**

What is the minimum share of investments in transitional and enabling activities?

0%.

What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

 are sustainable investments with an

²⁸ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

0%. The Sub-fund does not intend to make Taxonomy-aligned investments. It cannot be excluded that among the Sub-fund's holdings certain investments are Taxonomy aligned. The Sub-fund will report on Taxonomy-aligned investment in the periodic disclosures. In the future, once data-availability in relation to the EU Taxonomy will improve, Robeco might consider setting a target based on turnover or CAPEX. Robeco currently relies on third-party data, including data in relation to companies that do not disclose on the EU Taxonomy alignment of their activities. EU Taxonomy-alignment data is not yet subject to a review by third parties. The Sub-fund only makes investments in equity and therefore it does not have sovereign exposures. The expected level of alignment with and without sovereign bonds is the same.

What is the minimum share of socially sustainable investments?

The Sub-fund intends to make sustainable investments, measured as positive scores via Robeco's SDG Framework. Among those could be investments with social objectives. The social objectives of the Sub-fund are attained by investing in companies that score positively on SDG 1 (No poverty), SDG 2 (Zero hunger), SDG 3 (Good health and well-being), SDG 4 (Quality education), SDG 5 (Gender equality), SDG 6 (Clear water and sanitation), SDG 7 (Affordable and clean energy), SDG 8 (Decent work and economic growth), SDG 9 (Industry, innovation and infrastructure), SDG 10 (Reduced inequalities), SDG 11 (Sustainable cities and communities), SDG 16 (Peace, justice and strong institutions) and SDG 17 (Partnerships for the goals), in Robeco's SDG Framework. While the sum of socially sustainable investments and sustainable investments with an environmental objective always adds up to the Sub-fund's minimum proportion of sustainable investments, we do not commit to a minimum share of socially sustainable investments because the Sub-fund's investment strategy does not have a specific socially sustainable investment objective. Therefore, the minimum share of socially sustainable investments is 0%.

What investments are included under "#2 Other", what is their purpose and are there any minimum environmental or social safeguards?

The type of instruments included under "#2 Other" and their purpose are outlined in Annex I of this Prospectus under the header 'Financial instruments and investment restrictions'. They include cash, cash equivalents, as well as investment funds and eligible asset classes (other than bonds and equities) that do not specifically promote E/S characteristics. As indicated above, the Sub-fund does not make use of derivatives to attain the environmental or social characteristics promoted. The Sub-fund may make use of derivatives, which thus always fall under the category "#2 Other", for hedging, liquidity management and efficient portfolio management as well as investment purposes. Exchange traded and over-the-counter derivatives are permitted, including but not limited to futures, swaps, options and currency forwards. In case the Sub-fund uses derivatives, the underlying shall comply with the investment policy. Where relevant, minimum environmental or social safeguards are taken into account, by, for example, applying Robeco's Exclusion Policy for any single security derivative.

Is a specific index designated as a reference benchmark to determine whether this financial product is aligned with the environmental and/or social characteristics that it promotes?

Not applicable.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

Where can I find more product specific information online?

aa) Robeco Emerging Markets Ex China Equities

Pre-contractual disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Product name: Robeco Emerging Markets Ex China Equities

Legal entity identifier: 213800CM8YS7HH6MXS55

Environmental and/or social characteristics

Does this financial product have a sustainable investment objective?

Yes

No

It will make a minimum of **sustainable investments with an environmental objective: ___%**

- in economic activities that qualify as environmentally sustainable under the EU Taxonomy
- in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

It will make a minimum of **sustainable investments with a social objective: ___%**

It promotes **Environmental/Social (E/S) characteristics** and while it does not have as its objective a sustainable investment, it will have a minimum proportion of 35% of sustainable investments

- with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy
- with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy
- with a social objective

It promotes E/S characteristics, but **will not make any sustainable investments**

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

What environmental and/or social characteristics are promoted by this financial product?

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

The Sub-fund has the following E/S characteristics:

1. The Sub-fund promotes certain minimum environmental and social safeguards through applying exclusion criteria with regards to products and business practices that Robeco believes are detrimental to society and incompatible with sustainable investment strategies, such as exposure to controversial behaviour, controversial weapons, and fossil fuels.
2. The Sub-fund promotes adherence to and conducting business activities in accordance with the United Nations Universal Declaration of Human Rights, the International Labor Organization's (ILO) labor standards, the United Nations Guiding Principles for Business and Human Rights (UNGPs), the United Nations Global Compact (UNGC) and the OECD Guidelines for Multinational Enterprises, by scrutinizing companies that violate these principles.
3. The Sub-fund promotes good governance and sustainable corporate practices through proxy voting, which contributes to long-term shareholder value creation. This includes taking an active stance on social and environmental topics through Robeco's proxy voting policy.
4. The Sub-fund limits investing in companies with an elevated sustainability risk based on ESG risk scores whereas all such investments require separate approval of a dedicated committee that oversees that all investments are substantiated and eligible based on a fundamental review on the sustainability risk.

There is no reference benchmark designated for the purpose of attaining the environmental or social characteristics promoted by the Sub-fund.

● **What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?**

The Sub-fund has the following sustainability indicators:

1. The % of investments in securities that are on Robeco's Exclusion list as result of the application of Robeco's Exclusion Policy.
2. The number of companies that are in violation of the ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises and hence are a part of the Enhanced Engagement program.
3. The number of holdings and agenda items voted.
4. The % of holdings with an elevated sustainability risk profile.

● **What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?**

The sustainable investments aim to contribute to the UN Sustainable Development Goals ("SDGs"), that have both social and environmental objectives. These are 17 goals that are globally recognised and include environmental goals such as climate action, clean water, life on land and water and social goals such as zero hunger, gender equality, education, etc. Robeco has developed a proprietary framework based on the UN SDGs through which an issuer's contribution to such SDGs is determined through a 3-step process. This process starts with a sector baseline on which a company's products are analysed to examine contribution to the society and environment. Further, the operational processes involved in creating such products is checked along with any controversies/litigation claims and remediation actions taken which are perused before a final SDG score is determined. The final score ranges between high negative (-3) to high positive (+3) and only those issuers which achieve positive SDG scores (+1, +2 and +3) are regarded as Sustainable Investments.

● ***How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?***

The sustainable investments do no significant harm to any environmental or social sustainable investment objective by considering a principal adverse impact and aligning with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights. In addition, sustainable investments score positively on Robeco's SDG Framework, and therefore do not cause significant harm.

How have the indicators for adverse impacts on sustainability factors been taken into account?

Mandatory principal adverse impact indicators are considered through Robeco's SDG Framework, either directly or indirectly, when identifying sustainable investments for the Sub-fund. In addition, voluntary environmental and social indicators are taken into account, depending on their relevance for measuring impacts on the SDGs and the availability of data. A detailed description of the incorporation of principal adverse impacts is available via Robeco's Principal Adverse Impact Statement published on the Robeco website (<https://www.robeco.com/files/docm/docu-principal-adverse-impact-statement-summary-entity-level.pdf>). In this statement, Robeco sets out its approach to identifying and prioritizing principal adverse impacts, and how principal adverse impacts are considered as part of Robeco's investment due diligence process and procedures relating to research and analysis, exclusions and restrictions and/or voting and engagement. This description also explains how principal adverse impact indicators are considered by the SDG Framework.

How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The sustainable investments are aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights via both Robeco's Exclusion Policy and Robeco's SDG Framework.

Robeco's Exclusion Policy includes an explanation of how Robeco acts in accordance with the International Labor Organization (ILO) standards, United Nations Guiding Principles (UNGPs), United Nations Global Compact (UNGC) Principles and the Organization for Economic Co-operation and Development (OECD) Guidelines for Multinational Enterprises and is guided by these international treaties to assess the behavior of companies. Robeco continuously screens its investments for breaches of these principles. In case of a breach, the company will be excluded or engaged with, and is not considered a sustainable investment.

Robeco's SDG Framework screens for breaches on these principles in the final step of the framework. In this step, Robeco checks whether the company concerned has been involved in any controversies. Involvement in any controversy will result in a negative SDG score for the company, meaning it is not a sustainable investment.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

Does this financial product consider principal adverse impacts on sustainability factors?

Yes, _____

The Sub-fund considers principal adverse impacts on sustainability factors as referred to in Annex I of the SFDR Delegated Act.

Pre-investment, the following principal adverse impacts on sustainability factors are considered:

- Via the applied normative and activity-based exclusions, the following PAIs are considered:
 - Exposure to companies active in the fossil fuel sector (PAI 4, Table 1)
 - Violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1)
 - Activities negatively affecting biodiversity-sensitive areas (PAI 7, Table 1). The consideration of this PAI is currently restricted to applying exclusions to palm oil producing companies and for any breaches to the UNGC, UNGP and OECD Guidelines for Multinational Enterprises in relation to biodiversity.
 - Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons (PAI 14, Table 1)
- Via the ESG integration process, as part of the investment due diligence policies and procedures, the following PAIs are considered:
 - All indicators related to GHG emissions, as part of the required Climate Risk analysis (PAI 1-6, Table 1, PAI 4, Table 2)
 - Biodiversity, water and waste indicators (PAI 7-9, Table 1)
 - Board gender diversity (PAI 13, Table 1)

Post-investment, the following principal adverse impacts on sustainability factors are taken into account:

- Via the application of the voting policy, the following PAIs are considered:
 - All indicators related to GHG emissions (PAI 1-6, Table 1)

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

- Indicators related to social and employee matters (PAI 10-13, Table 1; PAI 5-8, Table 3)
- o Via Robeco's entity engagement program, the following PAIs are considered:
 - All indicators related to Climate and other environment-related indicators (PAI 1-9, Table 1)
 - Violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1). On an ongoing basis, the investment universe is scanned for controversial behavior in relation to the aforementioned principles and guidelines.
 - In addition, based on a yearly review of Robeco's performance on all mandatory and selected voluntary indicators, holdings of the Sub-fund that cause adverse impact might be selected for engagement.

More information is available via Robeco's Principal Adverse Impact Statement, published on Robeco's website. The Sub-fund will periodically report how it has considered the principal adverse impacts of its investments in the Company's annual report, which will be made available each year on or before 30 April at the Sub-fund page highlighted in final section of this document.

No

What investment strategy does this financial product follow?

Robeco Emerging Markets ex China Equities is an actively managed fund that invests in stocks in emerging countries across the world with the exception of China. The selection of these stocks is based on fundamental analysis as described in the Investment policy strategy paragraph in Appendix I of this Prospectus. The strategy integrates sustainability indicators on a continuous basis as part of the stock selection process. Amongst others, the Sub-fund applies norms-based and activity-based exclusions, Robeco's good governance policy, Robeco's SDG framework and considers Principal Adverse Impacts in the investment process. More product-specific information can be found on our website and the links provided in the final question of this disclosure.

The investment strategy guides investment decisions based on factors such as investment objectives and risk tolerance.

What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?

The Sub-fund has the following binding elements:

1. The Sub-fund's portfolio complies with Robeco's Exclusion Policy (<https://www.robeco.com/files/docm/docu-exclusion-policy.pdf>), that is based on exclusion criteria with regards to products and business practices that Robeco believes are detrimental to society and incompatible with sustainable investment strategies. This means that the Sub-fund has 0% exposure to excluded securities, taking into account a grace period. Information with regards to the effects of the exclusions on the Sub-fund's universe can be found at <https://www.robeco.com/files/docm/docu-exclusion-list.pdf>.
2. The Sub-fund scrutinizes investment in companies that are in breach of the ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises. If a company in the portfolio breaches one of the international guidelines during the investment period, the company will become part of the Enhanced Engagement program.
3. All equity holdings have a granted right to vote and Robeco exerts that right by voting according to Robeco's Proxy Voting Policy, unless impediments occur (e.g. share blocking or when not considered cost efficient). Robeco's Proxy Voting Policy can be found at <https://www.robeco.com/files/docm/docu-robeco-stewardship-policy.pdf>.
4. Investments with an elevated sustainability risk are defined by Robeco as companies with an ESG Risk Rating of 40 and higher (the ESG Risk Rating is explained in the sustainability risk policy which can be accessed via <https://www.robeco.com/files/docm/docu-robeco-sustainability-risk-policy.pdf>). The Sub-fund is limited to a maximum exposure of 10% to investments with an elevated sustainability risk, based on the market weight in the portfolio taking into account regional differences and benchmark. Each investment with an ESG Risk rating of higher than 40 requires

separate approval by a dedicated committee of sustainable investment specialists, compliance and risk management that oversees the bottom-up sustainability analysis.

● **What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?**

The Sub-fund does not commit to a minimum rate to reduce the scope of investments prior to the application of the investment strategy.

● **What is the policy to assess good governance practices of the investee companies?**

Robeco has a Good Governance policy to assess governance practices of companies. The policy describes how Robeco determines if and when a company does not follow good governance practices and is therefore excluded from the initial investment universe for Article 8 and 9 products. Robeco's Good Governance policy applies to the Sub-fund and tests on a set of governance criteria that reflect widely recognized industry established norms and include topics as employee relations, management structure, tax compliance and remuneration.

The Good Governance test consists of criteria on such topics that are examined for investee companies and further explained in Robeco's Good Governance policy <https://www.robeco.com/files/docm/docu-robeco-good-governance-policy.pdf>. Additionally, the companies that do not pass the good governance test are reflected in the exclusion list that can be accessed here - <https://www.robeco.com/files/docm/docu-exclusion-list.pdf>.

Good governance practices include sound management structures, employee relations, remuneration of staff and tax compliance.

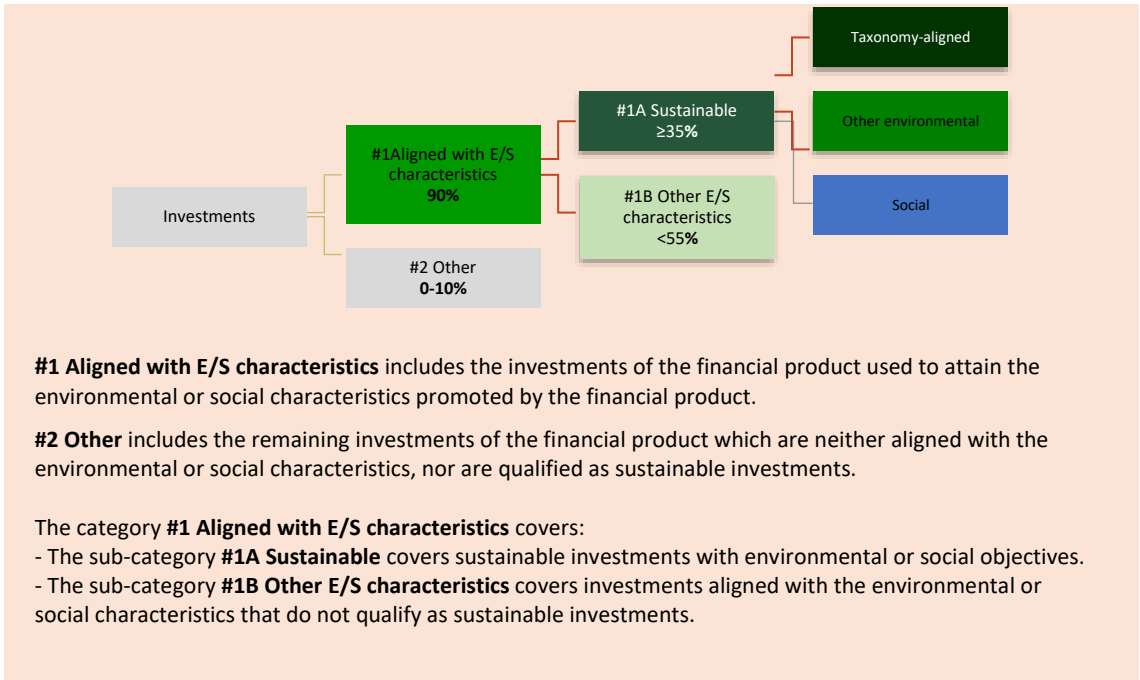

What is the asset allocation planned for this financial product?

At least 90% of the investments are aligned with the E/S characteristics of the Sub-fund. The Sub-fund plans to make a minimum of 35% sustainable investments, measured by positive scores via Robeco's SDG Framework. The investments in the category Other, estimated between 0-10%, are mostly in cash, cash equivalents and derivatives as further described below. The planned asset allocation is monitored continuously, and evaluated on a yearly basis.

Asset allocation describes the share of investments in specific assets.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure (CapEx)** showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure (OpEx)** reflecting green

operational activities of investee companies.

● **How does the use of derivatives attain the environmental or social characteristics promoted by the financial product?**

The Sub-fund does not make use of derivatives to attain the environmental or social characteristics promoted by the financial product. The Sub-fund may make use of derivatives for hedging, liquidity management and efficient portfolio management as well as investment purposes. Exchange traded and over-the-counter derivatives are permitted, including but not limited to futures, swaps, options and currency forwards. Whilst the Sub-fund may use derivatives both for investment purposes as well as for hedging and efficient portfolio management, it does not utilize derivatives for such purposes outside the intended share of investments allocated to the 'Other' category.

In case the Sub-fund uses derivatives, the underlying shall comply with the investment policy. Where relevant, minimum environmental or social safeguards are taken into account as described below.

● **To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?**

0%. The Sub-fund does not intend to make Taxonomy-aligned investments. It cannot be excluded that among the Sub-fund's holdings certain investments are Taxonomy aligned. The Sub-fund will report on Taxonomy-aligned investment in the periodic disclosures. In the future, once data-availability in relation to the EU Taxonomy will improve, Robeco might consider setting a target based on turnover or CAPEX. Robeco currently relies on third-party data, including data in relation to companies that do not disclose on the EU Taxonomy alignment of their activities. EU Taxonomy-alignment data is not yet subject to a review by third parties. The Sub-fund only makes investments in equity and therefore it does not have sovereign exposures. The expected level of alignment with and without sovereign bonds is the same.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to renewable power

● **Does the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy?²⁹**

Yes

In fossil gas

In nuclear energy

No

²⁹ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

or low-carbon fuels by the end of 2035. For nuclear energy, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

 are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

** As the investments are not Taxonomy-aligned, the exclusion of sovereign bonds has no impact on the graph and therefore no such percentage is shown here.

What is the minimum share of investments in transitional and enabling activities?

0%. Enabling activities directly enable other activities to make a substantial contribution to an environmental objective. Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?

The Sub-fund intends to make sustainable investments, measured as positive scores via Robeco's SDG Framework. Among those could be investments with environmental objectives that do not qualify as Taxonomy-aligned. The environmental objectives of the Sub-fund are attained by investing in companies that score positively on SDG 12 (Responsible consumption and production), SDG 13 (Climate action), SDG 14 (Life below water), and SDG 15 (Life on land) in Robeco's SDG Framework. While the sum of sustainable investments with an environmental objective and socially sustainable investments always adds up to the Sub-fund's minimum proportion of 35% sustainable investments, we do not commit to a minimum share of sustainable investments with an environmental objective because the Sub-fund's investment strategy does not have a specific environmental investment objective. Therefore, the minimum share of sustainable investments with an environmental objective is 0%.

What is the minimum share of socially sustainable investments?

The Sub-fund intends to make sustainable investments, measured as positive scores via Robeco's SDG Framework. Among those could be investments with social objectives. The social objectives of the Sub-fund are attained by investing in companies that score positively on SDG 1 (No poverty), SDG 2 (Zero hunger), SDG 3 (Good health and well-being), SDG 4 (Quality education), SDG 5 (Gender equality), SDG 6 (Clean water and sanitation), SDG 7 (Affordable and clean energy), SDG 8 (Decent work and economic growth), SDG 9 (Industry, innovation and infrastructure), SDG 10 (Reduced inequalities), SDG 11 (Sustainable cities and communities), SDG 16 (Peace, justice and strong institutions) and SDG 17 (Partnerships for the goals), in Robeco's SDG Framework. While the sum of socially sustainable investments and sustainable investments with an environmental objective always adds up to the Sub-fund's minimum proportion of sustainable investments, we do not commit to a minimum share of socially sustainable investments because the Sub-fund's investment strategy does not have a specific

socially sustainable investment objective. Therefore, the minimum share of socially sustainable investments is 0%.

What investments are included under "#2 Other", what is their purpose and are there any minimum environmental or social safeguards?

The type of instruments included under "#2 Other" and their purpose are outlined in Annex I of this Prospectus under the header 'Financial instruments and investment restrictions'. They include cash, cash equivalents, as well as investment funds and eligible asset classes (other than bonds and equities) that do not specifically promote E/S characteristics. As indicated above, the Sub-fund does not make use of derivatives to attain the environmental or social characteristics promoted. The Sub-fund may make use of derivatives, which thus always fall under the category "#2 Other", for hedging, liquidity management and efficient portfolio management as well as investment purposes. Exchange traded and over-the-counter derivatives are permitted, including but not limited to futures, swaps, options and currency forwards. In case the Sub-fund uses derivatives, the underlying shall comply with the investment policy. Where relevant, minimum environmental or social safeguards are taken into account, by, for example, applying Robeco's Exclusion Policy for any single security derivative.

Is a specific index designated as a reference benchmark to determine whether this financial product is aligned with the environmental and/or social characteristics that it promotes?

Not applicable.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

bb) Robeco Emerging Markets SDG Equities

Pre-contractual disclosure for the financial products referred to in Article 9, paragraphs 1 to 4a, of Regulation (EU) 2019/2088 and Article 5, first paragraph, of Regulation (EU) 2020/852

Product name: Robeco Emerging Markets SDG Equities

Legal entity identifier: N/A

Sustainable investment objective

Does this financial product have a sustainable investment objective?

Yes

No

It will make a minimum of **sustainable investments with an environmental objective: 1%**

in economic activities that qualify as environmentally sustainable under the EU Taxonomy

in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

It will make a minimum of **sustainable investments with a social objective: 50%**

It promotes **Environmental/Social (E/S) characteristics** and while it does not have as its objective a sustainable investment, it will have a minimum proportion of ___% of sustainable investments

with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with a social objective

It promotes E/S characteristics, but **will not make any sustainable investments**

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

What is the sustainable investment objective of this financial product?

Sustainability indicators measure how the sustainable objectives of this financial product are attained.

The Sub-fund's sustainable investment objective is to advance the United Nations Sustainable Development Goals (UN SDGs) by investing in companies whose business models and operational practices are aligned with targets defined by the 17 UN SDGs.

Sub-fund does not have a carbon-reduction objective and there is no reference benchmark designated for the purpose of attaining the sustainable objective promoted by the Sub-fund.

● ***What sustainability indicators are used to measure the attainment of the sustainable investment objective of this financial product?***

The Sub-fund has the following sustainability indicators:

1. The number of companies with a low, medium or high positive SDG score based on the internally developed SDG Framework.
2. The % of investments in securities that are on Robeco's Exclusion list as result of the application of Robeco's Exclusion Policy.
3. The % of holdings that are in violation of the ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises.
4. The number of holdings and agenda items voted.

● ***How do sustainable investments not cause significant harm to any environmental or social sustainable investment objective?***

The sustainable investments do no significant harm to any environmental or social sustainable investment objective by considering a principal adverse impact and aligning with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights. In addition, sustainable investments score positively on Robeco's SDG Framework, and therefore do not cause significant harm.

How have the indicators for adverse impacts on sustainability factors been taken into account?

Mandatory principal adverse impact indicators are considered through Robeco's SDG Framework, either directly or indirectly, when identifying sustainable investments for the Sub-fund. In addition, voluntary environmental and social indicators are taken into account, depending on their relevance for measuring impacts on the SDGs and the availability of data. A detailed description of the incorporation of principal adverse impacts is available via Robeco's Principal Adverse Impact Statement published on the Robeco website (<https://www.robeco.com/files/docm/docu-principal-adverse-impact-statement-summary-entity-level.pdf>). In this statement, Robeco sets out its approach to identifying and prioritizing principal adverse impacts, and how principal adverse impacts are considered as part of Robeco's investment due diligence process and procedures relating to research and analysis, exclusions and restrictions and/or voting and engagement. This description also explains how principal adverse impact indicators are considered by the SDG Framework.

How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights?

The sustainable investments are aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights via both Robeco's Exclusion Policy and Robeco's SDG Framework.

Does this financial product consider principal adverse impacts on sustainability factors?

Yes, _____

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

The Sub-fund considers principal adverse impacts on sustainability factors as referred to in Annex I of the SFDR Delegated Act.

Pre-investment, Robeco's SDG Framework assesses companies' positive and negative contributions to the Sustainable Development Goals (SDGs). Robeco's SDG Framework directly and/or indirectly screens companies on many of the topics considered by the PAI indicators.

Post-investment, the following principal adverse impacts on sustainability factors are taken into account:

- Via the application of the voting policy, the following PAIs are considered:
 - All indicators related to GHG emissions (PAI 1-6, Table 1)
 - Indicators related to social and employee matters (PAI 10-13, Table 1; PAI 5-8, Table 3)
- Via Robeco's entity engagement program, the following PAIs are considered:
 - All indicators related to Climate and other environment-related indicators (PAI 1-9, Table 1)
 - Violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1). On an ongoing basis, the investment universe is scanned for controversial behavior in relation to the aforementioned principles and guidelines.
 - In addition, based on a yearly review of Robeco's performance on all mandatory and selected voluntary indicators, holdings of the Sub-fund that cause adverse impact might be selected for engagement.

More information is available via Robeco's Principal Adverse Impact Statement, published on Robeco's website. The Sub-fund will periodically report how it has considered the principal adverse impacts of its investments in the Company's annual report, which will be made available each year on or before 30 April at the Sub-fund page highlighted in final section of this document.

No

The investment strategy guides investment decisions based on factors such as investment objectives and risk tolerance.

What investment strategy does this financial product follow?

Robeco Emerging Markets SDG Equities is an actively managed fund that invests in emerging markets companies that take action to advance the UN Sustainable Development Goals. The selection of these stocks is based on fundamental analysis as described in the Investment policy strategy paragraph in Appendix I of this Prospectus. The strategy integrates sustainability indicators on a continuous basis as part of the stock selection process. Amongst others, the Sub-fund applies norms-based and activity-based exclusions, Robeco's good governance policy, Robeco's SDG framework and considers Principal Adverse Impacts in the investment process. More product-specific information can be found on our website and the links provided in the final question of this disclosure.

What are the binding elements of the investment strategy used to select the investments to attain the sustainable investment objective?

The Sub-fund has the following binding elements:

1. The Sub-fund solely invests in companies with a positive SDG score.
2. The Sub-fund's portfolio complies with Robeco's Exclusion Policy (<https://www.robeco.com/files/docm/docu-exclusion-policy.pdf>), excluding investments in companies that are exposed to controversial behavior and controversial products. This means that the Sub-fund has 0% exposure to excluded securities, taking into account a grace period. Information with regards to the effects of the exclusions on the Sub-fund's universe can be found at <https://www.robeco.com/files/docm/docu-exclusion-list.pdf>.
3. The Sub-fund avoids investment in companies that are in breach of the ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises. Companies that breach the international norms will be excluded from the investment universe.
4. All equity holdings have a granted right to vote and Robeco exerts that right by voting according to Robeco's Proxy Voting Policy, unless impediments occur (e.g. share blocking or when not considered cost efficient). Robeco's Proxy Voting Policy can be found at <https://www.robeco.com/files/docm/docu-robeco-stewardship-policy.pdf>.

What is the policy to assess good governance practices of the investee companies?

Robeco has a Good Governance policy to assess governance practices of companies. The policy describes how Robeco determines if and when a company does not follow good governance practices and is therefore excluded from the initial investment universe for Article 8 and 9 products. Robeco's Good Governance policy applies to the Sub-fund and tests on a set of governance criteria that reflect widely recognized industry established norms and include topics as employee relations, management structure, tax compliance and remuneration.

The Good Governance test consists of criteria on such topics that are examined for investee companies and further explained in Robeco's Good Governance policy <https://www.robeco.com/files/docm/docu-robeco-good-governance-policy.pdf>. Additionally, the companies that do not pass the good governance test are reflected in the exclusion list that can be accessed here - <https://www.robeco.com/files/docm/docu-exclusion-list.pdf>.

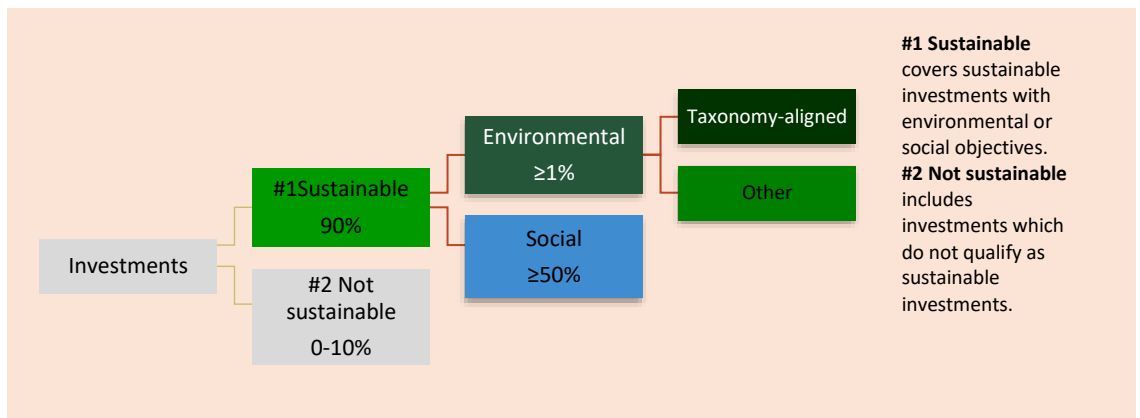

Good governance practices include sound management structures, employee relations, remuneration of staff and tax compliance.

What is the asset allocation and the minimum share of sustainable investments?

The Sub-fund plans to make a minimum of 90% sustainable investments, measured by positive scores via Robeco's SDG Framework. The investments in the category non-sustainable, estimated between 0-10%, are in cash and cash equivalents. The planned asset allocation is monitored continuously, and evaluated on a yearly basis.

Asset allocation describes the share of investments in specific assets.
Taxonomy-aligned activities are expressed as a share of:
- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure** (CapEx) showing the green

#1 Sustainable covers sustainable investments with environmental or social objectives.
#2 Not sustainable includes investments which do not qualify as sustainable investments.

How does the use of derivatives attain the sustainable investment objective?

investments made by investee companies, e.g. for a transition to a green economy.

- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

The Sub-fund does not make use of derivatives to attain the sustainable objective promoted by the financial product. The Sub-fund may make use of derivatives for hedging and liquidity management. This includes the usage of derivatives to manage currency and market exposures in a cost-effective manner. To that purpose exchange traded and over-the-counter derivatives linked to equity indices and currencies are permitted.

In case the Sub-fund uses derivatives, the underlying shall comply with the investment policy. Where relevant, minimum environmental or social safeguards are taken into account.

To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

The Sub-fund does not intend to make Taxonomy-aligned investments. It cannot be excluded that among the Sub-fund's holdings certain investments are Taxonomy aligned. The Sub-fund will report on Taxonomy-aligned investment in the periodic disclosures, this will be done based on turnover. In the future, once data-availability in relation to the EU Taxonomy will improve, Robeco might consider setting a target based on turnover or CAPEX. Robeco currently relies on third-party data in relation to the EU Taxonomy, including data in relation to companies that do not disclose on the EU Taxonomy alignment of their activities. EU Taxonomy-alignment data is not yet subject to a review by third parties. The Sub-fund only makes investments in equity and therefore it does not have sovereign exposures. The expected level of alignment with and without sovereign bonds is the same.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power

Does the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy³⁰?

Yes:

In fossil gas In nuclear energy

No

³⁰ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

 are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

*** For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures**
**** As the investments are not Taxonomy-aligned, the exclusion of sovereign bonds has no impact on the graph and therefore no such percentage is shown here.**

What is the minimum share of investments in transitional and enabling activities?

0%.

What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?

The Sub-fund makes sustainable investments with environmental objectives that do not qualify as Taxonomy-aligned. Given the Sub-fund's investment strategy and the specific environmental investment objective, the Sub-fund commits to a minimum share of sustainable investments of 1% with an environmental objective. The environmental objectives of the Sub-fund are attained by investing in companies, in line with a low carbon scenario stipulated by the Paris aligned benchmark methodology.

In addition, the Sub-fund intends to make sustainable investments off-benchmark, measured as positive scores via Robeco's SDG Framework. Among those could be sustainable investments with environmental objectives which are companies that score positively on SDG 12 (Responsible consumption and production), SDG 13 (Climate action), SDG 14 (Life below water), and SDG 15 (Life on land) in Robeco's SDG Framework.

The sum of sustainable investments with an environmental objective and socially sustainable investments will always add up to the Sub-fund's minimum proportion of 90% sustainable investments.

What is the minimum share of sustainable investments with a social objective?

Within the off-benchmark holdings (i.e. holdings that are not part of the Paris Aligned Benchmark), the Sub-fund intends to make sustainable investments with a social objective. Given the Sub-fund's investment strategy and the specific social investment objective, the Sub-fund commits to a minimum share of sustainable investments of 50% with a social objective, measured by off-benchmark holdings that have a positive score via Robeco's SDG Framework. The social objectives of the Sub-fund are attained by investing in companies that score positively on SDG 1 (No poverty), SDG 2 (Zero hunger), SDG 3 (Good health and well-being), SDG 4 (Quality education), SDG 5 (Gender equality), SDG 6 (Clear water and sanitation), SDG 7 (Affordable and clean energy), SDG 8 (Decent work and economic growth), SDG 9 (Industry, innovation and infrastructure), SDG 10 (Reduced inequalities), SDG 11 (Sustainable cities and communities), SDG 16 (Peace, justice and strong institutions) and SDG 17 (Partnerships for the goals), in Robeco's SDG Framework.

The sum of socially sustainable investments and sustainable investments with an environmental objective will always add up to the Sub-fund's minimum proportion of 90% sustainable investments.

What investments are included under "#2 Not sustainable", what is their purpose and are there any minimum environmental or social safeguards?

The type of instruments included under "#2 Not Sustainable" and their purpose are outlined in Annex I of this Prospectus under the header 'Financial instruments and investment restrictions'. They include cash, cash equivalents, as well as investment funds and eligible asset classes (other than bonds and equities) that do not specifically promote E/S characteristics. As indicated above, the Sub-fund does not make use of derivatives to attain its sustainable objective. The Sub-fund may make use of derivatives for hedging and liquidity management. This includes the usage of derivatives to manage currency and market exposures in a cost-effective manner. For the management of currency exposure FX Forwards are allowed. The exchange traded derivatives linked to equity indices, such as equity index futures covering the market universe, are permitted for cash equitization. In case the Sub-fund uses such index market derivatives, these shall be temporary positions as defined by the investment restrictions. Where relevant, minimum environmental or social safeguards are taken into account by monitoring and performing suitability tests on index futures constituents following Robeco's Exclusion Policy.

Is a specific index designated as a reference benchmark to meet the sustainable investment objective?

Not applicable.

Reference benchmarks are indexes to measure whether the financial product attains the sustainable investment objective.

cc) Robeco Emerging Markets SDG Engagement Equities

Pre-contractual disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Product name: Robeco Emerging Markets SDG Engagement Equities

Legal entity identifier: N/A

Environmental and/or social characteristics

Does this financial product have a sustainable investment objective?

Yes

No

It will make a minimum of **sustainable investments with an environmental objective: ___%**

in economic activities that qualify as environmentally sustainable under the EU Taxonomy

in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

It will make a minimum of **sustainable investments with a social objective: ___%**

It promotes **Environmental/Social (E/S) characteristics** and while it does not have as its objective a sustainable investment, it will have a minimum proportion of 40% of sustainable investments

with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with a social objective

It promotes E/S characteristics, but **will not make any sustainable investments**

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

What environmental and/or social characteristics are promoted by this financial product?

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

The Sub-fund has the following E/S characteristics:

1. The Sub-fund promotes investment in a portfolio that avoid significant harm, and aim to improve their contribution, to the Sustainable Development Goals (SDGs).
2. The Sub-fund promotes driving a clear and measurable improvement in a company's contribution to the United Nations Sustainable Development Goals (SDGs) over three to five years by performing engagement.
3. The Sub-fund promotes certain minimum environmental and social safeguards through applying exclusion criteria with regards to products and business practices that Robeco believes are detrimental to society and incompatible with sustainable investment strategies, such as exposure to controversial behaviour, controversial weapons, and fossil fuels.
4. The Sub-fund promotes adherence to and conducting business activities in accordance with the United Nations Universal Declaration of Human Rights, the International Labor Organization's (ILO) labor standards, the United Nations Guiding Principles for Business and Human Rights (UNGPs), the United Nations Global Compact (UNGC) and the OECD Guidelines for Multinational Enterprises, by scrutinizing companies that violate these principles.
5. The Sub-fund promotes good governance and sustainable corporate practices through proxy voting, which contributes to long-term shareholder value creation. This includes taking an active stance on social and environmental topics through Robeco's proxy voting policy.

There is no reference benchmark designated for the purpose of attaining the environmental or social characteristics promoted by the Sub-fund.

What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?

The Sub-fund has the following sustainability indicators:

1. The number of companies with a SDG score of -1, 0 (zero), +1 or +2 based on the internally developed SDG Framework.
2. The number of companies actively engaged.
3. The % of investments in securities that are on Robeco's Exclusion list as result of the application of Robeco's Exclusion Policy.
4. The % of holdings that are in violation of the ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises.
5. The number of holdings and agenda items voted.

What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?

The sustainable investments aim to contribute to the UN Sustainable Development Goals ("SDGs"), that have both social and environmental objectives. These are 17 goals that are globally recognised and include environmental goals such as climate action, clean water, life on land and water and social goals such as zero hunger, gender equality, education, etc. Robeco has developed a proprietary framework based on the UN SDGs through which an issuer's contribution to such SDGs is determined through a 3-step process. This process starts with a sector baseline on which a company's products are analysed to examine contribution to the society and environment. Further, the operational processes involved in creating such products is checked along with any controversies/litigation claims and remediation actions taken which are perused before a final SDG score is determined. The final score ranges between high negative (-3) to high positive (+3) and only those issuers which achieve positive SDG scores (+1, +2 and, +3) are regarded as Sustainable Investments.

● ***How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?***

The sustainable investments do no significant harm to any environmental or social sustainable investment objective by considering a principal adverse impact and aligning with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights. In addition, sustainable investments score positively on Robeco's SDG Framework, and therefore do not cause significant harm.

How have the indicators for adverse impacts on sustainability factors been taken into account?

Mandatory principal adverse impact indicators are considered through Robeco's SDG Framework, either directly or indirectly, when identifying sustainable investments for the Sub-fund. In addition, voluntary environmental and social indicators are taken into account, depending on their relevance for measuring impacts on the SDGs and the availability of data. A detailed description of the incorporation of principal adverse impacts is available via Robeco's Principal Adverse Impact Statement published on the Robeco website (<https://www.robeco.com/files/docm/docu-principal-adverse-impact-statement-summary-entity-level.pdf>). In this statement, Robeco sets out its approach to identifying and prioritizing principal adverse impacts, and how principal adverse impacts are considered as part of Robeco's investment due diligence process and procedures relating to research and analysis, exclusions and restrictions and/or voting and engagement. This description also explains how principal adverse impact indicators are considered by the SDG Framework.

How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The sustainable investments are aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights via both Robeco's Exclusion Policy and Robeco's SDG Framework.

Robeco's Exclusion Policy includes an explanation of how Robeco acts in accordance with the International Labor Organization (ILO) standards, United Nations Guiding Principles (UNGPs), United Nations Global Compact (UNGC) Principles and the Organization for Economic Co-operation and Development (OECD) Guidelines for Multinational Enterprises and is guided by these international treaties to assess the behavior of companies. Robeco continuously screens its investments for breaches of these principles. In case of a breach, the company will be excluded or engaged with, and is not considered a sustainable investment.

Robeco's SDG Framework screens for breaches on these principles in the final step of the framework. In this step, Robeco checks whether the company concerned has been involved in any controversies. Involvement in any controversy will result in a negative SDG score for the company, meaning it is not a sustainable investment.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

Does this financial product consider principal adverse impacts on sustainability factors?

Yes, _____

The Sub-fund considers principal adverse impacts on sustainability factors as referred to in Annex I of the SFDR Delegated Act.

Pre-investment, the following principal adverse impacts on sustainability factors are considered:

- Via the applied normative and activity-based exclusions, the following PAIs are considered:
 - Exposure to companies active in the fossil fuel sector (PAI 4, Table 1)
 - Violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1)
 - Activities negatively affecting biodiversity-sensitive areas (PAI 7, Table 1). The consideration of this PAI is currently restricted to applying exclusions to palm oil producing companies and for any breaches to the UNGC, UNGP and OECD Guidelines for Multinational Enterprises in relation to biodiversity.
 - Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons (PAI 14, Table 1)
- Via the ESG integration process, as part of the investment due diligence policies and procedures, the following PAIs are considered:
 - All indicators related to GHG emissions, as part of the required Climate Risk analysis (PAI 1-6, Table 1, PAI 4, Table 2)
 - Biodiversity, water and waste indicators (PAI 7-9, Table 1)
 - Board gender diversity (PAI 13, Table 1)

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

Post-investment, the following principal adverse impacts on sustainability factors are taken into account:

- Via the application of the voting policy, the following PAIs are considered:
 - All indicators related to GHG emissions (PAI 1-6, Table 1)
 - Indicators related to social and employee matters (PAI 10-13, Table 1; PAI 5-8, Table 3)
- Via Robeco's entity engagement program, the following PAIs are considered:
 - All indicators related to Climate and other environment-related indicators (PAI 1-9, Table 1)
 - Violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1). On an ongoing basis, the investment universe is scanned for controversial behavior in relation to the aforementioned principles and guidelines.
 - In addition, based on a yearly review of Robeco's performance on all mandatory and selected voluntary indicators, holdings of the Sub-fund that cause adverse impact might be selected for engagement.

More information is available via Robeco's Principal Adverse Impact Statement, published on Robeco's website. The Sub-fund will periodically report how it has considered the principal adverse impacts of its investments in the Company's annual report, which will be made available each year on or before 30 April at the Sub-fund page highlighted in final section of this document.

No

What investment strategy does this financial product follow?

Robeco Emerging Markets SDG Engagement Equities is an actively managed fund that invests in a concentrated selection of emerging markets stocks. Stock selection is based on fundamental analysis to invest in companies that are best able to have a clear and measurable improvement in their contribution to the United Nations Sustainable Development Goals (UN SDGs) over three to five years via active engagement, as described in the Investment policy strategy paragraph in Appendix I of this Prospectus. The strategy integrates sustainability indicators on a continuous basis as part of the stock selection process. Amongst others, the Sub-fund applies norms-based and activity-based exclusions, Robeco's good governance policy, Robeco's SDG framework and considers Principal Adverse Impacts in the investment process. More product-specific information can be found on our website and the links provided in the final question of this disclosure.

The investment strategy guides investment decisions based on factors such as investment objectives and risk tolerance.

What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?

The Sub-fund has the following binding elements:

1. The Sub-fund is solely invested in companies that hold a -1, 0 (zero) or positive SDG score. The Sub-fund excludes all high or medium negative SDG scores (-3 or -2) and all high positive SDG scores (+3) for selection of new investment cases based on the internally developed SDG Framework.
 - The Sub-fund only hold high positive SDG scores (+3) when a company receives an upgrade of their SDG score after successful SDG engagement that started with an initial -1, 0, +1 or +2 SDG score at investment. The Sub-fund can hold up to 20% of such holdings that are rated SDG (+3) after engagement has been successful for a period of 6 months.
 - (Successfully completed engagement: When a company progresses on the targets identified and fulfills the key performance indicators as established at the start of the engagement. Such targets can be linked with internal frameworks like the SDG framework).
2. The Sub-fund actively engages with 100% of the corporate holdings in the portfolio, typically for a period of 3 to 5 years. The engagement trajectories are assessed annually, considering the progress of pre-determined objectives that focus on contributing to specific sub targets of the SDGs. Once the company in scope falls out of the universe as a result of (a) a successful engagement (resulting in higher SDG scores) or (b) an unsuccessful engagement, then a selling strategy will be designed for divestment.

3. The Sub-fund's portfolio complies with Robeco's Exclusion Policy (<https://www.robeco.com/files/docm/docu-exclusion-policy.pdf>) excluding investments in companies that are exposed to controversial behavior and controversial products. This means that the Sub-fund has 0% exposure to excluded securities, taking into account a grace period. Information with regards to the effects of the exclusions on the Sub-fund's universe can be found at <https://www.robeco.com/files/docm/docu-exclusion-list.pdf>.
4. The Sub-fund avoids investment in companies that are in breach of the ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises. Companies that breach the international norms will be excluded from the investment universe.
5. All equity holdings have a granted right to vote and Robeco exerts that right by voting according to Robeco's Proxy Voting Policy, unless impediments occur (e.g. share blocking or when not considered cost efficient). Robeco's Proxy Voting Policy can be found at <https://www.robeco.com/files/docm/docu-robeco-stewardship-policy.pdf>.

● **What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?**

The Sub-fund does not commit to a minimum rate to reduce the scope of investments prior to the application of the investment strategy.

● **What is the policy to assess good governance practices of the investee companies?**

Robeco has a Good Governance policy to assess governance practices of companies. The policy describes how Robeco determines if and when a company does not follow good governance practices and is therefore excluded from the initial investment universe for Article 8 and 9 products. Robeco's Good Governance policy applies to the Sub-fund and tests on a set of governance criteria that reflect widely recognized industry established norms and include topics as employee relations, management structure, tax compliance and remuneration.

The Good Governance test consists of criteria on such topics that are examined for investee companies and further explained in Robeco's Good Governance policy <https://www.robeco.com/files/docm/docu-robeco-good-governance-policy.pdf>. Additionally, the companies that do not pass the good governance test are reflected in the exclusion list that can be accessed here - <https://www.robeco.com/files/docm/docu-exclusion-list.pdf>.

● **What is the asset allocation planned for this financial product?**

At least 90% of the investments are aligned with the E/S characteristics of the Sub-fund. The Sub-fund plans to make a minimum of 40% sustainable investments, measured by positive scores via Robeco's SDG Framework. The investments in the category Other, estimated between 0-10%, are mostly in cash, cash equivalents and derivatives as further described below. The planned asset allocation is monitored continuously, and evaluated on a yearly basis.

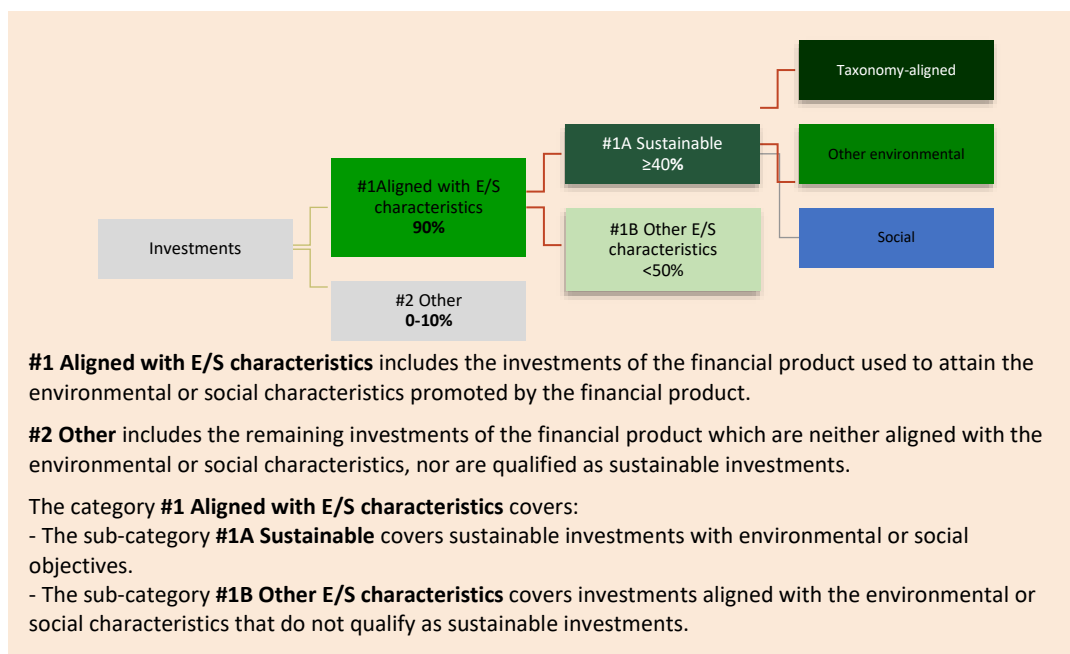

Good governance practices include sound management structures, employee relations, remuneration of staff and tax compliance.

Asset allocation describes the share of investments in specific assets.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure (CapEx)** showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure (OpEx)** reflecting green operational activities of investee companies.

● **How does the use of derivatives attain the environmental or social characteristics promoted by the financial product?**

The Sub-fund does not make use of derivatives to attain the environmental or social characteristics promoted by the financial product. The Sub-fund may make use of derivatives for hedging, liquidity management and efficient portfolio management as well as investment purposes. Exchange traded and over-the-counter derivatives are permitted, including but not limited to futures, swaps, options and currency forwards. Whilst the Sub-fund may use derivatives both for investment purposes as well as for hedging and efficient portfolio management, it does not utilize derivatives for such purposes outside the intended share of investments allocated to the 'Other' category. In case the Sub-fund uses derivatives, the underlying shall comply with the investment policy. Where relevant, minimum environmental or social safeguards are taken into account as described below.

To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

0%. The Sub-fund does not intend to make Taxonomy-aligned investments. It cannot be excluded that among the Sub-fund's holdings certain investments are Taxonomy aligned. The Sub-fund will report on Taxonomy-aligned investment in the periodic disclosures. In the future, once data-availability in relation to the EU Taxonomy will improve, Robeco might consider setting a target based on turnover or CAPEX. Robeco currently relies on third-party data, including data in relation to companies that do not disclose on the EU Taxonomy alignment of their activities. EU Taxonomy-alignment data is not yet subject to a review by third parties. The Sub-fund only makes investments in equity and therefore it does not have sovereign exposures. The expected level of alignment with and without sovereign bonds is the same.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

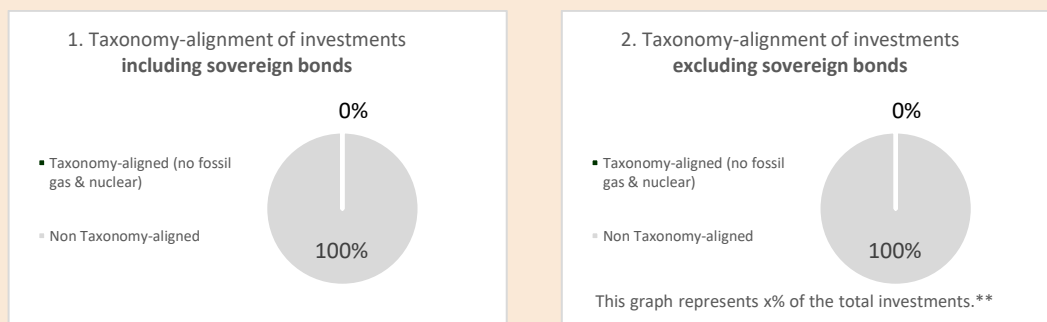

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

● **Does the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy?³¹**

- Yes
 - In fossil gas
 - In nuclear energy
- No

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.*

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures
 ** As the investments are not Taxonomy-aligned, the exclusion of sovereign bonds has no impact on the graph and therefore no such percentage is shown here.

● **What is the minimum share of investments in transitional and enabling activities?**

0%.

What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?

The Sub-fund intends to make sustainable investments, measured as positive scores via Robeco's SDG Framework. Among those could be investments with environmental objectives that do not qualify as Taxonomy-aligned. The environmental objectives of the Sub-fund are attained by investing in companies that score positively on SDG 12 (Responsible consumption and production), SDG 13 (Climate action), SDG 14 (Life below water), and SDG 15 (Life on land) in Robeco's SDG Framework. While the sum of sustainable investments with an environmental objective and socially sustainable investments always adds up to the Sub-fund's minimum proportion of 40% sustainable investments, we do not commit to a minimum share of sustainable investments with an environmental objective because the Sub-fund's investment strategy does not have a specific environmental investment objective. Therefore, the minimum share of sustainable investments with an environmental objective is 0%.

³¹ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

 are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

What is the minimum share of socially sustainable investments?

The Sub-fund intends to make sustainable investments, measured as positive scores via Robeco's SDG Framework. Among those could be investments with social objectives. The social objectives of the Sub-fund are attained by investing in companies that score positively on SDG 1 (No poverty), SDG 2 (Zero hunger), SDG 3 (Good health and well-being), SDG 4 (Quality education), SDG 5 (Gender equality), SDG 6 (Clear water and sanitation), SDG 7 (Affordable and clean energy), SDG 8 (Decent work and economic growth), SDG 9 (Industry, innovation and infrastructure), SDG 10 (Reduced inequalities), SDG 11 (Sustainable cities and communities), SDG 16 (Peace, justice and strong institutions) and SDG 17 (Partnerships for the goals), in Robeco's SDG Framework. While the sum of socially sustainable investments and sustainable investments with an environmental objective always adds up to the Sub-fund's minimum proportion of sustainable investments, we do not commit to a minimum share of socially sustainable investments because the Sub-fund's investment strategy does not have a specific socially sustainable investment objective. Therefore, the minimum share of socially sustainable investments is 0%.

What investments are included under "#2 Other", what is their purpose and are there any minimum environmental or social safeguards?

The type of instruments included under "#2 Other" and their purpose are outlined in Annex I of this Prospectus under the header 'Financial instruments and investment restrictions'. They include cash, cash equivalents, as well as investment funds and eligible asset classes (other than bonds and equities) that do not specifically promote E/S characteristics. As indicated above, the Sub-fund does not make use of derivatives to attain the environmental or social characteristics promoted. The Sub-fund may make use of derivatives, which thus always fall under the category "#2 Other", for hedging, liquidity management and efficient portfolio management as well as investment purposes. Exchange traded and over-the-counter derivatives are permitted, including but not limited to futures, swaps, options and currency forwards. In case the Sub-fund uses derivatives, the underlying shall comply with the investment policy. Where relevant, minimum environmental or social safeguards are taken into account, by, for example, applying Robeco's Exclusion Policy for any single security derivative.

Is a specific index designated as a reference benchmark to determine whether this financial product is aligned with the environmental and/or social characteristics that it promotes?

Not applicable.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

dd) Robeco Emerging Markets Ex China SDG Engagement Equities

Pre-contractual disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Product name: Robeco Emerging Markets Ex China SDG Engagement Equities

Legal entity identifier: N/A

Environmental and/or social characteristics

Does this financial product have a sustainable investment objective?

Yes

No

It will make a minimum of **sustainable investments with an environmental objective: ___%**

in economic activities that qualify as environmentally sustainable under the EU Taxonomy

in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

It will make a minimum of **sustainable investments with a social objective: ___%**

It promotes **Environmental/Social (E/S) characteristics** and while it does not have as its objective a sustainable investment, it will have a minimum proportion of 40% of sustainable investments

with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with a social objective

It promotes E/S characteristics, but **will not make any sustainable investments**

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

What environmental and/or social characteristics are promoted by this financial product?

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

The Sub-fund has the following E/S characteristics:

1. The Sub-fund promotes investment in a portfolio that avoid significant harm, and aim to improve their contribution, to the Sustainable Development Goals (SDGs).
2. The Sub-fund promotes driving a clear and measurable improvement in a company's contribution to the United Nations Sustainable Development Goals (SDGs) over three to five years by performing engagement.
3. The Sub-fund promotes certain minimum environmental and social safeguards through applying exclusion criteria with regards to products and business practices that Robeco believes are detrimental to society and incompatible with sustainable investment strategies, such as exposure to controversial behaviour, controversial weapons, and fossil fuels.
4. The Sub-fund promotes adherence to and conducting business activities in accordance with the United Nations Universal Declaration of Human Rights, the International Labor Organization's (ILO) labor standards, the United Nations Guiding Principles for Business and Human Rights (UNGPs), the United Nations Global Compact (UNGC) and the OECD Guidelines for Multinational Enterprises, by scrutinizing companies that violate these principles.
5. The Sub-fund promotes good governance and sustainable corporate practices through proxy voting, which contributes to long-term shareholder value creation. This includes taking an active stance on social and environmental topics through Robeco's proxy voting policy.

There is no reference benchmark designated for the purpose of attaining the environmental or social characteristics promoted by the Sub-fund.

● ***What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?***

The Sub-fund has the following sustainability indicators:

1. The number of companies with a SDG score of -1, 0 (zero), +1 or +2 based on the internally developed SDG Framework.
2. The number of companies actively engaged.
3. The % of investments in securities that are on Robeco's Exclusion list as result of the application of Robeco's Exclusion Policy.
4. The % of holdings that are in violation of the ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises.
5. The number of holdings and agenda items voted.

● ***What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?***

The sustainable investments aim to contribute to the UN Sustainable Development Goals ("SDGs"), that have both social and environmental objectives. These are 17 goals that are globally recognised and include environmental goals such as climate action, clean water, life on land and water and social goals such as zero hunger, gender equality, education, etc. Robeco has developed a proprietary framework based on the UN SDGs through which an issuer's contribution to such SDGs is determined through a 3-step process. This process starts with a sector baseline on which a company's products are analysed to examine contribution to the society and environment. Further, the operational processes involved in creating such products is checked along with any controversies/litigation claims and remediation actions taken which are perused before a final SDG score is determined. The final score ranges between high negative (-3) to high positive (+3) and only those issuers which achieve positive SDG scores (+1, +2 and +3) are regarded as Sustainable Investments.

● ***How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?***

The sustainable investments do no significant harm to any environmental or social sustainable investment objective by considering a principal adverse impact and aligning with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights. In addition, sustainable investments score positively on Robeco's SDG Framework, and therefore do not cause significant harm.

How have the indicators for adverse impacts on sustainability factors been taken into account?

Mandatory principal adverse impact indicators are considered through Robeco's SDG Framework, either directly or indirectly, when identifying sustainable investments for the Sub-fund. In addition, voluntary environmental and social indicators are taken into account, depending on their relevance for measuring impacts on the SDGs and the availability of data. A detailed description of the incorporation of principal adverse impacts is available via Robeco's Principal Adverse Impact Statement published on the Robeco website (<https://www.robeco.com/files/docm/docu-principal-adverse-impact-statement-summary-entity-level.pdf>). In this statement, Robeco sets out its approach to identifying and prioritizing principal adverse impacts, and how principal adverse impacts are considered as part of Robeco's investment due diligence process and procedures relating to research and analysis, exclusions and restrictions and/or voting and engagement. This description also explains how principal adverse impact indicators are considered by the SDG Framework.

How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The sustainable investments are aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights via both Robeco's Exclusion Policy and Robeco's SDG Framework.

Robeco's Exclusion Policy includes an explanation of how Robeco acts in accordance with the International Labor Organization (ILO) standards, United Nations Guiding Principles (UNGPs), United Nations Global Compact (UNGC) Principles and the Organization for Economic Co-operation and Development (OECD) Guidelines for Multinational Enterprises and is guided by these international treaties to assess the behavior of companies. Robeco continuously screens its investments for breaches of these principles. In case of a breach, the company will be excluded or engaged with, and is not considered a sustainable investment.

Robeco's SDG Framework screens for breaches on these principles in the final step of the framework. In this step, Robeco checks whether the company concerned has been involved in any controversies. Involvement in any controversy will result in a negative SDG score for the company, meaning it is not a sustainable investment.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

Does this financial product consider principal adverse impacts on sustainability factors?

Yes, _____

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

The Sub-fund considers principal adverse impacts on sustainability factors as referred to in Annex I of the SFDR Delegated Act.

Pre-investment, the following principal adverse impacts on sustainability factors are considered:

- Via the applied normative and activity-based exclusions, the following PAIs are considered:
 - Exposure to companies active in the fossil fuel sector (PAI 4, Table 1)
 - Violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1)
 - Activities negatively affecting biodiversity-sensitive areas (PAI 7, Table 1). The consideration of this PAI is currently restricted to applying exclusions to palm oil producing companies and for any breaches to the UNGC, UNGP and OECD Guidelines for Multinational Enterprises in relation to biodiversity.
 - Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons (PAI 14, Table 1)
- Via the ESG integration process, as part of the investment due diligence policies and procedures, the following PAIs are considered:
 - All indicators related to GHG emissions, as part of the required Climate Risk analysis (PAI 1-6, Table 1, PAI 4, Table 2)
 - Biodiversity, water and waste indicators (PAI 7-9, Table 1)
 - Board gender diversity (PAI 13, Table 1)

Post-investment, the following principal adverse impacts on sustainability factors are taken into account:

- Via the application of the voting policy, the following PAIs are considered:
 - All indicators related to GHG emissions (PAI 1-6, Table 1)
 - Indicators related to social and employee matters (PAI 10-13, Table 1; PAI 5-8, Table 3)
- Via Robeco's entity engagement program, the following PAIs are considered:
 - All indicators related to Climate and other environment-related indicators (PAI 1-9, Table 1)
 - Violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1). On an ongoing basis, the investment universe is scanned for controversial behavior in relation to the aforementioned principles and guidelines.
 - In addition, based on a yearly review of Robeco's performance on all mandatory and selected voluntary indicators, holdings of the Sub-fund that cause adverse impact might be selected for engagement.

More information is available via Robeco's Principal Adverse Impact Statement, published on Robeco's website. The Sub-fund will periodically report how it has considered the principal adverse impacts of its investments in the Company's annual report, which will be made available each year on or before 30 April at the Sub-fund page highlighted in final section of this document.

No

What investment strategy does this financial product follow?

Robeco Emerging Markets ex China SDG Engagement Equities is an actively managed fund that invests in a concentrated selection of emerging markets (ex China) stocks. Stock selection is based on fundamental analysis to invest in companies that are best able to have a clear and measurable improvement in their contribution to the United Nations Sustainable Development Goals (UN SDGs) over three to five years via active engagement, as described in the Investment policy strategy paragraph in Appendix I of this Prospectus. The strategy integrates sustainability indicators on a continuous basis as part of the stock selection process. Amongst others, the Sub-fund applies norms-based and activity-based exclusions, Robeco's good governance policy, Robeco's SDG framework and considers Principal Adverse Impacts in the investment process. More product-specific information can be found on our website and the links provided in the final question of this disclosure.

The investment strategy guides investment decisions based on factors such as investment objectives and risk tolerance.

● **What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?**

The Sub-fund has the following binding elements:

1. The Sub-fund is solely invested in companies that hold a -1, 0 (zero) or positive SDG score. The Sub-fund excludes all high or medium negative SDG scores (-3 or -2) and all high positive SDG scores (+3) for selection of new investment cases based on the internally developed SDG Framework.
 - The Sub-fund only hold high positive SDG scores (+3) when a company receives an upgrade of their SDG score after successful SDG engagement that started with an initial -1, 0, +1 or +2 SDG score at investment. The Sub-fund can hold up to 20% of such holdings that are rated SDG (+3) after engagement has been successful for a period of 6 months.
 - (Successfully completed engagement: When a company progresses on the targets identified and fulfills the key performance indicators as established at the start of the engagement. Such targets can be linked with internal frameworks like the SDG framework).
2. The Sub-fund actively engages with 100% of the corporate holdings in the portfolio, typically for a period of 3 to 5 years. The engagement trajectories are assessed annually, considering the progress of pre-determined objectives that focus on contributing to specific sub targets of the SDGs. Once the company in scope falls out of the universe as a result of (a) a successful engagement (resulting in higher SDG scores) or (b) an unsuccessful engagement, then a selling strategy will be designed for divestment.
3. The Sub-fund's portfolio complies with Robeco's Exclusion Policy (<https://www.robeco.com/files/docm/docu-exclusion-policy.pdf>) excluding investments in companies that are exposed to controversial behavior and controversial products. This means that the Sub-fund has 0% exposure to excluded securities, taking into account a grace period. Information with regards to the effects of the exclusions on the Sub-fund's universe can be found at <https://www.robeco.com/files/docm/docu-exclusion-list.pdf>.
4. The Sub-fund avoids investment in companies that are in breach of the ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises. Companies that breach the international norms will be excluded from the investment universe.
5. All equity holdings have a granted right to vote and Robeco exerts that right by voting according to Robeco's Proxy Voting Policy, unless impediments occur (e.g. share blocking or when not considered cost efficient). Robeco's Proxy Voting Policy can be found at <https://www.robeco.com/files/docm/docu-robeco-stewardship-policy.pdf>.

● **What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?**

The Sub-fund does not commit to a minimum rate to reduce the scope of investments prior to the application of the investment strategy.

● **What is the policy to assess good governance practices of the investee companies?**

Robeco has a Good Governance policy to assess governance practices of companies. The policy describes how Robeco determines if and when a company does not follow good governance practices and is therefore excluded from the initial investment universe for Article 8 and 9 products. Robeco's Good Governance policy applies to the Sub-fund and tests on a set of governance criteria that reflect widely recognized industry established norms and include topics as employee relations, management structure, tax compliance and remuneration.

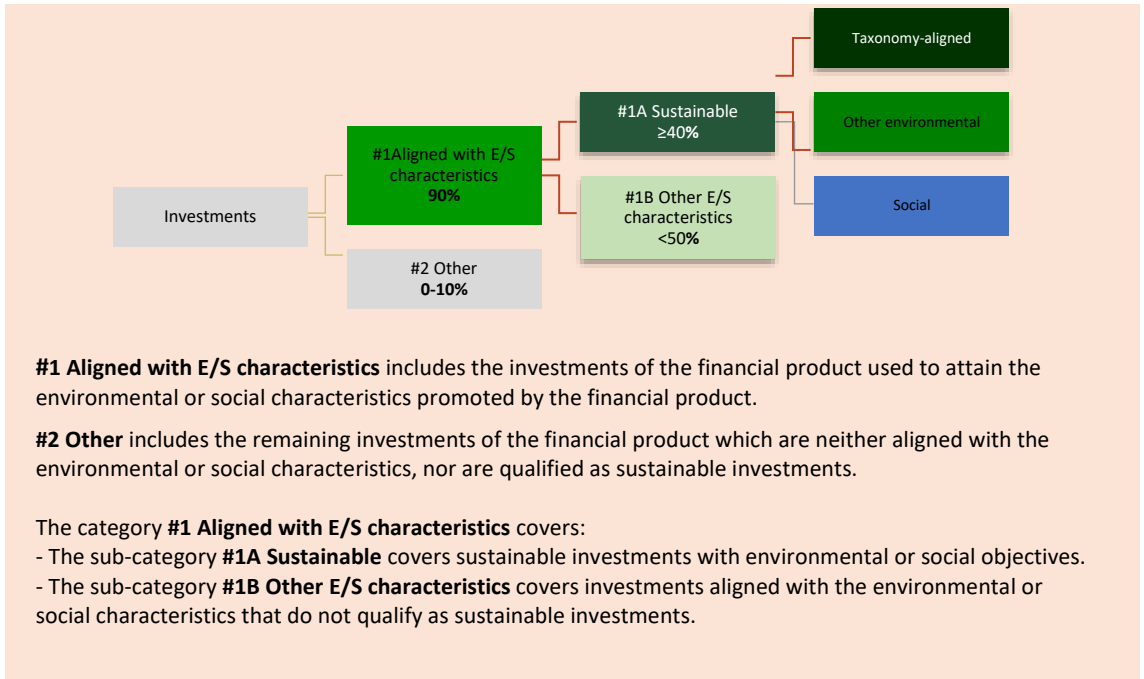

The Good Governance test consists of criteria on such topics that are examined for investee companies and further explained in Robeco's Good Governance policy <https://www.robeco.com/files/docm/docu-robeco-good-governance-policy.pdf>. Additionally, the companies that do not pass the good governance test are reflected in the exclusion list that can be accessed here - <https://www.robeco.com/files/docm/docu-exclusion-list.pdf>.

Good governance practices include sound management structures, employee relations, remuneration of staff and tax compliance.

What is the asset allocation planned for this financial product?

At least 90% of the investments are aligned with the E/S characteristics of the Sub-fund. The Sub-fund plans to make a minimum of 40% sustainable investments, measured by positive scores via Robeco's SDG Framework. The investments in the category Other, estimated between 0-10%, are mostly in cash, cash equivalents and derivatives as further described below. The planned asset allocation is monitored continuously, and evaluated on a yearly basis.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers sustainable investments with environmental or social objectives.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

How does the use of derivatives attain the environmental or social characteristics promoted by the financial product?

The Sub-fund does not make use of derivatives to attain the environmental or social characteristics promoted by the financial product. The Sub-fund may make use of derivatives for hedging, liquidity management and efficient portfolio management as well as investment purposes. Exchange traded and over-the-counter derivatives are permitted, including but not limited to futures, swaps, options and currency forwards. Whilst the Sub-fund may use derivatives both for investment purposes as well as for hedging and efficient portfolio management, it does not utilize derivatives for such purposes outside the intended share of investments allocated to the 'Other' category.

In case the Sub-fund uses derivatives, the underlying shall comply with the investment policy. Where relevant, minimum environmental or social safeguards are taken into account as described below.

To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

0%. The Sub-fund does not intend to make Taxonomy-aligned investments. It cannot be excluded that among the Sub-fund's holdings certain investments are Taxonomy aligned. The Sub-fund will report on Taxonomy-aligned investment in the periodic disclosures. In the future, once data-availability in relation to the EU Taxonomy will improve, Robeco might consider setting a target based on turnover or CAPEX. Robeco currently relies on third-party data, including data in relation to companies that do not disclose on the EU Taxonomy alignment of their activities. EU Taxonomy-alignment data is not yet subject to a review by third parties. The Sub-fund only makes investments in equity and therefore it does not have sovereign exposures. The expected level of alignment with and without sovereign bonds is the same.

Asset allocation describes the share of investments in specific assets.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

 are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

● **Does the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy?³²**

Yes

In fossil gas

In nuclear energy

No

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.*

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

** As the investments are not Taxonomy-aligned, the exclusion of sovereign bonds has no impact on the graph and therefore no such percentage is shown here.

● **What is the minimum share of investments in transitional and enabling activities?**

0%.

What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?

The Sub-fund intends to make sustainable investments, measured as positive scores via Robeco's SDG Framework. Among those could be investments with environmental objectives that do not qualify as Taxonomy-aligned. The environmental objectives of the Sub-fund are attained by investing in companies that score positively on SDG 12 (Responsible consumption and production), SDG 13 (Climate action), SDG 14 (Life below water), and SDG 15 (Life on land) in Robeco's SDG Framework. While the sum of sustainable investments with an environmental objective and socially sustainable investments always adds up to the Sub-fund's minimum proportion of 40% sustainable investments, we do not commit to a minimum share of sustainable investments with an environmental objective because the Sub-fund's investment strategy does not have a specific environmental investment objective. Therefore, the minimum share of sustainable investments with an environmental objective is 0%.

³² Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

What is the minimum share of socially sustainable investments?

The Sub-fund intends to make sustainable investments, measured as positive scores via Robeco's SDG Framework. Among those could be investments with social objectives. The social objectives of the Sub-fund are attained by investing in companies that score positively on SDG 1 (No poverty), SDG 2 (Zero hunger), SDG 3 (Good health and well-being), SDG 4 (Quality education), SDG 5 (Gender equality), SDG 6 (Clear water and sanitation), SDG 7 (Affordable and clean energy), SDG 8 (Decent work and economic growth), SDG 9 (Industry, innovation and infrastructure), SDG 10 (Reduced inequalities), SDG 11 (Sustainable cities and communities), SDG 16 (Peace, justice and strong institutions) and SDG 17 (Partnerships for the goals), in Robeco's SDG Framework. While the sum of socially sustainable investments and sustainable investments with an environmental objective always adds up to the Sub-fund's minimum proportion of sustainable investments, we do not commit to a minimum share of socially sustainable investments because the Sub-fund's investment strategy does not have a specific socially sustainable investment objective. Therefore, the minimum share of socially sustainable investments is 0%.

What investments are included under "#2 Other", what is their purpose and are there any minimum environmental or social safeguards?

The type of instruments included under "#2 Other" and their purpose are outlined in Annex I of this Prospectus under the header 'Financial instruments and investment restrictions'. They include cash, cash equivalents, as well as investment funds and eligible asset classes (other than bonds and equities) that do not specifically promote E/S characteristics. As indicated above, the Sub-fund does not make use of derivatives to attain the environmental or social characteristics promoted. The Sub-fund may make use of derivatives, which thus always fall under the category "#2 Other", for hedging, liquidity management and efficient portfolio management as well as investment purposes. Exchange traded and over-the-counter derivatives are permitted, including but not limited to futures, swaps, options and currency forwards. In case the Sub-fund uses derivatives, the underlying shall comply with the investment policy. Where relevant, minimum environmental or social safeguards are taken into account, by, for example, applying Robeco's Exclusion Policy for any single security derivative.

Is a specific index designated as a reference benchmark to determine whether this financial product is aligned with the environmental and/or social characteristics that it promotes?

Not applicable.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

ee) Robeco QI Emerging Markets Ex China Active Equities

Pre-contractual disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Product name: Robeco QI Emerging Markets Ex China Active Equities

Legal entity identifier: N/A

Environmental and/or social characteristics

Does this financial product have a sustainable investment objective?

Yes
 No

<p><input type="checkbox"/> It will make a minimum of sustainable investments with an environmental objective: ___%</p> <ul style="list-style-type: none"> <input type="checkbox"/> in economic activities that qualify as environmentally sustainable under the EU Taxonomy <input type="checkbox"/> in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy <p><input type="checkbox"/> It will make a minimum of sustainable investments with a social objective: ___%</p>	<p><input checked="" type="checkbox"/> It promotes Environmental/Social (E/S) characteristics and while it does not have as its objective a sustainable investment, it will have a minimum proportion of 40% of sustainable investments</p> <ul style="list-style-type: none"> <input type="checkbox"/> with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy <input type="checkbox"/> with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy <input checked="" type="checkbox"/> with a social objective <p><input type="checkbox"/> It promotes E/S characteristics, but will not make any sustainable investments</p>
-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------	---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

What environmental and/or social characteristics are promoted by this financial product?

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

The Sub-fund has the following E/S characteristics:

1. The Sub-fund promotes good governance and sustainable corporate practices through proxy voting, which contributes to long-term shareholder value creation. This includes taking an active stance on social and environmental topics through Robeco's proxy voting policy.
2. The Sub-fund promotes certain minimum environmental and social safeguards through applying exclusion criteria with regards to products and business practices that Robeco believes are detrimental to society and incompatible with sustainable investment strategies, such as exposure to controversial behaviour, controversial weapons, and fossil fuels.
3. The Sub-fund promotes having a lower environmental footprint than the general market index referred to in Appendix VI – Benchmarks (the "General Market Index"), through reduction in carbon, water and waste footprints.
4. The Sub-fund promotes adherence to and conducting business activities in accordance with the United Nations Universal Declaration of Human Rights, the International Labor Organization's (ILO) labor standards, the United Nations Guiding Principles for Business and Human Rights (UNGPs), the United Nations Global Compact (UNGC) and the OECD Guidelines for Multinational Enterprises, by scrutinizing companies that violate these principles.
5. The Sub-fund promotes having a weighted average ESG score that is better than that of the General Market Index.
6. The Sub-fund promotes having a larger share of companies with a positive SDG score (1,2,3) in the portfolio than the General Market Index.

There is no reference benchmark designated for the purpose of attaining the environmental or social characteristics promoted by the Sub-fund.

What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?

The Sub-fund has the following sustainability indicators:

1. The number of holdings and agenda items voted.
2. The % of investments in securities that are on Robeco's Exclusion list as result of the application of Robeco's Exclusion Policy.
3. The Sub-fund's weighted carbon, water and waste footprint score compared to the General Market Index.
4. The number of companies that are in violation of the ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises and hence are a part of the Enhanced Engagement program.
5. The Sub-fund's weighted average ESG score compared to the General Market Index.
6. The Sub-fund's weight in companies with a positive SDG score (1,2,3) compared to the General Market Index weight in companies with a positive SDG score (1,2,3).

What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?

The sustainable investments aim to contribute to the UN Sustainable Development Goals ("SDGs"), that have both social and environmental objectives. These are 17 goals that are globally recognised and include environmental goals such as climate action, clean water, life on land and water and social goals such as zero hunger, gender equality, education, etc. Robeco has developed a proprietary framework based on the UN SDGs through which an issuer's contribution to such SDGs is determined through a 3-step process. This process starts with a sector baseline on which a company's products are analysed to examine contribution to the society and environment. Further, the operational processes involved in creating such products is checked along with any controversies/litigation claims and remediation actions taken which are perused before a final SDG score is determined. The final score ranges between high

negative (-3) to high positive (+3) and only those issuers which achieve positive SDG scores (+1, +2 and +3) are regarded as Sustainable Investments.

● ***How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?***

The sustainable investments do no significant harm to any environmental or social sustainable investment objective by considering a principal adverse impact and aligning with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights. In addition, sustainable investments score positively on Robeco's SDG Framework, and therefore do not cause significant harm.

How have the indicators for adverse impacts on sustainability factors been taken into account?

Mandatory principal adverse impact indicators are considered through Robeco's SDG Framework, either directly or indirectly, when identifying sustainable investments for the Sub-fund. In addition, voluntary environmental and social indicators are taken into account, depending on their relevance for measuring impacts on the SDGs and the availability of data. A detailed description of the incorporation of principal adverse impacts is available via Robeco's Principal Adverse Impact Statement published on the Robeco website (<https://www.robeco.com/files/docm/docu-principal-adverse-impact-statement-summary-entity-level.pdf>). In this statement, Robeco sets out its approach to identifying and prioritizing principal adverse impacts, and how principal adverse impacts are considered as part of Robeco's investment due diligence process and procedures relating to research and analysis, exclusions and restrictions and/or voting and engagement. This description also explains how principal adverse impact indicators are considered by the SDG Framework.

How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The sustainable investments are aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights via both Robeco's Exclusion Policy and Robeco's SDG Framework.

Robeco's Exclusion Policy includes an explanation of how Robeco acts in accordance with the International Labor Organization (ILO) standards, United Nations Guiding Principles (UNGPs), United Nations Global Compact (UNGC) Principles and the Organization for Economic Co-operation and Development (OECD) Guidelines for Multinational Enterprises and is guided by these international treaties to assess the behavior of companies. Robeco continuously screens its investments for breaches of these principles. In case of a breach, the company will be excluded or engaged with, and is not considered a sustainable investment.

Robeco's SDG Framework screens for breaches on these principles in the final step of the framework. In this step, Robeco checks whether the company concerned has been involved in any controversies. Involvement in any controversy will result in a negative SDG score for the company, meaning it is not a sustainable investment.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

Does this financial product consider principal adverse impacts on sustainability factors?

Yes, _____

The Sub-fund considers principal adverse impacts on sustainability factors as referred to in Annex I of the SFDR Delegated Act.

Pre-investment, the following principal adverse impacts on sustainability factors are considered:

- o Via the applied normative and activity-based exclusions, the following PAIs are considered:
 - Exposure to companies active in the fossil fuel sector (PAI 4, Table 1)
 - Violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1)
 - Activities negatively affecting biodiversity-sensitive areas (PAI 7, Table 1). The consideration of this PAI is currently restricted to applying exclusions to palm oil producing companies and for any breaches to the UNGC, UNGP and OECD Guidelines for Multinational Enterprises in relation to biodiversity.
 - Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons (PAI 14, Table 1)
- o Via the environmental footprint performance targets of the Sub-fund, the following PAIs are considered:
 - Carbon footprint (PAI 2, Table 1)
 - Water and waste indicators (PAI 7-9, Table 1). Robeco will use on water and waste footprint until data quality and coverage of the PAIs will improve.

Post-investment, the following principal adverse impacts on sustainability factors are taken into account:

- o Via the application of the voting policy, the following PAIs are considered:
 - All indicators related to GHG emissions (PAI 1-6, Table 1)
 - Indicators related to social and employee matters (PAI 10-13, Table 1; PAI 5-8, Table 3)
- o Via Robeco's entity engagement program, the following PAIs are considered:
 - All indicators related to Climate and other environment-related indicators (PAI 1-9, Table 1)
 - Violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1)
 - In addition, based on a yearly review of Robeco's performance on all mandatory and selected voluntary indicators, holdings of the Sub-fund that cause adverse impact might be selected for engagement.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

More information is available via Robeco's Principal Adverse Impact Statement, published on Robeco's website. The Sub-fund will periodically report how it has considered the principal adverse impacts of its investments in the Company's annual report, which will be made available each year on or before 30 April at the Sub-fund page highlighted in final section of this document.

No

What investment strategy does this financial product follow?

Robeco QI Emerging Markets Active Equities is an actively managed fund and invests in stocks of companies in emerging markets. The selection of these stocks is based on a quantitative model as described in the Investment policy strategy paragraph in Appendix I of this Prospectus. The strategy integrates sustainability indicators on a continuous basis as part of the stock selection process. Amongst others, the Sub-fund applies norms-based and activity-based exclusions, Robeco's good governance policy, Robeco's SDG framework and considers Principal Adverse Impacts in the investment process. More product-specific information can be found on our website and the links provided in the final question of this disclosure.

The investment strategy guides investment decisions based on factors such as investment objectives and risk tolerance.

What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?

The Sub-fund has the following binding elements:

1. All equity holdings have a granted right to vote and Robeco exerts that right by voting according to Robeco's Proxy Voting Policy, unless impediments occur (e.g. share blocking or when not considered cost efficient). Robeco's Proxy Voting Policy can be found at <https://www.robeco.com/files/docm/docu-robeco-stewardship-policy.pdf>.
2. The Sub-fund's portfolio complies with Robeco's Exclusion Policy (<https://www.robeco.com/files/docm/docu-exclusion-policy.pdf>), that is based on exclusion criteria with regards to products and business practices that Robeco believes are detrimental to society and incompatible with sustainable investment strategies. This means that the Sub-fund has 0% exposure to excluded securities, taking into account a grace period. Information with regards to the effects of the exclusions on the Sub-fund's universe can be found at <https://www.robeco.com/files/docm/docu-exclusion-list.pdf>.
3. The Sub-fund's weighted carbon, water and waste footprint score is a better than that of the General Market Index.
4. The Sub-fund scrutinizes investment in companies that are in breach of the ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises. If a company in the portfolio breaches one of the international guidelines during the investment period, the company will become part of the Enhanced Engagement program. When engagement is deemed highly unlikely to succeed, the company might be excluded directly.
5. The Sub-fund's weighted average ESG score is better than that of the General Market Index.
6. The Sub-fund's weight in companies with a positive SDG score (1,2,3) is better than that of the General Market Index.

What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?

The Sub-fund does not commit to a minimum rate to reduce the scope of investments prior to the application of the investment strategy.

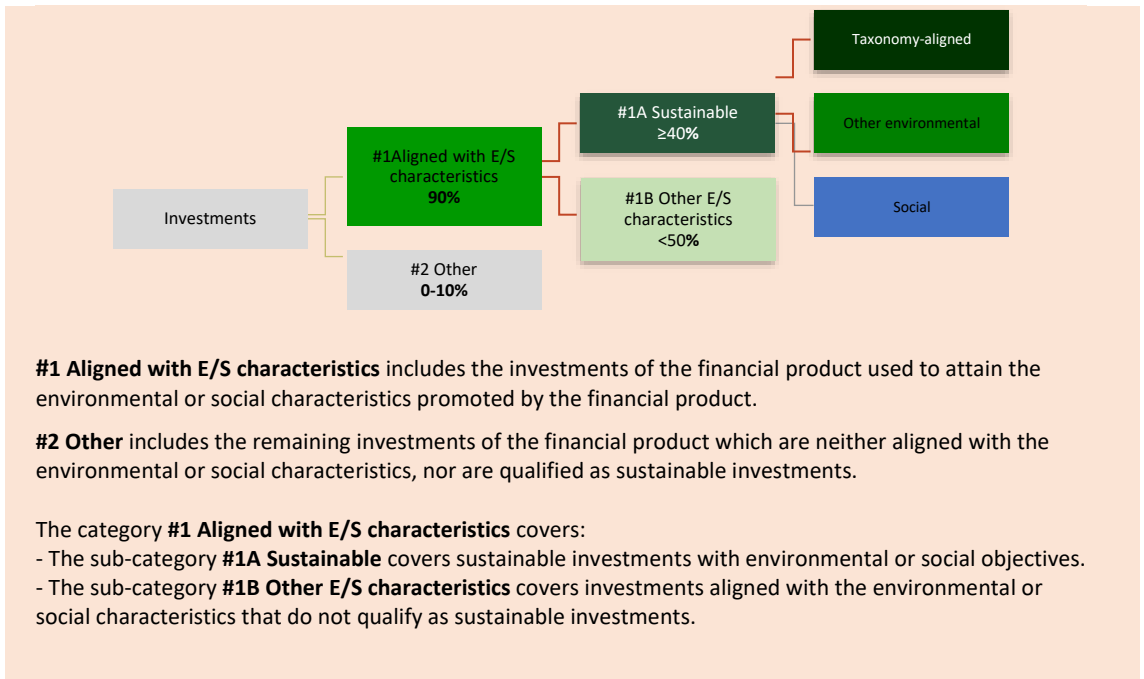

What is the policy to assess good governance practices of the investee companies?

Robeco has a Good Governance policy to assess governance practices of companies. The policy describes how Robeco determines if and when a company does not follow good governance practices and is therefore excluded from the initial investment universe for Article 8 and 9 products. Robeco's Good Governance policy applies to the Sub-fund and tests on a set of governance criteria that reflect widely recognized industry established norms and include topics as employee relations, management structure, tax compliance and remuneration.

The Good Governance test consists of criteria on such topics that are examined for investee companies and further explained in Robeco's Good Governance policy <https://www.robeco.com/files/docm/docu-robeco-good-governance-policy.pdf>. Additionally, the companies that do not pass the good governance test are reflected in the exclusion list that can be accessed here - <https://www.robeco.com/files/docm/docu-exclusion-list.pdf>.

What is the asset allocation planned for this financial product?

At least 90% of the investments are aligned with the E/S characteristics of the Sub-fund. The Sub-fund plans to make a minimum of 40% sustainable investments, measured by positive scores via Robeco's SDG Framework. The investments in the category Other, estimated between 0-10%, are mostly in cash, cash equivalents and derivatives as further described below. The planned asset allocation is monitored continuously, and evaluated on a yearly basis.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers sustainable investments with environmental or social objectives.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

How does the use of derivatives attain the environmental or social characteristics promoted by the financial product?

The Sub-fund does not make use of derivatives to attain the environmental or social characteristics promoted by the financial product. The Sub-fund may make use of derivatives for hedging, liquidity management and efficient portfolio management as well as investment purposes. Exchange traded and over-the-counter derivatives are permitted, including but not limited to futures, swaps, options and currency forwards. Whilst the Sub-fund may use derivatives both for investment purposes as well as for

Good governance practices include sound management structures, employee relations, remuneration of staff and tax compliance.

Asset allocation describes the share of investments in specific assets.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

hedging and efficient portfolio management, it does not utilize derivatives for such purposes outside the intended share of investments allocated to the 'Other' category.
 In case the Sub-fund uses derivatives, the underlying shall comply with the investment policy. Where relevant, minimum environmental or social safeguards are taken into account as described below.

To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

0%. The Sub-fund does not intend to make Taxonomy-aligned investments. It cannot be excluded that among the Sub-fund's holdings certain investments are Taxonomy aligned. The Sub-fund will report on Taxonomy-aligned investment in the periodic disclosures. In the future, once data-availability in relation to the EU Taxonomy will improve, Robeco might consider setting a target based on turnover or CAPEX. Robeco currently relies on third-party data, including data in relation to companies that do not disclose on the EU Taxonomy alignment of their activities. EU Taxonomy-alignment data is not yet subject to a review by third parties. The Sub-fund only makes investments in equity and therefore it does not have sovereign exposures. The expected level of alignment with and without sovereign bonds is the same.

Does the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy?³³

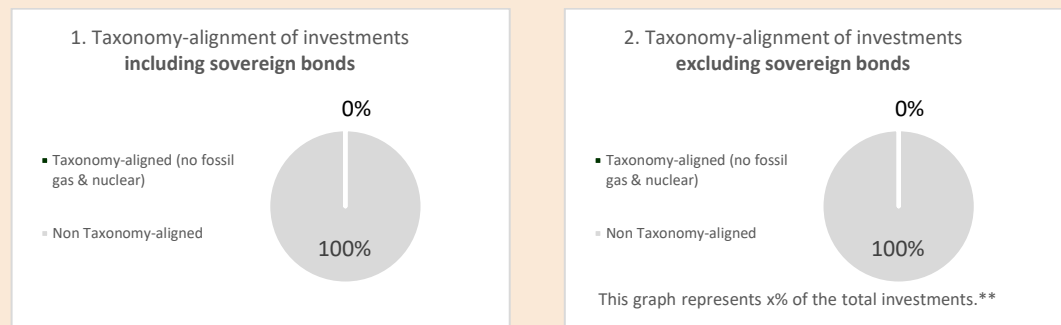

Yes

In fossil gas

In nuclear energy

No

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.*

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures
 ** As the investments are not Taxonomy-aligned, the exclusion of sovereign bonds has no impact on the graph and therefore no such percentage is shown here.

What is the minimum share of investments in transitional and enabling activities?

0%.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

³³ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

 are sustainable investments with an environmental objective that **do not take into account the criteria for environmentally sustainable economic activities under the EU Taxonomy.**

What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?

The Sub-fund intends to make sustainable investments, measured as positive scores via Robeco's SDG Framework. Among those could be investments with environmental objectives that do not qualify as Taxonomy-aligned. The environmental objectives of the Sub-fund are attained by investing in companies that score positively on SDG 12 (Responsible consumption and production), SDG 13 (Climate action), SDG 14 (Life below water), and SDG 15 (Life on land) in Robeco's SDG Framework. While the sum of sustainable investments with an environmental objective and socially sustainable investments always adds up to the Sub-fund's minimum proportion of 40% sustainable investments, we do not commit to a minimum share of sustainable investments with an environmental objective because the Sub-fund's investment strategy does not have a specific environmental investment objective. Therefore, the minimum share of sustainable investments with an environmental objective is 0%.

What is the minimum share of socially sustainable investments?

The Sub-fund intends to make sustainable investments, measured as positive scores via Robeco's SDG Framework. Among those could be investments with social objectives. The social objectives of the Sub-fund are attained by investing in companies that score positively on SDG 1 (No poverty), SDG 2 (Zero hunger), SDG 3 (Good health and well-being), SDG 4 (Quality education), SDG 5 (Gender equality), SDG 6 (Clean water and sanitation), SDG 7 (Affordable and clean energy), SDG 8 (Decent work and economic growth), SDG 9 (Industry, innovation and infrastructure), SDG 10 (Reduced inequalities), SDG 11 (Sustainable cities and communities), SDG 16 (Peace, justice and strong institutions) and SDG 17 (Partnerships for the goals), in Robeco's SDG Framework. While the sum of socially sustainable investments and sustainable investments with an environmental objective always adds up to the Sub-fund's minimum proportion of sustainable investments, we do not commit to a minimum share of socially sustainable investments because the Sub-fund's investment strategy does not have a specific socially sustainable investment objective. Therefore, the minimum share of socially sustainable investments is 0%.

What investments are included under "#2 Other", what is their purpose and are there any minimum environmental or social safeguards?

The type of instruments included under "#2 Other" and their purpose are outlined in Annex I of this Prospectus under the header 'Financial instruments and investment restrictions'. They include cash, cash equivalents, as well as investment funds and eligible asset classes (other than bonds and equities) that do not specifically promote E/S characteristics. As indicated above, the Sub-fund does not make use of derivatives to attain the environmental or social characteristics promoted. The Sub-fund may make use of derivatives, which thus always fall under the category "#2 Other", for hedging, liquidity management and efficient portfolio management as well as investment purposes. Exchange traded and over-the-counter derivatives are permitted, including but not limited to futures, swaps, options and currency forwards. In case the Sub-fund uses derivatives, the underlying shall comply with the investment policy. Where relevant, minimum environmental or social safeguards are taken into account, by, for example, applying Robeco's Exclusion Policy for any single security derivative.

Is a specific index designated as a reference benchmark to determine whether this financial product is aligned with the environmental and/or social characteristics that it promotes?

Not applicable.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or

social characteristics
that they promote.

Where can I find more product specific information online?

More product-specific information can be found on the website:

ff) Robeco QI Emerging Ex China Conservative Equities

Pre-contractual disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Product name: Robeco QI Emerging Ex China Conservative Equities

Legal entity identifier: N/A

Environmental and/or social characteristics

Does this financial product have a sustainable investment objective?

Yes

No

It will make a minimum of **sustainable investments with an environmental objective: ___%**

in economic activities that qualify as environmentally sustainable under the EU Taxonomy

in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

It will make a minimum of **sustainable investments with a social objective: ___%**

It **promotes Environmental/Social (E/S) characteristics** and while it does not have as its objective a sustainable investment, it will have a minimum proportion of 40% of sustainable investments

with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with a social objective

It promotes E/S characteristics, but **will not make any sustainable investments**

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

What environmental and/or social characteristics are promoted by this financial product?

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

The Sub-fund has the following E/S characteristics:

1. The Sub-fund promotes good governance and sustainable corporate practices through proxy voting, which contributes to long-term shareholder value creation. This includes taking an active stance on social and environmental topics through Robeco's proxy voting policy.
2. The Sub-fund promotes certain minimum environmental and social safeguards through applying exclusion criteria with regards to products and business practices that Robeco believes are detrimental to society and incompatible with sustainable investment strategies, such as exposure to controversial behaviour, controversial weapons, and fossil fuels.
3. The Sub-fund promotes having a lower environmental footprint than the general market index referred to in Appendix VI – Benchmarks (the "General Market Index"), through reduction in carbon, water and waste footprints.
4. The Sub-fund promotes adherence to and conducting business activities in accordance with the United Nations Universal Declaration of Human Rights, the International Labor Organization's (ILO) labor standards, the United Nations Guiding Principles for Business and Human Rights (UNGPs), the United Nations Global Compact (UNGC) and the OECD Guidelines for Multinational Enterprises, by scrutinizing companies that violate these principles.
5. The Sub-fund promotes having a weighted average ESG score that is better than that of the General Market Index.
6. The Sub-fund promotes having a larger share of companies with a positive SDG score (1,2,3) in the portfolio than the General Market Index.

There is no reference benchmark designated for the purpose of attaining the environmental or social characteristics promoted by the Sub-fund.

What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?

The Sub-fund has the following sustainability indicators:

1. The number of holdings and agenda items voted.
2. The % of investments in securities that are on Robeco's Exclusion list as result of the application of Robeco's Exclusion Policy.
3. The Sub-fund's weighted carbon, water and waste footprint score compared to the General Market Index.
4. The number of companies that are in violation of the ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises and hence are a part of the Enhanced Engagement program.
5. The Sub-fund's weighted average ESG score compared to the General Market Index.
6. The Sub-fund's weight in companies with a positive SDG score (1,2,3) compared to the General Market Index weight in companies with a positive SDG score (1,2,3).

What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?

The sustainable investments aim to contribute to the UN Sustainable Development Goals ("SDGs"), that have both social and environmental objectives. These are 17 goals that are globally recognised and include environmental goals such as climate action, clean water, life on land and water and social goals such as zero hunger, gender equality, education, etc. Robeco has developed a proprietary framework based on the UN SDGs through which an issuer's contribution to such SDGs is determined through a 3-step process. This process starts with a sector baseline on which a company's products are analysed to examine contribution to the society and environment. Further, the operational processes involved in creating such products is checked along with any controversies/litigation claims and remediation actions taken which are perused before a final SDG score is determined. The final score ranges between high

negative (-3) to high positive (+3) and only those issuers which achieve positive SDG scores (+1, +2 and +3) are regarded as Sustainable Investments.

● ***How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?***

The sustainable investments do no significant harm to any environmental or social sustainable investment objective by considering a principal adverse impact and aligning with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights. In addition, sustainable investments score positively on Robeco's SDG Framework, and therefore do not cause significant harm.

How have the indicators for adverse impacts on sustainability factors been taken into account?

Mandatory principal adverse impact indicators are considered through Robeco's SDG Framework, either directly or indirectly, when identifying sustainable investments for the Sub-fund. In addition, voluntary environmental and social indicators are taken into account, depending on their relevance for measuring impacts on the SDGs and the availability of data. A detailed description of the incorporation of principal adverse impacts is available via Robeco's Principal Adverse Impact Statement published on the Robeco website (<https://www.robeco.com/files/docm/docu-principal-adverse-impact-statement-summary-entity-level.pdf>). In this statement, Robeco sets out its approach to identifying and prioritizing principal adverse impacts, and how principal adverse impacts are considered as part of Robeco's investment due diligence process and procedures relating to research and analysis, exclusions and restrictions and/or voting and engagement. This description also explains how principal adverse impact indicators are considered by the SDG Framework.

How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The sustainable investments are aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights via both Robeco's Exclusion Policy and Robeco's SDG Framework.

Robeco's Exclusion Policy includes an explanation of how Robeco acts in accordance with the International Labor Organization (ILO) standards, United Nations Guiding Principles (UNGPs), United Nations Global Compact (UNGC) Principles and the Organization for Economic Co-operation and Development (OECD) Guidelines for Multinational Enterprises and is guided by these international treaties to assess the behavior of companies. Robeco continuously screens its investments for breaches of these principles. In case of a breach, the company will be excluded or engaged with, and is not considered a sustainable investment.

Robeco's SDG Framework screens for breaches on these principles in the final step of the framework. In this step, Robeco checks whether the company concerned has been involved in any controversies. Involvement in any controversy will result in a negative SDG score for the company, meaning it is not a sustainable investment.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

Does this financial product consider principal adverse impacts on sustainability factors?

Yes, _____

The Sub-fund considers principal adverse impacts on sustainability factors as referred to in Annex I of the SFDR Delegated Act.

Pre-investment, the following principal adverse impacts on sustainability factors are considered:

- Via the applied normative and activity-based exclusions, the following PAIs are considered:
 - Exposure to companies active in the fossil fuel sector (PAI 4, Table 1)
 - Violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1)
 - Activities negatively affecting biodiversity-sensitive areas (PAI 7, Table 1). The consideration of this PAI is currently restricted to applying exclusions to palm oil producing companies and for any breaches to the UNGC, UNGP and OECD Guidelines for Multinational Enterprises in relation to biodiversity.
 - Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons (PAI 14, Table 1)

- Via the environmental footprint performance targets of the Sub-fund, the following PAIs are considered:
 - Carbon footprint (PAI 2, Table 1)
 - Water and waste indicators (PAI 7-9, Table 1). Robeco will use on water and waste footprint until data quality and coverage of the PAIs will improve.

Post-investment, the following principal adverse impacts on sustainability factors are taken into account:

- Via the application of the voting policy, the following PAIs are considered:
 - All indicators related to GHG emissions (PAI 1-6, Table 1)
 - Indicators related to social and employee matters (PAI 10-13, Table 1; PAI 5-8, Table 3)
- Via Robeco's entity engagement program, the following PAIs are considered:
 - All indicators related to Climate and other environment-related indicators (PAI 1-9, Table 1)
 - Violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1)
 - In addition, based on a yearly review of Robeco's performance on all mandatory and selected voluntary indicators, holdings of the Sub-fund that cause adverse impact might be selected for engagement.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

More information is available via Robeco's Principal Adverse Impact Statement, published on Robeco's website. The Sub-fund will periodically report how it has considered the principal adverse impacts of its investments in the Company's annual report, which will be made available each year on or before 30 April at the Sub-fund page highlighted in final section of this document.

No

The investment strategy guides investment decisions based on factors such as investment objectives and risk tolerance.

What investment strategy does this financial product follow?

Robeco QI Emerging Conservative Equities is an actively managed fund that invests in low-volatility stocks in emerging countries across the world. The selection of these stocks is based on a quantitative model as described in the Investment policy strategy paragraph in Appendix I of this Prospectus. Conservative refers to the focus on equities that show a lower expected volatility than average global equity. The strategy integrates sustainability indicators on a continuous basis as part of the stock selection process. Amongst others, the Sub-fund applies norms-based and activity-based exclusions, Robeco's good governance policy, Robeco's SDG framework and considers Principal Adverse Impacts in the investment process. More product-specific information can be found on our website and the links provided in the final question of this disclosure.

What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?

The Sub-fund has the following binding elements:

1. All equity holdings have a granted right to vote and Robeco exerts that right by voting according to Robeco's Proxy Voting Policy, unless impediments occur (e.g. share blocking or when not considered cost efficient). Robeco's Proxy Voting Policy can be found at <https://www.robeco.com/files/docm/docu-robeco-stewardship-policy.pdf>.
2. The Sub-fund's portfolio complies with Robeco's Exclusion Policy (<https://www.robeco.com/files/docm/docu-exclusion-policy.pdf>), that is based on exclusion criteria with regards to products and business practices that Robeco believes are detrimental to society and incompatible with sustainable investment strategies. This means that the Sub-fund has 0% exposure to excluded securities, taking into account a grace period. Information with regards to the effects of the exclusions on the Sub-fund's universe can be found at <https://www.robeco.com/files/docm/docu-exclusion-list.pdf>
3. The Sub-fund's weighted carbon, water and waste footprint score is a better than that of the General Market Index.
4. The Sub-fund scrutinizes investment in companies that are in breach of the ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises. If a company in the portfolio breaches one of the international guidelines during the investment period, the company will become part of the Enhanced Engagement program. When engagement is deemed highly unlikely to succeed, the company might be excluded directly.
5. The Sub-fund's weighted average ESG score is better than that of the General Market Index.
6. The Sub-fund's weight in companies with a positive SDG score (1,2,3) is better than that of the General Market Index.

What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?

The Sub-fund does not commit to a minimum rate to reduce the scope of investments prior to the application of the investment strategy.

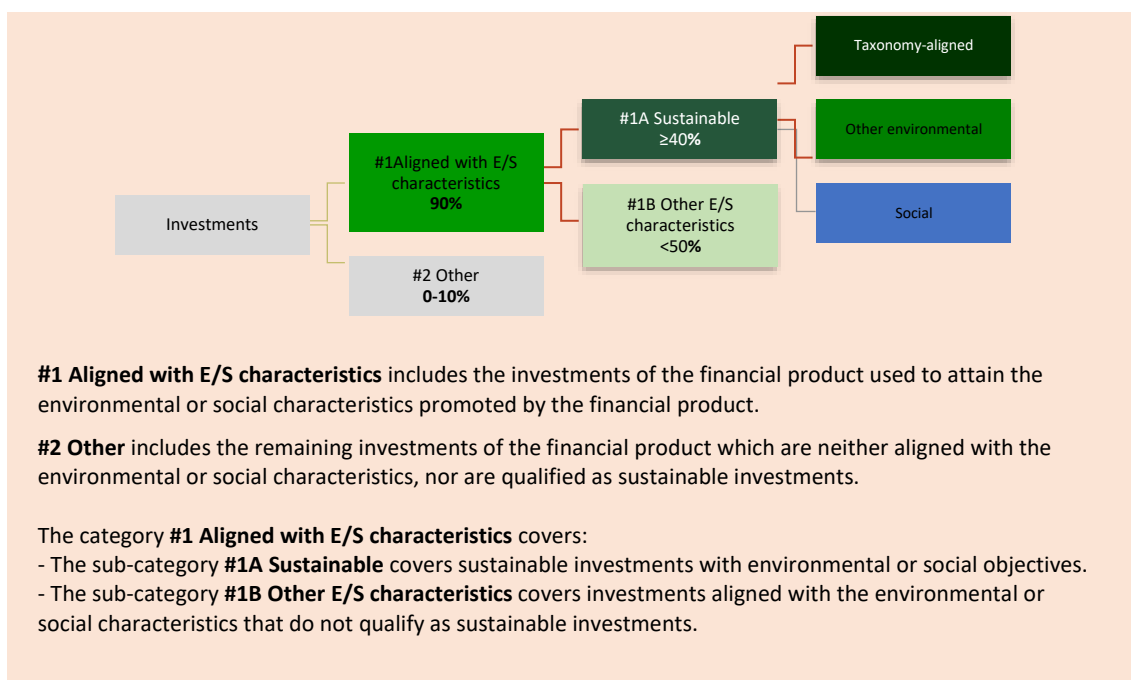

What is the policy to assess good governance practices of the investee companies?

Robeco has a Good Governance policy to assess governance practices of companies. The policy describes how Robeco determines if and when a company does not follow good governance practices and is therefore excluded from the initial investment universe for Article 8 and 9 products. Robeco's Good Governance policy applies to the Sub-fund and tests on a set of governance criteria that reflect widely recognized industry established norms and include topics as employee relations, management structure, tax compliance and remuneration.

The Good Governance test consists of criteria on such topics that are examined for investee companies and further explained in Robeco's Good Governance policy <https://www.robeco.com/files/docm/docu-robeco-good-governance-policy.pdf>. Additionally, the companies that do not pass the good governance test are reflected in the exclusion list that can be accessed here - <https://www.robeco.com/files/docm/docu-exclusion-list.pdf>.

What is the asset allocation planned for this financial product?

At least 90% of the investments are aligned with the E/S characteristics of the Sub-fund. The Sub-fund plans to make a minimum of 40% sustainable investments, measured by positive scores via Robeco's SDG Framework. The investments in the category Other, estimated between 0-10%, are mostly in cash, cash equivalents and derivatives as further described below. The planned asset allocation is monitored continuously, and evaluated on a yearly basis.

How does the use of derivatives attain the environmental or social characteristics promoted by the financial product?

The Sub-fund does not make use of derivatives to attain the environmental or social characteristics promoted by the financial product. The Sub-fund may make use of derivatives for hedging, liquidity management and efficient portfolio management as well as investment purposes. Exchange traded and over-the-counter derivatives are permitted, including but not limited to futures, swaps, options and currency forwards. Whilst the Sub-fund may use derivatives both for investment purposes as well as for

Good governance practices include sound management structures, employee relations, remuneration of staff and tax compliance.

Asset allocation describes the share of investments in specific assets.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

hedging and efficient portfolio management, it does not utilize derivatives for such purposes outside the intended share of investments allocated to the 'Other' category.

In case the Sub-fund uses derivatives, the underlying shall comply with the investment policy. Where relevant, minimum environmental or social safeguards are taken into account as described below.

To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

0%. The Sub-fund does not intend to make Taxonomy-aligned investments. It cannot be excluded that among the Sub-fund's holdings certain investments are Taxonomy aligned. The Sub-fund will report on Taxonomy-aligned investment in the periodic disclosures. In the future, once data-availability in relation to the EU Taxonomy will improve, Robeco might consider setting a target based on turnover or CAPEX. Robeco currently relies on third-party data, including data in relation to companies that do not disclose on the EU Taxonomy alignment of their activities. EU Taxonomy-alignment data is not yet subject to a review by third parties. The Sub-fund only makes investments in equity and therefore it does not have sovereign exposures. The expected level of alignment with and without sovereign bonds is the same.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

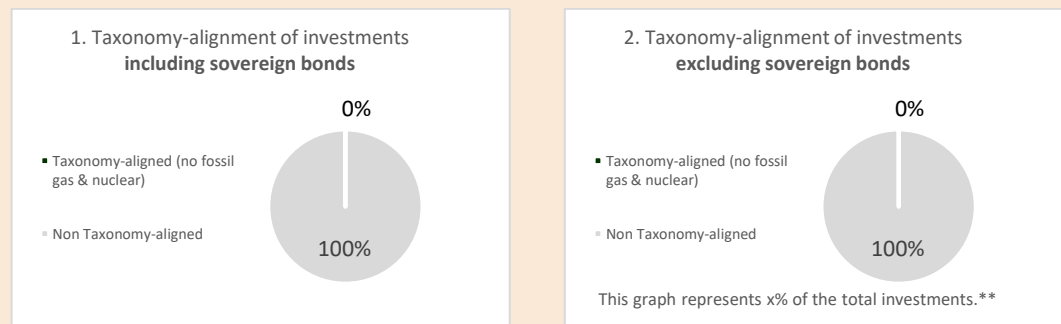

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels

Does the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy?³⁴

- Yes
 - In fossil gas
 - In nuclear energy
- No

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.*

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures
 ** As the investments are not Taxonomy-aligned, the exclusion of sovereign bonds has no impact on the graph and therefore no such percentage is shown here.

What is the minimum share of investments in transitional and enabling activities?

³⁴ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

corresponding to the best performance.

 are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

0%.

What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?

The Sub-fund intends to make sustainable investments, measured as positive scores via Robeco's SDG Framework. Among those could be investments with environmental objectives that do not qualify as Taxonomy-aligned. The environmental objectives of the Sub-fund are attained by investing in companies that score positively on SDG 12 (Responsible consumption and production), SDG 13 (Climate action), SDG 14 (Life below water), and SDG 15 (Life on land) in Robeco's SDG Framework. While the sum of sustainable investments with an environmental objective and socially sustainable investments always adds up to the Sub-fund's minimum proportion of 40% sustainable investments, we do not commit to a minimum share of sustainable investments with an environmental objective because the Sub-fund's investment strategy does not have a specific environmental investment objective. Therefore, the minimum share of sustainable investments with an environmental objective is 0%.

What is the minimum share of socially sustainable investments?

The Sub-fund intends to make sustainable investments, measured as positive scores via Robeco's SDG Framework. Among those could be investments with social objectives. The social objectives of the Sub-fund are attained by investing in companies that score positively on SDG 1 (No poverty), SDG 2 (Zero hunger), SDG 3 (Good health and well-being), SDG 4 (Quality education), SDG 5 (Gender equality), SDG 6 (Clear water and sanitation), SDG 7 (Affordable and clean energy), SDG 8 (Decent work and economic growth), SDG 9 (Industry, innovation and infrastructure), SDG 10 (Reduced inequalities), SDG 11 (Sustainable cities and communities), SDG 16 (Peace, justice and strong institutions) and SDG 17 (Partnerships for the goals), in Robeco's SDG Framework. While the sum of socially sustainable investments and sustainable investments with an environmental objective always adds up to the Sub-fund's minimum proportion of sustainable investments, we do not commit to a minimum share of socially sustainable investments because the Sub-fund's investment strategy does not have a specific socially sustainable investment objective. Therefore, the minimum share of socially sustainable investments is 0%.

What investments are included under "#2 Other", what is their purpose and are there any minimum environmental or social safeguards?

The type of instruments included under "#2 Other" and their purpose are outlined in Annex I of this Prospectus under the header 'Financial instruments and investment restrictions'. They include cash, cash equivalents, as well as investment funds and eligible asset classes (other than bonds and equities) that do not specifically promote E/S characteristics. As indicated above, the Sub-fund does not make use of derivatives to attain the environmental or social characteristics promoted. The Sub-fund may make use of derivatives, which thus always fall under the category "#2 Other", for hedging, liquidity management and efficient portfolio management as well as investment purposes. Exchange traded and over-the-counter derivatives are permitted, including but not limited to futures, swaps, options and currency forwards. In case the Sub-fund uses derivatives, the underlying shall comply with the investment policy. Where relevant, minimum environmental or social safeguards are taken into account, by, for example, applying Robeco's Exclusion Policy for any single security derivative.

Is a specific index designated as a reference benchmark to determine whether this financial product is aligned with the environmental and/or social characteristics that it promotes?

Not applicable.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

2. REGIONAL & COUNTRY EQUITY SUB-FUNDS

a) Robeco Asia-Pacific Equities

Pre-contractual disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Product name: Robeco Asia-Pacific Equities

Legal entity identifier:213800R6QI6SB393PI50

Environmental and/or social characteristics

Does this financial product have a sustainable investment objective?

Yes

No

It will make a minimum of **sustainable investments with an environmental objective:** ___%

- in economic activities that qualify as environmentally sustainable under the EU Taxonomy
- in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

It will make a minimum of **sustainable investments with a social objective:** ___%

It **promotes Environmental/Social (E/S) characteristics** and while it does not have as its objective a sustainable investment, it will have a minimum proportion of 35% of sustainable investments

- with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy
- with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy
- with a social objective

It promotes E/S characteristics, but **will not make any sustainable investments**

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

What environmental and/or social characteristics are promoted by this financial product?

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

The Sub-fund has the following E/S characteristics:

1. The Sub-fund promotes certain minimum environmental and social safeguards through applying exclusion criteria with regards to products and business practices that Robeco believes are detrimental to society and incompatible with sustainable investment strategies, such as exposure to controversial behaviour, controversial weapons, and fossil fuels.
2. The Sub-fund promotes adherence to and conducting business activities in accordance with the United Nations Universal Declaration of Human Rights, the International Labor Organization's (ILO) labor standards, the United Nations Guiding Principles for Business and Human Rights (UNGPs), the United Nations Global Compact (UNGC) and the OECD Guidelines for Multinational Enterprises, by scrutinizing companies that violate these principles.
3. The Sub-fund promotes good governance and sustainable corporate practices through proxy voting, which contributes to long-term shareholder value creation. This includes taking an active stance on social and environmental topics through Robeco's proxy voting policy.
4. The Sub-fund limits investing in companies with an elevated sustainability risk based on ESG risk scores whereas all such investments require separate approval of a dedicated committee that oversees that all investments are substantiated and eligible based on a fundamental review on the sustainability risk.

There is no reference benchmark designated for the purpose of attaining the environmental or social characteristics promoted by the Sub-fund.

● **What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?**

The Sub-fund has the following sustainability indicators:

1. The % of investments in securities that are on Robeco's Exclusion list as result of the application of Robeco's Exclusion Policy.
2. The number of companies that are in violation of the ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises and hence are a part of the Enhanced Engagement program.
3. The number of holdings and agenda items voted.
4. The % of holdings with an elevated sustainability risk profile.

● **What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?**

The sustainable investments aim to contribute to the UN Sustainable Development Goals ("SDGs"), that have both social and environmental objectives. These are 17 goals that are globally recognised and include environmental goals such as climate action, clean water, life on land and water and social goals such as zero hunger, gender equality, education, etc. Robeco has developed a proprietary framework based on the UN SDGs through which an issuer's contribution to such SDGs is determined through a 3-step process. This process starts with a sector baseline on which a company's products are analysed to examine contribution to the society and environment. Further, the operational processes involved in creating such products is checked along with any controversies/litigation claims and remediation actions taken which are perused before a final SDG score is determined. The final score ranges between high negative (-3) to high positive (+3) and only those issuers which achieve positive SDG scores (+1, +2 and +3) are regarded as Sustainable Investments.

● **How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?**

The sustainable investments do no significant harm to any environmental or social sustainable investment objective by considering a principal adverse impact and aligning with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights. In addition, sustainable investments score positively on Robeco's SDG Framework, and therefore do not cause significant harm.

How have the indicators for adverse impacts on sustainability factors been taken into account?

Mandatory principal adverse impact indicators are considered through Robeco's SDG Framework, either directly or indirectly, when identifying sustainable investments for the Sub-fund. In addition, voluntary environmental and social indicators are taken into account, depending on their relevance for measuring impacts on the SDGs and the availability of data. A detailed description of the incorporation of principal adverse impacts is available via Robeco's Principal Adverse Impact Statement published on the Robeco website (<https://www.robeco.com/files/docm/docu-principal-adverse-impact-statement-summary-entity-level.pdf>). In this statement, Robeco sets out its approach to identifying and prioritizing principal adverse impacts, and how principal adverse impacts are considered as part of Robeco's investment due diligence process and procedures relating to research and analysis, exclusions and restrictions and/or voting and engagement. This description also explains how principal adverse impact indicators are considered by the SDG Framework.

How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The sustainable investments are aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights via both Robeco's Exclusion Policy and Robeco's SDG Framework.

Robeco's Exclusion Policy includes an explanation of how Robeco acts in accordance with the International Labor Organization (ILO) standards, United Nations Guiding Principles (UNGPs), United Nations Global Compact (UNGC) Principles and the Organization for Economic Co-operation and Development (OECD) Guidelines for Multinational Enterprises and is guided by these international treaties to assess the behavior of companies. Robeco continuously screens its investments for breaches of these principles. In case of a breach, the company will be excluded or engaged with, and is not considered a sustainable investment.

Robeco's SDG Framework screens for breaches on these principles in the final step of the framework. In this step, Robeco checks whether the company concerned has been involved in any controversies. Involvement in any controversy will result in a negative SDG score for the company, meaning it is not a sustainable investment.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

Does this financial product consider principal adverse impacts on sustainability factors?

Yes, _____

The Sub-fund considers principal adverse impacts on sustainability factors as referred to in Annex I of the SFDR Delegated Act.

Pre-investment, the following principal adverse impacts on sustainability factors are considered:

- Via the applied normative and activity-based exclusions, the following PAIs are considered:
 - Exposure to companies active in the fossil fuel sector (PAI 4, Table 1)
 - Violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1)
 - Activities negatively affecting biodiversity-sensitive areas (PAI 7, Table 1). The consideration of this PAI is currently restricted to applying exclusions to palm oil producing companies and for any breaches to the UNGC, UNGP and OECD Guidelines for Multinational Enterprises in relation to biodiversity.
 - Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons (PAI 14, Table 1)
- Via the ESG integration process, as part of the investment due diligence policies and procedures, the following PAIs are considered:
 - All indicators related to GHG emissions, as part of the required Climate Risk analysis (PAI 1-6, Table 1, PAI 4, Table 2)
 - Biodiversity, water and waste indicators (PAI 7-9, Table 1)
 - Board gender diversity (PAI 13, Table 1)

Post-investment, the following principal adverse impacts on sustainability factors are taken into account:

- Via the application of the voting policy, the following PAIs are considered:

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

- All indicators related to GHG emissions (PAI 1-6, Table 1)
- Indicators related to social and employee matters (PAI 10-13, Table 1; PAI 5-8, Table 3)
- o Via Robeco's entity engagement program, the following PAIs are considered:
 - All indicators related to Climate and other environment-related indicators (PAI 1-9, Table 1)
 - Violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1). On an ongoing basis, the investment universe is scanned for controversial behavior in relation to the aforementioned principles and guidelines.
 - In addition, based on a yearly review of Robeco's performance on all mandatory and selected voluntary indicators, holdings of the Sub-fund that cause adverse impact might be selected for engagement.

More information is available via Robeco's Principal Adverse Impact Statement, published on Robeco's website. The Sub-fund will periodically report how it has considered the principal adverse impacts of its investments in the Company's annual report, which will be made available each year on or before 30 April at the Sub-fund page highlighted in final section of this document.

No

What investment strategy does this financial product follow?

Robeco Asia-Pacific Equities is an actively managed fund that invests in stocks in developed and emerging Asian-Pacific countries. The selection of these stocks is based on fundamental analysis as described in the Investment policy strategy paragraph in Appendix I of this Prospectus. The strategy integrates sustainability indicators on a continuous basis as part of the stock selection process. Amongst others, the Sub-fund applies norms-based and activity-based exclusions, Robeco's good governance policy, Robeco's SDG framework and considers Principal Adverse Impacts in the investment process. More product-specific information can be found on our website and the links provided in the final question of this disclosure.

What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?

The Sub-fund has the following binding elements:

1. The Sub-fund's portfolio complies with Robeco's Exclusion Policy (<https://www.robeco.com/files/docm/docu-exclusion-policy.pdf>), that is based on exclusion criteria with regards to products and business practices that Robeco believes are detrimental to society and incompatible with sustainable investment strategies. This means that the Sub-fund has 0% exposure to excluded securities, taking into account a grace period. Information with regards to the effects of the exclusions on the Sub-fund's universe can be found at <https://www.robeco.com/files/docm/docu-exclusion-list.pdf>.
2. The Sub-fund scrutinizes investment in companies that are in breach of the ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises. If a company in the portfolio breaches one of the international guidelines during the investment period, the company will become part of the Enhanced Engagement program.
3. All equity holdings have a granted right to vote and Robeco exerts that right by voting according to Robeco's Proxy Voting Policy, unless impediments occur (e.g. share blocking or when not considered cost efficient). Robeco's Proxy Voting Policy can be found at <https://www.robeco.com/files/docm/docu-robeco-stewardship-policy.pdf>.

The investment strategy guides investment decisions based on factors such as investment objectives and risk tolerance.

- Investments with an elevated sustainability risk are defined by Robeco as companies with an ESG Risk Rating of 40 and higher (the ESG Risk Rating is explained in the sustainability risk policy which can be accessed via <https://www.robeco.com/files/docm/docu-robeco-sustainability-risk-policy.pdf>). The Sub-fund is limited to a maximum exposure of 10% to investments with an elevated sustainability risk, based on the market weight in the portfolio taking into account regional differences and benchmark. Each investment with an ESG Risk rating of higher than 40 requires separate approval by a dedicated committee of sustainable investment specialists, compliance and risk management that oversees the bottom-up sustainability analysis.

● **What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?**

The Sub-fund does not commit to a minimum rate to reduce the scope of investments prior to the application of the investment strategy.

● **What is the policy to assess good governance practices of the investee companies?**

Robeco has a Good Governance policy to assess governance practices of companies. The policy describes how Robeco determines if and when a company does not follow good governance practices and is therefore excluded from the initial investment universe for Article 8 and 9 products. Robeco's Good Governance policy applies to the Sub-fund and tests on a set of governance criteria that reflect widely recognized industry established norms and include topics as employee relations, management structure, tax compliance and remuneration.

The Good Governance test consists of criteria on such topics that are examined for investee companies and further explained in Robeco's Good Governance policy <https://www.robeco.com/files/docm/docu-robeco-good-governance-policy.pdf>. Additionally, the companies that do not pass the good governance test are reflected in the exclusion list that can be accessed here - <https://www.robeco.com/files/docm/docu-exclusion-list.pdf>.

Good governance practices include sound management structures, employee relations, remuneration of staff and tax compliance.

What is the asset allocation planned for this financial product?

At least 90% of the investments are aligned with the E/S characteristics of the Sub-fund. The Sub-fund plans to make a minimum of 35% sustainable investments, measured by positive scores via Robeco's SDG Framework. The investments in the category Other, estimated between 0-10%, are mostly in cash, cash equivalents and derivatives as further described below. The planned asset allocation is monitored continuously, and evaluated on a yearly basis.

Asset allocation describes the share of investments in specific assets. Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure (CapEx)** showing the green investments made by investee companies, e.g. for

a transition to a green economy.
 - **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

The category #1 **Aligned with E/S characteristics** covers:
 - The sub-category #1A **Sustainable** covers sustainable investments with environmental or social objectives.
 - The sub-category #1B **Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

● **How does the use of derivatives attain the environmental or social characteristics promoted by the financial product?**

The Sub-fund does not make use of derivatives to attain the environmental or social characteristics promoted by the financial product. The Sub-fund may make use of derivatives for hedging, liquidity management and efficient portfolio management as well as investment purposes. Exchange traded and over-the-counter derivatives are permitted, including but not limited to futures, swaps, options and currency forwards. Whilst the Sub-fund may use derivatives both for investment purposes as well as for hedging and efficient portfolio management, it does not utilize derivatives for such purposes outside the intended share of investments allocated to the 'Other' category.
 In case the Sub-fund uses derivatives, the underlying shall comply with the investment policy. Where relevant, minimum environmental or social safeguards are taken into account as described below.

● **To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?**

0%. The Sub-fund does not intend to make Taxonomy-aligned investments. It cannot be excluded that among the Sub-fund's holdings certain investments are Taxonomy aligned. The Sub-fund will report on Taxonomy-aligned investment in the periodic disclosures. In the future, once data-availability in relation to the EU Taxonomy will improve, Robeco might consider setting a target based on turnover or CAPEX. Robeco currently relies on third-party data, including data in relation to companies that do not disclose on the EU Taxonomy alignment of their activities. EU Taxonomy-alignment data is not yet subject to a review by third parties. The Sub-fund only makes investments in equity and therefore it does not have sovereign exposures. The expected level of alignment with and without sovereign bonds is the same.

● **Does the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy?³⁵**

Yes

In fossil gas In nuclear energy

No

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to renewable power

³⁵ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

or low-carbon fuels by the end of 2035. For nuclear energy, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

 are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.*

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

** As the investments are not Taxonomy-aligned, the exclusion of sovereign bonds has no impact on the graph and therefore no such percentage is shown here.

● **What is the minimum share of investments in transitional and enabling activities?**

0%.

What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?

The Sub-fund intends to make sustainable investments, measured as positive scores via Robeco's SDG Framework. Among those could be investments with environmental objectives that do not qualify as Taxonomy-aligned. The environmental objectives of the Sub-fund are attained by investing in companies that score positively on SDG 12 (Responsible consumption and production), SDG 13 (Climate action), SDG 14 (Life below water), and SDG 15 (Life on land) in Robeco's SDG Framework. While the sum of sustainable investments with an environmental objective and socially sustainable investments always adds up to the Sub-fund's minimum proportion of 35% sustainable investments, we do not commit to a minimum share of sustainable investments with an environmental objective because the Sub-fund's investment strategy does not have a specific environmental investment objective. Therefore, the minimum share of sustainable investments with an environmental objective is 0%.

What is the minimum share of socially sustainable investments?

The Sub-fund intends to make sustainable investments, measured as positive scores via Robeco's SDG Framework. Among those could be investments with social objectives. The social objectives of the Sub-fund are attained by investing in companies that score positively on SDG 1 (No poverty), SDG 2 (Zero hunger), SDG 3 (Good health and well-being), SDG 4 (Quality education), SDG 5 (Gender equality), SDG 6 (Clear water and sanitation), SDG 7 (Affordable and clean energy), SDG 8 (Decent work and economic growth), SDG 9 (Industry, innovation and infrastructure), SDG 10 (Reduced inequalities), SDG 11 (Sustainable cities and communities), SDG 16 (Peace, justice and strong institutions) and SDG 17 (Partnerships for the goals), in Robeco's SDG Framework. While the sum of socially sustainable investments and sustainable investments with an environmental objective always adds up to the Sub-fund's minimum proportion of sustainable investments, we do not commit to a minimum share of socially sustainable investments because the Sub-fund's investment strategy does not have a specific socially sustainable investment objective. Therefore, the minimum share of socially sustainable investments is 0%.

What investments are included under "#2 Other", what is their purpose and are there any minimum environmental or social safeguards?

The type of instruments included under "#2 Other" and their purpose are outlined in Annex I of this Prospectus under the header 'Financial instruments and investment restrictions'. They include cash, cash equivalents, as well as investment funds and eligible asset classes (other than bonds and equities) that do not specifically promote E/S characteristics. As indicated above, the Sub-fund does not make use of derivatives to attain the environmental or social characteristics promoted. The Sub-fund may make use of derivatives, which thus always fall under the category "#2 Other", for hedging, liquidity management and efficient portfolio management as well as investment purposes. Exchange traded and over-the-counter derivatives are permitted, including but not limited to futures, swaps, options and currency forwards. In case the Sub-fund uses derivatives, the underlying shall comply with the investment policy. Where relevant, minimum environmental or social safeguards are taken into account, by, for example, applying Robeco's Exclusion Policy for any single security derivative.

Is a specific index designated as a reference benchmark to determine whether this financial product is aligned with the environmental and/or social characteristics that it promotes?

Not applicable.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

b) Robeco Sustainable European Stars Equities

Pre-contractual disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Product name: Robeco Sustainable European Stars Equities

Legal entity identifier: 21380089E1HSI8JRUS47

Environmental and/or social characteristics

Does this financial product have a sustainable investment objective?

Yes

No

It will make a minimum of **sustainable investments with an environmental objective:** ___%

- in economic activities that qualify as environmentally sustainable under the EU Taxonomy
- in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

It will make a minimum of **sustainable investments with a social objective:** ___%

It promotes **Environmental/Social (E/S) characteristics** and while it does not have as its objective a sustainable investment, it will have a minimum proportion of 50% of sustainable investments

- with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy
- with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy
- with a social objective

It promotes E/S characteristics, but **will not make any sustainable investments**

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

What environmental and/or social characteristics are promoted by this financial product?

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

The Sub-fund has the following E/S characteristics:

1. The Sub-fund promotes certain minimum environmental and social safeguards through applying exclusion criteria with regards to products and business practices that Robeco believes are detrimental to society and incompatible with sustainable investment strategies, such as exposure to controversial behaviour, controversial weapons, and fossil fuels.
2. The Sub-fund promotes adherence to and conducting business activities in accordance with the United Nations Universal Declaration of Human Rights, the International Labor Organization's (ILO) labor standards, the United Nations Guiding Principles for Business and Human Rights (UNGPs), the United Nations Global Compact (UNGC) and the OECD Guidelines for Multinational Enterprises, by scrutinizing companies that violate these principles.
3. The Sub-fund promotes good governance and sustainable corporate practices through proxy voting, which contributes to long-term shareholder value creation. This includes taking an active stance on social and environmental topics through Robeco's proxy voting policy.
4. The Sub-fund promotes having a substantially lower environmental footprint than the general market index referred to in Appendix VI – Benchmarks (the "General Market Index").
5. The Sub-fund promotes having a weighted average ESG score that is better than that of the General Market Index.
6. The Sub-fund limits investing in companies with an elevated sustainability risk based on ESG risk scores whereas all such investments require separate approval of a dedicated committee that oversees that all investments are substantiated and eligible based on a fundamental review on the sustainability risk.
7. The Sub-fund applies negative screening.

There is no reference benchmark designated for the purpose of attaining the environmental or social characteristics promoted by the Sub-fund.

● **What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?**

The Sub-fund has the following sustainability indicators:

1. The % of investments in securities that are on Robeco's Exclusion list as result of the application of Robeco's Exclusion Policy.
2. The number of companies that are in violation of the ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises and hence are a part of the Enhanced Engagement program.
3. The number of holdings and agenda items voted.
4. The Sub-fund's weighted carbon, water and waste footprint score compared to the General Market Index.
5. The Sub-fund's weighted average ESG score compared to the General Market Index.
6. The % of holdings with an elevated sustainability risk profile.
7. The % of worst ESG performers excluded from the universe.

● **What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?**

The sustainable investments aim to contribute to the UN Sustainable Development Goals ("SDGs"), that have both social and environmental objectives. These are 17 goals that are globally recognised and include environmental goals such as climate action, clean water, life on land and water and social goals such as zero hunger, gender equality, education, etc. Robeco has developed a proprietary framework based on the UN SDGs through which an issuer's contribution to such SDGs is determined through a 3-step process. This process starts with a sector baseline on which a company's products are analysed to examine contribution to the society and environment. Further, the operational processes involved in

creating such products is checked along with any controversies/litigation claims and remediation actions taken which are perused before a final SDG score is determined. The final score ranges between high negative (-3) to high positive (+3) and only those issuers which achieve positive SDG scores (+1, +2 and +3) are regarded as Sustainable Investments.

● ***How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?***

The sustainable investments do no significant harm to any environmental or social sustainable investment objective by considering a principal adverse impact and aligning with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights. In addition, sustainable investments score positively on Robeco's SDG Framework, and therefore do not cause significant harm.

How have the indicators for adverse impacts on sustainability factors been taken into account?

Mandatory principal adverse impact indicators are considered through Robeco's SDG Framework, either directly or indirectly, when identifying sustainable investments for the Sub-fund. In addition, voluntary environmental and social indicators are taken into account, depending on their relevance for measuring impacts on the SDGs and the availability of data. A detailed description of the incorporation of principal adverse impacts is available via Robeco's Principal Adverse Impact Statement published on the Robeco website (<https://www.robeco.com/files/docm/docu-principal-adverse-impact-statement-summary-entity-level.pdf>). In this statement, Robeco sets out its approach to identifying and prioritizing principal adverse impacts, and how principal adverse impacts are considered as part of Robeco's investment due diligence process and procedures relating to research and analysis, exclusions and restrictions and/or voting and engagement. This description also explains how principal adverse impact indicators are considered by the SDG Framework.

How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The sustainable investments are aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights via both Robeco's Exclusion Policy and Robeco's SDG Framework.

Robeco's Exclusion Policy includes an explanation of how Robeco acts in accordance with the International Labor Organization (ILO) standards, United Nations Guiding Principles (UNGPs), United Nations Global Compact (UNGC) Principles and the Organization for Economic Co-operation and Development (OECD) Guidelines for Multinational Enterprises and is guided by these international treaties to assess the behavior of companies. Robeco continuously screens its investments for breaches of these principles. In case of a breach, the company will be excluded or engaged with, and is not considered a sustainable investment.

Robeco's SDG Framework screens for breaches on these principles in the final step of the framework. In this step, Robeco checks whether the company concerned has been involved in any controversies. Involvement in any controversy will result in a negative SDG score for the company, meaning it is not a sustainable investment.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

Does this financial product consider principal adverse impacts on sustainability factors?

Yes, _____

The Sub-fund considers principal adverse impacts on sustainability factors as referred to in Annex I of the SFDR Delegated Act.

Pre-investment, the following principal adverse impacts on sustainability factors are considered:

- Via the applied normative and activity-based exclusions, the following PAIs are considered:
 - Exposure to companies active in the fossil fuel sector (PAI 4, Table 1)
 - Violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1)
 - Activities negatively affecting biodiversity-sensitive areas (PAI 7, Table 1). The consideration of this PAI is currently restricted to applying exclusions to palm oil producing companies and for any breaches to the UNGC, UNGP and OECD Guidelines for Multinational Enterprises in relation to biodiversity.
 - Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons (PAI 14, Table 1)
- Via the ESG integration process, as part of the investment due diligence policies and procedures, the following PAIs are considered:
 - All indicators related to GHG emissions, as part of the required Climate Risk analysis (PAI 1-6, Table 1, PAI 4, Table 2)
 - Biodiversity, water and waste indicators (PAI 7-9, Table 1) when relevant for the sector
 - Board gender diversity (PAI 13, Table 1)
- Via the environmental footprint performance targets of the Sub-fund, the following PAIs are considered:
 - Carbon footprint (PAI 2, Table 1)
 - Water and waste indicators (PAI 7-9, Table 1). Robeco will use on water and waste footprint until data quality and coverage of the PAIs will improve.

Post-investment, the following principal adverse impacts on sustainability factors are taken into account:

- Via the application of the voting policy, the following PAIs are considered:
 - All indicators related to GHG emissions (PAI 1-6, Table 1)
 - Indicators related to social and employee matters (PAI 10-13, Table 1; PAI 5-8, Table 3)

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

- o Via Robeco's entity engagement program, the following PAIs are considered:
 - All indicators related to Climate and other environment-related indicators (PAI 1-9, Table 1)
 - Violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1)
 - In addition, based on a yearly review of Robeco's performance on all mandatory and selected voluntary indicators, holdings of the Sub-fund that cause adverse impact might be selected for engagement.

More information is available via Robeco's Principal Adverse Impact Statement, published on Robeco's website. The Sub-fund will periodically report how it has considered the principal adverse impacts of its investments in the Company's annual report, which will be made available each year on or before 30 April at the Sub-fund page highlighted in final section of this document.

■ No

What investment strategy does this financial product follow?

Robeco Sustainable European Stars Equities is an actively managed fund that invests in equities of companies that are domiciled in Europe. The selection of these stocks is based on fundamental analysis as described in the Investment policy strategy paragraph in Appendix I of this Prospectus. The strategy integrates sustainability indicators on a continuous basis as part of the stock selection process. Amongst others, the Sub-fund applies norms-based and activity-based exclusions, Robeco's good governance policy, Robeco's SDG framework and considers Principal Adverse Impacts in the investment process. More product-specific information can be found on our website and the links provided in the final question of this disclosure.

The investment strategy guides investment decisions based on factors such as investment objectives and risk tolerance.

What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?

The Sub-fund has the following binding elements:

1. The Sub-fund's portfolio complies with Robeco's Exclusion Policy (<https://www.robeco.com/files/docm/docu-exclusion-policy.pdf>), that is based on exclusion criteria with regards to products and business practices that Robeco believes are detrimental to society and incompatible with sustainable investment strategies. This means that the Sub-fund has 0% exposure to excluded securities, taking into account a grace period. Information with regards to the effects of the exclusions on the Sub-fund's universe can be found at <https://www.robeco.com/files/docm/docu-exclusion-list.pdf>
2. The Sub-fund avoids investment in companies that are in breach of the ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises. Companies that breach the international norms will be excluded from the investment universe.
3. All equity holdings have a granted right to vote and Robeco exerts that right by voting according to Robeco's Proxy Voting Policy, unless impediments occur (e.g. share blocking or when not considered cost efficient). Robeco's Proxy Voting Policy can be found at <https://www.robeco.com/files/docm/docu-robeco-stewardship-policy.pdf>.
4. The Sub-fund's weighted carbon, water and waste footprint score is 20% better than that of the General Market Index.
5. The Sub-fund's weighted average ESG score is better than that of the General Market Index.
6. Investments with an elevated sustainability risk are defined by Robeco as companies with an ESG Risk Rating of 40 and higher (the ESG Risk Rating is explained in the sustainability risk policy which can be accessed via <https://www.robeco.com/files/docm/docu-robeco-sustainability-risk-policy.pdf>). The Sub-fund is limited to a maximum exposure of 2% to

investments with an elevated sustainability risk, based on the market weight in the portfolio taking into account regional differences and benchmark. Each investment with an ESG Risk rating of higher than 40 requires separate approval by a dedicated committee of sustainable investment specialists, compliance and risk management that oversees the bottom-up sustainability analysis.

7. The Sub-fund excludes the bottom 20% ranked companies on ESG from the investment universe.

● ***What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?***

The Sub-fund, as part of the negative screening process, the Sub-fund commits to a minimum rate of 20% reduction, resulting to excluding the lowest performing companies based on ESG metrics. More information in relation to methodology and data used, can be found at <https://www.robeco.com/docm/docu-robeco-sfdr-data-disclosures.pdf>.

● ***What is the policy to assess good governance practices of the investee companies?***

Robeco has a Good Governance policy to assess governance practices of companies. The policy describes how Robeco determines if and when a company does not follow good governance practices and is therefore excluded from the initial investment universe for Article 8 and 9 products. Robeco's Good Governance policy applies to the Sub-fund and tests on a set of governance criteria that reflect widely recognized industry established norms and include topics as employee relations, management structure, tax compliance and remuneration.

The Good Governance test consists of criteria on such topics that are examined for investee companies and further explained in Robeco's Good Governance policy <https://www.robeco.com/files/docm/docu-robeco-good-governance-policy.pdf>. Additionally, the companies that do not pass the good governance test are reflected in the exclusion list that can be accessed here - <https://www.robeco.com/files/docm/docu-exclusion-list.pdf>.

What is the asset allocation planned for this financial product?

At least 90% of the investments are aligned with the E/S characteristics of the Sub-fund. The Sub-fund plans to make a minimum of 50% sustainable investments, measured by positive scores via Robeco's SDG Framework. The investments in the category Other, estimated between 0-10%, are mostly in cash, cash equivalents and derivatives as further described below. The planned asset allocation is monitored continuously, and evaluated on a yearly basis.

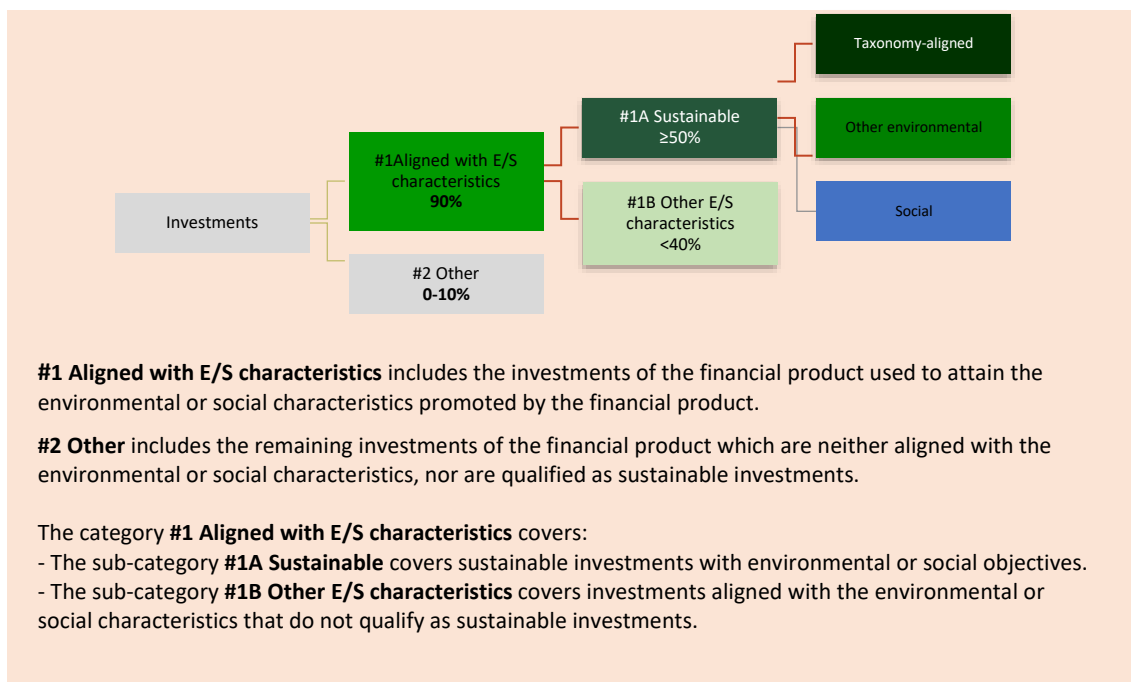

Good governance practices include sound management structures, employee relations, remuneration of staff and tax compliance.

Asset allocation describes the share of investments in specific assets.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

● **How does the use of derivatives attain the environmental or social characteristics promoted by the financial product?**

The Sub-fund does not make use of derivatives to attain the environmental or social characteristics promoted by the financial product. The Sub-fund may make use of derivatives for hedging, liquidity management and efficient portfolio management as well as investment purposes. Exchange traded and over-the-counter derivatives are permitted, including but not limited to futures, swaps, options and currency forwards. Whilst the Sub-fund may use derivatives both for investment purposes as well as for hedging and efficient portfolio management, it does not utilize derivatives for such purposes outside the intended share of investments allocated to the 'Other' category.

In case the Sub-fund uses derivatives, the underlying shall comply with the investment policy. Where relevant, minimum environmental or social safeguards are taken into account as described below.

To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

0%. The Sub-fund does not intend to make Taxonomy-aligned investments. It cannot be excluded that among the Sub-fund's holdings certain investments are Taxonomy aligned. The Sub-fund will report on Taxonomy-aligned investment in the periodic disclosures. In the future, once data-availability in relation to the EU Taxonomy will improve, Robeco might consider setting a target based on turnover or CAPEX. Robeco currently relies on third-party data, including data in relation to companies that do not disclose on the EU Taxonomy alignment of their activities. EU Taxonomy-alignment data is not yet subject to a review by third parties. The Sub-fund only makes investments in equity and therefore it does not have sovereign exposures. The expected level of alignment with and without sovereign bonds is the same.

To comply with the EU Taxonomy, the

● **Does the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy?³⁶**

³⁶ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

criteria for **fossil gas** include limitations on emissions and switching to renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

 are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

- Yes
 - In fossil gas
 - In nuclear energy
- No

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.*

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

** As the investments are not Taxonomy-aligned, the exclusion of sovereign bonds has no impact on the graph and therefore no such percentage is shown here.

What is the minimum share of investments in transitional and enabling activities?

0%.

What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?

The Sub-fund intends to make sustainable investments, measured as positive scores via Robeco's SDG Framework. Among those could be investments with environmental objectives that do not qualify as Taxonomy-aligned. The environmental objectives of the Sub-fund are attained by investing in companies that score positively on SDG 12 (Responsible consumption and production), SDG 13 (Climate action), SDG 14 (Life below water), and SDG 15 (Life on land) in Robeco's SDG Framework. While the sum of sustainable investments with an environmental objective and socially sustainable investments always adds up to the Sub-fund's minimum proportion of 50% sustainable investments, we do not commit to a minimum share of sustainable investments with an environmental objective because the Sub-fund's investment strategy does not have a specific environmental investment objective. Therefore, the minimum share of sustainable investments with an environmental objective is 0%.

What is the minimum share of socially sustainable investments?

The Sub-fund intends to make sustainable investments, measured as positive scores via Robeco's SDG Framework. Among those could be investments with social objectives. The social objectives of the Sub-fund are attained by investing in companies that score positively on SDG 1 (No poverty), SDG 2 (Zero hunger), SDG 3 (Good health and well-being), SDG 4 (Quality education), SDG 5 (Gender equality), SDG 6 (Clean water and sanitation), SDG 7 (Affordable and clean energy), SDG 8 (Decent work and economic growth), SDG 9 (Industry, innovation and infrastructure), SDG 10 (Reduced inequalities), SDG 11

(Sustainable cities and communities), SDG 16 (Peace, justice and strong institutions) and SDG 17 (Partnerships for the goals), in Robeco's SDG Framework. While the sum of socially sustainable investments and sustainable investments with an environmental objective always adds up to the Sub-fund's minimum proportion of sustainable investments, we do not commit to a minimum share of socially sustainable investments because the Sub-fund's investment strategy does not have a specific socially sustainable investment objective. Therefore, the minimum share of socially sustainable investments is 0%.

What investments are included under "#2 Other", what is their purpose and are there any minimum environmental or social safeguards?

The type of instruments included under "#2 Other" and their purpose are outlined in Annex I of this Prospectus under the header 'Financial instruments and investment restrictions'. They include cash, cash equivalents, as well as investment funds and eligible asset classes (other than bonds and equities) that do not specifically promote E/S characteristics. As indicated above, the Sub-fund does not make use of derivatives to attain the environmental or social characteristics promoted. The Sub-fund may make use of derivatives, which thus always fall under the category "#2 Other", for hedging, liquidity management and efficient portfolio management as well as investment purposes. Exchange traded and over-the-counter derivatives are permitted, including but not limited to futures, swaps, options and currency forwards. In case the Sub-fund uses derivatives, the underlying shall comply with the investment policy. Where relevant, minimum environmental or social safeguards are taken into account, by, for example, applying Robeco's Exclusion Policy for any single security derivative.

Is a specific index designated as a reference benchmark to determine whether this financial product is aligned with the environmental and/or social characteristics that it promotes?

The type of instruments included under "#2 Other" and their purpose are outlined in Annex I of this Prospectus under the header 'Financial instruments and investment restrictions'. They include cash, cash equivalents, as well as investment funds and eligible asset classes (other than bonds and equities) that do not specifically promote E/S characteristics. As indicated above, the Sub-fund does not make use of derivatives to attain the environmental or social characteristics promoted. The Sub-fund may make use of derivatives, which thus always fall under the category "#2 Other", for hedging, liquidity management and efficient portfolio management as well as investment purposes. Exchange traded and over-the-counter derivatives are permitted, including but not limited to futures, swaps, options and currency forwards. In case the Sub-fund uses derivatives, the underlying shall comply with the investment policy. Where relevant, minimum environmental or social safeguards are taken into account, by, for example, applying Robeco's Exclusion Policy for any single security derivative.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

c) Robeco QI European Conservative Equities

Pre-contractual disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Product name: Robeco QI European Conservative Equities

Legal entity identifier: 2138001XRMBVMGLO9954

Environmental and/or social characteristics

Does this financial product have a sustainable investment objective?

Yes

No

It will make a minimum of **sustainable investments with an environmental objective: ___%**

- in economic activities that qualify as environmentally sustainable under the EU Taxonomy
- in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

It will make a minimum of **sustainable investments with a social objective: ___%**

It promotes **Environmental/Social (E/S) characteristics** and while it does not have as its objective a sustainable investment, it will have a minimum proportion of 50% of sustainable investments

- with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy
- with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy
- with a social objective

It promotes E/S characteristics, but **will not make any sustainable investments**

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

What environmental and/or social characteristics are promoted by this financial product?

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

The Sub-fund has the following E/S characteristics:

1. The Sub-fund promotes good governance and sustainable corporate practices through proxy voting, which contributes to long-term shareholder value creation. This includes taking an active stance on social and environmental topics through Robeco's proxy voting policy.
2. The Sub-fund promotes certain minimum environmental and social safeguards through applying exclusion criteria with regards to products and business practices that Robeco believes are detrimental to society and incompatible with sustainable investment strategies, such as exposure to controversial behaviour, controversial weapons, and fossil fuels.
3. The Sub-fund promotes having a lower environmental footprint than the general market index referred to in Appendix VI – Benchmarks (the "General Market Index"), through reduction in carbon, water and waste footprints.
4. The Sub-fund promotes adherence to and conducting business activities in accordance with the United Nations Universal Declaration of Human Rights, the International Labor Organization's (ILO) labor standards, the United Nations Guiding Principles for Business and Human Rights (UNGPs), the United Nations Global Compact (UNGC) and the OECD Guidelines for Multinational Enterprises, by scrutinizing companies that violate these principles.
5. The Sub-fund promotes having a weighted average ESG score that is better than that of the General Market Index.
6. The Sub-fund promotes having a larger share of companies with a positive SDG score (1,2,3) in the portfolio than the General Market Index.

There is no reference benchmark designated for the purpose of attaining the environmental or social characteristics promoted by the Sub-fund.

● **What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?**

The Sub-fund has the following sustainability indicators:

1. The number of holdings and agenda items voted.
2. The % of investments in securities that are on Robeco's Exclusion list as result of the application of Robeco's Exclusion Policy.
3. The Sub-fund's weighted carbon, water and waste footprint score compared to the General Market Index.
4. The number of companies that are in violation of the ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises and hence are a part of the Enhanced Engagement program.
5. The Sub-fund's weighted average ESG score compared to the General Market Index.
6. The Sub-fund's weight in companies with a positive SDG score (1,2,3) compared to the General Market Index weight in companies with a positive SDG score (1,2,3).

● **What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?**

The sustainable investments aim to contribute to the UN Sustainable Development Goals ("SDGs"), that have both social and environmental objectives. These are 17 goals that are globally recognised and include environmental goals such as climate action, clean water, life on land and water and social goals such as zero hunger, gender equality, education, etc. Robeco has developed a proprietary framework based on the UN SDGs through which an issuer's contribution to such SDGs is determined through a 3-step process. This process starts with a sector baseline on which a company's products are analysed to examine contribution to the society and environment. Further, the operational processes involved in creating such products is checked along with any controversies/litigation claims and remediation actions

taken which are perused before a final SDG score is determined. The final score ranges between high negative (-3) to high positive (+3) and only those issuers which achieve positive SDG scores (+1, +2 and +3) are regarded as Sustainable Investments.

● ***How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?***

The sustainable investments do no significant harm to any environmental or social sustainable investment objective by considering a principal adverse impact and aligning with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights. In addition, sustainable investments score positively on Robeco's SDG Framework, and therefore do not cause significant harm.

How have the indicators for adverse impacts on sustainability factors been taken into account?

Mandatory principal adverse impact indicators are considered through Robeco's SDG Framework, either directly or indirectly, when identifying sustainable investments for the Sub-fund. In addition, voluntary environmental and social indicators are taken into account, depending on their relevance for measuring impacts on the SDGs and the availability of data. A detailed description of the incorporation of principal adverse impacts is available via Robeco's Principal Adverse Impact Statement published on the Robeco website (<https://www.robeco.com/files/docm/docu-principal-adverse-impact-statement-summary-entity-level.pdf>). In this statement, Robeco sets out its approach to identifying and prioritizing principal adverse impacts, and how principal adverse impacts are considered as part of Robeco's investment due diligence process and procedures relating to research and analysis, exclusions and restrictions and/or voting and engagement. This description also explains how principal adverse impact indicators are considered by the SDG Framework.

How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The sustainable investments are aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights via both Robeco's Exclusion Policy and Robeco's SDG Framework.

Robeco's Exclusion Policy includes an explanation of how Robeco acts in accordance with the International Labor Organization (ILO) standards, United Nations Guiding Principles (UNGPs), United Nations Global Compact (UNGC) Principles and the Organization for Economic Co-operation and Development (OECD) Guidelines for Multinational Enterprises and is guided by these international treaties to assess the behavior of companies. Robeco continuously screens its investments for breaches of these principles. In case of a breach, the company will be excluded or engaged with, and is not considered a sustainable investment.

Robeco's SDG Framework screens for breaches on these principles in the final step of the framework. In this step, Robeco checks whether the company concerned has been involved in any controversies. Involvement in any controversy will result in a negative SDG score for the company, meaning it is not a sustainable investment.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

Does this financial product consider principal adverse impacts on sustainability factors?

Yes, _____

The Sub-fund considers principal adverse impacts on sustainability factors as referred to in Annex I of the SFDR Delegated Act.

Pre-investment, the following principal adverse impacts on sustainability factors are considered:

- Via the applied normative and activity-based exclusions, the following PAIs are considered:
 - Exposure to companies active in the fossil fuel sector (PAI 4, Table 1)
 - Violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1)
 - Activities negatively affecting biodiversity-sensitive areas (PAI 7, Table 1). The consideration of this PAI is currently restricted to applying exclusions to palm oil producing companies and for any breaches to the UNGC, UNGP and OECD Guidelines for Multinational Enterprises in relation to biodiversity.
 - Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons (PAI 14, Table 1)
- Via the environmental footprint performance targets of the Sub-fund, the following PAIs are considered:
 - Carbon footprint (PAI 2, Table 1)
 - Water and waste indicators (PAI 7-9, Table 1). Robeco will use on water and waste footprint until data quality and coverage of the PAIs will improve.

Post-investment, the following principal adverse impacts on sustainability factors are taken into account:

- Via the application of the voting policy, the following PAIs are considered:
 - All indicators related to GHG emissions (PAI 1-6, Table 1)
 - Indicators related to social and employee matters (PAI 10-13, Table 1; PAI 5-8, Table 3)

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

- o Via Robeco's entity engagement program, the following PAIs are considered:
 - All indicators related to Climate and other environment-related indicators (PAI 1-9, Table 1)
 - Violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1)
 - In addition, based on a yearly review of Robeco's performance on all mandatory and selected voluntary indicators, holdings of the Sub-fund that cause adverse impact might be selected for engagement.

More information is available via Robeco's Principal Adverse Impact Statement, published on Robeco's website. The Sub-fund will periodically report how it has considered the principal adverse impacts of its investments in the Company's annual report, which will be made available each year on or before 30 April at the Sub-fund page highlighted in final section of this document.

No

What investment strategy does this financial product follow?

Robeco QI European Conservative Equities is an actively managed fund that invests in low-volatility stocks in European countries. The selection of these stocks is based on a quantitative model as described in the Investment policy strategy paragraph in Appendix I of this Prospectus. Conservative refers to the focus on equities that show a lower expected volatility than average global equity.

The strategy integrates sustainability indicators on a continuous basis as part of the stock selection process. Amongst others, the Sub-fund applies norms-based and activity-based exclusions, Robeco's good governance policy, Robeco's SDG framework and considers Principal Adverse Impacts in the investment process. More product-specific information can be found on our website and the links provided in the final question of this disclosure.

What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?

The Sub-fund has the following binding elements:

1. All equity holdings have a granted right to vote and Robeco exerts that right by voting according to Robeco's Proxy Voting Policy, unless impediments occur (e.g. share blocking or when not considered cost efficient). Robeco's Proxy Voting Policy can be found at <https://www.robeco.com/files/docm/docu-robeco-stewardship-policy.pdf>.
2. The Sub-fund's portfolio complies with Robeco's Exclusion Policy (<https://www.robeco.com/files/docm/docu-exclusion-policy.pdf>), that is based on exclusion criteria with regards to products and business practices that Robeco believes are detrimental to society and incompatible with sustainable investment strategies. This means that the Sub-fund has 0% exposure to excluded securities, taking into account a grace period. Information with regards to the effects of the exclusions on the Sub-fund's universe can be found at <https://www.robeco.com/files/docm/docu-exclusion-list.pdf>
3. The Sub-fund's weighted carbon, water and waste footprint score is a better than that of the General Market Index.
4. The Sub-fund scrutinizes investment in companies that are in breach of the ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises. If a company in the portfolio breaches one of the international guidelines during the investment period, the company will become part of the Enhanced Engagement program. When engagement is deemed highly unlikely to succeed, the company might be excluded directly.
5. The Sub-fund's weighted average ESG score is better than that of the General Market Index.

The investment strategy guides investment decisions based on factors such as investment objectives and risk tolerance.

- 6. The Sub-fund's weight in companies with a positive SDG score (1,2,3) is better than that of the General Market Index.

What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?

The Sub-fund does not commit to a minimum rate to reduce the scope of investments prior to the application of the investment strategy.

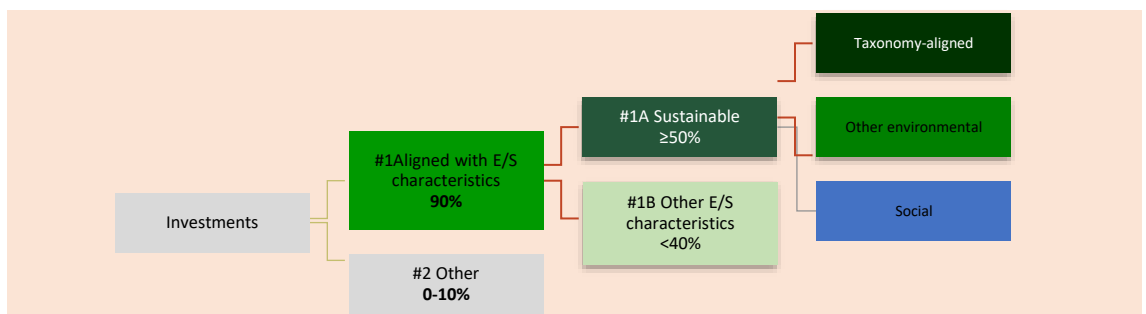

What is the policy to assess good governance practices of the investee companies?

Robeco has a Good Governance policy to assess governance practices of companies. The policy describes how Robeco determines if and when a company does not follow good governance practices and is therefore excluded from the initial investment universe for Article 8 and 9 products. Robeco's Good Governance policy applies to the Sub-fund and tests on a set of governance criteria that reflect widely recognized industry established norms and include topics as employee relations, management structure, tax compliance and remuneration.

The Good Governance test consists of criteria on such topics that are examined for investee companies and further explained in Robeco's Good Governance policy <https://www.robeco.com/files/docm/docu-robeco-good-governance-policy.pdf>. Additionally, the companies that do not pass the good governance test are reflected in the exclusion list that can be accessed here - <https://www.robeco.com/files/docm/docu-exclusion-list.pdf>.

What is the asset allocation planned for this financial product?

At least 90% of the investments are aligned with the E/S characteristics of the Sub-fund. The Sub-fund plans to make a minimum of 50% sustainable investments, measured by positive scores via Robeco's SDG Framework. The investments in the category Other, estimated between 0-10%, are mostly in cash, cash equivalents and derivatives as further described below. The planned asset allocation is monitored continuously, and evaluated on a yearly basis.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers sustainable investments with environmental or social objectives.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

Good governance practices include sound management structures, employee relations, remuneration of staff and tax compliance.

Asset allocation describes the share of investments in specific assets.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx)

reflecting green operational activities of investee companies.

● **How does the use of derivatives attain the environmental or social characteristics promoted by the financial product?**

The Sub-fund does not make use of derivatives to attain the environmental or social characteristics promoted by the financial product. The Sub-fund may make use of derivatives for hedging, liquidity management and efficient portfolio management as well as investment purposes. Exchange traded and over-the-counter derivatives are permitted, including but not limited to futures, swaps, options and currency forwards. Whilst the Sub-fund may use derivatives both for investment purposes as well as for hedging and efficient portfolio management, it does not utilize derivatives for such purposes outside the intended share of investments allocated to the 'Other' category. In case the Sub-fund uses derivatives, the underlying shall comply with the investment policy. Where relevant, minimum environmental or social safeguards are taken into account as described below.

● **To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?**

0%. The Sub-fund does not intend to make Taxonomy-aligned investments. It cannot be excluded that among the Sub-fund's holdings certain investments are Taxonomy aligned. The Sub-fund will report on Taxonomy-aligned investment in the periodic disclosures. In the future, once data-availability in relation to the EU Taxonomy will improve, Robeco might consider setting a target based on turnover or CAPEX. Robeco currently relies on third-party data, including data in relation to companies that do not disclose on the EU Taxonomy alignment of their activities. EU Taxonomy-alignment data is not yet subject to a review by third parties. The Sub-fund only makes investments in equity and therefore it does not have sovereign exposures. The expected level of alignment with and without sovereign bonds is the same.

● **Does the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy?³⁷**

- Yes
- In fossil gas In nuclear energy
- No

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to renewable power

³⁷ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

or low-carbon fuels by the end of 2035. For nuclear energy, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

 are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures
 ** As the investments are not Taxonomy-aligned, the exclusion of sovereign bonds has no impact on the graph and therefore no such percentage is shown here.

What is the minimum share of investments in transitional and enabling activities?

0%.

What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?

The Sub-fund intends to make sustainable investments, measured as positive scores via Robeco's SDG Framework. Among those could be investments with environmental objectives that do not qualify as Taxonomy-aligned. The environmental objectives of the Sub-fund are attained by investing in companies that score positively on SDG 12 (Responsible consumption and production), SDG 13 (Climate action), SDG 14 (Life below water), and SDG 15 (Life on land) in Robeco's SDG Framework. While the sum of sustainable investments with an environmental objective and socially sustainable investments always adds up to the Sub-fund's minimum proportion of 50% sustainable investments, we do not commit to a minimum share of sustainable investments with an environmental objective because the Sub-fund's investment strategy does not have a specific environmental investment objective. Therefore, the minimum share of sustainable investments with an environmental objective is 0%.

What is the minimum share of socially sustainable investments?

The Sub-fund intends to make sustainable investments, measured as positive scores via Robeco's SDG Framework. Among those could be investments with social objectives. The social objectives of the Sub-fund are attained by investing in companies that score positively on SDG 1 (No poverty), SDG 2 (Zero hunger), SDG 3 (Good health and well-being), SDG 4 (Quality education), SDG 5 (Gender equality), SDG 6 (Clear water and sanitation), SDG 7 (Affordable and clean energy), SDG 8 (Decent work and economic growth), SDG 9 (Industry, innovation and infrastructure), SDG 10 (Reduced inequalities), SDG 11 (Sustainable cities and communities), SDG 16 (Peace, justice and strong institutions) and SDG 17 (Partnerships for the goals), in Robeco's SDG Framework. While the sum of socially sustainable investments and sustainable investments with an environmental objective always adds up to the Sub-fund's minimum proportion of sustainable investments, we do not commit to a minimum share of socially sustainable investments because the Sub-fund's investment strategy does not have a specific

socially sustainable investment objective. Therefore, the minimum share of socially sustainable investments is 0%.

What investments are included under "#2 Other", what is their purpose and are there any minimum environmental or social safeguards?

The type of instruments included under "#2 Other" and their purpose are outlined in Annex I of this Prospectus under the header 'Financial instruments and investment restrictions'. They include cash, cash equivalents, as well as investment funds and eligible asset classes (other than bonds and equities) that do not specifically promote E/S characteristics. As indicated above, the Sub-fund does not make use of derivatives to attain the environmental or social characteristics promoted. The Sub-fund may make use of derivatives, which thus always fall under the category "#2 Other", for hedging, liquidity management and efficient portfolio management as well as investment purposes. Exchange traded and over-the-counter derivatives are permitted, including but not limited to futures, swaps, options and currency forwards. In case the Sub-fund uses derivatives, the underlying shall comply with the investment policy. Where relevant, minimum environmental or social safeguards are taken into account, by, for example, applying Robeco's Exclusion Policy for any single security derivative.

Is a specific index designated as a reference benchmark to determine whether this financial product is aligned with the environmental and/or social characteristics that it promotes?

Not applicable.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

Where can I find more product specific information online?

d) Robeco QI US Conservative Equities

Pre-contractual disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Product name: Robeco QI US Conservative Equities

Legal entity identifier: 549300LR6OB223QXB617

Environmental and/or social characteristics

Does this financial product have a sustainable investment objective?

Yes

No

It will make a minimum of **sustainable investments with an environmental objective:** ___%

- in economic activities that qualify as environmentally sustainable under the EU Taxonomy
- in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

It will make a minimum of **sustainable investments with a social objective:** ___%

It promotes **Environmental/Social (E/S) characteristics** and while it does not have as its objective a sustainable investment, it will have a minimum proportion of 50% of sustainable investments

- with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy
- with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy
- with a social objective

It promotes E/S characteristics, but **will not make any sustainable investments**

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

What environmental and/or social characteristics are promoted by this financial product?

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

The Sub-fund has the following E/S characteristics:

1. The Sub-fund promotes good governance and sustainable corporate practices through proxy voting, which contributes to long-term shareholder value creation. This includes taking an active stance on social and environmental topics through Robeco's proxy voting policy.
2. The Sub-fund promotes certain minimum environmental and social safeguards through applying exclusion criteria with regards to products and business practices that Robeco believes are detrimental to society and incompatible with sustainable investment strategies, such as exposure to controversial behaviour, controversial weapons, and fossil fuels.
3. The Sub-fund promotes having a lower environmental footprint than the general market index referred to in Appendix VI – Benchmarks (the "General Market Index"), through reduction in carbon, water and waste footprints.
4. The Sub-fund promotes adherence to and conducting business activities in accordance with the United Nations Universal Declaration of Human Rights, the International Labor Organization's (ILO) labor standards, the United Nations Guiding Principles for Business and Human Rights (UNGPs), the United Nations Global Compact (UNGC) and the OECD Guidelines for Multinational Enterprises, by scrutinizing companies that violate these principles.
5. The Sub-fund promotes having a weighted average ESG score that is better than that of the General Market Index.
6. The Sub-fund promotes having a larger share of companies with a positive SDG score (1,2,3) in the portfolio than the General Market Index.

There is no reference benchmark designated for the purpose of attaining the environmental or social characteristics promoted by the Sub-fund.

● **What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?**

The Sub-fund has the following sustainability indicators:

1. The number of holdings and agenda items voted.
2. The % of investments in securities that are on Robeco's Exclusion list as result of the application of Robeco's Exclusion Policy.
3. The Sub-fund's weighted carbon, water and waste footprint score compared to the General Market Index.
4. The number of companies that are in violation of the ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises and hence are a part of the Enhanced Engagement program.
5. The Sub-fund's weighted average ESG score compared to the General Market Index.
6. The Sub-fund's weight in companies with a positive SDG score (1,2,3) compared to the General Market Index weight in companies with a positive SDG score (1,2,3).

● **What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?**

The sustainable investments aim to contribute to the UN Sustainable Development Goals ("SDGs"), that have both social and environmental objectives. These are 17 goals that are globally recognised and include environmental goals such as climate action, clean water, life on land and water and social goals such as zero hunger, gender equality, education, etc. Robeco has developed a proprietary framework based on the UN SDGs through which an issuer's contribution to such SDGs is determined through a 3-step process. This process starts with a sector baseline on which a company's products are analysed to examine contribution to the society and environment. Further, the operational processes involved in creating such products is checked along with any controversies/litigation claims and remediation actions

taken which are perused before a final SDG score is determined. The final score ranges between high negative (-3) to high positive (+3) and only those issuers which achieve positive SDG scores (+1, +2 and +3) are regarded as Sustainable Investments.

● ***How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?***

The sustainable investments do no significant harm to any environmental or social sustainable investment objective by considering a principal adverse impact and aligning with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights. In addition, sustainable investments score positively on Robeco's SDG Framework, and therefore do not cause significant harm.

How have the indicators for adverse impacts on sustainability factors been taken into account?

Mandatory principal adverse impact indicators are considered through Robeco's SDG Framework, either directly or indirectly, when identifying sustainable investments for the Sub-fund. In addition, voluntary environmental and social indicators are taken into account, depending on their relevance for measuring impacts on the SDGs and the availability of data. A detailed description of the incorporation of principal adverse impacts is available via Robeco's Principal Adverse Impact Statement published on the Robeco website (<https://www.robeco.com/files/docm/docu-principal-adverse-impact-statement-summary-entity-level.pdf>). In this statement, Robeco sets out its approach to identifying and prioritizing principal adverse impacts, and how principal adverse impacts are considered as part of Robeco's investment due diligence process and procedures relating to research and analysis, exclusions and restrictions and/or voting and engagement. This description also explains how principal adverse impact indicators are considered by the SDG Framework.

How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The sustainable investments are aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights via both Robeco's Exclusion Policy and Robeco's SDG Framework.

Robeco's Exclusion Policy includes an explanation of how Robeco acts in accordance with the International Labor Organization (ILO) standards, United Nations Guiding Principles (UNGPs), United Nations Global Compact (UNGC) Principles and the Organization for Economic Co-operation and Development (OECD) Guidelines for Multinational Enterprises and is guided by these international treaties to assess the behavior of companies. Robeco continuously screens its investments for breaches of these principles. In case of a breach, the company will be excluded or engaged with, and is not considered a sustainable investment.

Robeco's SDG Framework screens for breaches on these principles in the final step of the framework. In this step, Robeco checks whether the company concerned has been involved in any controversies. Involvement in any controversy will result in a negative SDG score for the company, meaning it is not a sustainable investment.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

Does this financial product consider principal adverse impacts on sustainability factors?

Yes, _____

The Sub-fund considers principal adverse impacts on sustainability factors as referred to in Annex I of the SFDR Delegated Act.

Pre-investment, the following principal adverse impacts on sustainability factors are considered:

- Via the applied normative and activity-based exclusions, the following PAIs are considered:
 - Exposure to companies active in the fossil fuel sector (PAI 4, Table 1)
 - Violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1)
 - Activities negatively affecting biodiversity-sensitive areas (PAI 7, Table 1). The consideration of this PAI is currently restricted to applying exclusions to palm oil producing companies and for any breaches to the UNGC, UNGP and OECD Guidelines for Multinational Enterprises in relation to biodiversity.
 - Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons (PAI 14, Table 1)
- Via the environmental footprint performance targets of the Sub-fund, the following PAIs are considered:
 - Carbon footprint (PAI 2, Table 1)
 - Water and waste indicators (PAI 7-9, Table 1). Robeco will use on water and waste footprint until data quality and coverage of the PAIs will improve.

Post-investment, the following principal adverse impacts on sustainability factors are taken into account:

- Via the application of the voting policy, the following PAIs are considered:
 - All indicators related to GHG emissions (PAI 1-6, Table 1)
 - Indicators related to social and employee matters (PAI 10-13, Table 1; PAI 5-8, Table 3)
- Via Robeco's entity engagement program, the following PAIs are considered:

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

- All indicators related to Climate and other environment-related indicators (PAI 1-9, Table 1)
- Violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1)
- In addition, based on a yearly review of Robeco's performance on all mandatory and selected voluntary indicators, holdings of the Sub-fund that cause adverse impact might be selected for engagement.

More information is available via Robeco's Principal Adverse Impact Statement, published on Robeco's website. The Sub-fund will periodically report how it has considered the principal adverse impacts of its investments in the Company's annual report, which will be made available each year on or before 30 April at the Sub-fund page highlighted in final section of this document.

No

What investment strategy does this financial product follow?

Robeco QI US Conservative Equities is an actively managed fund that invests in low-volatility stocks in North-American countries. The selection of these stocks is based on a quantitative model as described in the Investment policy strategy paragraph in Appendix I of this Prospectus. Conservative refers to the focus on equities that show a lower expected volatility than average global equity.

The strategy integrates sustainability indicators on a continuous basis as part of the stock selection process. Amongst others, the Sub-fund applies norms-based and activity-based exclusions, Robeco's good governance policy, Robeco's SDG framework and considers Principal Adverse Impacts in the investment process. More product-specific information can be found on our website and the links provided in the final question of this disclosure.

What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?

The Sub-fund has the following binding elements:

1. All equity holdings have a granted right to vote and Robeco exerts that right by voting according to Robeco's Proxy Voting Policy, unless impediments occur (e.g. share blocking or when not considered cost efficient). Robeco's Proxy Voting Policy can be found at <https://www.robeco.com/files/docm/docu-robeco-stewardship-policy.pdf>
2. The Sub-fund's portfolio complies with Robeco's Exclusion Policy (<https://www.robeco.com/files/docm/docu-exclusion-policy.pdf>), that is based on exclusion criteria with regards to products and business practices that Robeco believes are detrimental to society and incompatible with sustainable investment strategies. This means that the Sub-fund has 0% exposure to excluded securities, taking into account a grace period. Information with regards to the effects of the exclusions on the Sub-fund's universe can be found at <https://www.robeco.com/files/docm/docu-exclusion-list.pdf>
3. The Sub-fund's weighted carbon, water and waste footprint score is a better than that of the General Market Index.
4. The Sub-fund scrutinizes investment in companies that are in breach of the ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises. If a company in the portfolio breaches one of the international guidelines during the investment period, the company will become part of the Enhanced Engagement program. When engagement is deemed highly unlikely to succeed, the company might be excluded directly.
5. The Sub-fund's weighted average ESG score is better than that of the General Market Index.

The investment strategy guides investment decisions based on factors such as investment objectives and risk tolerance.

6. The Sub-fund's weight in companies with a positive SDG score (1,2,3) is better than that of the General Market Index.

What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?

The Sub-fund does not commit to a minimum rate to reduce the scope of investments prior to the application of the investment strategy.

What is the policy to assess good governance practices of the investee companies?

Robeco has a Good Governance policy to assess governance practices of companies. The policy describes how Robeco determines if and when a company does not follow good governance practices and is therefore excluded from the initial investment universe for Article 8 and 9 products. Robeco's Good Governance policy applies to the Sub-fund and tests on a set of governance criteria that reflect widely recognized industry established norms and include topics as employee relations, management structure, tax compliance and remuneration.

The Good Governance test consists of criteria on such topics that are examined for investee companies and further explained in Robeco's Good Governance policy <https://www.robeco.com/files/docm/docu-robeco-good-governance-policy.pdf>. Additionally, the companies that do not pass the good governance test are reflected in the exclusion list that can be accessed here - <https://www.robeco.com/files/docm/docu-exclusion-list.pdf>.

Good governance practices include sound management structures, employee relations, remuneration of staff and tax compliance.

What is the asset allocation planned for this financial product?

At least 90% of the investments are aligned with the E/S characteristics of the Sub-fund. The Sub-fund plans to make a minimum of 50% sustainable investments, measured by positive scores via Robeco's SDG Framework. The investments in the category Other, estimated between 0-10%, are mostly in cash, cash equivalents and derivatives as further described below. The planned asset allocation is monitored continuously, and evaluated on a yearly basis

Asset allocation describes the share of investments in specific assets.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure (CapEx)** showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure (OpEx)** reflecting green

operational activities of investee companies.

● **How does the use of derivatives attain the environmental or social characteristics promoted by the financial product?**

The Sub-fund does not make use of derivatives to attain the environmental or social characteristics promoted by the financial product. The Sub-fund may make use of derivatives for hedging, liquidity management and efficient portfolio management as well as investment purposes. Exchange traded and over-the-counter derivatives are permitted, including but not limited to futures, swaps, options and currency forwards. Whilst the Sub-fund may use derivatives both for investment purposes as well as for hedging and efficient portfolio management, it does not utilize derivatives for such purposes outside the intended share of investments allocated to the 'Other' category.

In case the Sub-fund uses derivatives, the underlying shall comply with the investment policy. Where relevant, minimum environmental or social safeguards are taken into account as described below.

● **To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?**

0%. The Sub-fund does not intend to make Taxonomy-aligned investments. It cannot be excluded that among the Sub-fund's holdings certain investments are Taxonomy aligned. The Sub-fund will report on Taxonomy-aligned investment in the periodic disclosures. In the future, once data-availability in relation to the EU Taxonomy will improve, Robeco might consider setting a target based on turnover or CAPEX. Robeco currently relies on third-party data, including data in relation to companies that do not disclose on the EU Taxonomy alignment of their activities. EU Taxonomy-alignment data is not yet subject to a review by third parties. The Sub-fund only makes investments in equity and therefore it does not have sovereign exposures. The expected level of alignment with and without sovereign bonds is the same.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to renewable power

● **Does the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy?³⁸**

Yes

In fossil gas

In nuclear energy

No

³⁸ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

or low-carbon fuels by the end of 2035. For nuclear energy, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

 are sustainable investments with an environmental objective that **do not take into account the criteria for environmentally sustainable economic activities under the EU Taxonomy.**

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures
 ** As the investments are not Taxonomy-aligned, the exclusion of sovereign bonds has no impact on the graph and therefore no such percentage is shown here.

● **What is the minimum share of investments in transitional and enabling activities?**

0%.

 **What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?**

The Sub-fund intends to make sustainable investments, measured as positive scores via Robeco's SDG Framework. Among those could be investments with environmental objectives that do not qualify as Taxonomy-aligned. The environmental objectives of the Sub-fund are attained by investing in companies that score positively on SDG 12 (Responsible consumption and production), SDG 13 (Climate action), SDG 14 (Life below water), and SDG 15 (Life on land) in Robeco's SDG Framework. While the sum of sustainable investments with an environmental objective and socially sustainable investments always adds up to the Sub-fund's minimum proportion of 50% sustainable investments, we do not commit to a minimum share of sustainable investments with an environmental objective because the Sub-fund's investment strategy does not have a specific environmental investment objective. Therefore, the minimum share of sustainable investments with an environmental objective is 0%.

 **What is the minimum share of socially sustainable investments?**

The Sub-fund intends to make sustainable investments, measured as positive scores via Robeco's SDG Framework. Among those could be investments with social objectives. The social objectives of the Sub-fund are attained by investing in companies that score positively on SDG 1 (No poverty), SDG 2 (Zero hunger), SDG 3 (Good health and well-being), SDG 4 (Quality education), SDG 5 (Gender equality), SDG 6 (Clear water and sanitation), SDG 7 (Affordable and clean energy), SDG 8 (Decent work and economic growth), SDG 9 (Industry, innovation and infrastructure), SDG 10 (Reduced inequalities), SDG 11 (Sustainable cities and communities), SDG 16 (Peace, justice and strong institutions) and SDG 17 (Partnerships for the goals), in Robeco's SDG Framework. While the sum of socially sustainable investments and sustainable investments with an environmental objective always adds up to the Sub-fund's minimum proportion of sustainable investments, we do not commit to a minimum share of socially sustainable investments because the Sub-fund's investment strategy does not have a specific

socially sustainable investment objective. Therefore, the minimum share of socially sustainable investments is 0%.

What investments are included under "#2 Other", what is their purpose and are there any minimum environmental or social safeguards?

The type of instruments included under "#2 Other" and their purpose are outlined in Annex I of this Prospectus under the header 'Financial instruments and investment restrictions'. They include cash, cash equivalents, as well as investment funds and eligible asset classes (other than bonds and equities) that do not specifically promote E/S characteristics. As indicated above, the Sub-fund does not make use of derivatives to attain the environmental or social characteristics promoted. The Sub-fund may make use of derivatives, which thus always fall under the category "#2 Other", for hedging, liquidity management and efficient portfolio management as well as investment purposes. Exchange traded and over-the-counter derivatives are permitted, including but not limited to futures, swaps, options and currency forwards. In case the Sub-fund uses derivatives, the underlying shall comply with the investment policy. Where relevant, minimum environmental or social safeguards are taken into account, by, for example, applying Robeco's Exclusion Policy for any single security derivative.

Is a specific index designated as a reference benchmark to determine whether this financial product is aligned with the environmental and/or social characteristics that it promotes?

Not applicable.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

e) Robeco BP US Premium Equities

Pre-contractual disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Product name: Robeco BP US Premium Equities

Legal entity identifier: 213800NHT998V29TM914

Environmental and/or social characteristics

Does this financial product have a sustainable investment objective?

Yes

No

It will make a minimum of **sustainable investments with an environmental objective: ___%**

- in economic activities that qualify as environmentally sustainable under the EU Taxonomy
- in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

It will make a minimum of **sustainable investments with a social objective: ___%**

It promotes **Environmental/Social (E/S) characteristics** and while it does not have as its objective a sustainable investment, it will have a minimum proportion of 40% of sustainable investments

- with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy
- with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy
- with a social objective

It promotes E/S characteristics, but **will not make any sustainable investments**

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

What environmental and/or social characteristics are promoted by this financial product?

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

The Sub-fund has the following E/S characteristics:

1. The Sub-fund promotes certain minimum environmental and social safeguards through applying exclusion criteria with regards to products and business practices that Robeco believes are detrimental to society and incompatible with sustainable investment strategies, such as exposure to controversial behaviour, controversial weapons, and fossil fuels.
2. The Sub-fund promotes adherence to and conducting business activities in accordance with the United Nations Universal Declaration of Human Rights, the International Labor Organization's (ILO) labor standards, the United Nations Guiding Principles for Business and Human Rights (UNGPs), the United Nations Global Compact (UNGC) and the OECD Guidelines for Multinational Enterprises, by scrutinizing companies that violate these principles.
3. The Sub-fund promotes good governance and sustainable corporate practices through proxy voting, which contributes to long-term shareholder value creation. This includes taking an active stance on social and environmental topics through Robeco's proxy voting policy.
4. The Sub-fund limits investing in companies with an elevated sustainability risk based on ESG risk scores whereas all such investments require separate approval of a dedicated committee that oversees that all investments are substantiated and eligible based on a fundamental review on the sustainability risk.
5. The Sub-fund promotes having a lower carbon footprint than the general market index referred to in Appendix VI – Benchmarks (the "General Market Index").

There is no reference benchmark designated for the purpose of attaining the environmental or social characteristics promoted by the Sub-fund.

● **What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?**

The Sub-fund has the following sustainability indicators:

1. The % of investments in securities that are on Robeco's Exclusion list as result of the application of Robeco's Exclusion Policy.
2. The number of companies that are in violation of the ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises and hence are a part of the Enhanced Engagement program.
3. The number of holdings and agenda items voted.
4. The % of holdings with an elevated sustainability risk profile.
5. The weighted carbon footprint score of the Sub-fund compared to the General Market Index.

● **What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?**

The sustainable investments aim to contribute to the UN Sustainable Development Goals ("SDGs"), that have both social and environmental objectives. These are 17 goals that are globally recognised and include environmental goals such as climate action, clean water, life on land and water and social goals such as zero hunger, gender equality, education, etc. Robeco has developed a proprietary framework based on the UN SDGs through which an issuer's contribution to such SDGs is determined through a 3-step process. This process starts with a sector baseline on which a company's products are analysed to examine contribution to the society and environment. Further, the operational processes involved in creating such products is checked along with any controversies/litigation claims and remediation actions taken which are perused before a final SDG score is determined. The final score ranges between high negative (-3) to high positive (+3) and only those issuers which achieve positive SDG scores (+1, +2 and +3) are regarded as Sustainable Investments.

● ***How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?***

The sustainable investments do no significant harm to any environmental or social sustainable investment objective by considering a principal adverse impact and aligning with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights. In addition, sustainable investments score positively on Robeco's SDG Framework, and therefore do not cause significant harm.

How have the indicators for adverse impacts on sustainability factors been taken into account?

Mandatory principal adverse impact indicators are considered through Robeco's SDG Framework, either directly or indirectly, when identifying sustainable investments for the Sub-fund. In addition, voluntary environmental and social indicators are taken into account, depending on their relevance for measuring impacts on the SDGs and the availability of data. A detailed description of the incorporation of principal adverse impacts is available via Robeco's Principal Adverse Impact Statement published on the Robeco website (<https://www.robeco.com/files/docm/docu-principal-adverse-impact-statement-summary-entity-level.pdf>). In this statement, Robeco sets out its approach to identifying and prioritizing principal adverse impacts, and how principal adverse impacts are considered as part of Robeco's investment due diligence process and procedures relating to research and analysis, exclusions and restrictions and/or voting and engagement. This description also explains how principal adverse impact indicators are considered by the SDG Framework.

How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The sustainable investments are aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights via both Robeco's Exclusion Policy and Robeco's SDG Framework.

Robeco's Exclusion Policy includes an explanation of how Robeco acts in accordance with the International Labor Organization (ILO) standards, United Nations Guiding Principles (UNGPs), United Nations Global Compact (UNGC) Principles and the Organization for Economic Co-operation and Development (OECD) Guidelines for Multinational Enterprises and is guided by these international treaties to assess the behavior of companies. Robeco continuously screens its investments for breaches of these principles. In case of a breach, the company will be excluded or engaged with, and is not considered a sustainable investment.

Robeco's SDG Framework screens for breaches on these principles in the final step of the framework. In this step, Robeco checks whether the company concerned has been involved in any controversies. Involvement in any controversy will result in a negative SDG score for the company, meaning it is not a sustainable investment.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

Does this financial product consider principal adverse impacts on sustainability factors?

Yes, _____

The Sub-fund considers principal adverse impacts on sustainability factors as referred to in Annex I of the SFDR Delegated Act.

Pre-investment, the following principal adverse impacts on sustainability factors are considered:

- Via the applied normative and activity-based exclusions, the following PAIs are considered:
 - Exposure to companies active in the fossil fuel sector (PAI 4, Table 1)
 - Violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1)
 - Activities negatively affecting biodiversity-sensitive areas (PAI 7, Table 1). The consideration of this PAI is currently restricted to applying exclusions to palm oil producing companies and for any breaches to the UNGC, UNGP and OECD Guidelines for Multinational Enterprises in relation to biodiversity.
 - Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons (PAI 14, Table 1)

Post-investment, the following principal adverse impacts on sustainability factors are taken into account:

- Via the application of the voting policy, the following PAIs are considered:
 - All indicators related to GHG emissions (PAI 1-6, Table 1)
 - Indicators related to social and employee matters (PAI 10-13, Table 1; PAI 5-8, Table 3)
- Via Robeco's entity engagement program, the following PAIs are considered:
 - All indicators related to Climate and other environment-related indicators (PAI 1-9, Table 1)
 - Violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1). On an

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

ongoing basis, the investment universe is scanned for controversial behavior in relation to the aforementioned principles and guidelines.

- In addition, based on a yearly review of Robeco's performance on all mandatory and selected voluntary indicators, holdings of the Sub-fund that cause adverse impact might be selected for engagement.

More information is available via Robeco's Principal Adverse Impact Statement, published on Robeco's website. The Sub-fund will periodically report how it has considered the principal adverse impacts of its investments in the Company's annual report, which will be made available each year on or before 30 April at the Sub-fund page highlighted in final section of this document.

No

What investment strategy does this financial product follow?

Robeco BP US Premium Equities is an actively managed fund that invests in stocks in the United States. The selection of these stocks is based on fundamental analysis as described in the Investment policy strategy paragraph in Appendix I of this Prospectus. The strategy integrates sustainability indicators on a continuous basis as part of the stock selection process. Amongst others, the Sub-fund applies norms-based and activity-based exclusions, Robeco's good governance policy, Robeco's SDG framework and considers Principal Adverse Impacts in the investment process. More product-specific information can be found on our website and the links provided in the final question of this disclosure.

The investment strategy guides investment decisions based on factors such as investment objectives and risk tolerance.

What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?

The Sub-fund has the following binding elements:

1. The Sub-fund's portfolio complies with Robeco's Exclusion Policy (<https://www.robeco.com/files/docm/docu-exclusion-policy.pdf>), that is based on exclusion criteria with regards to products and business practices that Robeco believes are detrimental to society and incompatible with sustainable investment strategies. This means that the Sub-fund has 0% exposure to excluded securities, taking into account a grace period. Information with regards to the effects of the exclusions on the Sub-fund's universe can be found at <https://www.robeco.com/files/docm/docu-exclusion-list.pdf>
2. The Sub-fund scrutinizes investment in companies that are in breach of the ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises. If a company in the portfolio breaches one of the international guidelines during the investment period, the company will become part of the Enhanced Engagement program.
3. All equity holdings have a granted right to vote and Robeco exerts that right by voting according to Robeco's Proxy Voting Policy, unless impediments occur (e.g. share blocking or when not considered cost efficient). Robeco's Proxy Voting Policy can be found at <https://www.robeco.com/files/docm/docu-robeco-stewardship-policy.pdf>.
4. Investments with an elevated sustainability risk are defined by Robeco as companies with an ESG Risk Rating of 40 and higher (the ESG Risk Rating is explained in the sustainability risk policy which can be accessed via <https://www.robeco.com/files/docm/docu-robeco-sustainability-risk-policy.pdf>). The Sub-fund is limited to a maximum exposure of 3% to investments with an elevated sustainability risk, based on the market weight in the portfolio taking into account regional differences and benchmark. Each investment with an ESG Risk rating of higher than 40 requires separate approval by a dedicated committee of sustainable investment specialists, compliance and risk management that oversees the bottom-up sustainability analysis.
5. The Sub-fund's weighted carbon footprint score is better than that of the General Market Index.

● ***What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?***

The Sub-fund does not commit to a minimum rate to reduce the scope of investments prior to the application of the investment strategy.

● ***What is the policy to assess good governance practices of the investee companies?***

Robeco has a Good Governance policy to assess governance practices of companies. The policy describes how Robeco determines if and when a company does not follow good governance practices and is therefore excluded from the initial investment universe for Article 8 and 9 products. Robeco's Good Governance policy applies to the Sub-fund and tests on a set of governance criteria that reflect widely recognized industry established norms and include topics as employee relations, management structure, tax compliance and remuneration.

The Good Governance test consists of criteria on such topics that are examined for investee companies and further explained in Robeco's Good Governance policy <https://www.robeco.com/files/docm/docu-robeco-good-governance-policy.pdf>. Additionally, the companies that do not pass the good governance test are reflected in the exclusion list that can be accessed here - <https://www.robeco.com/files/docm/docu-exclusion-list.pdf>.

Good governance practices include sound management structures, employee relations, remuneration of staff and tax compliance.

What is the asset allocation planned for this financial product?

At least 90% of the investments are aligned with the E/S characteristics of the Sub-fund. The Sub-fund plans to make a minimum of 40% sustainable investments, measured by positive scores via Robeco's SDG Framework. The investments in the category Other, estimated between 0-10%, are mostly in cash, cash equivalents and derivatives as further described below. The planned asset allocation is monitored continuously, and evaluated on a yearly basis.

Asset allocation describes the share of investments in specific assets.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

How does the use of derivatives attain the environmental or social characteristics promoted by the financial product?

The Sub-fund does not make use of derivatives to attain the environmental or social characteristics promoted by the financial product. The Sub-fund may make use of derivatives for hedging, liquidity management and efficient portfolio management as well as investment purposes. Exchange traded and over-the-counter derivatives are permitted, including but not limited to futures, swaps, options and currency forwards. Whilst the Sub-fund may use derivatives both for investment purposes as well as for hedging and efficient portfolio management, it does not utilize derivatives for such purposes outside the intended share of investments allocated to the 'Other' category.

In case the Sub-fund uses derivatives, the underlying shall comply with the investment policy. Where relevant, minimum environmental or social safeguards are taken into account as described below.

To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

0%. The Sub-fund does not intend to make Taxonomy-aligned investments. It cannot be excluded that among the Sub-fund's holdings certain investments are Taxonomy aligned. The Sub-fund will report on Taxonomy-aligned investment in the periodic disclosures. In the future, once data-availability in relation to the EU Taxonomy will improve, Robeco might consider setting a target based on turnover or CAPEX. Robeco currently relies on third-party data, including data in relation to companies that do not disclose on the EU Taxonomy alignment of their activities. EU Taxonomy-alignment data is not yet subject to a review by third parties. The Sub-fund only makes investments in equity and therefore it does not have sovereign exposures. The expected level of alignment with and without sovereign bonds is the same.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

 are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

● **Does the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy?³⁹**

Yes

In fossil gas

In nuclear energy

No

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.*

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

** As the investments are not Taxonomy-aligned, the exclusion of sovereign bonds has no impact on the graph and therefore no such percentage is shown here.

● **What is the minimum share of investments in transitional and enabling activities?**

0%

What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?

The Sub-fund intends to make sustainable investments, measured as positive scores via Robeco's SDG Framework. Among those could be investments with environmental objectives that do not qualify as Taxonomy-aligned. The environmental objectives of the Sub-fund are attained by investing in companies that score positively on SDG 12 (Responsible consumption and production), SDG 13 (Climate action), SDG 14 (Life below water), and SDG 15 (Life on land) in Robeco's SDG Framework. While the sum of sustainable investments with an environmental objective and socially sustainable investments always adds up to the Sub-fund's minimum proportion of 40% sustainable investments, we do not commit to a minimum share of sustainable investments with an environmental objective because the Sub-fund's investment strategy does not have a specific environmental investment objective. Therefore, the minimum share of sustainable investments with an environmental objective is 0%.

³⁹ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

What is the minimum share of socially sustainable investments?

The Sub-fund intends to make sustainable investments, measured as positive scores via Robeco's SDG Framework. Among those could be investments with social objectives. The social objectives of the Sub-fund are attained by investing in companies that score positively on SDG 1 (No poverty), SDG 2 (Zero hunger), SDG 3 (Good health and well-being), SDG 4 (Quality education), SDG 5 (Gender equality), SDG 6 (Clear water and sanitation), SDG 7 (Affordable and clean energy), SDG 8 (Decent work and economic growth), SDG 9 (Industry, innovation and infrastructure), SDG 10 (Reduced inequalities), SDG 11 (Sustainable cities and communities), SDG 16 (Peace, justice and strong institutions) and SDG 17 (Partnerships for the goals), in Robeco's SDG Framework. While the sum of socially sustainable investments and sustainable investments with an environmental objective always adds up to the Sub-fund's minimum proportion of sustainable investments, we do not commit to a minimum share of socially sustainable investments because the Sub-fund's investment strategy does not have a specific socially sustainable investment objective. Therefore, the minimum share of socially sustainable investments is 0%.

What investments are included under "#2 Other", what is their purpose and are there any minimum environmental or social safeguards?

The type of instruments included under "#2 Other" and their purpose are outlined in Annex I of this Prospectus under the header 'Financial instruments and investment restrictions'. They include cash, cash equivalents, as well as investment funds and eligible asset classes (other than bonds and equities) that do not specifically promote E/S characteristics. As indicated above, the Sub-fund does not make use of derivatives to attain the environmental or social characteristics promoted. The Sub-fund may make use of derivatives, which thus always fall under the category "#2 Other", for hedging, liquidity management and efficient portfolio management as well as investment purposes. Exchange traded and over-the-counter derivatives are permitted, including but not limited to futures, swaps, options and currency forwards. In case the Sub-fund uses derivatives, the underlying shall comply with the investment policy. Where relevant, minimum environmental or social safeguards are taken into account, by, for example, applying Robeco's Exclusion Policy for any single security derivative.

Is a specific index designated as a reference benchmark to determine whether this financial product is aligned with the environmental and/or social characteristics that it promotes?

Not applicable.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

f) Robeco Chinese Equities

Pre-contractual disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Product name: Robeco Chinese Equities

Legal entity identifier: 213800TJUGS6VH4REL60

Environmental and/or social characteristics

Does this financial product have a sustainable investment objective?

Yes

No

It will make a minimum of **sustainable investments with an environmental objective:** ___%

- in economic activities that qualify as environmentally sustainable under the EU Taxonomy
- in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

It will make a minimum of **sustainable investments with a social objective:** ___%

It promotes **Environmental/Social (E/S) characteristics** and while it does not have as its objective a sustainable investment, it will have a minimum proportion of 35% of sustainable investments

- with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy
- with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy
- with a social objective

It promotes E/S characteristics, but **will not make any sustainable investments**

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

What environmental and/or social characteristics are promoted by this financial product?

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

The Sub-fund has the following E/S characteristics:

1. The Sub-fund promotes certain minimum environmental and social safeguards through applying exclusion criteria with regards to products and business practices that Robeco believes are detrimental to society and incompatible with sustainable investment strategies, such as exposure to controversial behaviour, controversial weapons, and fossil fuels.
2. The Sub-fund promotes adherence to and conducting business activities in accordance with the United Nations Universal Declaration of Human Rights, the International Labor Organization's (ILO) labor standards, the United Nations Guiding Principles for Business and Human Rights (UNGPs), the United Nations Global Compact (UNGC) and the OECD Guidelines for Multinational Enterprises, by scrutinizing companies that violate these principles.
3. The Sub-fund promotes good governance and sustainable corporate practices through proxy voting, which contributes to long-term shareholder value creation. This includes taking an active stance on social and environmental topics through Robeco's proxy voting policy.
4. The Sub-fund limits investing in companies with an elevated sustainability risk based on ESG risk scores whereas all such investments require separate approval of a dedicated committee that oversees that all investments are substantiated and eligible based on a fundamental review on the sustainability risk.

There is no reference benchmark designated for the purpose of attaining the environmental or social characteristics promoted by the Sub-fund.

● **What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?**

The Sub-fund has the following sustainability indicators:

1. The % of investments in securities that are on Robeco's Exclusion list as result of the application of Robeco's Exclusion Policy.
2. The number of companies that are in violation of the ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises and hence are a part of the Enhanced Engagement program.
3. The number of holdings and agenda items voted.
4. The % of holdings with an elevated sustainability risk profile.

● **What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?**

The sustainable investments aim to contribute to the UN Sustainable Development Goals ("SDGs"), that have both social and environmental objectives. These are 17 goals that are globally recognised and include environmental goals such as climate action, clean water, life on land and water and social goals such as zero hunger, gender equality, education, etc. Robeco has developed a proprietary framework based on the UN SDGs through which an issuer's contribution to such SDGs is determined through a 3-step process. This process starts with a sector baseline on which a company's products are analysed to examine contribution to the society and environment. Further, the operational processes involved in creating such products is checked along with any controversies/litigation claims and remediation actions taken which are perused before a final SDG score is determined. The final score ranges between high negative (-3) to high positive (+3) and only those issuers which achieve positive SDG scores (+1, +2 and +3) are regarded as Sustainable Investments.

● ***How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?***

The sustainable investments do no significant harm to any environmental or social sustainable investment objective by considering a principal adverse impact and aligning with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights. In addition, sustainable investments score positively on Robeco's SDG Framework, and therefore do not cause significant harm.

How have the indicators for adverse impacts on sustainability factors been taken into account?

Mandatory principal adverse impact indicators are considered through Robeco's SDG Framework, either directly or indirectly, when identifying sustainable investments for the Sub-fund. In addition, voluntary environmental and social indicators are taken into account, depending on their relevance for measuring impacts on the SDGs and the availability of data. A detailed description of the incorporation of principal adverse impacts is available via Robeco's Principal Adverse Impact Statement published on the Robeco website (<https://www.robeco.com/files/docm/docu-principal-adverse-impact-statement-summary-entity-level.pdf>). In this statement, Robeco sets out its approach to identifying and prioritizing principal adverse impacts, and how principal adverse impacts are considered as part of Robeco's investment due diligence process and procedures relating to research and analysis, exclusions and restrictions and/or voting and engagement. This description also explains how principal adverse impact indicators are considered by the SDG Framework.

How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The sustainable investments are aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights via both Robeco's Exclusion Policy and Robeco's SDG Framework.

Robeco's Exclusion Policy includes an explanation of how Robeco acts in accordance with the International Labor Organization (ILO) standards, United Nations Guiding Principles (UNGPs), United Nations Global Compact (UNGC) Principles and the Organization for Economic Co-operation and Development (OECD) Guidelines for Multinational Enterprises and is guided by these international treaties to assess the behavior of companies. Robeco continuously screens its investments for breaches of these principles. In case of a breach, the company will be excluded or engaged with, and is not considered a sustainable investment.

Robeco's SDG Framework screens for breaches on these principles in the final step of the framework. In this step, Robeco checks whether the company concerned has been involved in any controversies. Involvement in any controversy will result in a negative SDG score for the company, meaning it is not a sustainable investment.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

Does this financial product consider principal adverse impacts on sustainability factors?

Yes, _____

The Sub-fund considers principal adverse impacts on sustainability factors as referred to in Annex I of the SFDR Delegated Act.

Pre-investment, the following principal adverse impacts on sustainability factors are considered:

- Via the applied normative and activity-based exclusions, the following PAIs are considered:

- Exposure to companies active in the fossil fuel sector (PAI 4, Table 1)
- Violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1)
- Activities negatively affecting biodiversity-sensitive areas (PAI 7, Table 1). The consideration of this PAI is currently restricted to applying exclusions to palm oil producing companies and for any breaches to the UNGC, UNGP and OECD Guidelines for Multinational Enterprises in relation to biodiversity.
- Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons) (PAI 14, Table 1)

- Via the ESG integration process, as part of the investment due diligence policies and procedures, the following PAIs are considered:

- All indicators related to GHG emissions, as part of the required Climate Risk analysis (PAI 1-6, Table 1, PAI 4, Table 2)
- Biodiversity, water and waste indicators (PAI 7-9, Table 1)
- Board gender diversity (PAI 13, Table 1)

Post-investment, the following principal adverse impacts on sustainability factors are taken into account:

- Via the application of the voting policy, the following PAIs are considered:

- All indicators related to GHG emissions (PAI 1-6, Table 1)
- Indicators related to social and employee matters (PAI 10-13, Table 1; PAI 5-8, Table 3)

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

- Via Robeco's entity engagement program, the following PAIs are considered:
 - All indicators related to Climate and other environment-related indicators (PAI 1-9, Table 1)
 - Violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1). On an ongoing basis, the investment universe is scanned for controversial behavior in relation to the aforementioned principles and guidelines.
 - In addition, based on a yearly review of Robeco's performance on all mandatory and selected voluntary indicators, holdings of the Sub-fund that cause adverse impact might be selected for engagement.

More information is available via Robeco's Principal Adverse Impact Statement, published on Robeco's website. The Sub-fund will periodically report how it has considered the principal adverse impacts of its investments in the Company's annual report, which will be made available each year on or before 30 April at the Sub-fund page highlighted in final section of this document.

No

What investment strategy does this financial product follow?

Robeco Chinese Equities is an actively managed fund that invests in listed stocks of leading Chinese companies. The selection of these stocks is based on fundamental analysis as described in the Investment policy strategy paragraph in Appendix I of this Prospectus. The strategy integrates sustainability indicators on a continuous basis as part of the stock selection process. Amongst others, the Sub-fund applies norms-based and activity-based exclusions, Robeco's good governance policy, Robeco's SDG framework and considers Principal Adverse Impacts in the investment process. More product-specific information can be found on our website and the links provided in the final question of this disclosure.

The investment strategy guides investment decisions based on factors such as investment objectives and risk tolerance.

What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?

The Sub-fund has the following binding elements:

1. The Sub-fund's portfolio complies with Robeco's Exclusion Policy (<https://www.robeco.com/files/docm/docu-exclusion-policy.pdf>), that is based on exclusion criteria with regards to products and business practices that Robeco believes are detrimental to society and incompatible with sustainable investment strategies. This means that the Sub-fund has 0% exposure to excluded securities, taking into account a grace period. Information with regards to the effects of the exclusions on the Sub-fund's universe can be found at <https://www.robeco.com/files/docm/docu-exclusion-list.pdf>.
2. The Sub-fund scrutinizes investment in companies that are in breach of the ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises. If a company in the portfolio breaches one of the international guidelines during the investment period, the company will become part of the Enhanced Engagement program.
3. All equity holdings have a granted right to vote and Robeco exerts that right by voting according to Robeco's Proxy Voting Policy, unless impediments occur (e.g. share blocking or when not considered cost efficient). Robeco's Proxy Voting Policy can be found at <https://www.robeco.com/files/docm/docu-robeco-stewardship-policy.pdf>.
4. Investments with an elevated sustainability risk are defined by Robeco as companies with an ESG Risk Rating of 40 and higher (the ESG Risk Rating is explained in the sustainability risk policy which can be accessed via <https://www.robeco.com/files/docm/docu-robeco-sustainability-risk-policy.pdf>). The Sub-fund is limited to a maximum exposure of 10% to

investments with an elevated sustainability risk, based on the market weight in the portfolio taking into account regional differences and benchmark. Each investment with an ESG Risk rating of higher than 40 requires separate approval by a dedicated committee of sustainable investment specialists, compliance and risk management that oversees the bottom-up sustainability analysis.

● ***What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?***

The Sub-fund does not commit to a minimum rate to reduce the scope of investments prior to the application of the investment strategy.

● ***What is the policy to assess good governance practices of the investee companies?***

Robeco has a Good Governance policy to assess governance practices of companies. The policy describes how Robeco determines if and when a company does not follow good governance practices and is therefore excluded from the initial investment universe for Article 8 and 9 products. Robeco's Good Governance policy applies to the Sub-fund and tests on a set of governance criteria that reflect widely recognized industry established norms and include topics as employee relations, management structure, tax compliance and remuneration.

The Good Governance test consists of criteria on such topics that are examined for investee companies and further explained in Robeco's Good Governance policy <https://www.robeco.com/files/docm/docu-robeco-good-governance-policy.pdf>. Additionally, the companies that do not pass the good governance test are reflected in the exclusion list that can be accessed here - <https://www.robeco.com/files/docm/docu-exclusion-list.pdf>.

What is the asset allocation planned for this financial product?

At least 90% of the investments are aligned with the E/S characteristics of the Sub-fund. The Sub-fund plans to make a minimum of 35% sustainable investments, measured by positive scores via Robeco's SDG Framework. The investments in the category Other, estimated between 0-10%, are mostly in cash, cash equivalents and derivatives as further described below. The planned asset allocation is monitored continuously, and evaluated on a yearly basis.

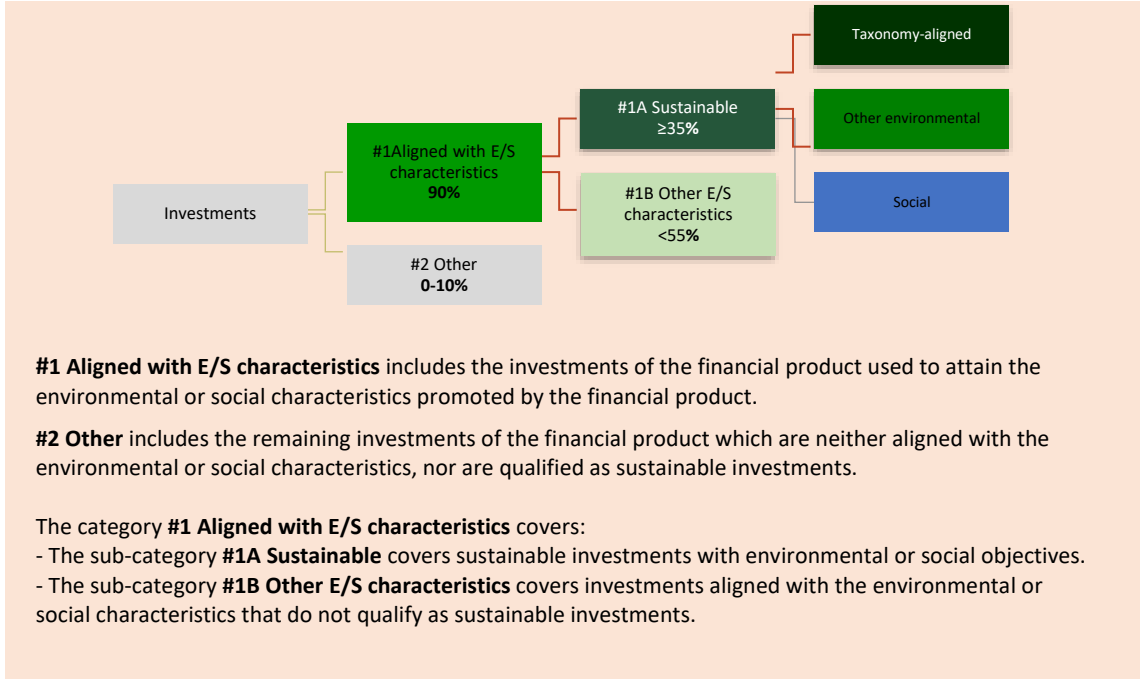

Good governance practices include sound management structures, employee relations, remuneration of staff and tax compliance.

Asset allocation describes the share of investments in specific assets.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

● **How does the use of derivatives attain the environmental or social characteristics promoted by the financial product?**

The Sub-fund does not make use of derivatives to attain the environmental or social characteristics promoted by the financial product. The Sub-fund may make use of derivatives for hedging, liquidity management and efficient portfolio management as well as investment purposes. Exchange traded and over-the-counter derivatives are permitted, including but not limited to futures, swaps, options and currency forwards. Whilst the Sub-fund may use derivatives both for investment purposes as well as for hedging and efficient portfolio management, it does not utilize derivatives for such purposes outside the intended share of investments allocated to the 'Other' category. In case the Sub-fund uses derivatives, the underlying shall comply with the investment policy. Where relevant, minimum environmental or social safeguards are taken into account as described below.

To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

0%. The Sub-fund does not intend to make Taxonomy-aligned investments. It cannot be excluded that among the Sub-fund's holdings certain investments are Taxonomy aligned. The Sub-fund will report on Taxonomy-aligned investment in the periodic disclosures. In the future, once data-availability in relation to the EU Taxonomy will improve, Robeco might consider setting a target based on turnover or CAPEX. Robeco currently relies on third-party data, including data in relation to companies that do not disclose on the EU Taxonomy alignment of their activities. EU Taxonomy-alignment data is not yet subject to a review by third parties. The Sub-fund only makes investments in equity and therefore it does not have sovereign exposures. The expected level of alignment with and without sovereign bonds is the same

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

 are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

● **Does the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy?⁴⁰**

Yes

In fossil gas

In nuclear energy

No

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.*

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

** As the investments are not Taxonomy-aligned, the exclusion of sovereign bonds has no impact on the graph and therefore no such percentage is shown here.

● **What is the minimum share of investments in transitional and enabling activities?**

0%.

What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?

The Sub-fund intends to make sustainable investments, measured as positive scores via Robeco's SDG Framework. Among those could be investments with environmental objectives that do not qualify as Taxonomy-aligned. The environmental objectives of the Sub-fund are attained by investing in companies that score positively on SDG 12 (Responsible consumption and production), SDG 13 (Climate action), SDG 14 (Life below water), and SDG 15 (Life on land) in Robeco's SDG Framework. While the sum of sustainable investments with an environmental objective and socially sustainable investments always adds up to the Sub-fund's minimum proportion of 35% sustainable investments, we do not commit to a minimum share of sustainable investments with an environmental objective because the Sub-fund's investment strategy does not have a specific environmental investment objective. Therefore, the minimum share of sustainable investments with an environmental objective is 0%.

⁴⁰ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

What is the minimum share of socially sustainable investments?

The Sub-fund intends to make sustainable investments, measured as positive scores via Robeco's SDG Framework. Among those could be investments with social objectives. The social objectives of the Sub-fund are attained by investing in companies that score positively on SDG 1 (No poverty), SDG 2 (Zero hunger), SDG 3 (Good health and well-being), SDG 4 (Quality education), SDG 5 (Gender equality), SDG 6 (Clear water and sanitation), SDG 7 (Affordable and clean energy), SDG 8 (Decent work and economic growth), SDG 9 (Industry, innovation and infrastructure), SDG 10 (Reduced inequalities), SDG 11 (Sustainable cities and communities), SDG 16 (Peace, justice and strong institutions) and SDG 17 (Partnerships for the goals), in Robeco's SDG Framework. While the sum of socially sustainable investments and sustainable investments with an environmental objective always adds up to the Sub-fund's minimum proportion of sustainable investments, we do not commit to a minimum share of socially sustainable investments because the Sub-fund's investment strategy does not have a specific socially sustainable investment objective. Therefore, the minimum share of socially sustainable investments is 0%.

What investments are included under "#2 Other", what is their purpose and are there any minimum environmental or social safeguards?

The type of instruments included under "#2 Other" and their purpose are outlined in Annex I of this Prospectus under the header 'Financial instruments and investment restrictions'. They include cash, cash equivalents, as well as investment funds and eligible asset classes (other than bonds and equities) that do not specifically promote E/S characteristics. As indicated above, the Sub-fund does not make use of derivatives to attain the environmental or social characteristics promoted. The Sub-fund may make use of derivatives, which thus always fall under the category "#2 Other", for hedging, liquidity management and efficient portfolio management as well as investment purposes. Exchange traded and over-the-counter derivatives are permitted, including but not limited to futures, swaps, options and currency forwards. In case the Sub-fund uses derivatives, the underlying shall comply with the investment policy. Where relevant, minimum environmental or social safeguards are taken into account, by, for example, applying Robeco's Exclusion Policy for any single security derivative.

Is a specific index designated as a reference benchmark to determine whether this financial product is aligned with the environmental and/or social characteristics that it promotes?

Not applicable.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

g) Robeco Indian Equities

Pre-contractual disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Product name: Robeco Indian Equities

Legal entity identifier: 213800F2XL8JYTIUE403

Environmental and/or social characteristics

Does this financial product have a sustainable investment objective?

Yes

No

It will make a minimum of **sustainable investments with an environmental objective:** ___%

- in economic activities that qualify as environmentally sustainable under the EU Taxonomy
- in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

It will make a minimum of **sustainable investments with a social objective:** ___%

It promotes **Environmental/Social (E/S) characteristics** and while it does not have as its objective a sustainable investment, it will have a minimum proportion of 35% of sustainable investments

- with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy
- with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy
- with a social objective

It promotes E/S characteristics, but **will not make any sustainable investments**

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

What environmental and/or social characteristics are promoted by this financial product?

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

The Sub-fund has the following E/S characteristics:

1. The Sub-fund promotes certain minimum environmental and social safeguards through applying exclusion criteria with regards to products and business practices that Robeco believes are detrimental to society and incompatible with sustainable investment strategies, such as exposure to controversial behaviour, controversial weapons, and fossil fuels.
2. The Sub-fund promotes adherence to and conducting business activities in accordance with the United Nations Universal Declaration of Human Rights, the International Labor Organization's (ILO) labor standards, the United Nations Guiding Principles for Business and Human Rights (UNGPs), the United Nations Global Compact (UNGC) and the OECD Guidelines for Multinational Enterprises, by scrutinizing companies that violate these principles.
3. The Sub-fund promotes good governance and sustainable corporate practices through proxy voting, which contributes to long-term shareholder value creation. This includes taking an active stance on social and environmental topics through Robeco's proxy voting policy.
4. The Sub-fund limits investing in companies with an elevated sustainability risk based on ESG risk scores whereas all such investments require separate approval of a dedicated committee that oversees that all investments are substantiated and eligible based on a fundamental review on the sustainability risk.

There is no reference benchmark designated for the purpose of attaining the environmental or social characteristics promoted by the Sub-fund.

● **What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?**

The Sub-fund has the following sustainability indicators:

1. The % of investments in securities that are on Robeco's Exclusion list as result of the application of Robeco's Exclusion Policy.
2. The number of companies that are in violation of the ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises and hence are a part of the Enhanced Engagement program.
3. The number of holdings and agenda items voted.
4. The % of holdings with an elevated sustainability risk profile.

● **What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?**

The sustainable investments aim to contribute to the UN Sustainable Development Goals ("SDGs"), that have both social and environmental objectives. These are 17 goals that are globally recognised and include environmental goals such as climate action, clean water, life on land and water and social goals such as zero hunger, gender equality, education, etc. Robeco has developed a proprietary framework based on the UN SDGs through which an issuer's contribution to such SDGs is determined through a 3-step process. This process starts with a sector baseline on which a company's products are analysed to examine contribution to the society and environment. Further, the operational processes involved in creating such products is checked along with any controversies/litigation claims and remediation actions taken which are perused before a final SDG score is determined. The final score ranges between high negative (-3) to high positive (+3) and only those issuers which achieve positive SDG scores (+1, +2 and +3) are regarded as Sustainable Investments.

● ***How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?***

The sustainable investments do no significant harm to any environmental or social sustainable investment objective by considering a principal adverse impact and aligning with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights. In addition, sustainable investments score positively on Robeco's SDG Framework, and therefore do not cause significant harm.

How have the indicators for adverse impacts on sustainability factors been taken into account?

Mandatory principal adverse impact indicators are considered through Robeco's SDG Framework, either directly or indirectly, when identifying sustainable investments for the Sub-fund. In addition, voluntary environmental and social indicators are taken into account, depending on their relevance for measuring impacts on the SDGs and the availability of data. A detailed description of the incorporation of principal adverse impacts is available via Robeco's Principal Adverse Impact Statement published on the Robeco website (<https://www.robeco.com/files/docm/docu-principal-adverse-impact-statement-summary-entity-level.pdf>). In this statement, Robeco sets out its approach to identifying and prioritizing principal adverse impacts, and how principal adverse impacts are considered as part of Robeco's investment due diligence process and procedures relating to research and analysis, exclusions and restrictions and/or voting and engagement. This description also explains how principal adverse impact indicators are considered by the SDG Framework.

How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The sustainable investments are aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights via both Robeco's Exclusion Policy and Robeco's SDG Framework.

Robeco's Exclusion Policy includes an explanation of how Robeco acts in accordance with the International Labor Organization (ILO) standards, United Nations Guiding Principles (UNGPs), United Nations Global Compact (UNGC) Principles and the Organization for Economic Co-operation and Development (OECD) Guidelines for Multinational Enterprises and is guided by these international treaties to assess the behavior of companies. Robeco continuously screens its investments for breaches of these principles. In case of a breach, the company will be excluded or engaged with, and is not considered a sustainable investment.

Robeco's SDG Framework screens for breaches on these principles in the final step of the framework. In this step, Robeco checks whether the company concerned has been involved in any controversies. Involvement in any controversy will result in a negative SDG score for the company, meaning it is not a sustainable investment.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

Does this financial product consider principal adverse impacts on sustainability factors?

Yes, _____

The Sub-fund considers principal adverse impacts on sustainability factors as referred to in Annex I of the SFDR Delegated Act.

Pre-investment, the following principal adverse impacts on sustainability factors are considered:

- Via the applied normative and activity-based exclusions, the following PAIs are considered:
 - Exposure to companies active in the fossil fuel sector (PAI 4, Table 1)
 - Violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1)
 - Activities negatively affecting biodiversity-sensitive areas (PAI 7, Table 1). The consideration of this PAI is currently restricted to applying exclusions to palm oil producing companies and for any breaches to the UNGC, UNGP and OECD Guidelines for Multinational Enterprises in relation to biodiversity.
 - Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons (PAI 14, Table 1)
- Via the ESG integration process, as part of the investment due diligence policies and procedures, the following PAIs are considered:
 - All indicators related to GHG emissions, as part of the required Climate Risk analysis (PAI 1-6, Table 1, PAI 4, Table 2)
 - Biodiversity, water and waste indicators (PAI 7-9, Table 1)
 - Board gender diversity (PAI 13, Table 1)

Post-investment, the following principal adverse impacts on sustainability factors are taken into account:

- Via the application of the voting policy, the following PAIs are considered:
 - All indicators related to GHG emissions (PAI 1-6, Table 1)
 - Indicators related to social and employee matters (PAI 10-13, Table 1; PAI 5-8, Table 3)

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

- o Via Robeco's entity engagement program, the following PAIs are considered:
 - All indicators related to Climate and other environment-related indicators (PAI 1-9, Table 1)
 - Violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1). On an ongoing basis, the investment universe is scanned for controversial behavior in relation to the aforementioned principles and guidelines.
 - In addition, based on a yearly review of Robeco's performance on all mandatory and selected voluntary indicators, holdings of the Sub-fund that cause adverse impact might be selected for engagement.

More information is available via Robeco's Principal Adverse Impact Statement, published on Robeco's website. The Sub-fund will periodically report how it has considered the principal adverse impacts of its investments in the Company's annual report, which will be made available each year on or before 30 April at the Sub-fund page highlighted in final section of this document.

No

What investment strategy does this financial product follow?

Robeco Indian Equities is an actively managed fund that invests in stocks listed on the major Indian stock exchanges. The selection of these stocks is based on fundamental analysis as described in the Investment policy strategy paragraph in Appendix I of this Prospectus. The strategy integrates sustainability indicators on a continuous basis as part of the stock selection process. Amongst others, the Sub-fund applies norms-based and activity-based exclusions, Robeco's good governance policy, Robeco's SDG framework and considers Principal Adverse Impacts in the investment process. More product-specific information can be found on our website and the links provided in the final question of this disclosure.

The investment strategy guides investment decisions based on factors such as investment objectives and risk tolerance.

What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?

The Sub-fund has the following binding elements:

1. The Sub-fund's portfolio complies with Robeco's Exclusion Policy (<https://www.robeco.com/files/docm/docu-exclusion-policy.pdf>), that is based on exclusion criteria with regards to products and business practices that Robeco believes are detrimental to society and incompatible with sustainable investment strategies. This means that the Sub-fund has 0% exposure to excluded securities, taking into account a grace period. Information with regards to the effects of the exclusions on the Sub-fund's universe can be found at <https://www.robeco.com/files/docm/docu-exclusion-list.pdf>.
2. The Sub-fund scrutinizes investment in companies that are in breach of the ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises. If a company in the portfolio breaches one of the international guidelines during the investment period, the company will become part of the Enhanced Engagement program.
3. All equity holdings have a granted right to vote and Robeco exerts that right by voting according to Robeco's Proxy Voting Policy, unless impediments occur (e.g. share blocking or when not considered cost efficient). Robeco's Proxy Voting Policy can be found at <https://www.robeco.com/files/docm/docu-robeco-stewardship-policy.pdf>.
4. Investments with an elevated sustainability risk are defined by Robeco as companies with an ESG Risk Rating of 40 and higher (the ESG Risk Rating is explained in the sustainability risk policy which can be accessed via <https://www.robeco.com/files/docm/docu-robeco-sustainability-risk-policy.pdf>). The Sub-fund is limited to a maximum exposure of 10% to

investments with an elevated sustainability risk, based on the market weight in the portfolio taking into account regional differences and benchmark. Each investment with an ESG Risk rating of higher than 40 requires separate approval by a dedicated committee of sustainable investment specialists, compliance and risk management that oversees the bottom-up sustainability analysis.

● ***What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?***

The Sub-fund does not commit to a minimum rate to reduce the scope of investments prior to the application of the investment strategy.

● ***What is the policy to assess good governance practices of the investee companies?***

Robeco has a Good Governance policy to assess governance practices of companies. The policy describes how Robeco determines if and when a company does not follow good governance practices and is therefore excluded from the initial investment universe for Article 8 and 9 products. Robeco's Good Governance policy applies to the Sub-fund and tests on a set of governance criteria that reflect widely recognized industry established norms and include topics as employee relations, management structure, tax compliance and remuneration.

The Good Governance test consists of criteria on such topics that are examined for investee companies and further explained in Robeco's Good Governance policy <https://www.robeco.com/files/docm/docu-robeco-good-governance-policy.pdf>. Additionally, the companies that do not pass the good governance test are reflected in the exclusion list that can be accessed here - <https://www.robeco.com/files/docm/docu-exclusion-list.pdf>.

What is the asset allocation planned for this financial product?

At least 90% of the investments are aligned with the E/S characteristics of the Sub-fund. The Sub-fund plans to make a minimum of 35% sustainable investments, measured by positive scores via Robeco's SDG Framework. The investments in the category Other, estimated between 0-10%, are mostly in cash, cash equivalents and derivatives as further described below. The planned asset allocation is monitored continuously, and evaluated on a yearly basis.

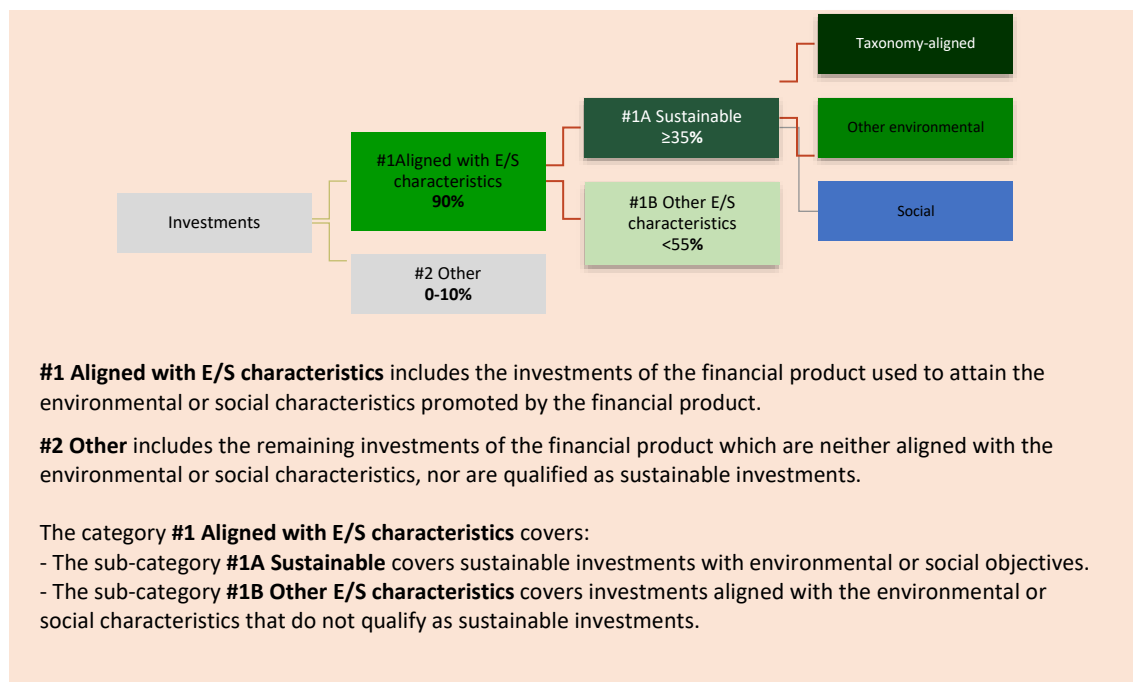

Good governance practices include sound management structures, employee relations, remuneration of staff and tax compliance.

Asset allocation describes the share of investments in specific assets.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

● **How does the use of derivatives attain the environmental or social characteristics promoted by the financial product?**

The Sub-fund does not make use of derivatives to attain the environmental or social characteristics promoted by the financial product. The Sub-fund may make use of derivatives for hedging, liquidity management and efficient portfolio management as well as investment purposes. Exchange traded and over-the-counter derivatives are permitted, including but not limited to futures, swaps, options and currency forwards. Whilst the Sub-fund may use derivatives both for investment purposes as well as for hedging and efficient portfolio management, it does not utilize derivatives for such purposes outside the intended share of investments allocated to the 'Other' category. In case the Sub-fund uses derivatives, the underlying shall comply with the investment policy. Where relevant, minimum environmental or social safeguards are taken into account as described below.

To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

0%. The Sub-fund does not intend to make Taxonomy-aligned investments. It cannot be excluded that among the Sub-fund's holdings certain investments are Taxonomy aligned. The Sub-fund will report on Taxonomy-aligned investment in the periodic disclosures. In the future, once data-availability in relation to the EU Taxonomy will improve, Robeco might consider setting a target based on turnover or CAPEX. Robeco currently relies on third-party data, including data in relation to companies that do not disclose on the EU Taxonomy alignment of their activities. EU Taxonomy-alignment data is not yet subject to a review by third parties. The Sub-fund only makes investments in equity and therefore it does not have sovereign exposures. The expected level of alignment with and without sovereign bonds is the same.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

 are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

● **Does the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy?⁴¹**

Yes

In fossil gas

In nuclear energy

No

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.*

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

** As the investments are not Taxonomy-aligned, the exclusion of sovereign bonds has no impact on the graph and therefore no such percentage is shown here.

● **What is the minimum share of investments in transitional and enabling activities?**

0%.

What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?

The Sub-fund intends to make sustainable investments, measured as positive scores via Robeco's SDG Framework. Among those could be investments with environmental objectives that do not qualify as Taxonomy-aligned. The environmental objectives of the Sub-fund are attained by investing in companies that score positively on SDG 12 (Responsible consumption and production), SDG 13 (Climate action), SDG 14 (Life below water), and SDG 15 (Life on land) in Robeco's SDG Framework. While the sum of sustainable investments with an environmental objective and socially sustainable investments always adds up to the Sub-fund's minimum proportion of 35% sustainable investments, we do not commit to a minimum share of sustainable investments with an environmental objective because the Sub-fund's investment strategy does not have a specific environmental investment objective. Therefore, the minimum share of sustainable investments with an environmental objective is 0%.

⁴¹ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

What is the minimum share of socially sustainable investments?

The Sub-fund intends to make sustainable investments, measured as positive scores via Robeco's SDG Framework. Among those could be investments with social objectives. The social objectives of the Sub-fund are attained by investing in companies that score positively on SDG 1 (No poverty), SDG 2 (Zero hunger), SDG 3 (Good health and well-being), SDG 4 (Quality education), SDG 5 (Gender equality), SDG 6 (Clear water and sanitation), SDG 7 (Affordable and clean energy), SDG 8 (Decent work and economic growth), SDG 9 (Industry, innovation and infrastructure), SDG 10 (Reduced inequalities), SDG 11 (Sustainable cities and communities), SDG 16 (Peace, justice and strong institutions) and SDG 17 (Partnerships for the goals), in Robeco's SDG Framework. While the sum of socially sustainable investments and sustainable investments with an environmental objective always adds up to the Sub-fund's minimum proportion of sustainable investments, we do not commit to a minimum share of socially sustainable investments because the Sub-fund's investment strategy does not have a specific socially sustainable investment objective. Therefore, the minimum share of socially sustainable investments is 0%.

What investments are included under "#2 Other", what is their purpose and are there any minimum environmental or social safeguards?

The type of instruments included under "#2 Other" and their purpose are outlined in Annex I of this Prospectus under the header 'Financial instruments and investment restrictions'. They include cash, cash equivalents, as well as investment funds and eligible asset classes (other than bonds and equities) that do not specifically promote E/S characteristics. As indicated above, the Sub-fund does not make use of derivatives to attain the environmental or social characteristics promoted. The Sub-fund may make use of derivatives, which thus always fall under the category "#2 Other", for hedging, liquidity management and efficient portfolio management as well as investment purposes. Exchange traded and over-the-counter derivatives are permitted, including but not limited to futures, swaps, options and currency forwards. In case the Sub-fund uses derivatives, the underlying shall comply with the investment policy. Where relevant, minimum environmental or social safeguards are taken into account, by, for example, applying Robeco's Exclusion Policy for any single security derivative.

Is a specific index designated as a reference benchmark to determine whether this financial product is aligned with the environmental and/or social characteristics that it promotes?

Not applicable.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

h) Robeco Asian Stars Equities

Pre-contractual disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Product name: Robeco Asian Stars Equities

Legal entity identifier: 213800G5JUR75POVU193

Environmental and/or social characteristics

Does this financial product have a sustainable investment objective?

Yes

No

It will make a minimum of **sustainable investments with an environmental objective:** ___%

- in economic activities that qualify as environmentally sustainable under the EU Taxonomy
- in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

It will make a minimum of **sustainable investments with a social objective:** ___%

It promotes **Environmental/Social (E/S) characteristics** and while it does not have as its objective a sustainable investment, it will have a minimum proportion of 35% of sustainable investments

- with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy
- with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy
- with a social objective

It promotes E/S characteristics, but **will not make any sustainable investments**

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

What environmental and/or social characteristics are promoted by this financial product?

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

The Sub-fund has the following E/S characteristics:

1. The Sub-fund promotes certain minimum environmental and social safeguards through applying exclusion criteria with regards to products and business practices that Robeco believes are detrimental to society and incompatible with sustainable investment strategies, such as exposure to controversial behaviour, controversial weapons, and fossil fuels.
2. The Sub-fund promotes adherence to and conducting business activities in accordance with the United Nations Universal Declaration of Human Rights, the International Labor Organization's (ILO) labor standards, the United Nations Guiding Principles for Business and Human Rights (UNGPs), the United Nations Global Compact (UNGC) and the OECD Guidelines for Multinational Enterprises, by scrutinizing companies that violate these principles.
3. The Sub-fund promotes good governance and sustainable corporate practices through proxy voting, which contributes to long-term shareholder value creation. This includes taking an active stance on social and environmental topics through Robeco's proxy voting policy.
4. The Sub-fund limits investing in companies with an elevated sustainability risk based on ESG risk scores whereas all such investments require separate approval of a dedicated committee that oversees that all investments are substantiated and eligible based on a fundamental review on the sustainability risk.

There is no reference benchmark designated for the purpose of attaining the environmental or social characteristics promoted by the Sub-fund.

● **What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?**

The Sub-fund has the following sustainability indicators:

1. The % of investments in securities that are on Robeco's Exclusion list as result of the application of Robeco's Exclusion Policy.
2. The number of companies that are in violation of the ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises and hence are a part of the Enhanced Engagement program.
3. The number of holdings and agenda items voted.
4. The % of holdings with an elevated sustainability risk profile.

● **What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?**

The sustainable investments aim to contribute to the UN Sustainable Development Goals ("SDGs"), that have both social and environmental objectives. These are 17 goals that are globally recognised and include environmental goals such as climate action, clean water, life on land and water and social goals such as zero hunger, gender equality, education, etc. Robeco has developed a proprietary framework based on the UN SDGs through which an issuer's contribution to such SDGs is determined through a 3-step process. This process starts with a sector baseline on which a company's products are analysed to examine contribution to the society and environment. Further, the operational processes involved in creating such products is checked along with any controversies/litigation claims and remediation actions taken which are perused before a final SDG score is determined. The final score ranges between high negative (-3) to high positive (+3) and only those issuers which achieve positive SDG scores (+1, +2 and +3) are regarded as Sustainable Investments.

● ***How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?***

The sustainable investments do no significant harm to any environmental or social sustainable investment objective by considering a principal adverse impact and aligning with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights. In addition, sustainable investments score positively on Robeco's SDG Framework, and therefore do not cause significant harm.

How have the indicators for adverse impacts on sustainability factors been taken into account?

Mandatory principal adverse impact indicators are considered through Robeco's SDG Framework, either directly or indirectly, when identifying sustainable investments for the Sub-fund. In addition, voluntary environmental and social indicators are taken into account, depending on their relevance for measuring impacts on the SDGs and the availability of data. A detailed description of the incorporation of principal adverse impacts is available via Robeco's Principal Adverse Impact Statement published on the Robeco website (<https://www.robeco.com/files/docm/docu-principal-adverse-impact-statement-summary-entity-level.pdf>). In this statement, Robeco sets out its approach to identifying and prioritizing principal adverse impacts, and how principal adverse impacts are considered as part of Robeco's investment due diligence process and procedures relating to research and analysis, exclusions and restrictions and/or voting and engagement. This description also explains how principal adverse impact indicators are considered by the SDG Framework.

How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The sustainable investments are aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights via both Robeco's Exclusion Policy and Robeco's SDG Framework.

Robeco's Exclusion Policy includes an explanation of how Robeco acts in accordance with the International Labor Organization (ILO) standards, United Nations Guiding Principles (UNGPs), United Nations Global Compact (UNGC) Principles and the Organization for Economic Co-operation and Development (OECD) Guidelines for Multinational Enterprises and is guided by these international treaties to assess the behavior of companies. Robeco continuously screens its investments for breaches of these principles. In case of a breach, the company will be excluded or engaged with, and is not considered a sustainable investment.

Robeco's SDG Framework screens for breaches on these principles in the final step of the framework. In this step, Robeco checks whether the company concerned has been involved in any controversies. Involvement in any controversy will result in a negative SDG score for the company, meaning it is not a sustainable investment.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

Does this financial product consider principal adverse impacts on sustainability factors?

Yes, _____

The Sub-fund considers principal adverse impacts on sustainability factors as referred to in Annex I of the SFDR Delegated Act.

Pre-investment, the following principal adverse impacts on sustainability factors are considered:

- Via the applied normative and activity-based exclusions, the following PAIs are considered:
 - Exposure to companies active in the fossil fuel sector (PAI 4, Table 1)
 - Violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1)
 - Activities negatively affecting biodiversity-sensitive areas (PAI 7, Table 1). The consideration of this PAI is currently restricted to applying exclusions to palm oil producing companies and for any breaches to the UNGC, UNGP and OECD Guidelines for Multinational Enterprises in relation to biodiversity.
 - Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons (PAI 14, Table 1)
- Via the ESG integration process, as part of the investment due diligence policies and procedures, the following PAIs are considered:
 - All indicators related to GHG emissions, as part of the required Climate Risk analysis (PAI 1-6, Table 1, PAI 4, Table 2)
 - Biodiversity, water and waste indicators (PAI 7-9, Table 1)
 - Board gender diversity (PAI 13, Table 1)

Post-investment, the following principal adverse impacts on sustainability factors are taken into account:

- Via the application of the voting policy, the following PAIs are considered:
 - All indicators related to GHG emissions (PAI 1-6, Table 1)
 - Indicators related to social and employee matters (PAI 10-13, Table 1; PAI 5-8, Table 3)

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

- o Via Robeco's entity engagement program, the following PAIs are considered:
 - All indicators related to Climate and other environment-related indicators (PAI 1-9, Table 1)
 - Violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1). On an ongoing basis, the investment universe is scanned for controversial behavior in relation to the aforementioned principles and guidelines.
 - In addition, based on a yearly review of Robeco's performance on all mandatory and selected voluntary indicators, holdings of the Sub-fund that cause adverse impact might be selected for engagement.

More information is available via Robeco's Principal Adverse Impact Statement, published on Robeco's website. The Sub-fund will periodically report how it has considered the principal adverse impacts of its investments in the Company's annual report, which will be made available each year on or before 30 April at the Sub-fund page highlighted in final section of this document.

No

What investment strategy does this financial product follow?

Robeco Asian Stars Equities is an actively managed fund that invests in stocks of the most attractive companies in Asia. The selection of these stocks is based on fundamental analysis as described in the Investment policy strategy paragraph in Appendix I of this Prospectus. The strategy integrates sustainability indicators on a continuous basis as part of the stock selection process. Amongst others, the Sub-fund applies norms-based and activity-based exclusions, Robeco's good governance policy, Robeco's SDG framework and considers Principal Adverse Impacts in the investment process. More product-specific information can be found on our website and the links provided in the final question of this disclosure.

The investment strategy guides investment decisions based on factors such as investment objectives and risk tolerance.

What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?

The Sub-fund has the following binding elements:

1. The Sub-fund's portfolio complies with Robeco's Exclusion Policy (<https://www.robeco.com/files/docm/docu-exclusion-policy.pdf>), that is based on exclusion criteria with regards to products and business practices that Robeco believes are detrimental to society and incompatible with sustainable investment strategies. This means that the Sub-fund has 0% exposure to excluded securities, taking into account a grace period. Information with regards to the effects of the exclusions on the Sub-fund's universe can be found at <https://www.robeco.com/files/docm/docu-exclusion-list.pdf>.
2. The Sub-fund scrutinizes investment in companies that are in breach of the ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises. If a company in the portfolio breaches one of the international guidelines during the investment period, the company will become part of the Enhanced Engagement program.
3. All equity holdings have a granted right to vote and Robeco exerts that right by voting according to Robeco's Proxy Voting Policy, unless impediments occur (e.g. share blocking or when not considered cost efficient). Robeco's Proxy Voting Policy can be found at <https://www.robeco.com/files/docm/docu-robeco-stewardship-policy.pdf>.
4. Investments with an elevated sustainability risk are defined by Robeco as companies with an ESG Risk Rating of 40 and higher (the ESG Risk Rating is explained in the sustainability risk policy which can be accessed via <https://www.robeco.com/files/docm/docu-robeco-sustainability-risk->

[policy.pdf](#)). The Sub-fund is limited to a maximum exposure of 10% to investments with an elevated sustainability risk, based on the market weight in the portfolio taking into account regional differences and benchmark. Each investment with an ESG Risk rating of higher than 40 requires separate approval by a dedicated committee of sustainable investment specialists, compliance and risk management that oversees the bottom-up sustainability analysis.

● **What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?**

The Sub-fund does not commit to a minimum rate to reduce the scope of investments prior to the application of the investment strategy.

● **What is the policy to assess good governance practices of the investee companies?**

Robeco has a Good Governance policy to assess governance practices of companies. The policy describes how Robeco determines if and when a company does not follow good governance practices and is therefore excluded from the initial investment universe for Article 8 and 9 products. Robeco's Good Governance policy applies to the Sub-fund and tests on a set of governance criteria that reflect widely recognized industry established norms and include topics as employee relations, management structure, tax compliance and remuneration.

The Good Governance test consists of criteria on such topics that are examined for investee companies and further explained in Robeco's Good Governance policy <https://www.robeco.com/files/docm/docu-robeco-good-governance-policy.pdf>. Additionally, the companies that do not pass the good governance test are reflected in the exclusion list that can be accessed here - <https://www.robeco.com/files/docm/docu-exclusion-list.pdf>.

What is the asset allocation planned for this financial product?

At least 90% of the investments are aligned with the E/S characteristics of the Sub-fund. The Sub-fund plans to make a minimum of 35% sustainable investments, measured by positive scores via Robeco's SDG Framework. The investments in the category Other, estimated between 0-10%, are mostly in cash, cash equivalents and derivatives as further described below. The planned asset allocation is monitored continuously, and evaluated on a yearly basis.

Good governance practices include sound management structures, employee relations, remuneration of staff and tax compliance.

Asset allocation describes the share of investments in specific assets.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

● **How does the use of derivatives attain the environmental or social characteristics promoted by the financial product?**

The Sub-fund does not make use of derivatives to attain the environmental or social characteristics promoted by the financial product. The Sub-fund may make use of derivatives for hedging, liquidity management and efficient portfolio management as well as investment purposes. Exchange traded and over-the-counter derivatives are permitted, including but not limited to futures, swaps, options and currency forwards. Whilst the Sub-fund may use derivatives both for investment purposes as well as for hedging and efficient portfolio management, it does not utilize derivatives for such purposes outside the intended share of investments allocated to the 'Other' category.

In case the Sub-fund uses derivatives, the underlying shall comply with the investment policy. Where relevant, minimum environmental or social safeguards are taken into account as described below.

● **To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?**

0%. The Sub-fund does not intend to make Taxonomy-aligned investments. It cannot be excluded that among the Sub-fund's holdings certain investments are Taxonomy aligned. The Sub-fund will report on Taxonomy-aligned investment in the periodic disclosures. In the future, once data-availability in relation to the EU Taxonomy will improve, Robeco might consider setting a target based on turnover or CAPEX. Robeco currently relies on third-party data, including data in relation to companies that do not disclose on the EU Taxonomy alignment of their activities. EU Taxonomy-alignment data is not yet subject to a review by third parties. The Sub-fund only makes investments in equity and therefore it does not have sovereign exposures. The expected level of alignment with and without sovereign bonds is the same.

To comply with the EU Taxonomy, the

● **Does the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy?⁴²**

⁴² Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

criteria for **fossil gas** include limitations on emissions and switching to renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

 are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

- Yes
- In fossil gas
- In nuclear energy
- No

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.*

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

** As the investments are not Taxonomy-aligned, the exclusion of sovereign bonds has no impact on the graph and therefore no such percentage is shown here.

 **What is the minimum share of investments in transitional and enabling activities?**

0%.

 **What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?**

The Sub-fund intends to make sustainable investments, measured as positive scores via Robeco's SDG Framework. Among those could be investments with environmental objectives that do not qualify as Taxonomy-aligned. The environmental objectives of the Sub-fund are attained by investing in companies that score positively on SDG 12 (Responsible consumption and production), SDG 13 (Climate action), SDG 14 (Life below water), and SDG 15 (Life on land) in Robeco's SDG Framework. While the sum of sustainable investments with an environmental objective and socially sustainable investments always adds up to the Sub-fund's minimum proportion of 35% sustainable investments, we do not commit to a minimum share of sustainable investments with an environmental objective because the Sub-fund's investment strategy does not have a specific environmental investment objective. Therefore, the minimum share of sustainable investments with an environmental objective is 0%.

 **What is the minimum share of socially sustainable investments?**

The Sub-fund intends to make sustainable investments, measured as positive scores via Robeco's SDG Framework. Among those could be investments with social objectives. The social objectives of the Sub-fund are attained by investing in companies that score positively on SDG 1 (No poverty), SDG 2 (Zero hunger), SDG 3 (Good health and well-being), SDG 4 (Quality education), SDG 5 (Gender equality), SDG

6 (Clear water and sanitation), SDG 7 (Affordable and clean energy), SDG 8 (Decent work and economic growth), SDG 9 (Industry, innovation and infrastructure), SDG 10 (Reduced inequalities), SDG 11 (Sustainable cities and communities), SDG 16 (Peace, justice and strong institutions) and SDG 17 (Partnerships for the goals), in Robeco's SDG Framework. While the sum of socially sustainable investments and sustainable investments with an environmental objective always adds up to the Sub-fund's minimum proportion of sustainable investments, we do not commit to a minimum share of socially sustainable investments because the Sub-fund's investment strategy does not have a specific socially sustainable investment objective. Therefore, the minimum share of socially sustainable investments is 0%.

What investments are included under "#2 Other", what is their purpose and are there any minimum environmental or social safeguards?

The type of instruments included under "#2 Other" and their purpose are outlined in Annex I of this Prospectus under the header 'Financial instruments and investment restrictions'. They include cash, cash equivalents, as well as investment funds and eligible asset classes (other than bonds and equities) that do not specifically promote E/S characteristics. As indicated above, the Sub-fund does not make use of derivatives to attain the environmental or social characteristics promoted. The Sub-fund may make use of derivatives, which thus always fall under the category "#2 Other", for hedging, liquidity management and efficient portfolio management as well as investment purposes. Exchange traded and over-the-counter derivatives are permitted, including but not limited to futures, swaps, options and currency forwards. In case the Sub-fund uses derivatives, the underlying shall comply with the investment policy. Where relevant, minimum environmental or social safeguards are taken into account, by, for example, applying Robeco's Exclusion Policy for any single security derivative.

Is a specific index designated as a reference benchmark to determine whether this financial product is aligned with the environmental and/or social characteristics that it promotes?

Not applicable.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

i) Robeco Sustainable Asian Stars Equities

Pre-contractual disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Product name: Robeco Sustainable Asian Stars Equities

Legal entity identifier: 213800C30E3BF5TD6K08

Environmental and/or social characteristics

Does this financial product have a sustainable investment objective?

Yes

No

It will make a minimum of **sustainable investments with an environmental objective:** ___%

- in economic activities that qualify as environmentally sustainable under the EU Taxonomy
- in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

It will make a minimum of **sustainable investments with a social objective:** ___%

It promotes **Environmental/Social (E/S) characteristics** and while it does not have as its objective a sustainable investment, it will have a minimum proportion of 50% of sustainable investments

- with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy
- with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy
- with a social objective

It promotes E/S characteristics, but **will not make any sustainable investments**

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

What environmental and/or social characteristics are promoted by this financial product?

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

The Sub-fund has the following E/S characteristics:

1. The Sub-fund promotes certain minimum environmental and social safeguards through applying exclusion criteria with regards to products and business practices that Robeco believes are detrimental to society and incompatible with sustainable investment strategies, such as exposure to controversial behaviour, controversial weapons, and fossil fuels.
2. The Sub-fund promotes adherence to and conducting business activities in accordance with the United Nations Universal Declaration of Human Rights, the International Labor Organization's (ILO) labor standards, the United Nations Guiding Principles for Business and Human Rights (UNGPs), the United Nations Global Compact (UNGC) and the OECD Guidelines for Multinational Enterprises, by scrutinizing companies that violate these principles.
3. The Sub-fund promotes good governance and sustainable corporate practices through proxy voting, which contributes to long-term shareholder value creation. This includes taking an active stance on social and environmental topics through Robeco's proxy voting policy.
4. The Sub-fund promotes having a substantially lower environmental footprint than the general market index referred to in Appendix VI – Benchmarks (the "General Market Index").
5. The Sub-fund promotes having a weighted average ESG score that is better than that of the General Market Index.
6. The Sub-fund limits investing in companies with an elevated sustainability risk based on ESG risk scores whereas all such investments require separate approval of a dedicated committee that oversees that all investments are substantiated and eligible based on a fundamental review on the sustainability risk.

There is no reference benchmark designated for the purpose of attaining the environmental or social characteristics promoted by the Sub-fund.

● **What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?**

The Sub-fund has the following sustainability indicators:

1. The % of investments in securities that are on Robeco's Exclusion list as result of the application of Robeco's Exclusion Policy.
2. The number of companies that are in violation of the ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises and hence are a part of the Enhanced Engagement program.
3. The number of holdings and agenda items voted.
4. The Sub-fund's weighted carbon, water and waste footprint score compared to the General Market Index.
5. The Sub-fund's weighted average ESG score compared to the General Market Index.
6. The % of holdings with an elevated sustainability risk profile.

● **What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?**

The sustainable investments aim to contribute to the UN Sustainable Development Goals ("SDGs"), that have both social and environmental objectives. These are 17 goals that are globally recognised and include environmental goals such as climate action, clean water, life on land and water and social goals such as zero hunger, gender equality, education, etc. Robeco has developed a proprietary framework based on the UN SDGs through which an issuer's contribution to such SDGs is determined through a 3-step process. This process starts with a sector baseline on which a company's products are analysed to examine contribution to the society and environment. Further, the operational processes involved in creating such products is checked along with any controversies/litigation claims and remediation actions

taken which are perused before a final SDG score is determined. The final score ranges between high negative (-3) to high positive (+3) and only those issuers which achieve positive SDG scores (+1, +2 and +3) are regarded as Sustainable Investments.

How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?

The sustainable investments do no significant harm to any environmental or social sustainable investment objective by considering a principal adverse impact and aligning with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights. In addition, sustainable investments score positively on Robeco's SDG Framework, and therefore do not cause significant harm.

How have the indicators for adverse impacts on sustainability factors been taken into account?

Mandatory principal adverse impact indicators are considered through Robeco's SDG Framework, either directly or indirectly, when identifying sustainable investments for the Sub-fund. In addition, voluntary environmental and social indicators are taken into account, depending on their relevance for measuring impacts on the SDGs and the availability of data. A detailed description of the incorporation of principal adverse impacts is available via Robeco's Principal Adverse Impact Statement published on the Robeco website (<https://www.robeco.com/files/docm/docu-principal-adverse-impact-statement-summary-entity-level.pdf>). In this statement, Robeco sets out its approach to identifying and prioritizing principal adverse impacts, and how principal adverse impacts are considered as part of Robeco's investment due diligence process and procedures relating to research and analysis, exclusions and restrictions and/or voting and engagement. This description also explains how principal adverse impact indicators are considered by the SDG Framework.

How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The sustainable investments are aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights via both Robeco's Exclusion Policy and Robeco's SDG Framework.

Robeco's Exclusion Policy includes an explanation of how Robeco acts in accordance with the International Labor Organization (ILO) standards, United Nations Guiding Principles (UNGPs), United Nations Global Compact (UNGC) Principles and the Organization for Economic Co-operation and Development (OECD) Guidelines for Multinational Enterprises and is guided by these international treaties to assess the behavior of companies. Robeco continuously screens its investments for breaches of these principles. In case of a breach, the company will be excluded or engaged with, and is not considered a sustainable investment.

Robeco's SDG Framework screens for breaches on these principles in the final step of the framework. In this step, Robeco checks whether the company concerned has been involved in any controversies. Involvement in any controversy will result in a negative SDG score for the company, meaning it is not a sustainable investment.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

Does this financial product consider principal adverse impacts on sustainability factors?

Yes, _____

The Sub-fund considers principal adverse impacts on sustainability factors as referred to in Annex I of the SFDR Delegated Act.

Pre-investment, the following principal adverse impacts on sustainability factors are considered:

- Via the applied normative and activity-based exclusions, the following PAIs are considered:
 - Exposure to companies active in the fossil fuel sector (PAI 4, Table 1)
 - Violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1)
 - Activities negatively affecting biodiversity-sensitive areas (PAI 7, Table 1). The consideration of this PAI is currently restricted to applying exclusions to palm oil producing companies and for any breaches to the UNGC, UNGP and OECD Guidelines for Multinational Enterprises in relation to biodiversity.
 - Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons (PAI 14, Table 1)
- Via the ESG integration process, as part of the investment due diligence policies and procedures, the following PAIs are considered:
 - All indicators related to GHG emissions, as part of the required Climate Risk analysis (PAI 1-6, Table 1, PAI 4, Table 2)
 - Biodiversity, water and waste indicators (PAI 7-9, Table 1) when relevant for the sector
 - Board gender diversity (PAI 13, Table 1)
- Via the environmental footprint performance targets of the Sub-fund, the following PAIs are considered:
 - Carbon footprint (PAI 2, Table 1)
 - Water and waste indicators (PAI 7-9, Table 1). Robeco will use on water and waste footprint until data quality and coverage of the PAIs will improve.

Post-investment, the following principal adverse impacts on sustainability factors are taken into account:

- Via the application of the voting policy, the following PAIs are considered:
 - All indicators related to GHG emissions (PAI 1-6, Table 1)

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

- Indicators related to social and employee matters (PAI 10-13, Table 1; PAI 5-8, Table 3)
- o Via Robeco's entity engagement program, the following PAIs are considered:
 - All indicators related to Climate and other environment-related indicators (PAI 1-9, Table 1)
 - Violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1)
 - In addition, based on a yearly review of Robeco's performance on all mandatory and selected voluntary indicators, holdings of the Sub-fund that cause adverse impact might be selected for engagement.

More information is available via Robeco's Principal Adverse Impact Statement, published on Robeco's website. The Sub-fund will periodically report how it has considered the principal adverse impacts of its investments in the Company's annual report, which will be made available each year on or before 30 April at the Sub-fund page highlighted in final section of this document.

No

What investment strategy does this financial product follow?

Robeco Sustainable Asian Stars Equities is an actively managed fund that invests in stocks of the most attractive companies in Asia. The selection of these stocks is based on fundamental analysis as described in the Investment policy strategy paragraph in Appendix I of this Prospectus. The strategy integrates sustainability indicators on a continuous basis as part of the stock selection process. Amongst others, the Sub-fund applies norms-based and activity-based exclusions, Robeco's good governance policy, Robeco's SDG framework and considers Principal Adverse Impacts in the investment process. More product-specific information can be found on our website and the links provided in the final question of this disclosure.

The investment strategy guides investment decisions based on factors such as investment objectives and risk tolerance.

What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?

The Sub-fund has the following binding elements:

1. The Sub-fund's portfolio complies with Robeco's Exclusion Policy (<https://www.robeco.com/files/docm/docu-exclusion-policy.pdf>), that is based on exclusion criteria with regards to products and business practices that Robeco believes are detrimental to society and incompatible with sustainable investment strategies. This means that the Sub-fund has 0% exposure to excluded securities, taking into account a grace period. Information with regards to the effects of the exclusions on the Sub-fund's universe can be found at <https://www.robeco.com/files/docm/docu-exclusion-list.pdf>
2. The Sub-fund avoids investment in companies that are in breach of the ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises. Companies that breach the international norms will be excluded from the investment universe.
3. All equity holdings have a granted right to vote and Robeco exerts that right by voting according to Robeco's Proxy Voting Policy, unless impediments occur (e.g. share blocking or when not considered cost efficient). Robeco's Proxy Voting Policy can be found at <https://www.robeco.com/files/docm/docu-robeco-stewardship-policy.pdf>.
4. The Sub-fund's weighted carbon, water and waste footprint score is 20% better than that of the General Market Index.
5. The Sub-fund's weighted average ESG score is better than that of the General Market Index.
6. Investments with an elevated sustainability risk are defined by Robeco as companies with an ESG Risk Rating of 40 and higher (the ESG Risk Rating is explained in the sustainability risk policy which can be accessed via <https://www.robeco.com/files/docm/docu-robeco-sustainability-risk->

[policy.pdf](#)). The Sub-fund is limited to a maximum exposure of 5% to investments with an elevated sustainability risk, based on the market weight in the portfolio taking into account regional differences and benchmark. Each investment with an ESG Risk rating of higher than 40 requires separate approval by a dedicated committee of sustainable investment specialists, compliance and risk management that oversees the bottom-up sustainability analysis.

● **What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?**

The Sub-fund does not commit to a minimum rate to reduce the scope of investments prior to the application of the investment strategy.

● **What is the policy to assess good governance practices of the investee companies?**

Robeco has a Good Governance policy to assess governance practices of companies. The policy describes how Robeco determines if and when a company does not follow good governance practices and is therefore excluded from the initial investment universe for Article 8 and 9 products. Robeco's Good Governance policy applies to the Sub-fund and tests on a set of governance criteria that reflect widely recognized industry established norms and include topics as employee relations, management structure, tax compliance and remuneration.

The Good Governance test consists of criteria on such topics that are examined for investee companies and further explained in Robeco's Good Governance policy <https://www.robeco.com/files/docm/docu-robeco-good-governance-policy.pdf>. Additionally, the companies that do not pass the good governance test are reflected in the exclusion list that can be accessed here - <https://www.robeco.com/files/docm/docu-exclusion-list.pdf>.

What is the asset allocation planned for this financial product?

At least 90% of the investments are aligned with the E/S characteristics of the Sub-fund. The Sub-fund plans to make a minimum of 50% sustainable investments, measured by positive scores via Robeco's SDG Framework. The investments in the category Other, estimated between 0-10%, are mostly in cash, cash equivalents and derivatives as further described below. The planned asset allocation is monitored continuously, and evaluated on a yearly basis.

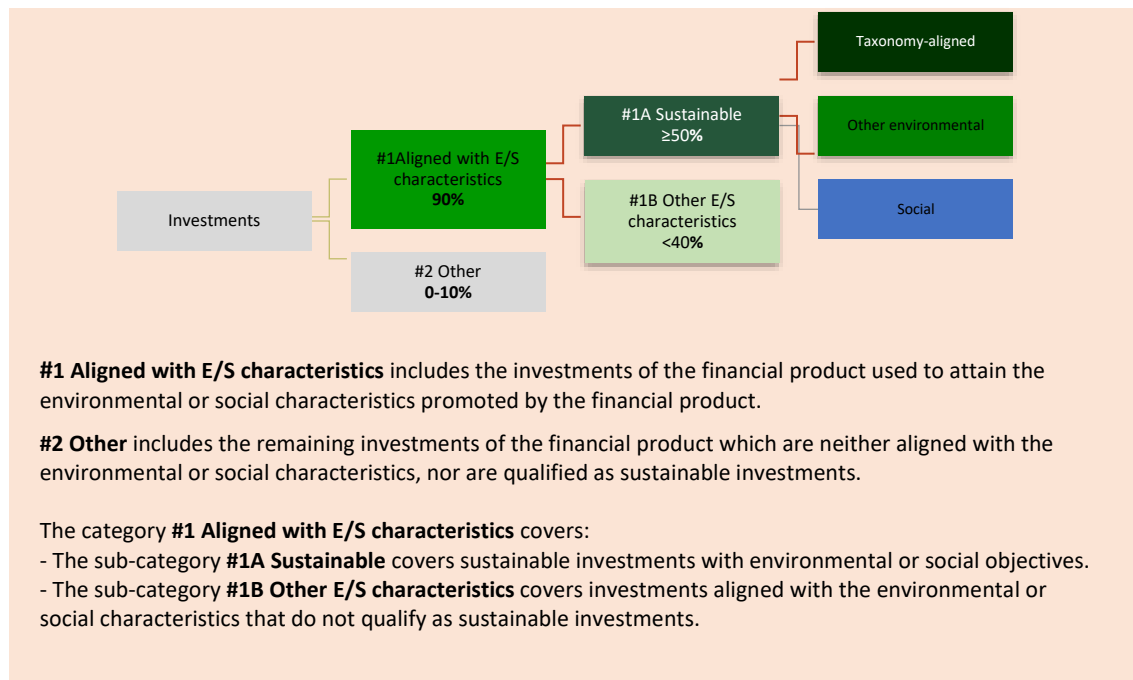

Good governance practices include sound management structures, employee relations, remuneration of staff and tax compliance.

Asset allocation describes the share of investments in specific assets.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

● **How does the use of derivatives attain the environmental or social characteristics promoted by the financial product?**

The Sub-fund does not make use of derivatives to attain the environmental or social characteristics promoted by the financial product. The Sub-fund may make use of derivatives for hedging, liquidity management and efficient portfolio management as well as investment purposes. Exchange traded and over-the-counter derivatives are permitted, including but not limited to futures, swaps, options and currency forwards. Whilst the Sub-fund may use derivatives both for investment purposes as well as for hedging and efficient portfolio management, it does not utilize derivatives for such purposes outside the intended share of investments allocated to the 'Other' category.

In case the Sub-fund uses derivatives, the underlying shall comply with the investment policy. Where relevant, minimum environmental or social safeguards are taken into account as described below.

● **To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?**

0%. The Sub-fund does not intend to make Taxonomy-aligned investments. It cannot be excluded that among the Sub-fund's holdings certain investments are Taxonomy aligned. The Sub-fund will report on Taxonomy-aligned investment in the periodic disclosures. In the future, once data-availability in relation to the EU Taxonomy will improve, Robeco might consider setting a target based on turnover or CAPEX. Robeco currently relies on third-party data, including data in relation to companies that do not disclose on the EU Taxonomy alignment of their activities. EU Taxonomy-alignment data is not yet subject to a review by third parties. The Sub-fund only makes investments in equity and therefore it does not have sovereign exposures. The expected level of alignment with and without sovereign bonds is the same.

To comply with the EU Taxonomy, the

● **Does the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy?⁴³**

⁴³ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

criteria for **fossil gas** include limitations on emissions and switching to renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

 are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

- Yes
- In fossil gas
- In nuclear energy
- No

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.*

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

** As the investments are not Taxonomy-aligned, the exclusion of sovereign bonds has no impact on the graph and therefore no such percentage is shown here.

 **What is the minimum share of investments in transitional and enabling activities?**

0%.

 **What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?**

The Sub-fund intends to make sustainable investments, measured as positive scores via Robeco's SDG Framework. Among those could be investments with environmental objectives that do not qualify as Taxonomy-aligned. The environmental objectives of the Sub-fund are attained by investing in companies that score positively on SDG 12 (Responsible consumption and production), SDG 13 (Climate action), SDG 14 (Life below water), and SDG 15 (Life on land) in Robeco's SDG Framework. While the sum of sustainable investments with an environmental objective and socially sustainable investments always adds up to the Sub-fund's minimum proportion of 50% sustainable investments, we do not commit to a minimum share of sustainable investments with an environmental objective because the Sub-fund's investment strategy does not have a specific environmental investment objective. Therefore, the minimum share of sustainable investments with an environmental objective is 0%.

 **What is the minimum share of socially sustainable investments?**

The Sub-fund intends to make sustainable investments, measured as positive scores via Robeco's SDG Framework. Among those could be investments with social objectives. The social objectives of the Sub-fund are attained by investing in companies that score positively on SDG 1 (No poverty), SDG 2 (Zero hunger), SDG 3 (Good health and well-being), SDG 4 (Quality education), SDG 5 (Gender equality), SDG 6 (Clear water and sanitation), SDG 7 (Affordable and clean energy), SDG 8 (Decent work and economic

growth), SDG 9 (Industry, innovation and infrastructure), SDG 10 (Reduced inequalities), SDG 11 (Sustainable cities and communities), SDG 16 (Peace, justice and strong institutions) and SDG 17 (Partnerships for the goals), in Robeco's SDG Framework. While the sum of socially sustainable investments and sustainable investments with an environmental objective always adds up to the Sub-fund's minimum proportion of sustainable investments, we do not commit to a minimum share of socially sustainable investments because the Sub-fund's investment strategy does not have a specific socially sustainable investment objective. Therefore, the minimum share of socially sustainable investments is 0%.

What investments are included under "#2 Other", what is their purpose and are there any minimum environmental or social safeguards?

The type of instruments included under "#2 Other" and their purpose are outlined in Annex I of this Prospectus under the header 'Financial instruments and investment restrictions'. They include cash, cash equivalents, as well as investment funds and eligible asset classes (other than bonds and equities) that do not specifically promote E/S characteristics. As indicated above, the Sub-fund does not make use of derivatives to attain the environmental or social characteristics promoted. The Sub-fund may make use of derivatives, which thus always fall under the category "#2 Other", for hedging, liquidity management and efficient portfolio management as well as investment purposes. Exchange traded and over-the-counter derivatives are permitted, including but not limited to futures, swaps, options and currency forwards. In case the Sub-fund uses derivatives, the underlying shall comply with the investment policy. Where relevant, minimum environmental or social safeguards are taken into account, by, for example, applying Robeco's Exclusion Policy for any single security derivative.

Is a specific index designated as a reference benchmark to determine whether this financial product is aligned with the environmental and/or social characteristics that it promotes?

Not applicable.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

What environmental and/or social characteristics are promoted by this financial product?

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

The Sub-fund has the following E/S characteristics:

1. The Sub-fund promotes certain minimum environmental and social safeguards through applying exclusion criteria with regards to products and business practices that Robeco believes are detrimental to society and incompatible with sustainable investment strategies, such as exposure to controversial behaviour, controversial weapons, and fossil fuels.
2. The Sub-fund promotes adherence to and conducting business activities in accordance with the United Nations Universal Declaration of Human Rights, the International Labor Organization's (ILO) labor standards, the United Nations Guiding Principles for Business and Human Rights (UNGPs), the United Nations Global Compact (UNGC) and the OECD Guidelines for Multinational Enterprises, by scrutinizing companies that violate these principles.
3. The Sub-fund promotes good governance and sustainable corporate practices through proxy voting, which contributes to long-term shareholder value creation. This includes taking an active stance on social and environmental topics through Robeco's proxy voting policy.
4. The Sub-fund limits investing in companies with an elevated sustainability risk based on ESG risk scores whereas all such investments require separate approval of a dedicated committee that oversees that all investments are substantiated and eligible based on a fundamental review on the sustainability risk.
5. The Sub-fund promotes having a lower carbon footprint than the general market index referred to in Appendix VI – Benchmarks (the "General Market Index").

There is no reference benchmark designated for the purpose of attaining the environmental or social characteristics promoted by the Sub-fund.

What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?

The Sub-fund has the following sustainability indicators:

1. The % of investments in securities that are on Robeco's Exclusion list as result of the application of Robeco's Exclusion Policy.
2. The number of companies that are in violation of the ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises and hence are a part of the Enhanced Engagement program.
3. The number of holdings and agenda items voted.
4. The % of holdings with an elevated sustainability risk profile.
5. The weighted carbon footprint score of the Sub-fund compared to the General Market Index.

What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?

The sustainable investments aim to contribute to the UN Sustainable Development Goals ("SDGs"), that have both social and environmental objectives. These are 17 goals that are globally recognised and include environmental goals such as climate action, clean water, life on land and water and social goals such as zero hunger, gender equality, education, etc. Robeco has developed a proprietary framework based on the UN SDGs through which an issuer's contribution to such SDGs is determined through a 3-step process. This process starts with a sector baseline on which a company's products are analysed to examine contribution to the society and environment. Further, the operational processes involved in creating such products is checked along with any controversies/litigation claims and remediation actions taken which are perused before a final SDG score is determined. The final score ranges between high negative (-3) to high positive (+3) and only those issuers which achieve positive SDG scores (+1, +2 and +3) are regarded as Sustainable Investments.

● ***How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?***

The sustainable investments do no significant harm to any environmental or social sustainable investment objective by considering a principal adverse impact and aligning with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights. In addition, sustainable investments score positively on Robeco's SDG Framework, and therefore do not cause significant harm.

How have the indicators for adverse impacts on sustainability factors been taken into account?

Mandatory principal adverse impact indicators are considered through Robeco's SDG Framework, either directly or indirectly, when identifying sustainable investments for the Sub-fund. In addition, voluntary environmental and social indicators are taken into account, depending on their relevance for measuring impacts on the SDGs and the availability of data. A detailed description of the incorporation of principal adverse impacts is available via Robeco's Principal Adverse Impact Statement published on the Robeco website (<https://www.robeco.com/files/docm/docu-principal-adverse-impact-statement-summary-entity-level.pdf>). In this statement, Robeco sets out its approach to identifying and prioritizing principal adverse impacts, and how principal adverse impacts are considered as part of Robeco's investment due diligence process and procedures relating to research and analysis, exclusions and restrictions and/or voting and engagement. This description also explains how principal adverse impact indicators are considered by the SDG Framework.

How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The sustainable investments are aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights via both Robeco's Exclusion Policy and Robeco's SDG Framework.

Robeco's Exclusion Policy includes an explanation of how Robeco acts in accordance with the International Labor Organization (ILO) standards, United Nations Guiding Principles (UNGPs), United Nations Global Compact (UNGC) Principles and the Organization for Economic Co-operation and Development (OECD) Guidelines for Multinational Enterprises and is guided by these international treaties to assess the behavior of companies. Robeco continuously screens its investments for breaches of these principles. In case of a breach, the company will be excluded or engaged with, and is not considered a sustainable investment.

Robeco's SDG Framework screens for breaches on these principles in the final step of the framework. In this step, Robeco checks whether the company concerned has been involved in any controversies. Involvement in any controversy will result in a negative SDG score for the company, meaning it is not a sustainable investment.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

Does this financial product consider principal adverse impacts on sustainability factors?

Yes, _____

The Sub-fund considers principal adverse impacts on sustainability factors as referred to in Annex I of the SFDR Delegated Act.

Pre-investment, the following principal adverse impacts on sustainability factors are considered:

- Via the applied normative and activity-based exclusions, the following PAIs are considered:
 - Exposure to companies active in the fossil fuel sector (PAI 4, Table 1)
 - Violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1)
 - Activities negatively affecting biodiversity-sensitive areas (PAI 7, Table 1). The consideration of this PAI is currently restricted to applying exclusions to palm oil producing companies and for any breaches to the UNGC, UNGP and OECD Guidelines for Multinational Enterprises in relation to biodiversity.
 - Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons (PAI 14, Table 1)

Post-investment, the following principal adverse impacts on sustainability factors are taken into account:

- Via the application of the voting policy, the following PAIs are considered:
 - All indicators related to GHG emissions (PAI 1-6, Table 1)
 - Indicators related to social and employee matters (PAI 10-13, Table 1; PAI 5-8, Table 3)
- Via Robeco's entity engagement program, the following PAIs are considered:
 - All indicators related to Climate and other environment-related indicators (PAI 1-9, Table 1)

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

- Violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1). On an ongoing basis, the investment universe is scanned for controversial behavior in relation to the aforementioned principles and guidelines.
- In addition, based on a yearly review of Robeco's performance on all mandatory and selected voluntary indicators, holdings of the Sub-fund that cause adverse impact might be selected for engagement.

More information is available via Robeco's Principal Adverse Impact Statement, published on Robeco's website. The Sub-fund will periodically report how it has considered the principal adverse impacts of its investments in the Company's annual report, which will be made available each year on or before 30 April at the Sub-fund page highlighted in final section of this document.

No

What investment strategy does this financial product follow?

Robeco BP US Large Cap Equities is an actively managed fund that invests in large-cap stocks in the United States. The selection of these stocks is based on fundamental analysis as described in the Investment policy strategy paragraph in Appendix I of this Prospectus. The strategy integrates sustainability indicators on a continuous basis as part of the stock selection process. Amongst others, the Sub-fund applies norms-based and activity-based exclusions, Robeco's good governance policy, Robeco's SDG framework and considers Principal Adverse Impacts in the investment process. More product-specific information can be found on our website and the links provided in the final question of this disclosure.

The investment strategy guides investment decisions based on factors such as investment objectives and risk tolerance.

What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?

The Sub-fund has the following binding elements:

1. The Sub-fund's portfolio complies with Robeco's Exclusion Policy (<https://www.robeco.com/files/docm/docu-exclusion-policy.pdf>) that is based on exclusion criteria with regards to products and business practices that Robeco believes are detrimental to society and incompatible with sustainable investment strategies. This means that the Sub-fund has 0% exposure to excluded securities, taking into account a grace period. Information with regards to the effects of the exclusions on the Sub-fund's universe can be found at <https://www.robeco.com/files/docm/docu-exclusion-list.pdf>.
2. The Sub-fund scrutinizes investment in companies that are in breach of the ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises. If a company in the portfolio breaches one of the international guidelines during the investment period, the company will become part of the Enhanced Engagement program.
3. All equity holdings have a granted right to vote and Robeco exerts that right by voting according to Robeco's Proxy Voting Policy, unless impediments occur (e.g. share blocking or when not considered cost efficient). Robeco's Proxy Voting Policy can be found at <https://www.robeco.com/files/docm/docu-robeco-stewardship-policy.pdf>.
4. Investments with an elevated sustainability risk are defined by Robeco as companies with an ESG Risk Rating of 40 and higher (the ESG Risk Rating is explained in the sustainability risk policy which can be accessed via <https://www.robeco.com/files/docm/docu-robeco-sustainability-risk-policy.pdf>). The Sub-fund is limited to a maximum exposure of 3% to investments with an elevated sustainability risk, based on the market weight in the portfolio taking into account regional differences and benchmark. Each investment with an ESG Risk rating of higher than 40 requires separate approval by a dedicated committee of sustainable

investment specialists, compliance and risk management that oversees the bottom-up sustainability analysis.

5. The Sub-fund's weighted carbon footprint score is better than that of the General Market Index.

● ***What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?***

The Sub-fund does not commit to a minimum rate to reduce the scope of investments prior to the application of the investment strategy.

● ***What is the policy to assess good governance practices of the investee companies?***

Robeco has a Good Governance policy to assess governance practices of companies. The policy describes how Robeco determines if and when a company does not follow good governance practices and is therefore excluded from the initial investment universe for Article 8 and 9 products. Robeco's Good Governance policy applies to the Sub-fund and tests on a set of governance criteria that reflect widely recognized industry established norms and include topics as employee relations, management structure, tax compliance and remuneration.

The Good Governance test consists of criteria on such topics that are examined for investee companies and further explained in Robeco's Good Governance policy <https://www.robeco.com/files/docm/docu-robeco-good-governance-policy.pdf>. Additionally, the companies that do not pass the good governance test are reflected in the exclusion list that can be accessed here - <https://www.robeco.com/files/docm/docu-exclusion-list.pdf>.

What is the asset allocation planned for this financial product?

At least 90% of the investments are aligned with the E/S characteristics of the Sub-fund. The Sub-fund plans to make a minimum of 30% sustainable investments, measured by positive scores via Robeco's SDG Framework. The investments in the category Other, estimated between 0-10%, are mostly in cash, cash equivalents and derivatives as further described below. The planned asset allocation is monitored continuously, and evaluated on a yearly basis.

Good governance practices include sound management structures, employee relations, remuneration of staff and tax compliance.

Asset allocation describes the share of investments in specific assets.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

● **How does the use of derivatives attain the environmental or social characteristics promoted by the financial product?**

The Sub-fund does not make use of derivatives to attain the environmental or social characteristics promoted by the financial product. The Sub-fund may make use of derivatives for hedging, liquidity management and efficient portfolio management as well as investment purposes. Exchange traded and over-the-counter derivatives are permitted, including but not limited to futures, swaps, options and currency forwards. Whilst the Sub-fund may use derivatives both for investment purposes as well as for hedging and efficient portfolio management, it does not utilize derivatives for such purposes outside the intended share of investments allocated to the 'Other' category.

In case the Sub-fund uses derivatives, the underlying shall comply with the investment policy. Where relevant, minimum environmental or social safeguards are taken into account as described below.

To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

0%. The Sub-fund does not intend to make Taxonomy-aligned investments. It cannot be excluded that among the Sub-fund's holdings certain investments are Taxonomy aligned. The Sub-fund will report on Taxonomy-aligned investment in the periodic disclosures. In the future, once data-availability in relation to the EU Taxonomy will improve, Robeco might consider setting a target based on turnover or CAPEX. Robeco currently relies on third-party data, including data in relation to companies that do not disclose on the EU Taxonomy alignment of their activities. EU Taxonomy-alignment data is not yet subject to a review by third parties. The Sub-fund only makes investments in equity and therefore it does not have sovereign exposures. The expected level of alignment with and without sovereign bonds is the same.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

 are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

● **Does the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy?⁴⁴**

Yes

In fossil gas

In nuclear energy

No

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.*

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

** As the investments are not Taxonomy-aligned, the exclusion of sovereign bonds has no impact on the graph and therefore no such percentage is shown here.

● **What is the minimum share of investments in transitional and enabling activities?**

0%.

What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?

The Sub-fund intends to make sustainable investments, measured as positive scores via Robeco's SDG Framework. Among those could be investments with environmental objectives that do not qualify as Taxonomy-aligned. The environmental objectives of the Sub-fund are attained by investing in companies that score positively on SDG 12 (Responsible consumption and production), SDG 13 (Climate action), SDG 14 (Life below water), and SDG 15 (Life on land) in Robeco's SDG Framework. While the sum of sustainable investments with an environmental objective and socially sustainable investments always adds up to the Sub-fund's minimum proportion of 30% sustainable investments, we do not commit to a minimum share of sustainable investments with an environmental objective because the Sub-fund's investment strategy does not have a specific environmental investment objective. Therefore, the minimum share of sustainable investments with an environmental objective is 0%.

⁴⁴ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

What is the minimum share of socially sustainable investments?

The Sub-fund intends to make sustainable investments, measured as positive scores via Robeco's SDG Framework. Among those could be investments with social objectives. The social objectives of the Sub-fund are attained by investing in companies that score positively on SDG 1 (No poverty), SDG 2 (Zero hunger), SDG 3 (Good health and well-being), SDG 4 (Quality education), SDG 5 (Gender equality), SDG 6 (Clear water and sanitation), SDG 7 (Affordable and clean energy), SDG 8 (Decent work and economic growth), SDG 9 (Industry, innovation and infrastructure), SDG 10 (Reduced inequalities), SDG 11 (Sustainable cities and communities), SDG 16 (Peace, justice and strong institutions) and SDG 17 (Partnerships for the goals), in Robeco's SDG Framework. While the sum of socially sustainable investments and sustainable investments with an environmental objective always adds up to the Sub-fund's minimum proportion of sustainable investments, we do not commit to a minimum share of socially sustainable investments because the Sub-fund's investment strategy does not have a specific socially sustainable investment objective. Therefore, the minimum share of socially sustainable investments is 0%.

What investments are included under "#2 Other", what is their purpose and are there any minimum environmental or social safeguards?

The type of instruments included under "#2 Other" and their purpose are outlined in Annex I of this Prospectus under the header 'Financial instruments and investment restrictions'. They include cash, cash equivalents, as well as investment funds and eligible asset classes (other than bonds and equities) that do not specifically promote E/S characteristics. As indicated above, the Sub-fund does not make use of derivatives to attain the environmental or social characteristics promoted. The Sub-fund may make use of derivatives, which thus always fall under the category "#2 Other", for hedging, liquidity management and efficient portfolio management as well as investment purposes. Exchange traded and over-the-counter derivatives are permitted, including but not limited to futures, swaps, options and currency forwards. In case the Sub-fund uses derivatives, the underlying shall comply with the investment policy. Where relevant, minimum environmental or social safeguards are taken into account, by, for example, applying Robeco's Exclusion Policy for any single security derivative.

Is a specific index designated as a reference benchmark to determine whether this financial product is aligned with the environmental and/or social characteristics that it promotes?

Not applicable.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

k) Robeco BP US Select Opportunities Equities

Pre-contractual disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Product name: Robeco BP US Select Opportunities Equities

Legal entity identifier: 213800YUJ667CDPK983

Environmental and/or social characteristics

Does this financial product have a sustainable investment objective?

Yes

No

It will make a minimum of **sustainable investments with an environmental objective: ___%**

- in economic activities that qualify as environmentally sustainable under the EU Taxonomy
- in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

It will make a minimum of **sustainable investments with a social objective: ___%**

It promotes **Environmental/Social (E/S) characteristics** and while it does not have as its objective a sustainable investment, it will have a minimum proportion of 30% of sustainable investments

- with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy
- with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy
- with a social objective

It promotes E/S characteristics, but **will not make any sustainable investments**

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

What environmental and/or social characteristics are promoted by this financial product?

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

The Sub-fund has the following E/S characteristics:

1. The Sub-fund promotes certain minimum environmental and social safeguards through applying exclusion criteria with regards to products and business practices that Robeco believes are detrimental to society and incompatible with sustainable investment strategies, such as exposure to controversial behaviour, controversial weapons, and fossil fuels.
2. The Sub-fund promotes adherence to and conducting business activities in accordance with the United Nations Universal Declaration of Human Rights, the International Labor Organization's (ILO) labor standards, the United Nations Guiding Principles for Business and Human Rights (UNGPs), the United Nations Global Compact (UNGC) and the OECD Guidelines for Multinational Enterprises, by scrutinizing companies that violate these principles.
3. The Sub-fund promotes good governance and sustainable corporate practices through proxy voting, which contributes to long-term shareholder value creation. This includes taking an active stance on social and environmental topics through Robeco's proxy voting policy.
4. The Sub-fund limits investing in companies with an elevated sustainability risk based on ESG risk scores whereas all such investments require separate approval of a dedicated committee that oversees that all investments are substantiated and eligible based on a fundamental review on the sustainability risk.
5. The Sub-fund promotes having a lower carbon footprint than the General Market Index. There is no reference benchmark designated for the purpose of attaining the environmental or social characteristics promoted by the Sub-fund.

● **What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?**

The Sub-fund has the following sustainability indicators:

1. The % of investments in securities that are on Robeco's Exclusion list as result of the application of Robeco's Exclusion Policy.
2. The number of companies that are in violation of the ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises and hence are a part of the Enhanced Engagement program.
3. The number of holdings and agenda items voted.
4. The % of holdings with an elevated sustainability risk profile.
5. The weighted carbon footprint score of the Sub-fund compared to the General Market Index.

● **What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?**

The sustainable investments aim to contribute to the UN Sustainable Development Goals ("SDGs"), that have both social and environmental objectives. These are 17 goals that are globally recognised and include environmental goals such as climate action, clean water, life on land and water and social goals such as zero hunger, gender equality, education, etc. Robeco has developed a proprietary framework based on the UN SDGs through which an issuer's contribution to such SDGs is determined through a 3-step process. This process starts with a sector baseline on which a company's products are analysed to examine contribution to the society and environment. Further, the operational processes involved in creating such products is checked along with any controversies/litigation claims and remediation actions taken which are perused before a final SDG score is determined. The final score ranges between high negative (-3) to high positive (+3) and only those issuers which achieve positive SDG scores (+1, +2 and +3) are regarded as Sustainable Investments.

● ***How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?***

The sustainable investments do no significant harm to any environmental or social sustainable investment objective by considering a principal adverse impact and aligning with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights. In addition, sustainable investments score positively on Robeco's SDG Framework, and therefore do not cause significant harm.

How have the indicators for adverse impacts on sustainability factors been taken into account?

Mandatory principal adverse impact indicators are considered through Robeco's SDG Framework, either directly or indirectly, when identifying sustainable investments for the Sub-fund. In addition, voluntary environmental and social indicators are taken into account, depending on their relevance for measuring impacts on the SDGs and the availability of data. A detailed description of the incorporation of principal adverse impacts is available via Robeco's Principal Adverse Impact Statement published on the Robeco website (<https://www.robeco.com/files/docm/docu-principal-adverse-impact-statement-summary-entity-level.pdf>). In this statement, Robeco sets out its approach to identifying and prioritizing principal adverse impacts, and how principal adverse impacts are considered as part of Robeco's investment due diligence process and procedures relating to research and analysis, exclusions and restrictions and/or voting and engagement. This description also explains how principal adverse impact indicators are considered by the SDG Framework.

How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The sustainable investments are aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights via both Robeco's Exclusion Policy and Robeco's SDG Framework.

Robeco's Exclusion Policy includes an explanation of how Robeco acts in accordance with the International Labor Organization (ILO) standards, United Nations Guiding Principles (UNGPs), United Nations Global Compact (UNGC) Principles and the Organization for Economic Co-operation and Development (OECD) Guidelines for Multinational Enterprises and is guided by these international treaties to assess the behavior of companies. Robeco continuously screens its investments for breaches of these principles. In case of a breach, the company will be excluded or engaged with, and is not considered a sustainable investment.

Robeco's SDG Framework screens for breaches on these principles in the final step of the framework. In this step, Robeco checks whether the company concerned has been involved in any controversies. Involvement in any controversy will result in a negative SDG score for the company, meaning it is not a sustainable investment.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

Does this financial product consider principal adverse impacts on sustainability factors?

Yes, _____

The Sub-fund considers principal adverse impacts on sustainability factors as referred to in Annex I of the SFDR Delegated Act.

Pre-investment, the following principal adverse impacts on sustainability factors are considered:

○ Via the applied normative and activity-based exclusions, the following PAIs are considered:

- Exposure to companies active in the fossil fuel sector (PAI 4, Table 1)
- Violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1)
- Activities negatively affecting biodiversity-sensitive areas (PAI 7, Table 1). The consideration of this PAI is currently restricted to applying exclusions to palm oil producing companies and for any breaches to the UNGC, UNGP and OECD Guidelines for Multinational Enterprises in relation to biodiversity.
- Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons (PAI 14, Table 1)

Post-investment, the following principal adverse impacts on sustainability factors are taken into account:

○ Via the application of the voting policy, the following PAIs are considered:

- All indicators related to GHG emissions (PAI 1-6, Table 1)
- Indicators related to social and employee matters (PAI 10-13, Table 1; PAI 5-8, Table 3)

○ Via Robeco's entity engagement program, the following PAIs are considered:

- All indicators related to Climate and other environment-related indicators (PAI 1-9, Table 1)
- Violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1). On an ongoing basis,

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

the investment universe is scanned for controversial behavior in relation to the aforementioned principles and guidelines.

- In addition, based on a yearly review of Robeco's performance on all mandatory and selected voluntary indicators, holdings of the Sub-fund that cause adverse impact might be selected for engagement.

More information is available via Robeco's Principal Adverse Impact Statement, published on Robeco's website. The Sub-fund will periodically report how it has considered the principal adverse impacts of its investments in the Company's annual report, which will be made available each year on or before 30 April at the Sub-fund page highlighted in final section of this document.

No

What investment strategy does this financial product follow?

Robeco BP US Select Opportunities Equities is an actively managed fund that invests in mid-cap stocks in the United States. The selection of these stocks is based on fundamental analysis as described in the Investment policy strategy paragraph in Appendix I of this Prospectus. The strategy integrates sustainability indicators on a continuous basis as part of the stock selection process. Amongst others, the Sub-fund applies norms-based and activity-based exclusions, Robeco's good governance policy, Robeco's SDG framework and considers Principal Adverse Impacts in the investment process. More product-specific information can be found on our website and the links provided in the final question of this disclosure.

The investment strategy guides investment decisions based on factors such as investment objectives and risk tolerance.

What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?

The Sub-fund has the following binding elements:

1. The Sub-fund's portfolio complies with Robeco's Exclusion Policy (<https://www.robeco.com/files/docm/docu-exclusion-policy.pdf>) that is based on exclusion criteria with regards to products and business practices that Robeco believes are detrimental to society and incompatible with sustainable investment strategies. This means that the Sub-fund has 0% exposure to excluded securities, taking into account a grace period. Information with regards to the effects of the exclusions on the Sub-fund's universe can be found at <https://www.robeco.com/files/docm/docu-exclusion-list.pdf>.
2. The Sub-fund scrutinizes investment in companies that are in breach of the ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises. If a company in the portfolio breaches one of the international guidelines during the investment period, the company will become part of the Enhanced Engagement program.
3. All equity holdings have a granted right to vote and Robeco exerts that right by voting according to Robeco's Proxy Voting Policy, unless impediments occur (e.g. share blocking or when not considered cost efficient). Robeco's Proxy Voting Policy can be found at <https://www.robeco.com/files/docm/docu-robeco-stewardship-policy.pdf>.
4. Investments with an elevated sustainability risk are defined by Robeco as companies with an ESG Risk Rating of 40 and higher (the ESG Risk Rating is explained in the sustainability risk policy which can be accessed via <https://www.robeco.com/files/docm/docu-robeco-sustainability-risk-policy.pdf>). The Sub-fund is limited to a maximum exposure of 3% to investments with an elevated sustainability risk, based on the market weight in the portfolio taking into account regional differences and benchmark. Each investment with an ESG Risk rating of higher than 40 requires separate approval by a dedicated committee of sustainable investment specialists, compliance and risk management that oversees the bottom-up sustainability analysis.

5. The Sub-fund's weighted carbon footprint is better than that of the General Market Index.

● ***What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?***

The Sub-fund does not commit to a minimum rate to reduce the scope of investments prior to the application of the investment strategy.

● ***What is the policy to assess good governance practices of the investee companies?***

Robeco has a Good Governance policy to assess governance practices of companies. The policy describes how Robeco determines if and when a company does not follow good governance practices and is therefore excluded from the initial investment universe for Article 8 and 9 products. Robeco's Good Governance policy applies to the Sub-fund and tests on a set of governance criteria that reflect widely recognized industry established norms and include topics as employee relations, management structure, tax compliance and remuneration.

The Good Governance test consists of criteria on such topics that are examined for investee companies and further explained in Robeco's Good Governance policy <https://www.robeco.com/files/docm/docu-robeco-good-governance-policy.pdf>. Additionally, the companies that do not pass the good governance test are reflected in the exclusion list that can be accessed here - <https://www.robeco.com/files/docm/docu-exclusion-list.pdf>.

What is the asset allocation planned for this financial product?

At least 90% of the investments are aligned with the E/S characteristics of the Sub-fund. The Sub-fund plans to make a minimum of 30% sustainable investments, measured by positive scores via Robeco's SDG Framework. The investments in the category Other, estimated between 0-10%, are mostly in cash, cash equivalents and derivatives as further described below. The planned asset allocation is monitored continuously, and evaluated on a yearly basis.

Good governance practices include sound management structures, employee relations, remuneration of staff and tax compliance.

Asset allocation describes the share of investments in specific assets.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers sustainable investments with environmental or social objectives.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

● **How does the use of derivatives attain the environmental or social characteristics promoted by the financial product?**

The Sub-fund does not make use of derivatives to attain the environmental or social characteristics promoted by the financial product. The Sub-fund may make use of derivatives for hedging, liquidity management and efficient portfolio management as well as investment purposes. Exchange traded and over-the-counter derivatives are permitted, including but not limited to futures, swaps, options and currency forwards. Whilst the Sub-fund may use derivatives both for investment purposes as well as for hedging and efficient portfolio management, it does not utilize derivatives for such purposes outside the intended share of investments allocated to the 'Other' category.

In case the Sub-fund uses derivatives, the underlying shall comply with the investment policy. Where relevant, minimum environmental or social safeguards are taken into account as described below.

To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

0%. The Sub-fund does not intend to make Taxonomy-aligned investments. It cannot be excluded that among the Sub-fund's holdings certain investments are Taxonomy aligned. The Sub-fund will report on Taxonomy-aligned investment in the periodic disclosures. In the future, once data-availability in relation to the EU Taxonomy will improve, Robeco might consider setting a target based on turnover or CAPEX. Robeco currently relies on third-party data, including data in relation to companies that do not disclose on the EU Taxonomy alignment of their activities. EU Taxonomy-alignment data is not yet subject to a review by third parties. The Sub-fund only makes investments in equity and therefore it does not have sovereign exposures. The expected level of alignment with and without sovereign bonds is the same.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

 are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

● **Does the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy?⁴⁵**

Yes

In fossil gas

In nuclear energy

No

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.*

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

** As the investments are not Taxonomy-aligned, the exclusion of sovereign bonds has no impact on the graph and therefore no such percentage is shown here.

● **What is the minimum share of investments in transitional and enabling activities?**

0%.

What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?

The Sub-fund intends to make sustainable investments, measured as positive scores via Robeco's SDG Framework. Among those could be investments with environmental objectives that do not qualify as Taxonomy-aligned. The environmental objectives of the Sub-fund are attained by investing in companies that score positively on SDG 12 (Responsible consumption and production), SDG 13 (Climate action), SDG 14 (Life below water), and SDG 15 (Life on land) in Robeco's SDG Framework. While the sum of sustainable investments with an environmental objective and socially sustainable investments always adds up to the Sub-fund's minimum proportion of 30% sustainable investments, we do not commit to a minimum share of sustainable investments with an environmental objective because the Sub-fund's investment strategy does not have a specific environmental investment objective. Therefore, the minimum share of sustainable investments with an environmental objective is 0%.

⁴⁵ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

What is the minimum share of socially sustainable investments?

The Sub-fund intends to make sustainable investments, measured as positive scores via Robeco's SDG Framework. Among those could be investments with social objectives. The social objectives of the Sub-fund are attained by investing in companies that score positively on SDG 1 (No poverty), SDG 2 (Zero hunger), SDG 3 (Good health and well-being), SDG 4 (Quality education), SDG 5 (Gender equality), SDG 6 (Clear water and sanitation), SDG 7 (Affordable and clean energy), SDG 8 (Decent work and economic growth), SDG 9 (Industry, innovation and infrastructure), SDG 10 (Reduced inequalities), SDG 11 (Sustainable cities and communities), SDG 16 (Peace, justice and strong institutions) and SDG 17 (Partnerships for the goals), in Robeco's SDG Framework. While the sum of socially sustainable investments and sustainable investments with an environmental objective always adds up to the Sub-fund's minimum proportion of sustainable investments, we do not commit to a minimum share of socially sustainable investments because the Sub-fund's investment strategy does not have a specific socially sustainable investment objective. Therefore, the minimum share of socially sustainable investments is 0%.

What investments are included under "#2 Other", what is their purpose and are there any minimum environmental or social safeguards?

The type of instruments included under "#2 Other" and their purpose are outlined in Annex I of this Prospectus under the header 'Financial instruments and investment restrictions'. They include cash, cash equivalents, as well as investment funds and eligible asset classes (other than bonds and equities) that do not specifically promote E/S characteristics. As indicated above, the Sub-fund does not make use of derivatives to attain the environmental or social characteristics promoted. The Sub-fund may make use of derivatives, which thus always fall under the category "#2 Other", for hedging, liquidity management and efficient portfolio management as well as investment purposes. Exchange traded and over-the-counter derivatives are permitted, including but not limited to futures, swaps, options and currency forwards. In case the Sub-fund uses derivatives, the underlying shall comply with the investment policy. Where relevant, minimum environmental or social safeguards are taken into account, by, for example, applying Robeco's Exclusion Policy for any single security derivative.

Is a specific index designated as a reference benchmark to determine whether this financial product is aligned with the environmental and/or social characteristics that it promotes?

Not applicable.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

Where can I find more product specific information online?

I) Robeco Chinese A-share Equities

Pre-contractual disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Product name: Robeco Chinese A-share Equities

Legal entity identifier: 213800GE9C6GVRJ3AM62

Environmental and/or social characteristics

Does this financial product have a sustainable investment objective?

Yes

No

It will make a minimum of **sustainable investments with an environmental objective: ___%**

- in economic activities that qualify as environmentally sustainable under the EU Taxonomy
- in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

It will make a minimum of **sustainable investments with a social objective: ___%**

It promotes **Environmental/Social (E/S) characteristics** and while it does not have as its objective a sustainable investment, it will have a minimum proportion of 35% of sustainable investments

- with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy
- with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy
- with a social objective

It promotes E/S characteristics, but **will not make any sustainable investments**

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

What environmental and/or social characteristics are promoted by this financial product?

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

The Sub-fund has the following E/S characteristics:

1. The Sub-fund promotes certain minimum environmental and social safeguards through applying exclusion criteria with regards to products and business practices that Robeco believes are detrimental to society and incompatible with sustainable investment strategies, such as exposure to controversial behaviour, controversial weapons, and fossil fuels.
2. The Sub-fund promotes adherence to and conducting business activities in accordance with the United Nations Universal Declaration of Human Rights, the International Labor Organization's (ILO) labor standards, the United Nations Guiding Principles for Business and Human Rights (UNGPs), the United Nations Global Compact (UNGC) and the OECD Guidelines for Multinational Enterprises, by scrutinizing companies that violate these principles.
3. The Sub-fund promotes good governance and sustainable corporate practices through proxy voting, which contributes to long-term shareholder value creation. This includes taking an active stance on social and environmental topics through Robeco's proxy voting policy.
4. The Sub-fund limits investing in companies with an elevated sustainability risk based on ESG risk scores whereas all such investments require separate approval of a dedicated committee that oversees that all investments are substantiated and eligible based on a fundamental review on the sustainability risk.
5. The Sub-fund's weighted average ESG score is better than that of the general market index referred to in Appendix VI – Benchmarks (the "General Market Index").

There is no reference benchmark designated for the purpose of attaining the environmental or social characteristics promoted by the Sub-fund.

What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?

The Sub-fund has the following sustainability indicators:

1. The % of investments in securities that are on Robeco's Exclusion list as result of the application of Robeco's Exclusion Policy.
2. The number of companies that are in violation of the ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises and hence are a part of the Enhanced Engagement program.
3. The number of holdings and agenda items voted.
4. The % of holdings with an elevated sustainability risk profile.
5. The Sub-fund's weighted average ESG score compared to the General Market Index.

What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?

The sustainable investments aim to contribute to the UN Sustainable Development Goals ("SDGs"), that have both social and environmental objectives. These are 17 goals that are globally recognised and include environmental goals such as climate action, clean water, life on land and water and social goals such as zero hunger, gender equality, education, etc. Robeco has developed a proprietary framework based on the UN SDGs through which an issuer's contribution to such SDGs is determined through a 3-step process. This process starts with a sector baseline on which a company's products are analysed to examine contribution to the society and environment. Further, the operational processes involved in creating such products is checked along with any controversies/litigation claims and remediation actions taken which are perused before a final SDG score is determined. The final score ranges between high

negative (-3) to high positive (+3) and only those issuers which achieve positive SDG scores (+1, +2 and +3) are regarded as Sustainable Investments.

● ***How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?***

The sustainable investments do no significant harm to any environmental or social sustainable investment objective by considering a principal adverse impact and aligning with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights. In addition, sustainable investments score positively on Robeco's SDG Framework, and therefore do not cause significant harm.

How have the indicators for adverse impacts on sustainability factors been taken into account?

Mandatory principal adverse impact indicators are considered through Robeco's SDG Framework, either directly or indirectly, when identifying sustainable investments for the Sub-fund. In addition, voluntary environmental and social indicators are taken into account, depending on their relevance for measuring impacts on the SDGs and the availability of data. A detailed description of the incorporation of principal adverse impacts is available via Robeco's Principal Adverse Impact Statement published on the Robeco website (<https://www.robeco.com/files/docm/docu-principal-adverse-impact-statement-summary-entity-level.pdf>). In this statement, Robeco sets out its approach to identifying and prioritizing principal adverse impacts, and how principal adverse impacts are considered as part of Robeco's investment due diligence process and procedures relating to research and analysis, exclusions and restrictions and/or voting and engagement. This description also explains how principal adverse impact indicators are considered by the SDG Framework.

How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The sustainable investments are aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights via both Robeco's Exclusion Policy and Robeco's SDG Framework.

Robeco's Exclusion Policy includes an explanation of how Robeco acts in accordance with the International Labor Organization (ILO) standards, United Nations Guiding Principles (UNGPs), United Nations Global Compact (UNGC) Principles and the Organization for Economic Co-operation and Development (OECD) Guidelines for Multinational Enterprises and is guided by these international treaties to assess the behavior of companies. Robeco continuously screens its investments for breaches of these principles. In case of a breach, the company will be excluded or engaged with, and is not considered a sustainable investment.

Robeco's SDG Framework screens for breaches on these principles in the final step of the framework. In this step, Robeco checks whether the company concerned has been involved in any controversies. Involvement in any controversy will result in a negative SDG score for the company, meaning it is not a sustainable investment.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

Does this financial product consider principal adverse impacts on sustainability factors?

Yes, _____

The Sub-fund considers principal adverse impacts on sustainability factors as referred to in Annex I of the SFDR Delegated Act.

Pre-investment, the following principal adverse impacts on sustainability factors are considered:

- Via the applied normative and activity-based exclusions, the following PAIs are considered:
 - Exposure to companies active in the fossil fuel sector (PAI 4, Table 1)
 - Violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1)
 - Activities negatively affecting biodiversity-sensitive areas (PAI 7, Table 1). The consideration of this PAI is currently restricted to applying exclusions to palm oil producing companies and for any breaches to the UNGC, UNGP and OECD Guidelines for Multinational Enterprises in relation to biodiversity.
 - Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons (PAI 14, Table 1)
- Via the ESG integration process, as part of the investment due diligence policies and procedures, the following PAIs are considered:
 - All indicators related to GHG emissions, as part of the required Climate Risk analysis (PAI 1-6, Table 1, PAI 4, Table 2)
 - Biodiversity, water and waste indicators (PAI 7-9, Table 1)
 - Board gender diversity (PAI 13, Table 1)

Post-investment, the following principal adverse impacts on sustainability factors are taken into account:

- Via the application of the voting policy, the following PAIs are considered:

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

- All indicators related to GHG emissions (PAI 1-6, Table 1)
- Indicators related to social and employee matters (PAI 10-13, Table 1; PAI 5-8, Table 3)
- o Via Robeco's entity engagement program, the following PAIs are considered:
 - All indicators related to Climate and other environment-related indicators (PAI 1-9, Table 1)
 - Violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1). On an ongoing basis, the investment universe is scanned for controversial behavior in relation to the aforementioned principles and guidelines.
 - In addition, based on a yearly review of Robeco's performance on all mandatory and selected voluntary indicators, holdings of the Sub-fund that cause adverse impact might be selected for engagement.

More information is available via Robeco's Principal Adverse Impact Statement, published on Robeco's website. The Sub-fund will periodically report how it has considered the principal adverse impacts of its investments in the Company's annual report, which will be made available each year on or before 30 April at the Sub-fund page highlighted in final section of this document.

No

What investment strategy does this financial product follow?

Robeco Chinese A-share Equities is an actively managed fund that invests in Chinese A-shares. The selection of these stocks is based on fundamental analysis as described in the Investment policy strategy paragraph in Appendix I of this Prospectus. The strategy integrates sustainability indicators on a continuous basis as part of the stock selection process. Amongst others, the Sub-fund applies norms-based and activity-based exclusions, Robeco's good governance policy, Robeco's SDG framework and considers Principal Adverse Impacts in the investment process. More product-specific information can be found on our website and the links provided in the final question of this disclosure.

The investment strategy guides investment decisions based on factors such as investment objectives and risk tolerance.

What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?

The Sub-fund has the following binding elements:

1. The Sub-fund's portfolio complies with Robeco's Exclusion Policy (<https://www.robeco.com/files/docm/docu-exclusion-policy.pdf>), that is based on exclusion criteria with regards to products and business practices that Robeco believes are detrimental to society and incompatible with sustainable investment strategies. This means that the Sub-fund has 0% exposure to excluded securities, taking into account a grace period. Information with regards to the effects of the exclusions on the Sub-fund's universe can be found at <https://www.robeco.com/files/docm/docu-exclusion-list.pdf>.
2. The Sub-fund scrutinizes investment in companies that are in breach of the ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises. If a company in the portfolio breaches one of the international guidelines during the investment period, the company will become part of the Enhanced Engagement program.
3. All equity holdings have a granted right to vote and Robeco exerts that right by voting according to Robeco's Proxy Voting Policy, unless impediments occur (e.g. share blocking or when not considered cost efficient). Robeco's Proxy Voting Policy can be found at <https://www.robeco.com/files/docm/docu-robeco-stewardship-policy.pdf>.

4. Investments with an elevated sustainability risk are defined by Robeco as companies with an ESG Risk Rating of 40 and higher (the ESG Risk Rating is explained in the sustainability risk policy which can be accessed via <https://www.robeco.com/files/docm/docu-robeco-sustainability-risk-policy.pdf>). The Sub-fund is limited to a maximum exposure of 25% to investments with an elevated sustainability risk, based on the market weight in the portfolio taking into account regional differences and benchmark. Each investment with an ESG Risk rating of higher than 40 requires separate approval by a dedicated committee of sustainable investment specialists, compliance and risk management that oversees the bottom-up sustainability analysis.
5. The Sub-fund's weighted average ESG score is better than that of the General Market Index.

● **What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?**

The Sub-fund does not commit to a minimum rate to reduce the scope of investments prior to the application of the investment strategy.

● **What is the policy to assess good governance practices of the investee companies?**

Robeco has a Good Governance policy to assess governance practices of companies. The policy describes how Robeco determines if and when a company does not follow good governance practices and is therefore excluded from the initial investment universe for Article 8 and 9 products. Robeco's Good Governance policy applies to the Sub-fund and tests on a set of governance criteria that reflect widely recognized industry established norms and include topics as employee relations, management structure, tax compliance and remuneration.

The Good Governance test consists of criteria on such topics that are examined for investee companies and further explained in Robeco's Good Governance policy <https://www.robeco.com/files/docm/docu-robeco-good-governance-policy.pdf>. Additionally, the companies that do not pass the good governance test are reflected in the exclusion list that can be accessed here - <https://www.robeco.com/files/docm/docu-exclusion-list.pdf>.

What is the asset allocation planned for this financial product?

At least 90% of the investments are aligned with the E/S characteristics of the Sub-fund. The Sub-fund plans to make a minimum of 35% sustainable investments, measured by positive scores via Robeco's SDG Framework. The investments in the category Other, estimated between 0-10%, are mostly in cash, cash equivalents and derivatives as further described below. The planned asset allocation is monitored continuously, and evaluated on a yearly basis.

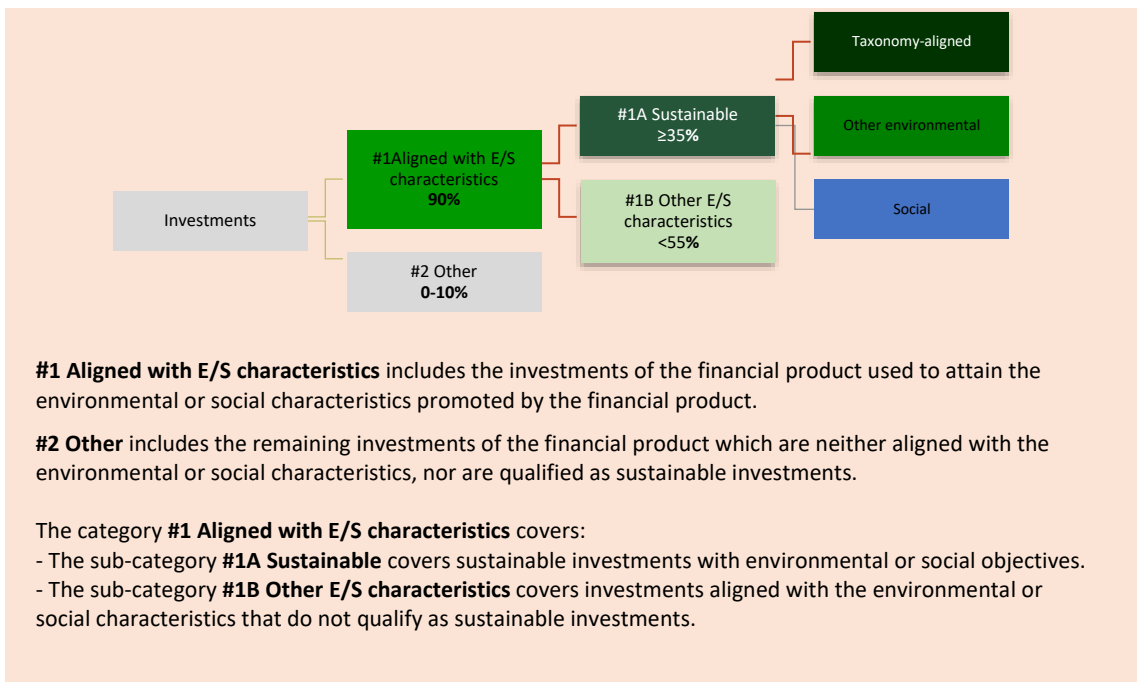

Good governance practices include sound management structures, employee relations, remuneration of staff and tax compliance.

Asset allocation describes the share of investments in specific assets.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

● **How does the use of derivatives attain the environmental or social characteristics promoted by the financial product?**

The Sub-fund does not make use of derivatives to attain the environmental or social characteristics promoted by the financial product. The Sub-fund may make use of derivatives for hedging, liquidity management and efficient portfolio management as well as investment purposes. Exchange traded and over-the-counter derivatives are permitted, including but not limited to futures, swaps, options and currency forwards. Whilst the Sub-fund may use derivatives both for investment purposes as well as for hedging and efficient portfolio management, it does not utilize derivatives for such purposes outside the intended share of investments allocated to the 'Other' category.

In case the Sub-fund uses derivatives, the underlying shall comply with the investment policy. Where relevant, minimum environmental or social safeguards are taken into account as described below.

To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

0%. The Sub-fund does not intend to make Taxonomy-aligned investments. It cannot be excluded that among the Sub-fund's holdings certain investments are Taxonomy aligned. The Sub-fund will report on Taxonomy-aligned investment in the periodic disclosures. In the future, once data-availability in relation to the EU Taxonomy will improve, Robeco might consider setting a target based on turnover or CAPEX. Robeco currently relies on third-party data, including data in relation to companies that do not disclose on the EU Taxonomy alignment of their activities. EU Taxonomy-alignment data is not yet subject to a review by third parties. The Sub-fund only makes investments in equity and therefore it does not have sovereign exposures. The expected level of alignment with and without sovereign bonds is the same.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

 are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

● **Does the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy?⁴⁶**

Yes

In fossil gas

In nuclear energy

No

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.*

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

** As the investments are not Taxonomy-aligned, the exclusion of sovereign bonds has no impact on the graph and therefore no such percentage is shown here.

● **What is the minimum share of investments in transitional and enabling activities?**

0%.

What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?

The Sub-fund intends to make sustainable investments, measured as positive scores via Robeco's SDG Framework. Among those could be investments with environmental objectives that do not qualify as Taxonomy-aligned. The environmental objectives of the Sub-fund are attained by investing in companies that score positively on SDG 12 (Responsible consumption and production), SDG 13 (Climate action), SDG 14 (Life below water), and SDG 15 (Life on land) in Robeco's SDG Framework. While the sum of sustainable investments with an environmental objective and socially sustainable investments always adds up to the Sub-fund's minimum proportion of 35% sustainable investments, we do not commit to a minimum share of sustainable investments with an environmental objective because the Sub-fund's investment strategy does not have a specific environmental investment objective. Therefore, the minimum share of sustainable investments with an environmental objective is 0%.

⁴⁶ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

What is the minimum share of socially sustainable investments?

The Sub-fund intends to make sustainable investments, measured as positive scores via Robeco's SDG Framework. Among those could be investments with social objectives. The social objectives of the Sub-fund are attained by investing in companies that score positively on SDG 1 (No poverty), SDG 2 (Zero hunger), SDG 3 (Good health and well-being), SDG 4 (Quality education), SDG 5 (Gender equality), SDG 6 (Clear water and sanitation), SDG 7 (Affordable and clean energy), SDG 8 (Decent work and economic growth), SDG 9 (Industry, innovation and infrastructure), SDG 10 (Reduced inequalities), SDG 11 (Sustainable cities and communities), SDG 16 (Peace, justice and strong institutions) and SDG 17 (Partnerships for the goals), in Robeco's SDG Framework. While the sum of socially sustainable investments and sustainable investments with an environmental objective always adds up to the Sub-fund's minimum proportion of sustainable investments, we do not commit to a minimum share of socially sustainable investments because the Sub-fund's investment strategy does not have a specific socially sustainable investment objective. Therefore, the minimum share of socially sustainable investments is 0%.

What investments are included under "#2 Other", what is their purpose and are there any minimum environmental or social safeguards?

The type of instruments included under "#2 Other" and their purpose are outlined in Annex I of this Prospectus under the header 'Financial instruments and investment restrictions'. They include cash, cash equivalents, as well as investment funds and eligible asset classes (other than bonds and equities) that do not specifically promote E/S characteristics. As indicated above, the Sub-fund does not make use of derivatives to attain the environmental or social characteristics promoted. The Sub-fund may make use of derivatives, which thus always fall under the category "#2 Other", for hedging, liquidity management and efficient portfolio management as well as investment purposes. Exchange traded and over-the-counter derivatives are permitted, including but not limited to futures, swaps, options and currency forwards. In case the Sub-fund uses derivatives, the underlying shall comply with the investment policy. Where relevant, minimum environmental or social safeguards are taken into account, by, for example, applying Robeco's Exclusion Policy for any single security derivative.

Is a specific index designated as a reference benchmark to determine whether this financial product is aligned with the environmental and/or social characteristics that it promotes?

Not applicable.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

Where can I find more product specific information online?

m) Robeco QI Chinese A-share Active Equities

Pre-contractual disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Product name: Robeco QI Chinese A-share Active Equities

Legal entity identifier: 2138000ARI6HPJH22T56

Environmental and/or social characteristics

Does this financial product have a sustainable investment objective?

Yes

No

It will make a minimum of **sustainable investments with an environmental objective: ___%**

- in economic activities that qualify as environmentally sustainable under the EU Taxonomy
- in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

It will make a minimum of **sustainable investments with a social objective: ___%**

It promotes **Environmental/Social (E/S) characteristics** and while it does not have as its objective a sustainable investment, it will have a minimum proportion of 40% of sustainable investments

- with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy
- with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy
- with a social objective

It promotes E/S characteristics, but **will not make any sustainable investments**

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

What environmental and/or social characteristics are promoted by this financial product?

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

The Sub-fund has the following E/S characteristics:

1. The Sub-fund promotes good governance and sustainable corporate practices through proxy voting, which contributes to long-term shareholder value creation. This includes taking an active stance on social and environmental topics through Robeco's proxy voting policy.
2. The Sub-fund promotes certain minimum environmental and social safeguards through applying exclusion criteria with regards to products and business practices that Robeco believes are detrimental to society and incompatible with sustainable investment strategies, such as exposure to controversial behaviour, controversial weapons, and fossil fuels.
3. The Sub-fund promotes having a lower environmental footprint than the general market index referred to in Appendix VI – Benchmarks (the "General Market Index"), through reduction in carbon, water and waste footprints.
4. The Sub-fund promotes adherence to and conducting business activities in accordance with the United Nations Universal Declaration of Human Rights, the International Labor Organization's (ILO) labor standards, the United Nations Guiding Principles for Business and Human Rights (UNGPs), the United Nations Global Compact (UNGC) and the OECD Guidelines for Multinational Enterprises, by scrutinizing companies that violate these principles.
5. The Sub-fund promotes having a weighted average ESG score that is better than that of the General Market Index.
6. The Sub-fund promotes having a larger share of companies with a positive SDG score (1,2,3) in the portfolio than the General Market Index.

There is no reference benchmark designated for the purpose of attaining the environmental or social characteristics promoted by the Sub-fund.

● **What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?**

The Sub-fund has the following sustainability indicators:

1. The number of holdings and agenda items voted.
2. The % of investments in securities that are on Robeco's Exclusion list as result of the application of Robeco's Exclusion Policy.
3. The Sub-fund's weighted carbon, water and waste footprint score compared to the General Market Index.
4. The number of companies that are in violation of the ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises and hence are a part of the Enhanced Engagement program.
5. The Sub-fund's weighted average ESG score compared to the General Market Index.
6. The Sub-fund's weight in companies with a positive SDG score (1,2,3) compared to the General Market Index weight in companies with a positive SDG score (1,2,3).

● **What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?**

The sustainable investments aim to contribute to the UN Sustainable Development Goals ("SDGs"), that have both social and environmental objectives. These are 17 goals that are globally recognised and include environmental goals such as climate action, clean water, life on land and water and social goals such as zero hunger, gender equality, education, etc. Robeco has developed a proprietary framework based on the UN SDGs through which an issuer's contribution to such SDGs is determined through a 3-step process. This process starts with a sector baseline on which a company's products are analysed to examine contribution to the society and environment. Further, the operational processes involved in creating such products is checked along with any controversies/litigation claims and remediation actions

taken which are perused before a final SDG score is determined. The final score ranges between high negative (-3) to high positive (+3) and only those issuers which achieve positive SDG scores (+1, +2 and +3) are regarded as Sustainable Investments.

● ***How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?***

The sustainable investments do no significant harm to any environmental or social sustainable investment objective by considering a principal adverse impact and aligning with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights. In addition, sustainable investments score positively on Robeco's SDG Framework, and therefore do not cause significant harm.

How have the indicators for adverse impacts on sustainability factors been taken into account?

Mandatory principal adverse impact indicators are considered through Robeco's SDG Framework, either directly or indirectly, when identifying sustainable investments for the Sub-fund. In addition, voluntary environmental and social indicators are taken into account, depending on their relevance for measuring impacts on the SDGs and the availability of data. A detailed description of the incorporation of principal adverse impacts is available via Robeco's Principal Adverse Impact Statement published on the Robeco website (<https://www.robeco.com/files/docm/docu-principal-adverse-impact-statement-summary-entity-level.pdf>). In this statement, Robeco sets out its approach to identifying and prioritizing principal adverse impacts, and how principal adverse impacts are considered as part of Robeco's investment due diligence process and procedures relating to research and analysis, exclusions and restrictions and/or voting and engagement. This description also explains how principal adverse impact indicators are considered by the SDG Framework.

How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The sustainable investments are aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights via both Robeco's Exclusion Policy and Robeco's SDG Framework.

Robeco's Exclusion Policy includes an explanation of how Robeco acts in accordance with the International Labor Organization (ILO) standards, United Nations Guiding Principles (UNGPs), United Nations Global Compact (UNGC) Principles and the Organization for Economic Co-operation and Development (OECD) Guidelines for Multinational Enterprises and is guided by these international treaties to assess the behavior of companies. Robeco continuously screens its investments for breaches of these principles. In case of a breach, the company will be excluded or engaged with, and is not considered a sustainable investment.

Robeco's SDG Framework screens for breaches on these principles in the final step of the framework. In this step, Robeco checks whether the company concerned has been involved in any controversies. Involvement in any controversy will result in a negative SDG score for the company, meaning it is not a sustainable investment.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

Does this financial product consider principal adverse impacts on sustainability factors?

Yes, _____

The Sub-fund considers principal adverse impacts on sustainability factors as referred to in Annex I of the SFDR Delegated Act.

Pre-investment, the following principal adverse impacts on sustainability factors are considered:

- Via the applied normative and activity-based exclusions, the following PAIs are considered:
 - Exposure to companies active in the fossil fuel sector (PAI 4, Table 1)
 - Violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1)
 - Activities negatively affecting biodiversity-sensitive areas (PAI 7, Table 1). The consideration of this PAI is currently restricted to applying exclusions to palm oil producing companies and for any breaches to the UNGC, UNGP and OECD Guidelines for Multinational Enterprises in relation to biodiversity.
 - Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons (PAI 14, Table 1)
- Via the environmental footprint performance targets of the Sub-fund, the following PAIs are considered:
 - Carbon footprint (PAI 2, Table 1)
 - Water and waste indicators (PAI 7-9, Table 1). Robeco will use on water and waste footprint until data quality and coverage of the PAIs will improve.

Post-investment, the following principal adverse impacts on sustainability factors are taken into account:

- Via the application of the voting policy, the following PAIs are considered:
 - All indicators related to GHG emissions (PAI 1-6, Table 1)
 - Indicators related to social and employee matters (PAI 10-13, Table 1; PAI 5-8, Table 3)

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

- Via Robeco's entity engagement program, the following PAIs are considered:
 - All indicators related to Climate and other environment-related indicators (PAI 1-9, Table 1)
 - Violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1)
 - In addition, based on a yearly review of Robeco's performance on all mandatory and selected voluntary indicators, holdings of the Sub-fund that cause adverse impact might be selected for engagement.

More information is available via Robeco's Principal Adverse Impact Statement, published on Robeco's website. The Sub-fund will periodically report how it has considered the principal adverse impacts of its investments in the Company's annual report, which will be made available each year on or before 30 April at the Sub-fund page highlighted in final section of this document.

No

What investment strategy does this financial product follow?

Robeco QI Chinese A-share Active Equities is an actively managed fund that invests in stocks of companies with an A-share listing in mainland China. The selection of these stocks is based on a quantitative model as described in the Investment policy strategy paragraph in Appendix I of this Prospectus.

The strategy integrates sustainability indicators on a continuous basis as part of the stock selection process. Amongst others, the Sub-fund applies norms-based and activity-based exclusions, Robeco's good governance policy, Robeco's SDG framework and considers Principal Adverse Impacts in the investment process. More product-specific information can be found on our website and the links provided in the final question of this disclosure.

What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?

The Sub-fund has the following binding elements:

1. All equity holdings have a granted right to vote and Robeco exerts that right by voting according to Robeco's Proxy Voting Policy, unless impediments occur (e.g. share blocking or when not considered cost efficient). Robeco's Proxy Voting Policy can be found at <https://www.robeco.com/files/docm/docu-robeco-stewardship-policy.pdf>
2. The Sub-fund's portfolio complies with Robeco's Exclusion Policy (<https://www.robeco.com/files/docm/docu-exclusion-policy.pdf>), that is based on exclusion criteria with regards to products and business practices that Robeco believes are detrimental to society and incompatible with sustainable investment strategies. This means that the Sub-fund has 0% exposure to excluded securities, taking into account a grace period. Information with regards to the effects of the exclusions on the Sub-fund's universe can be found at <https://www.robeco.com/files/docm/docu-exclusion-list.pdf>
3. The Sub-fund's weighted carbon, water and waste footprint score is a better than that of the General Market Index.
4. The Sub-fund scrutinizes investment in companies that are in breach of the ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises. If a company in the portfolio breaches one of the international guidelines during the investment period, the company will become part of the Enhanced Engagement program. When engagement is deemed highly unlikely to succeed, the company might be excluded directly.
5. The Sub-fund's weighted average ESG score is better than that of the General Market Index.

The investment strategy guides investment decisions based on factors such as investment objectives and risk tolerance.

6. The Sub-fund's weight in companies with a positive SDG score (1,2,3) is better than that of the General Market Index.

What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?

The Sub-fund does not commit to a minimum rate to reduce the scope of investments prior to the application of the investment strategy.

What is the policy to assess good governance practices of the investee companies?

Robeco has a Good Governance policy to assess governance practices of companies. The policy describes how Robeco determines if and when a company does not follow good governance practices and is therefore excluded from the initial investment universe for Article 8 and 9 products. Robeco's Good Governance policy applies to the Sub-fund and tests on a set of governance criteria that reflect widely recognized industry established norms and include topics as employee relations, management structure, tax compliance and remuneration.

The Good Governance test consists of criteria on such topics that are examined for investee companies and further explained in Robeco's Good Governance policy <https://www.robeco.com/files/docm/docu-robeco-good-governance-policy.pdf>. Additionally, the companies that do not pass the good governance test are reflected in the exclusion list that can be accessed here - <https://www.robeco.com/files/docm/docu-exclusion-list.pdf>.

Good governance practices include sound management structures, employee relations, remuneration of staff and tax compliance.

What is the asset allocation planned for this financial product?

At least 90% of the investments are aligned with the E/S characteristics of the Sub-fund. The Sub-fund plans to make a minimum of 40% sustainable investments, measured by positive scores via Robeco's SDG Framework. The investments in the category Other, estimated between 0-10%, are mostly in cash, cash equivalents and derivatives as further described below. The planned asset allocation is monitored continuously, and evaluated on a yearly basis.

Asset allocation describes the share of investments in specific assets.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure (CapEx)** showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure (OpEx)** reflecting green

operational activities of investee companies.

● **How does the use of derivatives attain the environmental or social characteristics promoted by the financial product?**

The Sub-fund does not make use of derivatives to attain the environmental or social characteristics promoted by the financial product. The Sub-fund may make use of derivatives for hedging, liquidity management and efficient portfolio management as well as investment purposes. Exchange traded and over-the-counter derivatives are permitted, including but not limited to futures, swaps, options and currency forwards. Whilst the Sub-fund may use derivatives both for investment purposes as well as for hedging and efficient portfolio management, it does not utilize derivatives for such purposes outside the intended share of investments allocated to the 'Other' category. In case the Sub-fund uses derivatives, the underlying shall comply with the investment policy. Where relevant, minimum environmental or social safeguards are taken into account as described below.

To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

0%. The Sub-fund does not intend to make Taxonomy-aligned investments. It cannot be excluded that among the Sub-fund's holdings certain investments are Taxonomy aligned. The Sub-fund will report on Taxonomy-aligned investment in the periodic disclosures. In the future, once data-availability in relation to the EU Taxonomy will improve, Robeco might consider setting a target based on turnover or CAPEX. Robeco currently relies on third-party data, including data in relation to companies that do not disclose on the EU Taxonomy alignment of their activities. EU Taxonomy-alignment data is not yet subject to a review by third parties. The Sub-fund only makes investments in equity and therefore it does not have sovereign exposures. The expected level of alignment with and without sovereign bonds is the same.

● **Does the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy?⁴⁷**

- Yes
 - In fossil gas
 - In nuclear energy
- No

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to renewable power

⁴⁷ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

 are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.*

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

** As the investments are not Taxonomy-aligned, the exclusion of sovereign bonds has no impact on the graph and therefore no such percentage is shown here.

 **What is the minimum share of investments in transitional and enabling activities?**

0%.

 **What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?**

The Sub-fund intends to make sustainable investments, measured as positive scores via Robeco's SDG Framework. Among those could be investments with environmental objectives that do not qualify as Taxonomy-aligned. The environmental objectives of the Sub-fund are attained by investing in companies that score positively on SDG 12 (Responsible consumption and production), SDG 13 (Climate action), SDG 14 (Life below water), and SDG 15 (Life on land) in Robeco's SDG Framework. While the sum of sustainable investments with an environmental objective and socially sustainable investments always adds up to the Sub-fund's minimum proportion of 40% sustainable investments, we do not commit to a minimum share of sustainable investments with an environmental objective because the Sub-fund's investment strategy does not have a specific environmental investment objective. Therefore, the minimum share of sustainable investments with an environmental objective is 0%.

 **What is the minimum share of socially sustainable investments?**

The Sub-fund intends to make sustainable investments, measured as positive scores via Robeco's SDG Framework. Among those could be investments with social objectives. The social objectives of the Sub-fund are attained by investing in companies that score positively on SDG 1 (No poverty), SDG 2 (Zero hunger), SDG 3 (Good health and well-being), SDG 4 (Quality education), SDG 5 (Gender equality), SDG 6 (Clear water and sanitation), SDG 7 (Affordable and clean energy), SDG 8 (Decent work and economic growth), SDG 9 (Industry, innovation and infrastructure), SDG 10 (Reduced inequalities), SDG 11 (Sustainable cities and communities), SDG 16 (Peace, justice and strong institutions) and SDG 17 (Partnerships for the goals), in Robeco's SDG Framework. While the sum of socially sustainable investments and sustainable investments with an environmental objective always adds up to the Sub-fund's minimum proportion of sustainable investments, we do not commit to a minimum share of socially sustainable investments because the Sub-fund's investment strategy does not have a specific

socially sustainable investment objective. Therefore, the minimum share of socially sustainable investments is 0%.

What investments are included under "#2 Other", what is their purpose and are there any minimum environmental or social safeguards?

The type of instruments included under "#2 Other" and their purpose are outlined in Annex I of this Prospectus under the header 'Financial instruments and investment restrictions'. They include cash, cash equivalents, as well as investment funds and eligible asset classes (other than bonds and equities) that do not specifically promote E/S characteristics. As indicated above, the Sub-fund does not make use of derivatives to attain the environmental or social characteristics promoted. The Sub-fund may make use of derivatives, which thus always fall under the category "#2 Other", for hedging, liquidity management and efficient portfolio management as well as investment purposes. Exchange traded and over-the-counter derivatives are permitted, including but not limited to futures, swaps, options and currency forwards. In case the Sub-fund uses derivatives, the underlying shall comply with the investment policy. Where relevant, minimum environmental or social safeguards are taken into account, by, for example, applying Robeco's Exclusion Policy for any single security derivative.

Is a specific index designated as a reference benchmark to determine whether this financial product is aligned with the environmental and/or social characteristics that it promotes?

Not applicable.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

Where can I find more product specific information online?

n) Robeco QI Chinese A-share Conservative Equities

Pre-contractual disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Product name: Robeco QI Chinese A-share Conservative Equities

Legal entity identifier: 213800XWLW8UPEKC9R39

Environmental and/or social characteristics

Does this financial product have a sustainable investment objective?

Yes

No

It will make a minimum of **sustainable investments with an environmental objective: ___%**

- in economic activities that qualify as environmentally sustainable under the EU Taxonomy
- in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

It will make a minimum of **sustainable investments with a social objective: ___%**

It promotes **Environmental/Social (E/S) characteristics** and while it does not have as its objective a sustainable investment, it will have a minimum proportion of 40% of sustainable investments

- with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy
- with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy
- with a social objective

It promotes E/S characteristics, but **will not make any sustainable investments**

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

What environmental and/or social characteristics are promoted by this financial product?

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

The Sub-fund has the following E/S characteristics:

1. The Sub-fund promotes certain minimum environmental and social safeguards through applying exclusion criteria with regards to products and business practices that Robeco believes are detrimental to society and incompatible with sustainable investment strategies, such as exposure to controversial behaviour, controversial weapons, and fossil fuels.
2. The Sub-fund promotes having a lower environmental footprint than the general market index referred to in Appendix VI – Benchmarks (the "General Market Index"), through reduction in carbon, water and waste footprints.
3. The Sub-fund promotes adherence to and conducting business activities in accordance with the United Nations Universal Declaration of Human Rights, the International Labor Organization's (ILO) labor standards, the United Nations Guiding Principles for Business and Human Rights (UNGPs), the United Nations Global Compact (UNGC) and the OECD Guidelines for Multinational Enterprises, by scrutinizing companies that violate these principles.
4. The Sub-fund promotes having a weighted average ESG score that is better than that of the General Market Index.
5. The Sub-fund promotes having a larger share of companies with a positive SDG score (1,2,3) in the portfolio than the General Market Index.

There is no reference benchmark designated for the purpose of attaining the environmental or social characteristics promoted by the Sub-fund.

● **What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?**

The Sub-fund has the following sustainability indicators:

1. The % of investments in securities that are on Robeco's Exclusion list as result of the application of Robeco's Exclusion Policy.
2. The Sub-fund's weighted carbon, water and waste footprint score compared to the General Market Index.
3. The number of companies that are in violation of the ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises and hence are a part of the Enhanced Engagement program.
4. The Sub-fund's weighted average ESG score compared to the General Market Index.
5. The Sub-fund's weight in companies with a positive SDG score (1,2,3) compared to the General Market Index weight in companies with a positive SDG score (1,2,3).

● **What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?**

The sustainable investments aim to contribute to the UN Sustainable Development Goals ("SDGs"), that have both social and environmental objectives. These are 17 goals that are globally recognised and include environmental goals such as climate action, clean water, life on land and water and social goals such as zero hunger, gender equality, education, etc. Robeco has developed a proprietary framework based on the UN SDGs through which an issuer's contribution to such SDGs is determined through a 3-step process. This process starts with a sector baseline on which a company's products are analysed to examine contribution to the society and environment. Further, the operational processes involved in creating such products is checked along with any controversies/litigation claims and remediation actions taken which are perused before a final SDG score is determined. The final score ranges between high negative (-3) to high positive (+3) and only those issuers which achieve positive SDG scores (+1,+2 and +3) are regarded as Sustainable Investments.

● ***How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?***

The sustainable investments do no significant harm to any environmental or social sustainable investment objective by considering a principal adverse impact and aligning with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights. In addition, sustainable investments score positively on Robeco's SDG Framework, and therefore do not cause significant harm.

How have the indicators for adverse impacts on sustainability factors been taken into account?

Mandatory principal adverse impact indicators are considered through Robeco's SDG Framework, either directly or indirectly, when identifying sustainable investments for the Sub-fund. In addition, voluntary environmental and social indicators are taken into account, depending on their relevance for measuring impacts on the SDGs and the availability of data. A detailed description of the incorporation of principal adverse impacts is available via Robeco's Principal Adverse Impact Statement published on the Robeco website (<https://www.robeco.com/files/docm/docu-principal-adverse-impact-statement-summary-entity-level.pdf>). In this statement, Robeco sets out its approach to identifying and prioritizing principal adverse impacts, and how principal adverse impacts are considered as part of Robeco's investment due diligence process and procedures relating to research and analysis, exclusions and restrictions and/or voting and engagement. This description also explains how principal adverse impact indicators are considered by the SDG Framework.

How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The sustainable investments are aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights via both Robeco's Exclusion Policy and Robeco's SDG Framework.

Robeco's Exclusion Policy includes an explanation of how Robeco acts in accordance with the International Labor Organization (ILO) standards, United Nations Guiding Principles (UNGPs), United Nations Global Compact (UNGC) Principles and the Organization for Economic Co-operation and Development (OECD) Guidelines for Multinational Enterprises and is guided by these international treaties to assess the behavior of companies. Robeco continuously screens its investments for breaches of these principles. In case of a breach, the company will be excluded or engaged with, and is not considered a sustainable investment.

Robeco's SDG Framework screens for breaches on these principles in the final step of the framework. In this step, Robeco checks whether the company concerned has been involved in any controversies. Involvement in any controversy will result in a negative SDG score for the company, meaning it is not a sustainable investment.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

Does this financial product consider principal adverse impacts on sustainability factors?

Yes, _____

The Sub-fund considers principal adverse impacts on sustainability factors as referred to in Annex I of the SFDR Delegated Act.

Pre-investment, the following principal adverse impacts on sustainability factors are considered:

- Via the applied normative and activity-based exclusions, the following PAIs are considered:
 - Exposure to companies active in the fossil fuel sector (PAI 4, Table 1)
 - Violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1)
 - Activities negatively affecting biodiversity-sensitive areas (PAI 7, Table 1). The consideration of this PAI is currently restricted to applying exclusions to palm oil producing companies and for any breaches to the UNGC, UNGP and OECD Guidelines for Multinational Enterprises in relation to biodiversity.
 - Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons (PAI 14, Table 1)
- Via the environmental footprint performance targets of the Sub-fund, the following PAIs are considered:
 - Carbon footprint (PAI 2, Table 1)
 - Water and waste indicators (PAI 7-9, Table 1). Robeco will use on water and waste footprint until data quality and coverage of the PAIs will improve.

Post-investment, the following principal adverse impacts on sustainability factors are taken into account:

- Via the application of the voting policy, the following PAIs are considered:
 - All indicators related to GHG emissions (PAI 1-6, Table 1)
 - Indicators related to social and employee matters (PAI 10-13, Table 1; PAI 5-8, Table 3)

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

- Via Robeco's entity engagement program, the following PAIs are considered:
 - All indicators related to Climate and other environment-related indicators (PAI 1-9, Table 1)
 - Violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1)
 - In addition, based on a yearly review of Robeco's performance on all mandatory and selected voluntary indicators, holdings of the Sub-fund that cause adverse impact might be selected for engagement.

More information is available via Robeco's Principal Adverse Impact Statement, published on Robeco's website. The Sub-fund will periodically report how it has considered the principal adverse impacts of its investments in the Company's annual report, which will be made available each year on or before 30 April at the Sub-fund page highlighted in final section of this document.

No

What investment strategy does this financial product follow?

Robeco QI Chinese A-share Conservative Equities is an actively managed fund that invests in low-volatility stocks of companies with an A-share listing in mainland China. The selection of these stocks is based on a quantitative model as described in the Investment policy strategy paragraph in Appendix I of this Prospectus. Conservative refers to the focus on equities that show a lower expected volatility than average global equity.

The strategy integrates sustainability indicators on a continuous basis as part of the stock selection process. Amongst others, the Sub-fund applies norms-based and activity-based exclusions, Robeco's good governance policy, Robeco's SDG framework and considers Principal Adverse Impacts in the investment process. More product-specific information can be found on our website and the links provided in the final question of this disclosure.

What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?

The Sub-fund has the following binding elements:

1. The Sub-fund's portfolio complies with Robeco's Exclusion Policy (<https://www.robeco.com/files/docm/docu-exclusion-policy.pdf>), that is based on exclusion criteria with regards to products and business practices that Robeco believes are detrimental to society and incompatible with sustainable investment strategies. This means that the Sub-fund has 0% exposure to excluded securities, taking into account a grace period. Information with regards to the effects of the exclusions on the Sub-fund's universe can be found at <https://www.robeco.com/files/docm/docu-exclusion-list.pdf>
2. The Sub-fund's weighted carbon, water and waste footprint score is a better than that of the General Market Index.
3. The Sub-fund scrutinizes investment in companies that are in breach of the ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises. If a company in the portfolio breaches one of the international guidelines during the investment period, the company will become part of the Enhanced Engagement program. When engagement is deemed highly unlikely to succeed, the company might be excluded directly.
4. The Sub-fund's weighted average ESG score is better than that of the General Market Index.
5. The Sub-fund's weight in companies with a positive SDG score (1,2,3) is better than that of the General Market Index.

The investment strategy guides investment decisions based on factors such as investment objectives and risk tolerance.

● **What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?**

The Sub-fund does not commit to a minimum rate to reduce the scope of investments prior to the application of the investment strategy.

● **What is the policy to assess good governance practices of the investee companies?**

Robeco has a Good Governance policy to assess governance practices of companies. The policy describes how Robeco determines if and when a company does not follow good governance practices and is therefore excluded from the initial investment universe for Article 8 and 9 products. Robeco's Good Governance policy applies to the Sub-fund and tests on a set of governance criteria that reflect widely recognized industry established norms and include topics as employee relations, management structure, tax compliance and remuneration.

The Good Governance test consists of criteria on such topics that are examined for investee companies and further explained in Robeco's Good Governance policy <https://www.robeco.com/files/docm/docu-robeco-good-governance-policy.pdf>. Additionally, the companies that do not pass the good governance test are reflected in the exclusion list that can be accessed here - <https://www.robeco.com/files/docm/docu-exclusion-list.pdf>.

Good governance practices include sound management structures, employee relations, remuneration of staff and tax compliance.

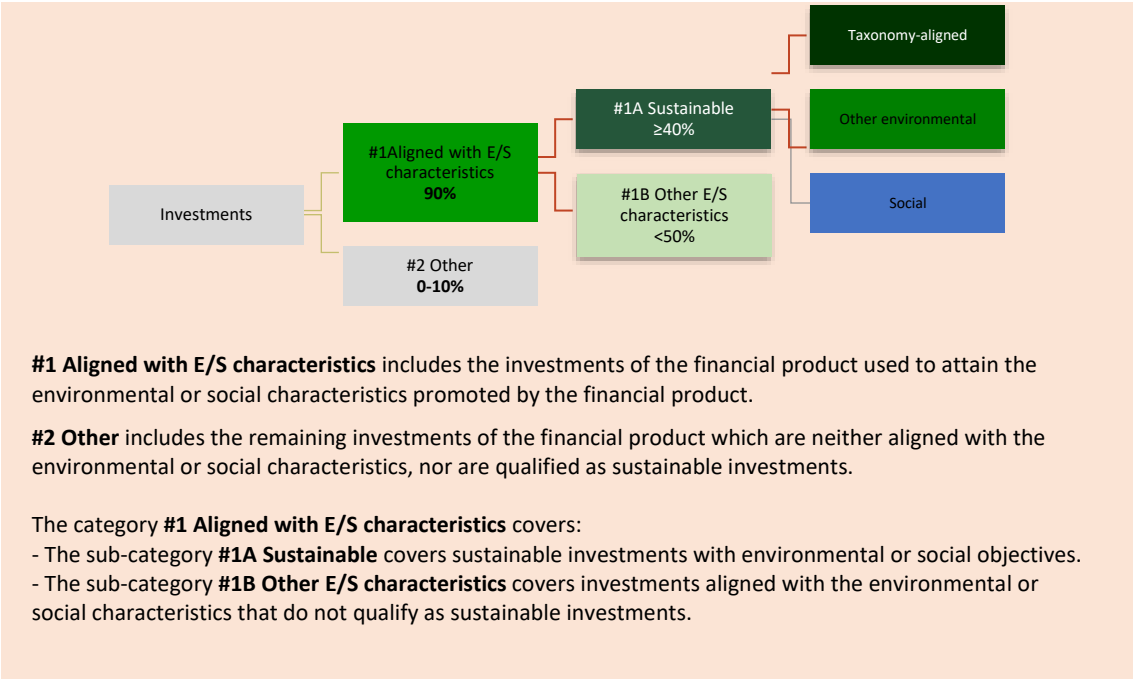

What is the asset allocation planned for this financial product?

At least 90% of the investments are aligned with the E/S characteristics of the Sub-fund. The Sub-fund plans to make a minimum of 40% sustainable investments, measured by positive scores via Robeco's SDG Framework. The investments in the category Other, estimated between 0-10%, are mostly in cash, cash equivalents and derivatives as further described below. The planned asset allocation is monitored continuously, and evaluated on a yearly basis.

Asset allocation describes the share of investments in specific assets.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green

operational activities of investee companies.

● **How does the use of derivatives attain the environmental or social characteristics promoted by the financial product?**

The Sub-fund does not make use of derivatives to attain the environmental or social characteristics promoted by the financial product. The Sub-fund may make use of derivatives for hedging, liquidity management and efficient portfolio management as well as investment purposes. Exchange traded and over-the-counter derivatives are permitted, including but not limited to futures, swaps, options and currency forwards. Whilst the Sub-fund may use derivatives both for investment purposes as well as for hedging and efficient portfolio management, it does not utilize derivatives for such purposes outside the intended share of investments allocated to the 'Other' category.

In case the Sub-fund uses derivatives, the underlying shall comply with the investment policy. Where relevant, minimum environmental or social safeguards are taken into account as described below.

To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

0%. The Sub-fund does not intend to make Taxonomy-aligned investments. It cannot be excluded that among the Sub-fund's holdings certain investments are Taxonomy aligned. The Sub-fund will report on Taxonomy-aligned investment in the periodic disclosures. In the future, once data-availability in relation to the EU Taxonomy will improve, Robeco might consider setting a target based on turnover or CAPEX. Robeco currently relies on third-party data, including data in relation to companies that do not disclose on the EU Taxonomy alignment of their activities. EU Taxonomy-alignment data is not yet subject to a review by third parties. The Sub-fund only makes investments in equity and therefore it does not have sovereign exposures. The expected level of alignment with and without sovereign bonds is the same.

● **Does the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy?⁴⁸**

Yes

In fossil gas

In nuclear energy

No

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to renewable power

⁴⁸ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

or low-carbon fuels by the end of 2035. For nuclear energy, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

 are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures
 ** As the investments are not Taxonomy-aligned, the exclusion of sovereign bonds has no impact on the graph and therefore no such percentage is shown here.

What is the minimum share of investments in transitional and enabling activities?

0%.

What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?

The Sub-fund intends to make sustainable investments, measured as positive scores via Robeco's SDG Framework. Among those could be investments with environmental objectives that do not qualify as Taxonomy-aligned. The environmental objectives of the Sub-fund are attained by investing in companies that score positively on SDG 12 (Responsible consumption and production), SDG 13 (Climate action), SDG 14 (Life below water), and SDG 15 (Life on land) in Robeco's SDG Framework. While the sum of sustainable investments with an environmental objective and socially sustainable investments always adds up to the Sub-fund's minimum proportion of 40% sustainable investments, we do not commit to a minimum share of sustainable investments with an environmental objective because the Sub-fund's investment strategy does not have a specific environmental investment objective. Therefore, the minimum share of sustainable investments with an environmental objective is 0%.

What is the minimum share of socially sustainable investments?

The Sub-fund intends to make sustainable investments, measured as positive scores via Robeco's SDG Framework. Among those could be investments with social objectives. The social objectives of the Sub-fund are attained by investing in companies that score positively on SDG 1 (No poverty), SDG 2 (Zero hunger), SDG 3 (Good health and well-being), SDG 4 (Quality education), SDG 5 (Gender equality), SDG 6 (Clear water and sanitation), SDG 7 (Affordable and clean energy), SDG 8 (Decent work and economic growth), SDG 9 (Industry, innovation and infrastructure), SDG 10 (Reduced inequalities), SDG 11 (Sustainable cities and communities), SDG 16 (Peace, justice and strong institutions) and SDG 17 (Partnerships for the goals), in Robeco's SDG Framework. While the sum of socially sustainable investments and sustainable investments with an environmental objective always adds up to the Sub-fund's minimum proportion of sustainable investments, we do not commit to a minimum share of socially sustainable investments because the Sub-fund's investment strategy does not have a specific

socially sustainable investment objective. Therefore, the minimum share of socially sustainable investments is 0%.

What investments are included under "#2 Other", what is their purpose and are there any minimum environmental or social safeguards?

The type of instruments included under "#2 Other" and their purpose are outlined in Annex I of this Prospectus under the header 'Financial instruments and investment restrictions'. They include cash, cash equivalents, as well as investment funds and eligible asset classes (other than bonds and equities) that do not specifically promote E/S characteristics. As indicated above, the Sub-fund does not make use of derivatives to attain the environmental or social characteristics promoted. The Sub-fund may make use of derivatives, which thus always fall under the category "#2 Other", for hedging, liquidity management and efficient portfolio management as well as investment purposes. Exchange traded and over-the-counter derivatives are permitted, including but not limited to futures, swaps, options and currency forwards. In case the Sub-fund uses derivatives, the underlying shall comply with the investment policy. Where relevant, minimum environmental or social safeguards are taken into account, by, for example, applying Robeco's Exclusion Policy for any single security derivative.

Is a specific index designated as a reference benchmark to determine whether this financial product is aligned with the environmental and/or social characteristics that it promotes?

Not applicable.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

Where can I find more product specific information online?

o) Robeco QI European Value Equities

Pre-contractual disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Product name: Robeco QI European Value Equities

Legal entity identifier: 213800SX488DS47PZG42

Environmental and/or social characteristics

Does this financial product have a sustainable investment objective?

Yes

No

It will make a minimum of **sustainable investments with an environmental objective: ___%**

- in economic activities that qualify as environmentally sustainable under the EU Taxonomy
- in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

It will make a minimum of **sustainable investments with a social objective: ___%**

It promotes **Environmental/Social (E/S) characteristics** and while it does not have as its objective a sustainable investment, it will have a minimum proportion of 50% of sustainable investments

- with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy
- with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy
- with a social objective

It promotes E/S characteristics, but **will not make any sustainable investments**

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

What environmental and/or social characteristics are promoted by this financial product?

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

The Sub-fund has the following E/S characteristics:

1. The Sub-fund promotes certain minimum environmental and social safeguards through applying exclusion criteria with regards to products and business practices that Robeco believes are detrimental to society and incompatible with sustainable investment strategies, such as exposure to controversial behaviour, controversial weapons, and fossil fuels.
2. The Sub-fund promotes having a lower environmental footprint than the general market index referred to in Appendix VI – Benchmarks (the "General Market Index"), through reduction in carbon, water and waste footprints.
3. The Sub-fund promotes adherence to and conducting business activities in accordance with the United Nations Universal Declaration of Human Rights, the International Labor Organization's (ILO) labor standards, the United Nations Guiding Principles for Business and Human Rights (UNGPs), the United Nations Global Compact (UNGC) and the OECD Guidelines for Multinational Enterprises, by scrutinizing companies that violate these principles.
4. The Sub-fund promotes having a weighted average ESG score that is better than that of the General Market Index.
5. The Sub-fund promotes having a larger share of companies with a positive SDG score (1,2,3) in the portfolio than the General Market Index.

There is no reference benchmark designated for the purpose of attaining the environmental or social characteristics promoted by the Sub-fund.

● **What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?**

The Sub-fund has the following sustainability indicators:

1. The % of investments in securities that are on Robeco's Exclusion list as result of the application of Robeco's Exclusion Policy.
2. The Sub-fund's weighted carbon, water and waste footprint score compared to the General Market Index.
3. The number of companies that are in violation of the ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises and hence are a part of the Enhanced Engagement program.
4. The Sub-fund's weighted average ESG score compared to the General Market Index.
5. The Sub-fund's weight in companies with a positive SDG score (1,2,3) compared to the General Market Index weight in companies with a positive SDG score (1,2,3).

● **What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?**

The sustainable investments aim to contribute to the UN Sustainable Development Goals ("SDGs"), that have both social and environmental objectives. These are 17 goals that are globally recognised and include environmental goals such as climate action, clean water, life on land and water and social goals such as zero hunger, gender equality, education, etc. Robeco has developed a proprietary framework based on the UN SDGs through which an issuer's contribution to such SDGs is determined through a 3-step process. This process starts with a sector baseline on which a company's products are analysed to examine contribution to the society and environment. Further, the operational processes involved in creating such products is checked along with any controversies/litigation claims and remediation actions taken which are perused before a final SDG score is determined. The final score ranges between high negative (-3) to high positive (+3) and only those issuers which achieve positive SDG scores (+1, +2 and +3) are regarded as Sustainable Investments.

● ***How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?***

The sustainable investments do no significant harm to any environmental or social sustainable investment objective by considering a principal adverse impact and aligning with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights. In addition, sustainable investments score positively on Robeco's SDG Framework, and therefore do not cause significant harm.

How have the indicators for adverse impacts on sustainability factors been taken into account?

Mandatory principal adverse impact indicators are considered through Robeco's SDG Framework, either directly or indirectly, when identifying sustainable investments for the Sub-fund. In addition, voluntary environmental and social indicators are taken into account, depending on their relevance for measuring impacts on the SDGs and the availability of data. A detailed description of the incorporation of principal adverse impacts is available via Robeco's Principal Adverse Impact Statement published on the Robeco website (<https://www.robeco.com/files/docm/docu-principal-adverse-impact-statement-summary-entity-level.pdf>). In this statement, Robeco sets out its approach to identifying and prioritizing principal adverse impacts, and how principal adverse impacts are considered as part of Robeco's investment due diligence process and procedures relating to research and analysis, exclusions and restrictions and/or voting and engagement. This description also explains how principal adverse impact indicators are considered by the SDG Framework.

How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The sustainable investments are aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights via both Robeco's Exclusion Policy and Robeco's SDG Framework.

Robeco's Exclusion Policy includes an explanation of how Robeco acts in accordance with the International Labor Organization (ILO) standards, United Nations Guiding Principles (UNGPs), United Nations Global Compact (UNGC) Principles and the Organization for Economic Co-operation and Development (OECD) Guidelines for Multinational Enterprises and is guided by these international treaties to assess the behavior of companies. Robeco continuously screens its investments for breaches of these principles. In case of a breach, the company will be excluded or engaged with, and is not considered a sustainable investment.

Robeco's SDG Framework screens for breaches on these principles in the final step of the framework. In this step, Robeco checks whether the company concerned has been involved in any controversies. Involvement in any controversy will result in a negative SDG score for the company, meaning it is not a sustainable investment.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

Does this financial product consider principal adverse impacts on sustainability factors?

Yes, _____

The Sub-fund considers principal adverse impacts on sustainability factors as referred to in Annex I of the SFDR Delegated Act.

Pre-investment, the following principal adverse impacts on sustainability factors are considered:

- Via the applied normative and activity-based exclusions, the following PAIs are considered:
 - Exposure to companies active in the fossil fuel sector (PAI 4, Table 1)
 - Violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1)
 - Activities negatively affecting biodiversity-sensitive areas (PAI 7, Table 1). The consideration of this PAI is currently restricted to applying exclusions to palm oil producing companies and for any breaches to the UNGC, UNGP and OECD Guidelines for Multinational Enterprises in relation to biodiversity.
 - Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons (PAI 14, Table 1)
- Via the environmental footprint performance targets of the Sub-fund, the following PAIs are considered:
 - Carbon footprint (PAI 2, Table 1)
 - Water and waste indicators (PAI 7-9, Table 1). Robeco will use on water and waste footprint until data quality and coverage of the PAIs will improve.

Post-investment, the following principal adverse impacts on sustainability factors are taken into account:

- Via the application of the voting policy, the following PAIs are considered:
 - All indicators related to GHG emissions (PAI 1-6, Table 1)
 - Indicators related to social and employee matters (PAI 10-13, Table 1; PAI 5-8, Table 3)

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

- o Via Robeco's entity engagement program, the following PAIs are considered:
 - All indicators related to Climate and other environment-related indicators (PAI 1-9, Table 1)
 - Violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1)
 - In addition, based on a yearly review of Robeco's performance on all mandatory and selected voluntary indicators, holdings of the Sub-fund that cause adverse impact might be selected for engagement.

More information is available via Robeco's Principal Adverse Impact Statement, published on Robeco's website. The Sub-fund will periodically report how it has considered the principal adverse impacts of its investments in the Company's annual report, which will be made available each year on or before 30 April at the Sub-fund page highlighted in final section of this document.

No

What investment strategy does this financial product follow?

Robeco QI European Value Equities is an actively managed fund that invests in stocks in European countries. The selection of these stocks is based on a quantitative model as described in the Investment policy strategy paragraph in Appendix I of this Prospectus. The strategy integrates sustainability indicators on a continuous basis as part of the stock selection process. Amongst others, the Sub-fund applies norms-based and activity-based exclusions, Robeco's good governance policy, Robeco's SDG framework and considers Principal Adverse Impacts in the investment process. More product-specific information can be found on our website and the links provided in the final question of this disclosure.

The investment strategy guides investment decisions based on factors such as investment objectives and risk tolerance.

What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?

The Sub-fund has the following binding elements:

1. The Sub-fund's portfolio complies with Robeco's Exclusion Policy (<https://www.robeco.com/files/docm/docu-exclusion-policy.pdf>), that is based on exclusion criteria with regards to products and business practices that Robeco believes are detrimental to society and incompatible with sustainable investment strategies. This means that the Sub-fund has 0% exposure to excluded securities, taking into account a grace period. Information with regards to the effects of the exclusions on the Sub-fund's universe can be found at <https://www.robeco.com/files/docm/docu-exclusion-list.pdf>
2. The Sub-fund's weighted carbon, water and waste footprint score is a better than that of the General Market Index.
3. The Sub-fund scrutinizes investment in companies that are in breach of the ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises. If a company in the portfolio breaches one of the international guidelines during the investment period, the company will become part of the Enhanced Engagement program. When engagement is deemed highly unlikely to succeed, the company might be excluded directly.
4. The Sub-fund's weighted average ESG score is better than that of the General Market Index.
5. The Sub-fund's weight in companies with a positive SDG score (1,2,3) is better than that of the General Market Index.

● **What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?**

The Sub-fund does not commit to a minimum rate to reduce the scope of investments prior to the application of the investment strategy.

● **What is the policy to assess good governance practices of the investee companies?**

Robeco has a Good Governance policy to assess governance practices of companies. The policy describes how Robeco determines if and when a company does not follow good governance practices and is therefore excluded from the initial investment universe for Article 8 and 9 products. Robeco's Good Governance policy applies to the Sub-fund and tests on a set of governance criteria that reflect widely recognized industry established norms and include topics as employee relations, management structure, tax compliance and remuneration.

The Good Governance test consists of criteria on such topics that are examined for investee companies and further explained in Robeco's Good Governance policy <https://www.robeco.com/files/docm/docu-robeco-good-governance-policy.pdf>. Additionally, the companies that do not pass the good governance test are reflected in the exclusion list that can be accessed here - <https://www.robeco.com/files/docm/docu-exclusion-list.pdf>.

Good governance practices include sound management structures, employee relations, remuneration of staff and tax compliance.

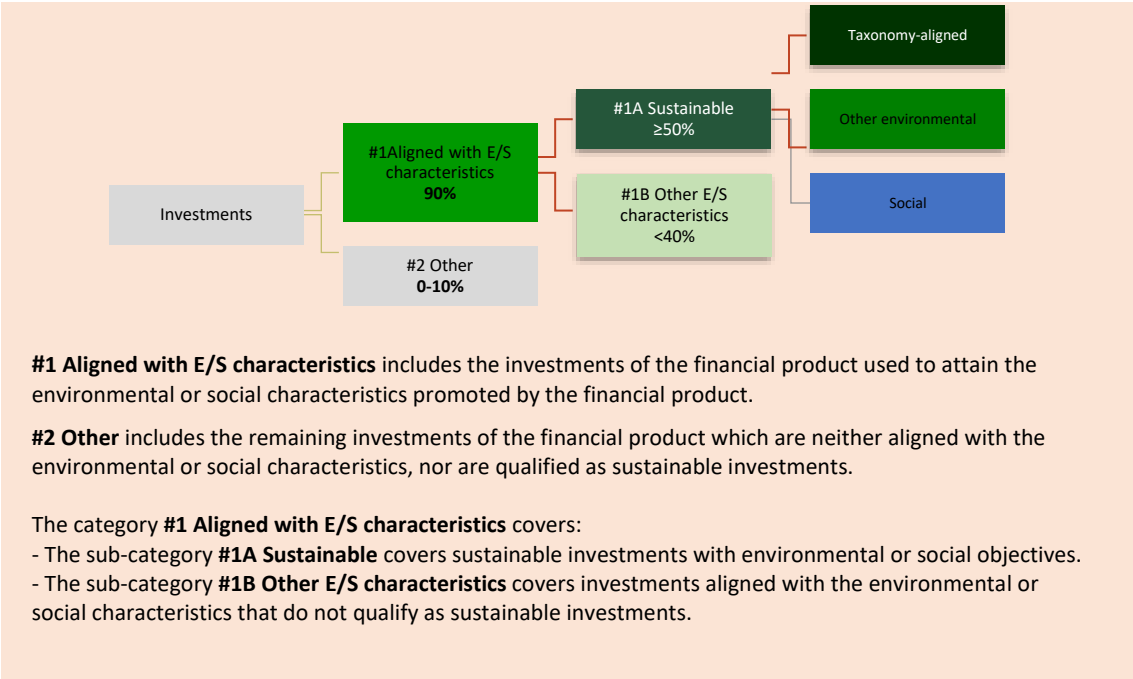

What is the asset allocation planned for this financial product?

At least 90% of the investments are aligned with the E/S characteristics of the Sub-fund. The Sub-fund plans to make a minimum of 50% sustainable investments, measured by positive scores via Robeco's SDG Framework. The investments in the category Other, estimated between 0-10%, are mostly in cash, cash equivalents and derivatives as further described below. The planned asset allocation is monitored continuously, and evaluated on a yearly basis.

Asset allocation describes the share of investments in specific assets.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure (CapEx)** showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure (OpEx)** reflecting green

operational activities of investee companies.

● **How does the use of derivatives attain the environmental or social characteristics promoted by the financial product?**

The Sub-fund does not make use of derivatives to attain the environmental or social characteristics promoted by the financial product. The Sub-fund may make use of derivatives for hedging, liquidity management and efficient portfolio management as well as investment purposes. Exchange traded and over-the-counter derivatives are permitted, including but not limited to futures, swaps, options and currency forwards. Whilst the Sub-fund may use derivatives both for investment purposes as well as for hedging and efficient portfolio management, it does not utilize derivatives for such purposes outside the intended share of investments allocated to the 'Other' category.

In case the Sub-fund uses derivatives, the underlying shall comply with the investment policy. Where relevant, minimum environmental or social safeguards are taken into account as described below.

● **To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?**

0%. The Sub-fund does not intend to make Taxonomy-aligned investments. It cannot be excluded that among the Sub-fund's holdings certain investments are Taxonomy aligned. The Sub-fund will report on Taxonomy-aligned investment in the periodic disclosures. In the future, once data-availability in relation to the EU Taxonomy will improve, Robeco might consider setting a target based on turnover or CAPEX. Robeco currently relies on third-party data, including data in relation to companies that do not disclose on the EU Taxonomy alignment of their activities. EU Taxonomy-alignment data is not yet subject to a review by third parties. The Sub-fund only makes investments in equity and therefore it does not have sovereign exposures. The expected level of alignment with and without sovereign bonds is the same.

● **Does the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy?⁴⁹**

- Yes
 - In fossil gas
 - In nuclear energy
- No

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to renewable power

⁴⁹ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

or low-carbon fuels by the end of 2035. For nuclear energy, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

 are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures
 ** As the investments are not Taxonomy-aligned, the exclusion of sovereign bonds has no impact on the graph and therefore no such percentage is shown here.

What is the minimum share of investments in transitional and enabling activities?

0%.

What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?

The Sub-fund intends to make sustainable investments, measured as positive scores via Robeco's SDG Framework. Among those could be investments with environmental objectives that do not qualify as Taxonomy-aligned. The environmental objectives of the Sub-fund are attained by investing in companies that score positively on SDG 12 (Responsible consumption and production), SDG 13 (Climate action), SDG 14 (Life below water), and SDG 15 (Life on land) in Robeco's SDG Framework. While the sum of sustainable investments with an environmental objective and socially sustainable investments always adds up to the Sub-fund's minimum proportion of 50% sustainable investments, we do not commit to a minimum share of sustainable investments with an environmental objective because the Sub-fund's investment strategy does not have a specific environmental investment objective. Therefore, the minimum share of sustainable investments with an environmental objective is 0%.

What is the minimum share of socially sustainable investments?

The Sub-fund intends to make sustainable investments, measured as positive scores via Robeco's SDG Framework. Among those could be investments with social objectives. The social objectives of the Sub-fund are attained by investing in companies that score positively on SDG 1 (No poverty), SDG 2 (Zero hunger), SDG 3 (Good health and well-being), SDG 4 (Quality education), SDG 5 (Gender equality), SDG 6 (Clear water and sanitation), SDG 7 (Affordable and clean energy), SDG 8 (Decent work and economic growth), SDG 9 (Industry, innovation and infrastructure), SDG 10 (Reduced inequalities), SDG 11 (Sustainable cities and communities), SDG 16 (Peace, justice and strong institutions) and SDG 17 (Partnerships for the goals), in Robeco's SDG Framework. While the sum of socially sustainable investments and sustainable investments with an environmental objective always adds up to the Sub-fund's minimum proportion of sustainable investments, we do not commit to a minimum share of socially sustainable investments because the Sub-fund's investment strategy does not have a specific

socially sustainable investment objective. Therefore, the minimum share of socially sustainable investments is 0%.

What investments are included under "#2 Other", what is their purpose and are there any minimum environmental or social safeguards?

The type of instruments included under "#2 Other" and their purpose are outlined in Annex I of this Prospectus under the header 'Financial instruments and investment restrictions'. They include cash, cash equivalents, as well as investment funds and eligible asset classes (other than bonds and equities) that do not specifically promote E/S characteristics. As indicated above, the Sub-fund does not make use of derivatives to attain the environmental or social characteristics promoted. The Sub-fund may make use of derivatives, which thus always fall under the category "#2 Other", for hedging, liquidity management and efficient portfolio management as well as investment purposes. Exchange traded and over-the-counter derivatives are permitted, including but not limited to futures, swaps, options and currency forwards. In case the Sub-fund uses derivatives, the underlying shall comply with the investment policy. Where relevant, minimum environmental or social safeguards are taken into account, by, for example, applying Robeco's Exclusion Policy for any single security derivative.

Is a specific index designated as a reference benchmark to determine whether this financial product is aligned with the environmental and/or social characteristics that it promotes?

Not applicable.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

Where can I find more product specific information online?

p) RobecoSAM QI US Climate Beta Equities

Pre-contractual disclosure for the financial products referred to in Article 9, paragraphs 1 to 4a, of Regulation (EU) 2019/2088 and Article 5, first paragraph, of Regulation (EU) 2020/852

Product name: RobecoSAM QI US Climate Beta Equities

Legal entity identifier: 2138002ROX4K9YH3D187

Sustainable investment objective

Does this financial product have a sustainable investment objective?

Yes

No

It will make a minimum of **sustainable investments with an environmental objective: 50%**

in economic activities that qualify as environmentally sustainable under the EU Taxonomy

in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

It will make a minimum of **sustainable investments with a social objective: 10%**

It **promotes Environmental/Social (E/S) characteristics** and while it does not have as its objective a sustainable investment, it will have a minimum proportion of ___% of sustainable investments

with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with a social objective

It promotes E/S characteristics, but **will not make any sustainable investments**

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

What is the sustainable investment objective of this financial product?

Sustainability indicators measure how the sustainable objectives of this financial product are attained.

The sustainable investments of the Sub-fund aims to reduce the carbon footprint of the portfolio and thereby contribute towards the goals of the Paris agreement to keep the maximum global temperature rise well-below 2°C.

The Sub-fund has a carbon-reduction objective and uses the MSCI US Climate Paris Aligned Index to monitor the carbon profile of the Sub-fund. The sustainable investments contribute partly to the environmental objective of Climate Mitigation under the Taxonomy regulation.

● ***What sustainability indicators are used to measure the attainment of the sustainable investment objective of this financial product?***

The Sub-fund has the following sustainability indicators:

1. The number of holdings and agenda items voted.
2. The Sub-fund's weighted carbon footprint score compared to the Paris aligned benchmark.
3. The Sub-fund's weighted water and waste footprint score compared to the general market index referred to in Appendix VI – Benchmarks (the "General Market Index").
4. The % of investments in securities that are on Robeco's Exclusion list as result of the application of the Robeco's Exclusion Policy.
5. The number of companies that are in violation of the UNGPs or OECD Guidelines for Multinational Enterprises.
6. The Sub-fund's weighted average ESG score compared to the General Market Index.
7. The proportion of companies that hold a high or medium negative SDG score (-3 or -2) based on the internally developed SDG Framework.
8. The Sub-fund's weight in companies with a positive SDG score (1,2,3) compared to the General Market Index weight in companies with a positive SDG score (1,2,3).

● ***How do sustainable investments not cause significant harm to any environmental or social sustainable investment objective?***

The sustainable investments do no significant harm to any environmental or social sustainable investment objective by considering a principal adverse impact and aligning with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights. In addition, sustainable investments made through the Paris Aligned Benchmark follow eligibility requirements as per Article 12 of the EU regulation EU Paris-aligned Benchmarks and sustainability-related disclosures for benchmarks and follows Robeco's Exclusion policy. In accordance with Robeco's SDG framework, any off benchmark investments are only considered by the Sub-fund when they have a positive contribution to the UN SDGs and therefore not cause significant harm to any environmental or social sustainable investment objective.

How have the indicators for adverse impacts on sustainability factors been taken into account?

All sustainable investments are constituents of Paris-Aligned Benchmark, or follow the benchmark methodology. The benchmark methodology directly assesses the following PAI indicators:

- Table 1, PAI 2 (Carbon Footprint)
- Table 1, PAI 4 (Exposure to companies in the fossil fuel sector)
- Table 1, PAI 10 (Violations of the UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises)
- Table 1, PAI 14 (Exposure to controversial weapons)

Post-investment, the Sub-fund assesses the performance on all mandatory PAI indicators on a regular basis.

A detailed description of the incorporation of principal adverse impacts is available via Robeco's Principal Adverse Impact Statement published on the Robeco website (<https://www.robeco.com/files/docm/docu-principal-adverse-impact-statement-summary-entity-level.pdf>).

How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights?

The sustainable investments are aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights via both Robeco's Exclusion Policy as well as the methodology of the benchmark provider.

Does this financial product consider principal adverse impacts on sustainability factors?

Yes, _____

The Sub-fund considers principal adverse impacts on sustainability factors as referred to in Annex 1 of the SFDR Delegated Act.

Pre-investment, the following principal adverse impacts on sustainability factors are considered:

- Via the applied normative and activity-based exclusions, the following PAIs are considered:
 - Exposure to companies active in the fossil fuel sector (PAI 4, Table 1)
 - Violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1)
 - Activities negatively affecting biodiversity-sensitive areas (PAI 7, Table 1). The consideration of this PAI is currently restricted to applying exclusions to palm oil producing companies and for any breaches to the UNGC, UNGP and OECD Guidelines for Multinational Enterprises in relation to biodiversity.
 - Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons (PAI 14, Table 1)
- Via the environmental footprint performance targets of the Sub-fund, the following PAIs are considered:
 - Carbon footprint (PAI 2, Table 1), via the Paris-Aligned Benchmark
 - Water and waste indicators (PAI 8-9, Table 1). Robeco will use on water and waste footprint until data quality and coverage of the PAIs will improve.

Post-investment, the following principal adverse impacts on sustainability factors are taken into account:

- Via the application of the voting policy, the following PAIs are considered:
 - All indicators related to GHG emissions (PAI 1-6, Table 1)
 - Indicators related to social and employee matters (PAI 10-13, Table 1; PAI 5-8, Table 3)
- Via Robeco's entity engagement program, the following PAIs are considered:
 - All indicators related to Climate and other environment-related indicators (PAI 1-9, Table 1)
 - Violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1)
 - Activities negatively affecting biodiversity sensitive areas (PAI 7, Table 1). The consideration of this PAI is currently restricted to applying exclusions to palm oil producing companies and

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

for any breaches to the UNGC, UNGP and OECD Guidelines for Multinational Enterprises in relation to biodiversity.

- In addition, based on a yearly review of Robeco's performance on all mandatory and selected voluntary indicators, holdings of the Sub-fund that cause adverse impact might be selected for engagement

More information is available via Robeco's Principal Adverse Impact Statement, published on Robeco's website. The Sub-fund will periodically report how it has considered the principal adverse impacts of its investments in the Company's annual report, which will be made available each year on or before 30 April at the Sub-fund page highlighted in final section of this document.

No

What investment strategy does this financial product follow?

RobecoSAM QI US Climate Beta Equities is an actively managed fund that invests in equities of companies in the United States of America. The selection of these stocks is based on a quantitative model as described in the Investment policy strategy paragraph in Appendix I of this Prospectus.

Beta stands for the investment management approach of the Sub-fund that follows the sole purpose of pursuing the sustainable investment objective of the Sub-fund. The strategy integrates sustainability indicators on a continuous basis as part of the stock selection process. Amongst others, the Sub-fund applies norms-based and activity-based exclusions, Robeco's good governance policy, Robeco's SDG framework and considers Principal Adverse Impacts in the investment process. More product-specific information can be found on our website and the links provided in the final question of this disclosure.

What are the binding elements of the investment strategy used to select the investments to attain the sustainable investment objective?

The Sub-fund has the following binding elements:

1. All equity holdings have a granted right to vote and Robeco exerts that right by voting according to Robeco's Proxy Voting Policy, unless impediments occur (e.g. share blocking or when not considered cost efficient). Robeco's Proxy Voting Policy can be found at <https://www.robeco.com/files/docm/docu-robeco-stewardship-policy.pdf>
2. The Sub-fund's weighted carbon footprint score is better than that of the Paris aligned benchmark.
3. The Sub-fund's weighted water and waste footprint score is at least 20% better than that of the General Market Index.
4. The Sub-fund fully complies with activity based exclusions with regards to products (including controversial weapons, tobacco, palm oil, and thermal coal, upstream oil and gas and electricity producers in line with Article 12 of the EU regulation Climate Transition Benchmarks, EU Paris-aligned Benchmarks and sustainability-related disclosures for benchmarks) as applicable. In addition, the Sub-fund's portfolio complies with Robeco's Exclusion Policy (<https://www.robeco.com/files/docm/docu-exclusion-policy.pdf>), that is based on exclusion criteria with regards to products and business practices that Robeco believes are detrimental to society and incompatible with sustainable investment strategies. This means that the Sub-fund has 0% exposure to excluded securities, taking into account a

The investment strategy guides investment decisions based on factors such as investment objectives and risk tolerance.

grace period. Information with regards to the effects of the exclusions on the Sub-fund's universe can be found at <https://www.robeco.com/files/docm/docu-exclusion-list.pdf>

5. The Sub-fund avoids investment in companies that are in breach of the ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises. Companies that breach these international norms will be excluded from the investment universe.
6. The Sub-fund's weighted average ESG score is at least 10% better than that of the General Market Index.
7. The Sub-fund excludes all high or medium negative SDG scores (-3 or -2).
8. The Sub-fund's weight in companies with a positive SDG score (1,2,3) is at least 20% better than that of the General Market Index, measured as a ratio.

What is the policy to assess good governance practices of the investee companies?

Robeco has a Good Governance policy to assess governance practices of companies. The policy describes how Robeco determines if and when a company does not follow good governance practices and is therefore excluded from the initial investment universe for Article 8 and 9 products. Robeco's Good Governance policy applies to the Sub-fund and tests on a set of governance criteria that reflect widely recognized industry established norms and include topics as employee relations, management structure, tax compliance and remuneration.

The Good Governance test consists of criteria on such topics that are examined for investee companies and further explained in Robeco's Good Governance policy <https://www.robeco.com/files/docm/docu-robeco-good-governance-policy.pdf>. Additionally, the companies that do not pass the good governance test are reflected in the exclusion list that can be accessed here - <https://www.robeco.com/files/docm/docu-exclusion-list.pdf>.

Good governance practices include sound management structures, employee relations, remuneration of staff and tax compliance.

What is the asset allocation and the minimum share of sustainable investments?

The Sub-fund plans to make a minimum of 90% sustainable investments, measured by the by holdings that are part of the Paris Aligned Benchmark or follow the methodology of the Paris Aligned Benchmark. The investments in the category non-sustainable, estimated between 0-10%, are in cash and cash equivalents. The planned asset allocation is monitored continuously, and evaluated on a yearly basis.

Asset allocation describes the share of investments in specific assets.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g.

How does the use of derivatives attain the sustainable investment objective?

for a transition to a green economy.

- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

The Sub-fund does not make use of derivatives to attain the sustainable objective promoted by the financial product. The Sub-fund may make use of derivatives for hedging and liquidity management. This includes the usage of derivatives to manage currency and market exposures in a cost-effective manner. To that purpose exchange traded and over-the-counter derivatives linked to equity indices and currencies are permitted.

In case the Sub-fund uses derivatives, the underlying shall comply with the investment policy. Where relevant, minimum environmental or social safeguards are taken into account.

To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

The Sub-fund intends to contribute to the climate change mitigation objective under the EU Taxonomy. The Sub-fund commits to a minimum share of 0% of Taxonomy-aligned activities. The Sub-fund intends to increase the minimum share of Taxonomy aligned activities for the Sub-fund once data availability in relation to the EU Taxonomy improves and stabilises.

The Sub-fund will report on Taxonomy-aligned investment in the periodic disclosures. In the future, once data-availability in relation to the EU Taxonomy will improve, Robeco might consider setting a target based on turnover or CAPEX. Robeco currently relies on third-party data in relation to the EU Taxonomy, including data in relation to companies that do not disclose on the EU Taxonomy alignment of their activities. EU Taxonomy-alignment data is not yet subject to a review by third parties. Given the current commitment, the expected level of alignment with and without sovereign bonds is the same.

Does the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy⁵⁰?

Yes:

In fossil gas

In nuclear energy

No

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power

⁵⁰ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

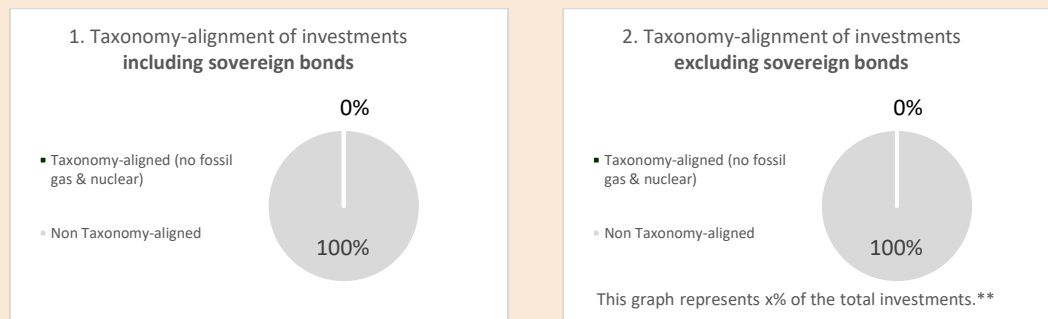

or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

 are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

*** For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures**
**** As the investments are not Taxonomy-aligned, the exclusion of sovereign bonds has no impact on the graph and therefore no such percentage is shown here.**

What is the minimum share of investments in transitional and enabling activities?

0%.

What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?

The Sub-fund makes sustainable investments with environmental objectives that do not qualify as Taxonomy-aligned. Given the Sub-fund's investment strategy and the specific environmental investment objective, the Sub-fund commits to a minimum share of sustainable investments of 50% with an environmental objective. The environmental objectives of the Sub-fund are attained by investing in companies, in line with a low carbon scenario stipulated by the Paris aligned benchmark methodology.

In addition, the Sub-fund intends to make sustainable investments off-benchmark, measured as positive scores via Robeco's SDG Framework. Among those could be sustainable investments with environmental objectives which are companies that score positively on SDG 12 (Responsible consumption and production), SDG 13 (Climate action), SDG 14 (Life below water), and SDG 15 (Life on land) in Robeco's SDG Framework.

The sum of sustainable investments with an environmental objective and socially sustainable investments will always add up to the Sub-fund's minimum proportion of 90% sustainable investments.

What is the minimum share of sustainable investments with a social objective?

Within the off-benchmark holdings (i.e. holdings that are not part of the Paris Aligned Benchmark), the Sub-fund intends to make sustainable investments with a social objective. Given the Sub-fund's investment strategy and the specific social investment objective, the Sub-fund commits to a minimum

share of sustainable investments of 10% with a social objective, measured by off-benchmark holdings that have a positive score via Robeco's SDG Framework. The social objectives of the Sub-fund are attained by investing in companies that score positively on SDG 1 (No poverty), SDG 2 (Zero hunger), SDG 3 (Good health and well-being), SDG 4 (Quality education), SDG 5 (Gender equality), SDG 6 (Clear water and sanitation), SDG 7 (Affordable and clean energy), SDG 8 (Decent work and economic growth), SDG 9 (Industry, innovation and infrastructure), SDG 10 (Reduced inequalities), SDG 11 (Sustainable cities and communities), SDG 16 (Peace, justice and strong institutions) and SDG 17 (Partnerships for the goals), in Robeco's SDG Framework.

The sum of socially sustainable investments and sustainable investments with an environmental objective will always add up to the Sub-fund's minimum proportion of 90% sustainable investments.

What investments are included under "#2 Not sustainable", what is their purpose and are there any minimum environmental or social safeguards?

The type of instruments included under "#2 Not Sustainable" and their purpose are outlined in Annex I of this Prospectus under the header 'Financial instruments and investment restrictions'. They include cash, cash equivalents, as well as investment funds and eligible asset classes (other than bonds and equities) that do not specifically promote E/S characteristics. As indicated above, the Sub-fund does not make use of derivatives to attain its sustainable objective. The Sub-fund may make use of derivatives for hedging and liquidity management. This includes the usage of derivatives to manage currency and market exposures in a cost-effective manner. For the management of currency exposure FX Forwards are allowed. The exchange traded derivatives linked to equity indices, such as equity index futures covering the market universe, are permitted for cash equitization. In case the Sub-fund uses such index market derivatives, these shall be temporary positions as defined by the investment restrictions. Where relevant, minimum environmental or social safeguards are taken into account by monitoring and performing suitability tests on index futures constituents following Robeco's Exclusion Policy.

Is a specific index designated as a reference benchmark to meet the sustainable investment objective?

Yes, the Sub-fund uses the MSCI US Climate Paris Aligned Index as a reference index to meet the carbon footprint reduction objective of the Sub-fund and thereby keeping the maximum global temperature rise well-below 2°C.

Reference benchmarks are indexes to measure whether the financial product attains the sustainable investment objective.

How does the reference benchmark take into account sustainability factors in a way that is continuously aligned with the sustainable investment objective?

The MSCI EU PAB Overlay Indices are constructed from their corresponding Parent Indexes using an optimization-based approach and aim to:

- Reduce the weighted average greenhouse gas intensity by 50% compared to the underlying investment universe.
- Achieve a modest tracking error compared to the Parent Index and low turnover.
- Exclude companies based on the following criteria: Companies involved in Controversial Weapons businesses, Very Severe ESG Controversies, Severe Environmental Controversies, Tobacco Manufacturing, Thermal Coal, Oil & Gas and Fossil Fuel-based power generation.

How is the alignment of the investment strategy with the methodology of the index ensured on a continuous basis?

The methodology of the reference index follows rebalancing rules which ensures alignment with the investment strategy and objective of the Sub-fund.

The index uses data such as MSCI Climate Change Metrics, MSCI ESG Controversies and MSCI Business Involvement Screening Research) as of the end of the month, preceding the Index Reviews, for the rebalancing of the index.

The Sub-fund follows a rebalancing strategy which ensures that the carbon footprint of the Sub-fund is better than that of the reference index. This in turn ensures that the investment strategy of the Sub-fund aligns with the methodology of the reference index. The methodology of the reference index takes into account a decarbonization trajectory of at least 7% GHG intensity per annum along with specific sector or activity exclusions and including involvement in controversial weapons.

● ***How does the designated index differ from a relevant broad market index?***

The benchmark differs from a broad general market index in that the latter does not take into account in its methodology any criteria on the carbon reduction objective and carbon footprint of companies.

● ***Where can the methodology used for the calculation of the designated index be found?***

The index methodology can be found on the relevant webpages by the index provider: <https://www.msci.com>

Where can I find more product specific information online?

q) Robeco QI European Active Equities

Pre-contractual disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Product name: Robeco QI European Active Equities

Legal entity identifier: 213800SATZYOKMAPLJ87

Environmental and/or social characteristics

Does this financial product have a sustainable investment objective?

Yes

No

It will make a minimum of **sustainable investments with an environmental objective: ___%**

- in economic activities that qualify as environmentally sustainable under the EU Taxonomy
- in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

It will make a minimum of **sustainable investments with a social objective: ___%**

It promotes **Environmental/Social (E/S) characteristics** and while it does not have as its objective a sustainable investment, it will have a minimum proportion of 50% of sustainable investments

- with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy
- with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy
- with a social objective

It promotes E/S characteristics, but **will not make any sustainable investments**

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

What environmental and/or social characteristics are promoted by this financial product?

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

The Sub-fund has the following E/S characteristics:

1. The Sub-fund promotes certain minimum environmental and social safeguards through applying exclusion criteria with regards to products and business practices that Robeco believes are detrimental to society and incompatible with sustainable investment strategies, such as exposure to controversial behaviour, controversial weapons, and fossil fuels.
2. The Sub-fund promotes having a lower environmental footprint than the general market index referred to in Appendix VI – Benchmarks (the "General Market Index"), through reduction in carbon, water and waste footprints.
3. The Sub-fund promotes adherence to and conducting business activities in accordance with the United Nations Universal Declaration of Human Rights, the International Labor Organization's (ILO) labor standards, the United Nations Guiding Principles for Business and Human Rights (UNGPs), the United Nations Global Compact (UNGC) and the OECD Guidelines for Multinational Enterprises, by scrutinizing companies that violate these principles.
4. The Sub-fund promotes having a weighted average ESG score that is better than that of the General Market Index.
5. The Sub-fund promotes having a larger share of companies with a positive SDG score (1,2,3) in the portfolio than the General Market Index.

There is no reference benchmark designated for the purpose of attaining the environmental or social characteristics promoted by the Sub-fund.

What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?

The Sub-fund has the following sustainability indicators:

1. The % of investments in securities that are on Robeco's Exclusion list as result of the application of Robeco's Exclusion Policy.
2. The Sub-fund's weighted carbon, water and waste footprint score compared to the General Market Index.
3. The number of companies that are in violation of the ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises and hence are a part of the Enhanced Engagement program.
4. The Sub-fund's weighted average ESG score compared to the General Market Index.
5. The Sub-fund's weight in companies with a positive SDG score (1,2,3) compared to the General Market Index weight in companies with a positive SDG score (1,2,3).

What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?

The sustainable investments aim to contribute to the UN Sustainable Development Goals ("SDGs"), that have both social and environmental objectives. These are 17 goals that are globally recognised and include environmental goals such as climate action, clean water, life on land and water and social goals such as zero hunger, gender equality, education, etc. Robeco has developed a proprietary framework based on the UN SDGs through which an issuer's contribution to such SDGs is determined through a 3-step process. This process starts with a sector baseline on which a company's products are analysed to examine contribution to the society and environment. Further, the operational processes involved in creating such products is checked along with any controversies/litigation claims and remediation actions taken which are perused before a final SDG score is determined. The final score ranges between high negative (-3) to high positive (+3) and only those issuers which achieve positive SDG scores (+1, +2 and +3) are regarded as Sustainable Investments.

● ***How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?***

The sustainable investments do no significant harm to any environmental or social sustainable investment objective by considering a principal adverse impact and aligning with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights. In addition, sustainable investments score positively on Robeco's SDG Framework, and therefore do not cause significant harm.

How have the indicators for adverse impacts on sustainability factors been taken into account?

Mandatory principal adverse impact indicators are considered through Robeco's SDG Framework, either directly or indirectly, when identifying sustainable investments for the Sub-fund. In addition, voluntary environmental and social indicators are taken into account, depending on their relevance for measuring impacts on the SDGs and the availability of data. A detailed description of the incorporation of principal adverse impacts is available via Robeco's Principal Adverse Impact Statement published on the Robeco website (<https://www.robeco.com/files/docm/docu-principal-adverse-impact-statement-summary-entity-level.pdf>). In this statement, Robeco sets out its approach to identifying and prioritizing principal adverse impacts, and how principal adverse impacts are considered as part of Robeco's investment due diligence process and procedures relating to research and analysis, exclusions and restrictions and/or voting and engagement. This description also explains how principal adverse impact indicators are considered by the SDG Framework.

How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The sustainable investments are aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights via both Robeco's Exclusion Policy and Robeco's SDG Framework.

Robeco's Exclusion Policy includes an explanation of how Robeco acts in accordance with the International Labor Organization (ILO) standards, United Nations Guiding Principles (UNGPs), United Nations Global Compact (UNGC) Principles and the Organization for Economic Co-operation and Development (OECD) Guidelines for Multinational Enterprises and is guided by these international treaties to assess the behavior of companies. Robeco continuously screens its investments for breaches of these principles. In case of a breach, the company will be excluded or engaged with, and is not considered a sustainable investment.

Robeco's SDG Framework screens for breaches on these principles in the final step of the framework. In this step, Robeco checks whether the company concerned has been involved in any controversies. Involvement in any controversy will result in a negative SDG score for the company, meaning it is not a sustainable investment.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

Does this financial product consider principal adverse impacts on sustainability factors?

Yes, _____

The Sub-fund considers principal adverse impacts on sustainability factors as referred to in Annex I of the SFDR Delegated Act.

Pre-investment, the following principal adverse impacts on sustainability factors are considered:

- Via the applied normative and activity-based exclusions, the following PAIs are considered:
 - Exposure to companies active in the fossil fuel sector (PAI 4, Table 1)
 - Violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1)
 - Activities negatively affecting biodiversity-sensitive areas (PAI 7, Table 1). The consideration of this PAI is currently restricted to applying exclusions to palm oil producing companies and for any breaches to the UNGC, UNGP and OECD Guidelines for Multinational Enterprises in relation to biodiversity.
 - Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons (PAI 14, Table 1)
- Via the environmental footprint performance targets of the Sub-fund, the following PAIs are considered:
 - Carbon footprint (PAI 2, Table 1)
 - Water and waste indicators (PAI 7-9, Table 1). Robeco will use on water and waste footprint until data quality and coverage of the PAIs will improve.

Post-investment, the following principal adverse impacts on sustainability factors are taken into account:

- Via Robeco's entity engagement program, the following PAIs are considered:
 - All indicators related to Climate and other environment-related indicators (PAI 1-9, Table 1)

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

- Violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1)
- In addition, based on a yearly review of Robeco's performance on all mandatory and selected voluntary indicators, holdings of the Sub-fund that cause adverse impact might be selected for engagement.

More information is available via Robeco's Principal Adverse Impact Statement, published on Robeco's website. The Sub-fund will periodically report how it has considered the principal adverse impacts of its investments in the Company's annual report, which will be made available each year on or before 30 April at the Sub-fund page highlighted in final section of this document.

No

What investment strategy does this financial product follow?

Robeco QI European Active Equities is an actively managed fund that invests in stocks of companies in Europe. The selection of these stocks is based on a quantitative model as described in the Investment policy strategy paragraph in Appendix I of this Prospectus. The strategy integrates sustainability indicators on a continuous basis as part of the stock selection process. Amongst others, the Sub-fund applies norms-based and activity-based exclusions, Robeco's good governance policy, Robeco's SDG framework and considers Principal Adverse Impacts in the investment process. More product-specific information can be found on our website and the links provided in the final question of this disclosure.

The investment strategy guides investment decisions based on factors such as investment objectives and risk tolerance.

What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?

The Sub-fund has the following binding elements:

1. The Sub-fund's portfolio complies with Robeco's Exclusion Policy (<https://www.robeco.com/files/docm/docu-exclusion-policy.pdf>), that is based on exclusion criteria with regards to products and business practices that Robeco believes are detrimental to society and incompatible with sustainable investment strategies. This means that the Sub-fund has 0% exposure to excluded securities, taking into account a grace period. Information with regards to the effects of the exclusions on the Sub-fund's universe can be found at <https://www.robeco.com/files/docm/docu-exclusion-list.pdf>
2. The Sub-fund's weighted carbon, water and waste footprint score is a better than that of the General Market Index.
3. The Sub-fund scrutinizes investment in companies that are in breach of the ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises. If a company in the portfolio breaches one of the international guidelines during the investment period, the company will become part of the Enhanced Engagement program. When engagement is deemed highly unlikely to succeed, the company might be excluded directly.
4. The Sub-fund's weighted average ESG score is better than that of the General Market Index.
5. The Sub-fund's weight in companies with a positive SDG score (1,2,3) is better than that of the General Market Index.

● **What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?**

The Sub-fund does not commit to a minimum rate to reduce the scope of investments prior to the application of the investment strategy.

● **What is the policy to assess good governance practices of the investee companies?**

Robeco has a Good Governance policy to assess governance practices of companies. The policy describes how Robeco determines if and when a company does not follow good governance practices and is therefore excluded from the initial investment universe for Article 8 and 9 products. Robeco's Good Governance policy applies to the Sub-fund and tests on a set of governance criteria that reflect widely recognized industry established norms and include topics as employee relations, management structure, tax compliance and remuneration.

The Good Governance test consists of criteria on such topics that are examined for investee companies and further explained in Robeco's Good Governance policy <https://www.robeco.com/files/docm/docu-robeco-good-governance-policy.pdf>. Additionally, the companies that do not pass the good governance test are reflected in the exclusion list that can be accessed here - <https://www.robeco.com/files/docm/docu-exclusion-list.pdf>.

Good governance practices include sound management structures, employee relations, remuneration of staff and tax compliance.

What is the asset allocation planned for this financial product?

At least 90% of the investments are aligned with the E/S characteristics of the Sub-fund. The Sub-fund plans to make a minimum of 50% sustainable investments, measured by positive scores via Robeco's SDG Framework. The investments in the category Other, estimated between 0-10%, are mostly in cash, cash equivalents and derivatives as further described below. The planned asset allocation is monitored continuously, and evaluated on a yearly basis.

Asset allocation describes the share of investments in specific assets. Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green

operational activities of investee companies.

● **How does the use of derivatives attain the environmental or social characteristics promoted by the financial product?**

The Sub-fund does not make use of derivatives to attain the environmental or social characteristics promoted by the financial product. The Sub-fund may make use of derivatives for hedging, liquidity management and efficient portfolio management as well as investment purposes. Exchange traded and over-the-counter derivatives are permitted, including but not limited to futures, swaps, options and currency forwards. Whilst the Sub-fund may use derivatives both for investment purposes as well as for hedging and efficient portfolio management, it does not utilize derivatives for such purposes outside the intended share of investments allocated to the 'Other' category.

In case the Sub-fund uses derivatives, the underlying shall comply with the investment policy. Where relevant, minimum environmental or social safeguards are taken into account as described below.

● **To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?**

0%. The Sub-fund does not intend to make Taxonomy-aligned investments. It cannot be excluded that among the Sub-fund's holdings certain investments are Taxonomy aligned. The Sub-fund will report on Taxonomy-aligned investment in the periodic disclosures. In the future, once data-availability in relation to the EU Taxonomy will improve, Robeco might consider setting a target based on turnover or CAPEX. Robeco currently relies on third-party data, including data in relation to companies that do not disclose on the EU Taxonomy alignment of their activities. EU Taxonomy-alignment data is not yet subject to a review by third parties. The Sub-fund only makes investments in equity and therefore it does not have sovereign exposures. The expected level of alignment with and without sovereign bonds is the same.

● **Does the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy?⁵¹**

Yes

In fossil gas

In nuclear energy

No

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to renewable power

⁵¹ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

or low-carbon fuels by the end of 2035. For nuclear energy, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

 are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

** As the investments are not Taxonomy-aligned, the exclusion of sovereign bonds has no impact on the graph and therefore no such percentage is shown here.

What is the minimum share of investments in transitional and enabling activities?

0%.

What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?

The Sub-fund intends to make sustainable investments, measured as positive scores via Robeco's SDG Framework. Among those could be investments with environmental objectives that do not qualify as Taxonomy-aligned. The environmental objectives of the Sub-fund are attained by investing in companies that score positively on SDG 12 (Responsible consumption and production), SDG 13 (Climate action), SDG 14 (Life below water), and SDG 15 (Life on land) in Robeco's SDG Framework. While the sum of sustainable investments with an environmental objective and socially sustainable investments always adds up to the Sub-fund's minimum proportion of 50% sustainable investments, we do not commit to a minimum share of sustainable investments with an environmental objective because the Sub-fund's investment strategy does not have a specific environmental investment objective. Therefore, the minimum share of sustainable investments with an environmental objective is 0%.

What is the minimum share of socially sustainable investments?

The Sub-fund intends to make sustainable investments, measured as positive scores via Robeco's SDG Framework. Among those could be investments with social objectives. The social objectives of the Sub-fund are attained by investing in companies that score positively on SDG 1 (No poverty), SDG 2 (Zero hunger), SDG 3 (Good health and well-being), SDG 4 (Quality education), SDG 5 (Gender equality), SDG 6 (Clean water and sanitation), SDG 7 (Affordable and clean energy), SDG 8 (Decent work and economic growth), SDG 9 (Industry, innovation and infrastructure), SDG 10 (Reduced inequalities), SDG 11 (Sustainable cities and communities), SDG 16 (Peace, justice and strong institutions) and SDG 17 (Partnerships for the goals), in Robeco's SDG Framework. While the sum of socially sustainable investments and sustainable investments with an environmental objective always adds up to the Sub-fund's minimum proportion of sustainable investments, we do not commit to a minimum share of socially sustainable investments because the Sub-fund's investment strategy does not have a specific

socially sustainable investment objective. Therefore, the minimum share of socially sustainable investments is 0%.

What investments are included under "#2 Other", what is their purpose and are there any minimum environmental or social safeguards?

The type of instruments included under "#2 Other" and their purpose are outlined in Annex I of this Prospectus under the header 'Financial instruments and investment restrictions'. They include cash, cash equivalents, as well as investment funds and eligible asset classes (other than bonds and equities) that do not specifically promote E/S characteristics. As indicated above, the Sub-fund does not make use of derivatives to attain the environmental or social characteristics promoted. The Sub-fund may make use of derivatives, which thus always fall under the category "#2 Other", for hedging, liquidity management and efficient portfolio management as well as investment purposes. Exchange traded and over-the-counter derivatives are permitted, including but not limited to futures, swaps, options and currency forwards. In case the Sub-fund uses derivatives, the underlying shall comply with the investment policy. Where relevant, minimum environmental or social safeguards are taken into account, by, for example, applying Robeco's Exclusion Policy for any single security derivative.

Is a specific index designated as a reference benchmark to determine whether this financial product is aligned with the environmental and/or social characteristics that it promotes?

Not applicable.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

Where can I find more product specific information online?

3. THEME EQUITY SUB-FUNDS

a) Robeco New World Financials

Pre-contractual disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Product name: Robeco New World Financials

Legal entity identifier: 213800WE9J70V8DOET07

Environmental and/or social characteristics

Does this financial product have a sustainable investment objective?

Yes

No

It will make a minimum of **sustainable investments with an environmental objective:** ___%

- in economic activities that qualify as environmentally sustainable under the EU Taxonomy
- in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

It will make a minimum of **sustainable investments with a social objective:** ___%

It **promotes Environmental/Social (E/S) characteristics** and while it does not have as its objective a sustainable investment, it will have a minimum proportion of 35% of sustainable investments

- with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy
- with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy
- with a social objective

It promotes E/S characteristics, but **will not make any sustainable investments**

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

What environmental and/or social characteristics are promoted by this financial product?

The Sub-fund has the following E/S characteristics:

1. The Sub-fund promotes certain minimum environmental and social safeguards through applying exclusion criteria with regards to products and business practices that Robeco believes are detrimental to society and incompatible with sustainable investment strategies, such as exposure to controversial behaviour, controversial weapons, and fossil fuels.
2. The Sub-fund promotes adherence to and conducting business activities in accordance with the United Nations Universal Declaration of Human Rights, the International Labor Organization's (ILO) labor standards, the United Nations Guiding Principles for Business and Human Rights (UNGPs), the United Nations Global Compact (UNGC) and the OECD Guidelines for Multinational Enterprises, by scrutinizing companies that violate these principles.
3. The Sub-fund promotes good governance and sustainable corporate practices through proxy voting, which contributes to long-term shareholder value creation. This includes taking an active stance on social and environmental topics through Robeco's proxy voting policy.
4. The Sub-fund limits investing in companies with an elevated sustainability risk based on ESG risk scores whereas all such investments require separate approval of a dedicated committee that oversees that all investments are substantiated and eligible based on a fundamental review on the sustainability risk.
5. The Sub-fund applies negative screening.

There is no reference benchmark designated for the purpose of attaining the environmental or social characteristics promoted by the Sub-fund.

● **What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?**

The Sub-fund has the following sustainability indicators:

1. The % of investments in securities that are on Robeco's Exclusion list as result of the application of Robeco's Exclusion Policy.
2. The number of companies that are in violation of the ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises and hence are a part of the Enhanced Engagement program.
3. The number of holdings and agenda items voted.
4. The % of holdings with an elevated sustainability risk profile.
5. The % of worst ESG performers excluded from the investment universe.

● **What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?**

The sustainable investments aim to contribute to the UN Sustainable Development Goals ("SDGs"), that have both social and environmental objectives. These are 17 goals that are globally recognised and include environmental goals such as climate action, clean water, life on land and water and social goals such as zero hunger, gender equality, education, etc. Robeco has developed a proprietary framework based on the UN SDGs through which an issuer's contribution to such SDGs is determined through a 3-step process. This process starts with a sector baseline on which a company's products are analysed to examine contribution to the society and environment. Further, the operational processes involved in creating such products is checked along with any controversies/litigation claims and remediation actions taken which are perused before a final SDG score is determined. The final score ranges between high negative (-3) to high positive (+3) and only those issuers which achieve positive SDG scores (+1, +2 and, +3) are regarded as Sustainable Investments.

● ***How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?***

The sustainable investments do no significant harm to any environmental or social sustainable investment objective by considering a principal adverse impact and aligning with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights. In addition, sustainable investments score positively on Robeco's SDG Framework, and therefore do not cause significant harm.

How have the indicators for adverse impacts on sustainability factors been taken into account?

Mandatory principal adverse impact indicators are considered through Robeco's SDG Framework, either directly or indirectly, when identifying sustainable investments for the Sub-fund. In addition, voluntary environmental and social indicators are taken into account, depending on their relevance for measuring impacts on the SDGs and the availability of data. A detailed description of the incorporation of principal adverse impacts is available via Robeco's Principal Adverse Impact Statement published on the Robeco website (<https://www.robeco.com/files/docm/docu-principal-adverse-impact-statement-summary-entity-level.pdf>). In this statement, Robeco sets out its approach to identifying and prioritizing principal adverse impacts, and how principal adverse impacts are considered as part of Robeco's investment due diligence process and procedures relating to research and analysis, exclusions and restrictions and/or voting and engagement. This description also explains how principal adverse impact indicators are considered by the SDG Framework.

How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The sustainable investments are aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights via both Robeco's Exclusion Policy and Robeco's SDG Framework.

Robeco's Exclusion Policy includes an explanation of how Robeco acts in accordance with the International Labor Organization (ILO) standards, United Nations Guiding Principles (UNGPs), United Nations Global Compact (UNGC) Principles and the Organization for Economic Co-operation and Development (OECD) Guidelines for Multinational Enterprises and is guided by these international treaties to assess the behavior of companies. Robeco continuously screens its investments for breaches of these principles. In case of a breach, the company will be excluded or engaged with, and is not considered a sustainable investment.

Robeco's SDG Framework screens for breaches on these principles in the final step of the framework. In this step, Robeco checks whether the company concerned has been involved in any controversies. Involvement in any controversy will result in a negative SDG score for the company, meaning it is not a sustainable investment.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

Does this financial product consider principal adverse impacts on sustainability factors?

Yes, _____

The Sub-fund considers principal adverse impacts on sustainability factors as referred to in Annex I of the SFDR Delegated Act.

Pre-investment, the following principal adverse impacts on sustainability factors are considered:

- Via the applied normative and activity-based exclusions, the following PAIs are considered:
 - Exposure to companies active in the fossil fuel sector (PAI 4, Table 1)
 - Violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1)
 - Activities negatively affecting biodiversity-sensitive areas (PAI 7, Table 1). The consideration of this PAI is currently restricted to applying exclusions to palm oil producing companies and for any breaches to the UNGC, UNGP and OECD Guidelines for Multinational Enterprises in relation to biodiversity.
 - Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons (PAI 14, Table 1)
- Via the ESG integration process, as part of the investment due diligence policies and procedures, the following PAIs are considered:
 - All indicators related to GHG emissions, as part of the required Climate Risk analysis (PAI 1-6, Table 1, PAI 4, Table 2)
 - Biodiversity, water and waste indicators (PAI 7-9, Table 1)
 - Board gender diversity (PAI 13, Table 1)

Post-investment, the following principal adverse impacts on sustainability factors are taken into account:

- Via the application of the voting policy, the following PAIs are considered:
 - All indicators related to GHG emissions (PAI 1-6, Table 1)
 - Indicators related to social and employee matters (PAI 10-13, Table 1; PAI 5-8, Table 3)

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

- o Via Robeco's entity engagement program, the following PAIs are considered:
 - All indicators related to Climate and other environment-related indicators (PAI 1-9, Table 1)
 - Violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1). On an ongoing basis, the investment universe is scanned for controversial behavior in relation to the aforementioned principles and guidelines.
 - In addition, based on a yearly review of Robeco's performance on all mandatory and selected voluntary indicators, holdings of the Sub-fund that cause adverse impact might be selected for engagement.

More information is available via Robeco's Principal Adverse Impact Statement, published on Robeco's website. The Sub-fund will periodically report how it has considered the principal adverse impacts of its investments in the Company's annual report, which will be made available each year on or before 30 April at the Sub-fund page highlighted in final section of this document.

No

What investment strategy does this financial product follow?

Robeco New World Financials is an actively managed fund that invests in equities from developed and emerging countries all over the world. The selection of these stocks is based on fundamental analysis as described in the Investment policy strategy paragraph in Appendix I of this Prospectus. The strategy integrates sustainability indicators on a continuous basis as part of the stock selection process. Amongst others, the Sub-fund applies norms-based and activity-based exclusions, Robeco's good governance policy, Robeco's SDG framework and considers Principal Adverse Impacts in the investment process. More product-specific information can be found on our website and the links provided in the final question of this disclosure.

The investment strategy guides investment decisions based on factors such as investment objectives and risk tolerance.

What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?

The Sub-fund has the following binding elements:

1. The Sub-fund's portfolio complies with Robeco's Exclusion Policy (<https://www.robeco.com/files/docm/docu-exclusion-policy.pdf>), that is based on exclusion criteria with regards to products and business practices that Robeco believes are detrimental to society and incompatible with sustainable investment strategies. This means that the Sub-fund has 0% exposure to excluded securities, taking into account a grace period. Information with regards to the effects of the exclusions on the Sub-fund's universe can be found at <https://www.robeco.com/files/docm/docu-exclusion-list.pdf>.
2. The Sub-fund scrutinizes investment in companies that are in breach of the ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises. If a company in the portfolio breaches one of the international guidelines during the investment period, the company will become part of the Enhanced Engagement program.
3. All equity holdings have a granted right to vote and Robeco exerts that right by voting according to Robeco's Proxy Voting Policy, unless impediments occur (e.g. share blocking or when not considered cost efficient). Robeco's Proxy Voting Policy can be found at <https://www.robeco.com/files/docm/docu-robeco-stewardship-policy.pdf>.
4. Investments with an elevated sustainability risk are defined by Robeco as companies with an ESG Risk Rating of 40 and higher (the ESG Risk Rating is explained in the sustainability risk policy which can be accessed via <https://www.robeco.com/files/docm/docu-robeco-sustainability-risk-policy.pdf>). The Sub-fund is limited to a maximum exposure of 3% to investments with an elevated sustainability risk, based on the market weight in the portfolio taking into account regional differences and benchmark. Each investment with an ESG Risk rating of higher than 40 requires

separate approval by a dedicated committee of sustainable investment specialists, compliance and risk management that oversees the bottom-up sustainability analysis.

5. The Sub-fund excludes the bottom 10% ranked companies on ESG from the investment universe.

● ***What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?***

The Sub-fund, as part of the negative screening process, commits to a minimum rate of 10% reduction, resulting to excluding the lowest performing companies based on ESG metrics. More information in relation to methodology and data used, can be found at <https://www.robeco.com/docm/docu-robecosfdr-data-disclosures.pdf>.

● ***What is the policy to assess good governance practices of the investee companies?***

Robeco has a Good Governance policy to assess governance practices of companies. The policy describes how Robeco determines if and when a company does not follow good governance practices and is therefore excluded from the initial investment universe for Article 8 and 9 products. Robeco's Good Governance policy applies to the Sub-fund and tests on a set of governance criteria that reflect widely recognized industry established norms and include topics as employee relations, management structure, tax compliance and remuneration.

The Good Governance test consists of criteria on such topics that are examined for investee companies and further explained in Robeco's Good Governance policy <https://www.robeco.com/files/docm/docu-robeco-good-governance-policy.pdf>. Additionally, the companies that do not pass the good governance test are reflected in the exclusion list that can be accessed here - <https://www.robeco.com/files/docm/docu-exclusion-list.pdf>.

● ***What is the asset allocation planned for this financial product?***

At least 90% of the investments are aligned with the E/S characteristics of the Sub-fund. The Sub-fund plans to make a minimum of 35% sustainable investments, measured by positive scores via Robeco's SDG Framework. The investments in the category Other, estimated between 0-10%, are mostly in cash, cash equivalents and derivatives as further described below. The planned asset allocation is monitored continuously, and evaluated on a yearly basis.

Good governance practices include sound management structures, employee relations, remuneration of staff and tax compliance.

Asset allocation describes the share of investments in specific assets.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure (CapEx)** showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure (OpEx)** reflecting green operational activities of investee companies.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers sustainable investments with environmental or social objectives.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

● **How does the use of derivatives attain the environmental or social characteristics promoted by the financial product?**

The Sub-fund does not make use of derivatives to attain the environmental or social characteristics promoted by the financial product. The Sub-fund may make use of derivatives for hedging, liquidity management and efficient portfolio management as well as investment purposes. Exchange traded and over-the-counter derivatives are permitted, including but not limited to futures, swaps, options and currency forwards. Whilst the Sub-fund may use derivatives both for investment purposes as well as for hedging and efficient portfolio management, it does not utilize derivatives for such purposes outside the intended share of investments allocated to the 'Other' category.

In case the Sub-fund uses derivatives, the underlying shall comply with the investment policy. Where relevant, minimum environmental or social safeguards are taken into account as described below.

● **To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?**

0%. The Sub-fund does not intend to make Taxonomy-aligned investments. It cannot be excluded that among the Sub-fund's holdings certain investments are Taxonomy aligned. The Sub-fund will report on Taxonomy-aligned investment in the periodic disclosures. In the future, once data-availability in relation to the EU Taxonomy will improve, Robeco might consider setting a target based on turnover or CAPEX. Robeco currently relies on third-party data, including data in relation to companies that do not disclose on the EU Taxonomy alignment of their activities. EU Taxonomy-alignment data is not yet subject to a review by third parties. The Sub-fund only makes investments in equity and therefore it does not have sovereign exposures. The expected level of alignment with and without sovereign bonds is the same.

To comply with the EU Taxonomy, the

● **Does the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy?⁵²**

⁵² Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

criteria for **fossil gas** include limitations on emissions and switching to renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

 are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

- Yes
- In fossil gas
- In nuclear energy
- No

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.*

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

** As the investments are not Taxonomy-aligned, the exclusion of sovereign bonds has no impact on the graph and therefore no such percentage is shown here.

 **What is the minimum share of investments in transitional and enabling activities?**

0%.

 **What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?**

The Sub-fund intends to make sustainable investments, measured as positive scores via Robeco's SDG Framework. Among those could be investments with environmental objectives that do not qualify as Taxonomy-aligned. The environmental objectives of the Sub-fund are attained by investing in companies that score positively on SDG 12 (Responsible consumption and production), SDG 13 (Climate action), SDG 14 (Life below water), and SDG 15 (Life on land) in Robeco's SDG Framework. While the sum of sustainable investments with an environmental objective and socially sustainable investments always adds up to the Sub-fund's minimum proportion of 35% sustainable investments, we do not commit to a minimum share of sustainable investments with an environmental objective because the Sub-fund's investment strategy does not have a specific environmental investment objective. Therefore, the minimum share of sustainable investments with an environmental objective is 0%.

 **What is the minimum share of socially sustainable investments?**

The Sub-fund intends to make sustainable investments, measured as positive scores via Robeco's SDG Framework. Among those could be investments with social objectives. The social objectives of the Sub-fund are attained by investing in companies that score positively on SDG 1 (No poverty), SDG 2 (Zero hunger), SDG 3 (Good health and well-being), SDG 4 (Quality education), SDG 5 (Gender equality), SDG

6 (Clear water and sanitation), SDG 7 (Affordable and clean energy), SDG 8 (Decent work and economic growth), SDG 9 (Industry, innovation and infrastructure), SDG 10 (Reduced inequalities), SDG 11 (Sustainable cities and communities), SDG 16 (Peace, justice and strong institutions) and SDG 17 (Partnerships for the goals), in Robeco's SDG Framework. While the sum of socially sustainable investments and sustainable investments with an environmental objective always adds up to the Sub-fund's minimum proportion of sustainable investments, we do not commit to a minimum share of socially sustainable investments because the Sub-fund's investment strategy does not have a specific socially sustainable investment objective. Therefore, the minimum share of socially sustainable investments is 0%.

What investments are included under "#2 Other", what is their purpose and are there any minimum environmental or social safeguards?

The type of instruments included under "#2 Other" and their purpose are outlined in Annex I of this Prospectus under the header 'Financial instruments and investment restrictions'. They include cash, cash equivalents, as well as investment funds and eligible asset classes (other than bonds and equities) that do not specifically promote E/S characteristics. As indicated above, the Sub-fund does not make use of derivatives to attain the environmental or social characteristics promoted. The Sub-fund may make use of derivatives, which thus always fall under the category "#2 Other", for hedging, liquidity management and efficient portfolio management as well as investment purposes. Exchange traded and over-the-counter derivatives are permitted, including but not limited to futures, swaps, options and currency forwards. In case the Sub-fund uses derivatives, the underlying shall comply with the investment policy. Where relevant, minimum environmental or social safeguards are taken into account, by, for example, applying Robeco's Exclusion Policy for any single security derivative.

Is a specific index designated as a reference benchmark to determine whether this financial product is aligned with the environmental and/or social characteristics that it promotes?

Not applicable.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

b) Robeco Sustainable Property Equities

Pre-contractual disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Product name: Robeco Sustainable Property Equities

Legal entity identifier: 2138003BSHS5NJ9EBX10

Environmental and/or social characteristics

Does this financial product have a sustainable investment objective?

Yes

No

It will make a minimum of **sustainable investments with an environmental objective:** ___%

- in economic activities that qualify as environmentally sustainable under the EU Taxonomy
- in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

It will make a minimum of **sustainable investments with a social objective:** ___%

It promotes **Environmental/Social (E/S) characteristics** and while it does not have as its objective a sustainable investment, it will have a minimum proportion of 50% of sustainable investments

- with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy
- with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy
- with a social objective

It promotes E/S characteristics, but **will not make any sustainable investments**

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

What environmental and/or social characteristics are promoted by this financial product?

The Sub-fund has the following E/S characteristics:

1. The Sub-fund promotes certain minimum environmental and social safeguards through applying exclusion criteria with regards to products and business practices that Robeco believes are detrimental to society and incompatible with sustainable investment strategies, such as exposure to controversial behaviour, controversial weapons, and fossil fuels.
2. The Sub-fund promotes adherence to and conducting business activities in accordance with the United Nations Universal Declaration of Human Rights, the International Labor Organization's (ILO) labor standards, the United Nations Guiding Principles for Business and Human Rights (UNGPs), the United Nations Global Compact (UNGC) and the OECD Guidelines for Multinational Enterprises, by scrutinizing companies that violate these principles.
3. The Sub-fund promotes good governance and sustainable corporate practices through proxy voting, which contributes to long-term shareholder value creation. This includes taking an active stance on social and environmental topics through Robeco's proxy voting policy.
4. The Sub-fund promotes having a substantially lower environmental footprint than the general market index referred to in Appendix VI – Benchmarks (the "General Market Index").
5. The Sub-fund promotes having a weighted average ESG score that is better than that of the General Market Index.
6. The Sub-fund limits investing in companies with an elevated sustainability risk based on ESG risk scores whereas all such investments require separate approval of a dedicated committee that oversees that all investments are substantiated and eligible based on a fundamental review on the sustainability risk.

There is no reference benchmark designated for the purpose of attaining the environmental or social characteristics promoted by the Sub-fund.

What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?

The Sub-fund has the following sustainability indicators:

1. The % of investments in securities that are on Robeco's Exclusion list as result of the application of Robeco's Exclusion Policy.
2. The number of companies that are in violation of the ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises and hence are a part of the Enhanced Engagement program.
3. The number of holdings and agenda items voted.
4. The Sub-fund's weighted carbon, water and waste footprint score compared to the General Market Index.
5. The Sub-fund's weighted average ESG score compared to the General Market Index.
6. The % of holdings with an elevated sustainability risk profile.

What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?

The sustainable investments aim to contribute to the UN Sustainable Development Goals ("SDGs"), that have both social and environmental objectives. These are 17 goals that are globally recognised and include environmental goals such as climate action, clean water, life on land and water and social goals such as zero hunger, gender equality, education, etc. Robeco has developed a proprietary framework based on the UN SDGs through which an issuer's contribution to such SDGs is determined through a 3-step process. This process starts with a sector baseline on which a company's products are analysed to examine contribution to the society and environment. Further, the operational processes involved in

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

creating such products is checked along with any controversies/litigation claims and remediation actions taken which are perused before a final SDG score is determined. The final score ranges between high negative (-3) to high positive (+3) and only those issuers which achieve positive SDG scores (+1,+2 and +3) are regarded as Sustainable Investments.

● ***How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?***

The sustainable investments do no significant harm to any environmental or social sustainable investment objective by considering a principal adverse impact and aligning with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights. In addition, sustainable investments score positively on Robeco's SDG Framework, and therefore do not cause significant harm.

How have the indicators for adverse impacts on sustainability factors been taken into account?

Mandatory principal adverse impact indicators are considered through Robeco's SDG Framework, either directly or indirectly, when identifying sustainable investments for the Sub-fund. In addition, voluntary environmental and social indicators are taken into account, depending on their relevance for measuring impacts on the SDGs and the availability of data. A detailed description of the incorporation of principal adverse impacts is available via Robeco's Principal Adverse Impact Statement published on the Robeco website (<https://www.robeco.com/files/docm/docu-principal-adverse-impact-statement-summary-entity-level.pdf>). In this statement, Robeco sets out its approach to identifying and prioritizing principal adverse impacts, and how principal adverse impacts are considered as part of Robeco's investment due diligence process and procedures relating to research and analysis, exclusions and restrictions and/or voting and engagement. This description also explains how principal adverse impact indicators are considered by the SDG Framework.

How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The sustainable investments are aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights via both Robeco's Exclusion Policy and Robeco's SDG Framework.

Robeco's Exclusion Policy includes an explanation of how Robeco acts in accordance with the International Labor Organization (ILO) standards, United Nations Guiding Principles (UNGPs), United Nations Global Compact (UNGC) Principles and the Organization for Economic Co-operation and Development (OECD) Guidelines for Multinational Enterprises and is guided by these international treaties to assess the behavior of companies. Robeco continuously screens its investments for breaches of these principles. In case of a breach, the company will be excluded or engaged with, and is not considered a sustainable investment.

Robeco's SDG Framework screens for breaches on these principles in the final step of the framework. In this step, Robeco checks whether the company concerned has been involved in any controversies. Involvement in any controversy will result in a negative SDG score for the company, meaning it is not a sustainable investment.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

Does this financial product consider principal adverse impacts on sustainability factors?

Yes, _____

The Sub-fund considers principal adverse impacts on sustainability factors as referred to in Annex I of the SFDR Delegated Act.

Pre-investment, the following principal adverse impacts on sustainability factors are considered:

- Via the applied normative and activity-based exclusions, the following PAIs are considered:
 - Exposure to companies active in the fossil fuel sector (PAI 4, Table 1)
 - Violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1)
 - Activities negatively affecting biodiversity-sensitive areas (PAI 7, Table 1). The consideration of this PAI is currently restricted to applying exclusions to palm oil producing companies and for any breaches to the UNGC, UNGP and OECD Guidelines for Multinational Enterprises in relation to biodiversity.
 - Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons (PAI 14, Table 1)
- Via the ESG integration process, as part of the investment due diligence policies and procedures, the following PAIs are considered:
 - All indicators related to GHG emissions, as part of the required Climate Risk analysis (PAI 1-6, Table 1, PAI 4, Table 2)
 - Biodiversity, water and waste indicators (PAI 7-9, Table 1) when relevant for the sector
 - Board gender diversity (PAI 13, Table 1)
- Via the environmental footprint performance targets of the Sub-fund, the following PAIs are considered:
 - Carbon footprint (PAI 2, Table 1)
 - Water and waste indicators (PAI 7-9, Table 1). Robeco will use on water and waste footprint until data quality and coverage of the PAIs will improve.

Post-investment, the following principal adverse impacts on sustainability factors are taken into account:

- Via the application of the voting policy, the following PAIs are considered:
 - All indicators related to GHG emissions (PAI 1-6, Table 1)
 - Indicators related to social and employee matters (PAI 10-13, Table 1; PAI 5-8, Table 3)

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

- Via Robeco's entity engagement program, the following PAIs are considered:
 - All indicators related to Climate and other environment-related indicators (PAI 1-9, Table 1)
 - Violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1)
 - In addition, based on a yearly review of Robeco's performance on all mandatory and selected voluntary indicators, holdings of the Sub-fund that cause adverse impact might be selected for engagement.

More information is available via Robeco's Principal Adverse Impact Statement, published on Robeco's website. The Sub-fund will periodically report how it has considered the principal adverse impacts of its investments in the Company's annual report, which will be made available each year on or before 30 April at the Sub-fund page highlighted in final section of this document.

No

What investment strategy does this financial product follow?

Robeco Sustainable Property Equities is an actively managed fund that invests in stocks in developed countries across the world. The selection of these stocks is based on fundamental analysis. The selection of these stocks is based on fundamental analysis as described in the Investment policy strategy paragraph in Appendix I of this Prospectus. The strategy integrates sustainability indicators on a continuous basis as part of the stock selection process. Amongst others, the Sub-fund applies norms-based and activity-based exclusions, Robeco's good governance policy, Robeco's SDG framework and considers Principal Adverse Impacts in the investment process. More product-specific information can be found on our website and the links provided in the final question of this disclosure.

The investment strategy guides investment decisions based on factors such as investment objectives and risk tolerance.

What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?

The Sub-fund has the following binding elements:

1. The Sub-fund's portfolio complies with Robeco's Exclusion Policy (<https://www.robeco.com/files/docm/docu-exclusion-policy.pdf>), that is based on exclusion criteria with regards to products and business practices that Robeco believes are detrimental to society and incompatible with sustainable investment strategies. This means that the Sub-fund has 0% exposure to excluded securities, taking into account a grace period. Information with regards to the effects of the exclusions on the Sub-fund's universe can be found at <https://www.robeco.com/files/docm/docu-exclusion-list.pdf>
2. The Sub-fund avoids investment in companies that are in breach of the ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises. If a company in the portfolio breaches one of the international guidelines during the investment period, the company will become part of the Enhanced Engagement program. When engagement is deemed highly unlikely to succeed, the company might be excluded directly.
3. All equity holdings have a granted right to vote and Robeco exerts that right by voting according to Robeco's Proxy Voting Policy, unless impediments occur (e.g. share blocking or when not considered cost efficient). Robeco's Proxy Voting Policy can be found at <https://www.robeco.com/files/docm/docu-robeco-stewardship-policy.pdf>.
4. The Sub-fund's weighted carbon, water and waste footprint score is 20% better than that of the General Market Index.
5. The Sub-fund's weighted average ESG score is better than that of the General Market Index.

6. Investments with an elevated sustainability risk are defined by Robeco as companies with an ESG Risk Rating of 40 and higher (the ESG Risk Rating is explained in the sustainability risk policy which can be accessed via <https://www.robeco.com/files/docm/docu-robeco-sustainability-risk-policy.pdf>). The Sub-fund is limited to a maximum exposure of 2% to investments with an elevated sustainability risk, based on the market weight in the portfolio taking into account regional differences and benchmark. Each investment with an ESG Risk rating of higher than 40 requires separate approval by a dedicated committee of sustainable investment specialists, compliance and risk management that oversees the bottom-up sustainability analysis.

● **What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?**

The Sub-fund does not commit to a minimum rate to reduce the scope of investments prior to the application of the investment strategy.

● **What is the policy to assess good governance practices of the investee companies?**

Robeco has a Good Governance policy to assess governance practices of companies. The policy describes how Robeco determines if and when a company does not follow good governance practices and is therefore excluded from the initial investment universe for Article 8 and 9 products. Robeco's Good Governance policy applies to the Sub-fund and tests on a set of governance criteria that reflect widely recognized industry established norms and include topics as employee relations, management structure, tax compliance and remuneration.

The Good Governance test consists of criteria on such topics that are examined for investee companies and further explained in Robeco's Good Governance policy <https://www.robeco.com/files/docm/docu-robeco-good-governance-policy.pdf>. Additionally, the companies that do not pass the good governance test are reflected in the exclusion list that can be accessed here - <https://www.robeco.com/files/docm/docu-exclusion-list.pdf>.

What is the asset allocation planned for this financial product?

At least 90% of the investments are aligned with the E/S characteristics of the Sub-fund. The Sub-fund plans to make a minimum of 50% sustainable investments, measured by positive scores via Robeco's SDG Framework. The investments in the category Other, estimated between 0-10%, are mostly in cash, cash equivalents and derivatives as further described below. The planned asset allocation is monitored continuously, and evaluated on a yearly basis.

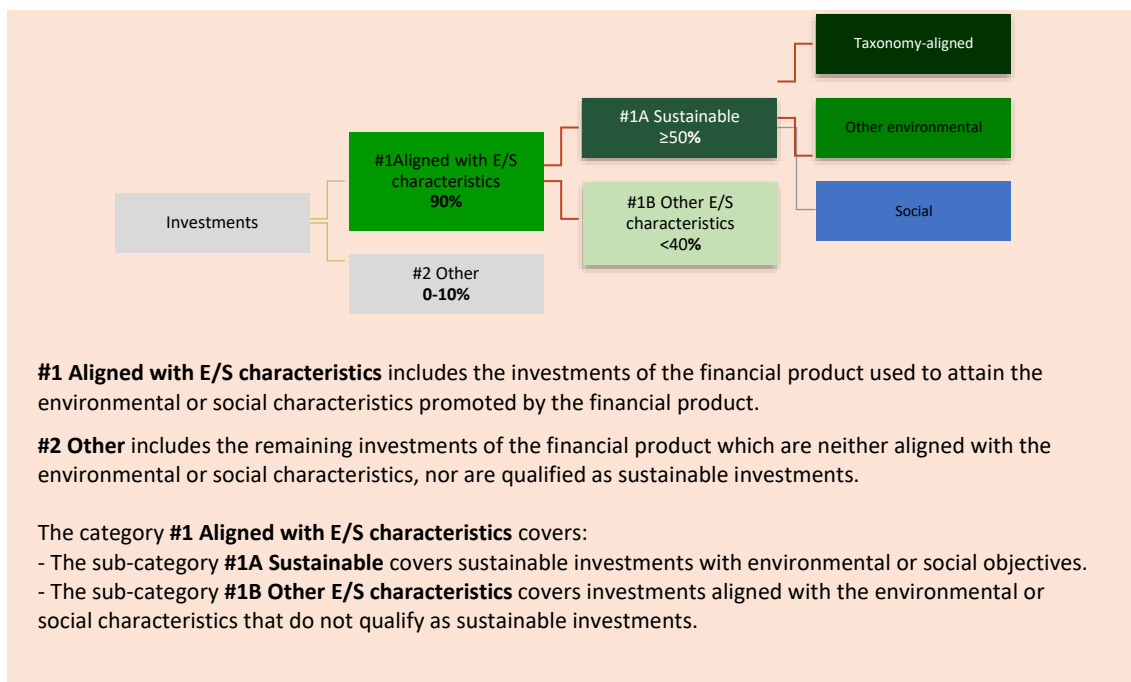

Good governance practices include sound management structures, employee relations, remuneration of staff and tax compliance.

Asset allocation describes the share of investments in specific assets.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

● **How does the use of derivatives attain the environmental or social characteristics promoted by the financial product?**

The Sub-fund does not make use of derivatives to attain the environmental or social characteristics promoted by the financial product. The Sub-fund may make use of derivatives for hedging, liquidity management and efficient portfolio management as well as investment purposes. Exchange traded and over-the-counter derivatives are permitted, including but not limited to futures, swaps, options and currency forwards. Whilst the Sub-fund may use derivatives both for investment purposes as well as for hedging and efficient portfolio management, it does not utilize derivatives for such purposes outside the intended share of investments allocated to the 'Other' category.

In case the Sub-fund uses derivatives, the underlying shall comply with the investment policy. Where relevant, minimum environmental or social safeguards are taken into account as described below.

● **To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?**

0%. The Sub-fund does not intend to make Taxonomy-aligned investments. It cannot be excluded that among the Sub-fund's holdings certain investments are Taxonomy aligned. The Sub-fund will report on Taxonomy-aligned investment in the periodic disclosures. In the future, once data-availability in relation to the EU Taxonomy will improve, Robeco might consider setting a target based on turnover or CAPEX. Robeco currently relies on third-party data, including data in relation to companies that do not disclose on the EU Taxonomy alignment of their activities. EU Taxonomy-alignment data is not yet subject to a review by third parties. The Sub-fund only makes investments in equity and therefore it does not have sovereign exposures. The expected level of alignment with and without sovereign bonds is the same.

To comply with the EU Taxonomy, the

● **Does the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy?⁵³**

⁵³ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

criteria for **fossil gas** include limitations on emissions and switching to renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

 are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

- Yes
- In fossil gas
- In nuclear energy
- No

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.*

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

** As the investments are not Taxonomy-aligned, the exclusion of sovereign bonds has no impact on the graph and therefore no such percentage is shown here.

 **What is the minimum share of investments in transitional and enabling activities?**

0%.

 **What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?**

The Sub-fund intends to make sustainable investments, measured as positive scores via Robeco's SDG Framework. Among those could be investments with environmental objectives that do not qualify as Taxonomy-aligned. The environmental objectives of the Sub-fund are attained by investing in companies that score positively on SDG 12 (Responsible consumption and production), SDG 13 (Climate action), SDG 14 (Life below water), and SDG 15 (Life on land) in Robeco's SDG Framework. While the sum of sustainable investments with an environmental objective and socially sustainable investments always adds up to the Sub-fund's minimum proportion of 50% sustainable investments, we do not commit to a minimum share of sustainable investments with an environmental objective because the Sub-fund's investment strategy does not have a specific environmental investment objective. Therefore, the minimum share of sustainable investments with an environmental objective is 0%.

 **What is the minimum share of socially sustainable investments?**

The Sub-fund intends to make sustainable investments, measured as positive scores via Robeco's SDG Framework. Among those could be investments with social objectives. The social objectives of the Sub-fund are attained by investing in companies that score positively on SDG 1 (No poverty), SDG 2 (Zero hunger), SDG 3 (Good health and well-being), SDG 4 (Quality education), SDG 5 (Gender equality), SDG 6 (Clean water and sanitation), SDG 7 (Affordable and clean energy), SDG 8 (Decent work and economic growth), SDG 9 (Industry, innovation and infrastructure), SDG 10 (Reduced inequalities), SDG 11 (Sustainable cities and communities), SDG 16 (Peace, justice and strong institutions) and SDG 17

(Partnerships for the goals), in Robeco's SDG Framework. While the sum of socially sustainable investments and sustainable investments with an environmental objective always adds up to the Sub-fund's minimum proportion of sustainable investments, we do not commit to a minimum share of socially sustainable investments because the Sub-fund's investment strategy does not have a specific socially sustainable investment objective. Therefore, the minimum share of socially sustainable investments is 0%.

What investments are included under "#2 Other", what is their purpose and are there any minimum environmental or social safeguards?

The type of instruments included under "#2 Other" and their purpose are outlined in Annex I of this Prospectus under the header 'Financial instruments and investment restrictions'. They include cash, cash equivalents, as well as investment funds and eligible asset classes (other than bonds and equities) that do not specifically promote E/S characteristics. As indicated above, the Sub-fund does not make use of derivatives to attain the environmental or social characteristics promoted. The Sub-fund may make use of derivatives, which thus always fall under the category "#2 Other", for hedging, liquidity management and efficient portfolio management as well as investment purposes. Exchange traded and over-the-counter derivatives are permitted, including but not limited to futures, swaps, options and currency forwards. In case the Sub-fund uses derivatives, the underlying shall comply with the investment policy. Where relevant, minimum environmental or social safeguards are taken into account, by, for example, applying Robeco's Exclusion Policy for any single security derivative.

Is a specific index designated as a reference benchmark to determine whether this financial product is aligned with the environmental and/or social characteristics that it promotes?

Not applicable.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

c) Robeco Global Consumer Trends

Pre-contractual disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Product name: Robeco Global Consumer Trends

Legal entity identifier: 213800PFG7CLST9A1742

Environmental and/or social characteristics

Does this financial product have a sustainable investment objective?

Yes

No

It will make a minimum of **sustainable investments with an environmental objective:** ___%

- in economic activities that qualify as environmentally sustainable under the EU Taxonomy
- in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

It will make a minimum of **sustainable investments with a social objective:** ___%

It promotes **Environmental/Social (E/S) characteristics** and while it does not have as its objective a sustainable investment, it will have a minimum proportion of 35% of sustainable investments

- with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy
- with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy
- with a social objective

It promotes E/S characteristics, but **will not make any sustainable investments**

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

What environmental and/or social characteristics are promoted by this financial product?

The Sub-fund has the following E/S characteristics:

1. The Sub-fund promotes certain minimum environmental and social safeguards through applying exclusion criteria with regards to products and business practices that Robeco believes are detrimental to society and incompatible with sustainable investment strategies, such as exposure to controversial behaviour, controversial weapons, and fossil fuels.
2. The Sub-fund promotes adherence to and conducting business activities in accordance with the United Nations Universal Declaration of Human Rights, the International Labor Organization's (ILO) labor standards, the United Nations Guiding Principles for Business and Human Rights (UNGPs), the United Nations Global Compact (UNGC) and the OECD Guidelines for Multinational Enterprises, by scrutinizing companies that violate these principles.
3. The Sub-fund promotes good governance and sustainable corporate practices through proxy voting, which contributes to long-term shareholder value creation. This includes taking an active stance on social and environmental topics through Robeco's proxy voting policy.
4. The Sub-fund limits investing in companies with an elevated sustainability risk based on ESG risk scores whereas all such investments require separate approval of a dedicated committee that oversees that all investments are substantiated and eligible based on a fundamental review on the sustainability risk.
5. The Sub-fund's weighted average ESG score is better than that of the general market index referred to in Appendix VI – Benchmarks (the "General Market Index").

There is no reference benchmark designated for the purpose of attaining the environmental or social characteristics promoted by the Sub-fund.

● **What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?**

The Sub-fund has the following sustainability indicators:

1. The % of investments in securities that are on Robeco's Exclusion list as result of the application of Robeco's Exclusion Policy.
2. The number of companies that are in violation of the ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises and hence are a part of the Enhanced Engagement program.
3. The number of holdings and agenda items voted.
4. The % of holdings with an elevated sustainability risk profile.
5. The Sub-fund's weighted average ESG score.

● **What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?**

The sustainable investments aim to contribute to the UN Sustainable Development Goals ("SDGs"), that have both social and environmental objectives. These are 17 goals that are globally recognised and include environmental goals such as climate action, clean water, life on land and water and social goals such as zero hunger, gender equality, education, etc. Robeco has developed a proprietary framework based on the UN SDGs through which an issuer's contribution to such SDGs is determined through a 3-step process. This process starts with a sector baseline on which a company's products are analysed to examine contribution to the society and environment. Further, the operational processes involved in creating such products is checked along with any controversies/litigation claims and remediation actions taken which are perused before a final SDG score is determined. The final score ranges between high

negative (-3) to high positive (+3) and only those issuers which achieve positive SDG scores (+1, +2 and +3) are regarded as Sustainable Investments.

● ***How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?***

The sustainable investments do no significant harm to any environmental or social sustainable investment objective by considering a principal adverse impact and aligning with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights. In addition, sustainable investments score positively on Robeco's SDG Framework, and therefore do not cause significant harm.

How have the indicators for adverse impacts on sustainability factors been taken into account?

Mandatory principal adverse impact indicators are considered through Robeco's SDG Framework, either directly or indirectly, when identifying sustainable investments for the Sub-fund. In addition, voluntary environmental and social indicators are taken into account, depending on their relevance for measuring impacts on the SDGs and the availability of data. A detailed description of the incorporation of principal adverse impacts is available via Robeco's Principal Adverse Impact Statement published on the Robeco website (<https://www.robeco.com/files/docm/docu-principal-adverse-impact-statement-summary-entity-level.pdf>). In this statement, Robeco sets out its approach to identifying and prioritizing principal adverse impacts, and how principal adverse impacts are considered as part of Robeco's investment due diligence process and procedures relating to research and analysis, exclusions and restrictions and/or voting and engagement. This description also explains how principal adverse impact indicators are considered by the SDG Framework.

How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The sustainable investments are aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights via both Robeco's Exclusion Policy and Robeco's SDG Framework.

Robeco's Exclusion Policy includes an explanation of how Robeco acts in accordance with the International Labor Organization (ILO) standards, United Nations Guiding Principles (UNGPs), United Nations Global Compact (UNGC) Principles and the Organization for Economic Co-operation and Development (OECD) Guidelines for Multinational Enterprises and is guided by these international treaties to assess the behavior of companies. Robeco continuously screens its investments for breaches of these principles. In case of a breach, the company will be excluded or engaged with, and is not considered a sustainable investment.

Robeco's SDG Framework screens for breaches on these principles in the final step of the framework. In this step, Robeco checks whether the company concerned has been involved in any controversies. Involvement in any controversy will result in a negative SDG score for the company, meaning it is not a sustainable investment.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

Does this financial product consider principal adverse impacts on sustainability factors?

Yes, _____

The Sub-fund considers principal adverse impacts on sustainability factors as referred to in Annex I of the SFDR Delegated Act.

Pre-investment, the following principal adverse impacts on sustainability factors are considered:

o Via the applied normative and activity-based exclusions, the following PAIs are considered:

- Exposure to companies active in the fossil fuel sector (PAI 4, Table 1)
- Violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1)
- Activities negatively affecting biodiversity-sensitive areas (PAI 7, Table 1). The consideration of this PAI is currently restricted to applying exclusions to palm oil producing companies and for any breaches to the UNGC, UNGP and OECD Guidelines for Multinational Enterprises in relation to biodiversity.
- Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons (PAI 14, Table 1)

o Via the ESG integration process, as part of the investment due diligence policies and procedures, the following PAIs are considered:

- All indicators related to GHG emissions, as part of the required Climate Risk analysis (PAI 1-6, Table 1, PAI 4, Table 2)
- Biodiversity, water and waste indicators (PAI 7-9, Table 1)
- Board gender diversity (PAI 13, Table 1)

Post-investment, the following principal adverse impacts on sustainability factors are taken into account:

o Via the application of the voting policy, the following PAIs are considered:

- All indicators related to GHG emissions (PAI 1-6, Table 1)

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

- Indicators related to social and employee matters (PAI 10-13, Table 1; PAI 5-8, Table 3)
 - o Via Robeco's entity engagement program, the following PAIs are considered:
- All indicators related to Climate and other environment-related indicators (PAI 1-9, Table 1)
- Violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1). On an ongoing basis, the investment universe is scanned for controversial behavior in relation to the aforementioned principles and guidelines.
- In addition, based on a yearly review of Robeco's performance on all mandatory and selected voluntary indicators, holdings of the Sub-fund that cause adverse impact might be selected for engagement.

More information is available via Robeco's Principal Adverse Impact Statement, published on Robeco's website. The Sub-fund will periodically report how it has considered the principal adverse impacts of its investments in the Company's annual report, which will be made available each year on or before 30 April at the Sub-fund page highlighted in final section of this document.

No

What investment strategy does this financial product follow?

Robeco Global Consumer Trends is an actively managed fund that invests in stocks in developed and emerging countries across the world. The selection of these stocks is based on fundamental analysis as described in the Investment policy strategy paragraph in Appendix I of this Prospectus. The strategy integrates sustainability indicators on a continuous basis as part of the stock selection process. Amongst others, the Sub-fund applies norms-based and activity-based exclusions, Robeco's good governance policy, Robeco's SDG framework and considers Principal Adverse Impacts in the investment process. More product-specific information can be found on our website and the links provided in the final question of this disclosure.

The investment strategy guides investment decisions based on factors such as investment objectives and risk tolerance.

What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?

The Sub-fund has the following binding elements:

1. The Sub-fund's portfolio complies with Robeco's Exclusion Policy (<https://www.robeco.com/files/docm/docu-exclusion-policy.pdf>), that is based on exclusion criteria with regards to products and business practices that Robeco believes are detrimental to society and incompatible with sustainable investment strategies. This means that the Sub-fund has 0% exposure to excluded securities, taking into account a grace period. Information with regards to the effects of the exclusions on the Sub-fund's universe can be found at <https://www.robeco.com/files/docm/docu-exclusion-list.pdf>.
2. The Sub-fund scrutinizes investment in companies that are in breach of the ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises. If a company in the portfolio breaches one of the international guidelines during the investment period, the company will become part of the Enhanced Engagement program.
3. All equity holdings have a granted right to vote and Robeco exerts that right by voting according to Robeco's Proxy Voting Policy, unless impediments occur (e.g. share blocking or when not considered cost efficient). Robeco's Proxy Voting Policy can be found at <https://www.robeco.com/files/docm/docu-robeco-stewardship-policy.pdf>.
4. Investments with an elevated sustainability risk are defined by Robeco as companies with an ESG Risk Rating of 40 and higher (the ESG Risk Rating is explained in the sustainability risk

policy which can be accessed via <https://www.robeco.com/files/docm/docu-robeco-sustainability-risk-policy.pdf>). The Sub-fund is limited to a maximum exposure of 3% to investments with an elevated sustainability risk, based on the market weight in the portfolio taking into account regional differences and benchmark. Each investment with an ESG Risk rating of higher than 40 requires separate approval by a dedicated committee of sustainable investment specialists, compliance and risk management that oversees the bottom-up sustainability analysis.

5. The Sub-fund's weighted average ESG score is better than that of the General Market Index.

● ***What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?***

The Sub-fund does not commit to a minimum rate to reduce the scope of investments prior to the application of the investment strategy.

● ***What is the policy to assess good governance practices of the investee companies?***

Robeco has a Good Governance policy to assess governance practices of companies. The policy describes how Robeco determines if and when a company does not follow good governance practices and is therefore excluded from the initial investment universe for Article 8 and 9 products. Robeco's Good Governance policy applies to the Sub-fund and tests on a set of governance criteria that reflect widely recognized industry established norms and include topics as employee relations, management structure, tax compliance and remuneration.

The Good Governance test consists of criteria on such topics that are examined for investee companies and further explained in Robeco's Good Governance policy <https://www.robeco.com/files/docm/docu-robeco-good-governance-policy.pdf>. Additionally, the companies that do not pass the good governance test are reflected in the exclusion list that can be accessed here - <https://www.robeco.com/files/docm/docu-exclusion-list.pdf>.

What is the asset allocation planned for this financial product?

At least 90% of the investments are aligned with the E/S characteristics of the Sub-fund. The Sub-fund plans to make a minimum of 35% sustainable investments, measured by positive scores via Robeco's SDG Framework. The investments in the category Other, estimated between 0-10%, are mostly in cash, cash equivalents and derivatives as further described below. The planned asset allocation is monitored continuously, and evaluated on a yearly basis.

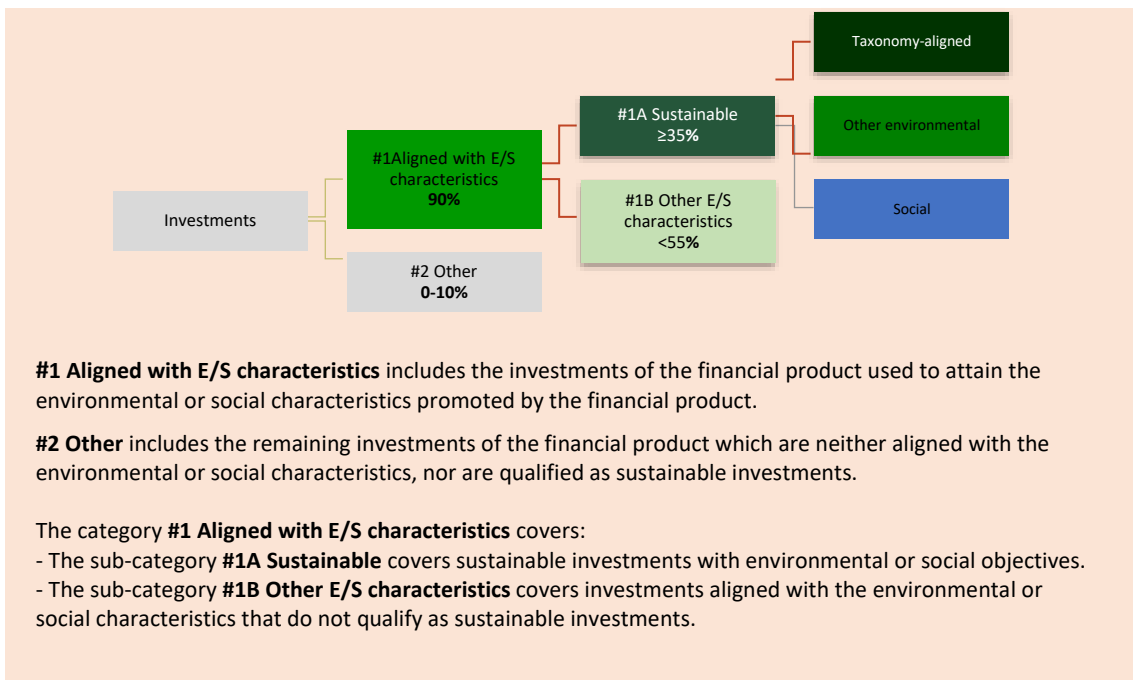

Good governance practices include sound management structures, employee relations, remuneration of staff and tax compliance.

Asset allocation describes the share of investments in specific assets.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

● **How does the use of derivatives attain the environmental or social characteristics promoted by the financial product?**

The Sub-fund does not make use of derivatives to attain the environmental or social characteristics promoted by the financial product. The Sub-fund may make use of derivatives for hedging, liquidity management and efficient portfolio management as well as investment purposes. Exchange traded and over-the-counter derivatives are permitted, including but not limited to futures, swaps, options and currency forwards. Whilst the Sub-fund may use derivatives both for investment purposes as well as for hedging and efficient portfolio management, it does not utilize derivatives for such purposes outside the intended share of investments allocated to the 'Other' category.

In case the Sub-fund uses derivatives, the underlying shall comply with the investment policy. Where relevant, minimum environmental or social safeguards are taken into account as described below.

To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

0%. The Sub-fund does not intend to make Taxonomy-aligned investments. It cannot be excluded that among the Sub-fund's holdings certain investments are Taxonomy aligned. The Sub-fund will report on Taxonomy-aligned investment in the periodic disclosures. In the future, once data-availability in relation to the EU Taxonomy will improve, Robeco might consider setting a target based on turnover or CAPEX. Robeco currently relies on third-party data, including data in relation to companies that do not disclose on the EU Taxonomy alignment of their activities. EU Taxonomy-alignment data is not yet subject to a review by third parties. The Sub-fund only makes investments in equity and therefore it does not have sovereign exposures. The expected level of alignment with and without sovereign bonds is the same.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

 are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

● **Does the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy?⁵⁴**

Yes

In fossil gas

In nuclear energy

No

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.*

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

** As the investments are not Taxonomy-aligned, the exclusion of sovereign bonds has no impact on the graph and therefore no such percentage is shown here.

● **What is the minimum share of investments in transitional and enabling activities?**

0%.

What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?

The Sub-fund intends to make sustainable investments, measured as positive scores via Robeco's SDG Framework. Among those could be investments with environmental objectives that do not qualify as Taxonomy-aligned. The environmental objectives of the Sub-fund are attained by investing in companies that score positively on SDG 12 (Responsible consumption and production), SDG 13 (Climate action), SDG 14 (Life below water), and SDG 15 (Life on land) in Robeco's SDG Framework. While the sum of sustainable investments with an environmental objective and socially sustainable investments always adds up to the Sub-fund's minimum proportion of 35% sustainable investments, we do not commit to a minimum share of sustainable investments with an environmental objective because the Sub-fund's investment strategy does not have a specific environmental investment objective. Therefore, the minimum share of sustainable investments with an environmental objective is 0%.

⁵⁴ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

What is the minimum share of socially sustainable investments?

The Sub-fund intends to make sustainable investments, measured as positive scores via Robeco's SDG Framework. Among those could be investments with social objectives. The social objectives of the Sub-fund are attained by investing in companies that score positively on SDG 1 (No poverty), SDG 2 (Zero hunger), SDG 3 (Good health and well-being), SDG 4 (Quality education), SDG 5 (Gender equality), SDG 6 (Clear water and sanitation), SDG 7 (Affordable and clean energy), SDG 8 (Decent work and economic growth), SDG 9 (Industry, innovation and infrastructure), SDG 10 (Reduced inequalities), SDG 11 (Sustainable cities and communities), SDG 16 (Peace, justice and strong institutions) and SDG 17 (Partnerships for the goals), in Robeco's SDG Framework. While the sum of socially sustainable investments and sustainable investments with an environmental objective always adds up to the Sub-fund's minimum proportion of sustainable investments, we do not commit to a minimum share of socially sustainable investments because the Sub-fund's investment strategy does not have a specific socially sustainable investment objective. Therefore, the minimum share of socially sustainable investments is 0%.

What investments are included under "#2 Other", what is their purpose and are there any minimum environmental or social safeguards?

The type of instruments included under "#2 Other" and their purpose are outlined in Annex I of this Prospectus under the header 'Financial instruments and investment restrictions'. They include cash, cash equivalents, as well as investment funds and eligible asset classes (other than bonds and equities) that do not specifically promote E/S characteristics. As indicated above, the Sub-fund does not make use of derivatives to attain the environmental or social characteristics promoted. The Sub-fund may make use of derivatives, which thus always fall under the category "#2 Other", for hedging, liquidity management and efficient portfolio management as well as investment purposes. Exchange traded and over-the-counter derivatives are permitted, including but not limited to futures, swaps, options and currency forwards. In case the Sub-fund uses derivatives, the underlying shall comply with the investment policy. Where relevant, minimum environmental or social safeguards are taken into account, by, for example, applying Robeco's Exclusion Policy for any single security derivative.

Is a specific index designated as a reference benchmark to determine whether this financial product is aligned with the environmental and/or social characteristics that it promotes?

Not applicable.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

d) Robeco MegaTrends

Pre-contractual disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Product name: Robeco MegaTrends

Legal entity identifier: 2138006ECAW1JITNY4V89

Environmental and/or social characteristics

Does this financial product have a sustainable investment objective?

Yes

No

It will make a minimum of **sustainable investments with an environmental objective:** ___%

- in economic activities that qualify as environmentally sustainable under the EU Taxonomy
- in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

It will make a minimum of **sustainable investments with a social objective:** ___%

It promotes **Environmental/Social (E/S) characteristics** and while it does not have as its objective a sustainable investment, it will have a minimum proportion of 35% of sustainable investments

- with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy
- with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy
- with a social objective

It promotes E/S characteristics, but **will not make any sustainable investments**

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

What environmental and/or social characteristics are promoted by this financial product?

The Sub-fund has the following E/S characteristics:

1. The Sub-fund promotes certain minimum environmental and social safeguards through applying exclusion criteria with regards to products and business practices that Robeco believes are detrimental to society and incompatible with sustainable investment strategies, such as exposure to controversial behaviour, controversial weapons, and fossil fuels.
2. The Sub-fund promotes adherence to and conducting business activities in accordance with the United Nations Universal Declaration of Human Rights, the International Labor Organization's (ILO) labor standards, the United Nations Guiding Principles for Business and Human Rights (UNGPs), the United Nations Global Compact (UNGC) and the OECD Guidelines for Multinational Enterprises, by scrutinizing companies that violate these principles.
3. The Sub-fund promotes good governance and sustainable corporate practices through proxy voting, which contributes to long-term shareholder value creation. This includes taking an active stance on social and environmental topics through Robeco's proxy voting policy.
4. The Sub-fund limits investing in companies with an elevated sustainability risk based on ESG risk scores whereas all such investments require separate approval of a dedicated committee that oversees that all investments are substantiated and eligible based on a fundamental review on the sustainability risk.

There is no reference benchmark designated for the purpose of attaining the environmental or social characteristics promoted by the Sub-fund.

● **What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?**

The Sub-fund has the following sustainability indicators:

1. The % of investments in securities that are on Robeco's Exclusion list as result of the application of Robeco's Exclusion Policy.
2. The number of companies that are in violation of the ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises and hence are a part of the Enhanced Engagement program.
3. The number of holdings and agenda items voted.
4. The % of holdings with an elevated sustainability risk profile.

● **What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?**

The sustainable investments aim to contribute to the UN Sustainable Development Goals ("SDGs"), that have both social and environmental objectives. These are 17 goals that are globally recognised and include environmental goals such as climate action, clean water, life on land and water and social goals such as zero hunger, gender equality, education, etc. Robeco has developed a proprietary framework based on the UN SDGs through which an issuer's contribution to such SDGs is determined through a 3-step process. This process starts with a sector baseline on which a company's products are analysed to examine contribution to the society and environment. Further, the operational processes involved in creating such products is checked along with any controversies/litigation claims and remediation actions taken which are perused before a final SDG score is determined. The final score ranges between high negative (-3) to high positive (+3) and only those issuers which achieve positive SDG scores (+1, +2 and +3) are regarded as Sustainable Investments.

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

● ***How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?***

The sustainable investments do no significant harm to any environmental or social sustainable investment objective by considering a principal adverse impact and aligning with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights. In addition, sustainable investments score positively on Robeco's SDG Framework, and therefore do not cause significant harm.

How have the indicators for adverse impacts on sustainability factors been taken into account?

Mandatory principal adverse impact indicators are considered through Robeco's SDG Framework, either directly or indirectly, when identifying sustainable investments for the Sub-fund. In addition, voluntary environmental and social indicators are taken into account, depending on their relevance for measuring impacts on the SDGs and the availability of data. A detailed description of the incorporation of principal adverse impacts is available via Robeco's Principal Adverse Impact Statement published on the Robeco website (<https://www.robeco.com/files/docm/docu-principal-adverse-impact-statement-summary-entity-level.pdf>). In this statement, Robeco sets out its approach to identifying and prioritizing principal adverse impacts, and how principal adverse impacts are considered as part of Robeco's investment due diligence process and procedures relating to research and analysis, exclusions and restrictions and/or voting and engagement. This description also explains how principal adverse impact indicators are considered by the SDG Framework.

How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The sustainable investments are aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights via both Robeco's Exclusion Policy and Robeco's SDG Framework.

Robeco's Exclusion Policy includes an explanation of how Robeco acts in accordance with the International Labor Organization (ILO) standards, United Nations Guiding Principles (UNGPs), United Nations Global Compact (UNGC) Principles and the Organization for Economic Co-operation and Development (OECD) Guidelines for Multinational Enterprises and is guided by these international treaties to assess the behavior of companies. Robeco continuously screens its investments for breaches of these principles. In case of a breach, the company will be excluded or engaged with, and is not considered a sustainable investment.

Robeco's SDG Framework screens for breaches on these principles in the final step of the framework. In this step, Robeco checks whether the company concerned has been involved in any controversies. Involvement in any controversy will result in a negative SDG score for the company, meaning it is not a sustainable investment.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

Does this financial product consider principal adverse impacts on sustainability factors?

Yes, _____

The Sub-fund considers principal adverse impacts on sustainability factors as referred to in Annex I of the SFDR Delegated Act.

Pre-investment, the following principal adverse impacts on sustainability factors are considered:

○ Via the applied normative and activity-based exclusions, the following PAIs are considered:

- Exposure to companies active in the fossil fuel sector (PAI 4, Table 1)
- Violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1)
- Activities negatively affecting biodiversity-sensitive areas (PAI 7, Table 1). The consideration of this PAI is currently restricted to applying exclusions to palm oil producing companies and for any breaches to the UNGC, UNGP and OECD Guidelines for Multinational Enterprises in relation to biodiversity.
- Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons (PAI 14, Table 1)
 - Via the ESG integration process, as part of the investment due diligence policies and procedures, the following PAIs are considered:
- All indicators related to GHG emissions, as part of the required Climate Risk analysis (PAI 1-6, Table 1, PAI 4, Table 2)
- Biodiversity, water and waste indicators (PAI 7-9, Table 1)
- Board gender diversity (PAI 13, Table 1)

Post-investment, the following principal adverse impacts on sustainability factors are taken into account:

○ Via the application of the voting policy, the following PAIs are considered:

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

- All indicators related to GHG emissions (PAI 1-6, Table 1)
- Indicators related to social and employee matters (PAI 10-13, Table 1; PAI 5-8, Table 3)
 - o Via Robeco's entity engagement program, the following PAIs are considered:
- All indicators related to Climate and other environment-related indicators (PAI 1-9, Table 1)
- Violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1). On an ongoing basis, the investment universe is scanned for controversial behavior in relation to the aforementioned principles and guidelines.
- In addition, based on a yearly review of Robeco's performance on all mandatory and selected voluntary indicators, holdings of the Sub-fund that cause adverse impact might be selected for engagement.

More information is available via Robeco's Principal Adverse Impact Statement, published on Robeco's website. The Sub-fund will periodically report how it has considered the principal adverse impacts of its investments in the Company's annual report, which will be made available each year on or before 30 April at the Sub-fund page highlighted in final section of this document.

No

What investment strategy does this financial product follow?

Robeco MegaTrends is an actively managed fund that invests worldwide in equities from developed and emerging countries. The selection of these stocks is based on fundamental analysis as described in the Investment policy paragraph in Appendix I of this Prospectus. The strategy integrates sustainability indicators on a continuous basis as part of the stock selection process. Amongst others, the Sub-fund applies norms-based and activity-based exclusions, Robeco's good governance policy, Robeco's SDG framework and considers Principal Adverse Impacts in the investment process. More product-specific information can be found on our website and the links provided in the final question of this disclosure.

What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?

The Sub-fund has the following binding elements:

1. The Sub-fund's portfolio complies with Robeco's Exclusion Policy (<https://www.robeco.com/files/docm/docu-exclusion-policy.pdf>), that is based on exclusion criteria with regards to products and business practices that Robeco believes are detrimental to society and incompatible with sustainable investment strategies. This means that the Sub-fund has 0% exposure to excluded securities, taking into account a grace period. Information with regards to the effects of the exclusions on the Sub-fund's universe can be found at <https://www.robeco.com/files/docm/docu-exclusion-list.pdf>.
2. The Sub-fund scrutinizes investment in companies that are in breach of the ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises. If a company in the portfolio breaches one of the international guidelines during the investment period, the company will become part of the Enhanced Engagement program.
3. All equity holdings have a granted right to vote and Robeco exerts that right by voting according to Robeco's Proxy Voting Policy, unless impediments occur (e.g. share blocking or when not considered cost efficient). Robeco's Proxy Voting Policy can be found at <https://www.robeco.com/files/docm/docu-robeco-stewardship-policy.pdf>.

The investment strategy guides investment decisions based on factors such as investment objectives and risk tolerance.

4. Investments with an elevated sustainability risk are defined by Robeco as companies with an ESG Risk Rating of 40 and higher (the ESG Risk Rating is explained in the sustainability risk policy which can be accessed via <https://www.robeco.com/files/docm/docu-robeco-sustainability-risk-policy.pdf>). The Sub-fund is limited to a maximum exposure of 3% to investments with an elevated sustainability risk, based on the market weight in the portfolio taking into account regional differences and benchmark. Each investment with an ESG Risk rating of higher than 40 requires separate approval by a dedicated committee of sustainable investment specialists, compliance and risk management that oversees the bottom-up sustainability analysis.

● **What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?**

The Sub-fund does not commit to a minimum rate to reduce the scope of investments prior to the application of the investment strategy.

● **What is the policy to assess good governance practices of the investee companies?**

Robeco has a Good Governance policy to assess governance practices of companies. The policy describes how Robeco determines if and when a company does not follow good governance practices and is therefore excluded from the initial investment universe for Article 8 and 9 products. Robeco's Good Governance policy applies to the Sub-fund and tests on a set of governance criteria that reflect widely recognized industry established norms and include topics as employee relations, management structure, tax compliance and remuneration.

The Good Governance test consists of criteria on such topics that are examined for investee companies and further explained in Robeco's Good Governance policy <https://www.robeco.com/files/docm/docu-robeco-good-governance-policy.pdf>. Additionally, the companies that do not pass the good governance test are reflected in the exclusion list that can be accessed here - <https://www.robeco.com/files/docm/docu-exclusion-list.pdf>.

● **What is the asset allocation planned for this financial product?**

At least 90% of the investments are aligned with the E/S characteristics of the Sub-fund. The Sub-fund plans to make a minimum of 35% sustainable investments, measured by positive scores via Robeco's SDG Framework. The investments in the category Other, estimated between 0-10%, are mostly in cash, cash equivalents and derivatives as further described below. The planned asset allocation is monitored continuously, and evaluated on a yearly basis.

Good governance practices include sound management structures, employee relations, remuneration of staff and tax compliance.

Asset allocation describes the share of investments in specific assets.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

● **How does the use of derivatives attain the environmental or social characteristics promoted by the financial product?**

The Sub-fund does not make use of derivatives to attain the environmental or social characteristics promoted by the financial product. The Sub-fund may make use of derivatives for hedging, liquidity management and efficient portfolio management as well as investment purposes. Exchange traded and over-the-counter derivatives are permitted, including but not limited to futures, swaps, options and currency forwards. Whilst the Sub-fund may use derivatives both for investment purposes as well as for hedging and efficient portfolio management, it does not utilize derivatives for such purposes outside the intended share of investments allocated to the 'Other' category.

In case the Sub-fund uses derivatives, the underlying shall comply with the investment policy. Where relevant, minimum environmental or social safeguards are taken into account as described below.

To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

0%. The Sub-fund does not intend to make Taxonomy-aligned investments. It cannot be excluded that among the Sub-fund's holdings certain investments are Taxonomy aligned. The Sub-fund will report on Taxonomy-aligned investment in the periodic disclosures. In the future, once data-availability in relation to the EU Taxonomy will improve, Robeco might consider setting a target based on turnover or CAPEX. Robeco currently relies on third-party data, including data in relation to companies that do not disclose on the EU Taxonomy alignment of their activities. EU Taxonomy-alignment data is not yet subject to a review by third parties. The Sub-fund only makes investments in equity and therefore it does not have sovereign exposures. The expected level of alignment with and without sovereign bonds is the same.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

 are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

● **Does the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy?⁵⁵**

Yes

In fossil gas

In nuclear energy

No

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.*

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

** As the investments are not Taxonomy-aligned, the exclusion of sovereign bonds has no impact on the graph and therefore no such percentage is shown here.

● **What is the minimum share of investments in transitional and enabling activities?**

0%.

What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?

The Sub-fund intends to make sustainable investments, measured as positive scores via Robeco's SDG Framework. Among those could be investments with environmental objectives that do not qualify as Taxonomy-aligned. The environmental objectives of the Sub-fund are attained by investing in companies that score positively on SDG 12 (Responsible consumption and production), SDG 13 (Climate action), SDG 14 (Life below water), and SDG 15 (Life on land) in Robeco's SDG Framework. While the sum of sustainable investments with an environmental objective and socially sustainable investments always adds up to the Sub-fund's minimum proportion of 35% sustainable investments, we do not commit to a minimum share of sustainable investments with an environmental objective because the Sub-fund's investment strategy does not have a specific environmental investment objective. Therefore, the minimum share of sustainable investments with an environmental objective is 0%.

⁵⁵ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

What is the minimum share of socially sustainable investments?

The Sub-fund intends to make sustainable investments, measured as positive scores via Robeco's SDG Framework. Among those could be investments with social objectives. The social objectives of the Sub-fund are attained by investing in companies that score positively on SDG 1 (No poverty), SDG 2 (Zero hunger), SDG 3 (Good health and well-being), SDG 4 (Quality education), SDG 5 (Gender equality), SDG 6 (Clear water and sanitation), SDG 7 (Affordable and clean energy), SDG 8 (Decent work and economic growth), SDG 9 (Industry, innovation and infrastructure), SDG 10 (Reduced inequalities), SDG 11 (Sustainable cities and communities), SDG 16 (Peace, justice and strong institutions) and SDG 17 (Partnerships for the goals), in Robeco's SDG Framework. While the sum of socially sustainable investments and sustainable investments with an environmental objective always adds up to the Sub-fund's minimum proportion of sustainable investments, we do not commit to a minimum share of socially sustainable investments because the Sub-fund's investment strategy does not have a specific socially sustainable investment objective. Therefore, the minimum share of socially sustainable investments is 0%.

What investments are included under "#2 Other", what is their purpose and are there any minimum environmental or social safeguards?

The type of instruments included under "#2 Other" and their purpose are outlined in Annex I of this Prospectus under the header 'Financial instruments and investment restrictions'. They include cash, cash equivalents, as well as investment funds and eligible asset classes (other than bonds and equities) that do not specifically promote E/S characteristics. As indicated above, the Sub-fund does not make use of derivatives to attain the environmental or social characteristics promoted. The Sub-fund may make use of derivatives, which thus always fall under the category "#2 Other", for hedging, liquidity management and efficient portfolio management as well as investment purposes. Exchange traded and over-the-counter derivatives are permitted, including but not limited to futures, swaps, options and currency forwards. In case the Sub-fund uses derivatives, the underlying shall comply with the investment policy. Where relevant, minimum environmental or social safeguards are taken into account, by, for example, applying Robeco's Exclusion Policy for any single security derivative.

Is a specific index designated as a reference benchmark to determine whether this financial product is aligned with the environmental and/or social characteristics that it promotes?

Not applicable.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

e) Robeco Digital Innovations

Pre-contractual disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Product name: Robeco Digital Innovations

Legal entity identifier: 213800WH91CRLWH4AL56

Environmental and/or social characteristics

Does this financial product have a sustainable investment objective?

Yes

No

It will make a minimum of **sustainable investments with an environmental objective:** ___%

- in economic activities that qualify as environmentally sustainable under the EU Taxonomy
- in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

It will make a minimum of **sustainable investments with a social objective:** ___%

It promotes **Environmental/Social (E/S) characteristics** and while it does not have as its objective a sustainable investment, it will have a minimum proportion of 35% of sustainable investments

- with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy
- with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy
- with a social objective

It promotes E/S characteristics, but **will not make any sustainable investments**

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

What environmental and/or social characteristics are promoted by this financial product?

The Sub-fund has the following E/S characteristics:

1. The Sub-fund promotes certain minimum environmental and social safeguards through applying exclusion criteria with regards to products and business practices that Robeco believes are detrimental to society and incompatible with sustainable investment strategies, such as exposure to controversial behaviour, controversial weapons, and fossil fuels.
2. The Sub-fund promotes adherence to and conducting business activities in accordance with the United Nations Universal Declaration of Human Rights, the International Labor Organization's (ILO) labor standards, the United Nations Guiding Principles for Business and Human Rights (UNGPs), the United Nations Global Compact (UNGC) and the OECD Guidelines for Multinational Enterprises, by scrutinizing companies that violate these principles.
3. The Sub-fund promotes good governance and sustainable corporate practices through proxy voting, which contributes to long-term shareholder value creation. This includes taking an active stance on social and environmental topics through Robeco's proxy voting policy.
4. The Sub-fund limits investing in companies with an elevated sustainability risk based on ESG risk scores whereas all such investments require separate approval of a dedicated committee that oversees that all investments are substantiated and eligible based on a fundamental review on the sustainability risk.

There is no reference benchmark designated for the purpose of attaining the environmental or social characteristics promoted by the Sub-fund.

● **What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?**

The Sub-fund has the following sustainability indicators:

1. The % of investments in securities that are on Robeco's Exclusion list as result of the application of Robeco's Exclusion Policy.
2. The number of companies that are in violation of the ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises and hence are a part of the Enhanced Engagement program.
3. The number of holdings and agenda items voted.
4. The % of holdings with an elevated sustainability risk profile.

● **What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?**

The sustainable investments aim to contribute to the UN Sustainable Development Goals ("SDGs"), that have both social and environmental objectives. These are 17 goals that are globally recognised and include environmental goals such as climate action, clean water, life on land and water and social goals such as zero hunger, gender equality, education, etc. Robeco has developed a proprietary framework based on the UN SDGs through which an issuer's contribution to such SDGs is determined through a 3-step process. This process starts with a sector baseline on which a company's products are analysed to examine contribution to the society and environment. Further, the operational processes involved in creating such products is checked along with any controversies/litigation claims and remediation actions taken which are perused before a final SDG score is determined. The final score ranges between high negative (-3) to high positive (+3) and only those issuers which achieve positive SDG scores (+1, +2 and +3) are regarded as Sustainable Investments.

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

● ***How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?***

The sustainable investments do no significant harm to any environmental or social sustainable investment objective by considering a principal adverse impact and aligning with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights. In addition, sustainable investments score positively on Robeco's SDG Framework, and therefore do not cause significant harm.

How have the indicators for adverse impacts on sustainability factors been taken into account?

Mandatory principal adverse impact indicators are considered through Robeco's SDG Framework, either directly or indirectly, when identifying sustainable investments for the Sub-fund. In addition, voluntary environmental and social indicators are taken into account, depending on their relevance for measuring impacts on the SDGs and the availability of data. A detailed description of the incorporation of principal adverse impacts is available via Robeco's Principal Adverse Impact Statement published on the Robeco website (<https://www.robeco.com/files/docm/docu-principal-adverse-impact-statement-summary-entity-level.pdf>). In this statement, Robeco sets out its approach to identifying and prioritizing principal adverse impacts, and how principal adverse impacts are considered as part of Robeco's investment due diligence process and procedures relating to research and analysis, exclusions and restrictions and/or voting and engagement. This description also explains how principal adverse impact indicators are considered by the SDG Framework.

How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The sustainable investments are aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights via both Robeco's Exclusion Policy and Robeco's SDG Framework.

Robeco's Exclusion Policy includes an explanation of how Robeco acts in accordance with the International Labor Organization (ILO) standards, United Nations Guiding Principles (UNGPs), United Nations Global Compact (UNGC) Principles and the Organization for Economic Co-operation and Development (OECD) Guidelines for Multinational Enterprises and is guided by these international treaties to assess the behavior of companies. Robeco continuously screens its investments for breaches of these principles. In case of a breach, the company will be excluded or engaged with, and is not considered a sustainable investment.

Robeco's SDG Framework screens for breaches on these principles in the final step of the framework. In this step, Robeco checks whether the company concerned has been involved in any controversies. Involvement in any controversy will result in a negative SDG score for the company, meaning it is not a sustainable investment.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

Does this financial product consider principal adverse impacts on sustainability factors?

Yes, _____

The Sub-fund considers principal adverse impacts on sustainability factors as referred to in Annex I of the SFDR Delegated Act.

Pre-investment, the following principal adverse impacts on sustainability factors are considered:

o Via the applied normative and activity-based exclusions, the following PAIs are considered:

- Exposure to companies active in the fossil fuel sector (PAI 4, Table 1)
- Violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1)
- Activities negatively affecting biodiversity-sensitive areas (PAI 7, Table 1). The consideration of this PAI is currently restricted to applying exclusions to palm oil producing companies and for any breaches to the UNGC, UNGP and OECD Guidelines for Multinational Enterprises in relation to biodiversity.
- Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons (PAI 14, Table 1)

o Via the ESG integration process, as part of the investment due diligence policies and procedures, the following PAIs are considered:

- All indicators related to GHG emissions, as part of the required Climate Risk analysis (PAI 1-6, Table 1, PAI 4, Table 2)
- Biodiversity, water and waste indicators (PAI 7-9, Table 1)
- Board gender diversity (PAI 13, Table 1)

Post-investment, the following principal adverse impacts on sustainability factors are taken into account:

o Via the application of the voting policy, the following PAIs are considered:

- All indicators related to GHG emissions (PAI 1-6, Table 1)
- Indicators related to social and employee matters (PAI 10-13, Table 1; PAI 5-8, Table 3)

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

- o Via Robeco's entity engagement program, the following PAIs are considered:
- All indicators related to Climate and other environment-related indicators (PAI 1-9, Table 1)
- Violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1). On an ongoing basis, the investment universe is scanned for controversial behavior in relation to the aforementioned principles and guidelines.
- In addition, based on a yearly review of Robeco's performance on all mandatory and selected voluntary indicators, holdings of the Sub-fund that cause adverse impact might be selected for engagement.

More information is available via Robeco's Principal Adverse Impact Statement, published on Robeco's website. The Sub-fund will periodically report how it has considered the principal adverse impacts of its investments in the Company's annual report, which will be made available each year on or before 30 April at the Sub-fund page highlighted in final section of this document.

No

What investment strategy does this financial product follow?

Robeco Digital Innovations is an actively managed fund that invests worldwide in equities from developed and emerging countries. The selection of these stocks is based on fundamental analysis as described in the Investment policy strategy paragraph in Appendix I of this Prospectus. The strategy integrates sustainability indicators on a continuous basis as part of the stock selection process. Amongst others, the Sub-fund applies norms-based and activity-based exclusions, Robeco's good governance policy, Robeco's SDG framework and considers Principal Adverse Impacts in the investment process. More product-specific information can be found on our website and the links provided in the final question of this disclosure.

The investment strategy guides investment decisions based on factors such as investment objectives and risk tolerance.

What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?

The Sub-fund has the following binding elements:

1. The Sub-fund's portfolio complies with Robeco's Exclusion Policy (<https://www.robeco.com/files/docm/docu-exclusion-policy.pdf>), that is based on exclusion criteria with regards to products and business practices that Robeco believes are detrimental to society and incompatible with sustainable investment strategies. This means that the Sub-fund has 0% exposure to excluded securities, taking into account a grace period. Information with regards to the effects of the exclusions on the Sub-fund's universe can be found at <https://www.robeco.com/files/docm/docu-exclusion-list.pdf>.
2. The Sub-fund scrutinizes investment in companies that are in breach of the ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises. If a company in the portfolio breaches one of the international guidelines during the investment period, the company will become part of the Enhanced Engagement program.
3. All equity holdings have a granted right to vote and Robeco exerts that right by voting according to Robeco's Proxy Voting Policy, unless impediments occur (e.g. share blocking or when not considered cost efficient). Robeco's Proxy Voting Policy can be found at <https://www.robeco.com/files/docm/docu-robeco-stewardship-policy.pdf>.
4. Investments with an elevated sustainability risk are defined by Robeco as companies with an ESG Risk Rating of 40 and higher (the ESG Risk Rating is explained in the sustainability risk policy which can be accessed via <https://www.robeco.com/files/docm/docu-robeco-sustainability-risk-policy.pdf>). The Sub-fund is limited to a maximum exposure of 3% to

investments with an elevated sustainability risk, based on the market weight in the portfolio taking into account regional differences and benchmark. Each investment with an ESG Risk rating of higher than 40 requires separate approval by a dedicated committee of sustainable investment specialists, compliance and risk management that oversees the bottom-up sustainability analysis.

● **What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?**

The Sub-fund does not commit to a minimum rate to reduce the scope of investments prior to the application of the investment strategy.

● **What is the policy to assess good governance practices of the investee companies?**

Robeco has a Good Governance policy to assess governance practices of companies. The policy describes how Robeco determines if and when a company does not follow good governance practices and is therefore excluded from the initial investment universe for Article 8 and 9 products. Robeco's Good Governance policy applies to the Sub-fund and tests on a set of governance criteria that reflect widely recognized industry established norms and include topics as employee relations, management structure, tax compliance and remuneration.

The Good Governance test consists of criteria on such topics that are examined for investee companies and further explained in Robeco's Good Governance policy <https://www.robeco.com/files/docm/docu-robeco-good-governance-policy.pdf>. Additionally, the companies that do not pass the good governance test are reflected in the exclusion list that can be accessed here - <https://www.robeco.com/files/docm/docu-exclusion-list.pdf>.

Good governance practices include sound management structures, employee relations, remuneration of staff and tax compliance.

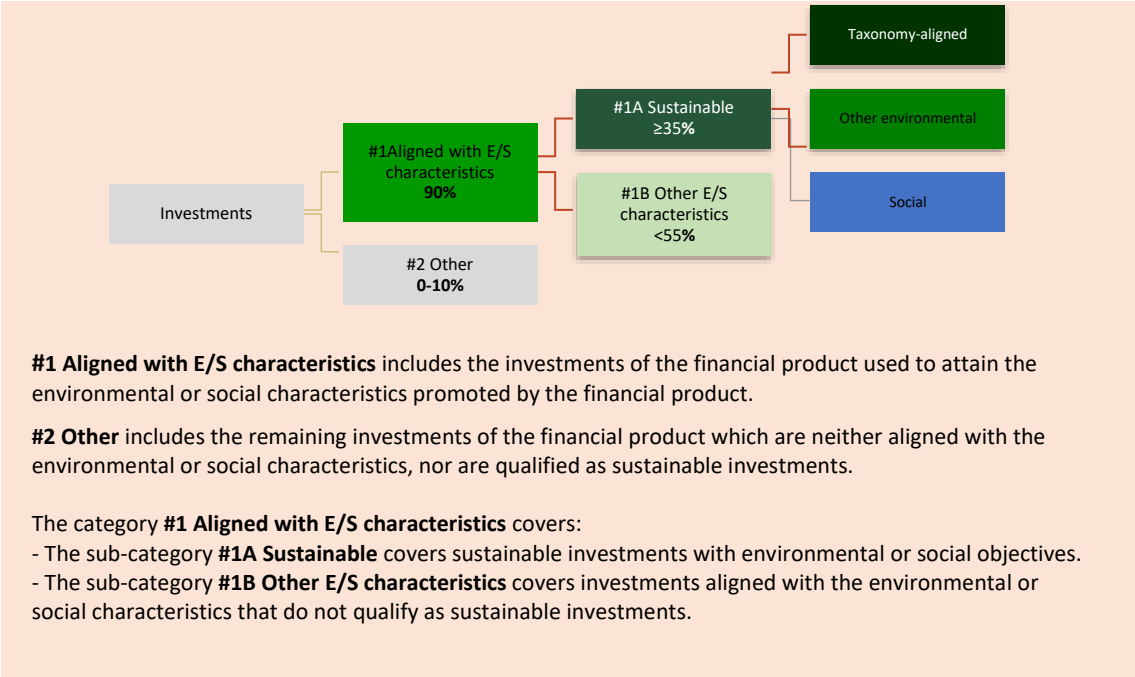

What is the asset allocation planned for this financial product?

At least 90% of the investments are aligned with the E/S characteristics of the Sub-fund. The Sub-fund plans to make a minimum of 35% sustainable investments, measured by positive scores via Robeco's SDG Framework. The investments in the category Other, estimated between 0-10%, are mostly in cash, cash equivalents and derivatives as further described below. The planned asset allocation is monitored continuously, and evaluated on a yearly basis.

Asset allocation describes the share of investments in specific assets.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

How does the use of derivatives attain the environmental or social characteristics promoted by the financial product?

The Sub-fund does not make use of derivatives to attain the environmental or social characteristics promoted by the financial product. The Sub-fund may make use of derivatives for hedging, liquidity management and efficient portfolio management as well as investment purposes. Exchange traded and over-the-counter derivatives are permitted, including but not limited to futures, swaps, options and currency forwards. Whilst the Sub-fund may use derivatives both for investment purposes as well as for hedging and efficient portfolio management, it does not utilize derivatives for such purposes outside the intended share of investments allocated to the 'Other' category. In case the Sub-fund uses derivatives, the underlying shall comply with the investment policy. Where relevant, minimum environmental or social safeguards are taken into account as described below.

To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

0%. The Sub-fund does not intend to make Taxonomy-aligned investments. It cannot be excluded that among the Sub-fund's holdings certain investments are Taxonomy aligned. The Sub-fund will report on Taxonomy-aligned investment in the periodic disclosures. In the future, once data-availability in relation to the EU Taxonomy will improve, Robeco might consider setting a target based on turnover or CAPEX. Robeco currently relies on third-party data, including data in relation to companies that do not disclose on the EU Taxonomy alignment of their activities. EU Taxonomy-alignment data is not yet subject to a review by third parties. The Sub-fund only makes investments in equity and therefore it does not have sovereign exposures. The expected level of alignment with and without sovereign bonds is the same.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

 are sustainable investments with an environmental objective that **do not take into account the criteria for environmentally sustainable economic activities under the EU Taxonomy.**

● **Does the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy?⁵⁶**

Yes

In fossil gas

In nuclear energy

No

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.*

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

** As the investments are not Taxonomy-aligned, the exclusion of sovereign bonds has no impact on the graph and therefore no such percentage is shown here.

● **What is the minimum share of investments in transitional and enabling activities?**

0%.

What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?

The Sub-fund intends to make sustainable investments, measured as positive scores via Robeco's SDG Framework. Among those could be investments with environmental objectives that do not qualify as Taxonomy-aligned. The environmental objectives of the Sub-fund are attained by investing in companies that score positively on SDG 12 (Responsible consumption and production), SDG 13 (Climate action), SDG 14 (Life below water), and SDG 15 (Life on land) in Robeco's SDG Framework. While the sum of sustainable investments with an environmental objective and socially sustainable investments always adds up to the Sub-fund's minimum proportion of 35% sustainable investments, we do not commit to a minimum share of sustainable investments with an environmental objective because the Sub-fund's investment strategy does not have a specific environmental investment objective. Therefore, the minimum share of sustainable investments with an environmental objective is 0%.

⁵⁶ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

What is the minimum share of socially sustainable investments?

The Sub-fund intends to make sustainable investments, measured as positive scores via Robeco's SDG Framework. Among those could be investments with social objectives. The social objectives of the Sub-fund are attained by investing in companies that score positively on SDG 1 (No poverty), SDG 2 (Zero hunger), SDG 3 (Good health and well-being), SDG 4 (Quality education), SDG 5 (Gender equality), SDG 6 (Clear water and sanitation), SDG 7 (Affordable and clean energy), SDG 8 (Decent work and economic growth), SDG 9 (Industry, innovation and infrastructure), SDG 10 (Reduced inequalities), SDG 11 (Sustainable cities and communities), SDG 16 (Peace, justice and strong institutions) and SDG 17 (Partnerships for the goals), in Robeco's SDG Framework. While the sum of socially sustainable investments and sustainable investments with an environmental objective always adds up to the Sub-fund's minimum proportion of sustainable investments, we do not commit to a minimum share of socially sustainable investments because the Sub-fund's investment strategy does not have a specific socially sustainable investment objective. Therefore, the minimum share of socially sustainable investments is 0%.

What investments are included under "#2 Other", what is their purpose and are there any minimum environmental or social safeguards?

The type of instruments included under "#2 Other" and their purpose are outlined in Annex I of this Prospectus under the header 'Financial instruments and investment restrictions'. They include cash, cash equivalents, as well as investment funds and eligible asset classes (other than bonds and equities) that do not specifically promote E/S characteristics. As indicated above, the Sub-fund does not make use of derivatives to attain the environmental or social characteristics promoted. The Sub-fund may make use of derivatives, which thus always fall under the category "#2 Other", for hedging, liquidity management and efficient portfolio management as well as investment purposes. Exchange traded and over-the-counter derivatives are permitted, including but not limited to futures, swaps, options and currency forwards. In case the Sub-fund uses derivatives, the underlying shall comply with the investment policy. Where relevant, minimum environmental or social safeguards are taken into account, by, for example, applying Robeco's Exclusion Policy for any single security derivative.

Is a specific index designated as a reference benchmark to determine whether this financial product is aligned with the environmental and/or social characteristics that it promotes?

Not applicable.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

f) Robeco FinTech

Pre-contractual disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Product name: Robeco FinTech

Legal entity identifier: 213800XVWPYZAY58YG68

Environmental and/or social characteristics

Does this financial product have a sustainable investment objective?

Yes

No

It will make a minimum of **sustainable investments with an environmental objective:** ___%

- in economic activities that qualify as environmentally sustainable under the EU Taxonomy
- in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

It will make a minimum of **sustainable investments with a social objective:** ___%

It promotes **Environmental/Social (E/S) characteristics** and while it does not have as its objective a sustainable investment, it will have a minimum proportion of 35% of sustainable investments

- with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy
- with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy
- with a social objective

It promotes E/S characteristics, but **will not make any sustainable investments**

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

What environmental and/or social characteristics are promoted by this financial product?

The Sub-fund has the following E/S characteristics:

1. The Sub-fund promotes certain minimum environmental and social safeguards through applying exclusion criteria with regards to products and business practices that Robeco believes are detrimental to society and incompatible with sustainable investment strategies, such as exposure to controversial behaviour, controversial weapons, and fossil fuels.
2. The Sub-fund promotes adherence to and conducting business activities in accordance with the United Nations Universal Declaration of Human Rights, the International Labor Organization's (ILO) labor standards, the United Nations Guiding Principles for Business and Human Rights (UNGPs), the United Nations Global Compact (UNGC) and the OECD Guidelines for Multinational Enterprises, by scrutinizing companies that violate these principles.
3. The Sub-fund promotes good governance and sustainable corporate practices through proxy voting, which contributes to long-term shareholder value creation. This includes taking an active stance on social and environmental topics through Robeco's proxy voting policy.
4. The Sub-fund limits investing in companies with an elevated sustainability risk based on ESG risk scores whereas all such investments require separate approval of a dedicated committee that oversees that all investments are substantiated and eligible based on a fundamental review on the sustainability risk.

There is no reference benchmark designated for the purpose of attaining the environmental or social characteristics promoted by the Sub-fund.

● **What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?**

The Sub-fund has the following sustainability indicators:

1. The % of investments in securities that are on Robeco's Exclusion list as result of the application of Robeco's Exclusion Policy.
2. The number of companies that are in violation of the ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises and hence are a part of the Enhanced Engagement program.
3. The number of holdings and agenda items voted.
4. The % of holdings with an elevated sustainability risk profile.

● **What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?**

The sustainable investments aim to contribute to the UN Sustainable Development Goals ("SDGs"), that have both social and environmental objectives. These are 17 goals that are globally recognised and include environmental goals such as climate action, clean water, life on land and water and social goals such as zero hunger, gender equality, education, etc. Robeco has developed a proprietary framework based on the UN SDGs through which an issuer's contribution to such SDGs is determined through a 3-step process. This process starts with a sector baseline on which a company's products are analysed to examine contribution to the society and environment. Further, the operational processes involved in creating such products is checked along with any controversies/litigation claims and remediation actions taken which are perused before a final SDG score is determined. The final score ranges between high negative (-3) to high positive (+3) and only those issuers which achieve positive SDG scores (+1, +2 and +3) are regarded as Sustainable Investments.

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

● ***How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?***

The sustainable investments do no significant harm to any environmental or social sustainable investment objective by considering a principal adverse impact and aligning with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights. In addition, sustainable investments score positively on Robeco's SDG Framework, and therefore do not cause significant harm.

How have the indicators for adverse impacts on sustainability factors been taken into account?

Mandatory principal adverse impact indicators are considered through Robeco's SDG Framework, either directly or indirectly, when identifying sustainable investments for the Sub-fund. In addition, voluntary environmental and social indicators are taken into account, depending on their relevance for measuring impacts on the SDGs and the availability of data. A detailed description of the incorporation of principal adverse impacts is available via Robeco's Principal Adverse Impact Statement published on the Robeco website (<https://www.robeco.com/files/docm/docu-principal-adverse-impact-statement-summary-entity-level.pdf>). In this statement, Robeco sets out its approach to identifying and prioritizing principal adverse impacts, and how principal adverse impacts are considered as part of Robeco's investment due diligence process and procedures relating to research and analysis, exclusions and restrictions and/or voting and engagement. This description also explains how principal adverse impact indicators are considered by the SDG Framework.

How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The sustainable investments are aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights via both Robeco's Exclusion Policy and Robeco's SDG Framework.

Robeco's Exclusion Policy includes an explanation of how Robeco acts in accordance with the International Labor Organization (ILO) standards, United Nations Guiding Principles (UNGPs), United Nations Global Compact (UNGC) Principles and the Organization for Economic Co-operation and Development (OECD) Guidelines for Multinational Enterprises and is guided by these international treaties to assess the behavior of companies. Robeco continuously screens its investments for breaches of these principles. In case of a breach, the company will be excluded or engaged with, and is not considered a sustainable investment.

Robeco's SDG Framework screens for breaches on these principles in the final step of the framework. In this step, Robeco checks whether the company concerned has been involved in any controversies. Involvement in any controversy will result in a negative SDG score for the company, meaning it is not a sustainable investment.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

Does this financial product consider principal adverse impacts on sustainability factors?

Yes, _____

The Sub-fund considers principal adverse impacts on sustainability factors as referred to in Annex I of the SFDR Delegated Act.

Pre-investment, the following principal adverse impacts on sustainability factors are considered:

○ Via the applied normative and activity-based exclusions, the following PAIs are considered:

- Exposure to companies active in the fossil fuel sector (PAI 4, Table 1)
- Violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1)
- Activities negatively affecting biodiversity-sensitive areas (PAI 7, Table 1). The consideration of this PAI is currently restricted to applying exclusions to palm oil producing companies and for any breaches to the UNGC, UNGP and OECD Guidelines for Multinational Enterprises in relation to biodiversity.
- Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons (PAI 14, Table 1)

○ Via the ESG integration process, as part of the investment due diligence policies and procedures, the following PAIs are considered:

- All indicators related to GHG emissions, as part of the required Climate Risk analysis (PAI 1-6, Table 1, PAI 4, Table 2)
- Biodiversity, water and waste indicators (PAI 7-9, Table 1)
- Board gender diversity (PAI 13, Table 1)

Post-investment, the following principal adverse impacts on sustainability factors are taken into account:

○ Via the application of the voting policy, the following PAIs are considered:

- All indicators related to GHG emissions (PAI 1-6, Table 1)
- Indicators related to social and employee matters (PAI 10-13, Table 1; PAI 5-8, Table 3)

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

- Via Robeco's entity engagement program, the following PAIs are considered:
 - All indicators related to Climate and other environment-related indicators (PAI 1-9, Table 1)
 - Violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1). On an ongoing basis, the investment universe is scanned for controversial behavior in relation to the aforementioned principles and guidelines.
 - In addition, based on a yearly review of Robeco's performance on all mandatory and selected voluntary indicators, holdings of the Sub-fund that cause adverse impact might be selected for engagement.

More information is available via Robeco's Principal Adverse Impact Statement, published on Robeco's website. The Sub-fund will periodically report how it has considered the principal adverse impacts of its investments in the Company's annual report, which will be made available each year on or before 30 April at the Sub-fund page highlighted in final section of this document.

No

What investment strategy does this financial product follow?

Robeco FinTech is an actively managed fund that invests in stocks in developed and emerging countries. The selection of these stocks is based on fundamental analysis as described in the Investment policy strategy paragraph in Appendix I of this Prospectus. The strategy integrates sustainability indicators on a continuous basis as part of the stock selection process. Amongst others, the Sub-fund applies norms-based and activity-based exclusions, Robeco's good governance policy, Robeco's SDG framework and considers Principal Adverse Impacts in the investment process. More product-specific information can be found on our website and the links provided in the final question of this disclosure.

The investment strategy guides investment decisions based on factors such as investment objectives and risk tolerance.

What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?

The Sub-fund has the following binding elements:

1. The Sub-fund's portfolio complies with Robeco's Exclusion Policy (<https://www.robeco.com/files/docm/docu-exclusion-policy.pdf>), that is based on exclusion criteria with regards to products and business practices that Robeco believes are detrimental to society and incompatible with sustainable investment strategies. This means that the Sub-fund has 0% exposure to excluded securities, taking into account a grace period. Information with regards to the effects of the exclusions on the Sub-fund's universe can be found at <https://www.robeco.com/files/docm/docu-exclusion-list.pdf>.
2. The Sub-fund scrutinizes investment in companies that are in breach of the ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises. If a company in the portfolio breaches one of the international guidelines during the investment period, the company will become part of the Enhanced Engagement program.
3. All equity holdings have a granted right to vote and Robeco exerts that right by voting according to Robeco's Proxy Voting Policy, unless impediments occur (e.g. share blocking or when not considered cost efficient). Robeco's Proxy Voting Policy can be found at <https://www.robeco.com/files/docm/docu-robeco-stewardship-policy.pdf>.
4. Investments with an elevated sustainability risk are defined by Robeco as companies with an ESG Risk Rating of 40 and higher (the ESG Risk Rating is explained in the sustainability risk policy which can be accessed via <https://www.robeco.com/files/docm/docu-robeco-sustainability-risk-policy.pdf>). The Sub-fund is limited to a maximum exposure of 3% to investments with an elevated

sustainability risk, based on the market weight in the portfolio taking into account regional differences and benchmark. Each investment with an ESG Risk rating of higher than 40 requires separate approval by a dedicated committee of sustainable investment, compliance and risk management that oversees the bottom-up sustainability analysis.

● ***What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?***

The Sub-fund does not commit to a minimum rate to reduce the scope of investments prior to the application of the investment strategy.

● ***What is the policy to assess good governance practices of the investee companies?***

Robeco has a Good Governance policy to assess governance practices of companies. The policy describes how Robeco determines if and when a company does not follow good governance practices and is therefore excluded from the initial investment universe for Article 8 and 9 products. Robeco's Good Governance policy applies to the Sub-fund and tests on a set of governance criteria that reflect widely recognized industry established norms and include topics as employee relations, management structure, tax compliance and remuneration.

The Good Governance test consists of criteria on such topics that are examined for investee companies and further explained in Robeco's Good Governance policy <https://www.robeco.com/files/docm/docu-robeco-good-governance-policy.pdf>. Additionally, the companies that do not pass the good governance test are reflected in the exclusion list that can be accessed here - <https://www.robeco.com/files/docm/docu-exclusion-list.pdf>.

What is the asset allocation planned for this financial product?

At least 90% of the investments are aligned with the E/S characteristics of the Sub-fund. The Sub-fund plans to make a minimum of 35% sustainable investments, measured by positive scores via Robeco's SDG Framework. The investments in the category Other, estimated between 0-10%, are mostly in cash, cash equivalents and derivatives as further described below. The planned asset allocation is monitored continuously, and evaluated on a yearly basis.

Good governance practices include sound management structures, employee relations, remuneration of staff and tax compliance.

Asset allocation describes the share of investments in specific assets.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

● **How does the use of derivatives attain the environmental or social characteristics promoted by the financial product?**

The Sub-fund does not make use of derivatives to attain the environmental or social characteristics promoted by the financial product. The Sub-fund may make use of derivatives for hedging, liquidity management and efficient portfolio management as well as investment purposes. Exchange traded and over-the-counter derivatives are permitted, including but not limited to futures, swaps, options and currency forwards. Whilst the Sub-fund may use derivatives both for investment purposes as well as for hedging and efficient portfolio management, it does not utilize derivatives for such purposes outside the intended share of investments allocated to the 'Other' category. In case the Sub-fund uses derivatives, the underlying shall comply with the investment policy. Where relevant, minimum environmental or social safeguards are taken into account as described below.

To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

0%. The Sub-fund does not intend to make Taxonomy-aligned investments. It cannot be excluded that among the Sub-fund's holdings certain investments are Taxonomy aligned. The Sub-fund will report on Taxonomy-aligned investment in the periodic disclosures. In the future, once data-availability in relation to the EU Taxonomy will improve, Robeco might consider setting a target based on turnover or CAPEX. Robeco currently relies on third-party data, including data in relation to companies that do not disclose on the EU Taxonomy alignment of their activities. EU Taxonomy-alignment data is not yet subject to a review by third parties. The Sub-fund only makes investments in equity and therefore it does not have sovereign exposures. The expected level of alignment with and without sovereign bonds is the same.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

 are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

● **Does the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy?⁵⁷**

Yes

In fossil gas

In nuclear energy

No

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.*

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

** As the investments are not Taxonomy-aligned, the exclusion of sovereign bonds has no impact on the graph and therefore no such percentage is shown here.

● **What is the minimum share of investments in transitional and enabling activities?**

0%.

What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?

The Sub-fund intends to make sustainable investments, measured as positive scores via Robeco's SDG Framework. Among those could be investments with environmental objectives that do not qualify as Taxonomy-aligned. The environmental objectives of the Sub-fund are attained by investing in companies that score positively on SDG 12 (Responsible consumption and production), SDG 13 (Climate action), SDG 14 (Life below water), and SDG 15 (Life on land) in Robeco's SDG Framework. While the sum of sustainable investments with an environmental objective and socially sustainable investments always adds up to the Sub-fund's minimum proportion of 35% sustainable investments, we do not commit to a minimum share of sustainable investments with an environmental objective because the Sub-fund's investment strategy does not have a specific environmental investment objective. Therefore, the minimum share of sustainable investments with an environmental objective is 0%.

⁵⁷ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

What is the minimum share of socially sustainable investments?

The Sub-fund intends to make sustainable investments, measured as positive scores via Robeco's SDG Framework. Among those could be investments with social objectives. The social objectives of the Sub-fund are attained by investing in companies that score positively on SDG 1 (No poverty), SDG 2 (Zero hunger), SDG 3 (Good health and well-being), SDG 4 (Quality education), SDG 5 (Gender equality), SDG 6 (Clear water and sanitation), SDG 7 (Affordable and clean energy), SDG 8 (Decent work and economic growth), SDG 9 (Industry, innovation and infrastructure), SDG 10 (Reduced inequalities), SDG 11 (Sustainable cities and communities), SDG 16 (Peace, justice and strong institutions) and SDG 17 (Partnerships for the goals), in Robeco's SDG Framework. While the sum of socially sustainable investments and sustainable investments with an environmental objective always adds up to the Sub-fund's minimum proportion of sustainable investments, we do not commit to a minimum share of socially sustainable investments because the Sub-fund's investment strategy does not have a specific socially sustainable investment objective. Therefore, the minimum share of socially sustainable investments is 0%.

What investments are included under "#2 Other", what is their purpose and are there any minimum environmental or social safeguards?

The type of instruments included under "#2 Other" and their purpose are outlined in Annex I of this Prospectus under the header 'Financial instruments and investment restrictions'. They include cash, cash equivalents, as well as investment funds and eligible asset classes (other than bonds and equities) that do not specifically promote E/S characteristics. As indicated above, the Sub-fund does not make use of derivatives to attain the environmental or social characteristics promoted. The Sub-fund may make use of derivatives, which thus always fall under the category "#2 Other", for hedging, liquidity management and efficient portfolio management as well as investment purposes. Exchange traded and over-the-counter derivatives are permitted, including but not limited to futures, swaps, options and currency forwards. In case the Sub-fund uses derivatives, the underlying shall comply with the investment policy. Where relevant, minimum environmental or social safeguards are taken into account, by, for example, applying Robeco's Exclusion Policy for any single security derivative.

Is a specific index designated as a reference benchmark to determine whether this financial product is aligned with the environmental and/or social characteristics that it promotes?

Not applicable.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

g) RobecoSAM Circular Economy Equities

Pre-contractual disclosure for the financial products referred to in Article 9, paragraphs 1 to 4a, of Regulation (EU) 2019/2088 and Article 5, first paragraph, of Regulation (EU) 2020/852

Product name: RobecoSAM Circular Economy Equities

Legal entity identifier: 21380076KKDPDXSFG955

Sustainable investment objective

Does this financial product have a sustainable investment objective?

Yes

No

It will make a minimum of **sustainable investments with an environmental objective: 5%**

in economic activities that qualify as environmentally sustainable under the EU Taxonomy

in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

It will make a minimum of **sustainable investments with a social objective: 45%**

It **promotes Environmental/Social (E/S) characteristics** and while it does not have as its objective a sustainable investment, it will have a minimum proportion of ___% of sustainable investments

with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with a social objective

It promotes E/S characteristics, but **will not make any sustainable investments**

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

What is the sustainable investment objective of this financial product?

Sustainability indicators measure how the sustainable objectives of this financial product are attained.

The Sub-fund has the following sustainable investment objective: to finance solutions that support the transition from traditional production and consumption patterns toward a circular economy. The sustainable investment objective is attained by mainly investing in companies that advance the following United Nations Sustainable Development Goals (SDGs): Zero Hunger (SDG 2), Good health and well-being (SDG 3), Decent work and economic growth (SDG 8), Industry, innovation and infrastructure (SDG 9), Sustainable cities and communities (SDG 11) and Responsible consumption and production (SDG 12). The Sub-fund does not have a carbon-reduction objective and the reference benchmark has not been designated for the purpose of attaining the sustainable investment objective.

A part of the investments made by the Sub-fund contribute to the following environmental objectives of the EU Taxonomy regulation:

- Protection and restoration of biodiversity and ecosystems
- Sustainable use and protection of water and marine resources
- Substantial contribution to the transition to a circular economy

There is no reference benchmark designated for the sustainable investment objective promoted by the Sub-fund.

● ***What sustainability indicators are used to measure the attainment of the sustainable investment objective of this financial product?***

The Sub-fund has the following sustainability indicators:

1. The number of companies with a positive or allowed neutral SDG score. Allowed neutral SDG score companies can be companies with transitioning activities or companies that perform relatively well in the sector that the Sub-fund may invest in. It is only for such thematic funds that there is possibility to consider neutral (zero) SDG score holdings as sustainable investments.
2. The % of investments in securities that are on Robeco's Exclusion list as result of the application of Robeco's Exclusion Policy.
3. The % of holdings that are in violation of the ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises.
4. The number of holdings and agenda items voted.

● ***How do sustainable investments not cause significant harm to any environmental or social sustainable investment objective?***

The sustainable investments do no significant harm to any environmental or social sustainable investment objective by considering a principal adverse impact and aligning with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights. In addition, sustainable investments score positively on Robeco's SDG Framework, and therefore do not cause significant harm.

How have the indicators for adverse impacts on sustainability factors been taken into account?

Mandatory principal adverse impact indicators are considered through Robeco's SDG Framework, either directly or indirectly, when identifying sustainable investments for the Sub-fund. In addition, voluntary environmental and social indicators are taken into account, depending on their relevance for measuring impacts on the SDGs and the availability of data. A detailed description of the incorporation of principal adverse impacts is available via Robeco's Principal Adverse Impact Statement published on the Robeco website (<https://www.robeco.com/files/docm/docu-principal-adverse-impact-statement-summary-entity-level.pdf>). In this statement, Robeco sets out its approach to identifying and prioritizing principal adverse impacts, and how principal adverse impacts are considered as part of Robeco's investment due diligence process and procedures relating to research and analysis, exclusions and restrictions and/or voting and engagement. This description also explains how principal adverse impact indicators are considered by the SDG Framework.

How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights?

The sustainable investments are aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights via both Robeco's Exclusion Policy and Robeco's SDG Framework.

Does this financial product consider principal adverse impacts on sustainability factors?

Yes, _____

The Sub-fund considers principal adverse impacts on sustainability factors as referred to in Annex I of the SFDR Delegated Act.

Pre-investment, Robeco's SDG Framework assesses companies' positive and negative contributions to the Sustainable Development Goals (SDGs). Robeco's SDG Framework directly and/or indirectly screens companies on many of the topics considered by the PAI indicators.

Post-investment, the following principal adverse impacts on sustainability factors are taken into account:

- Via the application of the voting policy, the following PAIs are considered:
 - All indicators related to GHG emissions (PAI 1-6, Table 1)
 - Indicators related to social and employee matters (PAI 10-13, Table 1; PAI 5-8, Table 3)
- Via Robeco's entity engagement program, the following PAIs are considered:
 - All indicators related to Climate and other environment-related indicators (PAI 1-9, Table 1)
 - Violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1). On an ongoing basis, the investment universe is scanned for controversial behavior in relation to the aforementioned principles and guidelines.
 - In addition, based on a yearly review of Robeco's performance on all mandatory and selected voluntary indicators, holdings of the Sub-fund that cause adverse impact might be selected for engagement.

More information is available via Robeco's Principal Adverse Impact Statement, published on Robeco's website. The Sub-fund will periodically report how it has considered the principal adverse impacts of its investments in the Company's annual report, which will be made available each year on or before 30 April at the Sub-fund page highlighted in final section of this document.

No

What investment strategy does this financial product follow?

RobecoSAM Circular Economy Equities is an actively managed fund that invests globally in companies aligned with circular economy principles. The selection of these stocks is based on fundamental

The investment strategy guides investment decisions based on factors such as investment objectives and risk tolerance.

analysis as described in the Investment policy strategy paragraph in Appendix I of this Prospectus. The strategy integrates sustainability indicators on a continuous basis as part of the stock selection process. Amongst others, the Sub-fund applies norms-based and activity-based exclusions, Robeco's good governance policy, Robeco's SDG framework and considers Principal Adverse Impacts in the investment process. More product-specific information can be found on our website and the links provided in the final question of this disclosure.

● **What are the binding elements of the investment strategy used to select the investments to attain the sustainable investment objective?**

The Sub-fund has the following binding elements:

1. The Sub-fund is solely invested in companies that hold a positive or allowed neutral SDG score based on the internally developed SDG Framework. A maximum of 10% of the Sub-fund's assets can consist of neutral SDG scores.
2. The Sub-fund's portfolio complies with Robeco's Exclusion Policy (<https://www.robeco.com/files/docm/docu-exclusion-policy.pdf>) excluding investments in companies that are exposed to controversial behavior and controversial products. This means that the Sub-fund has 0% exposure to excluded securities, taking into account a grace period. Information with regards to the impact of the exclusions on the Sub-fund's universe can be found at <https://www.robeco.com/files/docm/docu-exclusion-list.pdf>.
3. The Sub-fund avoids investment in companies that are in breach of the ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises. Companies that breach the international norms will be excluded from the investment universe.
4. All equity holdings have a granted right to vote and Robeco exerts that right by voting according to Robeco's Proxy Voting Policy, unless impediments occur (e.g. share blocking or when not considered cost efficient). Robeco's Proxy Voting Policy can be found at <https://www.robeco.com/files/docm/docu-robeco-stewardship-policy.pdf>.

● **What is the policy to assess good governance practices of the investee companies?**

Robeco has a Good Governance policy to assess governance practices of companies. The policy describes how Robeco determines if and when a company does not follow good governance practices and is therefore excluded from the initial investment universe for Article 8 and 9 products. Robeco's Good Governance policy applies to the Sub-fund and tests on a set of governance criteria that reflect widely recognized industry established norms and include topics as employee relations, management structure, tax compliance and remuneration.

The Good Governance test consists of criteria on such topics that are examined for investee companies and further explained in Robeco's Good Governance policy <https://www.robeco.com/files/docm/docu-robeco-good-governance-policy.pdf>. Additionally, the companies that do not pass the good governance test are reflected in the exclusion list that can be accessed here - <https://www.robeco.com/files/docm/docu-exclusion-list.pdf>.

What is the asset allocation and the minimum share of sustainable investments?

The Sub-fund plans to make a minimum of 90% sustainable investments, with a minimum portion of 5% sustainable investments with an environmental objective and a minimum portion of 45% sustainable investments with a social objective, measured by positive scores or allowed neutrals, via Robeco's SDG Framework. The investments in the category non-sustainable, estimated between 0-10%, are in cash and cash equivalents. The planned asset allocation is monitored continuously, and evaluated on a yearly basis.

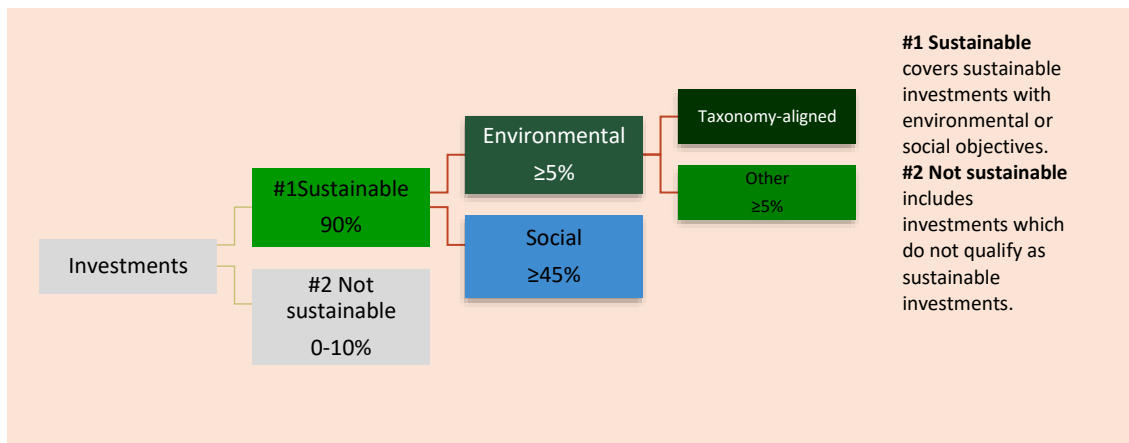

Good governance practices include sound management structures, employee relations, remuneration of staff and tax compliance.

Asset allocation describes the share of investments in specific assets.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

#1 Sustainable covers sustainable investments with environmental or social objectives. **#2 Not sustainable** includes investments which do not qualify as sustainable investments.

● **How does the use of derivatives attain the sustainable investment objective?**

The Sub-fund does not make use of derivatives to attain the sustainable objective promoted by the financial product. The Sub-fund may make use of derivatives for hedging and liquidity management. This includes the usage of derivatives to manage currency and market exposures in a cost-effective manner. To that purpose exchange traded and over-the-counter derivatives linked to equity indices and currencies are permitted.

In case the Sub-fund uses derivatives, the underlying shall comply with the investment policy. Where relevant, minimum environmental or social safeguards are taken into account.

To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

The Sub-fund intends to contribute to the following environmental objectives the EU Taxonomy Regulation:

- Protection and restoration of biodiversity and ecosystems
- Sustainable use and protection of water and marine resources
- Substantial contribution to the transition to a circular economy

The Sub-fund commits to a minimum share of 0% of Taxonomy-aligned activities. The Sub-fund intends to increase the minimum share of Taxonomy aligned activities for the Sub-fund once data availability in relation to the EU Taxonomy improves and stabilises.

The Sub-fund will report on Taxonomy-aligned investment in the periodic disclosures. In the future, once data-availability in relation to the EU Taxonomy will improve, Robeco might consider setting a target based on turnover or CAPEX. Robeco currently relies on third-party data in relation to the EU Taxonomy, including data in relation to companies that do not disclose on the EU Taxonomy alignment of their activities. EU Taxonomy-alignment data is not yet subject to a review by third parties. The Sub-fund only makes investments in equity and therefore it does not have sovereign exposures. The expected level of alignment with and without sovereign bonds is the same.

To comply with the EU Taxonomy,

● **Does the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy⁵⁸?**

⁵⁸ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

 are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally

- Yes:
 - In fossil gas
 - In nuclear energy
- No

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.*

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures
 ** As the investments are not Taxonomy-aligned, the exclusion of sovereign bonds has no impact on the graph and therefore no such percentage is shown here.

 **What is the minimum share of investments in transitional and enabling activities?**

0%.

What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?

The Sub-fund intends to make sustainable investments, measured as positive scores via Robeco's SDG Framework. Among those could be investments with environmental objectives that do not qualify as Taxonomy-aligned. The Sub-fund commits to a minimum share of sustainable investments of 5% with an environmental objective because the Sub-fund's investment strategy does have a specific environmental investment objective. The environmental objectives of the Sub-fund are attained by investing in companies that score positively on SDG 12 (Responsible consumption and production), SDG 13 (Climate action), SDG 14 (Life below water), and SDG 15 (Life on land) in Robeco's SDG Framework. The sum of sustainable investments with an environmental objective and socially sustainable investments always adds up to the Sub-fund's minimum proportion of 90% sustainable investments.

What is the minimum share of sustainable investments with a social objective?

The Sub-fund intends to make sustainable investments, measured as positive scores via Robeco's SDG Framework. The Sub-fund commits to a minimum share of socially sustainable investments of 45% because the Sub-fund's investment strategy does have a specific social investment objective. The social objectives of the Sub-fund are attained by investing in companies that score positively on SDG 1 (No poverty), SDG 2 (Zero hunger), SDG 3 (Good health and well-being), SDG 4 (Quality education), SDG

sustainable economic activities under the EU Taxonomy.

5 (Gender equality), SDG 6 (Clear water and sanitation), SDG 7 (Affordable and clean energy), SDG 8 (Decent work and economic growth), SDG 9 (Industry, innovation and infrastructure), SDG 10 (Reduced inequalities), SDG 11 (Sustainable cities and communities), SDG 16 (Peace, justice and strong institutions) and SDG 17 (Partnerships for the goals), in Robeco's SDG Framework. The sum of socially sustainable investments and sustainable investments with an environmental objective always adds up to the Sub-fund's minimum proportion of 90% sustainable investments.

What investments are included under "#2 Not sustainable", what is their purpose and are there any minimum environmental or social safeguards?

The type of instruments included under "#2 Not Sustainable" and their purpose are outlined in Annex I of this Prospectus under the header 'Financial instruments and investment restrictions'. They include cash, cash equivalents, as well as investment funds and eligible asset classes (other than bonds and equities) that do not specifically promote E/S characteristics. As indicated above, the Sub-fund does not make use of derivatives to attain its sustainable objective. The Sub-fund may make use of derivatives for hedging and liquidity management. This includes the usage of derivatives to manage currency and market exposures in a cost-effective manner. For the management of currency exposure FX Forwards are allowed. The exchange traded derivatives linked to equity indices, such as equity index futures covering the market universe, are permitted for cash equitization. In case the Sub-fund uses such index market derivatives, these shall be temporary positions as defined by the investment restrictions. Where relevant, minimum environmental or social safeguards are taken into account by monitoring and performing suitability tests on index futures constituents following Robeco's Exclusion Policy.

Is a specific index designated as a reference benchmark to meet the sustainable investment objective?

Not applicable.

Reference benchmarks are indexes to measure whether the financial product attains the sustainable investment objective.

h) RobecoSAM Smart Energy Equities

Pre-contractual disclosure for the financial products referred to in Article 9, paragraphs 1 to 4a, of Regulation (EU) 2019/2088 and Article 5, first paragraph, of Regulation (EU) 2020/852

Product name: RobecoSAM Smart Energy Equities

Legal entity identifier: 213800XOKIZRP1SLWA28

Sustainable investment objective

Does this financial product have a sustainable investment objective?

Yes

No

It will make a minimum of **sustainable investments with an environmental objective: 15%**

in economic activities that qualify as environmentally sustainable under the EU Taxonomy

in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

It will make a minimum of **sustainable investments with a social objective: 35%**

It **promotes Environmental/Social (E/S) characteristics** and while it does not have as its objective a sustainable investment, it will have a minimum proportion of ___% of sustainable investments

with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with a social objective

It promotes E/S characteristics, but **will not make any sustainable investments**

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

What is the sustainable investment objective of this financial product?

Sustainability indicators measure how the sustainable objectives of this financial product are attained.

The sustainable investments of the Sub-fund aim to further the transformation and decarbonization of the global energy sector. The sustainable investment objective is attained by mainly investing in companies that advance the following United Nations Sustainable Development Goals (SDGs): Affordable and clean energy goal (SDG 7), Decent work and economic growth (SDG 8), Industry, innovation and infrastructure (SDG 9), Sustainable cities and communities (SDG 11) and Climate action (SDG 13).

A part of the investments made by the Sub-fund contribute to the environmental objective of Climate Mitigation under the Taxonomy regulation. The Sub-fund has a carbon-reduction objective and uses the Custom Bloomberg Climate Transition Benchmark to monitor the carbon profile of the Sub-fund.

What sustainability indicators are used to measure the attainment of the sustainable investment objective of this financial product?

The Sub-fund has the following sustainability indicators:

1. The Sub-fund's weighted carbon footprint compared to the Custom Bloomberg Climate Transition Benchmark.
2. The number of companies with a positive or allowed neutral SDG score. Allowed neutral SDG score companies can be companies with transitioning activities or companies that perform relatively well in the sector that the Sub-fund may invest in. It is only for such thematic funds that there is possibility to consider neutral (zero) SDG score holdings as sustainable investments.
3. The % of investments in securities that are on Robeco's Exclusion list as result of the application of Robeco's Exclusion Policy.
4. The % of holdings that are in violation of the ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises.
5. The number of holdings and agenda items voted.

How do sustainable investments not cause significant harm to any environmental or social sustainable investment objective?

The sustainable investments do no significant harm to any environmental or social sustainable investment objective by considering a principal adverse impact and aligning with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights. In addition, sustainable investments score positively on Robeco's SDG Framework, and therefore do not cause significant harm.

How have the indicators for adverse impacts on sustainability factors been taken into account?

Mandatory principal adverse impact indicators are considered through Robeco's SDG Framework, either directly or indirectly, when identifying sustainable investments for the Sub-fund. In addition, voluntary environmental and social indicators are taken into account, depending on their relevance for measuring impacts on the SDGs and the availability of data. A detailed description of the incorporation of principal adverse impacts is available via Robeco's Principal Adverse Impact Statement published on the Robeco website (<https://www.robeco.com/files/docm/docu-principal-adverse-impact-statement-summary-entity-level.pdf>). In this statement, Robeco sets out its approach to identifying and prioritizing principal adverse impacts, and how principal adverse impacts are considered as part of Robeco's investment due diligence process and procedures relating to research and analysis, exclusions and restrictions and/or voting and engagement. This description also explains how principal adverse impact indicators are considered by the SDG Framework.

How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights?

The sustainable investments are aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights via both Robeco's Exclusion Policy and Robeco's SDG Framework.

Does this financial product consider principal adverse impacts on sustainability factors?

Yes, _____

The Sub-fund considers principal adverse impacts on sustainability factors as referred to in Annex I of the SFDR Delegated Act.

Pre-investment, Robeco's SDG Framework assesses companies' positive and negative contributions to the Sustainable Development Goals (SDGs). Robeco's SDG Framework directly and/or indirectly screens companies on many of the topics considered by the PAI indicators.

Post-investment, the following principal adverse impacts on sustainability factors are taken into account:

- Via the application of the voting policy, the following PAIs are considered:
 - All indicators related to GHG emissions (PAI 1-6, Table 1)
 - Indicators related to social and employee matters (PAI 10-13, Table 1; PAI 5-8, Table 3)
- Via Robeco's entity engagement program, the following PAIs are considered:
 - All indicators related to Climate and other environment-related indicators (PAI 1-9, Table 1)
 - Violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1). On an ongoing basis, the investment universe is scanned for controversial behavior in relation to the aforementioned principles and guidelines.
 - In addition, based on a yearly review of Robeco's performance on all mandatory and selected voluntary indicators, holdings of the Sub-fund that cause adverse impact might be selected for engagement.

More information is available via Robeco's Principal Adverse Impact Statement, published on Robeco's website. The Sub-fund will periodically report how it has considered the principal adverse impacts of its investments in the Company's annual report, which will be made available each year on or before 30 April at the Sub-fund page highlighted in final section of this document.

No

What investment strategy does this financial product follow?

RobecoSAM Smart Energy Equities is an actively managed fund that invests globally in companies providing technologies for clean energy production, distribution, power management infrastructure and energy efficiency. The selection of these stocks is based on fundamental analysis as described in the Investment policy strategy paragraph in Appendix I of this Prospectus. The strategy integrates sustainability indicators on a continuous basis as part of the stock selection process. Amongst others, the Sub-fund applies norms-based and activity-based exclusions, Robeco's good governance policy, Robeco's SDG framework and considers Principal Adverse Impacts in the investment process. More

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

The investment strategy guides investment decisions based on factors such as

investment objectives and risk tolerance.

product-specific information can be found on our website and the links provided in the final question of this disclosure.

● **What are the binding elements of the investment strategy used to select the investments to attain the sustainable investment objective?**

The Sub-fund has the following binding elements:

1. The Sub-fund's weighted carbon footprint score is equal or better than that of the Custom Bloomberg Climate Transition Benchmark. A maximum of 10% of the Sub-fund's assets can consist of neutral SDG scores.
2. The Sub-fund is solely invested in companies that hold a positive or allowed neutral SDG score based on the internally developed SDG Framework.
3. The Sub-fund's portfolio complies with Robeco's Exclusion Policy (<https://www.robeco.com/files/docm/docu-exclusion-policy.pdf>) excluding investments in companies that are exposed to controversial behavior and controversial products. This means that the Sub-fund has 0% exposure to excluded securities, taking into account a grace period. Information with regards to the impact of the exclusions on the Sub-fund's universe can be found at <https://www.robeco.com/files/docm/docu-exclusion-list.pdf>.
4. The Sub-fund avoids investment in companies that are in breach of the ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises. Companies that breach the international norms will be excluded from the investment universe.
5. All equity holdings have a granted right to vote and Robeco exerts that right by voting according to Robeco's Proxy Voting Policy, unless impediments occur (e.g. share blocking or when not considered cost efficient). Robeco's Proxy Voting Policy can be found at <https://www.robeco.com/files/docm/docu-robeco-stewardship-policy.pdf>.

● **What is the policy to assess good governance practices of the investee companies?**

Robeco has a Good Governance policy to assess governance practices of companies. The policy describes how Robeco determines if and when a company does not follow good governance practices and is therefore excluded from the initial investment universe for Article 8 and 9 products. Robeco's Good Governance policy applies to the Sub-fund and tests on a set of governance criteria that reflect widely recognized industry established norms and include topics as employee relations, management structure, tax compliance and remuneration.

The Good Governance test consists of criteria on such topics that are examined for investee companies and further explained in Robeco's Good Governance policy <https://www.robeco.com/files/docm/docu-robeco-good-governance-policy.pdf>. Additionally, the companies that do not pass the good governance test are reflected in the exclusion list that can be accessed here - <https://www.robeco.com/files/docm/docu-exclusion-list.pdf>.

● **What is the asset allocation and the minimum share of sustainable investments?**

The Sub-fund plans to make a minimum of 90% sustainable investments, with a minimum portion of 15% sustainable investments with an environmental objective and a minimum portion of 35% sustainable investments with a social objective, measured by positive scores or allowed neutrals, via Robeco's SDG Framework. The investments in the category non-sustainable, estimated between 0-10%, are in cash and cash equivalents. The planned asset allocation is monitored continuously, and evaluated on a yearly basis.

Good governance practices include sound management structures, employee relations, remuneration of staff and tax compliance.

Asset allocation describes the share of investments in specific assets.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

● **How does the use of derivatives attain the sustainable investment objective?**

The Sub-fund does not make use of derivatives to attain the sustainable objective promoted by the financial product. The Sub-fund may make use of derivatives for hedging and liquidity management. This includes the usage of derivatives to manage currency and market exposures in a cost-effective manner. To that purpose exchange traded and over-the-counter derivatives linked to equity indices and currencies are permitted.

In case the Sub-fund uses derivatives, the underlying shall comply with the investment policy. Where relevant, minimum environmental or social safeguards are taken into account.

To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

The Sub-fund intends to contribute to the environmental objective of Climate Mitigation under the EU Taxonomy.

The Sub-fund commits to a minimum share of 0% of Taxonomy-aligned activities. The Sub-fund intends to increase the minimum share of Taxonomy aligned activities for the Sub-fund once data availability in relation to the EU Taxonomy improves and stabilises.

The Sub-fund will report on Taxonomy-aligned investment in the periodic disclosures. In the future, once data-availability in relation to the EU Taxonomy will improve, Robeco might consider setting a target based on turnover or CAPEX. Robeco currently relies on third-party data in relation to the EU Taxonomy, including data in relation to companies that do not disclose on the EU Taxonomy alignment of their activities. EU Taxonomy-alignment data is not yet subject to a review by third parties. The Sub-fund only makes investments in equity and therefore it does not have sovereign exposures. The expected level of alignment with and without sovereign bonds is the same.

● **Does the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy⁵⁹?**

Yes:

In fossil gas

In nuclear energy

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and

⁵⁹ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

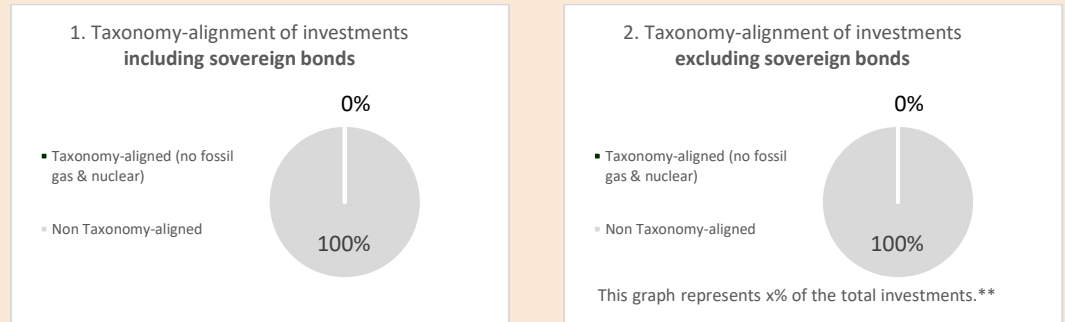

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

✘ No

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

*** For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures**
**** As the investments are not Taxonomy-aligned, the exclusion of sovereign bonds has no impact on the graph and therefore no such percentage is shown here.**

● What is the minimum share of investments in transitional and enabling activities?

0%.

What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?

The Sub-fund intends to make sustainable investments, measured as positive scores via Robeco's SDG Framework. Among those could be investments with environmental objectives that do not qualify as Taxonomy-aligned. The Sub-fund commits to a minimum share of sustainable investments of 15% with an environmental objective because the Sub-fund's investment strategy does have a specific environmental investment objective. The environmental objectives of the Sub-fund are attained by investing in companies that score positively on SDG 12 (Responsible consumption and production), SDG 13 (Climate action), SDG 14 (Life below water), and SDG 15 (Life on land) in Robeco's SDG Framework. The sum of sustainable investments with an environmental objective and socially sustainable investments always adds up to the Sub-fund's minimum proportion of 90% sustainable investments.

What is the minimum share of sustainable investments with a social objective?

The Sub-fund intends to make sustainable investments, measured as positive scores via Robeco's SDG Framework. The Sub-fund commits to a minimum share of socially sustainable investments of 35% because the Sub-fund's investment strategy does have a specific social investment objective. The social objectives of the Sub-fund are attained by investing in companies that score positively on SDG 1 (No poverty), SDG 2 (Zero hunger), SDG 3 (Good health and well-being), SDG 4 (Quality education), SDG 5 (Gender equality), SDG 6 (Clean water and sanitation), SDG 7 (Affordable and clean energy), SDG 8 (Decent work and economic growth), SDG 9 (Industry, innovation and infrastructure), SDG 10

(Reduced inequalities), SDG 11 (Sustainable cities and communities), SDG 16 (Peace, justice and strong institutions) and SDG 17 (Partnerships for the goals), in Robeco's SDG Framework. The sum of socially sustainable investments and sustainable investments with an environmental objective always adds up to the Sub-fund's minimum proportion of 90% sustainable investments.

What investments are included under "#2 Not sustainable", what is their purpose and are there any minimum environmental or social safeguards?

The type of instruments included under "#2 Not Sustainable" and their purpose are outlined in Annex I of this Prospectus under the header 'Financial instruments and investment restrictions'. They include cash, cash equivalents, as well as investment funds and eligible asset classes (other than bonds and equities) that do not specifically promote E/S characteristics. As indicated above, the Sub-fund does not make use of derivatives to attain its sustainable objective. The Sub-fund may make use of derivatives for hedging and liquidity management. This includes the usage of derivatives to manage currency and market exposures in a cost-effective manner. For the management of currency exposure FX Forwards are allowed. The exchange traded derivatives linked to equity indices, such as equity index futures covering the market universe, are permitted for cash equitization. In case the Sub-fund uses such index market derivatives, these shall be temporary positions as defined by the investment restrictions. Where relevant, minimum environmental or social safeguards are taken into account by monitoring and performing suitability tests on index futures constituents following Robeco's Exclusion Policy.

Is a specific index designated as a reference benchmark to meet the sustainable investment objective?

The Sub-fund uses the Custom Bloomberg Climate Transition Benchmark to meet the carbon objective of the Sub-fund.

Reference benchmarks are indexes to measure whether the financial product attains the sustainable investment objective.

● *How does the reference benchmark take into account sustainability factors in a way that is continuously aligned with the sustainable investment objective?*

The reference benchmark is designed in accordance with the requirements of point (d) of Article 13 (1) of the Benchmark Regulation and of the Commission Delegated Regulation (EU) 2020/1817. The Sub-fund's exclusion criteria are similar to those of the reference index, and the Sub-fund's weighted carbon footprint score is equal to or better than the reference benchmark for the carbon objective of the Sub-fund.

● *How is the alignment of the investment strategy with the methodology of the index ensured on a continuous basis?*

The Sub-fund follows a rebalancing strategy which ensures that the carbon footprint of the Sub-fund is better than that of the reference index. This in turn ensures that the investment strategy of the Sub-fund aligns with the methodology of the reference index. Bloomberg applies Robeco defined criteria on a regular basis to exclude companies which do not comply with the thematic objective of the Sub-fund. The methodology of the reference index takes into account a decarbonization trajectory of at least 7% GHG intensity per annum along with specific sector or activity exclusions and including involvement in controversial weapons.

● *How does the designated index differ from a relevant broad market index?*

The benchmark differs from a broad general market index in that the latter does not take into account in its methodology any criteria on the carbon reduction objective and carbon footprint of companies. In addition, the designated index is tailored towards the sector-specific focus of the Sub-fund.

● **Where can the methodology used for the calculation of the designated index be found?**

The index methodology can be found at <https://assets.bbhub.io/professional/sites/10/Bloomberg-Global-Equity-Paris-Aligned-Climate-Transition-Methodology.pdf>.

i) RobecoSAM Smart Materials Equities

Pre-contractual disclosure for the financial products referred to in Article 9, paragraphs 1 to 4a, of Regulation (EU) 2019/2088 and Article 5, first paragraph, of Regulation (EU) 2020/852

Product name: RobecoSAM Smart Materials Equities

Legal entity identifier: 213800HUVXY434VECO29

Sustainable investment objective

Does this financial product have a sustainable investment objective?

Yes

No

It will make a minimum of **sustainable investments with an environmental objective: 15%**

in economic activities that qualify as environmentally sustainable under the EU Taxonomy

in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

It will make a minimum of **sustainable investments with a social objective: 35%**

It **promotes Environmental/Social (E/S) characteristics** and while it does not have as its objective a sustainable investment, it will have a minimum proportion of ___% of sustainable investments

with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with a social objective

It promotes E/S characteristics, but **will not make any sustainable investments**

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

What is the sustainable investment objective of this financial product?

Sustainability indicators measure how the sustainable objectives of this financial product are attained.

The sustainable investments of the Sub-fund aim to help mitigate the resource scarcity challenge within industries while supporting economic growth. The sustainable investment objective is attained by mainly investing in companies that advance the following United Nations Sustainable Development Goals (SDGs): Decent work and economic growth (SDG 8), Industry, innovation and infrastructure (SDG 9), Sustainable cities and communities (SDG 11), and Responsible consumption and production (SDG 12) as well as Climate action (SDG 13).

A part of the investments made by the Sub-fund contribute to the environmental objective of Climate Mitigation under the Taxonomy regulation. The Sub-fund has a carbon-reduction objective and uses the Custom Bloomberg Climate Transition Benchmark to monitor the carbon profile of the Sub-fund.

● ***What sustainability indicators are used to measure the attainment of the sustainable investment objective of this financial product?***

The Sub-fund has the following sustainability indicators:

1. The Sub-fund's weighted carbon footprint compared to the Custom Bloomberg Climate Transition Benchmark.
2. The number of companies with a positive or allowed neutral SDG score. Allowed neutral SDG score companies can be companies with transitioning activities or companies that perform relatively well in the sector that the Sub-fund may invest in. It is only for such thematic funds that there is possibility to consider neutral (zero) SDG score holdings as sustainable investments.
3. The % of investments in securities that are on Robeco's Exclusion list as result of the application of Robeco's Exclusion Policy.
4. The % of holdings that are in violation of the ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises.
5. The number of holdings and agenda items voted.

● ***How do sustainable investments not cause significant harm to any environmental or social sustainable investment objective?***

The sustainable investments do no significant harm to any environmental or social sustainable investment objective by considering a principal adverse impact and aligning with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights. In addition, sustainable investments score positively on Robeco's SDG Framework, and therefore do not cause significant harm.

How have the indicators for adverse impacts on sustainability factors been taken into account?

Mandatory principal adverse impact indicators are considered through Robeco's SDG Framework, either directly or indirectly, when identifying sustainable investments for the Sub-fund. In addition, voluntary environmental and social indicators are taken into account, depending on their relevance for measuring impacts on the SDGs and the availability of data. A detailed description of the incorporation of principal adverse impacts is available via Robeco's Principal Adverse Impact Statement published on the Robeco website (<https://www.robeco.com/files/docm/docu-principal-adverse-impact-statement-summary-entity-level.pdf>). In this statement, Robeco sets out its approach to identifying and prioritizing principal adverse impacts, and how principal adverse impacts are considered as part of Robeco's investment due diligence process and procedures relating to research and analysis, exclusions and restrictions and/or voting and engagement. This description also explains how principal adverse impact indicators are considered by the SDG Framework.

How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights?

The sustainable investments are aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights via both Robeco's Exclusion Policy and Robeco's SDG Framework

Does this financial product consider principal adverse impacts on sustainability factors?

Yes, _____

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

The Sub-fund considers principal adverse impacts on sustainability factors as referred to in Annex I of the SFDR Delegated Act.

Pre-investment, Robeco's SDG Framework assesses companies' positive and negative contributions to the Sustainable Development Goals (SDGs). Robeco's SDG Framework directly and/or indirectly screens companies on many of the topics considered by the PAI indicators.

Post-investment, the following principal adverse impacts on sustainability factors are taken into account:

- Via the application of the voting policy, the following PAIs are considered:
 - All indicators related to GHG emissions (PAI 1-6, Table 1)
 - Indicators related to social and employee matters (PAI 10-13, Table 1; PAI 5-8, Table 3)
- Via Robeco's entity engagement program, the following PAIs are considered:
 - All indicators related to Climate and other environment-related indicators (PAI 1-9, Table 1)
 - Violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1). On an ongoing basis, the investment universe is scanned for controversial behavior in relation to the aforementioned principles and guidelines.
 - In addition, based on a yearly review of Robeco's performance on all mandatory and selected voluntary indicators, holdings of the Sub-fund that cause adverse impact might be selected for engagement.

More information is available via Robeco's Principal Adverse Impact Statement, published on Robeco's website. The Sub-fund will periodically report how it has considered the principal adverse impacts of its investments in the Company's annual report, which will be made available each year on or before 30 April at the Sub-fund page highlighted in final section of this document.

No

What investment strategy does this financial product follow?

The investment strategy guides investment decisions based on factors such as investment objectives and risk tolerance.

RobecoSAM Smart Materials Equities is an actively managed fund that invests globally in companies that provide innovative materials and process technologies. The selection of these stocks is based on fundamental analysis as described in the Investment policy strategy paragraph in Appendix I of this Prospectus. The strategy integrates sustainability indicators on a continuous basis as part of the stock selection process. Amongst others, the Sub-fund applies norms-based and activity-based exclusions, Robeco's good governance policy, Robeco's SDG framework and considers Principal Adverse Impacts in the investment process. More product-specific information can be found on our website and the links provided in the final question of this disclosure.

● **What are the binding elements of the investment strategy used to select the investments to attain the sustainable investment objective?**

The Sub-fund has the following binding elements:

1. The Sub-fund's weighted carbon footprint score is equal or better than that of the Custom Bloomberg Climate Transition Benchmark. A maximum of 10% of the Sub-fund's assets can consist of neutral SDG scores.
2. The Sub-fund is solely invested in companies that hold a positive or allowed neutral SDG score based on the internally developed SDG Framework.
3. The Sub-fund's portfolio complies with Robeco's Exclusion Policy (<https://www.robeco.com/files/docm/docu-exclusion-policy.pdf>) excluding investments in companies that are exposed to controversial behavior and controversial products. This means that the Sub-fund has 0% exposure to excluded securities, taking into account a grace period. Information with regards to the impact of the exclusions on the Sub-fund's universe can be found at <https://www.robeco.com/files/docm/docu-exclusion-list.pdf>.
4. The Sub-fund avoids investment in companies that are in breach of the ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises. Companies that breach the international norms will be excluded from the investment universe.
5. All equity holdings have a granted right to vote and Robeco exerts that right by voting according to Robeco's Proxy Voting Policy, unless impediments occur (e.g. share blocking or when not considered cost efficient). Robeco's Proxy Voting Policy can be found at <https://www.robeco.com/files/docm/docu-robeco-stewardship-policy.pdf>.

● **What is the policy to assess good governance practices of the investee companies?**

Robeco has a Good Governance policy to assess governance practices of companies. The policy describes how Robeco determines if and when a company does not follow good governance practices and is therefore excluded from the initial investment universe for Article 8 and 9 products. Robeco's Good Governance policy applies to the Sub-fund and tests on a set of governance criteria that reflect widely recognized industry established norms and include topics as employee relations, management structure, tax compliance and remuneration.

The Good Governance test consists of criteria on such topics that are examined for investee companies and further explained in Robeco's Good Governance policy <https://www.robeco.com/files/docm/docu-robeco-good-governance-policy.pdf>. Additionally, the companies that do not pass the good governance test are reflected in the exclusion list that can be accessed here - <https://www.robeco.com/files/docm/docu-exclusion-list.pdf>.

Good governance practices include sound management structures, employee relations, remuneration of staff and tax compliance.

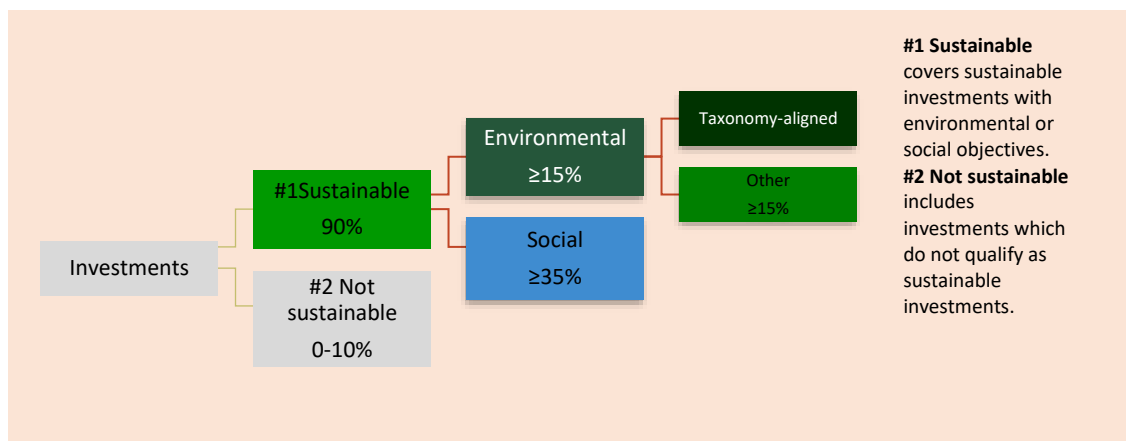

What is the asset allocation and the minimum share of sustainable investments?

The Sub-fund plans to make a minimum of 90% sustainable investments, with a minimum portion of 15% sustainable investments with an environmental objective and a minimum portion of 35% sustainable investments with a social objective, measured by positive scores or allowed neutrals, via Robeco's SDG Framework. The investments in the category non-sustainable, estimated between 0-10%, are in cash and cash equivalents. The planned asset allocation is monitored continuously, and evaluated on a yearly basis.

Asset allocation describes the share of investments in specific assets.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

#1 Sustainable covers sustainable investments with environmental or social objectives. **#2 Not sustainable** includes investments which do not qualify as sustainable investments.

● **How does the use of derivatives attain the sustainable investment objective?**

The Sub-fund does not make use of derivatives to attain the sustainable objective promoted by the financial product. The Sub-fund may make use of derivatives for hedging and liquidity management. This includes the usage of derivatives to manage currency and market exposures in a cost-effective manner. To that purpose exchange traded and over-the-counter derivatives linked to equity indices and currencies are permitted. In case the Sub-fund uses derivatives, the underlying shall comply with the investment policy. Where relevant, minimum environmental or social safeguards are taken into account.

To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

The Sub-fund intends to contribute to the environmental objective of Climate Mitigation under the EU Taxonomy.

The Sub-fund commits to a minimum share of 0% of Taxonomy-aligned activities. The Sub-fund intends to increase the minimum share of Taxonomy aligned activities for the Sub-fund once data availability in relation to the EU Taxonomy improves and stabilises.

The Sub-fund will report on Taxonomy-aligned investment in the periodic disclosures. In the future, once data-availability in relation to the EU Taxonomy will improve, Robeco might consider setting a target based on turnover or CAPEX. Robeco currently relies on third-party data in relation to the EU Taxonomy, including data in relation to companies that do not disclose on the EU Taxonomy alignment of their activities. EU Taxonomy-alignment data is not yet subject to a review by third parties. The Sub-fund only makes investments in equity and therefore it does not have sovereign exposures. The expected level of alignment with and without sovereign bonds is the same.

To comply with the EU Taxonomy,

● **Does the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy⁶⁰?**

⁶⁰ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

 are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

- Yes:
 - In fossil gas
 - In nuclear energy
- No

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.*

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures
 ** As the investments are not Taxonomy-aligned, the exclusion of sovereign bonds has no impact on the graph and therefore no such percentage is shown here.

What is the minimum share of investments in transitional and enabling activities?

0%.

What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?

The Sub-fund intends to make sustainable investments, measured as positive scores via Robeco's SDG Framework. Among those could be investments with environmental objectives that do not qualify as Taxonomy-aligned. The Sub-fund commits to a minimum share of sustainable investments of 15% with an environmental objective because the Sub-fund's investment strategy does have a specific environmental investment objective. The environmental objectives of the Sub-fund are attained by investing in companies that score positively on SDG 12 (Responsible consumption and production), SDG 13 (Climate action), SDG 14 (Life below water), and SDG 15 (Life on land) in Robeco's SDG Framework. The sum of sustainable investments with an environmental objective and socially sustainable investments always adds up to the Sub-fund's minimum proportion of 90% sustainable investments.

What is the minimum share of sustainable investments with a social objective?

The Sub-fund intends to make sustainable investments, measured as positive scores via Robeco's SDG Framework. The Sub-fund commits to a minimum share of socially sustainable investments of 35% because the Sub-fund's investment strategy does have a specific social investment objective. The social objectives of the Sub-fund are attained by investing in companies that score positively on SDG 1 (No poverty), SDG 2 (Zero hunger), SDG 3 (Good health and well-being), SDG 4 (Quality education), SDG 5 (Gender equality), SDG 6 (Clean water and sanitation), SDG 7 (Affordable and clean energy), SDG 8 (Decent work and economic growth), SDG 9 (Industry, innovation and infrastructure), SDG 10 (Reduced inequalities), SDG 11 (Sustainable cities and communities), SDG 16 (Peace, justice and strong institutions) and SDG 17 (Partnerships for the goals), in Robeco's SDG Framework. While the sum of socially sustainable investments and sustainable investments with an environmental objective always adds up to the Sub-fund's minimum proportion of 90% sustainable investments.

What investments are included under "#2 Not sustainable", what is their purpose and are there any minimum environmental or social safeguards?

The type of instruments included under "#2 Not Sustainable" and their purpose are outlined in Annex I of this Prospectus under the header 'Financial instruments and investment restrictions'. They include cash, cash equivalents, as well as investment funds and eligible asset classes (other than bonds and equities) that do not specifically promote E/S characteristics. As indicated above, the Sub-fund does not make use of derivatives to attain its sustainable objective. The Sub-fund may make use of derivatives for hedging and liquidity management. This includes the usage of derivatives to manage currency and market exposures in a cost-effective manner. For the management of currency exposure FX Forwards are allowed. The exchange traded derivatives linked to equity indices, such as equity index futures covering the market universe, are permitted for cash equitization. In case the Sub-fund uses such index market derivatives, these shall be temporary positions as defined by the investment restrictions. Where relevant, minimum environmental or social safeguards are taken into account by monitoring and performing suitability tests on index futures constituents following Robeco's Exclusion Policy.

Is a specific index designated as a reference benchmark to meet the sustainable investment objective?

The Sub-fund uses the Custom Bloomberg Climate Transition Benchmark to meet the carbon objective of the Sub-fund.

Reference benchmarks are indexes to measure whether the financial product attains the sustainable investment objective.

How does the reference benchmark take into account sustainability factors in a way that is continuously aligned with the sustainable investment objective?

The reference benchmark is designed in accordance with the requirements of point (d) of Article 13 (1) of the Benchmark Regulation and of the Commission Delegated Regulation (EU) 2020/1817. The Sub-fund's exclusion criteria are similar to those of the reference index, and the Sub-fund's weighted carbon footprint score is equal to or better than the reference benchmark for the carbon objective of the Sub-fund.

How is the alignment of the investment strategy with the methodology of the index ensured on a continuous basis?

The Sub-fund follows a rebalancing strategy which ensures that the carbon footprint of the Sub-fund is better than that of the reference index. This in turn ensures that the investment strategy of the Sub-fund aligns with the methodology of the reference index. Bloomberg applies Robeco defined criteria on a regular basis to exclude companies which do not comply with the thematic objective of the Sub-fund. The methodology of the reference index takes into account a decarbonization trajectory of at

least 7% GHG intensity per annum along with specific sector or activity exclusions and including involvement in controversial weapons.

● ***How does the designated index differ from a relevant broad market index?***

The benchmark differs from a broad general market index in that the latter does not take into account in its methodology any criteria on the carbon reduction objective and carbon footprint of companies. In addition, the designated index is tailored towards the sector-specific focus of the Sub-fund.

● ***Where can the methodology used for the calculation of the designated index be found?***

The index methodology can be found at <https://assets.bbhub.io/professional/sites/10/Bloomberg-Global-Equity-Paris-Aligned-Climate-Transition-Methodology.pdf>.

j) RobecoSAM Smart Mobility Equities

Pre-contractual disclosure for the financial products referred to in Article 9, paragraphs 1 to 4a, of Regulation (EU) 2019/2088 and Article 5, first paragraph, of Regulation (EU) 2020/852

Product name: RobecoSAM Smart Mobility Equities

Legal entity identifier: 21380025AXSQN7Y4RV82

Sustainable investment objective

Does this financial product have a sustainable investment objective?

Yes

No

It will make a minimum of **sustainable investments with an environmental objective: 15%**

in economic activities that qualify as environmentally sustainable under the EU Taxonomy

in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

It will make a minimum of **sustainable investments with a social objective: 35%**

It **promotes Environmental/Social (E/S) characteristics** and while it does not have as its objective a sustainable investment, it will have a minimum proportion of ___% of sustainable investments

with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with a social objective

It promotes E/S characteristics, but **will not make any sustainable investments**

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

What is the sustainable investment objective of this financial product?

Sustainability indicators measure how the sustainable objectives of this financial product are attained.

The sustainable investments of the Sub-fund aim to support the transformation and decarbonization of the global transportation sector. The sustainable investment objective is attained by mainly investing in companies that advance the following United Nations Sustainable Development Goals (SDGs): Affordable and clean energy goal (SDG 7), Decent work and economic growth (SDG 8), Industry, innovation and infrastructure (SDG 9), Sustainable cities and communities (SDG 11) and Climate action (SDG 13).

A part of the investments made by the Sub-fund contribute to the environmental objective of Climate Mitigation under the Taxonomy regulation. The Sub-fund has a carbon-reduction objective and uses the Custom Bloomberg Climate Transition Benchmark to monitor the carbon profile of the Sub-fund.

● ***What sustainability indicators are used to measure the attainment of the sustainable investment objective of this financial product?***

The Sub-fund has the following sustainability indicators:

1. The Sub-fund's weighted carbon footprint compared to the Custom Bloomberg Climate Transition Benchmark.
2. The number of companies with a positive or allowed neutral SDG score. Allowed neutral SDG score companies can be companies with transitioning activities or companies that perform relatively well in the sector that the Sub-fund may invest in. It is only for such thematic funds that there is possibility to consider neutral (zero) SDG score holdings as sustainable investments.
3. The % of investments in securities that are on Robeco's Exclusion list as result of the application of Robeco's Exclusion Policy.
4. The % of holdings that are in violation of the ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises.
5. The number of holdings and agenda items voted.

● ***How do sustainable investments not cause significant harm to any environmental or social sustainable investment objective?***

The sustainable investments do no significant harm to any environmental or social sustainable investment objective by considering a principal adverse impact and aligning with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights. In addition, sustainable investments score positively on Robeco's SDG Framework, and therefore do not cause significant harm.

How have the indicators for adverse impacts on sustainability factors been taken into account?

Mandatory principal adverse impact indicators are considered through Robeco's SDG Framework, either directly or indirectly, when identifying sustainable investments for the Sub-fund. In addition, voluntary environmental and social indicators are taken into account, depending on their relevance for measuring impacts on the SDGs and the availability of data. A detailed description of the incorporation of principal adverse impacts is available via Robeco's Principal Adverse Impact Statement published on the Robeco website (<https://www.robeco.com/files/docm/docu-principal-adverse-impact-statement-summary-entity-level.pdf>). In this statement, Robeco sets out its approach to identifying and prioritizing principal adverse impacts, and how principal adverse impacts are considered as part of Robeco's investment due diligence process and procedures relating to research and analysis, exclusions and restrictions and/or voting and engagement. This description also explains how principal adverse impact indicators are considered by the SDG Framework.

How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights?

The sustainable investments are aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights via both Robeco's Exclusion Policy and Robeco's SDG Framework.

Does this financial product consider principal adverse impacts on sustainability factors?

Yes, _____

The Sub-fund considers principal adverse impacts on sustainability factors as referred to in Annex I of the SFDR Delegated Act.

Pre-investment, Robeco's SDG Framework assesses companies' positive and negative contributions to the Sustainable Development Goals (SDGs). Robeco's SDG Framework directly and/or indirectly screens companies on many of the topics considered by the PAI indicators.

Post-investment, the following principal adverse impacts on sustainability factors are taken into account:

- Via the application of the voting policy, the following PAIs are considered:
 - All indicators related to GHG emissions (PAI 1-6, Table 1)
 - Indicators related to social and employee matters (PAI 10-13, Table 1; PAI 5-8, Table 3)
- Via Robeco's entity engagement program, the following PAIs are considered:
 - All indicators related to Climate and other environment-related indicators (PAI 1-9, Table 1)
 - Violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1). On an ongoing basis, the investment universe is scanned for controversial behavior in relation to the aforementioned principles and guidelines.
 - In addition, based on a yearly review of Robeco's performance on all mandatory and selected voluntary indicators, holdings of the Sub-fund that cause adverse impact might be selected for engagement.

More information is available via Robeco's Principal Adverse Impact Statement, published on Robeco's website. The Sub-fund will periodically report how it has considered the principal adverse impacts of its investments in the Company's annual report, which will be made available each year on or before 30 April at the Sub-fund page highlighted in final section of this document.

No

What investment strategy does this financial product follow?

RobecoSAM Smart Mobility Equities is an actively managed fund that invests globally in companies benefiting from the electrification of transportation. The selection of these stocks is based on fundamental analysis as described in the Investment policy strategy paragraph in Appendix I of this Prospectus. The strategy integrates sustainability indicators on a continuous basis as part of the stock selection process. Amongst others, the Sub-fund applies norms-based and activity-based exclusions, Robeco's good governance policy, Robeco's SDG framework and considers Principal Adverse Impacts in the investment process. More product-specific information can be found on our website and the links provided in the final question of this disclosure.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

The investment strategy guides investment decisions based on factors such as investment

objectives and risk tolerance.

● **What are the binding elements of the investment strategy used to select the investments to attain the sustainable investment objective?**

The Sub-fund has the following binding elements:

1. The Sub-fund's weighted carbon footprint score is equal or better than that of the Custom Bloomberg Climate Transition Benchmark. A maximum of 10% of the Sub-fund's assets can consist of neutral SDG scores.
2. The Sub-fund is solely invested in companies that hold a positive or allowed neutral SDG score based on the internally developed SDG Framework.
3. The Sub-fund's portfolio complies with Robeco's Exclusion Policy (<https://www.robeco.com/files/docm/docu-exclusion-policy.pdf>) excluding investments in companies that are exposed to controversial behavior and controversial products. This means that the Sub-fund has 0% exposure to excluded securities, taking into account a grace period. Information with regards to the impact of the exclusions on the Sub-fund's universe can be found at <https://www.robeco.com/files/docm/docu-exclusion-list.pdf>.
4. The Sub-fund avoids investment in companies that are in breach of the ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises. Companies that breach the international norms will be excluded from the investment universe.
5. All equity holdings have a granted right to vote and Robeco exerts that right by voting according to Robeco's Proxy Voting Policy, unless impediments occur (e.g. share blocking or when not considered cost efficient). Robeco's Proxy Voting Policy can be found at <https://www.robeco.com/files/docm/docu-robeco-stewardship-policy.pdf>.

● **What is the policy to assess good governance practices of the investee companies?**

Robeco has a Good Governance policy to assess governance practices of companies. The policy describes how Robeco determines if and when a company does not follow good governance practices and is therefore excluded from the initial investment universe for Article 8 and 9 products. Robeco's Good Governance policy applies to the Sub-fund and tests on a set of governance criteria that reflect widely recognized industry established norms and include topics as employee relations, management structure, tax compliance and remuneration.

The Good Governance test consists of criteria on such topics that are examined for investee companies and further explained in Robeco's Good Governance policy <https://www.robeco.com/files/docm/docu-robeco-good-governance-policy.pdf>. Additionally, the companies that do not pass the good governance test are reflected in the exclusion list that can be accessed here - <https://www.robeco.com/files/docm/docu-exclusion-list.pdf>.

● **What is the asset allocation and the minimum share of sustainable investments?**

The Sub-fund plans to make a minimum of 90% sustainable investments, with a minimum portion of 15% sustainable investments with an environmental objective and a minimum portion of 35% sustainable investments with a social objective, measured by positive scores or allowed neutrals, via Robeco's SDG Framework. The investments in the category non-sustainable, estimated between 0-10%, are in cash and cash equivalents. The planned asset allocation is monitored continuously, and evaluated on a yearly basis.

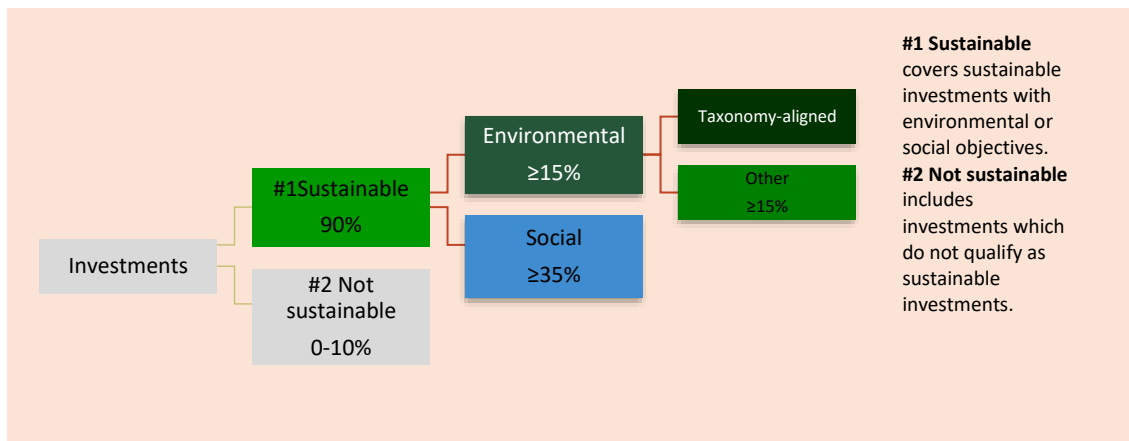

Good governance practices include sound management structures, employee relations, remuneration of staff and tax compliance.

Asset allocation describes the share of investments in specific assets.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

● **How does the use of derivatives attain the sustainable investment objective?**

The Sub-fund does not make use of derivatives to attain the sustainable objective promoted by the financial product. The Sub-fund may make use of derivatives for hedging and liquidity management. This includes the usage of derivatives to manage currency and market exposures in a cost-effective manner. To that purpose exchange traded and over-the-counter derivatives linked to equity indices and currencies are permitted. In case the Sub-fund uses derivatives, the underlying shall comply with the investment policy. Where relevant, minimum environmental or social safeguards are taken into account.

To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

The Sub-fund intends to contribute to the environmental objective of Climate Mitigation under the EU Taxonomy.

The Sub-fund commits to a minimum share of 0% of Taxonomy-aligned activities. The Sub-fund intends to increase the minimum share of Taxonomy aligned activities for the Sub-fund once data availability in relation to the EU Taxonomy improves and stabilises.

The Sub-fund will report on Taxonomy-aligned investment in the periodic disclosures. In the future, once data-availability in relation to the EU Taxonomy will improve, Robeco might consider setting a target based on turnover or CAPEX. Robeco currently relies on third-party data in relation to the EU Taxonomy alignment of their activities. EU Taxonomy-alignment data is not yet subject to a review by third parties. The Sub-fund only makes investments in equity and therefore it does not have sovereign exposures. The expected level of alignment with and without sovereign bonds is the same.

To comply with the EU Taxonomy,

● **Does the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy⁶¹?**

⁶¹ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

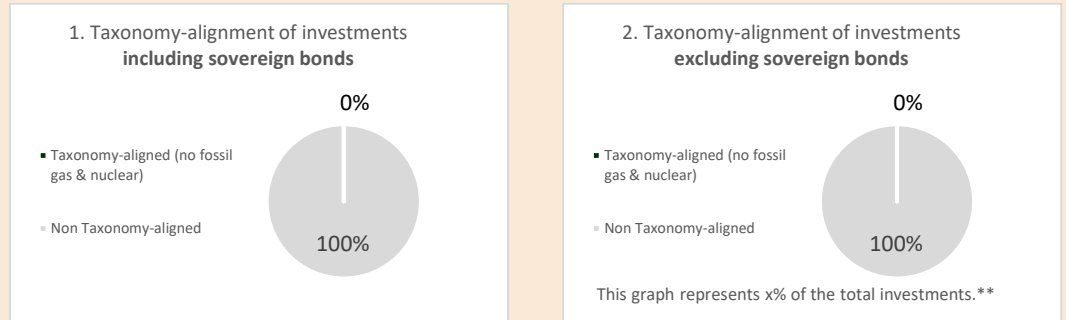

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

 are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

- Yes:
 - In fossil gas
 - In nuclear energy
- No

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.*

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures
 ** As the investments are not Taxonomy-aligned, the exclusion of sovereign bonds has no impact on the graph and therefore no such percentage is shown here.

What is the minimum share of investments in transitional and enabling activities?

0%.

What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?

The Sub-fund intends to make sustainable investments, measured as positive scores via Robeco's SDG Framework. Among those could be investments with environmental objectives that do not qualify as Taxonomy-aligned. The Sub-fund commits to a minimum share of sustainable investments of 15% with an environmental objective because the Sub-fund's investment strategy does have a specific environmental investment objective. The environmental objectives of the Sub-fund are attained by investing in companies that score positively on SDG 12 (Responsible consumption and production), SDG 13 (Climate action), SDG 14 (Life below water), and SDG 15 (Life on land) in Robeco's SDG Framework. The sum of sustainable investments with an environmental objective and socially sustainable investments always adds up to the Sub-fund's minimum proportion of 90% sustainable investments.

What is the minimum share of sustainable investments with a social objective?

The Sub-fund intends to make sustainable investments, measured as positive scores via Robeco's SDG Framework. The Sub-fund commits to a minimum share of socially sustainable investments of 35% because the Sub-fund's investment strategy does have a specific social investment objective. The social objectives of the Sub-fund are attained by investing in companies that score positively on SDG 1 (No poverty), SDG 2 (Zero hunger), SDG 3 (Good health and well-being), SDG 4 (Quality education), SDG 5 (Gender equality), SDG 6 (Clear water and sanitation), SDG 7 (Affordable and clean energy), SDG 8 (Decent work and economic growth), SDG 9 (Industry, innovation and infrastructure), SDG 10 (Reduced inequalities), SDG 11 (Sustainable cities and communities), SDG 16 (Peace, justice and strong institutions) and SDG 17 (Partnerships for the goals), in Robeco's SDG Framework. The sum of socially sustainable investments and sustainable investments with an environmental objective always adds up to the Sub-fund's minimum proportion of 90% sustainable investments.

What investments are included under "#2 Not sustainable", what is their purpose and are there any minimum environmental or social safeguards?

The type of instruments included under "#2 Not Sustainable" and their purpose are outlined in Annex I of this Prospectus under the header 'Financial instruments and investment restrictions'. They include cash, cash equivalents, as well as investment funds and eligible asset classes (other than bonds and equities) that do not specifically promote E/S characteristics. As indicated above, the Sub-fund does not make use of derivatives to attain its sustainable objective. The Sub-fund may make use of derivatives for hedging and liquidity management. This includes the usage of derivatives to manage currency and market exposures in a cost-effective manner. For the management of currency exposure FX Forwards are allowed. The exchange traded derivatives linked to equity indices, such as equity index futures covering the market universe, are permitted for cash equitization. In case the Sub-fund uses such index market derivatives, these shall be temporary positions as defined by the investment restrictions. Where relevant, minimum environmental or social safeguards are taken into account by monitoring and performing suitability tests on index futures constituents following Robeco's Exclusion Policy.

Is a specific index designated as a reference benchmark to meet the sustainable investment objective?

The Sub-fund uses the Custom Bloomberg Climate Transition Benchmark to meet the carbon objective of the Sub-fund.

Reference benchmarks are indexes to measure whether the financial product attains the sustainable investment objective.

How does the reference benchmark take into account sustainability factors in a way that is continuously aligned with the sustainable investment objective?

The reference benchmark is designed in accordance with the requirements of point (d) of Article 13 (1) of the Benchmark Regulation and of the Commission Delegated Regulation (EU) 2020/1817. The Sub-fund's exclusion criteria are similar to those of the reference index, and the Sub-fund's weighted carbon footprint score is equal to or better than the reference benchmark for the carbon objective of the Sub-fund.

How is the alignment of the investment strategy with the methodology of the index ensured on a continuous basis?

The Sub-fund follows a rebalancing strategy which ensures that the carbon footprint of the Sub-fund is better than that of the reference index. This in turn ensures that the investment strategy of the Sub-fund aligns with the methodology of the reference index. Bloomberg applies Robeco defined criteria on a regular basis to exclude companies which do not comply with the thematic objective of the Sub-

fund. The methodology of the reference index takes into account a decarbonization trajectory of at least 7% GHG intensity per annum along with specific sector or activity exclusions and including involvement in controversial weapons.

● ***How does the designated index differ from a relevant broad market index?***

The benchmark differs from a broad general market index in that the latter does not take into account in its methodology any criteria on the carbon reduction objective and carbon footprint of companies. In addition, the designated index is tailored towards the sector-specific focus of the Sub-fund.

● ***Where can the methodology used for the calculation of the designated index be found?***

The index methodology can be found at <https://assets.bbhub.io/professional/sites/10/Bloomberg-Global-Equity-Paris-Aligned-Climate-Transition-Methodology.pdf>.

k) RobecoSAM Sustainable Healthy Living Equities

Pre-contractual disclosure for the financial products referred to in Article 9, paragraphs 1 to 4a, of Regulation (EU) 2019/2088 and Article 5, first paragraph, of Regulation (EU) 2020/852

Product name: RobecoSAM Sustainable Healthy Living Equities

Legal entity identifier: 213800KMESITUG55W114

Sustainable investment objective

Does this financial product have a sustainable investment objective?

Yes

No

<p><input type="checkbox"/> It will make a minimum of sustainable investments with an environmental objective: ___%</p> <ul style="list-style-type: none"> <input type="checkbox"/> in economic activities that qualify as environmentally sustainable under the EU Taxonomy <input type="checkbox"/> in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy <p><input checked="" type="checkbox"/> It will make a minimum of sustainable investments with a social objective: 70%</p>	<p><input type="checkbox"/> It promotes Environmental/Social (E/S) characteristics and while it does not have as its objective a sustainable investment, it will have a minimum proportion of ___% of sustainable investments</p> <ul style="list-style-type: none"> <input type="checkbox"/> with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy <input type="checkbox"/> with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy <input type="checkbox"/> with a social objective <p><input type="checkbox"/> It promotes E/S characteristics, but will not make any sustainable investments</p>
-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------	------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

What is the sustainable investment objective of this financial product?

Sustainability indicators measure how the sustainable objectives of this financial product are attained.

The sustainable investments aim to contribute to the Sustainable Development Goals, promoting good health and well-being and contribute to an efficient healthcare system.

Therefore the financial product does not take into account the EU criteria for environmentally sustainable economic activities. The Sub-fund does make sustainable investments with a social objective.

There is no reference benchmark designated for the purpose of attaining the sustainable investment objective.

● **What sustainability indicators are used to measure the attainment of the sustainable investment objective of this financial product?**

The Sub-fund has the following sustainability indicators:

1. The number of companies with a positive or allowed neutral SDG score. Allowed neutral SDG score companies can be companies with transitioning activities or companies that perform relatively well in the sector that the Sub-fund may invest in. It is only for such thematic funds that there is possibility to consider neutral (zero) SDG score holdings as sustainable investments.
2. The % of investments in securities that are on Robeco's Exclusion list as result of the application of Robeco's Exclusion Policy.
3. The % of holdings that are in violation of the ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises.
4. The number of holdings and agenda items voted.

● **How do sustainable investments not cause significant harm to any environmental or social sustainable investment objective?**

The sustainable investments do no significant harm to any environmental or social sustainable investment objective by considering a principal adverse impact and aligning with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights. In addition, sustainable investments score positively on Robeco's SDG Framework, and therefore do not cause significant harm.

How have the indicators for adverse impacts on sustainability factors been taken into account?

Mandatory principal adverse impact indicators are considered through Robeco's SDG Framework, either directly or indirectly, when identifying sustainable investments for the Sub-fund. In addition, voluntary environmental and social indicators are taken into account, depending on their relevance for measuring impacts on the SDGs and the availability of data. A detailed description of the incorporation of principal adverse impacts is available via Robeco's Principal Adverse Impact Statement published on the Robeco website (<https://www.robeco.com/files/docm/docu-principal-adverse-impact-statement-summary-entity-level.pdf>). In this statement, Robeco sets out its approach to identifying and prioritizing principal adverse impacts, and how principal adverse impacts are considered as part of Robeco's investment due diligence process and procedures relating to research and analysis, exclusions and restrictions and/or voting and engagement. This description also explains how principal adverse impact indicators are considered by the SDG Framework.

How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights?

The sustainable investments are aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights via both Robeco's Exclusion Policy and Robeco's SDG Framework.

Does this financial product consider principal adverse impacts on sustainability factors?

Yes, _____

The Sub-fund considers principal adverse impacts on sustainability factors as referred to in Annex I of the SFDR Delegated Act.

Pre-investment, Robeco's SDG Framework assesses companies' positive and negative contributions to the Sustainable Development Goals (SDGs). Robeco's SDG Framework directly and/or indirectly screens companies on many of the topics considered by the PAI indicators.

Post-investment, the following principal adverse impacts on sustainability factors are taken into account:

- Via the application of the voting policy, the following PAIs are considered:
 - All indicators related to GHG emissions (PAI 1-6, Table 1)
 - Indicators related to social and employee matters (PAI 10-13, Table 1; PAI 5-8, Table 3)
- Via Robeco's entity engagement program, the following PAIs are considered:
 - All indicators related to Climate and other environment-related indicators (PAI 1-9, Table 1)
 - Violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1). On an ongoing basis, the investment universe is scanned for controversial behavior in relation to the aforementioned principles and guidelines.
 - In addition, based on a yearly review of Robeco's performance on all mandatory and selected voluntary indicators, holdings of the Sub-fund that cause adverse impact might be selected for engagement.

More information is available via Robeco's Principal Adverse Impact Statement, published on Robeco's website. The Sub-fund will periodically report how it has considered the principal adverse impacts of its investments in the Company's annual report, which will be made available each year on or before 30 April at the Sub-fund page highlighted in final section of this document.

No

What investment strategy does this financial product follow?

RobecoSAM Sustainable Healthy Living Equities is an actively managed fund that invests globally in companies that promote good health and well-being and contribute to an efficient healthcare system.

The investment strategy guides investment decisions based on factors such as investment objectives and risk tolerance.

The selection of these stocks is based on fundamental analysis as described in the Investment policy strategy paragraph in Appendix I of this Prospectus. The strategy integrates sustainability indicators on a continuous basis as part of the stock selection process. Amongst others, the Sub-fund applies norms-based and activity-based exclusions, Robeco's good governance policy, Robeco's SDG framework and considers Principal Adverse Impacts in the investment process. More product-specific information can be found on our website and the links provided in the final question of this disclosure.

● **What are the binding elements of the investment strategy used to select the investments to attain the sustainable investment objective?**

The Sub-fund has the following binding elements:

1. The Sub-fund is solely invested in companies that hold a positive or allowed neutral SDG score based on the internally developed SDG Framework. A maximum of 10% of the Sub-fund's assets can consist of neutral SDG scores.
2. The Sub-fund's portfolio complies with Robeco's Exclusion Policy (<https://www.robeco.com/files/docm/docu-exclusion-policy.pdf>) excluding investments in companies that are exposed to controversial behavior and controversial products. This means that the Sub-fund has 0% exposure to excluded securities, taking into account a grace period. Information with regards to the impact of the exclusions on the Sub-fund's universe can be found at <https://www.robeco.com/files/docm/docu-exclusion-list.pdf>.
3. The Sub-fund avoids investment in companies that are in breach of the ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises. Companies that breach the international norms will be excluded from the investment universe.
4. All equity holdings have a granted right to vote and Robeco exerts that right by voting according to Robeco's Proxy Voting Policy, unless impediments occur (e.g. share blocking or when not considered cost efficient). Robeco's Proxy Voting Policy can be found at <https://www.robeco.com/files/docm/docu-robeco-stewardship-policy.pdf>.

● **What is the policy to assess good governance practices of the investee companies?**

Robeco has a Good Governance policy to assess governance practices of companies. The policy describes how Robeco determines if and when a company does not follow good governance practices and is therefore excluded from the initial investment universe for Article 8 and 9 products. Robeco's Good Governance policy applies to the Sub-fund and tests on a set of governance criteria that reflect widely recognized industry established norms and include topics as employee relations, management structure, tax compliance and remuneration.

The Good Governance test consists of criteria on such topics that are examined for investee companies and further explained in Robeco's Good Governance policy <https://www.robeco.com/files/docm/docu-robeco-good-governance-policy.pdf>. Additionally, the companies that do not pass the good governance test are reflected in the exclusion list that can be accessed here - <https://www.robeco.com/files/docm/docu-exclusion-list.pdf>.

● **What is the asset allocation and the minimum share of sustainable investments?**

The Sub-fund plans to make a minimum of 90% sustainable investments, with a minimum portion of 70% sustainable investments with a social objective, measured by positive scores or allowed neutrals, via Robeco's SDG Framework. The investments in the category non-sustainable, estimated between 0-10%, are in cash and cash equivalents. The planned asset allocation is monitored continuously, and evaluated on a yearly basis.

Good governance practices include sound management structures, employee relations, remuneration of staff and tax compliance.

Asset allocation describes the share of investments in specific assets.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

● **How does the use of derivatives attain the sustainable investment objective?**

The Sub-fund does not make use of derivatives to attain the sustainable objective promoted by the financial product. The Sub-fund may make use of derivatives for hedging and liquidity management. This includes the usage of derivatives to manage currency and market exposures in a cost-effective manner. To that purpose exchange traded and over-the-counter derivatives linked to equity indices and currencies are permitted. In case the Sub-fund uses derivatives, the underlying shall comply with the investment policy. Where relevant, minimum environmental or social safeguards are taken into account.

To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

0%. The Sub-fund does not intend to make Taxonomy-aligned investments. It cannot be excluded that among the Sub-fund's holdings certain investments are Taxonomy aligned. The Sub-fund will report on Taxonomy-aligned investment in the periodic disclosures. In the future, once data-availability in relation to the EU Taxonomy will improve, Robeco might consider setting a target based on turnover or CAPEX. Robeco currently relies on third-party data, including data in relation to companies that do not disclose on the EU Taxonomy alignment of their activities. EU Taxonomy-alignment data is not yet subject to a review by third parties. The Sub-fund only makes investments in equity and therefore it does not have sovereign exposures. The expected level of alignment with and without sovereign bonds is the same.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power

● **Does the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy⁶²?**

- Yes:
 - In fossil gas
 - In nuclear energy
- No

⁶² Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

*** For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures**
**** As the investments are not Taxonomy-aligned, the exclusion of sovereign bonds has no impact on the graph and therefore no such percentage is shown here.**

● **What is the minimum share of investments in transitional and enabling activities?**

0%.

What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?

The Sub-fund intends to make sustainable investments, measured as positive scores via Robeco's SDG Framework. Among those could be investments with environmental objectives that do not qualify as Taxonomy-aligned. The environmental objectives of the Sub-fund are attained by investing in companies that score positively on SDG 12 (Responsible consumption and production), SDG 13 (Climate action), SDG 14 (Life below water), and SDG 15 (Life on land) in Robeco's SDG Framework. While the sum of sustainable investments with an environmental objective and socially sustainable investments always adds up to the Sub-fund's minimum proportion of 90% sustainable investments, we do not commit to a minimum share of sustainable investments with an environmental objective because the Sub-fund's investment strategy does not have a specific environmental investment objective. Therefore, the minimum share of sustainable investments with an environmental objective is 0%.

What is the minimum share of sustainable investments with a social objective?

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

The Sub-fund intends to make sustainable investments, measured as positive scores via Robeco's SDG Framework. The Sub-fund commits to a minimum share of socially sustainable investments of 70% because the Sub-fund's investment strategy does have a specific social investment objective. The social objectives of the Sub-fund are attained by investing in companies that score positively on SDG 1 (No poverty), SDG 2 (Zero hunger), SDG 3 (Good health and well-being), SDG 4 (Quality education), SDG 5 (Gender equality), SDG 6 (Clear water and sanitation), SDG 7 (Affordable and clean energy), SDG 8 (Decent work and economic growth), SDG 9 (Industry, innovation and infrastructure), SDG 10 (Reduced inequalities), SDG 11 (Sustainable cities and communities), SDG 16 (Peace, justice and strong institutions) and SDG 17 (Partnerships for the goals), in Robeco's SDG Framework. The sum of socially sustainable investments and sustainable investments with an environmental objective will always add up to the Sub-fund's minimum proportion of 90% sustainable investments.

What investments are included under "#2 Not sustainable", what is their purpose and are there any minimum environmental or social safeguards?

The type of instruments included under "#2 Not Sustainable" and their purpose are outlined in Annex I of this Prospectus under the header 'Financial instruments and investment restrictions'. They include cash, cash equivalents, as well as investment funds and eligible asset classes (other than bonds and equities) that do not specifically promote E/S characteristics. As indicated above, the Sub-fund does not make use of derivatives to attain its sustainable objective. The Sub-fund may make use of derivatives for hedging and liquidity management. This includes the usage of derivatives to manage currency and market exposures in a cost-effective manner. For the management of currency exposure FX Forwards are allowed. The exchange traded derivatives linked to equity indices, such as equity index futures covering the market universe, are permitted for cash equitization. In case the Sub-fund uses such index market derivatives, these shall be temporary positions as defined by the investment restrictions. Where relevant, minimum environmental or social safeguards are taken into account by monitoring and performing suitability tests on index futures constituents following Robeco's Exclusion Policy.

Is a specific index designated as a reference benchmark to meet the sustainable investment objective?

Not applicable.

Reference benchmarks are indexes to measure whether the financial product attains the sustainable investment objective.

I) RobecoSAM Sustainable Water Equities

Pre-contractual disclosure for the financial products referred to in Article 9, paragraphs 1 to 4a, of Regulation (EU) 2019/2088 and Article 5, first paragraph, of Regulation (EU) 2020/852

Product name: RobecoSAM Sustainable Water Equities

Legal entity identifier: 2138006TSIFH5ZD97319

Sustainable investment objective

Does this financial product have a sustainable investment objective?

Yes

No

It will make a minimum of **sustainable investments with an environmental objective: 5%**

in economic activities that qualify as environmentally sustainable under the EU Taxonomy

in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

It will make a minimum of **sustainable investments with a social objective: 45%**

It **promotes Environmental/Social (E/S) characteristics** and while it does not have as its objective a sustainable investment, it will have a minimum proportion of ___% of sustainable investments

with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with a social objective

It promotes E/S characteristics, but **will not make any sustainable investments**

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

What is the sustainable investment objective of this financial product?

Sustainability indicators measure how the sustainable objectives of this financial product are attained.

The sustainable investments of the Sub-fund aim to help mitigate the global challenges related to scarcity, quality, and allocation of water. The sustainable investment objective is attained by mainly investing in companies that advance the following United Nations Sustainable Development Goals (SDGs): Good health and well-being (SDG 3), Clean water and sanitation (SDG 6), Industry, innovation and infrastructure (SDG 9), Sustainable cities and communities (SDG 11), Responsible consumption and production (SDG 12), and Life below water (SDG 14).

A part of the investments made by the Sub-fund contribute to the following environmental objectives of the Taxonomy regulation:

- Sustainable use and protection of water and marine resources
- Pollution prevention and control

There is no reference benchmark designated for the purpose of attaining the sustainable objectives promoted by the Sub-fund.

● **What sustainability indicators are used to measure the attainment of the sustainable investment objective of this financial product?**

The Sub-fund has the following sustainability indicators:

1. The number of companies with a positive or allowed neutral SDG score. Allowed neutral SDG score companies can be companies with transitioning activities or companies that perform relatively well in the sector that the Sub-fund may invest in. It is only for such thematic funds that there is possibility to consider neutral (zero) SDG score holdings as sustainable investments.
2. The % of investments in securities that are on Robeco's Exclusion list as result of the application of Robeco's Exclusion Policy.
3. The % of holdings that are in violation of the ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises.
4. The number of holdings and agenda items voted.

● **How do sustainable investments not cause significant harm to any environmental or social sustainable investment objective?**

The sustainable investments do no significant harm to any environmental or social sustainable investment objective by considering a principal adverse impact and aligning with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights. In addition, sustainable investments score positively on Robeco's SDG Framework, and therefore do not cause significant harm.

How have the indicators for adverse impacts on sustainability factors been taken into account?

Mandatory principal adverse impact indicators are considered through Robeco's SDG Framework, either directly or indirectly, when identifying sustainable investments for the Sub-fund. In addition, voluntary environmental and social indicators are taken into account, depending on their relevance for measuring impacts on the SDGs and the availability of data. A detailed description of the incorporation of principal adverse impacts is available via Robeco's Principal Adverse Impact Statement published on the Robeco website (<https://www.robeco.com/files/docm/docu-principal-adverse-impact-statement-summary-entity-level.pdf>). In this statement, Robeco sets out its approach to identifying and prioritizing principal adverse impacts, and how principal adverse impacts are considered as part of Robeco's investment due diligence process and procedures relating to research and analysis, exclusions and restrictions and/or voting and engagement. This description also explains how principal adverse impact indicators are considered by the SDG Framework.

How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights?

The sustainable investments are aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights via both Robeco's Exclusion Policy and Robeco's SDG Framework.

Does this financial product consider principal adverse impacts on sustainability factors?

Yes, _____

The Sub-fund considers principal adverse impacts on sustainability factors as referred to in Annex I of the SFDR Delegated Act.

Pre-investment, Robeco's SDG Framework assesses companies' positive and negative contributions to the Sustainable Development Goals (SDGs). Robeco's SDG Framework directly and/or indirectly screens companies on many of the topics considered by the PAI indicators.

Post-investment, the following principal adverse impacts on sustainability factors are taken into account:

- Via the application of the voting policy, the following PAIs are considered:
 - All indicators related to GHG emissions (PAI 1-6, Table 1)
 - Indicators related to social and employee matters (PAI 10-13, Table 1; PAI 5-8, Table 3)
- Via Robeco's entity engagement program, the following PAIs are considered:
 - All indicators related to Climate and other environment-related indicators (PAI 1-9, Table 1)
 - Violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1). On an ongoing basis, the investment universe is scanned for controversial behavior in relation to the aforementioned principles and guidelines.
 - In addition, based on a yearly review of Robeco's performance on all mandatory and selected voluntary indicators, holdings of the Sub-fund that cause adverse impact might be selected for engagement.

More information is available via Robeco's Principal Adverse Impact Statement, published on Robeco's website. The Sub-fund will periodically report how it has considered the principal adverse impacts of its investments in the Company's annual report, which will be made available each year on or before 30 April at the Sub-fund page highlighted in final section of this document.

No

What investment strategy does this financial product follow?

RobecoSAM Sustainable Water Equities is an actively managed fund that invests globally in companies offering products and services across the water value chain. The selection of these stocks is based on fundamental analysis as described in the Investment policy strategy paragraph in Appendix I of this

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

The investment strategy guides investment decisions based on factors such as investment objectives and risk tolerance.

Prospectus. The strategy integrates sustainability indicators on a continuous basis as part of the stock selection process. Amongst others, the Sub-fund applies norms-based and activity-based exclusions, Robeco's good governance policy, Robeco's SDG framework and considers Principal Adverse Impacts in the investment process. More product-specific information can be found on our website and the links provided in the final question of this disclosure.

● **What are the binding elements of the investment strategy used to select the investments to attain the sustainable investment objective?**

The Sub-fund has the following binding elements:

1. The Sub-fund is solely invested in companies that hold a positive or allowed neutral SDG score based on the internally developed SDG Framework. A maximum of 10% of the Sub-fund's assets can consist of neutral SDG scores.
2. The Sub-fund's portfolio complies with Robeco's Exclusion Policy (<https://www.robeco.com/files/docm/docu-exclusion-policy.pdf>) excluding investments in companies that are exposed to controversial behavior and controversial products. This means that the Sub-fund has 0% exposure to excluded securities, taking into account a grace period. Information with regards to the impact of the exclusions on the Sub-fund's universe can be found at <https://www.robeco.com/files/docm/docu-exclusion-list.pdf>.
3. The Sub-fund avoids investment in companies that are in breach of the ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises. Companies that breach the international norms will be excluded from the investment universe.
4. All equity holdings have a granted right to vote and Robeco exerts that right by voting according to Robeco's Proxy Voting Policy, unless impediments occur (e.g. share blocking or when not considered cost efficient). Robeco's Proxy Voting Policy can be found at <https://www.robeco.com/files/docm/docu-robeco-stewardship-policy.pdf>.

● **What is the policy to assess good governance practices of the investee companies?**

Robeco has a Good Governance policy to assess governance practices of companies. The policy describes how Robeco determines if and when a company does not follow good governance practices and is therefore excluded from the initial investment universe for Article 8 and 9 products. Robeco's Good Governance policy applies to the Sub-fund and tests on a set of governance criteria that reflect widely recognized industry established norms and include topics as employee relations, management structure, tax compliance and remuneration.

The Good Governance test consists of criteria on such topics that are examined for investee companies and further explained in Robeco's Good Governance policy <https://www.robeco.com/files/docm/docu-robeco-good-governance-policy.pdf>. Additionally, the companies that do not pass the good governance test are reflected in the exclusion list that can be accessed here - <https://www.robeco.com/files/docm/docu-exclusion-list.pdf>.

● **What is the asset allocation and the minimum share of sustainable investments?**

The Sub-fund plans to make a minimum of 90% sustainable investments, with a minimum portion of 5% sustainable investments with an environmental objective and a minimum portion of 45% sustainable investments with a social objective, measured by positive scores or allowed neutrals, via Robeco's SDG Framework. The investments in the category non-sustainable, estimated between 0-10%, are in cash and cash equivalents. The planned asset allocation is monitored continuously, and evaluated on a yearly basis.

Good governance practices include sound management structures, employee relations, remuneration of staff and tax compliance.

Asset allocation describes the share of investments in specific assets.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

● **How does the use of derivatives attain the sustainable investment objective?**

The Sub-fund does not make use of derivatives to attain the sustainable objective promoted by the financial product. The Sub-fund may make use of derivatives for hedging and liquidity management. This includes the usage of derivatives to manage currency and market exposures in a cost-effective manner. To that purpose exchange traded and over-the-counter derivatives linked to equity indices and currencies are permitted.

In case the Sub-fund uses derivatives, the underlying shall comply with the investment policy. Where relevant, minimum environmental or social safeguards are taken into account.

To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

The Sub-fund intends to contribute to the following environmental objectives of the EU Taxonomy Regulation:

- Sustainable use and protection of water and marine resources
- Pollution prevention and control

The Sub-fund commits to a minimum share of 0% of Taxonomy-aligned activities. The Sub-fund intends to increase the minimum share of Taxonomy aligned activities for the Sub-fund once data availability in relation to the EU Taxonomy improves and stabilises.

The Sub-fund will report on Taxonomy-aligned investment in the periodic disclosures. In the future, once data-availability in relation to the EU Taxonomy will improve, Robeco might consider setting a target based on turnover or CAPEX. Robeco currently relies on third-party data in relation to the EU Taxonomy, including data in relation to companies that do not disclose on the EU Taxonomy alignment of their activities. EU Taxonomy-alignment data is not yet subject to a review by third parties. The Sub-fund only makes investments in equity and therefore it does not have sovereign exposures. The expected level of alignment with and without sovereign bonds is the same.

To comply with the EU Taxonomy,

● **Does the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy⁶³?**

⁶³ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

 are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

- Yes:
 - In fossil gas
 - In nuclear energy
- No

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.*

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures
 ** As the investments are not Taxonomy-aligned, the exclusion of sovereign bonds has no impact on the graph and therefore no such percentage is shown here.

What is the minimum share of investments in transitional and enabling activities?

0%.

What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?

The Sub-fund intends to make sustainable investments, measured as positive scores via Robeco's SDG Framework. Among those could be investments with environmental objectives that do not qualify as Taxonomy-aligned. The Sub-fund commits to a minimum share of sustainable investments of 5% with an environmental objective because the Sub-fund's investment strategy does have a specific environmental investment objective. The environmental objectives of the Sub-fund are attained by investing in companies that score positively on SDG 12 (Responsible consumption and production), SDG 13 (Climate action), SDG 14 (Life below water), and SDG 15 (Life on land) in Robeco's SDG Framework. The sum of sustainable investments with an environmental objective and socially sustainable investments always adds up to the Sub-fund's minimum proportion of 90% sustainable investments.

What is the minimum share of sustainable investments with a social objective?

The Sub-fund intends to make sustainable investments, measured as positive scores via Robeco's SDG Framework. The Sub-fund commits to a minimum share of socially sustainable investments of 45% because the Sub-fund's investment strategy does have a specific social investment objective. The social objectives of the Sub-fund are attained by investing in companies that score positively on SDG 1 (No poverty), SDG 2 (Zero hunger), SDG 3 (Good health and well-being), SDG 4 (Quality education), SDG 5 (Gender equality), SDG 6 (Clear water and sanitation), SDG 7 (Affordable and clean energy), SDG 8 (Decent work and economic growth), SDG 9 (Industry, innovation and infrastructure), SDG 10 (Reduced inequalities), SDG 11 (Sustainable cities and communities), SDG 16 (Peace, justice and strong institutions) and SDG 17 (Partnerships for the goals), in Robeco's SDG Framework. While the sum of socially sustainable investments and sustainable investments with an environmental objective always adds up to the Sub-fund's minimum proportion of 90% sustainable investments.

What investments are included under "#2 Not sustainable", what is their purpose and are there any minimum environmental or social safeguards?

The type of instruments included under "#2 Not Sustainable" and their purpose are outlined in Annex I of this Prospectus under the header 'Financial instruments and investment restrictions'. They include cash, cash equivalents, as well as investment funds and eligible asset classes (other than bonds and equities) that do not specifically promote E/S characteristics. As indicated above, the Sub-fund does not make use of derivatives to attain its sustainable objective. The Sub-fund may make use of derivatives for hedging and liquidity management. This includes the usage of derivatives to manage currency and market exposures in a cost-effective manner. For the management of currency exposure FX Forwards are allowed. The exchange traded derivatives linked to equity indices, such as equity index futures covering the market universe, are permitted for cash equitization. In case the Sub-fund uses such index market derivatives, these shall be temporary positions as defined by the investment restrictions. Where relevant, minimum environmental or social safeguards are taken into account by monitoring and performing suitability tests on index futures constituents following Robeco's Exclusion Policy.

Is a specific index designated as a reference benchmark to meet the sustainable investment objective?

Not applicable.

Reference benchmarks are indexes to measure whether the financial product attains the sustainable investment objective.

Where can I find more product specific information online?

m) RobecoSAM Global Gender Equality Equities

Pre-contractual disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Product name: RobecoSAM Global Gender Equality Equities

Legal entity identifier: 213800FAEA843S2ACV24

Environmental and/or social characteristics

Does this financial product have a sustainable investment objective?

Yes

No

It will make a minimum of **sustainable investments with an environmental objective:** ___%

- in economic activities that qualify as environmentally sustainable under the EU Taxonomy
- in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

It will make a minimum of **sustainable investments with a social objective:** ___%

It promotes **Environmental/Social (E/S) characteristics** and while it does not have as its objective a sustainable investment, it will have a minimum proportion of 50% of sustainable investments

- with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy
- with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy
- with a social objective

It promotes E/S characteristics, but **will not make any sustainable investments**

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

What environmental and/or social characteristics are promoted by this financial product?

The Sub-fund has the following E/S characteristics:

1. The Sub-fund promotes investment in a portfolio that advances social impact by investing in gender equality leaders combined with sustainable business practices.
2. The Sub-fund promotes investment in a portfolio that contributes to the Sustainable Development Goals (SDGs).
3. The Sub-fund applies negative screening.
4. The Sub-fund promotes certain minimum environmental and social safeguards through applying exclusion criteria with regards to products and business practices that Robeco believes are detrimental to society and incompatible with sustainable investment strategies, such as exposure to controversial behaviour, controversial weapons, and fossil fuels.
5. The Sub-fund promotes adherence to and conducting business activities in accordance with the United Nations Universal Declaration of Human Rights, the International Labor Organization's (ILO) labor standards, the United Nations Guiding Principles for Business and Human Rights (UNGPs), the United Nations Global Compact (UNGC) and the OECD Guidelines for Multinational Enterprises.
6. The Sub-fund promotes good governance and sustainable corporate practices through proxy voting, which contributes to long-term shareholder value creation. This includes taking an active stance on social and environmental topics through Robeco's proxy voting policy.

There is no reference benchmark designated for the purpose of attaining the environmental or social characteristics promoted by the Sub-fund.

● **What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?**

The Sub-fund has the following sustainability indicators:

1. The % of companies with a Gender Equality score below 50 as determined through the thematic universe methodology.
2. The number of companies with a positive or neutral SDG score.
3. The % of worst ESG performers excluded from the investment universe.
4. The % of investments in securities that are on Robeco's Exclusion list as result of the application of Robeco's Exclusion Policy.
5. The % of holdings that are in violation of the ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises.
6. The number of holdings and agenda items voted.

● **What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?**

The sustainable investments aim to contribute to the UN Sustainable Development Goals ("SDGs"), that have both social and environmental objectives. These are 17 goals that are globally recognised and include environmental goals such as climate action, clean water, life on land and water and social goals such as zero hunger, gender equality, education, etc. Robeco has developed a proprietary framework based on the UN SDGs through which an issuer's contribution to such SDGs is determined through a 3-step process. This process starts with a sector baseline on which a company's products are analysed to examine contribution to the society and environment. Further, the operational processes involved in creating such products is checked along with any controversies/litigation claims and remediation actions taken which are perused before a final SDG score is determined. The final score ranges between high negative (-3) to high positive (+3) and only those issuers which achieve positive SDG scores (+1, +2 and +3) are regarded as Sustainable Investments.

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

● ***How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?***

The sustainable investments do no significant harm to any environmental or social sustainable investment objective by considering a principal adverse impact and aligning with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights. In addition, sustainable investments score positively on Robeco's SDG Framework, and therefore do not cause significant harm.

How have the indicators for adverse impacts on sustainability factors been taken into account?

Mandatory principal adverse impact indicators are considered through Robeco's SDG Framework, either directly or indirectly, when identifying sustainable investments for the Sub-fund. In addition, voluntary environmental and social indicators are taken into account, depending on their relevance for measuring impacts on the SDGs and the availability of data. A detailed description of the incorporation of principal adverse impacts is available via Robeco's Principal Adverse Impact Statement published on the Robeco website (<https://www.robeco.com/files/docm/docu-principal-adverse-impact-statement-summary-entity-level.pdf>). In this statement, Robeco sets out its approach to identifying and prioritizing principal adverse impacts, and how principal adverse impacts are considered as part of Robeco's investment due diligence process and procedures relating to research and analysis, exclusions and restrictions and/or voting and engagement. This description also explains how principal adverse impact indicators are considered by the SDG Framework.

How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The sustainable investments are aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights via both Robeco's Exclusion Policy and Robeco's SDG Framework.

Robeco's Exclusion Policy includes an explanation of how Robeco acts in accordance with the International Labor Organization (ILO) standards, United Nations Guiding Principles (UNGPs), United Nations Global Compact (UNGC) Principles and the Organization for Economic Co-operation and Development (OECD) Guidelines for Multinational Enterprises and is guided by these international treaties to assess the behavior of companies. Robeco continuously screens its investments for breaches of these principles. In case of a breach, the company will be excluded or engaged with, and is not considered a sustainable investment.

Robeco's SDG Framework screens for breaches on these principles in the final step of the framework. In this step, Robeco checks whether the company concerned has been involved in any controversies. Involvement in any controversy will result in a negative SDG score for the company, meaning it is not a sustainable investment.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

Does this financial product consider principal adverse impacts on sustainability factors?

Yes, _____

The Sub-fund considers principal adverse impacts on sustainability factors as referred to in Annex I of the SFDR Delegated Act.

Pre-investment, Robeco's SDG Framework assesses companies' positive and negative contributions to the Sustainable Development Goals (SDGs). Robeco's SDG Framework directly and/or indirectly screens companies on many of the topics considered by the PAI indicators.

Post-investment, the following principal adverse impacts on sustainability factors are taken into account:

- Via the application of the voting policy, the following PAIs are considered:
 - All indicators related to GHG emissions (PAI 1-6, Table 1)
 - Indicators related to social and employee matters (PAI 10-13, Table 1; PAI 5-8, Table 3)
- Via Robeco's entity engagement program, the following PAIs are considered:
 - All indicators related to Climate and other environment-related indicators (PAI 1-9, Table 1)
 - Violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1). On an ongoing basis, the investment universe is scanned for controversial behavior in relation to the aforementioned principles and guidelines.
 - In addition, based on a yearly review of Robeco's performance on all mandatory and selected voluntary indicators, holdings of the Sub-fund that cause adverse impact might be selected for engagement.

More information is available via Robeco's Principal Adverse Impact Statement, published on Robeco's website. The Sub-fund will periodically report how it has considered the principal adverse impacts of its investments in the Company's annual report, which will be made available each year on or before 30 April at the Sub-fund page highlighted in final section of this document.

No

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

The investment strategy guides investment decisions based on factors such as investment objectives and risk tolerance.

What investment strategy does this financial product follow?

RobecoSAM Global Gender Equality Equities is an actively managed fund that invests globally in companies that advance gender equality. The selection of these stocks is based on fundamental analysis as described in the Investment policy strategy paragraph in Appendix I of this Prospectus. The strategy integrates sustainability indicators on a continuous basis as part of the stock selection process. Amongst others, the Sub-fund applies norms-based and activity-based exclusions, Robeco's good governance policy, Robeco's SDG framework and considers Principal Adverse Impacts in the investment process. More product-specific information can be found on our website and the links provided in the final question of this disclosure.

What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?

The Sub-fund has the following binding elements:

1. The Sub-fund invests a minimum of 66.7% in companies with a Gender Equality score of 50 or higher.
2. The Sub-fund is solely invested in companies that hold a positive or neutral SDG score based on the internally developed SDG Framework.
3. The Sub-fund excludes the bottom 20% ranked companies on ESG from the investment universe.
4. The Sub-fund's portfolio complies with Robeco's Exclusion Policy (<https://www.robeco.com/files/docm/docu-exclusion-policy.pdf>), excluding investments in companies that are exposed to controversial behavior and controversial products. This means that the Sub-fund has 0% exposure to excluded securities, taking into account a grace period. Information with regards to the effects of the exclusions on the Sub-fund's universe can be found at <https://www.robeco.com/files/docm/docu-exclusion-list.pdf>.
5. The Sub-fund avoids investment in companies that are in breach of the ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises. Companies that breach the international norms will be excluded from the investment universe.
6. All equity holdings have a granted right to vote and Robeco exerts that right by voting according to Robeco's Proxy Voting Policy, unless impediments occur (e.g. share blocking or when not considered cost efficient). Robeco's Proxy Voting Policy can be found at <https://www.robeco.com/files/docm/docu-robeco-stewardship-policy.pdf>.

What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?

The Sub-fund, as part of the negative screening process, the Sub-fund commits to a minimum rate of 20% reduction, resulting to excluding the lowest performing companies based on ESG metrics. More information in relation to methodology and data used, can be found at <https://www.robeco.com/docm/docu-robeco-sfdr-data-disclosures.pdf>.

What is the policy to assess good governance practices of the investee companies?

Good governance practices include sound management structures, employee relations, remuneration of staff and tax compliance.

Robeco has a Good Governance policy to assess governance practices of companies. The policy describes how Robeco determines if and when a company does not follow good governance practices and is therefore excluded from the initial investment universe for Article 8 and 9 products. Robeco's Good Governance policy applies to the Sub-fund and tests on a set of governance criteria that reflect widely recognized industry established norms and include topics as employee relations, management structure, tax compliance and remuneration.

The Good Governance test consists of criteria on such topics that are examined for investee companies and further explained in Robeco's Good Governance policy <https://www.robeco.com/files/docm/docu-robeco-good-governance-policy.pdf>. Additionally, the companies that do not pass the good governance test are reflected in the exclusion list that can be accessed here - <https://www.robeco.com/files/docm/docu-exclusion-list.pdf>.

What is the asset allocation planned for this financial product?

Asset allocation describes the share of investments in specific assets.

At least 90% of the investments are aligned with the E/S characteristics of the Sub-fund. The Sub-fund plans to make a minimum of 50% sustainable investments, measured by positive scores via Robeco's SDG Framework. The investments in the category Other, estimated between 0-10%, are mostly in cash, cash equivalents and derivatives as further described below. The planned asset allocation is monitored continuously, and evaluated on a yearly basis.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

How does the use of derivatives attain the environmental or social characteristics promoted by the financial product?

The Sub-fund does not make use of derivatives to attain the environmental or social characteristics promoted by the financial product. The Sub-fund may make use of derivatives for hedging, liquidity management and efficient portfolio management as well as investment purposes. Exchange traded and over-the-counter derivatives are permitted, including but not limited to futures, swaps, options and currency forwards. Whilst the Sub-fund may use derivatives both for investment purposes as well as for hedging and efficient portfolio management, it does not utilize derivatives for such purposes outside the intended share of investments allocated to the 'Other' category.

In case the Sub-fund uses derivatives, the underlying shall comply with the investment policy. Where relevant, minimum environmental or social safeguards are taken into account as described below.

To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

0%. The Sub-fund does not intend to make Taxonomy-aligned investments. It cannot be excluded that among the Sub-fund's holdings certain investments are Taxonomy aligned. The Sub-fund will report on Taxonomy-aligned investment in the periodic disclosures. In the future, once data-availability in relation to the EU Taxonomy will improve, Robeco might consider setting a target based on turnover or CAPEX. Robeco currently relies on third-party data, including data in relation to companies that do not disclose on the EU Taxonomy alignment of their activities. EU Taxonomy-alignment data is not yet subject to a review by third parties. The Sub-fund only makes investments in equity and therefore it does not have sovereign exposures. The expected level of alignment with and without sovereign bonds is the same.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to renewable power

Does the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy?⁶⁴

Yes

In fossil gas

In nuclear energy

No

⁶⁴ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

 are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.*

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures
 ** As the investments are not Taxonomy-aligned, the exclusion of sovereign bonds has no impact on the graph and therefore no such percentage is shown here.

● **What is the minimum share of investments in transitional and enabling activities?**

0%.

 **What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?**

The Sub-fund intends to make sustainable investments, measured as positive scores via Robeco's SDG Framework. Among those could be investments with environmental objectives that do not qualify as Taxonomy-aligned. The environmental objectives of the Sub-fund are attained by investing in companies that score positively on SDG 12 (Responsible consumption and production), SDG 13 (Climate action), SDG 14 (Life below water), and SDG 15 (Life on land) in Robeco's SDG Framework. While the sum of sustainable investments with an environmental objective and socially sustainable investments always adds up to the Sub-fund's minimum proportion of 50% sustainable investments, we do not commit to a minimum share of sustainable investments with an environmental objective because the Sub-fund's investment strategy does not have a specific environmental investment objective. Therefore, the minimum share of sustainable investments with an environmental objective is 0%.

 **What is the minimum share of socially sustainable investments?**

The Sub-fund intends to make sustainable investments, measured as positive scores via Robeco's SDG Framework. Among those could be investments with social objectives. The social objectives of the Sub-fund are attained by investing in companies that score positively on SDG 1 (No poverty), SDG 2 (Zero hunger), SDG 3 (Good health and well-being), SDG 4 (Quality education), SDG 5 (Gender equality), SDG 6 (Clean water and sanitation), SDG 7 (Affordable and clean energy), SDG 8 (Decent work and economic growth), SDG 9 (Industry, innovation and infrastructure), SDG 10 (Reduced inequalities), SDG 11 (Sustainable cities and communities), SDG 16 (Peace, justice and strong institutions) and SDG 17 (Partnerships for the goals), in Robeco's SDG Framework. While the sum of socially sustainable investments and sustainable investments with an environmental objective always adds up to the Sub-

fund's minimum proportion of sustainable investments, we do not commit to a minimum share of socially sustainable investments because the Sub-fund's investment strategy does not have a specific socially sustainable investment objective. Therefore, the minimum share of socially sustainable investments is 0%.

What investments are included under "#2 Other", what is their purpose and are there any minimum environmental or social safeguards?

The type of instruments included under "#2 Other" and their purpose are outlined in Annex I of this Prospectus under the header 'Financial instruments and investment restrictions'. They include cash, cash equivalents, as well as investment funds and eligible asset classes (other than bonds and equities) that do not specifically promote E/S characteristics. As indicated above, the Sub-fund does not make use of derivatives to attain the environmental or social characteristics promoted. The Sub-fund may make use of derivatives, which thus always fall under the category "#2 Other", for hedging, liquidity management and efficient portfolio management as well as investment purposes. Exchange traded and over-the-counter derivatives are permitted, including but not limited to futures, swaps, options and currency forwards. In case the Sub-fund uses derivatives, the underlying shall comply with the investment policy. Where relevant, minimum environmental or social safeguards are taken into account, by, for example, applying Robeco's Exclusion Policy for any single security derivative.

Is a specific index designated as a reference benchmark to determine whether this financial product is aligned with the environmental and/or social characteristics that it promotes?

Not applicable.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

Where can I find more product specific information online?

More product-specific information can be found on the website:

n) Robeco Next Digital Billion

Pre-contractual disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Product name: Robeco Next Digital Billion

Legal entity identifier: 213800MRQK7VNZMYS210

Environmental and/or social characteristics

Does this financial product have a sustainable investment objective?

Yes

No

It will make a minimum of **sustainable investments with an environmental objective:** ___%

- in economic activities that qualify as environmentally sustainable under the EU Taxonomy
- in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

It will make a minimum of **sustainable investments with a social objective:** ___%

It promotes **Environmental/Social (E/S) characteristics** and while it does not have as its objective a sustainable investment, it will have a minimum proportion of 35% of sustainable investments

- with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy
- with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy
- with a social objective

It promotes E/S characteristics, but **will not make any sustainable investments**

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

What environmental and/or social characteristics are promoted by this financial product?

The Sub-fund has the following E/S characteristics:

1. The Sub-fund promotes certain minimum environmental and social safeguards through applying exclusion criteria with regards to products and business practices that Robeco believes are detrimental to society and incompatible with sustainable investment strategies, such as exposure to controversial behaviour, controversial weapons, and fossil fuels.
2. The Sub-fund promotes adherence to and conducting business activities in accordance with the United Nations Universal Declaration of Human Rights, the International Labor Organization's (ILO) labor standards, the United Nations Guiding Principles for Business and Human Rights (UNGPs), the United Nations Global Compact (UNGC) and the OECD Guidelines for Multinational Enterprises, by scrutinizing companies that violate these principles.
3. The Sub-fund promotes good governance and sustainable corporate practices through proxy voting, which contributes to long-term shareholder value creation. This includes taking an active stance on social and environmental topics through Robeco's proxy voting policy.
4. The Sub-fund limits investing in companies with an elevated sustainability risk based on ESG risk scores whereas all such investments require separate approval of a dedicated committee that oversees that all investments are substantiated and eligible based on a fundamental review on the sustainability risk.

There is no reference benchmark designated for the purpose of attaining the environmental or social characteristics promoted by the Sub-fund.

● **What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?**

The Sub-fund has the following sustainability indicators:

1. The % of investments in securities that are on Robeco's Exclusion list as result of the application of Robeco's Exclusion Policy.
2. The number of companies that are in violation of the ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises and hence are a part of the Enhanced Engagement program.
3. The number of holdings and agenda items voted.
4. The % of holdings with an elevated sustainability risk profile.

● **What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?**

The sustainable investments aim to contribute to the UN Sustainable Development Goals ("SDGs"), that have both social and environmental objectives. These are 17 goals that are globally recognised and include environmental goals such as climate action, clean water, life on land and water and social goals such as zero hunger, gender equality, education, etc. Robeco has developed a proprietary framework based on the UN SDGs through which an issuer's contribution to such SDGs is determined through a 3-step process. This process starts with a sector baseline on which a company's products are analysed to examine contribution to the society and environment. Further, the operational processes involved in creating such products is checked along with any controversies/litigation claims and remediation actions taken which are perused before a final SDG score is determined. The final score ranges between high negative (-3) to high positive (+3) and only those issuers which achieve positive SDG scores (+1, +2 and +3) are regarded as Sustainable Investments.

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

● ***How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?***

The sustainable investments do no significant harm to any environmental or social sustainable investment objective by considering a principal adverse impact and aligning with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights. In addition, sustainable investments score positively on Robeco's SDG Framework, and therefore do not cause significant harm.

How have the indicators for adverse impacts on sustainability factors been taken into account?

Mandatory principal adverse impact indicators are considered through Robeco's SDG Framework, either directly or indirectly, when identifying sustainable investments for the Sub-fund. In addition, voluntary environmental and social indicators are taken into account, depending on their relevance for measuring impacts on the SDGs and the availability of data. A detailed description of the incorporation of principal adverse impacts is available via Robeco's Principal Adverse Impact Statement published on the Robeco website (<https://www.robeco.com/files/docm/docu-principal-adverse-impact-statement-summary-entity-level.pdf>). In this statement, Robeco sets out its approach to identifying and prioritizing principal adverse impacts, and how principal adverse impacts are considered as part of Robeco's investment due diligence process and procedures relating to research and analysis, exclusions and restrictions and/or voting and engagement. This description also explains how principal adverse impact indicators are considered by the SDG Framework.

How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The sustainable investments are aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights via both Robeco's Exclusion Policy and Robeco's SDG Framework.

Robeco's Exclusion Policy includes an explanation of how Robeco acts in accordance with the International Labor Organization (ILO) standards, United Nations Guiding Principles (UNGPs), United Nations Global Compact (UNGC) Principles and the Organization for Economic Co-operation and Development (OECD) Guidelines for Multinational Enterprises and is guided by these international treaties to assess the behavior of companies. Robeco continuously screens its investments for breaches of these principles. In case of a breach, the company will be excluded or engaged with, and is not considered a sustainable investment.

Robeco's SDG Framework screens for breaches on these principles in the final step of the framework. In this step, Robeco checks whether the company concerned has been involved in any controversies. Involvement in any controversy will result in a negative SDG score for the company, meaning it is not a sustainable investment.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

Does this financial product consider principal adverse impacts on sustainability factors?

Yes, _____

The Sub-fund considers principal adverse impacts on sustainability factors as referred to in Annex I of the SFDR Delegated Act.

Pre-investment, the following principal adverse impacts on sustainability factors are considered:

o Via the applied normative and activity-based exclusions, the following PAIs are considered:

- Exposure to companies active in the fossil fuel sector (PAI 4, Table 1)
- Violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1)
- Activities negatively affecting biodiversity-sensitive areas (PAI 7, Table 1). The consideration of this PAI is currently restricted to applying exclusions to palm oil producing companies and for any breaches to the UNGC, UNGP and OECD Guidelines for Multinational Enterprises in relation to biodiversity.
- Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons (PAI 14, Table 1)
 - o Via the ESG integration process, as part of the investment due diligence policies and procedures, the following PAIs are considered:

- All indicators related to GHG emissions, as part of the required Climate Risk analysis (PAI 1-6, Table 1, PAI 4, Table 2)

- Biodiversity, water and waste indicators (PAI 7-9, Table 1)

- Board gender diversity (PAI 13, Table 1)

Post-investment, the following principal adverse impacts on sustainability factors are taken into account:

o Via the application of the voting policy, the following PAIs are considered:

- All indicators related to GHG emissions (PAI 1-6, Table 1)
- Indicators related to social and employee matters (PAI 10-13, Table 1; PAI 5-8, Table 3)

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

- Via Robeco's entity engagement program, the following PAIs are considered:
 - All indicators related to Climate and other environment-related indicators (PAI 1-9, Table 1)
 - Violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1). On an ongoing basis, the investment universe is scanned for controversial behavior in relation to the aforementioned principles and guidelines.
 - In addition, based on a yearly review of Robeco's performance on all mandatory and selected voluntary indicators, holdings of the Sub-fund that cause adverse impact might be selected for engagement.

More information is available via Robeco's Principal Adverse Impact Statement, published on Robeco's website. The Sub-fund will periodically report how it has considered the principal adverse impacts of its investments in the Company's annual report, which will be made available each year on or before 30 April at the Sub-fund page highlighted in final section of this document.

No

What investment strategy does this financial product follow?

Robeco Next Digital Billion is an actively managed fund that invests in companies in emerging markets. The selection of these stocks is based on fundamental analysis as described in the Investment policy strategy paragraph in Appendix I of this Prospectus. The strategy integrates sustainability indicators on a continuous basis as part of the stock selection process. Amongst others, the Sub-fund applies norms-based and activity-based exclusions, Robeco's good governance policy, Robeco's SDG framework and considers Principal Adverse Impacts in the investment process. More product-specific information can be found on our website and the links provided in the final question of this disclosure.

The investment strategy guides investment decisions based on factors such as investment objectives and risk tolerance.

What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?

The Sub-fund has the following binding elements:

1. The Sub-fund's portfolio complies with Robeco's Exclusion Policy (<https://www.robeco.com/files/docm/docu-exclusion-policy.pdf>), that is based on exclusion criteria with regards to products and business practices that Robeco believes are detrimental to society and incompatible with sustainable investment strategies. This means that the Sub-fund has 0% exposure to excluded securities, taking into account a grace period. Information with regards to the effects of the exclusions on the Sub-fund's universe can be found at <https://www.robeco.com/files/docm/docu-exclusion-list.pdf>.
2. The Sub-fund scrutinizes investment in companies that are in breach of the ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises. If a company in the portfolio breaches one of the international guidelines during the investment period, the company will become part of the Enhanced Engagement program.
3. All equity holdings have a granted right to vote and Robeco exerts that right by voting according to Robeco's Proxy Voting Policy, unless impediments occur (e.g. share blocking or when not considered cost efficient). Robeco's Proxy Voting Policy can be found at <https://www.robeco.com/files/docm/docu-robeco-stewardship-policy.pdf>.
4. Investments with an elevated sustainability risk are defined by Robeco as companies with an ESG Risk Rating of 40 and higher (the ESG Risk Rating is explained in the sustainability risk policy which can be accessed via <https://www.robeco.com/files/docm/docu-robeco-sustainability-risk-policy.pdf>). The Sub-fund is limited to a maximum exposure of 10% to investments with an elevated sustainability risk, based on the market weight in the portfolio

taking into account regional differences and benchmark. Each investment with an ESG Risk rating of higher than 40 requires separate approval by a dedicated committee of sustainable investment specialists, compliance and risk management that oversees the bottom-up sustainability analysis.

● ***What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?***

The Sub-fund does not commit to a minimum rate to reduce the scope of investments prior to the application of the investment strategy.

● ***What is the policy to assess good governance practices of the investee companies?***

Robeco has a Good Governance policy to assess governance practices of companies. The policy describes how Robeco determines if and when a company does not follow good governance practices and is therefore excluded from the initial investment universe for Article 8 and 9 products. Robeco's Good Governance policy applies to the Sub-fund and tests on a set of governance criteria that reflect widely recognized industry established norms and include topics as employee relations, management structure, tax compliance and remuneration.

The Good Governance test consists of criteria on such topics that are examined for investee companies and further explained in Robeco's Good Governance policy <https://www.robeco.com/files/docm/docu-robeco-good-governance-policy.pdf>. Additionally, the companies that do not pass the good governance test are reflected in the exclusion list that can be accessed here - <https://www.robeco.com/files/docm/docu-exclusion-list.pdf>.

What is the asset allocation planned for this financial product?

At least 90% of the investments are aligned with the E/S characteristics of the Sub-fund. The Sub-fund plans to make a minimum of 35% sustainable investments, measured by positive scores via Robeco's SDG Framework. The investments in the category Other, estimated between 0-10%, are mostly in cash, cash equivalents and derivatives as further described below. The planned asset allocation is monitored continuously, and evaluated on a yearly basis.

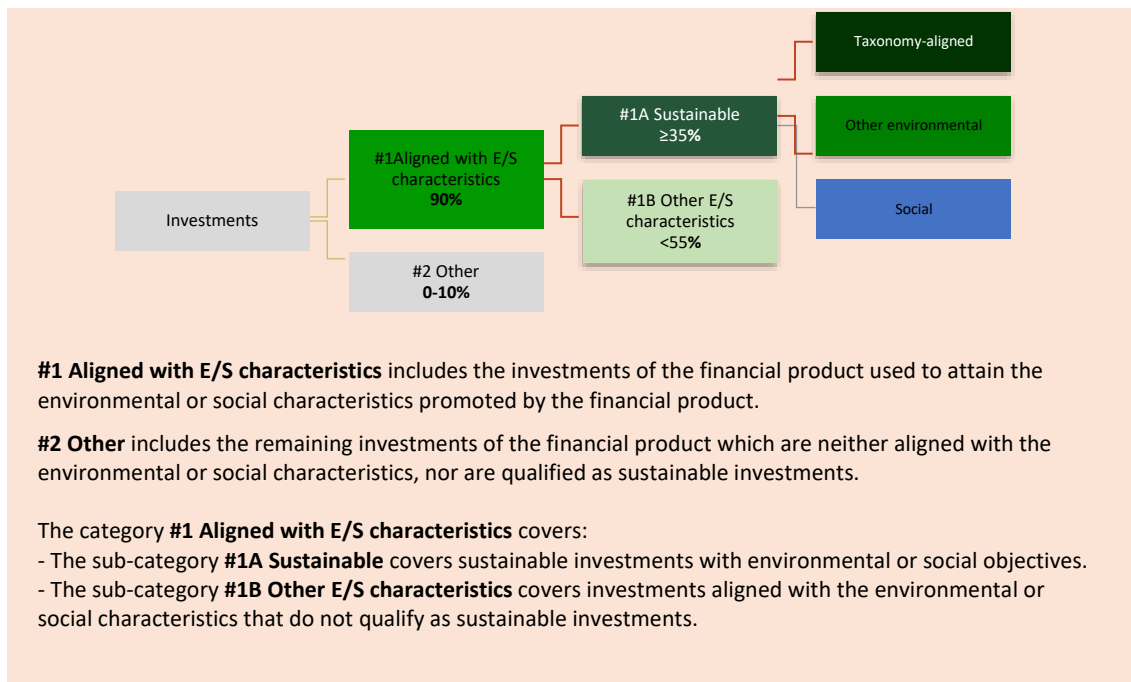

Good governance practices include sound management structures, employee relations, remuneration of staff and tax compliance.

Asset allocation describes the share of investments in specific assets.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure (CapEx)** showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure (OpEx)** reflecting green operational activities of investee companies.

● **How does the use of derivatives attain the environmental or social characteristics promoted by the financial product?**

The Sub-fund does not make use of derivatives to attain the environmental or social characteristics promoted by the financial product. The Sub-fund may make use of derivatives for hedging, liquidity management and efficient portfolio management as well as investment purposes. Exchange traded and over-the-counter derivatives are permitted, including but not limited to futures, swaps, options and currency forwards. Whilst the Sub-fund may use derivatives both for investment purposes as well as for hedging and efficient portfolio management, it does not utilize derivatives for such purposes outside the intended share of investments allocated to the 'Other' category. In case the Sub-fund uses derivatives, the underlying shall comply with the investment policy. Where relevant, minimum environmental or social safeguards are taken into account as described below.

● **To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?**

0%. The Sub-fund does not intend to make Taxonomy-aligned investments. It cannot be excluded that among the Sub-fund's holdings certain investments are Taxonomy aligned. The Sub-fund will report on Taxonomy-aligned investment in the periodic disclosures. In the future, once data-availability in relation to the EU Taxonomy will improve, Robeco might consider setting a target based on turnover or CAPEX. Robeco currently relies on third-party data, including data in relation to companies that do not disclose on the EU Taxonomy alignment of their activities. EU Taxonomy-alignment data is not yet subject to a review by third parties. The Sub-fund only makes investments in equity and therefore it does not have sovereign exposures. The expected level of alignment with and without sovereign bonds is the same.

To comply with the EU Taxonomy, the

● **Does the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy?⁶⁵**

⁶⁵ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

criteria for **fossil gas** include limitations on emissions and switching to renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

 are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

- Yes
- In fossil gas
- In nuclear energy
- No

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.*

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

** As the investments are not Taxonomy-aligned, the exclusion of sovereign bonds has no impact on the graph and therefore no such percentage is shown here.

What is the minimum share of investments in transitional and enabling activities?

0%.

What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?

The Sub-fund intends to make sustainable investments, measured as positive scores via Robeco's SDG Framework. Among those could be investments with environmental objectives that do not qualify as Taxonomy-aligned. The environmental objectives of the Sub-fund are attained by investing in companies that score positively on SDG 12 (Responsible consumption and production), SDG 13 (Climate action), SDG 14 (Life below water), and SDG 15 (Life on land) in Robeco's SDG Framework. While the sum of sustainable investments with an environmental objective and socially sustainable investments always adds up to the Sub-fund's minimum proportion of 35% sustainable investments, we do not commit to a minimum share of sustainable investments with an environmental objective because the Sub-fund's investment strategy does not have a specific environmental investment objective. Therefore, the minimum share of sustainable investments with an environmental objective is 0%.

What is the minimum share of socially sustainable investments?

The Sub-fund intends to make sustainable investments, measured as positive scores via Robeco's SDG Framework. Among those could be investments with social objectives. The social objectives of the Sub-fund are attained by investing in companies that score positively on SDG 1 (No poverty), SDG 2 (Zero hunger), SDG 3 (Good health and well-being), SDG 4 (Quality education), SDG 5 (Gender equality), SDG 6 (Clean water and sanitation), SDG 7 (Affordable and clean energy), SDG 8 (Decent work and economic growth), SDG 9 (Industry, innovation and infrastructure), SDG 10 (Reduced inequalities), SDG 11

(Sustainable cities and communities), SDG 16 (Peace, justice and strong institutions) and SDG 17 (Partnerships for the goals), in Robeco's SDG Framework. While the sum of socially sustainable investments and sustainable investments with an environmental objective always adds up to the Sub-fund's minimum proportion of sustainable investments, we do not commit to a minimum share of socially sustainable investments because the Sub-fund's investment strategy does not have a specific socially sustainable investment objective. Therefore, the minimum share of socially sustainable investments is 0%.

What investments are included under "#2 Other", what is their purpose and are there any minimum environmental or social safeguards?

The type of instruments included under "#2 Other" and their purpose are outlined in Annex I of this Prospectus under the header 'Financial instruments and investment restrictions'. They include cash, cash equivalents, as well as investment funds and eligible asset classes (other than bonds and equities) that do not specifically promote E/S characteristics. As indicated above, the Sub-fund does not make use of derivatives to attain the environmental or social characteristics promoted. The Sub-fund may make use of derivatives, which thus always fall under the category "#2 Other", for hedging, liquidity management and efficient portfolio management as well as investment purposes. Exchange traded and over-the-counter derivatives are permitted, including but not limited to futures, swaps, options and currency forwards. In case the Sub-fund uses derivatives, the underlying shall comply with the investment policy. Where relevant, minimum environmental or social safeguards are taken into account, by, for example, applying Robeco's Exclusion Policy for any single security derivative.

Is a specific index designated as a reference benchmark to determine whether this financial product is aligned with the environmental and/or social characteristics that it promotes?

Not applicable.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

o) RobecoSAM Biodiversity Equities

Pre-contractual disclosure for the financial products referred to in Article 9, paragraphs 1 to 4a, of Regulation (EU) 2019/2088 and Article 5, first paragraph, of Regulation (EU) 2020/852

Product name: RobecoSAM Biodiversity Equities

Legal entity identifier: 213800YFIUFHGS8PLX94

Sustainable investment objective

Does this financial product have a sustainable investment objective?

Yes

No

It will make a minimum of **sustainable investments with an environmental objective: 10%**

in economic activities that qualify as environmentally sustainable under the EU Taxonomy

in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

It will make a minimum of **sustainable investments with a social objective: 40%**

It **promotes Environmental/Social (E/S) characteristics** and while it does not have as its objective a sustainable investment, it will have a minimum proportion of ___% of sustainable investments

with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with a social objective

It promotes E/S characteristics, but **will not make any sustainable investments**

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

What is the sustainable investment objective of this financial product?

The sustainable investments of the Sub-fund aim to support the sustainable use of natural resources and ecosystem services, as well as technologies, products and services that help to reduce Biodiversity threats or restore natural habitats.

Sustainability indicators measure how the sustainable objectives of this financial product are attained.

The foregoing is implemented by mainly invested in companies that advance the following United Nations Sustainable Development Goals (UN SDGs): Good health and well-being (SDG 3), Industry, Innovation and infrastructure (SDG 9), Responsible consumption and production (SDG 12), Life below water (SDG 14) and Life on Land (SDG 15).

A part of the investments made by the Sub-fund contribute to the following environmental objectives of the Taxonomy regulation:

- Protection and restoration of biodiversity and ecosystems
- Sustainable use and protection of water and marine resources
- Pollution prevention and control

There is no reference benchmark designated for the purpose of attaining the sustainable objectives promoted by the Sub-fund.

● ***What sustainability indicators are used to measure the attainment of the sustainable investment objective of this financial product?***

The Sub-fund has the following sustainability indicators:

1. The number of companies with a positive or neutral SDG score.
2. The number of companies which are selected for engagement
3. The % of investments in securities that are on Robeco's Exclusion list as result of the application of Robeco's Exclusion Policy.
4. The % of holdings that are in violation of the ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises.
5. The number of holdings and agenda items voted.

● ***How do sustainable investments not cause significant harm to any environmental or social sustainable investment objective?***

The sustainable investments do no significant harm to any environmental or social sustainable investment objective by considering a principal adverse impact and aligning with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights. In addition, sustainable investments score positively on Robeco's SDG Framework, and therefore do not cause significant harm.

How have the indicators for adverse impacts on sustainability factors been taken into account?

Mandatory principal adverse impact indicators are considered through Robeco's SDG Framework, either directly or indirectly, when identifying sustainable investments for the Sub-fund. In addition, voluntary environmental and social indicators are taken into account, depending on their relevance for measuring impacts on the SDGs and the availability of data. A detailed description of the incorporation of principal adverse impacts is available via Robeco's Principal Adverse Impact Statement published on the Robeco website (<https://www.robeco.com/files/docm/docu-principal-adverse-impact-statement-summary-entity-level.pdf>). In this statement, Robeco sets out its approach to identifying and prioritizing principal adverse impacts, and how principal adverse impacts are considered as part of Robeco's investment due diligence process and procedures relating to research and analysis, exclusions and restrictions and/or voting and engagement. This description also explains how principal adverse impact indicators are considered by the SDG Framework.

How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights?

The sustainable investments are aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights via both Robeco's Exclusion Policy and Robeco's SDG Framework

Does this financial product consider principal adverse impacts on sustainability factors?

Yes, _____

The Sub-fund considers principal adverse impacts on sustainability factors as referred to in Annex I of the SFDR Delegated Act.

Pre-investment, Robeco's SDG Framework assesses companies' positive and negative contributions to the Sustainable Development Goals (SDGs). Robeco's SDG Framework directly and/or indirectly screens companies on many of the topics considered by the PAI indicators.

Post-investment, the following principal adverse impacts on sustainability factors are taken into account:

- Via the application of the voting policy, the following PAIs are considered:
 - All indicators related to GHG emissions (PAI 1-6, Table 1)
 - Indicators related to social and employee matters (PAI 10-13, Table 1; PAI 5-8, Table 3)
- Via Robeco's entity engagement program, the following PAIs are considered:
 - All indicators related to Climate and other environment-related indicators (PAI 1-9, Table 1)
 - Violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1). On an ongoing basis, the investment universe is scanned for controversial behavior in relation to the aforementioned principles and guidelines.
 - In addition, based on a yearly review of Robeco's performance on all mandatory and selected voluntary indicators, holdings of the Sub-fund that cause adverse impact might be selected for engagement.

More information is available via Robeco's Principal Adverse Impact Statement, published on Robeco's website. The Sub-fund will periodically report how it has considered the principal adverse impacts of its investments in the Company's annual report, which will be made available each year on or before 30 April at the Sub-fund page highlighted in final section of this document.

No

What investment strategy does this financial product follow?

RobecoSAM Biodiversity Equities is an actively managed fund that invests globally in companies that provide innovative materials and process technologies. The selection of these stocks is based on fundamental analysis as described in the Investment policy strategy paragraph in Appendix I of this Prospectus. The strategy integrates sustainability indicators on a continuous basis as part of the stock selection process. Amongst others, the Sub-fund applies norms-based and activity-based exclusions, Robeco's good governance policy, Robeco's SDG framework and considers Principal Adverse Impacts in the investment process. More product-specific information can be found on our website and the links provided in the final question of this disclosure.

What are the binding elements of the investment strategy used to select the investments to attain the sustainable investment objective?

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

The investment strategy guides investment decisions based on factors such as investment objectives and risk tolerance.

The Sub-fund has the following binding elements:

1. The Sub-fund is solely invested in companies that hold a positive or allowed neutral SDG score based on the internally developed SDG Framework.
2. The Sub-fund will at least engage with a minimum of 20% of holdings on an annual basis which show potential for improvement on biodiversity footprint.
3. The Sub-fund's portfolio complies with Robeco's Exclusion Policy <https://www.robeco.com/files/docm/docu-exclusion-policy.pdf> excluding investments in companies that are exposed to controversial behavior and controversial products. This means that the Sub-fund has 0% exposure to excluded securities, taking into account a grace period. Information with regards to the impact of the exclusions on the Sub-fund's universe can be found at <https://www.robeco.com/files/docm/docu-exclusion-list.pdf>.
4. The Sub-fund avoids investment in companies that are in breach of the ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises. Companies that breach the international norms will be excluded from the investment universe.
5. All equity holdings have a granted right to vote and Robeco exerts that right by voting according to Robeco's Proxy Voting Policy, unless impediments occur (e.g. share blocking or when not considered cost efficient). Robeco's Proxy Voting Policy can be found at <https://www.robeco.com/files/docm/docu-robeco-stewardship-policy.pdf>.

● **What is the policy to assess good governance practices of the investee companies?**

Robeco has a Good Governance policy to assess governance practices of companies. The policy describes how Robeco determines if and when a company does not follow good governance practices and is therefore excluded from the initial investment universe for Article 8 and 9 products. Robeco's Good Governance policy applies to the Sub-fund and tests on a set of governance criteria that reflect widely recognized industry established norms and include topics as employee relations, management structure, tax compliance and remuneration.

The Good Governance test consists of criteria on such topics that are examined for investee companies and further explained in Robeco's Good Governance policy <https://www.robeco.com/files/docm/docu-robeco-good-governance-policy.pdf>. Additionally, the companies that do not pass the good governance test are reflected in the exclusion list that can be accessed here - <https://www.robeco.com/files/docm/docu-exclusion-list.pdf>.

● **What is the asset allocation and the minimum share of sustainable investments?**

The Sub-fund plans to make a minimum of 90% sustainable investments, with a minimum portion of 10% sustainable investments with an environmental objective and a minimum portion of 40% sustainable investments with a social objective, measured by positive scores or allowed neutrals, via Robeco's SDG Framework. The investments in the category non-sustainable, estimated between 0-10%, are in cash and cash equivalents. The planned asset allocation is monitored continuously, and evaluated on a yearly basis.

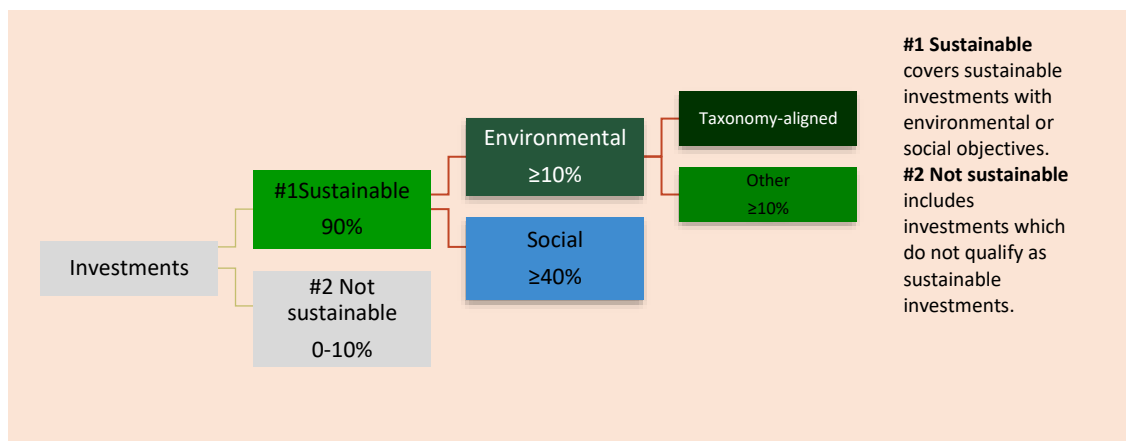

Good governance practices include sound management structures, employee relations, remuneration of staff and tax compliance.

Asset allocation describes the share of investments in specific assets.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

● **How does the use of derivatives attain the sustainable investment objective?**

The Sub-fund does not make use of derivatives to attain the sustainable objective promoted by the financial product. The Sub-fund may make use of derivatives for hedging and liquidity management. This includes the usage of derivatives to manage currency and market exposures in a cost-effective manner. To that purpose exchange traded and over-the-counter derivatives linked to equity indices and currencies are permitted. In case the Sub-fund uses derivatives, the underlying shall comply with the investment policy. Where relevant, minimum environmental or social safeguards are taken into account.

To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

The Sub-fund intends to contribute to the following environmental objectives under the EU Taxonomy:

- Protection and restoration of biodiversity and ecosystems
- Sustainable use and protection of water and marine resources
- Substantial contribution to the transition to a circular economy

The Sub-fund commits to a minimum share of 0% of Taxonomy-aligned activities. The Sub-fund intends to increase the minimum share of Taxonomy aligned activities for the Sub-fund once data availability in relation to the EU Taxonomy improves and stabilises.

The Sub-fund will report on Taxonomy-aligned investment in the periodic disclosures. In the future, once data-availability in relation to the EU Taxonomy will improve, Robeco might consider setting a target based on turnover or CAPEX. Robeco currently relies on third-party data in relation to the EU Taxonomy, including data in relation to companies that do not disclose on the EU Taxonomy alignment of their activities. EU Taxonomy-alignment data is not yet subject to a review by third parties. The Sub-fund only makes investments in equity and therefore it does not have sovereign exposures. The expected level of alignment with and without sovereign bonds is the same.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

 are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities

● **Does the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy⁶⁶?**

Yes:

In fossil gas

In nuclear energy

No

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.*

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

** As the investments are not Taxonomy-aligned, the exclusion of sovereign bonds has no impact on the graph and therefore no such percentage is shown here.

● **What is the minimum share of investments in transitional and enabling activities?**

0%.

What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?

The Sub-fund intends to make sustainable investments, measured as positive scores via Robeco's SDG Framework. Among those could be investments with environmental objectives that do not qualify as Taxonomy-aligned. The Sub-fund commits to a minimum share of sustainable investments of 10% with an environmental objective because the Sub-fund's investment strategy does have a specific environmental investment objective. The environmental objectives of the Sub-fund are attained by investing in companies that score positively on SDG 12 (Responsible consumption and production), SDG 13 (Climate action), SDG 14 (Life below water), and SDG 15 (Life on land) in Robeco's SDG Framework. The sum of sustainable investments with an environmental objective and socially

⁶⁶ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

under the EU
Taxonomy.

sustainable investments always add up to the Sub-fund's minimum proportion of 90% sustainable investments.

What is the minimum share of sustainable investments with a social objective?

The Sub-fund intends to make sustainable investments, measured as positive scores via Robeco's SDG Framework. The Sub-fund commits to a minimum share of socially sustainable investments of 40% because the Sub-fund's investment strategy does not have a specific social investment objective. The social objectives of the Sub-fund are attained by investing in companies that score positively on SDG 1 (No poverty), SDG 2 (Zero hunger), SDG 3 (Good health and well-being), SDG 4 (Quality education), SDG 5 (Gender equality), SDG 6 (Clean water and sanitation), SDG 7 (Affordable and clean energy), SDG 8 (Decent work and economic growth), SDG 9 (Industry, innovation and infrastructure), SDG 10 (Reduced inequalities), SDG 11 (Sustainable cities and communities), SDG 16 (Peace, justice and strong institutions) and SDG 17 (Partnerships for the goals), in Robeco's SDG Framework. The sum of socially sustainable investments and sustainable investments with an environmental objective always add up to the Sub-fund's minimum proportion of 90% sustainable investments.

What investments are included under "#2 Not sustainable", what is their purpose and are there any minimum environmental or social safeguards?

The type of instruments included under "#2 Not Sustainable" and their purpose are outlined in Annex I of this Prospectus under the header 'Financial instruments and investment restrictions'. They include cash, cash equivalents, as well as investment funds and eligible asset classes (other than bonds and equities) that do not specifically promote E/S characteristics. As indicated above, the Sub-fund does not make use of derivatives to attain its sustainable objective. The Sub-fund may make use of derivatives for hedging and liquidity management. This includes the usage of derivatives to manage currency and market exposures in a cost-effective manner. For the management of currency exposure FX Forwards are allowed. The exchange traded derivatives linked to equity indices, such as equity index futures covering the market universe, are permitted for cash equitization. In case the Sub-fund uses such index market derivatives, these shall be temporary positions as defined by the investment restrictions. Where relevant, minimum environmental or social safeguards are taken into account by monitoring and performing suitability tests on index futures constituents following Robeco's Exclusion Policy.

Is a specific index designated as a reference benchmark to meet the sustainable investment objective?

Not applicable.

Reference benchmarks are indexes to measure whether the financial product attains the sustainable investment objective.

p) RobecoSAM Net Zero 2050 Climate Equities

Pre-contractual disclosure for the financial products referred to in Article 9, paragraphs 1 to 4a, of Regulation (EU) 2019/2088 and Article 5, first paragraph, of Regulation (EU) 2020/852

Product name: RobecoSAM Net Zero 2050 Climate Equities

Legal entity identifier: 213800T59KJ3I92BUA65

Sustainable investment objective

Does this financial product have a sustainable investment objective?

Yes

No

It will make a minimum of **sustainable investments with an environmental objective: 20%**

in economic activities that qualify as environmentally sustainable under the EU Taxonomy

in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

It will make a minimum of **sustainable investments with a social objective: 20%**

It **promotes Environmental/Social (E/S) characteristics** and while it does not have as its objective a sustainable investment, it will have a minimum proportion of ___% of sustainable investments

with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with a social objective

It promotes E/S characteristics, but **will not make any sustainable investments**

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

What is the sustainable investment objective of this financial product?

The Sub-fund aims to reduce the carbon footprint of the portfolio and thereby contribute towards the goals of the Paris agreement to keep the maximum global temperature rise well-below 2°C.

Sustainability indicators measure how the sustainable objectives of this financial product are attained.

The Sub-fund has a carbon-reduction objective and uses a Climate Transition Benchmark to monitor the carbon profile of the Sub-fund. The foregoing is implemented by essentially actively investing in companies that contribute to achieve Net Zero by 2050.

A part of the investments made by the Sub-fund contribute to the environmental objective of Climate Mitigation under the EU Taxonomy regulation.

● ***What sustainability indicators are used to measure the attainment of the sustainable investment objective of this financial product?***

The Sub-fund has the following sustainability indicators:

1. The Sub-fund's weighted carbon footprint score compared to the Climate Transition Benchmark.
2. The % of companies with a Net Zero target 2050 or earlier.
3. The % of investments in securities that are on Robeco's Exclusion list as result of the application of Robeco's Exclusion Policy.
4. The number of companies that are in violation of the UNGPs or OECD Guidelines for Multinational Enterprises.
5. The number of holdings and agenda items voted.

● ***How do sustainable investments not cause significant harm to any environmental or social sustainable investment objective?***

The sustainable investments do no significant harm to any environmental or social sustainable investment objective by considering a principal adverse impact and aligning with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights. In addition, sustainable investments made through the Paris Aligned Benchmark follow eligibility requirements as per Article 12 of the EU regulation Paris-aligned Benchmarks and sustainability-related disclosures for benchmarks and follows Robeco's Exclusion policy. In accordance with Robeco's SDG framework, any off benchmark investments are only considered by the Sub-fund when they have a positive contribution to the UN SDGs and therefore not cause significant harm to any environmental or social sustainable investment objective.

How have the indicators for adverse impacts on sustainability factors been taken into account?

All sustainable investments are constituents of Climate Transition Benchmark, or follow the benchmark methodology. The benchmark methodology directly assesses the following PAI indicators:

- Table 1, PAI 2 (Carbon Footprint)
- Table 1, PAI 4 (Exposure to companies in the fossil fuel sector)
- Table 1, PAI 10 (Violations of the UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises)
- Table 1, PAI 14 (Exposure to controversial weapons)

Post-investment, the Sub-fund assesses the performance on all mandatory PAI indicators on a regular basis.

A detailed description of the incorporation of principal adverse impacts is available via Robeco's Principal Adverse Impact Statement published on the Robeco website (<https://www.robeco.com/files/docm/docu-principal-adverse-impact-statement-summary-entity-level.pdf>).

How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights?

The sustainable investments are aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights via both Robeco's Exclusion Policy as well as the methodology of the benchmark provider.

Does this financial product consider principal adverse impacts on sustainability factors?

Yes, _____

The Sub-fund considers principal adverse impacts on sustainability factors as referred to in Annex 1 of the SFDR Delegated Act.

Pre-investment, the following principal adverse impacts on sustainability factors are considered:

- Via the applied normative and activity-based exclusions, the following PAIs are considered:
 - Exposure to companies active in the fossil fuel sector (PAI 4, Table 1)
 - Violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1)
 - Activities negatively affecting biodiversity-sensitive areas (PAI 7, Table 1). The consideration of this PAI is currently restricted to applying exclusions to palm oil producing companies and for any breaches to the UNGC, UNGP and OECD Guidelines for Multinational Enterprises in relation to biodiversity.
 - Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons (PAI 14, Table 1)
- Via the environmental footprint performance targets of the Sub-fund, the following PAIs are considered:
 - Carbon footprint (PAI 2, Table 1), via the Climate Transition Benchmark

Post-investment, the following principal adverse impacts on sustainability factors are taken into account:

- Via the application of the voting policy, the following PAIs are considered:
 - All indicators related to GHG emissions (PAI 1-6, Table 1)
 - Indicators related to social and employee matters (PAI 10-13, Table 1; PAI 5-8, Table 3)
- Via Robeco's entity engagement program, the following PAIs are considered:
 - All indicators related to Climate and other environment-related indicators (PAI 1-9, Table 1)
 - Violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1)
 - Activities negatively affecting biodiversity sensitive areas (PAI 7, Table 1). The consideration of this PAI is currently restricted to applying exclusions to palm oil producing companies and for any breaches to the UNGC, UNGP and OECD Guidelines for Multinational Enterprises in relation to biodiversity.
 - In addition, based on a yearly review of Robeco's performance on all mandatory and selected voluntary indicators, holdings of the Sub-fund that cause adverse impact might be selected for engagement.

More information is available via Robeco's Principal Adverse Impact Statement, published on Robeco's website. The Sub-fund will periodically report how it has considered the principal adverse impacts of its investments in the Company's annual report, which will be made available each year on or before 30 April at the Sub-fund page highlighted in final section of this document.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

No

The investment strategy guides investment decisions based on factors such as investment objectives and risk tolerance.

What investment strategy does this financial product follow?

RobecoSAM Net Zero 2050 Climate Equities is an actively managed fund that invests in companies in developed markets who have the objective to contribute to keeping the maximum global temperature rise well-below 2°C and those that have set Net Zero commitments. The selection of these stocks is based on fundamental analysis as described in the Investment policy strategy paragraph in Appendix I of this Prospectus. The strategy integrates sustainability indicators on a continuous basis as part of the stock selection process. Amongst others, the Sub-fund applies norms-based and activity-based exclusions, Robeco's good governance policy, Robeco's SDG framework and considers Principal Adverse Impacts in the investment process. More product-specific information can be found on our website and the links provided in the final question of this disclosure.

What are the binding elements of the investment strategy used to select the investments to attain the sustainable investment objective?

The Sub-fund has the following binding elements:

1. The Sub-fund's weighted carbon footprint score is equal or better than that of the Climate Transition Benchmark.
2. The Sub-fund's portfolio consists of at least 75% of companies with an established Net Zero target by 2050 or earlier.
3. The Sub-fund does not invest in activities that are excluded on the basis of Article 12 of the EU regulation Climate Transition Benchmarks, EU Paris-aligned Benchmarks and sustainability-related disclosures for benchmarks as applicable. In addition, the Sub-fund's portfolio complies with Robeco's Exclusion Policy (<https://www.robeco.com/files/docm/docu-exclusion-policy.pdf>), that is based on exclusion criteria with regards to products and business practices that Robeco believes are detrimental to society and incompatible with sustainable investment strategies. This means that the Sub-fund has 0% exposure to excluded securities, taking into account a grace period. Information with regards to the effects of the exclusions on the Sub-fund's universe can be found at <https://www.robeco.com/files/docm/docu-exclusion-list.pdf>.
4. The Sub-fund avoids investment in companies that are in breach of the ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises. Companies that breach these international norms will be excluded from the investment universe.
5. All equity holdings have a granted right to vote and Robeco exerts that right by voting according to Robeco's Proxy Voting Policy, unless impediments occur (e.g. share blocking or when not considered cost efficient). Robeco's Proxy Voting Policy can be found at <https://www.robeco.com/files/docm/docu-robeco-stewardship-policy.pdf>.

What is the policy to assess good governance practices of the investee companies?

Robeco has a Good Governance policy to assess governance practices of companies. The policy describes how Robeco determines if and when a company does not follow good governance practices and is therefore excluded from the initial investment universe for Article 8 and 9 products. Robeco's Good Governance policy applies to the Sub-fund and tests on a set of governance criteria that reflect widely recognized industry established norms and include topics as employee relations, management structure, tax compliance and remuneration.

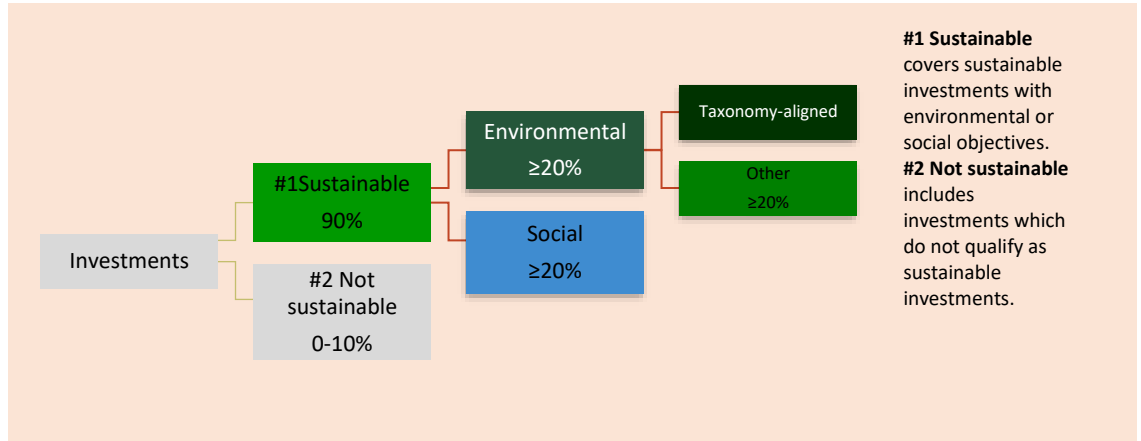

The Good Governance test consists of criteria on such topics that are examined for investee companies and further explained in Robeco's Good Governance policy <https://www.robeco.com/files/docm/docu-robeco-good-governance-policy.pdf>. Additionally, the companies that do not pass the good governance test are reflected in the exclusion list that can be accessed here - <https://www.robeco.com/files/docm/docu-exclusion-list.pdf>.

Good governance practices include sound management structures, employee relations, remuneration of staff and tax compliance.

What is the asset allocation and the minimum share of sustainable investments?

The Sub-fund plans to make a minimum of 90% sustainable investments, with a minimum portion of 20% sustainable investments with an environmental objective and a minimum portion of 20% sustainable investments with a social objective, measured either by holdings that are part of the Climate Transition Benchmark or holdings that have a positive score via Robeco's SDG Framework. The investments in the category non-sustainable, estimated between 0-10%, are in cash and cash equivalents. The planned asset allocation is monitored continuously, and evaluated on a yearly basis.

How does the use of derivatives attain the sustainable investment objective?

The Sub-fund does not make use of derivatives to attain the sustainable objective promoted by the financial product. The Sub-fund may make use of derivatives for hedging and liquidity management. This includes the usage of derivatives to manage currency and market exposures in a cost-effective manner. To that purpose exchange traded and over-the-counter derivatives linked to equity indices and currencies are permitted.

In case the Sub-fund uses derivatives, the underlying shall comply with the investment policy. Where relevant, minimum environmental or social safeguards are taken into account.

To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

The Sub-fund intends to contribute to the climate change mitigation objective under the EU Taxonomy. The Sub-fund commits to a minimum share of 0% of Taxonomy-aligned activities. The Sub-fund intends to increase the minimum share of Taxonomy aligned activities for the Sub-fund once data availability in relation to the EU Taxonomy improves and stabilises.

The Sub-fund will report on Taxonomy-aligned investment in the periodic disclosures. In the future, once data-availability in relation to the EU Taxonomy will improve, Robeco might consider setting a target based on turnover or CAPEX. Robeco currently relies on third-party data in relation to the EU Taxonomy, including data in relation to companies that do not disclose on the EU Taxonomy alignment of their activities. EU Taxonomy-alignment data is not yet subject to a review by third parties. Given the current commitment, the expected level of alignment with and without sovereign bonds is the same.

Asset allocation describes the share of investments in specific assets.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

● **Does the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy⁶⁷?**

Yes:

In fossil gas

In nuclear energy

No

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.*

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

** As the investments are not Taxonomy-aligned, the exclusion of sovereign bonds has no impact on the graph and therefore no such percentage is shown here.

● **What is the minimum share of investments in transitional and enabling activities?**

0%.

● **What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?**

The Sub-fund makes sustainable investments with environmental objectives that do qualify as Taxonomy-aligned. The Sub-fund commits to a minimum share of sustainable investments of 20% with an environmental objective because the Sub-fund's investment strategy does have a specific environmental investment objective. The environmental objectives of the Sub-fund are attained by

 are sustainable investments with an environmental objective that **do not take into**

⁶⁷ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

account the criteria for environmentally sustainable economic activities under the EU Taxonomy.

investing in companies with a low carbon footprint, in line with a low carbon scenario stipulated by the benchmark methodology. However, some of these companies with a low carbon footprint may not be exposed to activities that are eligible under the EU Taxonomy. In addition, the Sub-fund intends to make sustainable investments off-benchmark, measured as positive scores via Robeco's SDG Framework. These can be companies that score positively on SDG 12 (Responsible consumption and production), SDG 13 (Climate action), SDG 14 (Life below water), and SDG 15 (Life on land) in Robeco's SDG Framework. The sum of sustainable investments with an environmental objective and socially sustainable investments always adds up to the Sub-fund's minimum proportion of 90% sustainable investments.

What is the minimum share of sustainable investments with a social objective?

The Sub-fund intends to make sustainable investments, measured either by holdings that are part of the Paris Aligned Index or holdings that have a positive score via Robeco's SDG Framework. The Sub-fund commit to a minimum share of sustainable investments of 20% with a social objective because the Sub-fund's investment strategy does have a specific social investment objective. The social objectives of the Sub-fund are attained by investing in companies that score positively on SDG 1 (No poverty), SDG 2 (Zero hunger), SDG 3 (Good health and well-being), SDG 4 (Quality education), SDG 5 (Gender equality), SDG 6 (Clean water and sanitation), SDG 7 (Affordable and clean energy), SDG 8 (Decent work and economic growth), SDG 9 (Industry, innovation and infrastructure), SDG 10 (Reduced inequalities), SDG 11 (Sustainable cities and communities), SDG 16 (Peace, justice and strong institutions) and SDG 17 (Partnerships for the goals), in Robeco's SDG Framework. The sum of socially sustainable investments and sustainable investments with an environmental objective always adds up to the Sub-fund's minimum proportion of 90% sustainable investments.

What investments are included under "#2 Not sustainable", what is their purpose and are there any minimum environmental or social safeguards?

The type of instruments included under "#2 Not Sustainable" and their purpose are outlined in Annex I of this Prospectus under the header 'Financial instruments and investment restrictions'. They include cash, cash equivalents, as well as investment funds and eligible asset classes (other than bonds and equities) that do not specifically promote E/S characteristics. As indicated above, the Sub-fund does not make use of derivatives to attain its sustainable objective. The Sub-fund may make use of derivatives for hedging and liquidity management. This includes the usage of derivatives to manage currency and market exposures in a cost-effective manner. For the management of currency exposure FX Forwards are allowed. The exchange traded derivatives linked to equity indices, such as equity index futures covering the market universe, are permitted for cash equitization. In case the Sub-fund uses such index market derivatives, these shall be temporary positions as defined by the investment restrictions. Where relevant, minimum environmental or social safeguards are taken into account by monitoring and performing suitability tests on index futures constituents following Robeco's Exclusion Policy.

Is a specific index designated as a reference benchmark to meet the sustainable investment objective?

Yes, the Sub-fund uses the MSCI World Climate Change Index as a reference index to meet the carbon footprint reduction objective of the Sub-fund and thereby keeping the maximum global temperature rise well-below 2°C.

Reference benchmarks are indexes to measure whether the financial product attains the sustainable investment objective.

- ***How does the reference benchmark take into account sustainability factors in a way that is continuously aligned with the sustainable investment objective?***

Given that sustainable investment objective of the Sub-fund of reducing the carbon footprint of its portfolio, the reference index is aligned with such objective of the Sub-fund by applying in its methodology clearly defined rules for evaluating securities on their carbon footprint.

The reference index is designed to exceed the minimum standards of the EU Climate Transition Benchmark (CTB). The index is constructed by following baseline exclusions (controversial weapons, tobacco, thermal coal mining, environmental controversies) and applies constraints to ensure 30% reduction in weighted average carbon emissions intensity and a 7% reduction year-on-year. Further, equivalent ratio of weighted average "Green Revenues" to weighted average "Brown Revenues" is maintained by the index to factor in opportunities and risks of transition to a lower carbon economy.

The above aspects followed by the index align with the sustainable investment objective of the financial product.

- ***How is the alignment of the investment strategy with the methodology of the index ensured on a continuous basis?***

The methodology of the reference index follows rebalancing rules which ensures alignment with the investment strategy and objective of the Sub-fund.

MSCI uses MSCI ESG Research data (including MSCI Climate Change Metrics and MSCI Business Involvement Screening Research) as of the end of the month preceding the index reviews for the rebalancing of MSCI Climate Change index.

The Sub-fund follows a rebalancing strategy which ensures that the carbon footprint of the Sub-fund is better than that of the reference index. This in turn ensures that the investment strategy of the Sub-fund aligns with the methodology of the reference index. The methodology of the reference index takes into account a decarbonization trajectory of at least 7% GHG intensity per annum along with specific sector or activity exclusions and including involvement in controversial weapons.

- ***How does the designated index differ from a relevant broad market index?***

The benchmark differs from a broad general market index in that the latter does not take into account in its methodology any criteria on the carbon reduction objective and carbon footprint of companies.

- ***Where can the methodology used for the calculation of the designated index be found?***

The index methodology can be found on the relevant webpages by the index provider: <https://www.msci.com>

Where can I find more product specific information online?

q) Robeco Fashion Engagement Equities

Pre-contractual disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Product name: Robeco Fashion Engagement Equities

Legal entity identifier: 2138001KO5RJYHRY5H90

Environmental and/or social characteristics

Does this financial product have a sustainable investment objective?

Yes

No

It will make a minimum of **sustainable investments with an environmental objective: ___%**

- in economic activities that qualify as environmentally sustainable under the EU Taxonomy
- in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

It will make a minimum of **sustainable investments with a social objective: ___%**

It promotes **Environmental/Social (E/S) characteristics** and while it does not have as its objective a sustainable investment, it will have a minimum proportion of 30% of sustainable investments

- with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy
- with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy
- with a social objective

It promotes E/S characteristics, but **will not make any sustainable investments**

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

What environmental and/or social characteristics are promoted by this financial product?

The Sub-fund promotes the following E/S characteristics

1. The Sub-fund promotes structural changes in the fashion industry by engaging with companies on the industry's sustainability challenges. The companies are selected by showing potential and intention to address the industry's sustainability challenges and driving systemic change for the fashion industry.
2. The Sub-fund promotes certain minimum environmental and social safeguards through applying exclusion criteria with regards to products and business practices that Robeco believes are detrimental to society and incompatible with sustainable investment strategies, such as exposure to controversial behaviour, controversial weapons, and fossil fuels.
3. The Sub-fund promotes adherence to and conducting business activities in accordance with the United Nations Universal Declaration of Human Rights, the International Labor Organization's (ILO) labor standards, the United Nations Guiding Principles for Business and Human Rights (UNGPs), the United Nations Global Compact (UNGC) and the OECD Guidelines for Multinational Enterprises.
4. The Sub-fund promotes internationally accepted principles set by the International Corporate Governance Network (ICGN), and applies proxy voting in line with Robeco's Stewardship policy.

There is no reference benchmark designated for the purpose of attaining the environmental or social characteristics promoted by the Sub-fund.

● **What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?**

The Sub-fund has the following sustainability indicators:

1. The % of the portfolio value engaged with.
2. The % of investments in securities that are on Robeco's Exclusion list as result of the application of Robeco's Exclusion Policy.
3. The % of holdings that are in violation of the ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises.
4. The number of holdings and agenda items voted.

● **What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?**

The sustainable investments aim to contribute to the UN Sustainable Development Goals ("SDGs"), that have both social and environmental objectives. These are 17 goals that are globally recognised and include environmental goals such as climate action, clean water, life on land and water and social goals such as zero hunger, gender equality, education, etc. Robeco has developed a proprietary framework based on the UN SDGs through which an issuer's contribution to such SDGs is determined through a 3-step process. This process starts with a sector baseline on which a company's products are analysed to examine contribution to the society and environment. Further, the operational processes involved in creating such products is checked along with any controversies/litigation claims and remediation actions taken which are perused before a final SDG score is determined. The final score ranges between high negative (-3) to high positive (+3) and only those issuers which achieve positive SDG scores (+1, +2 and, +3) are regarded as Sustainable Investments.

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

● ***How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?***

The sustainable investments do no significant harm to any environmental or social sustainable investment objective by considering a principal adverse impact and aligning with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights. In addition, sustainable investments score positively on Robeco's SDG Framework, and therefore do not cause significant harm.

How have the indicators for adverse impacts on sustainability factors been taken into account?

Mandatory principal adverse impact indicators are considered through Robeco's SDG Framework, either directly or indirectly, when identifying sustainable investments for the Sub-fund. In addition, voluntary environmental and social indicators are taken into account, depending on their relevance for measuring impacts on the SDGs and the availability of data. A detailed description of the incorporation of principal adverse impacts is available via Robeco's Principal Adverse Impact Statement published on the Robeco website (<https://www.robeco.com/files/docm/docu-principal-adverse-impact-statement-summary-entity-level.pdf>). In this statement, Robeco sets out its approach to identifying and prioritizing principal adverse impacts, and how principal adverse impacts are considered as part of Robeco's investment due diligence process and procedures relating to research and analysis, exclusions and restrictions and/or voting and engagement. This description also explains how principal adverse impact indicators are considered by the SDG Framework.

How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The sustainable investments are aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights via both Robeco's Exclusion Policy and Robeco's SDG Framework.

Robeco's Exclusion Policy includes an explanation of how Robeco acts in accordance with the International Labor Organization (ILO) standards, United Nations Guiding Principles (UNGPs), United Nations Global Compact (UNGC) Principles and the Organization for Economic Co-operation and Development (OECD) Guidelines for Multinational Enterprises and is guided by these international treaties to assess the behavior of companies. Robeco continuously screens its investments for breaches of these principles. In case of a breach, the company will be excluded or engaged with, and is not considered a sustainable investment.

Robeco's SDG Framework screens for breaches on these principles in the final step of the framework. In this step, Robeco checks whether the company concerned has been involved in any controversies. Involvement in any controversy will result in a negative SDG score for the company, meaning it is not a sustainable investment.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

Does this financial product consider principal adverse impacts on sustainability factors?

Yes, _____

The Sub-fund considers principal adverse impacts on sustainability factors as referred to in Annex I of the SFDR Delegated Act.

Pre-investment, the following principal adverse impacts on sustainability factors are considered:

- Via the applied normative and activity-based exclusions, the following PAIs are considered:
 - Exposure to companies active in the fossil fuel sector (PAI 4, Table 1)
 - Violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1)
 - Activities negatively affecting biodiversity-sensitive areas (PAI 7, Table 1). The consideration of this PAI is currently restricted to applying exclusions to palm oil producing companies and for any breaches to the UNGC, UNGP and OECD Guidelines for Multinational Enterprises in relation to biodiversity.
 - Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons (PAI 14, Table 1)

Post-investment, the following principal adverse impacts on sustainability factors are taken into account:

- Via the application of the voting policy, the following PAIs are considered:
 - All indicators related to GHG emissions (PAI 1-6, Table 1)
 - Indicators related to social and employee matters (PAI 10-13, Table 1; PAI 5-8, Table 3)
 - Via the Sub-fund's engagement program, different environmental and social PAIs may be considered, depending on the materiality to the investee company.

More information is available via Robeco's Principal Adverse Impact Statement, published on Robeco's website. The Sub-fund will periodically report how it has considered the principal adverse impacts of its investments in the Company's annual report, which will be made available each year on or before 30 April at the Sub-fund page highlighted in final section of this document.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

No

The investment strategy guides investment decisions based on factors such as investment objectives and risk tolerance.

What investment strategy does this financial product follow?

Robeco Fashion Engagement Equities is an actively managed fund that invests in a concentrated selection of global stocks. Stock selection is based on fundamental analysis to invest in companies that are best able to have a clear and measurable improvement in their performance as per targets and key performance indicators defined over three to five years via active engagement, as described in the Investment policy strategy paragraph in Appendix I of this Prospectus. The strategy integrates sustainability indicators on a continuous basis as part of the stock selection process. Amongst others, the Sub-fund applies norms-based and activity-based exclusions, Robeco's good governance policy, Robeco's SDG framework and considers Principal Adverse Impacts in the investment process. More product-specific information can be found on our website and the links provided in the final question of this disclosure.

What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?

1. The Sub-fund actively engages with at least 80% of the value of the portfolio. In practice, the Sub-fund will engage all holdings of the portfolio, typically for a period of 3 to 5 years yet considers room for divestment after an engagement trajectory. Engagement trajectories are assessed annually, based on the progress of pre-determined objectives and targets. The pre-determined objectives and targets are determined by an internally developed framework, created to allow for an in-depth sustainability assessment specific to the fashion industry.
2. The Sub-fund's portfolio complies with Robeco's Exclusion Policy (<https://www.robeco.com/files/docm/docu-exclusion-policy.pdf>), that is based on exclusion criteria with regards to products and business practices that Robeco believes are detrimental to society and incompatible with sustainable investment strategies. This means that the Sub-fund has 0% exposure to excluded securities, taking into account a grace period. Information with regards to the effects of the exclusions on the Sub-fund's universe can be found at <https://www.robeco.com/files/docm/docu-exclusion-list.pdf>.
3. The Sub-fund avoids investment in companies that are in breach of the ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises. Companies that breach the international norms will be excluded from the investment universe.
4. All equity holdings have granted the right to vote and Robeco exerts that right by voting according to Robeco's Proxy Voting Policy, unless impediments occur (e.g. share blocking or when not considered cost efficient). Robeco's Proxy Voting Policy can be found at <https://www.robeco.com/files/docm/docu-robeco-stewardship-policy.pdf>

What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?

The Sub-fund does not commit to a minimum rate to reduce the scope of investments prior to the application of the investment strategy.

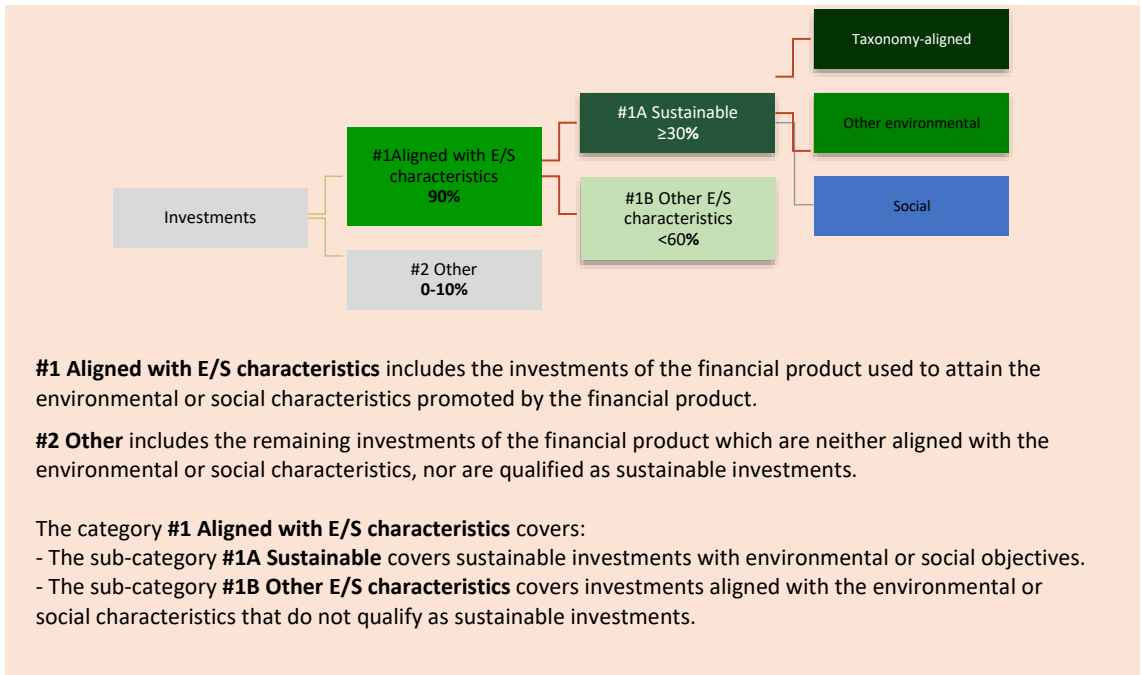

What is the policy to assess good governance practices of the investee companies?

Robeco has a Good Governance policy to assess governance practices of companies. The policy describes how Robeco determines if and when a company does not follow good governance practices and is therefore excluded from the initial investment universe for Article 8 and 9 products. Robeco's Good Governance policy applies to the Sub-fund and tests on a set of governance criteria that reflect widely recognized industry established norms and include topics as employee relations, management structure, tax compliance and remuneration.

The Good Governance test consists of criteria on such topics that are examined for investee companies and further explained in Robeco's Good Governance policy <https://www.robeco.com/files/docm/docu-robeco-good-governance-policy.pdf>. Additionally, the companies that do not pass the good governance test are reflected in the exclusion list that can be accessed here - <https://www.robeco.com/files/docm/docu-exclusion-list.pdf>.

What is the asset allocation planned for this financial product?

At least 90% of the investments are aligned with the E/S characteristics of the Sub-fund. The Sub-fund plans to make a minimum of 30% sustainable investments, measured by either being positive scores via Robeco's SDG Framework or investments in green, social, sustainability or sustainability-linked bonds. The investments in the category Other, estimated between 0-10%, are mostly in cash, cash equivalents and derivatives as further described below. The planned asset allocation is monitored continuously, and evaluated on a yearly basis.

How does the use of derivatives attain the environmental or social characteristics promoted by the financial product?

The Sub-fund does not make use of derivatives to attain the environmental or social characteristics promoted by the financial product. The Sub-fund may make use of derivatives for hedging, liquidity management and efficient portfolio management as well as investment purposes. Exchange traded and over-the-counter derivatives are permitted, including but not limited to futures, swaps, options and

Good governance practices include sound management structures, employee relations, remuneration of staff and tax compliance.

Asset allocation describes the share of investments in specific assets.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure (CapEx)** showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure (OpEx)** reflecting green operational activities of investee companies.

currency forwards. Whilst the Sub-fund may use derivatives both for investment purposes as well as for hedging and efficient portfolio management, it does not utilize derivatives for such purposes outside the intended share of investments allocated to the 'Other' category. In case the Sub-fund uses derivatives, the underlying shall comply with the investment policy. Where relevant, minimum environmental or social safeguards are taken into account as described below.

To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

0%. The Sub-fund does not intend to make EU Taxonomy-aligned investments. It cannot be excluded that among the Sub-fund's holdings certain investments are EU Taxonomy aligned. The Sub-fund will report on EU Taxonomy-aligned investment in the periodic disclosures. In the future, once data-availability in relation to the EU Taxonomy will improve, Robeco might consider setting a target based on turnover or CAPEX. Robeco currently relies on third-party data in relation to the EU Taxonomy, including data in relation to companies that do not disclose on the EU Taxonomy alignment of their activities. EU Taxonomy-alignment data is not yet subject to a review by third parties. At this moment, the expected level of alignment with and without sovereign bonds is the same.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels

● **Does the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy?⁶⁸**

- Yes
 - In fossil gas
 - In nuclear energy
- No

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.*

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures
 ** As the investments are not Taxonomy-aligned, the exclusion of sovereign bonds has no impact on the graph and therefore no such percentage is shown here.

● **What is the minimum share of investments in transitional and enabling activities?**

⁶⁸ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

corresponding to the best performance.

 are sustainable investments with an environmental objective that **do not take into account the criteria for environmentally sustainable economic activities under the EU Taxonomy.**

0%.

What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?

The Sub-fund intends to make sustainable investments, measured as positive scores via Robeco's SDG Framework. Among those could be investments with environmental objectives that do not qualify as Taxonomy-aligned. The environmental objectives of the Sub-fund are attained by investing in companies that score positively on SDG 12 (Responsible consumption and production), SDG 13 (Climate action), SDG 14 (Life below water), and SDG 15 (Life on land) in Robeco's SDG Framework. While the sum of sustainable investments with an environmental objective and socially sustainable investments always adds up to the Sub-fund's minimum proportion of 30% sustainable investments, we do not commit to a minimum share of sustainable investments with an environmental objective because the Sub-fund's investment strategy does not have a specific environmental investment objective. Therefore, the minimum share of sustainable investments with an environmental objective is 0%.

What is the minimum share of socially sustainable investments?

The Sub-fund intends to make sustainable investments, measured as positive scores via Robeco's SDG Framework. Among those could be investments with social objectives. The social objectives of the Sub-fund are attained by investing in companies that score positively on SDG 1 (No poverty), SDG 2 (Zero hunger), SDG 3 (Good health and well-being), SDG 4 (Quality education), SDG 5 (Gender equality), SDG 6 (Clean water and sanitation), SDG 7 (Affordable and clean energy), SDG 8 (Decent work and economic growth), SDG 9 (Industry, innovation and infrastructure), SDG 10 (Reduced inequalities), SDG 11 (Sustainable cities and communities), SDG 16 (Peace, justice and strong institutions) and SDG 17 (Partnerships for the goals), in Robeco's SDG Framework. While the sum of socially sustainable investments and sustainable investments with an environmental objective always adds up to the Sub-fund's minimum proportion of sustainable investments, we do not commit to a minimum share of socially sustainable investments because the Sub-fund's investment strategy does not have a specific socially sustainable investment objective. Therefore, the minimum share of socially sustainable investments is 0%.

What investments are included under "#2 Other", what is their purpose and are there any minimum environmental or social safeguards?

The type of instruments included under "#2 Other" and their purpose are outlined in Annex I of this Prospectus under the header 'Financial instruments and investment restrictions'. They include cash, cash equivalents, as well as investment funds and eligible asset classes (other than bonds and equities) that do not specifically promote E/S characteristics. As indicated above, the Sub-fund does not make use of derivatives to attain the environmental or social characteristics promoted. The Sub-fund may make use of derivatives, which thus always fall under the category "#2 Other", for hedging, liquidity management and efficient portfolio management as well as investment purposes. Exchange traded and over-the-counter derivatives are permitted, including but not limited to futures, swaps, options and currency forwards. In case the Sub-fund uses derivatives, the underlying shall comply with the investment policy. Where relevant, minimum environmental or social safeguards are taken into account, by, for example, applying Robeco's Exclusion Policy for any single security derivative.

Is a specific index designated as a reference benchmark to determine whether this financial product is aligned with the environmental and/or social characteristics that it promotes?

Not applicable.

Reference benchmarks are

indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

r) Robeco Gravis Digital Infrastructure Income

Pre-contractual disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Product name: Robeco Gravis Digital Infrastructure Income

Legal entity identifier: 2138000C7UH4PTYER332

Environmental and/or social characteristics

Does this financial product have a sustainable investment objective?

Yes **No**

<p><input type="checkbox"/> It will make a minimum of sustainable investments with an environmental objective: ____%</p> <ul style="list-style-type: none"> <input type="checkbox"/> in economic activities that qualify as environmentally sustainable under the EU Taxonomy <input type="checkbox"/> in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy <p><input type="checkbox"/> It will make a minimum of sustainable investments with a social objective: ____%</p>	<p><input checked="" type="checkbox"/> It promotes Environmental/Social (E/S) characteristics and while it does not have as its objective a sustainable investment, it will have a minimum proportion of 35% of sustainable investments</p> <ul style="list-style-type: none"> <input type="checkbox"/> with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy <input checked="" type="checkbox"/> with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy <input checked="" type="checkbox"/> with a social objective <p><input type="checkbox"/> It promotes E/S characteristics, but will not make any sustainable investments</p>
---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------	--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

What environmental and/or social characteristics are promoted by this financial product?

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

The Sub-fund promotes the following E/S characteristics

1. The Sub-fund promotes certain minimum environmental and social safeguards through applying exclusion criteria with regards to products and business practices that Robeco believes are detrimental to society and incompatible with sustainable investment strategies, such as exposure to controversial behaviour, controversial weapons, and fossil fuels.
2. The Sub-fund promotes adherence to and conducting business activities in accordance with the United Nations Universal Declaration of Human Rights, the International Labor Organization's (ILO) labor standards, the United Nations Guiding Principles for Business and Human Rights (UNGPs), the United Nations Global Compact (UNGC) and the OECD Guidelines for Multinational Enterprises, by scrutinizing companies that violate these principles.
3. The Sub-fund promotes good governance and sustainable corporate practices through proxy voting, which contributes to long-term shareholder value creation. This includes taking an active stance on social and environmental topics through Robeco's proxy voting policy.
4. The Sub-fund limits investing in companies with an elevated sustainability risk based on ESG risk scores whereas all such investments require separate approval of a dedicated committee that oversees that all investments are substantiated and eligible based on a fundamental review on the sustainability risk.

There is no reference benchmark designated for the purpose of attaining the environmental or social characteristics promoted by the Sub-fund.

● **What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?**

The Sub-fund has the following sustainability indicators:

1. The % of investments in securities that are on Robeco's Exclusion list as result of the application of Robeco's Exclusion policy.
2. The number of companies that are in violation of the ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises and hence are a part of the Enhanced Engagement program.
3. The number of holdings and agenda items voted.
4. The % of holdings with an elevated sustainability risk profile.

● **What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?**

The sustainable investments aim to contribute to the UN Sustainable Development Goals, that have both social and environmental objectives. Robeco uses its proprietary SDG Framework and related SDG scores to determine which issuers constitute a sustainable investment as referred to in art 2(17) SFDR. Positive SDG scores (+1, +2, +3) are regarded as sustainable investments.

● **How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?**

The sustainable investments do no significant harm to any environmental or social sustainable investment objective by considering a principal adverse impact and aligning with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights. In addition,

sustainable investments score positively on Robeco's SDG Framework, and therefore do not cause significant harm.

How have the indicators for adverse impacts on sustainability factors been taken into account?

A detailed description of the incorporation of principal adverse impacts is available via Robeco's Principal Adverse Impact Statement published on the Robeco website. In this statement, Robeco sets out its approach to identifying and prioritizing principal adverse impact, and how principal adverse impacts are considered as part of Robeco's investment due diligence process and procedures relating to research and analysis, exclusions and restrictions and/or voting and engagement. For sustainable investments, the PAI indicators have been taken into account by ensuring that the investments do no significant harm to any environmental or social objective. For this purpose, many PAI indicators are either directly or indirectly included in Robeco's SDG Framework to determine whether a company has significant impacts on the SDGs related to the PAI indicators.

How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The sustainable investments are aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights via both Robeco's Exclusion Policy and Robeco's SDG Framework.

Robeco's Exclusion Policy includes an explanation of how Robeco acts in accordance with the International Labor Organization (ILO) standards, United Nations Guiding Principles (UNGPs), United Nations Global Compact (UNGC) Principles and the Organization for Economic Co-operation and Development (OECD) Guidelines for Multinational Enterprises and is guided by these international treaties to assess the behavior of companies. Robeco continuously screens its investments for breaches of these principles. In case of a breach, the company will be excluded or engaged with, and is not considered a sustainable investment. Robeco's SDG Framework screens for breaches of these principles in the final step of the framework. In this step, Robeco checks whether the company concerned has been involved in any controversies. Involvement in any controversy will result in a negative SDG score for the company, meaning it is not a sustainable investment.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

Does this financial product consider principal adverse impacts on sustainability factors?

Yes, _____

The Sub-fund considers principal adverse impacts on sustainability factors as referred to in Annex I of the SFDR Delegated Act.

Pre-investment, the following principal adverse impacts on sustainability factors are considered:

- Via the applied normative and activity-based exclusions, the following PAIs are considered:
 - Exposure to companies active in the fossil fuel sector (PAI 4, Table 1)
 - Violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1)
 - Activities negatively affecting biodiversity-sensitive areas (PAI 7, Table 1). The consideration of this PAI is currently restricted to applying exclusions to palm oil producing companies and for any breaches to the UNGC, UNGP and OECD Guidelines for Multinational Enterprises in relation to biodiversity.
 - Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons (PAI 14, Table 1)

Post-investment, the following principal adverse impacts on sustainability factors are taken into account:

- Via the application of the voting policy, the following PAIs are considered:
 - All indicators related to GHG emissions (PAI 1-6, Table 1)
 - Indicators related to social and employee matters (PAI 10-13, Table 1; PAI 5-8, Table 3)
- Via Robeco's entity engagement program, the following PAIs are considered:
 - All indicators related to Climate and other environment-related indicators (PAI 1-9, Table 1)
 - Violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1). On an ongoing basis, the investment universe is scanned for controversial behavior in relation to the aforementioned principles and guidelines.
 - In addition, based on a yearly review of Robeco's performance on all mandatory and selected voluntary indicators, holdings of the Sub-fund that cause adverse impact might be selected for engagement.

More information is available via Robeco's Principal Adverse Impact Statement, published on Robeco's website. The Sub-fund will periodically report how it has considered the principal adverse impacts of its investments in the Company's annual report, which will be made available each year on or before 30 April at the Sub-fund page highlighted in final section of this document.

No

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

The investment strategy guides investment decisions based on factors such as investment objectives and risk tolerance.

What investment strategy does this financial product follow?

Robeco Gravis Digital Infrastructure Income is an actively managed fund that invests worldwide in securities from companies listed in developed markets. The selection of these stocks is based on fundamental analysis as described in the Investment policy strategy paragraph in Appendix I of this Prospectus. The strategy integrates sustainability indicators on a continuous basis as part of the stock selection process. Amongst others, the Sub-fund applies norms-based and activity-based exclusions, Robeco's good governance policy and considers Principal Adverse Impacts in the investment process.

What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?

The Sub-fund has the following binding elements:

1. The Sub-fund's portfolio complies with Robeco's Exclusion Policy (<https://www.robeco.com/files/docm/docu-exclusion-policy.pdf>), that is based on exclusion criteria with regards to products and business practices that Robeco believes are detrimental to society and incompatible with sustainable investment strategies. This means that the Sub-fund has 0% exposure to excluded securities, taking into account a grace period. Information with regards to the effects of the exclusions on the Sub-fund's universe can be found at <https://www.robeco.com/files/docm/docu-exclusion-list.pdf>.
2. The Sub-fund scrutinizes investment in companies that are in breach of the ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises. If a company in the portfolio breaches one of the international guidelines during the investment period, the company will become part of the Enhanced Engagement program.
3. All equity holdings have a granted right to vote and Robeco exerts that right by voting according to Robeco's Proxy Voting Policy, unless impediments occur (e.g. share blocking). Robeco's Proxy Voting Policy can be found at <https://www.robeco.com/files/docm/docu-robeco-stewardship-policy.pdf>.
4. Investments with an elevated sustainability risk are defined by Robeco as companies with an ESG Risk Rating of 40 and higher. The Sub-fund is limited to a maximum exposure of 3% to investments with an elevated sustainability risk, based on the market weight in the portfolio taking into account regional differences and benchmark. Each investment with an ESG Risk rating of higher than 40 requires separate approval by a dedicated committee of SI specialists, compliance and risk management that oversees the bottom-up sustainability analysis.

What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?

The Sub-fund does not commit to a minimum rate to reduce the scope of investments prior to the application of the investment strategy.

What is the policy to assess good governance practices of the investee companies?

Robeco has a Good Governance policy to assess governance practices of companies. The policy describes how Robeco determines if and when a company does not follow good governance practices and is therefore excluded from the initial investment universe for Article 8 and 9 products. Robeco's Good Governance policy applies to the Sub-fund and tests on a set of governance criteria that reflect widely recognized industry-established norms and include topics as employee relations, management

Good governance practices include sound management structures, employee relations,

remuneration of staff and tax compliance.

structure, tax compliance and remuneration. A link to the good governance test is made available in the final section of this document.

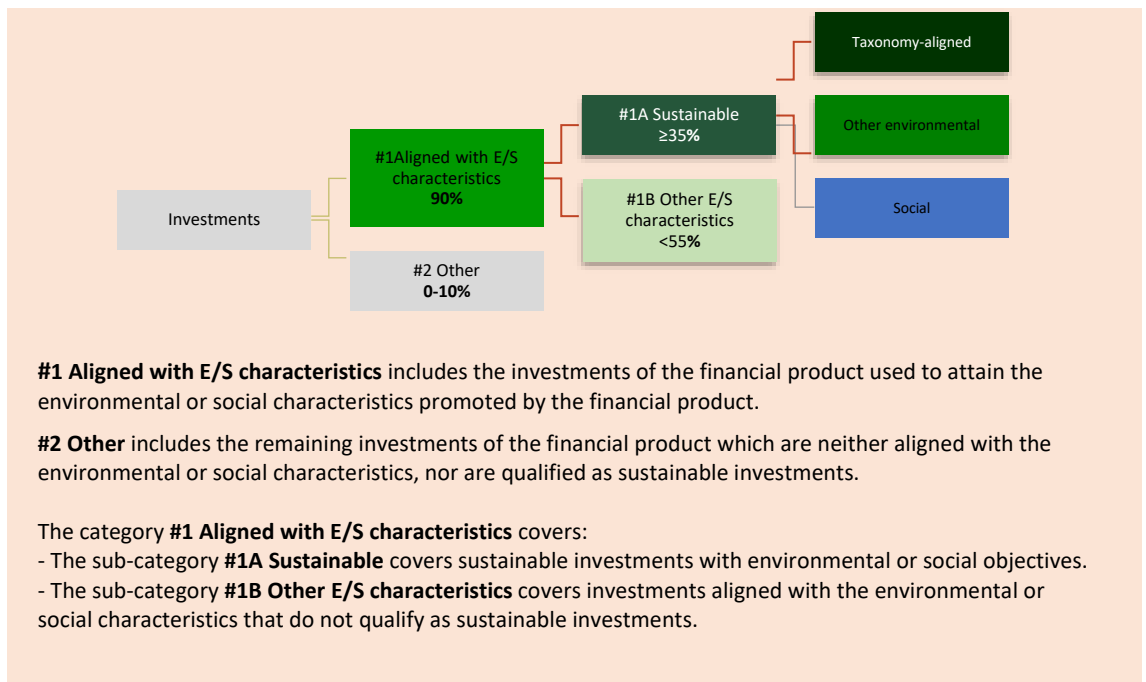

What is the asset allocation planned for this financial product?

Asset allocation describes the share of investments in specific assets.

At least 90% of the investments are aligned with the E/S characteristics of the Sub-fund. The Sub-fund plans to make a minimum of 35% sustainable investments, measured by either being positive scores via Robeco's SDG Framework or investments in green, social, sustainability or sustainability-linked bonds. The Sub-fund does not specifically target a minimum percentage of its sustainable investments with an environmental objective but it cannot be ruled out that sustainable investments may include those with an environmental objective. The investments in the category Other, estimated between 0-10%, are mostly in cash and cash equivalents. The planned asset allocation is monitored continuously, and evaluated on a yearly basis.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies

● **How does the use of derivatives attain the environmental or social characteristics promoted by the financial product?**

The Sub-fund does not make use of derivatives to attain the environmental or social characteristics promoted by the financial product. The Sub-fund may make use of derivatives for both hedging, liquidity and efficient portfolio management as well as investment purposes. Exchange traded and over-the-counter derivatives are permitted, including but not limited to futures, swaps, options and currency forwards. Whilst the Sub-fund may use derivatives both for investment purposes as well as for hedging and efficient portfolio management, it does not utilize derivatives for such purposes outside the intended share of investments allocated to the 'Other' category. In case the Sub-fund uses derivatives, the underlying shall comply with the investment policy. Where relevant, minimum environmental or social safeguards are taken into account.

● **To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?**

0%. The Sub-fund does not intend to make Taxonomy-aligned investments. It cannot be excluded that among the Sub-fund's holdings certain investments are Taxonomy aligned. The Sub-fund will report on Taxonomy-aligned investment in the periodic disclosures. In the future, once data-availability in relation to the EU Taxonomy will improve, Robeco might consider setting a target based on turnover or CAPEX.

Robeco currently relies on third-party data, including data in relation to companies that do not disclose on the EU Taxonomy alignment of their activities. EU Taxonomy-alignment data is not yet subject to a review by third parties. The Sub-fund only makes investments in equity and therefore it does not have sovereign exposures. The expected level of alignment with and without sovereign bonds is the same.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

● **Does the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy?⁶⁹**

- Yes
 - In fossil gas
 - In nuclear energy
- No

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.*

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures
 ** As the investments are not Taxonomy-aligned, the exclusion of sovereign bonds has no impact on the graph and therefore no such percentage is shown here.

● **What is the minimum share of investments in transitional and enabling activities?**

0%.

● **What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?**

The Sub-fund intends to make sustainable investments, measured as positive scores via Robeco's SDG Framework. Among those could be investments with environmental objectives that do not qualify as Taxonomy-aligned. The environmental objectives of the Sub-fund are attained by investing in companies that score positively on SDG 12 (Responsible consumption and production), SDG 13 (Climate action), SDG 14 (Life below water), and SDG 15 (Life on land) in Robeco's SDG Framework. While the sum of sustainable investments with an environmental objective and socially sustainable investments always adds up to the Sub-fund's minimum proportion of 35% sustainable investments, we do not commit to a

⁶⁹ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

 are sustainable investments with an environmental objective that **do not take into account the criteria for environmentally sustainable economic activities under the EU Taxonomy.**

What is the minimum share of socially sustainable investments?

The Sub-fund intends to make sustainable investments, measured as positive scores via Robeco's SDG Framework. Among those could be investments with social objectives. The social objectives of the Sub-fund are attained by investing in companies that score positively on SDG 1 (No poverty), SDG 2 (Zero hunger), SDG 3 (Good health and well-being), SDG 4 (Quality education), SDG 5 (Gender equality), SDG 6 (Clean water and sanitation), SDG 7 (Affordable and clean energy), SDG 8 (Decent work and economic growth), SDG 9 (Industry, innovation and infrastructure), SDG 10 (Reduced inequalities), SDG 11 (Sustainable cities and communities), SDG 16 (Peace, justice and strong institutions) and SDG 17 (Partnerships for the goals), in Robeco's SDG Framework. While the sum of socially sustainable investments and sustainable investments with an environmental objective always adds up to the Sub-fund's minimum proportion of sustainable investments, we do not commit to a minimum share of socially sustainable investments because the Sub-fund's investment strategy does not have a specific socially sustainable investment objective. Therefore, the minimum share of socially sustainable investments is 0%.

What investments are included under "#2 Other", what is their purpose and are there any minimum environmental or social safeguards?

The type of instruments included under "#2 Other" and their purpose are outlined in Annex I of this Prospectus under the header 'Financial instruments and investment restrictions'. Amongst others, the use of cash, cash equivalents and derivatives is included under "#2 Other". The Sub-fund may make use of derivatives for hedging, liquidity and efficient portfolio management as well as investment purposes (in line with the investment policy). Where relevant, minimum environmental or social safeguards apply to the underlying securities.

Is a specific index designated as a reference benchmark to determine whether this financial product is aligned with the environmental and/or social characteristics that it promotes?

Not applicable.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

4. GLOBAL BOND SUB-FUNDS

a) Robeco High Yield Bonds

Pre-contractual disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Product name: Robeco High Yield Bonds

Legal entity identifier: 21380044N3COGER5OK12

Environmental and/or social characteristics

Does this financial product have a sustainable investment objective?

Yes

No

It will make a minimum of **sustainable investments with an environmental objective:** ___%

- in economic activities that qualify as environmentally sustainable under the EU Taxonomy
- in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

It will make a minimum of **sustainable investments with a social objective:** ___%

It promotes **Environmental/Social (E/S) characteristics** and while it does not have as its objective a sustainable investment, it will have a minimum proportion of 30% of sustainable investments

- with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy
- with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy
- with a social objective

It promotes E/S characteristics, but **will not make any sustainable investments**

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

What environmental and/or social characteristics are promoted by this financial product?

The Sub-fund has the following E/S characteristics:

1. The Sub-fund promotes certain minimum environmental and social safeguards through applying exclusion criteria with regards to products and business practices that Robeco believes are detrimental to society and incompatible with sustainable investment strategies, such as exposure to controversial behaviour, controversial weapons, and fossil fuels.
2. The Sub-fund promotes adherence to and conducting business activities in accordance with the United Nations Universal Declaration of Human Rights, the International Labor Organization's (ILO) labor standards, the United Nations Guiding Principles for Business and Human Rights (UNGPs), the United Nations Global Compact (UNGC) and the OECD Guidelines for Multinational Enterprises, by scrutinizing companies that violate these principles.
3. The Sub-fund limits investing in companies with an elevated sustainability risk based on ESG risk scores whereas all such investments require separate approval of a dedicated committee that oversees that all investments are substantiated and eligible based on a fundamental review on the sustainability risk.
4. The Sub-fund aims to contribute to the United Nations Sustainable Development Goals by investing in green, social, sustainability and/or sustainability-linked bonds that are used to finance environmental and social projects.

There is no reference benchmark designated for the purpose of attaining the environmental or social characteristics promoted by the Sub-fund.

What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?

The Sub-fund has the following sustainability indicators:

1. The % of investments in securities that are on Robeco's Exclusion list as result of the application of Robeco's Exclusion Policy.
2. The number of companies that are in violation of the ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises and hence are a part of the Enhanced Engagement program.
3. The % of holdings with an elevated sustainability risk profile.
4. The % of the Sub-fund invested in green, social, sustainability and/or sustainability-linked bonds.

What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?

The sustainable investments aim to contribute to the UN Sustainable Development Goals ("SDGs"), that have both social and environmental objectives. These are 17 goals that are globally recognised and include environmental goals such as climate action, clean water, life on land and water and social goals such as zero hunger, gender equality, education, etc. Robeco has developed a proprietary framework based on the UN SDGs through which an issuer's contribution to such SDGs is determined through a 3-step process. This process starts with a sector baseline on which a company's products are analysed to examine contribution to the society and environment. Further, the operational processes involved in creating such products is checked along with any controversies/litigation claims and remediation actions taken which are perused before a final SDG score is determined. The final score ranges between high negative (-3) to high positive (+3) and only those issuers which achieve positive SDG scores (+1, +2 and, +3) are regarded as Sustainable Investments. Some of the sustainable investments are green bonds, and therefore contribute to the environmental objectives under EU Taxonomy.

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

● ***How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?***

The sustainable investments do no significant harm to any environmental or social sustainable investment objective by considering a principal adverse impact and aligning with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights. In addition, sustainable investments score positively on Robeco's SDG Framework, and therefore do not cause significant harm.

How have the indicators for adverse impacts on sustainability factors been taken into account?

For sustainable investments that are either green, social, sustainability or sustainability-linked bonds, significant harm is avoided by the application of the Robeco's green, social, sustainability or sustainability-linked bond eligibility frameworks.

Robeco's SDG Framework is considered for the analysis of sustainable investments determined by positive scores on this framework. Robeco's SDG Framework assesses the contribution of companies to the Sustainable Development Goals (SDGs). Many PAI indicators are either directly or indirectly included in the SDG Framework to determine whether a company has significant impacts on the SDGs related to the PAI indicators. A detailed description of the incorporation of principal adverse impacts is available via Robeco's Principal Adverse Impact Statement published on the Robeco website (<https://www.robeco.com/files/docm/docu-principal-adverse-impact-statement-summary-entity-level.pdf>).

How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The sustainable investments are aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights via both Robeco's Exclusion Policy and Robeco's SDG Framework.

Robeco's Exclusion Policy includes an explanation of how Robeco acts in accordance with the International Labor Organization (ILO) standards, United Nations Guiding Principles (UNGPs), United Nations Global Compact (UNGC) Principles and the Organization for Economic Co-operation and Development (OECD) Guidelines for Multinational Enterprises and is guided by these international treaties to assess the behavior of companies. Robeco continuously screens its investments for breaches of these principles. In case of a breach, the company will be excluded or engaged with, and is not considered a sustainable investment.

Robeco's SDG Framework screens for breaches on these principles in the final step of the framework. In this step, Robeco checks whether the company concerned has been involved in any controversies. Involvement in any controversy will result in a negative SDG score for the company, meaning it is not a sustainable investment.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

Does this financial product consider principal adverse impacts on sustainability factors?

Yes, _____

The Sub-fund considers principal adverse impacts on sustainability factors as referred to in Annex I of the SFDR Delegated Act.

Pre-investment, the following principal adverse impacts on sustainability factors are considered:

- o Via the applied normative and activity-based exclusions, the following PAIs are considered:
 - Exposure to companies active in the fossil fuel sector (PAI 4, Table 1)
 - Violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1)
 - Activities negatively affecting biodiversity-sensitive areas (PAI 7, Table 1). The consideration of this PAI is currently restricted to applying exclusions to palm oil producing companies and for any breaches to the UNGC, UNGP and OECD Guidelines for Multinational Enterprises in relation to biodiversity.
 - Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons (PAI 14, Table 1)
- o Via the ESG integration process, as part of the investment due diligence policies and procedures, the following PAIs are considered:
 - All indicators related to GHG emissions, as part of the required Climate Risk analysis (PAI 1-6, Table 1, PAI 4, Table 2)
 - Water and waste indicators (PAI 7-9, Table 1)

Post-investment, the following principal adverse impacts on sustainability factors are taken into account via Robeco's entity engagement program:

- All indicators related to Climate and other environment-related indicators (PAI 1-9, Table 1)
- Violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1). On an ongoing basis, the investment universe is scanned for controversial behavior in relation to the aforementioned principles and guidelines.
- In addition, based on a yearly review of Robeco's performance on all mandatory and selected voluntary indicators, holdings of the Sub-fund that cause adverse impact might be selected for engagement.

More information is available via Robeco's Principal Adverse Impact Statement, published on Robeco's website. The Sub-fund will periodically report how it has considered the principal adverse impacts of its

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

investments in the Company's annual report, which will be made available each year on or before 30 April at the Sub-fund page highlighted in final section of this document.

No

What investment strategy does this financial product follow?

Robeco High Yield Bonds is an actively managed fund that invests in high yield corporate bonds. The selection of these bonds is based on fundamental analysis as described in the Investment policy strategy paragraph in Appendix I of this Prospectus. The strategy integrates sustainability indicators on a continuous basis as part of the bond selection process. Amongst others, the Sub-fund applies norms-based, activity-based and regional exclusions, Robeco's good governance policy, Robeco's SDG framework and considers Principal Adverse Impacts in the investment process. More product-specific information can be found on our website and the links provided in the final question of this disclosure.

The investment strategy guides investment decisions based on factors such as investment objectives and risk tolerance.

What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?

The Sub-fund has the following binding elements:

1. The Sub-fund's portfolio complies with Robeco's Exclusion Policy (<https://www.robeco.com/files/docm/docu-exclusion-policy.pdf>), that is based on exclusion criteria with regards to products and business practices that Robeco believes are detrimental to society and incompatible with sustainable investment strategies. This means that the Sub-fund has 0% exposure to excluded securities, taking into account a grace period. Information with regards to the effects of the exclusions on the Sub-fund's universe can be found at <https://www.robeco.com/files/docm/docu-exclusion-list.pdf>.
2. The Sub-fund scrutinizes investment in companies that are in breach of the ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises. If a company in the portfolio breaches one of the international guidelines during the investment period, the company will become part of the Enhanced Engagement program.
3. Investments with an elevated sustainability risk are defined by Robeco as companies with an ESG Risk Rating of 40 and higher (the ESG Risk Rating is explained in the sustainability risk policy which can be accessed via <https://www.robeco.com/files/docm/docu-robeco-sustainability-risk-policy.pdf>). The Sub-fund is limited to a maximum exposure of 5% to investments with an elevated sustainability risk, based on the market weight in the portfolio taking into account regional differences and benchmark. Each investment with an ESG Risk rating of higher than 40 requires separate approval by a dedicated committee of sustainable investment specialists, compliance and risk management that oversees the bottom-up sustainability analysis.
4. The Sub-fund invests a minimum of 2% in green, social, sustainability, and/or sustainability-linked bonds.

What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?

The Sub-fund does not commit to a minimum rate to reduce the scope of investments prior to the application of the investment strategy.

● **What is the policy to assess good governance practices of the investee companies?**

Good governance practices include sound management structures, employee relations, remuneration of staff and tax compliance.

Robeco has a Good Governance policy to assess governance practices of companies. The policy describes how Robeco determines if and when a company does not follow good governance practices and is therefore excluded from the initial investment universe for Article 8 and 9 products. Robeco's Good Governance policy applies to the Sub-fund and tests on a set of governance criteria that reflect widely recognized industry established norms and include topics as employee relations, management structure, tax compliance and remuneration.

The Good Governance test consists of criteria on such topics that are examined for investee companies and further explained in Robeco's Good Governance policy <https://www.robeco.com/files/docm/docu-robeco-good-governance-policy.pdf>. Additionally, the companies that do not pass the good governance test are reflected in the exclusion list that can be accessed here - <https://www.robeco.com/files/docm/docu-exclusion-list.pdf>.

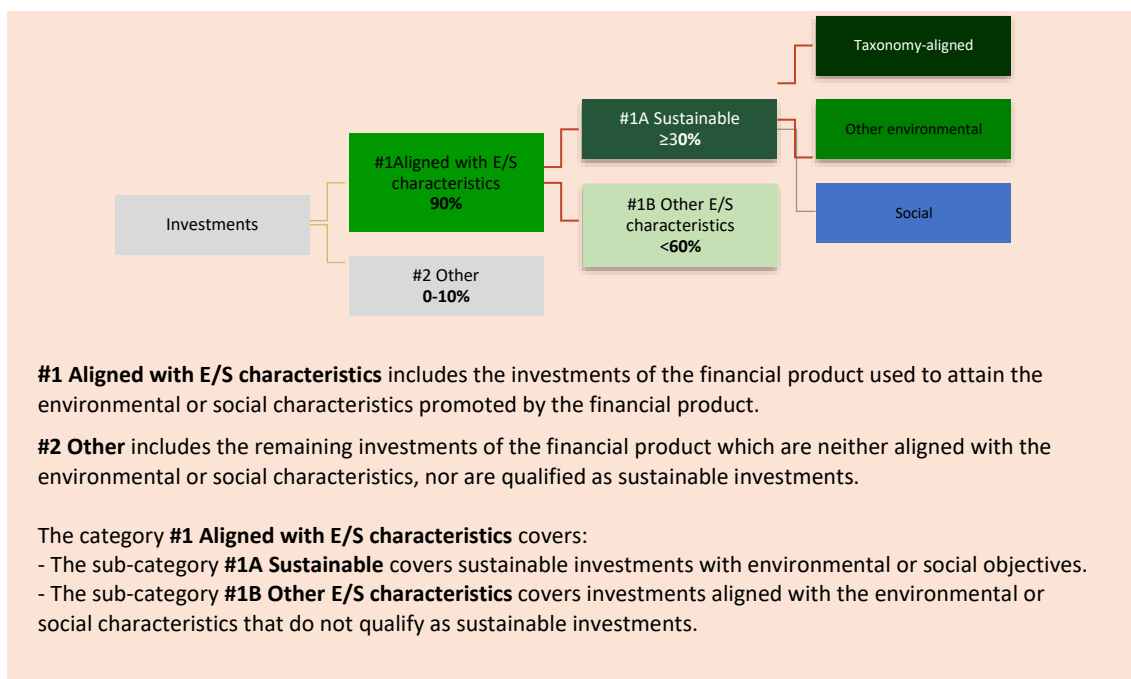

What is the asset allocation planned for this financial product?

Asset allocation describes the share of investments in specific assets.

At least 90% of the investments are aligned with the E/S characteristics of the Sub-fund. The Sub-fund plans to make a minimum of 30% sustainable investments, measured by either being positive scores via Robeco's SDG Framework or investments in green, social, sustainability or sustainability-linked bonds. The investments in the category Other, estimated between 0-10%, are mostly in cash, cash equivalents and derivatives as further described below. The planned asset allocation is monitored continuously, and evaluated on a yearly basis.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

● **How does the use of derivatives attain the environmental or social characteristics promoted by the financial product?**

The Sub-fund does not make use of derivatives to attain the environmental or social characteristics promoted by the financial product. The Sub-fund may make use of derivatives for hedging, liquidity management and efficient portfolio management as well as investment purposes. Exchange traded and over-the-counter derivatives are permitted, including but not limited to futures, swaps, options and currency forwards. Whilst the Sub-fund may use derivatives both for investment purposes as well as for hedging and efficient portfolio management, it does not utilize derivatives for such purposes outside the intended share of investments allocated to the 'Other' category. In case the Sub-fund uses derivatives, the underlying shall comply with the investment policy. Where relevant, minimum environmental or social safeguards are taken into account as described below.

To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

0%. The Sub-fund intends to contribute to all 6 environmental objectives under the EU Taxonomy via the investments in green bonds. The Sub-fund commits to a minimum share of 0% of Taxonomy-aligned activities. The Sub-fund intends to increase the minimum share of Taxonomy aligned activities for the Sub-fund, based on use of proceeds, once data availability in relation to the EU Taxonomy for Green bonds improves and stabilises. The Sub-fund will report on Taxonomy-aligned investment in the periodic disclosures. For investments in corporate bonds, the Sub-fund will report on turnover. Given the lack of data on the EU Taxonomy for green bonds in the market, Robeco relies on internal analysis for the time being. EU Taxonomy-alignment data is not yet subject to a review by third parties. The expected level of alignment with and without sovereign bonds is the same.

● **Does the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy⁷⁰?**

Yes

In fossil gas

In nuclear energy

No

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to renewable power

⁷⁰ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

or low-carbon fuels by the end of 2035. For nuclear energy, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.*

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures
 ** As the investments are not Taxonomy-aligned, the exclusion of sovereign bonds has no impact on the graph and therefore no such percentage is shown here.

● **What is the minimum share of investments in transitional and enabling activities?**

0%.

● **What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?**

Green bonds may invest (part of) their use of proceeds in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy. In addition, the Sub-fund intends to make sustainable investments measured as positive scores via Robeco's SDG Framework. Among those could be investments with environmental objectives that do not qualify as Taxonomy-aligned. The environmental objectives of the Sub-fund are attained by investing in companies that score positively on SDG 12 (Responsible consumption and production), SDG 13 (Climate action), SDG 14 (Life below water), and SDG 15 (Life on land) in Robeco's SDG Framework.

While the sum of sustainable investments with an environmental objective and socially sustainable investments always adds up to the Sub-fund's minimum proportion of 30% sustainable investments, we do not commit to a minimum share of sustainable investments with an environmental objective because the Sub-fund's investment strategy does not have a specific environmental investment objective. Therefore, the minimum share of sustainable investments with an environmental objective is 0%.

● **What is the minimum share of socially sustainable investments?**

Social, sustainable or sustainability-linked bonds may invest (part of) their use of proceeds in economic activities that contribute to a social objective.

In addition, the Sub-fund intends to make sustainable investments, measured as positive scores via Robeco's SDG Framework. Among those could be investments with social objectives. The social objectives of the Sub-fund are attained by investing in companies that score positively on SDG 1 (No poverty), SDG 2 (Zero hunger), SDG 3 (Good health and well-being), SDG 4 (Quality education), SDG 5 (Gender equality), SDG 6 (Clear water and sanitation), SDG 7 (Affordable and clean energy), SDG 8 (Decent work and economic growth), SDG 9 (Industry, innovation and infrastructure), SDG 10 (Reduced

inequalities), SDG 11 (Sustainable cities and communities), SDG 16 (Peace, justice and strong institutions) and SDG 17 (Partnerships for the goals), in Robeco's SDG Framework.

While the sum of socially sustainable investments and sustainable investments with an environmental objective always adds up to the Sub-fund's minimum proportion of sustainable investments, we do not commit to a minimum share of socially sustainable investments because the Sub-fund's investment strategy does not have a specific socially sustainable investment objective. Therefore, the minimum share of socially sustainable investments is 0%.

What investments are included under "#2 Other", what is their purpose and are there any minimum environmental or social safeguards?

The type of instruments included under "#2 Other" and their purpose are outlined in Annex I of this Prospectus under the header 'Financial instruments and investment restrictions'. They include cash, cash equivalents, as well as investment funds and eligible asset classes (other than bonds and equities) that do not specifically promote E/S characteristics. As indicated above, the Sub-fund does not make use of derivatives to attain the environmental or social characteristics promoted. The Sub-fund may make use of derivatives, which thus always fall under the category "#2 Other", for hedging, liquidity management and efficient portfolio management as well as investment purposes. Exchange traded and over-the-counter derivatives are permitted, including but not limited to futures, swaps, options and currency forwards. In case the Sub-fund uses derivatives, the underlying shall comply with the investment policy. Where relevant, minimum environmental or social safeguards are taken into account, by, for example, applying Robeco's Exclusion Policy for any single security derivative.

Is a specific index designated as a reference benchmark to determine whether this financial product is aligned with the environmental and/or social characteristics that it promotes?

Not applicable.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

b) Robeco Global Credits

Pre-contractual disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Product name: Robeco Global Credits

Legal entity identifier: 549300317YFQHV1J8E29

Environmental and/or social characteristics

Does this financial product have a sustainable investment objective?

Yes

No

It will make a minimum of **sustainable investments with an environmental objective:** ___%

- in economic activities that qualify as environmentally sustainable under the EU Taxonomy
- in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

It will make a minimum of **sustainable investments with a social objective:** ___%

It promotes **Environmental/Social (E/S) characteristics** and while it does not have as its objective a sustainable investment, it will have a minimum proportion of 30% of sustainable investments

- with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy
- with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy
- with a social objective

It promotes E/S characteristics, but **will not make any sustainable investments**

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

What environmental and/or social characteristics are promoted by this financial product?

The Sub-fund has the following E/S characteristics:

1. The Sub-fund promotes certain minimum environmental and social safeguards through applying exclusion criteria with regards to products and business practices that Robeco believes are detrimental to society and incompatible with sustainable investment strategies, such as exposure to controversial behaviour, controversial weapons, and fossil fuels.
2. The Sub-fund promotes adherence to and conducting business activities in accordance with the United Nations Universal Declaration of Human Rights, the International Labor Organization's (ILO) labor standards, the United Nations Guiding Principles for Business and Human Rights (UNGPs), the United Nations Global Compact (UNGC) and the OECD Guidelines for Multinational Enterprises, by scrutinizing companies that violate these principles.
3. The Sub-fund limits investing in companies with an elevated sustainability risk based on ESG risk scores whereas all such investments require separate approval of a dedicated committee that oversees that all investments are substantiated and eligible based on a fundamental review on the sustainability risk.
4. The Sub-fund aims to contribute to the United Nations Sustainable Development Goals by investing in green, social, sustainability and/or sustainability-linked bonds that are used to finance environmental and social projects.

There is no reference benchmark designated for the purpose of attaining the environmental or social characteristics promoted by the Sub-fund.

● **What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?**

The Sub-fund has the following sustainability indicators:

1. The % of investments in securities that are on Robeco's Exclusion list as result of the application of Robeco's Exclusion Policy.
2. The number of companies that are in violation of the ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises and hence are a part of the Enhanced Engagement program.
3. The % of holdings with an elevated sustainability risk profile.
4. The % of the Sub-fund invested in green, social, sustainability and/or sustainability-linked bonds.

● **What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?**

The sustainable investments aim to contribute to the UN Sustainable Development Goals ("SDGs"), that have both social and environmental objectives. These are 17 goals that are globally recognised and include environmental goals such as climate action, clean water, life on land and water and social goals such as zero hunger, gender equality, education, etc. Robeco has developed a proprietary framework based on the UN SDGs through which an issuer's contribution to such SDGs is determined through a 3-step process. This process starts with a sector baseline on which a company's products are analysed to examine contribution to the society and environment. Further, the operational processes involved in creating such products is checked along with any controversies/litigation claims and remediation actions taken which are perused before a final SDG score is determined. The final score ranges between high negative (-3) to high positive (+3) and only those issuers which achieve positive SDG scores (+1, +2 and, +3) are regarded as Sustainable Investments. Some of the sustainable investments are green bonds, and therefore contribute to the environmental objectives under EU Taxonomy.

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

● ***How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?***

The sustainable investments do no significant harm to any environmental or social sustainable investment objective by considering a principal adverse impact and aligning with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights. In addition, sustainable investments score positively on Robeco's SDG Framework or are assessed by either Robeco's Green Bond Framework or Social Bond Framework, and therefore do not cause significant harm.

How have the indicators for adverse impacts on sustainability factors been taken into account?

For sustainable investments that are either green, social, sustainability or sustainability-linked bonds, significant harm is avoided by the application of the Robeco's green, social, sustainability or sustainability-linked bond eligibility frameworks.

Robeco's SDG Framework is considered for the analysis of sustainable investments determined by positive scores on this framework. Robeco's SDG Framework assesses the contribution of companies to the Sustainable Development Goals (SDGs). Many PAI indicators are either directly or indirectly included in the SDG Framework to determine whether a company has significant impacts on the SDGs related to the PAI indicators. A detailed description of the incorporation of principal adverse impacts is available via Robeco's Principal Adverse Impact Statement published on the Robeco website (<https://www.robeco.com/files/docm/docu-principal-adverse-impact-statement-summary-entity-level.pdf>).

How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The sustainable investments are aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights via both Robeco's Exclusion Policy and Robeco's SDG Framework.

Robeco's Exclusion Policy includes an explanation of how Robeco acts in accordance with the International Labor Organization (ILO) standards, United Nations Guiding Principles (UNGPs), United Nations Global Compact (UNGC) Principles and the Organization for Economic Co-operation and Development (OECD) Guidelines for Multinational Enterprises and is guided by these international treaties to assess the behavior of companies. Robeco continuously screens its investments for breaches of these principles. In case of a breach, the company will be excluded or engaged with, and is not considered a sustainable investment.

Robeco's SDG Framework screens for breaches on these principles in the final step of the framework. In this step, Robeco checks whether the company concerned has been involved in any controversies. Involvement in any controversy will result in a negative SDG score for the company, meaning it is not a sustainable investment.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

Does this financial product consider principal adverse impacts on sustainability factors?

Yes, _____

The Sub-fund considers principal adverse impacts on sustainability factors as referred to in Annex I of the SFDR Delegated Act.

Pre-investment, the following principal adverse impacts on sustainability factors are considered:

- Via the applied normative and activity-based exclusions, the following PAIs are considered:
 - Exposure to companies active in the fossil fuel sector (PAI 4, Table 1)
 - Violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1)
 - Activities negatively affecting biodiversity-sensitive areas (PAI 7, Table 1). The consideration of this PAI is currently restricted to applying exclusions to palm oil producing companies and for any breaches to the UNGC, UNGP and OECD Guidelines for Multinational Enterprises in relation to biodiversity.
 - Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons (PAI 14, Table 1)
 - Via the ESG integration process, as part of the investment due diligence policies and procedures, the following PAIs are considered:
 - All indicators related to GHG emissions, as part of the required Climate Risk analysis (PAI 1-6, Table 1, PAI 4, Table 2)
 - Water and waste indicators (PAI 7-9, Table 1)

Post-investment, the following principal adverse impacts on sustainability factors are taken into account via Robeco's entity engagement program:

- All indicators related to Climate and other environment-related indicators (PAI 1-9, Table 1)
- Violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1). On an ongoing basis, the investment universe is scanned for controversial behavior in relation to the aforementioned principles and guidelines.
- In addition, based on a yearly review of Robeco's performance on all mandatory and selected voluntary indicators, holdings of the Sub-fund that cause adverse impact might be selected for engagement.

More information is available via Robeco's Principal Adverse Impact Statement, published on Robeco's website. The Sub-fund will periodically report how it has considered the principal adverse impacts of its investments in the Company's annual report, which will be made available each year on or before 30 April at the Sub-fund page highlighted in final section of this document.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

No

What investment strategy does this financial product follow?

Robeco Global Credits is an actively managed fund that invests primarily in a diversified portfolio of global investment grade corporate bonds. The selection of these bonds is based on fundamental analysis as described in the Investment policy strategy paragraph in Appendix I of this Prospectus. The strategy integrates sustainability indicators on a continuous basis as part of the bond selection process. Amongst others, the Sub-fund applies norms-based, activity-based and regional exclusions, Robeco's good governance policy, Robeco's SDG framework and considers Principal Adverse Impacts in the investment process. More product-specific information can be found on our website and the links provided in the final question of this disclosure.

The investment strategy guides investment decisions based on factors such as investment objectives and risk tolerance.

What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?

The Sub-fund has the following binding elements:

1. The Sub-fund's portfolio complies with Robeco's Exclusion Policy (<https://www.robeco.com/files/docm/docu-exclusion-policy.pdf>), that is based on exclusion criteria with regards to products and business practices that Robeco believes are detrimental to society and incompatible with sustainable investment strategies. This means that the Sub-fund has 0% exposure to excluded securities, taking into account a grace period. Information with regards to the effects of the exclusions on the Sub-fund's universe can be found at <https://www.robeco.com/files/docm/docu-exclusion-list.pdf>.
2. The Sub-fund scrutinizes investment in companies that are in breach of the ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises. If a company in the portfolio breaches one of the international guidelines during the investment period, the company will become part of the Enhanced Engagement program.
3. Investments with an elevated sustainability risk are defined by Robeco as companies with an ESG Risk Rating of 40 and higher (the ESG Risk Rating is explained in the sustainability risk policy which can be accessed via <https://www.robeco.com/files/docm/docu-robeco-sustainability-risk-policy.pdf>). The Sub-fund is limited to a maximum exposure of 3% to investments with an elevated sustainability risk, based on the market weight in the portfolio taking into account regional differences and benchmark. Each investment with an ESG Risk rating of higher than 40 requires separate approval by a dedicated committee of sustainable investment specialists, compliance and risk management that oversees the bottom-up sustainability analysis.
4. The Sub-fund invests a minimum of 5% in green, social, sustainability, and/or sustainability-linked bonds.

What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?

The Sub-fund does not commit to a minimum rate to reduce the scope of investments prior to the application of the investment strategy.

What is the policy to assess good governance practices of the investee companies?

Robeco has a Good Governance policy to assess governance practices of companies. The policy describes how Robeco determines if and when a company does not follow good governance practices and is therefore excluded from the initial investment universe for Article 8 and 9 products. Robeco's Good Governance policy applies to the Sub-fund and tests on a set of governance criteria that reflect widely

Good governance practices include sound management structures, employee

relations, remuneration of staff and tax compliance.

recognized industry established norms and include topics as employee relations, management structure, tax compliance and remuneration.

The Good Governance test consists of criteria on such topics that are examined for investee companies and further explained in Robeco's Good Governance policy <https://www.robeco.com/files/docm/docu-robeco-good-governance-policy.pdf>. Additionally, the companies that do not pass the good governance test are reflected in the exclusion list that can be accessed here - <https://www.robeco.com/files/docm/docu-exclusion-list.pdf>.

What is the asset allocation planned for this financial product?

Asset allocation describes the share of investments in specific assets.

At least 90% of the investments are aligned with the E/S characteristics of the Sub-fund. The Sub-fund plans to make a minimum of 30% sustainable investments, measured by positive scores via Robeco's SDG Framework. The investments in the category Other, estimated between 0-10%, are mostly in cash, cash equivalents and derivatives as further described below. The planned asset allocation is monitored continuously, and evaluated on a yearly basis.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

● **How does the use of derivatives attain the environmental or social characteristics promoted by the financial product?**

The Sub-fund does not make use of derivatives to attain the environmental or social characteristics promoted by the financial product. The Sub-fund may make use of derivatives for hedging, liquidity management and efficient portfolio management as well as investment purposes in the global fixed income, money market, interest rates and currency markets. In case the Sub-fund uses derivatives, the underlying shall comply with the investment policy of the Sub-fund. Where relevant, minimum environmental or social safeguards are taken into account as described below.

To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

0%. The Sub-fund intends to contribute to all 6 environmental objectives under the EU Taxonomy via the investments in green bonds. The Sub-fund commits to a minimum share of 0% of Taxonomy-aligned activities. The Sub-fund intends to increase the minimum share of Taxonomy aligned activities for the Sub-fund, based on use of proceeds, once data availability in relation to the EU Taxonomy for green bonds improves and stabilises.

The Sub-fund will report on Taxonomy-aligned investment in the periodic disclosures. For investments in corporate bonds, the Sub-fund will report on turnover. Given the lack of data on the EU Taxonomy for green bonds in the market, Robeco relies on internal analysis for the time being. EU Taxonomy-alignment data is not yet subject to a review by third parties. The expected level of alignment with and without sovereign bonds is the same.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

● **Does the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy⁷¹?**

Yes

In fossil gas

In nuclear energy

No

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.*

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

** As the investments are not Taxonomy-aligned, the exclusion of sovereign bonds has no impact on the graph and therefore no such percentage is shown here.

● **What is the minimum share of investments in transitional and enabling activities?**

0%.

⁷¹ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

 are sustainable investments with an environmental objective that **do not take into account the criteria for environmentally sustainable economic activities under the EU Taxonomy.**

What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?

Green bonds may invest (part of) their use of proceeds in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy. In addition, the Sub-fund intends to make sustainable investments measured as positive scores via Robeco's SDG Framework. Among those could be investments with environmental objectives that do not qualify as Taxonomy-aligned. The environmental objectives of the Sub-fund are attained by investing in companies that score positively on SDG 12 (Responsible consumption and production), SDG 13 (Climate action), SDG 14 (Life below water), and SDG 15 (Life on land) in Robeco's SDG Framework.

While the sum of sustainable investments with an environmental objective and socially sustainable investments always adds up to the Sub-fund's minimum proportion of 30% sustainable investments, we do not commit to a minimum share of sustainable investments with an environmental objective because the Sub-fund's investment strategy does not have a specific environmental investment objective. Therefore, the minimum share of sustainable investments with an environmental objective is 0%.

What is the minimum share of socially sustainable investments?

Social, sustainable or sustainability-linked bonds may invest (part of) their use of proceeds in economic activities that contribute to a social objective.

In addition, the Sub-fund intends to make sustainable investments, measured as positive scores via Robeco's SDG Framework. Among those could be investments with social objectives. The social objectives of the Sub-fund are attained by investing in companies that score positively on SDG 1 (No poverty), SDG 2 (Zero hunger), SDG 3 (Good health and well-being), SDG 4 (Quality education), SDG 5 (Gender equality), SDG 6 (Clean water and sanitation), SDG 7 (Affordable and clean energy), SDG 8 (Decent work and economic growth), SDG 9 (Industry, innovation and infrastructure), SDG 10 (Reduced inequalities), SDG 11 (Sustainable cities and communities), SDG 16 (Peace, justice and strong institutions) and SDG 17 (Partnerships for the goals), in Robeco's SDG Framework.

While the sum of socially sustainable investments and sustainable investments with an environmental objective always adds up to the Sub-fund's minimum proportion of sustainable investments, we do not commit to a minimum share of socially sustainable investments because the Sub-fund's investment strategy does not have a specific socially sustainable investment objective. Therefore, the minimum share of socially sustainable investments is 0%.

What investments are included under "#2 Other", what is their purpose and are there any minimum environmental or social safeguards?

The type of instruments included under "#2 Other" and their purpose are outlined in Annex I of this Prospectus under the header 'Financial instruments and investment restrictions'. They include cash, cash equivalents, as well as investment funds and eligible asset classes (other than bonds and equities) that do not specifically promote E/S characteristics. As indicated above, the Sub-fund does not make use of derivatives to attain the environmental or social characteristics promoted. The Sub-fund may make use of derivatives, which thus always fall under the category "#2 Other", for hedging, liquidity management and efficient portfolio management as well as investment purposes. Exchange traded and over-the-counter derivatives are permitted, including but not limited to futures, swaps, options and currency forwards. In case the Sub-fund uses derivatives, the underlying shall comply with the investment policy. Where relevant, minimum environmental or social safeguards are taken into account, by, for example, applying Robeco's Exclusion Policy for any single security derivative.

Is a specific index designated as a reference benchmark to determine whether this financial product is aligned with the environmental and/or social characteristics that it promotes?

Not applicable.

Reference benchmarks are indexes to measure whether the financial

product attains the environmental or social characteristics that they promote.

Where can I find more product specific information online?

c) Robeco QI Global Multi-Factor Credits

Pre-contractual disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Product name: Robeco QI Global Multi-Factor Credits

Legal entity identifier: 2138004NM2KLO7YMDZ55

Environmental and/or social characteristics

Does this financial product have a sustainable investment objective?

Yes

No

It will make a minimum of **sustainable investments with an environmental objective:** ___%

- in economic activities that qualify as environmentally sustainable under the EU Taxonomy
- in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

It will make a minimum of **sustainable investments with a social objective:** ___%

It promotes **Environmental/Social (E/S) characteristics** and while it does not have as its objective a sustainable investment, it will have a minimum proportion of 40% of sustainable investments

- with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy
- with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy
- with a social objective

It promotes E/S characteristics, but **will not make any sustainable investments**

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

What environmental and/or social characteristics are promoted by this financial product?

The Sub-fund has the following E/S characteristics:

1. The Sub-fund promotes certain minimum environmental and social safeguards through applying exclusion criteria with regards to products and business practices that Robeco believes are detrimental to society and incompatible with sustainable investment strategies, such as exposure to controversial behaviour, controversial weapons, and fossil fuels.
2. The Sub-fund promotes having a lower environmental footprint than that of the general market index referred to in Appendix VI – Benchmarks (the "General Market Index"), through reduction in carbon, water and waste footprints.
3. The Sub-fund promotes adherence to and conducting business activities in accordance with the United Nations Universal Declaration of Human Rights, the International Labor Organization's (ILO) labor standards, the United Nations Guiding Principles for Business and Human Rights (UNGPs), the United Nations Global Compact (UNGC) and the OECD Guidelines for Multinational Enterprises, by scrutinizing companies that violate these principles.
4. The Sub-fund promotes having a weighted average ESG score that is better than that of the General Market Index.
5. The Sub-fund promotes having a larger share of companies with a positive SDG score (1,2,3) in the portfolio than the General Market Index.

There is no reference benchmark designated for the purpose of attaining the environmental or social characteristics promoted by the Sub-fund.

● **What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?**

The Sub-fund has the following sustainability indicators:

1. The % of investments in securities that are on Robeco's Exclusion list as result of the application of Robeco's Exclusion Policy.
2. The environmental footprint of the Sub-fund compared to the General Market Index.
3. The number of companies that are in violation of the ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises and hence are a part of the Enhanced Engagement program.
4. The Sub-fund's weighted average ESG score as compared to the General Market Index.
5. The Sub-fund's weight in companies with a positive SDG score (1,2,3) compared to the General Market Index weight in companies with a positive SDG score (1,2,3).

● **What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?**

The sustainable investments aim to contribute to the UN Sustainable Development Goals ("SDGs"), that have both social and environmental objectives. These are 17 goals that are globally recognised and include environmental goals such as climate action, clean water, life on land and water and social goals such as zero hunger, gender equality, education, etc. Robeco has developed a proprietary framework based on the UN SDGs through which an issuer's contribution to such SDGs is determined through a 3-step process. This process starts with a sector baseline on which a company's products are analysed to examine contribution to the society and environment. Further, the operational processes involved in creating such products is checked along with any controversies/litigation claims and remediation actions taken which are perused before a final SDG score is determined. The final score ranges between high

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

negative (-3) to high positive (+3) and only those issuers which achieve positive SDG scores (+1, +2 and +3) are regarded as Sustainable Investments.

● ***How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?***

The sustainable investments do no significant harm to any environmental or social sustainable investment objective by considering a principal adverse impact and aligning with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights. In addition, sustainable investments score positively on Robeco's SDG Framework, and therefore do not cause significant harm.

How have the indicators for adverse impacts on sustainability factors been taken into account?

Mandatory principal adverse impact indicators are considered through Robeco's SDG Framework, either directly or indirectly, when identifying sustainable investments for the Sub-fund. In addition, voluntary environmental and social indicators are taken into account, depending on their relevance for measuring impacts on the SDGs and the availability of data. A detailed description of the incorporation of principal adverse impacts is available via Robeco's Principal Adverse Impact Statement published on the Robeco website (<https://www.robeco.com/files/docm/docu-principal-adverse-impact-statement-summary-entity-level.pdf>). In this statement, Robeco sets out its approach to identifying and prioritizing principal adverse impacts, and how principal adverse impacts are considered as part of Robeco's investment due diligence process and procedures relating to research and analysis, exclusions and restrictions and/or voting and engagement. This description also explains how principal adverse impact indicators are considered by the SDG Framework.

How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The sustainable investments are aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights via both Robeco's Exclusion Policy and Robeco's SDG Framework.

Robeco's Exclusion Policy includes an explanation of how Robeco acts in accordance with the International Labor Organization (ILO) standards, United Nations Guiding Principles (UNGPs), United Nations Global Compact (UNGC) Principles and the Organization for Economic Co-operation and Development (OECD) Guidelines for Multinational Enterprises and is guided by these international treaties to assess the behavior of companies. Robeco continuously screens its investments for breaches of these principles. In case of a breach, the company will be excluded or engaged with, and is not considered a sustainable investment.

Robeco's SDG Framework screens for breaches on these principles in the final step of the framework. In this step, Robeco checks whether the company concerned has been involved in any controversies. Involvement in any controversy will result in a negative SDG score for the company, meaning it is not a sustainable investment.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

Does this financial product consider principal adverse impacts on sustainability factors?

Yes, _____

The Sub-fund considers principal adverse impacts on sustainability factors as referred to in Annex I of the SFDR Delegated Act.

Pre-investment, the following principal adverse impacts on sustainability factors are considered:

- Via the applied normative and activity-based exclusions, the following PAIs are considered:
 - Exposure to companies active in the fossil fuel sector (PAI 4, Table 1)
 - Violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1)
 - Activities negatively affecting biodiversity-sensitive areas (PAI 7, Table 1). The consideration of this PAI is currently restricted to applying exclusions to palm oil producing companies and for any breaches to the UNGC, UNGP and OECD Guidelines for Multinational Enterprises in relation to biodiversity.
 - Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons (PAI 14, Table 1)
- Via the environmental footprint performance targets of the Sub-fund, the following PAIs are considered:
 - Carbon footprint (PAI 2, Table 1)
 - Water and waste indicators (PAI 7-9, Table 1). Robeco will use on water and waste footprint until data quality and coverage of the PAIs will improve.

Post-investment, the following principal adverse impacts on sustainability factors are taken into account via Robeco's entity engagement program:

- All indicators related to Climate and other environment-related indicators (PAI 1-9, Table 1)
- Violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1)
- In addition, based on a yearly review of Robeco's performance on all mandatory and selected voluntary indicators, holdings of the Sub-fund that cause adverse impact might be selected for engagement.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

More information is available via Robeco's Principal Adverse Impact Statement, published on Robeco's website. The Sub-fund will periodically report how it has considered the principal adverse impacts of its investments in the Company's annual report, which will be made available each year on or before 30 April at the Sub-fund page highlighted in final section of this document.

No

What investment strategy does this financial product follow?

Robeco QI Global Multi-Factor Credits is an actively managed fund that invests systematically in predominantly investment grade credits. The selection of these stocks is based on a quantitative model as described in the Investment policy strategy paragraph in Appendix I of this Prospectus. The Sub-fund focuses on offering exposure to a number of quantitative strategies in a diversified way, such as, but not limited to, a strategy focusing on bonds with (Low volatility); on bonds with an attractive valuation (Value) and a strategy focusing on bonds of companies with a medium term attractive performance trend (Momentum). The strategy integrates sustainability indicators on a continuous basis as part of the stock selection process. Amongst others, the Sub-fund applies norms-based and activity-based exclusions, Robeco's good governance policy, Robeco's SDG framework and considers Principal Adverse Impacts in the investment process. More product-specific information can be found on our website and the links provided in the final question of this disclosure. In case of a rebalancing of the portfolio, the portfolio may temporarily, but no longer than 72 hours, deviate from its binding elements, with the exception of adherence to the exclusion policy that applies at all times.

What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?

The Sub-fund has the following binding elements:

1. The Sub-fund's portfolio complies with Robeco's Exclusion Policy (<https://www.robeco.com/files/docm/docu-exclusion-policy.pdf>), that is based on exclusion criteria with regards to products and business practices that Robeco believes are detrimental to society and incompatible with sustainable investment strategies. This means that the Sub-fund has 0% exposure to excluded securities, taking into account a grace period. Information with regards to the effects of the exclusions on the Sub-fund's universe can be found at <https://www.robeco.com/files/docm/docu-exclusion-list.pdf>
2. The Sub-fund's carbon, water and waste footprint score is better than that of the General Market Index.
3. The Sub-fund scrutinizes investment in companies that are in breach of the ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises. If a company in the portfolio breaches one of the international guidelines during the investment period, the company will become part of the Enhanced Engagement program. When engagement is deemed highly unlikely to succeed, the company might be excluded directly.
4. The Sub-fund's weighted average ESG score is better than that of the General Market Index.
5. The Sub-fund's weight in companies with a positive SDG score (1,2,3) is better than that of the General Market Index.

What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?

The Sub-fund does not commit to a minimum rate to reduce the scope of investments prior to the application of the investment strategy.

The investment strategy guides investment decisions based on factors such as investment objectives and risk tolerance.

● **What is the policy to assess good governance practices of the investee companies?**

Good governance practices include sound management structures, employee relations, remuneration of staff and tax compliance.

Robeco has a Good Governance policy to assess governance practices of companies. The policy describes how Robeco determines if and when a company does not follow good governance practices and is therefore excluded from the initial investment universe for Article 8 and 9 products. Robeco's Good Governance policy applies to the Sub-fund and tests on a set of governance criteria that reflect widely recognized industry established norms and include topics as employee relations, management structure, tax compliance and remuneration.

The Good Governance test consists of criteria on such topics that are examined for investee companies and further explained in Robeco's Good Governance policy <https://www.robeco.com/files/docm/docu-robeco-good-governance-policy.pdf>. Additionally, the companies that do not pass the good governance test are reflected in the exclusion list that can be accessed here - <https://www.robeco.com/files/docm/docu-exclusion-list.pdf>.

What is the asset allocation planned for this financial product?

Asset allocation describes the share of investments in specific assets.

At least 90% of the investments are aligned with the E/S characteristics of the Sub-fund. The Sub-fund plans to make a minimum of 40% sustainable investments, measured by positive scores via Robeco's SDG Framework. The investments in the category Other, estimated between 0-10%, are mostly in cash, cash equivalents and derivatives as further described below. The planned asset allocation is monitored continuously, and evaluated on a yearly basis.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers sustainable investments with environmental or social objectives.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

● **How does the use of derivatives attain the environmental or social characteristics promoted by the financial product?**

The Sub-fund does not make use of derivatives to attain the environmental or social characteristics promoted by the financial product. The Sub-fund may make use of derivatives for hedging, liquidity management and efficient portfolio management as well as investment purposes in the global fixed income, money market, interest rates and currency markets. In case the Sub-fund uses derivatives, the

underlying shall comply with the investment policy of the Sub-fund. Where relevant, minimum environmental or social safeguards are taken into account as described below.

To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

0%. The Sub-fund does not intend to make Taxonomy-aligned investments. It cannot be excluded that among the Sub-fund's holdings certain investments are Taxonomy aligned. The Sub-fund will report on Taxonomy-aligned investment in the periodic disclosures. In the future, once data-availability in relation to the EU Taxonomy will improve, Robeco might consider setting a target based on turnover or CAPEX. Robeco currently relies on third-party data in relation to the EU Taxonomy, including data in relation to companies that do not disclose on the EU Taxonomy alignment of their activities. EU Taxonomy-alignment data is not yet subject to a review by third parties. The Sub-fund makes investments in equities and bonds and therefore it does not have sovereign exposures. At this moment, the expected level of alignment with and without sovereign bonds is the same.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

● **Does the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy⁷²?**

- Yes
 - In fossil gas
 - In nuclear energy
- No

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.*

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures
 ** As the investments are not Taxonomy-aligned, the exclusion of sovereign bonds has no impact on the graph and therefore no such percentage is shown here.

● **What is the minimum share of investments in transitional and enabling activities?**

0%.

⁷² Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

 are sustainable investments with an environmental objective that **do not take into account the criteria for environmentally sustainable economic activities under the EU Taxonomy.**

What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?

The Sub-fund intends to make sustainable investments, measured as positive scores via Robeco's SDG Framework. Among those could be investments with environmental objectives that do not qualify as Taxonomy-aligned. The environmental objectives of the Sub-fund are attained by investing in companies that score positively on SDG 12 (Responsible consumption and production), SDG 13 (Climate action), SDG 14 (Life below water), and SDG 15 (Life on land) in Robeco's SDG Framework. While the sum of sustainable investments with an environmental objective and socially sustainable investments always adds up to the Sub-fund's minimum proportion of 40% sustainable investments, we do not commit to a minimum share of sustainable investments with an environmental objective because the Sub-fund's investment strategy does not have a specific environmental investment objective. Therefore, the minimum share of sustainable investments with an environmental objective is 0%.

What is the minimum share of socially sustainable investments?

The Sub-fund intends to make sustainable investments, measured as positive scores via Robeco's SDG Framework. Among those could be investments with social objectives. The social objectives of the Sub-fund are attained by investing in companies that score positively on SDG 1 (No poverty), SDG 2 (Zero hunger), SDG 3 (Good health and well-being), SDG 4 (Quality education), SDG 5 (Gender equality), SDG 6 (Clean water and sanitation), SDG 7 (Affordable and clean energy), SDG 8 (Decent work and economic growth), SDG 9 (Industry, innovation and infrastructure), SDG 10 (Reduced inequalities), SDG 11 (Sustainable cities and communities), SDG 16 (Peace, justice and strong institutions) and SDG 17 (Partnerships for the goals), in Robeco's SDG Framework. While the sum of socially sustainable investments and sustainable investments with an environmental objective always adds up to the Sub-fund's minimum proportion of sustainable investments, we do not commit to a minimum share of socially sustainable investments because the Sub-fund's investment strategy does not have a specific socially sustainable investment objective. Therefore, the minimum share of socially sustainable investments is 0%.

What investments are included under "#2 Other", what is their purpose and are there any minimum environmental or social safeguards?

The type of instruments included under "#2 Other" and their purpose are outlined in Annex I of this Prospectus under the header 'Financial instruments and investment restrictions'. They include cash, cash equivalents, as well as investment funds and eligible asset classes (other than bonds and equities) that do not specifically promote E/S characteristics. As indicated above, the Sub-fund does not make use of derivatives to attain the environmental or social characteristics promoted. The Sub-fund may make use of derivatives, which thus always fall under the category "#2 Other", for hedging, liquidity management and efficient portfolio management as well as investment purposes. Exchange traded and over-the-counter derivatives are permitted, including but not limited to futures, swaps, options and currency forwards. In case the Sub-fund uses derivatives, the underlying shall comply with the investment policy. Where relevant, minimum environmental or social safeguards are taken into account, by, for example, applying Robeco's Exclusion Policy for any single security derivative.

Is a specific index designated as a reference benchmark to determine whether this financial product is aligned with the environmental and/or social characteristics that it promotes?

Not applicable.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or

social characteristics
that they promote.

d) Robeco QI Global Multi-Factor Bonds

Pre-contractual disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Product name: Robeco QI Global Multi-Factor Bonds

Legal entity identifier: 2138009INGIOSX2F6B58

Environmental and/or social characteristics

Does this financial product have a sustainable investment objective?

Yes

No

It will make a minimum of **sustainable investments with an environmental objective:** ___%

- in economic activities that qualify as environmentally sustainable under the EU Taxonomy
- in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

It will make a minimum of **sustainable investments with a social objective:** ___%

It promotes **Environmental/Social (E/S) characteristics** and while it does not have as its objective a sustainable investment, it will have a minimum proportion of 10% of sustainable investments

- with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy
- with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy
- with a social objective

It promotes E/S characteristics, but **will not make any sustainable investments**

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

What environmental and/or social characteristics are promoted by this financial product?

The Sub-fund promotes the following E/S characteristics for investments in corporate bonds:

1. The Sub-fund promotes certain minimum environmental and social safeguards through applying exclusion criteria with regards to products and business practices that Robeco believes are detrimental to society and incompatible with sustainable investment strategies, such as exposure to controversial behaviour, controversial weapons, and fossil fuels.
2. The Sub-fund promotes having a lower environmental footprint than the corporate bonds in the general market index referred to in Appendix VI – Benchmarks (the "General Market Index"), through reduction in carbon, water and waste footprints.
3. The Sub-fund promotes adherence to and conducting business activities in accordance with the United Nations Universal Declaration of Human Rights, the International Labor Organization's (ILO) labor standards, the United Nations Guiding Principles for Business and Human Rights (UNGPs), the United Nations Global Compact (UNGC) and the OECD Guidelines for Multinational Enterprises, by scrutinizing companies that violate these principles.
4. The Sub-fund promotes having a weighted average ESG score that is better than that of the corporate bonds in the General Market Index.
5. The Sub-fund promotes having a larger share of companies with a positive SDG score (1,2,3) in the portfolio than the General Market Index.

The Sub-fund has the following E/S characteristics for investments in government bonds:

1. The Sub-fund promotes certain minimum environmental and social safeguards through applying exclusion criteria with regards to products and business practices that Robeco believes are detrimental to society and incompatible with sustainable investment strategies, such as exposure to controversial behaviour, controversial weapons, and fossil fuels. Robeco deems investing in government bonds (federal or local) of countries where serious violations of human rights or a collapse of the governance structure take place as unsustainable. In addition, Robeco will follow applicable sanctions of the UN, EU or US to which it is subject and follows any mandatory (investment) restrictions deriving therefrom.
2. The Sub-fund promotes investment in countries that perform well on the RobecoSAM Country Sustainability Ranking. The RobecoSAM Country Sustainability Ranking incorporates a wide range of ESG factors such as aging, corruption, social unrest, political risks and environmental risks.
3. The Sub-fund promotes having a lower carbon footprint than the government bonds in the General Market Index.

There is no reference benchmark designated for the purpose of attaining the environmental or social characteristics promoted by the Sub-fund.

What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?

The Sub-fund has the following sustainability indicators for investments in corporate bonds:

1. The % of investments in securities that are on Robeco's Exclusion list as result of the application of Robeco's Exclusion Policy.
2. The Sub-fund's weighted carbon, water and waste footprint compared to corporate bonds in the General Market Index.
3. The number of companies that are in violation of the ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises and hence are a part of the Enhanced Engagement program.
4. The Sub-fund's weighted average ESG score compared to the corporate bonds in the General Market Index.
5. The Sub-fund's weight in companies with a positive SDG score (1,2,3) compared to the General Market Index weight in companies with a positive SDG score (1,2,3).

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

The Sub-fund has the following E/S characteristics for investments in government bonds:

1. The % of investments in securities that are on Robeco's Exclusion list as result of the application of Robeco's Exclusion Policy.
2. The weighted average score based on Robeco's Country Sustainability Ranking compared to the General Market Index.
3. The Sub-fund's weighted carbon emissions per capita compared to the government bonds in the General Market Index.

● ***What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?***

The sustainable investments aim to contribute to the UN Sustainable Development Goals ("SDGs"), that have both social and environmental objectives. These are 17 goals that are globally recognised and include environmental goals such as climate action, clean water, life on land and water and social goals such as zero hunger, gender equality, education, etc. Robeco has developed a proprietary framework based on the UN SDGs through which an issuer's contribution to such SDGs is determined through a 3-step process. This process starts with a sector baseline on which a company's products are analysed to examine contribution to the society and environment. Further, the operational processes involved in creating such products is checked along with any controversies/litigation claims and remediation actions taken which are perused before a final SDG score is determined. The final score ranges between high negative (-3) to high positive (+3) and only those issuers which achieve positive SDG scores (+1, +2 and +3) are regarded as Sustainable Investments.

● ***How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?***

The sustainable investments do no significant harm to any environmental or social sustainable investment objective by considering a principal adverse impact and aligning with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights. In addition, sustainable investments score positively on Robeco's SDG Framework, and therefore do not cause significant harm.

How have the indicators for adverse impacts on sustainability factors been taken into account?

Mandatory principal adverse impact indicators are considered through Robeco's SDG Framework, either directly or indirectly, when identifying sustainable investments for the Sub-fund. In addition, voluntary environmental and social indicators are taken into account, depending on their relevance for measuring impacts on the SDGs and the availability of data. A detailed description of the incorporation of principal adverse impacts is available via Robeco's Principal Adverse Impact Statement published on the Robeco website (<https://www.robeco.com/files/docm/docu-principal-adverse-impact-statement-summary-entity-level.pdf>). In this statement, Robeco sets out its approach to identifying and prioritizing principal adverse impacts, and how principal adverse impacts are considered as part of Robeco's investment due diligence process and procedures relating to research and analysis, exclusions and restrictions and/or voting and engagement. This description also explains how principal adverse impact indicators are considered by the SDG Framework.

How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The sustainable investments are aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights via both Robeco's Exclusion Policy and Robeco's SDG Framework.

Robeco's Exclusion Policy includes an explanation of how Robeco acts in accordance with the International Labor Organization (ILO) standards, United Nations Guiding Principles (UNGPs), United Nations Global Compact (UNGC) Principles and the Organization for Economic Co-operation and Development (OECD) Guidelines for Multinational Enterprises and is guided by these international treaties to assess the behavior of companies. Robeco continuously screens its investments for breaches of these principles. In case of a breach, the company will be excluded or engaged with, and is not considered a sustainable investment.

Robeco's SDG Framework screens for breaches on these principles in the final step of the framework. In this step, Robeco checks whether the company concerned has been involved in any controversies. Involvement in any controversy will result in a negative SDG score for the company, meaning it is not a sustainable investment.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

Does this financial product consider principal adverse impacts on sustainability factors?

Yes, _____

The Sub-fund considers principal adverse impacts on sustainability factors as referred to in Annex I of the SFDR Delegated Act.

Pre-investment, the following principal adverse impacts on sustainability factors are considered via the applied normative and activity-based exclusions:

- Exposure to companies active in the fossil fuel sector (PAI 4, Table 1)
- Violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1)
- Activities negatively affecting biodiversity-sensitive areas (PAI 7, Table 1). The consideration of this PAI is currently restricted to applying exclusions to palm oil producing companies and for any breaches to the UNGC, UNGP and OECD Guidelines for Multinational Enterprises in relation to biodiversity.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

- Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons (PAI 14, Table 1)

Post-investment, the following principal adverse impacts on sustainability factors are taken into account via Robeco's entity engagement program:

- All indicators related to Climate and other environment-related indicators (PAI 1-9, Table 1)
- Violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1). On an ongoing basis, the investment universe is scanned for controversial behavior in relation to the aforementioned principles and guidelines.
- In addition, based on a yearly review of Robeco's performance on all mandatory and selected voluntary indicators, holdings of the Sub-fund that cause adverse impact might be selected for engagement.

More information is available via Robeco's Principal Adverse Impact Statement, published on Robeco's website. The Sub-fund will periodically report how it has considered the principal adverse impacts of its investments in the Company's annual report, which will be made available each year on or before 30 April at the Sub-fund page highlighted in final section of this document.

No

What investment strategy does this financial product follow?

Robeco QI Global Multi-Factor Bonds is an actively managed fund that invests globally in bonds issued by governments, agencies and corporates. The selection of these bonds is based on a quantitative model as described in the Investment policy strategy paragraph in Appendix I of this Prospectus. The Sub-fund uses low-risk, quality, value, momentum and size factors to select the most attractive bonds.

The strategy integrates sustainability indicators on a continuous basis as part of the stock selection process. Amongst others, the Sub-fund applies norms-based and activity-based exclusions, Robeco's good governance policy, Robeco's SDG framework and considers Principal Adverse Impacts in the investment process. More product-specific information can be found on our website and the links provided in the final question of this disclosure. In case of a rebalancing of the portfolio, the portfolio may temporarily, but no longer than 72 hours, deviate from its binding elements, with the exception of adherence to the exclusion policy that applies at all times.

What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?

The Sub-fund has the following binding elements for investments in corporate bonds:

1. The Sub-fund's portfolio complies with Robeco's Exclusion Policy (<https://www.robeco.com/files/docm/docu-exclusion-policy.pdf>), that is based on exclusion criteria with regards to products and business practices that Robeco believes are detrimental to society and incompatible with sustainable investment strategies. This means that the Sub-fund has 0% exposure to excluded securities, taking into account a grace period. Information with regards to the effects of the exclusions on the Sub-fund's universe can be found at <https://www.robeco.com/files/docm/docu-exclusion-list.pdf>
2. The Sub-fund's weighted carbon, water and waste footprint score of corporate bonds in portfolio are better than those of the corporate bonds in the General Market Index.
3. The Sub-fund scrutinizes investment in companies that are in breach of the ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises. If a company in the portfolio breaches one of the international guidelines during the investment period, the company will become part of the

The investment strategy guides investment decisions based on factors such as investment objectives and risk tolerance.

Enhanced Engagement program. When engagement is deemed highly unlikely to succeed, the company might be excluded directly.

4. The Sub-fund's weighted average ESG score of the corporate bonds in portfolio is better than that of the corporate bonds in the General Market Index.
5. The Sub-fund's weight in companies with a positive SDG score (1,2,3) is better than that of the General Market Index.

The Sub-fund has the following E/S characteristics for investments in government bonds:

1. The Sub-fund's portfolio complies with Robeco's Exclusion Policy (<https://www.robeco.com/files/docm/docu-exclusion-policy.pdf>), that is based on exclusion criteria with regards to products and business practices that Robeco believes are detrimental to society and incompatible with sustainable investment strategies. This means that the Sub-fund has 0% exposure to excluded securities, taking into account a grace period. Information with regards to the effects of the exclusions on the Sub-fund's universe can be found at <https://www.robeco.com/files/docm/docu-exclusion-list.pdf>.
2. The Sub-fund's weighted average ESG score of the government bonds in portfolio is better than that of the government bonds in the General Market Index.
3. The Sub-fund's weighted carbon emissions per capita of the government bonds in portfolio is better than that of the government bonds in the General Market Index.

● ***What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?***

The Sub-fund does not commit to a minimum rate to reduce the scope of investments prior to the application of the investment strategy.

● ***What is the policy to assess good governance practices of the investee companies?***

Robeco has a Good Governance policy to assess governance practices of companies. The policy describes how Robeco determines if and when a company does not follow good governance practices and is therefore excluded from the initial investment universe for Article 8 and 9 products. Robeco's Good Governance policy applies to the Sub-fund and tests on a set of governance criteria that reflect widely recognized industry established norms and include topics as employee relations, management structure, tax compliance and remuneration.

The Good Governance test consists of criteria on such topics that are examined for investee companies and further explained in Robeco's Good Governance policy <https://www.robeco.com/files/docm/docu-robeco-good-governance-policy.pdf>. Additionally, the companies that do not pass the good governance test are reflected in the exclusion list that can be accessed here - <https://www.robeco.com/files/docm/docu-exclusion-list.pdf>.

What is the asset allocation planned for this financial product?

At least 90% of the investments are aligned with the E/S characteristics of the Sub-fund. The Sub-fund plans to make a minimum of 10% sustainable investments, measured by positive scores via Robeco's SDG Framework. The investments in the category Other, estimated between 0-10%, are mostly in cash, cash equivalents and derivatives as further described below. The planned asset allocation is monitored continuously, and evaluated on a yearly basis.

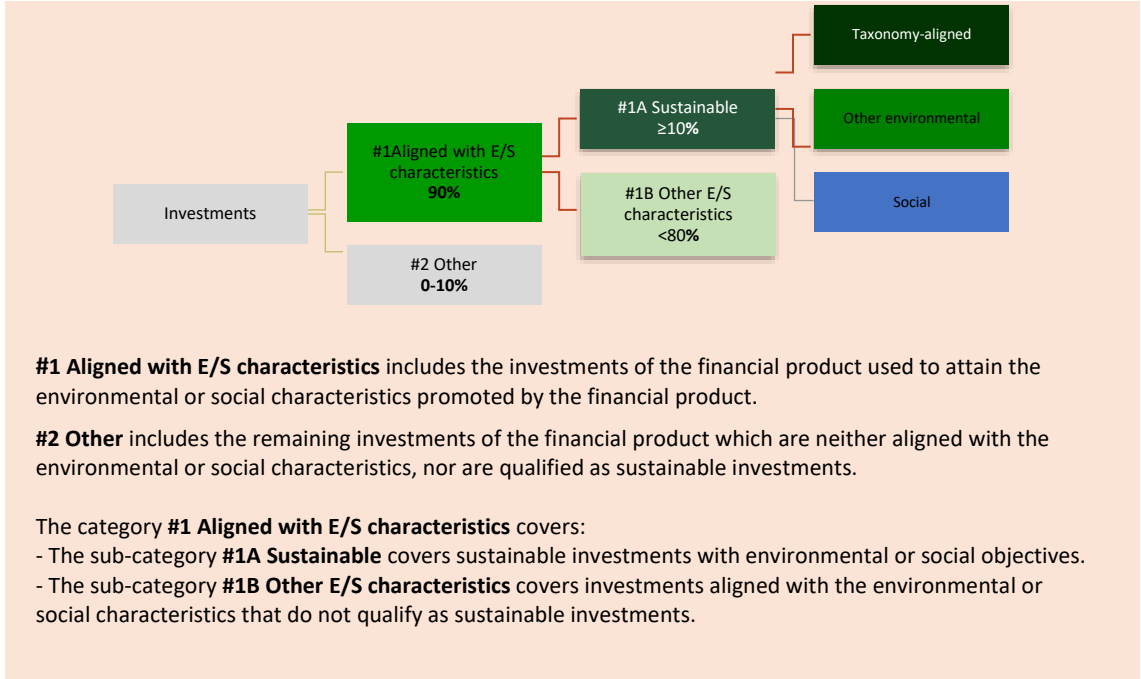

Good governance practices include sound management structures, employee relations, remuneration of staff and tax compliance.

Asset allocation describes the share of investments in specific assets.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure (CapEx)** showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure (OpEx)** reflecting green operational activities of investee companies.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers sustainable investments with environmental or social objectives.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

● **How does the use of derivatives attain the environmental or social characteristics promoted by the financial product?**

The Sub-fund does not make use of derivatives to attain the environmental or social characteristics promoted by the financial product. The Sub-fund may make use of derivatives for hedging, liquidity management and efficient portfolio management as well as investment purposes in the global fixed income, money market, interest rates and currency markets. In case the Sub-fund uses derivatives, the underlying shall comply with the investment policy of the Sub-fund. Where relevant, minimum environmental or social safeguards are taken into account as described below.

● **To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?**

0%. The Sub-fund does not intend to make Taxonomy-aligned investments. It cannot be excluded that among the Sub-fund's holdings certain investments are Taxonomy aligned. The Sub-fund will report on Taxonomy-aligned investment in the periodic disclosures. In the future, once data-availability in relation to the EU Taxonomy will improve, Robeco might consider setting a target based on turnover or CAPEX. Robeco currently relies on third-party data, including data in relation to companies that do not disclose on the EU Taxonomy alignment of their activities. EU Taxonomy-alignment data is not yet subject to a review by third parties. The Sub-fund only makes investments in equity and therefore it does not have sovereign exposures. The expected level of alignment with and without sovereign bonds is the same.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and

● **Does the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy⁷³?**

Yes

In fossil gas

In nuclear energy

⁷³ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

switching to renewable power or low-carbon fuels by the end of 2035. For nuclear energy, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

 are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

 No

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

** As the investments are not Taxonomy-aligned, the exclusion of sovereign bonds has no impact on the graph and therefore no such percentage is shown here.

 **What is the minimum share of investments in transitional and enabling activities?**

0%.

 **What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?**

The Sub-fund intends to make sustainable investments, measured as positive scores via Robeco's SDG Framework. Among those could be investments with environmental objectives that do not qualify as Taxonomy-aligned. The environmental objectives of the Sub-fund are attained by investing in companies that score positively on SDG 12 (Responsible consumption and production), SDG 13 (Climate action), SDG 14 (Life below water), and SDG 15 (Life on land) in Robeco's SDG Framework. While the sum of sustainable investments with an environmental objective and socially sustainable investments always adds up to the Sub-fund's minimum proportion of 10% sustainable investments, we do not commit to a minimum share of sustainable investments with an environmental objective because the Sub-fund's investment strategy does not have a specific environmental investment objective. Therefore, the minimum share of sustainable investments with an environmental objective is 0%.

 **What is the minimum share of socially sustainable investments?**

The Sub-fund intends to make sustainable investments, measured as positive scores via Robeco's SDG Framework. Among those could be investments with social objectives. The social objectives of the Sub-fund are attained by investing in companies that score positively on SDG 1 (No poverty), SDG 2 (Zero hunger), SDG 3 (Good health and well-being), SDG 4 (Quality education), SDG 5 (Gender equality), SDG 6 (Clean water and sanitation), SDG 7 (Affordable and clean energy), SDG 8 (Decent work and economic growth), SDG 9 (Industry, innovation and infrastructure), SDG 10 (Reduced inequalities), SDG 11 (Sustainable cities and communities), SDG 16 (Peace, justice and strong institutions) and SDG 17 (Partnerships for the goals), in Robeco's SDG Framework. While the sum of socially sustainable investments and sustainable investments with an environmental objective always adds up to the Sub-fund's minimum proportion of sustainable investments, we do not commit to a minimum share of socially sustainable investments because the Sub-fund's investment strategy does not have a specific

socially sustainable investment objective. Therefore, the minimum share of socially sustainable investments is 0%.

What investments are included under "#2 Other", what is their purpose and are there any minimum environmental or social safeguards?

The type of instruments included under "#2 Other" and their purpose are outlined in Annex I of this Prospectus under the header 'Financial instruments and investment restrictions'. They include cash, cash equivalents, as well as investment funds and eligible asset classes (other than bonds and equities) that do not specifically promote E/S characteristics. As indicated above, the Sub-fund does not make use of derivatives to attain the environmental or social characteristics promoted. The Sub-fund may make use of derivatives, which thus always fall under the category "#2 Other", for hedging, liquidity management and efficient portfolio management as well as investment purposes. Exchange traded and over-the-counter derivatives are permitted, including but not limited to futures, swaps, options and currency forwards. In case the Sub-fund uses derivatives, the underlying shall comply with the investment policy. Where relevant, minimum environmental or social safeguards are taken into account, by, for example, applying Robeco's Exclusion Policy for any single security derivative.

Is a specific index designated as a reference benchmark to determine whether this financial product is aligned with the environmental and/or social characteristics that it promotes?

Not applicable.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

e) Robeco Global Credits – Short Maturity

Pre-contractual disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Product name: Robeco Global Credits – Short Maturity

Legal entity identifier: 2138001CC7H5L9AYFW22

Environmental and/or social characteristics

Does this financial product have a sustainable investment objective?

Yes

No

It will make a minimum of **sustainable investments with an environmental objective:** ___%

- in economic activities that qualify as environmentally sustainable under the EU Taxonomy
- in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

It will make a minimum of **sustainable investments with a social objective:** ___%

It promotes **Environmental/Social (E/S) characteristics** and while it does not have as its objective a sustainable investment, it will have a minimum proportion of 30% of sustainable investments

- with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy
- with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy
- with a social objective

It promotes E/S characteristics, but **will not make any sustainable investments**

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

What environmental and/or social characteristics are promoted by this financial product?

The Sub-fund has the following E/S characteristics:

1. The Sub-fund promotes certain minimum environmental and social safeguards through applying exclusion criteria with regards to products and business practices that Robeco believes are detrimental to society and incompatible with sustainable investment strategies, such as exposure to controversial behaviour, controversial weapons, and fossil fuels.
2. The Sub-fund promotes adherence to and conducting business activities in accordance with the United Nations Universal Declaration of Human Rights, the International Labor Organization's (ILO) labor standards, the United Nations Guiding Principles for Business and Human Rights (UNGPs), the United Nations Global Compact (UNGC) and the OECD Guidelines for Multinational Enterprises, by scrutinizing companies that violate these principles.
3. The Sub-fund limits investing in companies with an elevated sustainability risk based on ESG risk scores whereas all such investments require separate approval of a dedicated committee that oversees that all investments are substantiated and eligible based on a fundamental review on the sustainability risk.
4. The Sub-fund aims to contribute to the United Nations Sustainable Development Goals by investing in green, social, sustainability and/or sustainability-linked bonds that are used to finance environmental and social projects.

● **What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?**

The Sub-fund has the following sustainability indicators:

1. The % of investments in securities that are on Robeco's Exclusion list as result of the application of Robeco's Exclusion Policy.
2. The number of companies that are in violation of the ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises and hence are a part of the Enhanced Engagement program.
3. The % of holdings with an elevated sustainability risk profile.
4. The % of the Sub-fund invested in green, social, sustainability and/or sustainability-linked bonds.

● **What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?**

The sustainable investments aim to contribute to the UN Sustainable Development Goals ("SDGs"), that have both social and environmental objectives. These are 17 goals that are globally recognised and include environmental goals such as climate action, clean water, life on land and water and social goals such as zero hunger, gender equality, education, etc. Robeco has developed a proprietary framework based on the UN SDGs through which an issuer's contribution to such SDGs is determined through a 3-step process. This process starts with a sector baseline on which a company's products are analysed to examine contribution to the society and environment. Further, the operational processes involved in creating such products is checked along with any controversies/litigation claims and remediation actions taken which are perused before a final SDG score is determined. The final score ranges between high negative (-3) to high positive (+3) and only those issuers which achieve positive SDG scores (+1,+2 and, +3) are regarded as Sustainable Investments. Some of the sustainable investments are green bonds, and therefore contribute to the environmental objectives under EU Taxonomy.

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

● ***How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?***

The sustainable investments do no significant harm to any environmental or social sustainable investment objective by considering a principal adverse impact and aligning with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights. In addition, sustainable investments score positively on Robeco's SDG Framework, and therefore do not cause significant harm.

How have the indicators for adverse impacts on sustainability factors been taken into account?

For sustainable investments that are either green, social, sustainability or sustainability-linked bonds, significant harm is avoided by the application of the Robeco's green, social, sustainability or sustainability-linked bond eligibility frameworks.

Robeco's SDG Framework is considered for the analysis of sustainable investments determined by positive scores on this framework. Robeco's SDG Framework assesses the contribution of companies to the Sustainable Development Goals (SDGs). Many PAI indicators are either directly or indirectly included in the SDG Framework to determine whether a company has significant impacts on the SDGs related to the PAI indicators. A detailed description of the incorporation of principal adverse impacts is available via Robeco's Principal Adverse Impact Statement published on the Robeco website (<https://www.robeco.com/files/docm/docu-principal-adverse-impact-statement-summary-entity-level.pdf>).

How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The sustainable investments are aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights via both Robeco's Exclusion Policy and Robeco's SDG Framework.

Robeco's Exclusion Policy includes an explanation of how Robeco acts in accordance with the International Labor Organization (ILO) standards, United Nations Guiding Principles (UNGPs), United Nations Global Compact (UNGC) Principles and the Organization for Economic Co-operation and Development (OECD) Guidelines for Multinational Enterprises and is guided by these international treaties to assess the behavior of companies. Robeco continuously screens its investments for breaches of these principles. In case of a breach, the company will be excluded or engaged with, and is not considered a sustainable investment.

Robeco's SDG Framework screens for breaches on these principles in the final step of the framework. In this step, Robeco checks whether the company concerned has been involved in any controversies. Involvement in any controversy will result in a negative SDG score for the company, meaning it is not a sustainable investment.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

Does this financial product consider principal adverse impacts on sustainability factors?

Yes, _____

The Sub-fund considers principal adverse impacts on sustainability factors as referred to in Annex I of the SFDR Delegated Act.

Pre-investment, the following principal adverse impacts on sustainability factors are considered:

- Via the applied normative and activity-based exclusions, the following PAIs are considered:
 - Exposure to companies active in the fossil fuel sector (PAI 4, Table 1)
 - Violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1)
 - Activities negatively affecting biodiversity-sensitive areas (PAI 7, Table 1). The consideration of this PAI is currently restricted to applying exclusions to palm oil producing companies and for any breaches to the UNGC, UNGP and OECD Guidelines for Multinational Enterprises in relation to biodiversity.
 - Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons (PAI 14, Table 1)
- Via the ESG integration process, as part of the investment due diligence policies and procedures, the following PAIs are considered:
 - All indicators related to GHG emissions, as part of the required Climate Risk analysis (PAI 1-6, Table 1, PAI 4, Table 2)
 - Water and waste indicators (PAI 7-9, Table 1)

Post-investment, the following principal adverse impacts on sustainability factors are taken into account via Robeco's entity engagement program:

- All indicators related to Climate and other environment-related indicators (PAI 1-9, Table 1)
- Violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1). On an ongoing basis, the investment universe is scanned for controversial behavior in relation to the aforementioned principles and guidelines.
- In addition, based on a yearly review of Robeco's performance on all mandatory and selected voluntary indicators, holdings of the Sub-fund that cause adverse impact might be selected for engagement.

More information is available via Robeco's Principal Adverse Impact Statement, published on Robeco's website. The Sub-fund will periodically report how it has considered the principal adverse impacts of its

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

investments in the Company's annual report, which will be made available each year on or before 30 April at the Sub-fund page highlighted in final section of this document.

No

What investment strategy does this financial product follow?

Robeco Global Credits – Short Maturity is an actively managed fund that invests primarily in a diversified portfolio of global investment grade corporate bonds with a short maturity.

The selection of these bonds is based on fundamental analysis as described in the Investment policy strategy paragraph in Appendix I of this Prospectus. The strategy integrates sustainability indicators on a continuous basis as part of the bond selection process. Amongst others, the Sub-fund applies norms-based, activity-based and regional exclusions, Robeco's good governance policy, Robeco's SDG framework and considers Principal Adverse Impacts in the investment process. More product-specific information can be found on our website and the links provided in the final question of this disclosure.

The investment strategy guides investment decisions based on factors such as investment objectives and risk tolerance.

What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?

The Sub-fund has the following binding elements:

1. The Sub-fund's portfolio complies with Robeco's Exclusion Policy (<https://www.robeco.com/files/docm/docu-exclusion-policy.pdf>), that is based on exclusion criteria with regards to products and business practices that Robeco believes are detrimental to society and incompatible with sustainable investment strategies. This means that the Sub-fund has 0% exposure to excluded securities, taking into account a grace period. Information with regards to the effects of the exclusions on the Sub-fund's universe can be found at <https://www.robeco.com/files/docm/docu-exclusion-list.pdf>.
2. The Sub-fund scrutinizes investment in companies that are in breach of the ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises. If a company in the portfolio breaches one of the international guidelines during the investment period, the company will become part of the Enhanced Engagement program.
3. Investments with an elevated sustainability risk are defined by Robeco as companies with an ESG Risk Rating of 40 and higher (the ESG Risk Rating is explained in the sustainability risk policy which can be accessed via <https://www.robeco.com/files/docm/docu-robeco-sustainability-risk-policy.pdf>). The Sub-fund is limited to a maximum exposure of 3% to investments with an elevated sustainability risk, based on the market weight in the portfolio taking into account regional differences and benchmark. Each investment with an ESG Risk rating of higher than 40 requires separate approval by a dedicated committee of sustainable investment specialists, compliance and risk management that oversees the bottom-up sustainability analysis.
4. The Sub-fund invests a minimum of 5% in green, social, sustainability, and/or sustainability-linked bonds.

What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?

The Sub-fund does not commit to a minimum rate to reduce the scope of investments prior to the application of the investment strategy.

What is the policy to assess good governance practices of the investee companies?

Good governance practices include sound management structures, employee relations, remuneration of staff and tax compliance.

Robeco has a Good Governance policy to assess governance practices of companies. The policy describes how Robeco determines if and when a company does not follow good governance practices and is therefore excluded from the initial investment universe for Article 8 and 9 products. Robeco's Good Governance policy applies to the Sub-fund and tests on a set of governance criteria that reflect widely recognized industry established norms and include topics as employee relations, management structure, tax compliance and remuneration.

The Good Governance test consists of criteria on such topics that are examined for investee companies and further explained in Robeco's Good Governance policy <https://www.robeco.com/files/docm/docu-robeco-good-governance-policy.pdf>. Additionally, the companies that do not pass the good governance test are reflected in the exclusion list that can be accessed here - <https://www.robeco.com/files/docm/docu-exclusion-list.pdf>.

What is the asset allocation planned for this financial product?

At least 90% of the investments are aligned with the E/S characteristics of the Sub-fund. The Sub-fund plans to make a minimum of 30% sustainable investments, measured by either being positive scores via Robeco's SDG Framework or investments in green, social, sustainability or sustainability-linked bonds. The investments in the category Other, estimated between 0-10%, are mostly in cash, cash equivalents and derivatives as further described below. The planned asset allocation is monitored continuously, and evaluated on a yearly basis.

Asset allocation describes the share of investments in specific assets. Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers sustainable investments with environmental or social objectives.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

How does the use of derivatives attain the environmental or social characteristics promoted by the financial product?

The Sub-fund does not make use of derivatives to attain the environmental or social characteristics promoted by the financial product. The Sub-fund may make use of derivatives for hedging, liquidity management and efficient portfolio management as well as investment purposes in the global fixed income, money market, interest rates and currency markets. In case the Sub-fund uses derivatives, the underlying shall comply with the investment policy of the Sub-fund. Where relevant, minimum environmental or social safeguards are taken into account as described below.

To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

0%. The Sub-fund intends to contribute to all 6 environmental objectives under the EU Taxonomy via the investments in green bonds. The Sub-fund commits to a minimum share of 0% of Taxonomy-aligned activities. The Sub-fund intends to increase the minimum share of Taxonomy aligned activities for the Sub-fund, based on use of proceeds, once data availability in relation to the EU Taxonomy for green bonds improves and stabilises.

The Sub-fund will report on Taxonomy-aligned investment in the periodic disclosures. For investments in corporate bonds, the Sub-fund will report on turnover. Given the lack of data on the EU Taxonomy for green bonds in the market, Robeco relies on internal analysis for the time being. EU Taxonomy-alignment data is not yet subject to a review by third parties. The expected level of alignment with and without sovereign bonds is the same.

Does the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy⁷⁴?

Yes

In fossil gas

In nuclear energy

No

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.*

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

** As the investments are not Taxonomy-aligned, the exclusion of sovereign bonds has no impact on the graph and therefore no such percentage is shown here.

What is the minimum share of investments in transitional and enabling activities?

0%.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

⁷⁴ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

 are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?

Green bonds may invest (part of) their use of proceeds in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy. In addition, the Sub-fund intends to make sustainable investments measured as positive scores via Robeco's SDG Framework. Among those could be investments with environmental objectives that do not qualify as Taxonomy-aligned. The environmental objectives of the Sub-fund are attained by investing in companies that score positively on SDG 12 (Responsible consumption and production), SDG 13 (Climate action), SDG 14 (Life below water), and SDG 15 (Life on land) in Robeco's SDG Framework.

While the sum of sustainable investments with an environmental objective and socially sustainable investments always adds up to the Sub-fund's minimum proportion of 30% sustainable investments, we do not commit to a minimum share of sustainable investments with an environmental objective because the Sub-fund's investment strategy does not have a specific environmental investment objective. Therefore, the minimum share of sustainable investments with an environmental objective is 0%.

What is the minimum share of socially sustainable investments?

Social, sustainable or sustainability-linked bonds may invest (part of) their use of proceeds in economic activities that contribute to a social objective.

In addition, the Sub-fund intends to make sustainable investments, measured as positive scores via Robeco's SDG Framework. Among those could be investments with social objectives. The social objectives of the Sub-fund are attained by investing in companies that score positively on SDG 1 (No poverty), SDG 2 (Zero hunger), SDG 3 (Good health and well-being), SDG 4 (Quality education), SDG 5 (Gender equality), SDG 6 (Clean water and sanitation), SDG 7 (Affordable and clean energy), SDG 8 (Decent work and economic growth), SDG 9 (Industry, innovation and infrastructure), SDG 10 (Reduced inequalities), SDG 11 (Sustainable cities and communities), SDG 16 (Peace, justice and strong institutions) and SDG 17 (Partnerships for the goals), in Robeco's SDG Framework.

While the sum of socially sustainable investments and sustainable investments with an environmental objective always adds up to the Sub-fund's minimum proportion of sustainable investments, we do not commit to a minimum share of socially sustainable investments because the Sub-fund's investment strategy does not have a specific socially sustainable investment objective. Therefore, the minimum share of socially sustainable investments is 0%.

What investments are included under "#2 Other", what is their purpose and are there any minimum environmental or social safeguards?

The type of instruments included under "#2 Other" and their purpose are outlined in Annex I of this Prospectus under the header 'Financial instruments and investment restrictions'. They include cash, cash equivalents, as well as investment funds and eligible asset classes (other than bonds and equities) that do not specifically promote E/S characteristics. As indicated above, the Sub-fund does not make use of derivatives to attain the environmental or social characteristics promoted. The Sub-fund may make use of derivatives, which thus always fall under the category "#2 Other", for hedging, liquidity management and efficient portfolio management as well as investment purposes. Exchange traded and over-the-counter derivatives are permitted, including but not limited to futures, swaps, options and currency forwards. In case the Sub-fund uses derivatives, the underlying shall comply with the investment policy. Where relevant, minimum environmental or social safeguards are taken into account, by, for example, applying Robeco's Exclusion Policy for any single security derivative.

Is a specific index designated as a reference benchmark to determine whether this financial product is aligned with the environmental and/or social characteristics that it promotes?

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

Not applicable.

f) Robeco Corporate Hybrid Bonds

Pre-contractual disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Product name: Robeco Corporate Hybrid Bonds

Legal entity identifier: 213800KXAXX8MJC82S52

Environmental and/or social characteristics

Does this financial product have a sustainable investment objective?

Yes

No

It will make a minimum of **sustainable investments with an environmental objective:** ___%

- in economic activities that qualify as environmentally sustainable under the EU Taxonomy
- in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

It will make a minimum of **sustainable investments with a social objective:** ___%

It promotes **Environmental/Social (E/S) characteristics** and while it does not have as its objective a sustainable investment, it will have a minimum proportion of 30% of sustainable investments

- with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy
- with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy
- with a social objective

It promotes E/S characteristics, but **will not make any sustainable investments**

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

What environmental and/or social characteristics are promoted by this financial product?

The Sub-fund has the following E/S characteristics:

1. The Sub-fund promotes certain minimum environmental and social safeguards through applying exclusion criteria with regards to products and business practices that Robeco believes are detrimental to society and incompatible with sustainable investment strategies, such as exposure to controversial behaviour, controversial weapons, and fossil fuels.
2. The Sub-fund promotes adherence to and conducting business activities in accordance with the United Nations Universal Declaration of Human Rights, the International Labor Organization's (ILO) labor standards, the United Nations Guiding Principles for Business and Human Rights (UNGPs), the United Nations Global Compact (UNGC) and the OECD Guidelines for Multinational Enterprises, by scrutinizing companies that violate these principles.
3. The Sub-fund limits investing in companies with an elevated sustainability risk based on ESG risk scores whereas all such investments require separate approval of a dedicated committee that oversees that all investments are substantiated and eligible based on a fundamental review on the sustainability risk.
4. The Sub-fund aims to contribute to the United Nations Sustainable Development Goals by investing in green, social, sustainability and/or sustainability-linked bonds that are used to finance environmental and social projects.

● **What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?**

The Sub-fund has the following sustainability indicators:

1. The % of investments in securities that are on Robeco's Exclusion list as result of the application of Robeco's Exclusion Policy.
2. The number of companies that are in violation of the ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises and hence are a part of the Enhanced Engagement program.
3. The % of holdings with an elevated sustainability risk profile.
4. The % of the Sub-fund invested in green, social, sustainability and/or sustainability-linked bonds.

● **What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?**

The sustainable investments aim to contribute to the UN Sustainable Development Goals ("SDGs"), that have both social and environmental objectives. These are 17 goals that are globally recognised and include environmental goals such as climate action, clean water, life on land and water and social goals such as zero hunger, gender equality, education, etc. Robeco has developed a proprietary framework based on the UN SDGs through which an issuer's contribution to such SDGs is determined through a 3-step process. This process starts with a sector baseline on which a company's products are analysed to examine contribution to the society and environment. Further, the operational processes involved in creating such products is checked along with any controversies/litigation claims and remediation actions taken which are perused before a final SDG score is determined. The final score ranges between high negative (-3) to high positive (+3) and only those issuers which achieve positive SDG scores (+1, +2 and, +3) are regarded as Sustainable Investments. Some of the sustainable investments are green bonds, and therefore contribute to the environmental objectives under EU Taxonomy.

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

● ***How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?***

The sustainable investments do no significant harm to any environmental or social sustainable investment objective by considering a principal adverse impact and aligning with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights. In addition, sustainable investments score positively on Robeco's SDG Framework or are assessed by either Robeco's Green Bond Framework or Social Bond Framework, and therefore do not cause significant harm.

How have the indicators for adverse impacts on sustainability factors been taken into account?

Mandatory principal adverse impact indicators are considered through Robeco's SDG Framework, either directly or indirectly, when identifying sustainable investments for the Sub-fund. In addition, voluntary environmental and social indicators are taken into account, depending on their relevance for measuring impacts on the SDGs and the availability of data. A detailed description of the incorporation of principal adverse impacts is available via Robeco's Principal Adverse Impact Statement published on the Robeco website (<https://www.robeco.com/files/docm/docu-principal-adverse-impact-statement-summary-entity-level.pdf>). In this statement, Robeco sets out its approach to identifying and prioritizing principal adverse impacts, and how principal adverse impacts are considered as part of Robeco's investment due diligence process and procedures relating to research and analysis, exclusions and restrictions and/or voting and engagement. This description also explains how principal adverse impact indicators are considered by the SDG Framework.

How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The sustainable investments are aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights via both Robeco's Exclusion Policy and Robeco's SDG Framework.

Robeco's Exclusion Policy includes an explanation of how Robeco acts in accordance with the International Labor Organization (ILO) standards, United Nations Guiding Principles (UNGPs), United Nations Global Compact (UNGC) Principles and the Organization for Economic Co-operation and Development (OECD) Guidelines for Multinational Enterprises and is guided by these international treaties to assess the behavior of companies. Robeco continuously screens its investments for breaches of these principles. In case of a breach, the company will be excluded or engaged with, and is not considered a sustainable investment.

Robeco's SDG Framework screens for breaches on these principles in the final step of the framework. In this step, Robeco checks whether the company concerned has been involved in any controversies. Involvement in any controversy will result in a negative SDG score for the company, meaning it is not a sustainable investment.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

Does this financial product consider principal adverse impacts on sustainability factors?

Yes, _____

The Sub-fund considers principal adverse impacts on sustainability factors as referred to in Annex I of the SFDR Delegated Act.

Pre-investment, the following principal adverse impacts on sustainability factors are considered:

- Via the applied normative and activity-based exclusions, the following PAIs are considered:

- Exposure to companies active in the fossil fuel sector (PAI 4, Table 1)
- Violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1)
- Activities negatively affecting biodiversity-sensitive areas (PAI 7, Table 1). The consideration of this PAI is currently restricted to applying exclusions to palm oil producing companies and for any breaches to the UNGC, UNGP and OECD Guidelines for Multinational Enterprises in relation to biodiversity.
- Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons (PAI 14, Table 1)

- Via the ESG integration process, as part of the investment due diligence policies and procedures, the following PAIs are considered:

- All indicators related to GHG emissions, as part of the required Climate Risk analysis (PAI 1-6, Table 1, PAI 4, Table 2)
- Water and waste indicators (PAI 7-9, Table 1)

Post-investment, the following principal adverse impacts on sustainability factors are taken into account via Robeco's entity engagement program:

- All indicators related to Climate and other environment-related indicators (PAI 1-9, Table 1)
- Violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1). On an ongoing basis, the investment universe is scanned for controversial behavior in relation to the aforementioned principles and guidelines.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

- In addition, based on a yearly review of Robeco's performance on all mandatory and selected voluntary indicators, holdings of the Sub-fund that cause adverse impact might be selected for engagement.

More information is available via Robeco's Principal Adverse Impact Statement, published on Robeco's website. The Sub-fund will periodically report how it has considered the principal adverse impacts of its investments in the Company's annual report, which will be made available each year on or before 30 April at the Sub-fund page highlighted in final section of this document.

No

What investment strategy does this financial product follow?

Robeco Corporate Hybrid Bonds is an actively managed fund that invests in global corporate hybrids bonds issued by non financials. The selection of these bonds is based on fundamental analysis as described in the Investment policy strategy paragraph in Appendix I of this Prospectus. The strategy integrates sustainability indicators on a continuous basis as part of the bond selection process. Amongst others, the Sub-fund applies norms-based, activity-based and regional exclusions, Robeco's good governance policy, Robeco's SDG framework and considers Principal Adverse Impacts in the investment process. More product-specific information can be found on our website and the links provided in the final question of this disclosure.

The investment strategy guides investment decisions based on factors such as investment objectives and risk tolerance.

What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?

The Sub-fund has the following binding elements:

1. The Sub-fund's portfolio complies with Robeco's Exclusion Policy (<https://www.robeco.com/files/docm/docu-exclusion-policy.pdf>), that is based on exclusion criteria with regards to products and business practices that Robeco believes are detrimental to society and incompatible with sustainable investment strategies. This means that the Sub-fund has 0% exposure to excluded securities, taking into account a grace period. Information with regards to the effects of the exclusions on the Sub-fund's universe can be found at <https://www.robeco.com/files/docm/docu-exclusion-list.pdf>.
2. The Sub-fund scrutinizes investment in companies that are in breach of the ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises. If a company in the portfolio breaches one of the international guidelines during the investment period, the company will become part of the Enhanced Engagement program.
3. Investments with an elevated sustainability risk are defined by Robeco as companies with an ESG Risk Rating of 40 and higher (the ESG Risk Rating is explained in the sustainability risk policy which can be accessed via <https://www.robeco.com/files/docm/docu-robeco-sustainability-risk-policy.pdf>). The Sub-fund is limited to a maximum exposure of 10% to investments with an elevated sustainability risk, based on the market weight in the portfolio taking into account regional differences and benchmark. Each investment with an ESG Risk rating of higher than 40 requires separate approval by a dedicated committee of sustainable investment specialists, compliance and risk management that oversees the bottom-up sustainability analysis.
4. The Sub-fund invests a minimum of 5% in green, social, sustainability, and/or sustainability-linked bonds.

What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?

The Sub-fund does not commit to a minimum rate to reduce the scope of investments prior to the application of the investment strategy.

● **What is the policy to assess good governance practices of the investee companies?**

Good governance practices include sound management structures, employee relations, remuneration of staff and tax compliance.

Robeco has a Good Governance policy to assess governance practices of companies. The policy describes how Robeco determines if and when a company does not follow good governance practices and is therefore excluded from the initial investment universe for Article 8 and 9 products. Robeco's Good Governance policy applies to the Sub-fund and tests on a set of governance criteria that reflect widely recognized industry established norms and include topics as employee relations, management structure, tax compliance and remuneration.

The Good Governance test consists of criteria on such topics that are examined for investee companies and further explained in Robeco's Good Governance policy <https://www.robeco.com/files/docm/docu-robeco-good-governance-policy.pdf>. Additionally, the companies that do not pass the good governance test are reflected in the exclusion list that can be accessed here - <https://www.robeco.com/files/docm/docu-exclusion-list.pdf>.

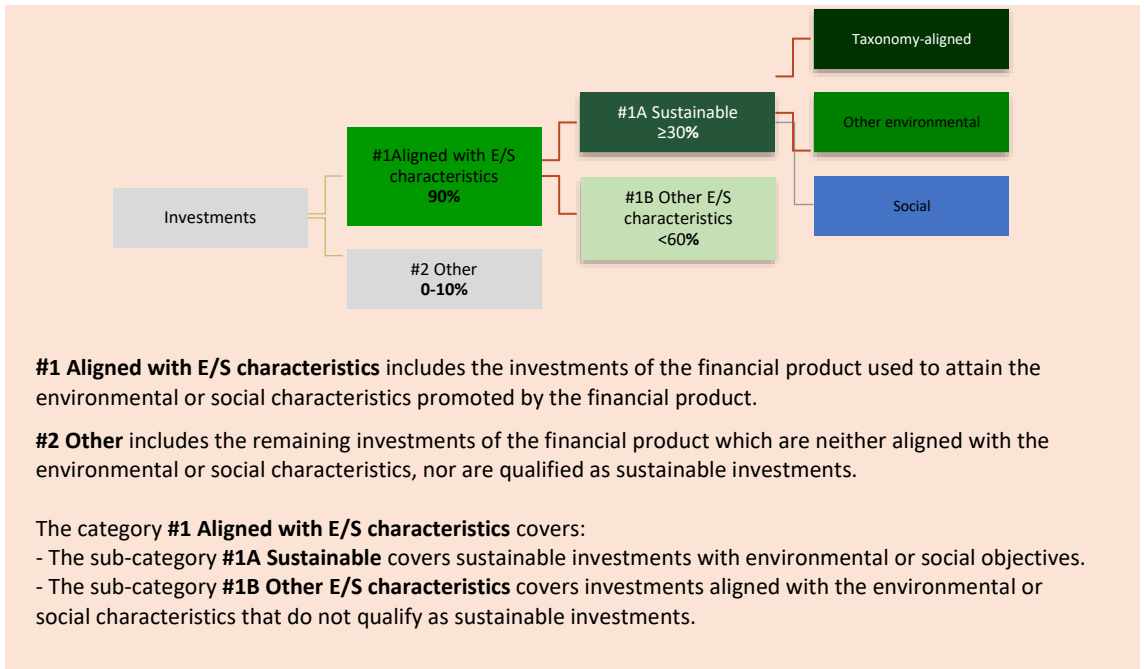

● **What is the asset allocation planned for this financial product?**

Asset allocation describes the share of investments in specific assets.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure (CapEx)** showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure (OpEx)** reflecting green operational activities of investee companies.

At least 90% of the investments are aligned with the E/S characteristics of the Sub-fund. The Sub-fund plans to make a minimum of 30% sustainable investments, measured by either being positive scores via Robeco's SDG Framework or investments in green, sustainability or sustainability-linked bonds. The investments in the category Other, estimated between 0-10%, are mostly in cash, cash equivalents and derivatives as further described below. The planned asset allocation is monitored continuously, and evaluated on a yearly basis.

● **How does the use of derivatives attain the environmental or social characteristics promoted by the financial product?**

The Sub-fund does not make use of derivatives to attain the environmental or social characteristics promoted by the financial product. The Sub-fund may make use of derivatives for hedging, liquidity management and efficient portfolio management as well as investment purposes in the global fixed income, money market, interest rates and currency markets. In case the Sub-fund uses derivatives, the underlying shall comply with the investment policy of the Sub-fund. Where relevant, minimum environmental or social safeguards are taken into account as described below.

To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

0%. The Sub-fund intends to contribute to all 6 environmental objectives under the EU Taxonomy via the investments in green bonds. The Sub-fund commits to a minimum share of 0% of Taxonomy-aligned activities. The Sub-fund intends to increase the minimum share of Taxonomy aligned activities for the Sub-fund, based on use of proceeds, once data availability in relation to the EU Taxonomy for green bonds improves and stabilises.

The Sub-fund will report on Taxonomy-aligned investment in the periodic disclosures. For investments in corporate bonds, the Sub-fund will report on turnover. Given the lack of data on the EU Taxonomy for green bonds in the market, Robeco relies on internal analysis for the time being. EU Taxonomy-alignment data is not yet subject to a review by third parties. The expected level of alignment with and without sovereign bonds is the same.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to renewable power

Does the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy⁷⁵?

Yes

In fossil gas

In nuclear energy

No

⁷⁵ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

or low-carbon fuels by the end of 2035. For nuclear energy, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

 are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.*

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

** As the investments are not Taxonomy-aligned, the exclusion of sovereign bonds has no impact on the graph and therefore no such percentage is shown here.

● **What is the minimum share of investments in transitional and enabling activities?**

0%.

What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?

Green bonds may invest (part of) their use of proceeds in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy. In addition, the Sub-fund intends to make sustainable investments measured as positive scores via Robeco's SDG Framework. Among those could be investments with environmental objectives that do not qualify as Taxonomy-aligned. The environmental objectives of the Sub-fund are attained by investing in companies that score positively on SDG 12 (Responsible consumption and production), SDG 13 (Climate action), SDG 14 (Life below water), and SDG 15 (Life on land) in Robeco's SDG Framework.

While the sum of sustainable investments with an environmental objective and socially sustainable investments always adds up to the Sub-fund's minimum proportion of 30% sustainable investments, we do not commit to a minimum share of sustainable investments with an environmental objective because the Sub-fund's investment strategy does not have a specific environmental investment objective. Therefore, the minimum share of sustainable investments with an environmental objective is 0%.

What is the minimum share of socially sustainable investments?

Social, sustainable or sustainability-linked bonds may invest (part of) their use of proceeds in economic activities that contribute to a social objective.

In addition, the Sub-fund intends to make sustainable investments, measured as positive scores via Robeco's SDG Framework. Among those could be investments with social objectives. The social objectives of the Sub-fund are attained by investing in companies that score positively on SDG 1 (No poverty), SDG 2 (Zero hunger), SDG 3 (Good health and well-being), SDG 4 (Quality education), SDG 5 (Gender equality), SDG 6 (Clean water and sanitation), SDG 7 (Affordable and clean energy), SDG 8 (Decent work and economic growth), SDG 9 (Industry, innovation and infrastructure), SDG 10 (Reduced

inequalities), SDG 11 (Sustainable cities and communities), SDG 16 (Peace, justice and strong institutions) and SDG 17 (Partnerships for the goals), in Robeco's SDG Framework.

While the sum of socially sustainable investments and sustainable investments with an environmental objective always adds up to the Sub-fund's minimum proportion of sustainable investments, we do not commit to a minimum share of socially sustainable investments because the Sub-fund's investment strategy does not have a specific socially sustainable investment objective. Therefore, the minimum share of socially sustainable investments is 0%.

What investments are included under "#2 Other", what is their purpose and are there any minimum environmental or social safeguards?

The type of instruments included under "#2 Other" and their purpose are outlined in Annex I of this Prospectus under the header 'Financial instruments and investment restrictions'. They include cash, cash equivalents, as well as investment funds and eligible asset classes (other than bonds and equities) that do not specifically promote E/S characteristics. As indicated above, the Sub-fund does not make use of derivatives to attain the environmental or social characteristics promoted. The Sub-fund may make use of derivatives, which thus always fall under the category "#2 Other", for hedging, liquidity management and efficient portfolio management as well as investment purposes. Exchange traded and over-the-counter derivatives are permitted, including but not limited to futures, swaps, options and currency forwards. In case the Sub-fund uses derivatives, the underlying shall comply with the investment policy. Where relevant, minimum environmental or social safeguards are taken into account, by, for example, applying Robeco's Exclusion Policy for any single security derivative.

Is a specific index designated as a reference benchmark to determine whether this financial product is aligned with the environmental and/or social characteristics that it promotes?

Not applicable.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

g) Robeco QI Global Multi-Factor High Yield

Pre-contractual disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Product name: Robeco QI Global Multi-Factor High Yield

Legal entity identifier: 213800AQVRERU8HLMD03

Environmental and/or social characteristics

Does this financial product have a sustainable investment objective?

Yes

No

It will make a minimum of **sustainable investments with an environmental objective:** ___%

- in economic activities that qualify as environmentally sustainable under the EU Taxonomy
- in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

It will make a minimum of **sustainable investments with a social objective:** ___%

It promotes **Environmental/Social (E/S) characteristics** and while it does not have as its objective a sustainable investment, it will have a minimum proportion of 20% of sustainable investments

- with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy
- with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy
- with a social objective

It promotes E/S characteristics, but **will not make any sustainable investments**

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

What environmental and/or social characteristics are promoted by this financial product?

The Sub-fund has the following E/S characteristics:

1. The Sub-fund promotes certain minimum environmental and social safeguards through applying exclusion criteria with regards to products and business practices that Robeco believes are detrimental to society and incompatible with sustainable investment strategies, such as exposure to controversial behaviour, controversial weapons, and fossil fuels.
2. The Sub-fund promotes having a lower environmental footprint than the general market index referred to in Appendix VI – Benchmarks (the "General Market Index"), through reduction in carbon, water and waste footprints.
3. The Sub-fund promotes adherence to and conducting business activities in accordance with the United Nations Universal Declaration of Human Rights, the International Labor Organization's (ILO) labor standards, the United Nations Guiding Principles for Business and Human Rights (UNGPs), the United Nations Global Compact (UNGC) and the OECD Guidelines for Multinational Enterprises, by scrutinizing companies that violate these principles.
4. The Sub-fund promotes having a weighted average ESG score that is better than that of the General Market Index.
5. The Sub-fund promotes having a larger share of companies with a positive SDG score (1,2,3) in the portfolio than the General Market Index.

There is no reference benchmark designated for the purpose of attaining the environmental or social characteristics promoted by the Sub-fund.

What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?

The Sub-fund has the following sustainability indicators:

1. The % of investments in securities that are on Robeco's Exclusion list as result of the application of Robeco's Exclusion Policy.
2. The environmental footprint score of the Sub-fund compared to the General Market Index.
3. The number of companies that are in violation of the ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises and hence are a part of the Enhanced Engagement program.
4. The Sub-fund's weighted average ESG score as compared to the General Market Index.
5. The Sub-fund's weight in companies with a positive SDG score (1,2,3) compared to the General Market Index weight in companies with a positive SDG score (1,2,3).

What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?

The sustainable investments aim to contribute to the UN Sustainable Development Goals ("SDGs"), that have both social and environmental objectives. These are 17 goals that are globally recognised and include environmental goals such as climate action, clean water, life on land and water and social goals such as zero hunger, gender equality, education, etc. Robeco has developed a proprietary framework based on the UN SDGs through which an issuer's contribution to such SDGs is determined through a 3-step process. This process starts with a sector baseline on which a company's products are analysed to examine contribution to the society and environment. Further, the operational processes involved in creating such products is checked along with any controversies/litigation claims and remediation actions taken which are perused before a final SDG score is determined. The final score ranges between high

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

negative (-3) to high positive (+3) and only those issuers which achieve positive SDG scores (+1, +2 and +3) are regarded as Sustainable Investments.

● ***How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?***

The sustainable investments do no significant harm to any environmental or social sustainable investment objective by considering a principal adverse impact and aligning with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights. In addition, sustainable investments score positively on Robeco's SDG Framework, and therefore do not cause significant harm.

How have the indicators for adverse impacts on sustainability factors been taken into account?

Mandatory principal adverse impact indicators are considered through Robeco's SDG Framework, either directly or indirectly, when identifying sustainable investments for the Sub-fund. In addition, voluntary environmental and social indicators are taken into account, depending on their relevance for measuring impacts on the SDGs and the availability of data. A detailed description of the incorporation of principal adverse impacts is available via Robeco's Principal Adverse Impact Statement published on the Robeco website (<https://www.robeco.com/files/docm/docu-principal-adverse-impact-statement-summary-entity-level.pdf>). In this statement, Robeco sets out its approach to identifying and prioritizing principal adverse impacts, and how principal adverse impacts are considered as part of Robeco's investment due diligence process and procedures relating to research and analysis, exclusions and restrictions and/or voting and engagement. This description also explains how principal adverse impact indicators are considered by the SDG Framework.

How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The sustainable investments are aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights via both Robeco's Exclusion Policy and Robeco's SDG Framework.

Robeco's Exclusion Policy includes an explanation of how Robeco acts in accordance with the International Labor Organization (ILO) standards, United Nations Guiding Principles (UNGPs), United Nations Global Compact (UNGC) Principles and the Organization for Economic Co-operation and Development (OECD) Guidelines for Multinational Enterprises and is guided by these international treaties to assess the behavior of companies. Robeco continuously screens its investments for breaches of these principles. In case of a breach, the company will be excluded or engaged with, and is not considered a sustainable investment.

Robeco's SDG Framework screens for breaches on these principles in the final step of the framework. In this step, Robeco checks whether the company concerned has been involved in any controversies. Involvement in any controversy will result in a negative SDG score for the company, meaning it is not a sustainable investment.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

Does this financial product consider principal adverse impacts on sustainability factors?

Yes, _____

The Sub-fund considers principal adverse impacts on sustainability factors as referred to in Annex I of the SFDR Delegated Act.

Pre-investment, the following principal adverse impacts on sustainability factors are considered:

o Via the applied normative and activity-based exclusions, the following PAIs are considered:

- Exposure to companies active in the fossil fuel sector (PAI 4, Table 1)
- Violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1)
- Activities negatively affecting biodiversity-sensitive areas (PAI 7, Table 1). The consideration of this PAI is currently restricted to applying exclusions to palm oil producing companies and for any breaches to the UNGC, UNGP and OECD Guidelines for Multinational Enterprises in relation to biodiversity.

- Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons (PAI 14, Table 1)

o Via the environmental footprint performance targets of the Sub-fund, the following PAIs are considered:

- Carbon footprint (PAI 2, Table 1)
- Water and waste indicators (PAI 7-9, Table 1). Robeco will use on water and waste footprint until data quality and coverage of the PAIs will improve.

Post-investment, the following principal adverse impacts on sustainability factors are taken into account via Robeco's entity engagement program:

- All indicators related to Climate and other environment-related indicators (PAI 1-9, Table 1)
- Violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1)
- In addition, based on a yearly review of Robeco's performance on all mandatory and selected voluntary indicators, holdings of the Sub-fund that cause adverse impact might be selected for engagement.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

More information is available via Robeco's Principal Adverse Impact Statement, published on Robeco's website. The Sub-fund will periodically report how it has considered the principal adverse impacts of its investments in the Company's annual report, which will be made available each year on or before 30 April at the Sub-fund page highlighted in final section of this document.

No

What investment strategy does this financial product follow?

Robeco QI Global Multi-Factor High Yield is an actively managed fund that invests systematically in high-yield bonds. The selection of these bonds is based on a quantitative model as described in the Investment policy strategy paragraph in Appendix I of this Prospectus. The Sub-fund focuses on offering exposure to a number of quantitative strategies in a diversified way, such as, but not limited to, a strategy focusing on bonds with (Low volatility); on bonds with an attractive valuation (Value) and a strategy focusing on bonds of companies with a medium term attractive performance trend (Momentum). The strategy integrates sustainability indicators on a continuous basis as part of the bond selection process. Amongst others, the Sub-fund applies norms-based and activity-based exclusions, Robeco's good governance policy, Robeco's SDG framework and considers Principal Adverse Impacts in the investment process. More product-specific information can be found on our website and the links provided in the final question of this disclosure. In case of a rebalancing of the portfolio, the portfolio may temporarily, but no longer than 72 hours, deviate from its binding elements, with the exception of adherence to the exclusion policy that applies at all times.

What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?

The Sub-fund has the following binding elements:

1. The Sub-fund's portfolio complies with Robeco's Exclusion Policy (<https://www.robeco.com/files/docm/docu-exclusion-policy.pdf>), that is based on exclusion criteria with regards to products and business practices that Robeco believes are detrimental to society and incompatible with sustainable investment strategies. This means that the Sub-fund has 0% exposure to excluded securities, taking into account a grace period. Information with regards to the effects of the exclusions on the Sub-fund's universe can be found at <https://www.robeco.com/files/docm/docu-exclusion-list.pdf>
2. The Sub-fund's carbon, water and waste footprint is better than the General Market Index.
3. The Sub-fund scrutinizes investment in companies that are in breach of the ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises. If a company in the portfolio breaches one of the international guidelines during the investment period, the company will become part of the Enhanced Engagement program. When engagement is deemed highly unlikely to succeed, the company might be excluded directly.
4. The Sub-fund's weighted average ESG score is better than that of the General Market Index.
5. The Sub-fund's weight in companies with a positive SDG score (1,2,3) is better than that of the General Market Index.

What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?

The Sub-fund does not commit to a minimum rate to reduce the scope of investments prior to the application of the investment strategy.

The investment strategy guides investment decisions based on factors such as investment objectives and risk tolerance.

● **What is the policy to assess good governance practices of the investee companies?**

Good governance practices include sound management structures, employee relations, remuneration of staff and tax compliance.

Robeco has a Good Governance policy to assess governance practices of companies. The policy describes how Robeco determines if and when a company does not follow good governance practices and is therefore excluded from the initial investment universe for Article 8 and 9 products. Robeco's Good Governance policy applies to the Sub-fund and tests on a set of governance criteria that reflect widely recognized industry established norms and include topics as employee relations, management structure, tax compliance and remuneration.

The Good Governance test consists of criteria on such topics that are examined for investee companies and further explained in Robeco's Good Governance policy <https://www.robeco.com/files/docm/docu-robeco-good-governance-policy.pdf>. Additionally, the companies that do not pass the good governance test are reflected in the exclusion list that can be accessed here - <https://www.robeco.com/files/docm/docu-exclusion-list.pdf>.

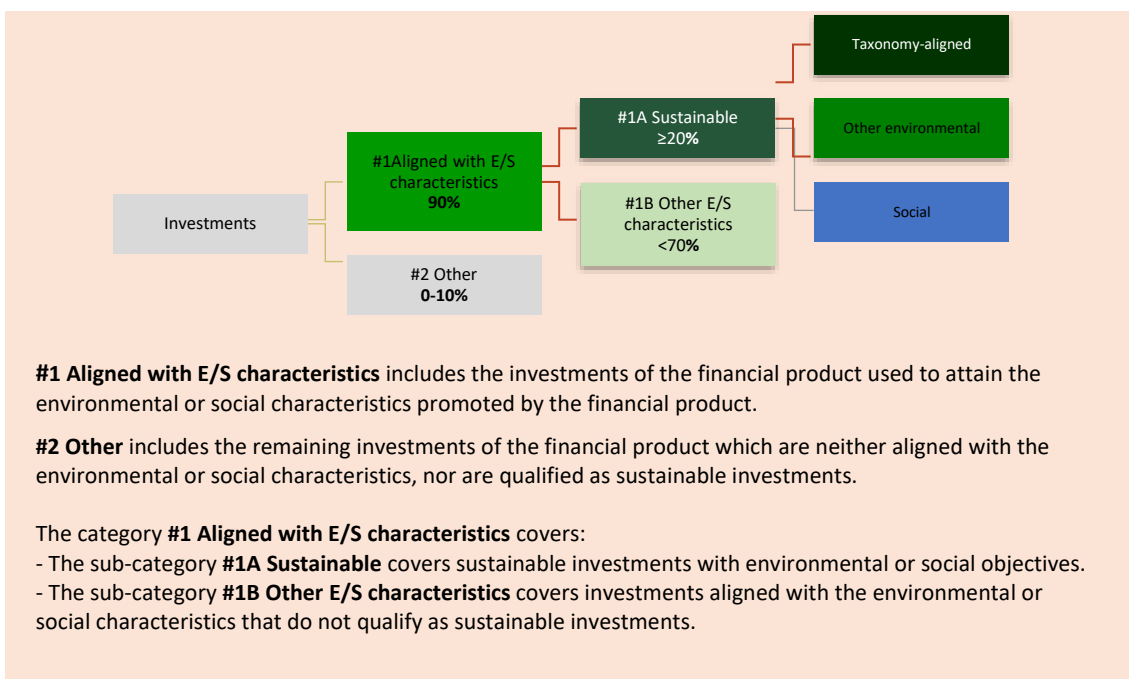

● **What is the asset allocation planned for this financial product?**

Asset allocation describes the share of investments in specific assets.

At least 90% of the investments are aligned with the E/S characteristics of the Sub-fund. The Sub-fund plans to make a minimum of 20% sustainable investments, measured by positive scores via Robeco's SDG Framework. The investments in the category Other, estimated between 0-10%, are mostly in cash, cash equivalents and derivatives as further described below. The planned asset allocation is monitored continuously, and evaluated on a yearly basis.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

● **How does the use of derivatives attain the environmental or social characteristics promoted by the financial product?**

The Sub-fund does not make use of derivatives to attain the environmental or social characteristics promoted by the financial product. The Sub-fund may make use of derivatives for hedging, liquidity management and efficient portfolio management as well as investment purposes in the global fixed income, money market, interest rates and currency markets. In case the Sub-fund uses derivatives, the

underlying shall comply with the investment policy of the Sub-fund. Where relevant, minimum environmental or social safeguards are taken into account as described below.

To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

0%. The Sub-fund does not intend to make Taxonomy-aligned investments. It cannot be excluded that among the Sub-fund's holdings certain investments are Taxonomy aligned. The Sub-fund will report on Taxonomy-aligned investment in the periodic disclosures. In the future, once data-availability in relation to the EU Taxonomy will improve, Robeco might consider setting a target based on turnover or CAPEX. Robeco currently relies on third-party data in relation to the EU Taxonomy, including data in relation to companies that do not disclose on the EU Taxonomy alignment of their activities. EU Taxonomy-alignment data is not yet subject to a review by third parties. The Sub-fund makes investments in equities and bonds and therefore it does not have sovereign exposures. At this moment, the expected level of alignment with and without sovereign bonds is the same.

Does the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy⁷⁶?

Yes

In fossil gas

In nuclear energy

No

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.*

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

** As the investments are not Taxonomy-aligned, the exclusion of sovereign bonds has no impact on the graph and therefore no such percentage is shown here.

What is the minimum share of investments in transitional and enabling activities?

0%.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

⁷⁶ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

 are sustainable investments with an environmental objective that **do not take into account the criteria for environmentally sustainable economic activities under the EU Taxonomy.**

What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?

The Sub-fund intends to make sustainable investments, measured as positive scores via Robeco's SDG Framework. Among those could be investments with environmental objectives that do not qualify as Taxonomy-aligned. The environmental objectives of the Sub-fund are attained by investing in companies that score positively on SDG 12 (Responsible consumption and production), SDG 13 (Climate action), SDG 14 (Life below water), and SDG 15 (Life on land) in Robeco's SDG Framework. While the sum of sustainable investments with an environmental objective and socially sustainable investments always adds up to the Sub-fund's minimum proportion of 20% sustainable investments, we do not commit to a minimum share of sustainable investments with an environmental objective because the Sub-fund's investment strategy does not have a specific environmental investment objective. Therefore, the minimum share of sustainable investments with an environmental objective is 0%.

What is the minimum share of socially sustainable investments?

The Sub-fund intends to make sustainable investments, measured as positive scores via Robeco's SDG Framework. Among those could be investments with social objectives. The social objectives of the Sub-fund are attained by investing in companies that score positively on SDG 1 (No poverty), SDG 2 (Zero hunger), SDG 3 (Good health and well-being), SDG 4 (Quality education), SDG 5 (Gender equality), SDG 6 (Clean water and sanitation), SDG 7 (Affordable and clean energy), SDG 8 (Decent work and economic growth), SDG 9 (Industry, innovation and infrastructure), SDG 10 (Reduced inequalities), SDG 11 (Sustainable cities and communities), SDG 16 (Peace, justice and strong institutions) and SDG 17 (Partnerships for the goals), in Robeco's SDG Framework. While the sum of socially sustainable investments and sustainable investments with an environmental objective always adds up to the Sub-fund's minimum proportion of sustainable investments, we do not commit to a minimum share of socially sustainable investments because the Sub-fund's investment strategy does not have a specific socially sustainable investment objective. Therefore, the minimum share of socially sustainable investments is 0%.

What investments are included under "#2 Other", what is their purpose and are there any minimum environmental or social safeguards?

The type of instruments included under "#2 Other" and their purpose are outlined in Annex I of this Prospectus under the header 'Financial instruments and investment restrictions'. They include cash, cash equivalents, as well as investment funds and eligible asset classes (other than bonds and equities) that do not specifically promote E/S characteristics. As indicated above, the Sub-fund does not make use of derivatives to attain the environmental or social characteristics promoted. The Sub-fund may make use of derivatives, which thus always fall under the category "#2 Other", for hedging, liquidity management and efficient portfolio management as well as investment purposes. Exchange traded and over-the-counter derivatives are permitted, including but not limited to futures, swaps, options and currency forwards. In case the Sub-fund uses derivatives, the underlying shall comply with the investment policy. Where relevant, minimum environmental or social safeguards are taken into account, by, for example, applying Robeco's Exclusion Policy for any single security derivative.

Is a specific index designated as a reference benchmark to determine whether this financial product is aligned with the environmental and/or social characteristics that it promotes?

Not applicable.

Reference benchmarks are indexes to measure whether the financial product attains the

environmental or social characteristics that they promote.

h) RobecoSAM SDG Credit Income

Pre-contractual disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Product name: RobecoSAM SDG Credit Income

Legal entity identifier: 213800T791CO7EB3NL58

Environmental and/or social characteristics

Does this financial product have a sustainable investment objective?

Yes

No

It will make a minimum of **sustainable investments with an environmental objective:** ___%

- in economic activities that qualify as environmentally sustainable under the EU Taxonomy
- in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

It will make a minimum of **sustainable investments with a social objective:** ___%

It promotes **Environmental/Social (E/S) characteristics** and while it does not have as its objective a sustainable investment, it will have a minimum proportion of 70% of sustainable investments

- with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy
- with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy
- with a social objective

It promotes E/S characteristics, but **will not make any sustainable investments**

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

What environmental and/or social characteristics are promoted by this financial product?

The Sub-fund has the following E/S characteristics:

1. The Sub-fund promotes investment in a portfolio that contributes to the Sustainable Development Goals (SDGs).
2. The Sub-fund promotes certain minimum environmental and social safeguards through applying exclusion criteria with regards to products and business practices that Robeco believes are detrimental to society and incompatible with sustainable investment strategies, such as exposure to controversial behaviour, controversial weapons, and fossil fuels.
3. The Sub-fund promotes adherence to and conducting business activities in accordance with the United Nations Universal Declaration of Human Rights, the International Labor Organization's (ILO) labor standards, the United Nations Guiding Principles for Business and Human Rights (UNGPs), the United Nations Global Compact (UNGC) and the OECD Guidelines for Multinational Enterprises.
4. The Sub-fund aims to contribute to the United Nations Sustainable Development Goals by investing in green, social, sustainability and/or sustainability-linked bonds that are used to finance environmental and social projects.

There is no reference benchmark designated for the purpose of attaining the environmental or social characteristics promoted by the Sub-fund.

● **What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?**

The Sub-fund has the following sustainability indicators:

1. Investments in companies with a positive or neutral SDG score based on the internally developed SDG Framework.
2. For its allocation to Emerging Markets sovereign bonds: investments in countries with a positive or neutral SDG score based on the internally developed SDG Framework.
3. The % of investments in securities that are on Robeco's Exclusion list as result of the application of Robeco's Exclusion Policy.
4. The number of holdings that are in violation of the ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises.
5. The % of the Sub-fund invested in green, social, sustainability and/or sustainability-linked bonds.

● **What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?**

The sustainable investments aim to contribute to the UN Sustainable Development Goals ("SDGs"), that have both social and environmental objectives. These are 17 goals that are globally recognised and include environmental goals such as climate action, clean water, life on land and water and social goals such as zero hunger, gender equality, education, etc. Robeco has developed a proprietary framework based on the UN SDGs through which an issuer's contribution to such SDGs is determined through a 3-step process. This process starts with a sector baseline on which a company's products are analysed to examine contribution to the society and environment. Further, the operational processes involved in creating such products is checked along with any controversies/litigation claims and remediation actions taken which are perused before a final SDG score is determined. The final score ranges between high negative (-3) to high positive (+3) and only those issuers which achieve positive SDG scores (+1, +2 and +3) are regarded as Sustainable Investments.

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

● ***How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?***

The sustainable investments do no significant harm to any environmental or social sustainable investment objective by considering a principal adverse impact and aligning with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights. In addition, sustainable investments score positively on Robeco's SDG Framework, and therefore do not cause significant harm.

How have the indicators for adverse impacts on sustainability factors been taken into account?

Robeco's SDG Framework assesses the contribution of companies and countries to the Sustainable Development Goals (SDGs). Many PAI indicators are either directly or indirectly included in the SDG Framework to determine whether a company has significant impacts on the SDGs related to the PAI indicators. A detailed description of the incorporation of Principal Adverse Impact is available via Robeco's Principal Adverse Impact Statement published on the Robeco website (<https://www.robeco.com/files/docm/docu-principal-adverse-impact-statement-summary-entity-level.pdf>).

How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The sustainable investments are aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights via both Robeco's Exclusion Policy and Robeco's SDG Framework.

Robeco's Exclusion Policy includes an explanation of how Robeco acts in accordance with the International Labor Organization (ILO) standards, United Nations Guiding Principles (UNGPs), United Nations Global Compact (UNGC) Principles and the Organization for Economic Co-operation and Development (OECD) Guidelines for Multinational Enterprises and is guided by these international treaties to assess the behavior of companies. Robeco continuously screens its investments for breaches of these principles. In case of a breach, the company will be excluded or engaged with, and is not considered a sustainable investment.

Robeco's SDG Framework screens for breaches on these principles in the final step of the framework. In this step, Robeco checks whether the company concerned has been involved in any controversies. Involvement in any controversy will result in a negative SDG score for the company, meaning it is not a sustainable investment.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

Does this financial product consider principal adverse impacts on sustainability factors?

Yes, _____

The Sub-fund considers principal adverse impacts on sustainability factors as referred to in Annex I of the SFDR Delegated Act.

Pre-investment, Robeco's SDG Framework assesses companies' and countries' positive and negative contributions to the Sustainable Development Goals (SDGs). Robeco's SDG Framework directly and/or indirectly screens companies and countries on many of the topics considered by the PAI indicators.

Post-investment, the following principal adverse impacts on sustainability factors are taken into account via Robeco's entity engagement program:

- All indicators related to Climate and other environment-related indicators (PAI 1-9, Table 1)
- Violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1). On an ongoing basis, the investment universe is scanned for controversial behavior in relation to the aforementioned principles and guidelines.
- In addition, based on a yearly review of Robeco's performance on all mandatory and selected voluntary indicators, holdings of the Sub-fund that cause adverse impact might be selected for engagement.

More information is available via Robeco's Principal Adverse Impact Statement, published on Robeco's website. The Sub-fund will periodically report how it has considered the principal adverse impacts of its investments in the Company's annual report, which will be made available each year on or before 30 April at the Sub-fund page highlighted in final section of this document.

No

What investment strategy does this financial product follow?

RobecoSAM SDG Credit Income is an actively managed fund that invests in companies and countries that contribute to realizing the UN Sustainable Development Goals (SDGs). The selection of these bonds is based on fundamental analysis as described in the Investment policy strategy paragraph in Appendix I of this Prospectus.

The strategy integrates sustainability indicators on a continuous basis as part of the bond selection process. Amongst others, the Sub-fund applies norms-based, activity-based and regional exclusions, Robeco's good governance policy, Robeco's SDG framework and considers Principal Adverse Impacts in the investment process. More product-specific information can be found on our website and the links provided in the final question of this disclosure.

What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?

The Sub-fund has the following binding elements:

1. The Sub-fund is solely invested in companies that hold a positive or neutral SDG score.
2. For its allocation to Emerging Markets sovereign bonds: The Sub-fund is solely invested in countries that hold a positive or neutral SDG score.
3. The Sub-fund's portfolio complies with Robeco's Exclusion Policy (<https://www.robeco.com/files/docm/docu-exclusion-policy.pdf>), that is based on exclusion criteria with regards to products and business practices that Robeco believes are detrimental to society and incompatible with sustainable investment strategies. This means that the Sub-fund has

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

The investment strategy guides investment decisions based on factors such as investment objectives and risk tolerance.

0% exposure to excluded securities, taking into account a grace period. Information with regards to the effects of the exclusions on the Sub-fund's universe can be found at <https://www.robeco.com/files/docm/docu-exclusion-list.pdf>.

4. The Sub-fund avoids investment in companies that are in breach of the ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises. Companies that breach the international norms will be excluded from the investment universe.
5. The Sub-fund invests a minimum of 5% in green, social, sustainability, and/or sustainability-linked bonds.

● ***What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?***

The Sub-fund does not commit to a minimum rate to reduce the scope of investments prior to the application of the investment strategy.

● ***What is the policy to assess good governance practices of the investee companies?***

Robeco has a Good Governance policy to assess governance practices of companies. The policy describes how Robeco determines if and when a company does not follow good governance practices and is therefore excluded from the initial investment universe for Article 8 and 9 products. Robeco's Good Governance policy applies to the Sub-fund and tests on a set of governance criteria that reflect widely recognized industry established norms and include topics as employee relations, management structure, tax compliance and remuneration.

The Good Governance test consists of criteria on such topics that are examined for investee companies and further explained in Robeco's Good Governance policy <https://www.robeco.com/files/docm/docu-robeco-good-governance-policy.pdf>. Additionally, the companies that do not pass the good governance test are reflected in the exclusion list that can be accessed here - <https://www.robeco.com/files/docm/docu-exclusion-list.pdf>.

● ***What is the asset allocation planned for this financial product?***

At least 90% of the investments are aligned with the E/S characteristics of the Sub-fund. The Sub-fund plans to make a minimum of 70% sustainable investments, measured by positive scores via Robeco's SDG Framework. The investments in the category Other, estimated between 0-10%, are mostly in cash, cash equivalents and derivatives as further described below. The planned asset allocation is monitored continuously, and evaluated on a yearly basis.

Good governance practices include sound management structures, employee relations, remuneration of staff and tax compliance.

Asset allocation describes the share of investments in specific assets.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

● **How does the use of derivatives attain the environmental or social characteristics promoted by the financial product?**

The Sub-fund does not make use of derivatives to attain the environmental or social characteristics promoted by the financial product. The Sub-fund may make use of derivatives for hedging, liquidity management and efficient portfolio management as well as investment purposes in the global fixed income, money market, interest rates and currency markets. In case the Sub-fund uses derivatives, the underlying shall comply with the investment policy. Where relevant, minimum environmental or social safeguards are taken into account as described below.

To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

0%. The Sub-fund intends to contribute to all 6 environmental objectives under the EU Taxonomy via the investments in green bonds. The Sub-fund commits to a minimum share of 0% of Taxonomy-aligned activities. The Sub-fund intends to increase the minimum share of Taxonomy aligned activities for the Sub-fund, based on use of proceeds, once data availability in relation to the EU Taxonomy for green bonds improves and stabilises.

The Sub-fund will report on Taxonomy-aligned investment in the periodic disclosures. For investments in corporate bonds, the Sub-fund will report on turnover. Given the lack of data on the EU Taxonomy for green bonds in the market, Robeco relies on internal analysis for the time being. EU Taxonomy-alignment data is not yet subject to a review by third parties. The expected level of alignment with and without sovereign bonds is the same.

To comply with the EU Taxonomy, the

● **Does the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy⁷⁷?**

⁷⁷ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

criteria for **fossil gas** include limitations on emissions and switching to renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

 are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

- Yes
- In fossil gas
- In nuclear energy
- No

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.*

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

** As the investments are not Taxonomy-aligned, the exclusion of sovereign bonds has no impact on the graph and therefore no such percentage is shown here.

 **What is the minimum share of investments in transitional and enabling activities?**

0%.

 **What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?**

Green bonds may invest (part of) their use of proceeds in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy. In addition, the Sub-fund intends to make sustainable investments measured as positive scores via Robeco's SDG Framework. Among those could be investments with environmental objectives that do not qualify as Taxonomy-aligned. The environmental objectives of the Sub-fund are attained by investing in companies and countries that score positively on SDG 12 (Responsible consumption and production), SDG 13 (Climate action), SDG 14 (Life below water), and SDG 15 (Life on land) in Robeco's SDG Framework.

While the sum of sustainable investments with an environmental objective and socially sustainable investments always adds up to the Sub-fund's minimum proportion of 70% sustainable investments, we do not commit to a minimum share of sustainable investments with an environmental objective because the Sub-fund's investment strategy does not have a specific environmental investment objective. Therefore, the minimum share of sustainable investments with an environmental objective is 0%.

 **What is the minimum share of socially sustainable investments?**

Social, sustainable or sustainability-linked bonds may invest (part of) their use of proceeds in economic activities that contribute to a social objective. In addition, the Sub-fund intends to make sustainable investments, measured as positive scores via Robeco's SDG Framework. Among those could be investments with social objectives. The social objectives of the Sub-fund are attained by investing in

companies and countries that score positively on SDG 1 (No poverty), SDG 2 (Zero hunger), SDG 3 (Good health and well-being), SDG 4 (Quality education), SDG 5 (Gender equality), SDG 6 (Clear water and sanitation), SDG 7 (Affordable and clean energy), SDG 8 (Decent work and economic growth), SDG 9 (Industry, innovation and infrastructure), SDG 10 (Reduced inequalities), SDG 11 (Sustainable cities and communities), SDG 16 (Peace, justice and strong institutions) and SDG 17 (Partnerships for the goals), in Robeco's SDG Framework.

While the sum of socially sustainable investments and sustainable investments with an environmental objective always adds up to the Sub-fund's minimum proportion of sustainable investments, we do not commit to a minimum share of socially sustainable investments because the Sub-fund's investment strategy does not have a specific socially sustainable investment objective. Therefore, the minimum share of socially sustainable investments is 0%.

What investments are included under "#2 Other", what is their purpose and are there any minimum environmental or social safeguards?

The type of instruments included under "#2 Other" and their purpose are outlined in Annex I of this Prospectus under the header 'Financial instruments and investment restrictions'. They include cash, cash equivalents, as well as investment funds and eligible asset classes (other than bonds and equities) that do not specifically promote E/S characteristics. As indicated above, the Sub-fund does not make use of derivatives to attain the environmental or social characteristics promoted. The Sub-fund may make use of derivatives, which thus always fall under the category "#2 Other", for hedging, liquidity management and efficient portfolio management as well as investment purposes. Exchange traded and over-the-counter derivatives are permitted, including but not limited to futures, swaps, options and currency forwards. In case the Sub-fund uses derivatives, the underlying shall comply with the investment policy. Where relevant, minimum environmental or social safeguards are taken into account, by, for example, applying Robeco's Exclusion Policy for any single security derivative.

Is a specific index designated as a reference benchmark to determine whether this financial product is aligned with the environmental and/or social characteristics that it promotes?

Not applicable.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

i) RobecoSAM Global SDG Credits

Pre-contractual disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Product name: RobecoSAM Global SDG Credits

Legal entity identifier: 213800CKSU373L6J3U62

Environmental and/or social characteristics

Does this financial product have a sustainable investment objective?

Yes

No

It will make a minimum of **sustainable investments with an environmental objective:** ___%

- in economic activities that qualify as environmentally sustainable under the EU Taxonomy
- in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

It will make a minimum of **sustainable investments with a social objective:** ___%

It promotes **Environmental/Social (E/S) characteristics** and while it does not have as its objective a sustainable investment, it will have a minimum proportion of 70% of sustainable investments

- with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy
- with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy
- with a social objective

It promotes E/S characteristics, but **will not make any sustainable investments**

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

What environmental and/or social characteristics are promoted by this financial product?

The Sub-fund has the following E/S characteristics:

1. The Sub-fund promotes investment in a portfolio that contributes to the Sustainable Development Goals.
2. The Sub-fund promotes certain minimum environmental and social safeguards through applying exclusion criteria with regards to products and business practices that Robeco believes are detrimental to society and incompatible with sustainable investment strategies, such as exposure to controversial behaviour, controversial weapons, and fossil fuels.
3. The Sub-fund promotes adherence to and conducting business activities in accordance with the United Nations Universal Declaration of Human Rights, the International Labor Organization's (ILO) labor standards, the United Nations Guiding Principles for Business and Human Rights (UNGPs), the United Nations Global Compact (UNGC) and the OECD Guidelines for Multinational Enterprises.
4. The Sub-fund aims to contribute to the United Nations Sustainable Development Goals by investing in green, social, sustainability and/or sustainability-linked bonds that are used to finance environmental and social projects.

There is no reference benchmark designated for the purpose of attaining the environmental or social characteristics promoted by the Sub-fund.

● ***What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?***

The Sub-fund has the following sustainability indicators:

1. The number of companies that hold a positive or neutral SDG score based on the internally developed SDG Framework.
2. The % of investments in securities that are on Robeco's Exclusion list as result of the application of Robeco's Exclusion Policy.
3. The number of holdings that are in violation of the ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises.
4. The % of the Sub-fund invested in green, social, sustainability and/or sustainability-linked bonds.

● ***What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?***

The sustainable investments aim to contribute to the UN Sustainable Development Goals ("SDGs"), that have both social and environmental objectives. These are 17 goals that are globally recognised and include environmental goals such as climate action, clean water, life on land and water and social goals such as zero hunger, gender equality, education, etc. Robeco has developed a proprietary framework based on the UN SDGs through which an issuer's contribution to such SDGs is determined through a 3-step process. This process starts with a sector baseline on which a company's products are analysed to examine contribution to the society and environment. Further, the operational processes involved in creating such products is checked along with any controversies/litigation claims and remediation actions taken which are perused before a final SDG score is determined. The final score ranges between high negative (-3) to high positive (+3) and only those issuers which achieve positive SDG scores (+1, +2 and +3) are regarded as Sustainable Investments.

How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

The sustainable investments do no significant harm to any environmental or social sustainable investment objective by considering a principal adverse impact and aligning with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights. In addition, sustainable investments score positively on Robeco's SDG Framework, and therefore do not cause significant harm.

How have the indicators for adverse impacts on sustainability factors been taken into account?

Mandatory principal adverse impact indicators are considered through Robeco's SDG Framework, either directly or indirectly, when identifying sustainable investments for the Sub-fund. In addition, voluntary environmental and social indicators are taken into account, depending on their relevance for measuring impacts on the SDGs and the availability of data. A detailed description of the incorporation of principal adverse impacts is available via Robeco's Principal Adverse Impact Statement published on the Robeco website (<https://www.robeco.com/files/docm/docu-principal-adverse-impact-statement-summary-entity-level.pdf>). In this statement, Robeco sets out its approach to identifying and prioritizing principal adverse impacts, and how principal adverse impacts are considered as part of Robeco's investment due diligence process and procedures relating to research and analysis, exclusions and restrictions and/or voting and engagement. This description also explains how principal adverse impact indicators are considered by the SDG Framework.

How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The sustainable investments are aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights via both Robeco's Exclusion Policy and Robeco's SDG Framework.

Robeco's Exclusion Policy includes an explanation of how Robeco acts in accordance with the International Labor Organization (ILO) standards, United Nations Guiding Principles (UNGPs), United Nations Global Compact (UNGC) Principles and the Organization for Economic Co-operation and Development (OECD) Guidelines for Multinational Enterprises and is guided by these international treaties to assess the behavior of companies. Robeco continuously screens its investments for breaches of these principles. In case of a breach, the company will be excluded or engaged with, and is not considered a sustainable investment.

Robeco's SDG Framework screens for breaches on these principles in the final step of the framework. In this step, Robeco checks whether the company concerned has been involved in any controversies. Involvement in any controversy will result in a negative SDG score for the company, meaning it is not a sustainable investment.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

Does this financial product consider principal adverse impacts on sustainability factors?

Yes, _____

The Sub-fund considers principal adverse impacts on sustainability factors as referred to in Annex I of the SFDR Delegated Act.

Pre-investment, Robeco's SDG Framework assesses companies' positive and negative contributions to the Sustainable Development Goals (SDGs). Robeco's SDG Framework directly and/or indirectly screens companies on many of the topics considered by the PAI indicators.

Post-investment, the following principal adverse impacts on sustainability factors are taken into account:

- Via Robeco's entity engagement program, the following PAIs are considered:

- All indicators related to Climate and other environment-related indicators (PAI 1-9, Table 1)
- Violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1). On an ongoing basis, the investment universe is scanned for controversial behavior in relation to the aforementioned principles and guidelines.
- In addition, based on a yearly review of Robeco's performance on all mandatory and selected voluntary indicators, holdings of the Sub-fund that cause adverse impact might be selected for engagement.

More information is available via Robeco's Principal Adverse Impact Statement, published on Robeco's website. The Sub-fund will periodically report how it has considered the principal adverse impacts of its investments in the Company's annual report, which will be made available each year on or before 30 April at the Sub-fund page highlighted in final section of this document.

No

What investment strategy does this financial product follow?

RobecoSAM Global SDG Credits is an actively managed fund that invests in corporate bonds in the global developed and emerging markets. The selection of these bonds is based on fundamental analysis as described in the Investment policy strategy paragraph in Appendix I of this Prospectus. The strategy integrates sustainability indicators on a continuous basis as part of the bond selection process. Amongst others, the Sub-fund applies norms-based, activity-based and regional exclusions, Robeco's good governance policy, Robeco's SDG framework and considers Principal Adverse Impacts in the investment process. More product-specific information can be found on our website and the links provided in the final question of this disclosure.

What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?

The Sub-fund has the following binding elements:

1. The Sub-fund is solely invested in companies that hold a positive or neutral SDG score.
2. The Sub-fund's portfolio complies with Robeco's Exclusion Policy (<https://www.robeco.com/files/docm/docu-exclusion-policy.pdf>), that is based on exclusion criteria with regards to products and business practices that Robeco believes are detrimental to society and incompatible with sustainable investment strategies. This means that the Sub-fund has 0% exposure to excluded securities, taking into account a grace period. Information with regards

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

The investment strategy guides investment decisions based on factors such as investment objectives and risk tolerance.

to the effects of the exclusions on the Sub-fund's universe can be found at <https://www.robeco.com/files/docm/docu-exclusion-list.pdf>.

3. The Sub-fund avoids investment in companies that are in breach of the ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises. Companies that breach the international norms will be excluded from the investment universe.
4. The Sub-fund invests a minimum of 10% in green, social, sustainability, and/or sustainability-linked bonds.

● **What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?**

The Sub-fund does not commit to a minimum rate to reduce the scope of investments prior to the application of the investment strategy.

● **What is the policy to assess good governance practices of the investee companies?**

Robeco has a Good Governance policy to assess governance practices of companies. The policy describes how Robeco determines if and when a company does not follow good governance practices and is therefore excluded from the initial investment universe for Article 8 and 9 products. Robeco's Good Governance policy applies to the Sub-fund and tests on a set of governance criteria that reflect widely recognized industry established norms and include topics as employee relations, management structure, tax compliance and remuneration.

The Good Governance test consists of criteria on such topics that are examined for investee companies and further explained in Robeco's Good Governance policy <https://www.robeco.com/files/docm/docu-robeco-good-governance-policy.pdf>. Additionally, the companies that do not pass the good governance test are reflected in the exclusion list that can be accessed here - <https://www.robeco.com/files/docm/docu-exclusion-list.pdf>.

Good governance practices include sound management structures, employee relations, remuneration of staff and tax compliance.

What is the asset allocation planned for this financial product?

At least 90% of the investments are aligned with the E/S characteristics of the Sub-fund. The Sub-fund plans to make a minimum of 70% sustainable investments, measured by positive scores via Robeco's SDG Framework. The investments in the category Other, estimated between 0-10%, are mostly in cash, cash equivalents and derivatives as further described below. The planned asset allocation is monitored continuously, and evaluated on a yearly basis.

Asset allocation describes the share of investments in specific assets.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

● **How does the use of derivatives attain the environmental or social characteristics promoted by the financial product?**

The Sub-fund does not make use of derivatives to attain the environmental or social characteristics promoted by the financial product. The Sub-fund may make use of derivatives for hedging, liquidity management and efficient portfolio management as well as investment purposes. Exchange traded and over-the-counter derivatives are permitted, including but not limited to futures, swaps, options and currency forwards. Whilst the Sub-fund may use derivatives both for investment purposes as well as for hedging and efficient portfolio management, it does not utilize derivatives for such purposes outside the intended share of investments allocated to the 'Other' category.

In case the Sub-fund uses derivatives, the underlying shall comply with the investment policy. Where relevant, minimum environmental or social safeguards are taken into account as described below.

● **To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?**

0%. The Sub-fund intends to contribute to all 6 environmental objectives under the EU Taxonomy via the investments in green bonds. The Sub-fund commits to a minimum share of 0% of Taxonomy-aligned activities. The Sub-fund intends to increase the minimum share of Taxonomy aligned activities for the Sub-fund, based on use of proceeds, once data availability in relation to the EU Taxonomy for green bonds improves and stabilises.

The Sub-fund will report on Taxonomy-aligned investment in the periodic disclosures. For investments in corporate bonds, the Sub-fund will report on turnover. Given the lack of data on the EU Taxonomy for green bonds in the market, Robeco relies on internal analysis for the time being. EU Taxonomy-alignment data is not yet subject to a review by third parties. The expected level of alignment with and without sovereign bonds is the same.

To comply with the EU Taxonomy, the

● **Does the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy⁷⁸?**

⁷⁸ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

criteria for **fossil gas** include limitations on emissions and switching to renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

 are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

- Yes
- In fossil gas
- In nuclear energy
- No

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.*

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

** As the investments are not Taxonomy-aligned, the exclusion of sovereign bonds has no impact on the graph and therefore no such percentage is shown here.

 **What is the minimum share of investments in transitional and enabling activities?**

0%.

What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?

Green bonds may invest (part of) their use of proceeds in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy. In addition, the Sub-fund intends to make sustainable investments measured as positive scores via Robeco's SDG Framework. Among those could be investments with environmental objectives that do not qualify as Taxonomy-aligned. The environmental objectives of the Sub-fund are attained by investing in companies that score positively on SDG 12 (Responsible consumption and production), SDG 13 (Climate action), SDG 14 (Life below water), and SDG 15 (Life on land) in Robeco's SDG Framework.

While the sum of sustainable investments with an environmental objective and socially sustainable investments always adds up to the Sub-fund's minimum proportion of 70% sustainable investments, we do not commit to a minimum share of sustainable investments with an environmental objective because the Sub-fund's investment strategy does not have a specific environmental investment objective. Therefore, the minimum share of sustainable investments with an environmental objective is 0%.

What is the minimum share of socially sustainable investments?

Social, sustainable or sustainability-linked bonds may invest (part of) their use of proceeds in economic activities that contribute to a social objective. In addition, the Sub-fund intends to make sustainable investments, measured as positive scores via Robeco's SDG Framework. Among those could be investments with social objectives. The social objectives of the Sub-fund are attained by investing in companies that score positively on SDG 1 (No poverty), SDG 2 (Zero hunger), SDG 3 (Good health and

well-being), SDG 4 (Quality education), SDG 5 (Gender equality), SDG 6 (Clear water and sanitation), SDG 7 (Affordable and clean energy), SDG 8 (Decent work and economic growth), SDG 9 (Industry, innovation and infrastructure), SDG 10 (Reduced inequalities), SDG 11 (Sustainable cities and communities), SDG 16 (Peace, justice and strong institutions) and SDG 17 (Partnerships for the goals), in Robeco's SDG Framework.

While the sum of socially sustainable investments and sustainable investments with an environmental objective always adds up to the Sub-fund's minimum proportion of sustainable investments, we do not commit to a minimum share of socially sustainable investments because the Sub-fund's investment strategy does not have a specific socially sustainable investment objective. Therefore, the minimum share of socially sustainable investments is 0%.

What investments are included under "#2 Other", what is their purpose and are there any minimum environmental or social safeguards?

The type of instruments included under "#2 Other" and their purpose are outlined in Annex I of this Prospectus under the header 'Financial instruments and investment restrictions'. They include cash, cash equivalents, as well as investment funds and eligible asset classes (other than bonds and equities) that do not specifically promote E/S characteristics. As indicated above, the Sub-fund does not make use of derivatives to attain the environmental or social characteristics promoted. The Sub-fund may make use of derivatives, which thus always fall under the category "#2 Other", for hedging, liquidity management and efficient portfolio management as well as investment purposes. Exchange traded and over-the-counter derivatives are permitted, including but not limited to futures, swaps, options and currency forwards. In case the Sub-fund uses derivatives, the underlying shall comply with the investment policy. Where relevant, minimum environmental or social safeguards are taken into account, by, for example, applying Robeco's Exclusion Policy for any single security derivative.

Is a specific index designated as a reference benchmark to determine whether this financial product is aligned with the environmental and/or social characteristics that it promotes?

Not applicable.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

j) RobecoSAM SDG High Yield Bonds

Pre-contractual disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Product name: RobecoSAM SDG High Yield Bonds

Legal entity identifier: 2138004EB4XIM39VFW48

Environmental and/or social characteristics

Does this financial product have a sustainable investment objective?

Yes

No

It will make a minimum of **sustainable investments with an environmental objective:** ___%

- in economic activities that qualify as environmentally sustainable under the EU Taxonomy
- in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

It will make a minimum of **sustainable investments with a social objective:** ___%

It promotes **Environmental/Social (E/S) characteristics** and while it does not have as its objective a sustainable investment, it will have a minimum proportion of 70% of sustainable investments

- with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy
- with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy
- with a social objective

It promotes E/S characteristics, but **will not make any sustainable investments**

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

What environmental and/or social characteristics are promoted by this financial product?

The Sub-fund has the following E/S characteristics:

1. The Sub-fund promotes investment in a portfolio that contributes to the Sustainable Development Goals.
2. The Sub-fund promotes certain minimum environmental and social safeguards through applying exclusion criteria with regards to products and business practices that Robeco believes are detrimental to society and incompatible with sustainable investment strategies, such as exposure to controversial behaviour, controversial weapons, and fossil fuels.
3. The Sub-fund promotes adherence to and conducting business activities in accordance with the United Nations Universal Declaration of Human Rights, the International Labor Organization's (ILO) labor standards, the United Nations Guiding Principles for Business and Human Rights (UNGPs), the United Nations Global Compact (UNGC) and the OECD Guidelines for Multinational Enterprises.
4. The Sub-fund aims to contribute to the United Nations Sustainable Development Goals by investing in green, social, sustainability and/or sustainability-linked bonds that are used to finance environmental and social projects.

There is no reference benchmark designated for the purpose of attaining the environmental or social characteristics promoted by the Sub-fund.

● ***What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?***

The Sub-fund has the following sustainability indicators:

1. The number of companies that hold a positive or neutral SDG score based on the internally developed SDG Framework.
2. The % of investments in securities that are on Robeco's Exclusion list as result of the application of Robeco's Exclusion Policy.
3. The number of holdings that are in violation of the ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises.
4. The % of the Sub-fund invested in green, social, sustainability and/or sustainability-linked bonds.

● ***What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?***

The sustainable investments aim to contribute to the UN Sustainable Development Goals ("SDGs"), that have both social and environmental objectives. These are 17 goals that are globally recognised and include environmental goals such as climate action, clean water, life on land and water and social goals such as zero hunger, gender equality, education, etc. Robeco has developed a proprietary framework based on the UN SDGs through which an issuer's contribution to such SDGs is determined through a 3-step process. This process starts with a sector baseline on which a company's products are analysed to examine contribution to the society and environment. Further, the operational processes involved in creating such products is checked along with any controversies/litigation claims and remediation actions taken which are perused before a final SDG score is determined. The final score ranges between high negative (-3) to high positive (+3) and only those issuers which achieve positive SDG scores (+1, +2 and +3) are regarded as Sustainable Investments.

● ***How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?***

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

The sustainable investments do no significant harm to any environmental or social sustainable investment objective by considering a principal adverse impact and aligning with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights. In addition, sustainable investments score positively on Robeco's SDG Framework, and therefore do not cause significant harm.

How have the indicators for adverse impacts on sustainability factors been taken into account?

Mandatory principal adverse impact indicators are considered through Robeco's SDG Framework, either directly or indirectly, when identifying sustainable investments for the Sub-fund. In addition, voluntary environmental and social indicators are taken into account, depending on their relevance for measuring impacts on the SDGs and the availability of data. A detailed description of the incorporation of principal adverse impacts is available via Robeco's Principal Adverse Impact Statement published on the Robeco website (<https://www.robeco.com/files/docm/docu-principal-adverse-impact-statement-summary-entity-level.pdf>). In this statement, Robeco sets out its approach to identifying and prioritizing principal adverse impacts, and how principal adverse impacts are considered as part of Robeco's investment due diligence process and procedures relating to research and analysis, exclusions and restrictions and/or voting and engagement. This description also explains how principal adverse impact indicators are considered by the SDG Framework.

How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The sustainable investments are aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights via both Robeco's Exclusion Policy and Robeco's SDG Framework.

Robeco's Exclusion Policy includes an explanation of how Robeco acts in accordance with the International Labor Organization (ILO) standards, United Nations Guiding Principles (UNGPs), United Nations Global Compact (UNGC) Principles and the Organization for Economic Co-operation and Development (OECD) Guidelines for Multinational Enterprises and is guided by these international treaties to assess the behavior of companies. Robeco continuously screens its investments for breaches of these principles. In case of a breach, the company will be excluded or engaged with, and is not considered a sustainable investment.

Robeco's SDG Framework screens for breaches on these principles in the final step of the framework. In this step, Robeco checks whether the company concerned has been involved in any controversies. Involvement in any controversy will result in a negative SDG score for the company, meaning it is not a sustainable investment.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

Does this financial product consider principal adverse impacts on sustainability factors?

Yes, _____

The Sub-fund considers principal adverse impacts on sustainability factors as referred to in Annex I of the SFDR Delegated Act.

Pre-investment, Robeco's SDG Framework assesses companies' positive and negative contributions to the Sustainable Development Goals (SDGs). Robeco's SDG Framework directly and/or indirectly screens companies on many of the topics considered by the PAI indicators.

Post-investment, the following principal adverse impacts on sustainability factors are taken into account:

- o Via Robeco's entity engagement program, the following PAIs are considered:

- All indicators related to Climate and other environment-related indicators (PAI 1-9, Table 1)
- Violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1). On an ongoing basis, the investment universe is scanned for controversial behavior in relation to the aforementioned principles and guidelines.
- In addition, based on a yearly review of Robeco's performance on all mandatory and selected voluntary indicators, holdings of the Sub-fund that cause adverse impact might be selected for engagement.

More information is available via Robeco's Principal Adverse Impact Statement, published on Robeco's website. The Sub-fund will periodically report how it has considered the principal adverse impacts of its investments in the Company's annual report, which will be made available each year on or before 30 April at the Sub-fund page highlighted in final section of this document.

No

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

What investment strategy does this financial product follow?

RobecoSAM SDG High Yield Bonds is an actively managed fund that invests in global corporate bonds. The selection of these bonds is based on fundamental analysis as described in the Investment policy strategy paragraph in Appendix I of this Prospectus. The strategy integrates sustainability indicators on a continuous basis as part of the bond selection process. Amongst others, the Sub-fund applies norms-based, activity-based and regional exclusions, Robeco's good governance policy, Robeco's SDG framework and considers Principal Adverse Impacts in the investment process. More product-specific information can be found on our website and the links provided in the final question of this disclosure.

The investment strategy guides investment decisions based on factors such as investment objectives and risk tolerance.

What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?

The Sub-fund has the following binding elements:

1. The Sub-fund is solely invested in companies that hold a positive or neutral SDG score.
2. The Sub-fund's portfolio complies with Robeco's Exclusion Policy (<https://www.robeco.com/files/docm/docu-exclusion-policy.pdf>), that is based on exclusion criteria with regards to products and business practices that Robeco believes are detrimental to society and incompatible with sustainable investment strategies. This means that the Sub-fund has 0% exposure to excluded securities, taking into account a grace period. Information with regards to the effects of the exclusions on the Sub-fund's universe can be found at <https://www.robeco.com/files/docm/docu-exclusion-list.pdf>.
3. The Sub-fund avoids investment in companies that are in breach of the ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises. Companies that breach the international norms will be excluded from the investment universe.
4. The Sub-fund invests a minimum of 2% in green, social, sustainability, and/or sustainability-linked bonds.

What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?

The Sub-fund does not commit to a minimum rate to reduce the scope of investments prior to the application of the investment strategy.

What is the policy to assess good governance practices of the investee companies?

Robeco has a Good Governance policy to assess governance practices of companies. The policy describes how Robeco determines if and when a company does not follow good governance practices and is therefore excluded from the initial investment universe for Article 8 and 9 products. Robeco's Good Governance policy applies to the Sub-fund and tests on a set of governance criteria that reflect widely recognized industry established norms and include topics as employee relations, management structure, tax compliance and remuneration.

The Good Governance test consists of criteria on such topics that are examined for investee companies and further explained in Robeco's Good Governance policy <https://www.robeco.com/files/docm/docu-robeco-good-governance-policy.pdf>. Additionally, the companies that do not pass the good governance test are reflected in the exclusion list that can be accessed here - <https://www.robeco.com/files/docm/docu-exclusion-list.pdf>.

Good governance practices include sound management structures, employee relations, remuneration of staff and tax compliance.

What is the asset allocation planned for this financial product?

At least 90% of the investments are aligned with the E/S characteristics of the Sub-fund. The Sub-fund plans to make a minimum of 70% sustainable investments, measured by positive scores via Robeco's SDG Framework. The investments in the category Other, estimated between 0-10%, are mostly in cash, cash equivalents and derivatives as further described below. The planned asset allocation is monitored continuously, and evaluated on a yearly basis

How does the use of derivatives attain the environmental or social characteristics promoted by the financial product?

The Sub-fund does not make use of derivatives to attain the environmental or social characteristics promoted by the financial product. The Sub-fund may make use of derivatives for hedging, liquidity management and efficient portfolio management as well as investment purposes. Exchange traded and over-the-counter derivatives are permitted, including but not limited to futures, swaps, options and currency forwards. Whilst the Sub-fund may use derivatives both for investment purposes as well as for hedging and efficient portfolio management, it does not utilize derivatives for such purposes outside the intended share of investments allocated to the 'Other' category.

In case the Sub-fund uses derivatives, the underlying shall comply with the investment policy. Where relevant, minimum environmental or social safeguards are taken into account as described below.

To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

0%. The Sub-fund intends to contribute to all 6 environmental objectives under the EU Taxonomy via the investments in green bonds. The Sub-fund commits to a minimum share of 0% of Taxonomy-aligned activities. The Sub-fund intends to increase the minimum share of Taxonomy aligned activities for the Sub-fund, based on use of proceeds, once data availability in relation to the EU Taxonomy for green bonds improves and stabilises.

The Sub-fund will report on Taxonomy-aligned investment in the periodic disclosures. For investments in corporate bonds, the Sub-fund will report on turnover. Given the lack of data on the EU Taxonomy for green bonds in the market, Robeco relies on internal analysis for the time being. EU Taxonomy-

Asset allocation describes the share of investments in specific assets.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

alignment data is not yet subject to a review by third parties. The expected level of alignment with and without sovereign bonds is the same.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

 are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

● **Does the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy⁷⁹?**

Yes

In fossil gas

In nuclear energy

No

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.*

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

** As the investments are not Taxonomy-aligned, the exclusion of sovereign bonds has no impact on the graph and therefore no such percentage is shown here.

● **What is the minimum share of investments in transitional and enabling activities?**

0%.

● **What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?**

Green bonds may invest (part of) their use of proceeds in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy. In addition, the Sub-fund intends to make sustainable investments measured as positive scores via Robeco's SDG Framework. Among those could be investments with environmental objectives that do not qualify as Taxonomy-aligned. The environmental objectives of the Sub-fund are attained by investing in companies that score positively on SDG 12 (Responsible consumption and production), SDG 13 (Climate action), SDG 14 (Life below water), and SDG 15 (Life on land) in Robeco's SDG Framework.

While the sum of sustainable investments with an environmental objective and socially sustainable investments always adds up to the Sub-fund's minimum proportion of 70% sustainable investments, we

⁷⁹ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

do not commit to a minimum share of sustainable investments with an environmental objective because the Sub-fund's investment strategy does not have a specific environmental investment objective. Therefore, the minimum share of sustainable investments with an environmental objective is 0%.

What is the minimum share of socially sustainable investments?

Social, sustainable or sustainability-linked bonds may invest (part of) their use of proceeds in economic activities that contribute to a social objective. In addition, the Sub-fund intends to make sustainable investments, measured as positive scores via Robeco's SDG Framework. Among those could be investments with social objectives. The social objectives of the Sub-fund are attained by investing in companies that score positively on SDG 1 (No poverty), SDG 2 (Zero hunger), SDG 3 (Good health and well-being), SDG 4 (Quality education), SDG 5 (Gender equality), SDG 6 (Clean water and sanitation), SDG 7 (Affordable and clean energy), SDG 8 (Decent work and economic growth), SDG 9 (Industry, innovation and infrastructure), SDG 10 (Reduced inequalities), SDG 11 (Sustainable cities and communities), SDG 16 (Peace, justice and strong institutions) and SDG 17 (Partnerships for the goals), in Robeco's SDG Framework.

While the sum of socially sustainable investments and sustainable investments with an environmental objective always adds up to the Sub-fund's minimum proportion of sustainable investments, we do not commit to a minimum share of socially sustainable investments because the Sub-fund's investment strategy does not have a specific socially sustainable investment objective. Therefore, the minimum share of socially sustainable investments is 0%.

What investments are included under "#2 Other", what is their purpose and are there any minimum environmental or social safeguards?

The type of instruments included under "#2 Other" and their purpose are outlined in Annex I of this Prospectus under the header 'Financial instruments and investment restrictions'. They include cash, cash equivalents, as well as investment funds and eligible asset classes (other than bonds and equities) that do not specifically promote E/S characteristics. As indicated above, the Sub-fund does not make use of derivatives to attain the environmental or social characteristics promoted. The Sub-fund may make use of derivatives, which thus always fall under the category "#2 Other", for hedging, liquidity management and efficient portfolio management as well as investment purposes. Exchange traded and over-the-counter derivatives are permitted, including but not limited to futures, swaps, options and currency forwards. In case the Sub-fund uses derivatives, the underlying shall comply with the investment policy. Where relevant, minimum environmental or social safeguards are taken into account, by, for example, applying Robeco's Exclusion Policy for any single security derivative.

Is a specific index designated as a reference benchmark to determine whether this financial product is aligned with the environmental and/or social characteristics that it promotes?

Not applicable.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

k) RobecoSAM Global Green Bonds

Pre-contractual disclosure for the financial products referred to in Article 9, paragraphs 1 to 4a, of Regulation (EU) 2019/2088 and Article 5, first paragraph, of Regulation (EU) 2020/852

Product name: RobecoSAM Global Green Bonds

Legal entity identifier: 213800TZF61C5ZUI3146

Sustainable investment objective

Does this financial product have a sustainable investment objective?

Yes

No

It will make a minimum of **sustainable investments with an environmental objective: 70%**

in economic activities that qualify as environmentally sustainable under the EU Taxonomy

in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

It will make a minimum of **sustainable investments with a social objective: ___%**

It **promotes Environmental/Social (E/S) characteristics** and while it does not have as its objective a sustainable investment, it will have a minimum proportion of ___% of sustainable investments

with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with a social objective

It promotes E/S characteristics, but **will not make any sustainable investments**

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Sustainability indicators measure how the sustainable objectives of this financial product are attained.

What is the sustainable investment objective of this financial product?

The Sub-fund invests predominantly in green bonds, as well as in social and sustainable bonds.

With these investments, the Sub-fund finances investments that contribute to environmental goals like:

- Climate change mitigation and adaptation,
- Sustainable use and protection of water and marine resources,
- Transition to a circular economy,
- Waste prevention and recycling,
- Pollution prevention, and
- Protection of healthy ecosystems.

There is a reference benchmark designated for the purpose of attaining the sustainable objectives promoted by the Sub-fund.

What sustainability indicators are used to measure the attainment of the sustainable investment objective of this financial product?

The Sub-fund has the following sustainability indicators:

1. The % of the Sub-fund invested in green bonds.
2. The % of investments in securities that are on Robeco's Exclusion list as result of the application of Robeco's Exclusion Policy.

The % of holdings that are in violation of the ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises.

How do sustainable investments not cause significant harm to any environmental or social sustainable investment objective?

The sustainable investments do no significant harm to any environmental or social sustainable investment objective by considering a principal adverse impact and aligning with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights.

How have the indicators for adverse impacts on sustainability factors been taken into account?

For sustainable investments that are either Green, Social or Sustainable Bonds, significant harm is avoided by the application of Green Bonds Principles.

For a large share of Green, Social and Sustainable bonds, Robeco adds an extra assessment on sustainability factors by applying Robeco's Green Bonds Framework or Social Bond Framework.

Via these frameworks, the following adverse impacts are directly considered:

- Table 1, PAI 10 (Violations of the UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises)
- Table 1, PAI 14 (Exposure to controversial weapons)

For Green bonds, there is no disclosures on GHG emissions. Yet, avoided emissions (scope 4 emissions) are considered. For Social bonds, Robeco considers board gender diversity (Table 1, PAI 13) depending on whether the use of proceeds of the social bond will tackle gender diversity issues.

Lastly, Robeco's SDG Framework is considered for the analysis of green, social or sustainable bonds. Robeco's SDG Framework assesses the contribution of companies to the Sustainable Development Goals (SDGs). Many PAI indicators are either directly or indirectly included in the SDG Framework to determine whether a company has significant impacts on the SDGs related to the PAI indicators. A

detailed description of the incorporation of Principal Adverse Impact is available via Robeco's Principal Adverse Impact Statement published on the Robeco website (<https://www.robeco.com/files/docm/docu-principal-adverse-impact-statement-summary-entity-level.pdf>).

How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights?

The sustainable investments are aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights via Robeco's Exclusion Policy.

Does this financial product consider principal adverse impacts on sustainability factors?

Yes, _____

The Sub-fund considers principal adverse impacts on sustainability factors as referred to in Annex I of the SFDR Delegated Act.

Pre-investment, green, social and sustainable bonds are assessed via Robeco's Green Bond Framework and Social Framework, as well as via Robeco's SDG Framework. These framework directly and indirectly assess PAI indicators

Robeco's SDG Framework assesses companies' positive and negative contributions to the Sustainable Development Goals (SDGs). Robeco's SDG Framework directly and/or indirectly screens companies on many of the topics considered by the PAI indicators.

Post-investment, the following principal adverse impacts on sustainability factors are taken into account via Robeco's entity engagement program:

- All indicators related to Climate and other environment-related indicators (PAI 1-13, Table 1)
- Violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1). On an ongoing basis, the investment universe is scanned for controversial behavior in relation to the aforementioned principles and guidelines.
- In addition, based on a yearly review of Robeco's performance on all mandatory and selected voluntary indicators, holdings of the Sub-fund that cause adverse impact might be selected for engagement.

A detailed description of the incorporation of Principal Adverse Impact is available via Robeco's Principal Adverse Impact Statement published on the Robeco website.

No

What investment strategy does this financial product follow?

RobecoSAM Global Green Bonds is an actively managed fund that invests in green bonds globally issued by governments, government-related agencies and corporates. The selection of these bonds is based on fundamental analysis as described in the Investment policy strategy paragraph in Appendix I of this Prospectus. Other bonds invested in are either social bonds, sustainable bonds, or sustainability-linked bonds. The strategy integrates sustainability indicators on a continuous basis as part of the stock selection process. Amongst others, the Sub-fund applies norms-based and activity-based exclusions, Robeco's good governance policy, Robeco's SDG

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

The investment strategy guides investment decisions based on factors such as

investment objectives and risk tolerance.

framework and considers Principal Adverse Impacts in the investment process. More product-specific information can be found on our website and the links provided in the final question of this disclosure.

● **What are the binding elements of the investment strategy used to select the investments to attain the sustainable investment objective?**

The Sub-fund has the following binding elements:

1. The Sub-fund allocates a minimum 80% of the bond exposure ex government bonds in the green bonds based on external vendor data or the internally developed framework by Robeco.
2. The Sub-fund's portfolio complies with Robeco's Exclusion Policy (<https://www.robeco.com/docm/docu-exclusion-policy.pdf>), that is based on exclusion criteria with regards to products and business practices that Robeco believes are detrimental to society and incompatible with sustainable investment strategies. This means that the Sub-fund has 0% exposure to excluded securities, taking into account a grace period. Information with regards to the effects of the exclusions on the Sub-fund's universe can be found at <https://www.robeco.com/files/docm/docu-exclusion-list.pdf>.
3. The Sub-fund avoids investment in companies that are in breach of the ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises. Companies that breach these international norms will be excluded from the investment universe.

● **What is the policy to assess good governance practices of the investee companies?**

Robeco has a Good Governance policy to assess governance practices of companies. The policy describes how Robeco determines if and when a company does not follow good governance practices and is therefore excluded from the initial investment universe for Article 8 and 9 products. Robeco's Good Governance policy applies to the Sub-fund and tests on a set of governance criteria that reflect widely recognized industry established norms and include topics as employee relations, management structure, tax compliance and remuneration.

The Good Governance test consists of criteria on such topics that are examined for investee companies and further explained in Robeco's Good Governance policy <https://www.robeco.com/files/docm/docu-robeco-good-governance-policy.pdf>. Additionally, the companies that do not pass the good governance test are reflected in the exclusion list that can be accessed here - <https://www.robeco.com/files/docm/docu-exclusion-list.pdf>.

● **What is the asset allocation and the minimum share of sustainable investments?**

The Sub-fund plans to make a minimum of 90% sustainable investments, with a minimum portion of 70% sustainable investments with an environmental objective, defined as investments in green, social or sustainable bonds. The investments in the category non-sustainable, estimated between 0-10%, are in cash and cash equivalents. The planned asset allocation is monitored and evaluated on a yearly basis.

Good governance practices include sound management structures, employee relations, remuneration of staff and tax compliance.

Asset allocation describes the share of investments in specific assets.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

● **How does the use of derivatives attain the sustainable investment objective?**

The Sub-fund does not make use of derivatives to attain the sustainable objective promoted by the financial product. The Sub-fund may make use of derivatives for hedging as well as liquidity management. This includes the usage of derivatives to manage currency and duration exposures in a cost-effective manner. To that purpose exchange traded and over-the-counter derivatives linked to sovereign bonds (treasuries), interest rates, swap rates and currencies are permitted. Derivatives linked to corporate exposure are not allowed.

In case the Sub-fund uses derivatives, the underlying shall comply with the investment policy. Where relevant, minimum environmental or social safeguards are taken into account.

● **To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?**

The Sub-fund intends to contribute to all environmental objectives under the EU Taxonomy. The Sub-fund commits to a minimum share of 0% of Taxonomy-aligned activities. The Sub-fund intends to increase the minimum share of Taxonomy aligned activities for the Sub-fund, based on use of proceeds, once data availability in relation to the EU Taxonomy for Green bonds improves and stabilizes.

The Sub-fund will report on Taxonomy-aligned investment in the periodic disclosures. Given the lack of data on the EU Taxonomy for green bonds in the market, Robeco relies on internal analysis for the time being. EU Taxonomy-alignment data is not yet subject to a review by third parties. The Sub-fund only makes investments in Green, Social and Sustainable bonds and therefore it does not have sovereign exposures. The expected level of alignment with and without sovereign bonds is the same.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power

● **Does the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy⁸⁰?**

Yes:

In fossil gas In nuclear energy

No

⁸⁰ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

 are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

*** For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures**
**** As the investments are not Taxonomy-aligned, the exclusion of sovereign bonds has no impact on the graph and therefore no such percentage is shown here.**

● **What is the minimum share of investments in transitional and enabling activities?**

0%.

 **What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?**

Green bonds may invest (part of) their use of proceeds in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy. The Sub-fund commits to a minimum share of sustainable investments of 70% with an environmental objective because the Sub-fund's investment strategy does have a specific environmental investment objective. The sum of sustainable investments with an environmental objective and socially sustainable investments always adds up to the Sub-fund's minimum proportion of 90% sustainable investments.

What is the minimum share of sustainable investments with a social objective?

Social, sustainable or sustainability-linked bonds may invest (part of) their use of proceeds in economic activities that contribute to a social objective. We do not commit to a minimum share of socially sustainable investments because the Sub-fund's investment strategy does not have a specific social investment objective. The sum of socially sustainable investments and sustainable investments with an environmental objective will always add up to the Sub-fund's minimum proportion of 90% sustainable investments.

What investments are included under "#2 Not sustainable", what is their purpose and are there any minimum environmental or social safeguards?

The type of instruments included under "#2 Not Sustainable" and their purpose are outlined in Annex I of this Prospectus under the header 'Financial instruments and investment restrictions'. They include cash, cash equivalents, as well as investment funds and eligible asset classes (other than bonds and equities) that do not specifically promote E/S characteristics. As indicated above, the Sub-fund does not make use of derivatives to attain its sustainable objective. The Sub-fund may make use of derivatives for hedging and liquidity management. This includes the usage of derivatives to manage the duration around the benchmark duration and currency exposures in a cost-effective manner. For the management of currency exposure FX Forwards are allowed. Furthermore exchange traded and over-the-counter derivatives linked to sovereign bonds (treasuries), interest rates, swap rates and currencies are permitted. In case the Sub-fund uses derivatives, the underlying shall comply with the investment policy and the exposure through the use of derivatives must fit the investment universe of the Sub-fund. Where relevant, minimum environmental or social safeguards are taken into account by monitoring and applying Robeco's Exclusion Policy for the use of derivatives linked to sovereigns. Additionally, derivatives linked to corporate exposure are not allowed.

Is a specific index designated as a reference benchmark to meet the sustainable investment objective?

Yes, the Sub-fund uses the Bloomberg MSCI US Green Bond Index as a reference index to meet the sustainable investment objective of The Sub-fund.

Reference benchmarks are indexes to measure whether the financial product attains the sustainable investment objective.

- ***How does the reference benchmark take into account sustainability factors in a way that is continuously aligned with the sustainable investment objective?***

Given that sustainable investment objective of The Sub-fund is to finance investment in green bonds, the reference index is aligned with such objective of The Sub-fund by applying clearly defined rules for evaluating green bonds composition in the index.

Bloomberg MSCI evaluates green bonds to ensure adherence to established Green Bond Principles (GBP) and to examine bonds by their environmental use of proceeds. The index provider follows an eligibility criteria along four dimensions as per the GBP for assessing eligibility to index. In this way The Sub-fund's investment objective is aligned with the reference index.

- ***How is the alignment of the investment strategy with the methodology of the index ensured on a continuous basis?***

The methodology of the reference index follows rebalancing rules which ensures alignment with the investment strategy of The Sub-fund.

The Bloomberg MSCI US Green Bond Index is rebalanced on the last business day of each month. New bond issues are not added to the Projected Universe until after the Green Bond Evaluation. On the 25th calendar day of each month, the list of green bonds that are evaluated is updated by MSCI ESG Research which are taken into consideration before rebalancing.

- ***How does the designated index differ from a relevant broad market index?***

The benchmark differs from a broad general market index in that the latter does not take into account in its methodology any criteria for eligibility and inclusion of green bonds.

● ***Where can the methodology used for the calculation of the designated index be found?***

The index methodology can be found on the relevant webpages by the index provider:
<https://www.msci.com>

Where can I find more product specific information online?

More product-specific information can be found on the website:

I) RobecoSAM Climate Global Credits

Pre-contractual disclosure for the financial products referred to in Article 9, paragraphs 1 to 4a, of Regulation (EU) 2019/2088 and Article 5, first paragraph, of Regulation (EU) 2020/852

Product name: RobecoSAM Climate Global Credits

Legal entity identifier: 213800LB657HDJBI4637

Sustainable investment objective

Does this financial product have a sustainable investment objective?

Yes

No

It will make a minimum of **sustainable investments with an environmental objective: 50%**

in economic activities that qualify as environmentally sustainable under the EU Taxonomy

in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

It will make a minimum of **sustainable investments with a social objective: ___%**

It **promotes Environmental/Social (E/S) characteristics** and while it does not have as its objective a sustainable investment, it will have a minimum proportion of ___% of sustainable investments

with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with a social objective

It promotes E/S characteristics, but **will not make any sustainable investments**

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

What is the sustainable investment objective of this financial product?

The sustainable investments of the Sub-fund aims to reduce the carbon footprint of the portfolio and thereby contribute towards the goals of the Paris agreement to keep the maximum global temperature rise well-below 2°C.

Sustainability indicators measure how the sustainable objectives of this financial product are attained.

The Sub-fund also promotes investment in green, social, sustainability and/or sustainability-linked bonds used to finance environmental and social projects.

The sustainable investments contribute partly to the environmental objective of Climate Mitigation under the Taxonomy regulation.

● ***What sustainability indicators are used to measure the attainment of the sustainable investment objective of this financial product?***

The Sub-fund has the following sustainability indicators:

1. The Sub-fund's weighted carbon footprint compared to the Paris aligned benchmark.
2. The % of the Sub-fund invested in green, social, sustainability and/or sustainability-linked bonds.
3. The % of investments in securities that are on Robeco's Exclusion list as result of the application of Robeco's Exclusion Policy.
4. The number of companies that are in violation of the UNGPs or OECD Guidelines for Multinational Enterprises.

● ***How do sustainable investments not cause significant harm to any environmental or social sustainable investment objective?***

The sustainable investments do no significant harm to any environmental or social sustainable investment objective by considering a principal adverse impact and aligning with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights. In addition, sustainable investments made through the Paris Aligned Benchmark follow eligibility requirements as per Article 12 of the EU regulation EU Paris-aligned Benchmarks and sustainability-related disclosures for benchmarks and follows Robeco's Exclusion policy. In accordance with Robeco's SDG framework, any off benchmark investments are only considered by the Sub-fund when they have a positive contribution to the UN SDGs and therefore not cause significant harm to any environmental or social sustainable investment objective.

How have the indicators for adverse impacts on sustainability factors been taken into account?

All sustainable investments are constituents of Solactive Paris Aligned Global Corporate Index or follow the benchmark methodology. The benchmark methodology directly assesses the following PAI indicators:

- Table 1, PAI 2 (Carbon Footprint)
- Table 1, PAI 4 (Exposure to companies in the fossil fuel sector)
- Table 1, PAI 10 (Violations of the UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises)
- Table 1, PAI 14 (Exposure to controversial weapons)

Post-investment, the Sub-fund assesses the performance on all mandatory PAI indicators on a regular basis.

More information is available via Robeco's Principal Adverse Impact Statement published on the Robeco website (<https://www.robeco.com/files/docm/docu-principal-adverse-impact-statement-summary-entity-level.pdf>).

How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights?

The sustainable investments are aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights via both Robeco's Exclusion Policy as well as the methodology of the benchmark provider.

Does this financial product consider principal adverse impacts on sustainability factors?

Yes, _____

Yes, the Sub-fund considers principal adverse impacts on sustainability factors as referred to in Annex 1 of the SFDR Delegated Act.

Pre-investment, the following principal adverse impacts on sustainability factors are considered via the applied normative and activity-based exclusions:

- Exposure to companies active in the fossil fuel sector (PAI 4, Table 1)
- Violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1)
- Activities negatively affecting biodiversity-sensitive areas (PAI 7, Table 1). The consideration of this PAI is currently restricted to applying exclusions to palm oil producing companies and for any breaches to the UNGC, UNGP and OECD Guidelines for Multinational Enterprises in relation to biodiversity.
- Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons (PAI 14, Table 1)

Via the carbon footprint performance target of the Sub-fund, the PAI on Carbon footprint (PAI 2, Table 1) is considered via the Paris-Aligned Benchmark.

Post-investment, the following principal adverse impacts on sustainability factors are taken into account via Robeco's entity engagement program:

- All indicators related to Climate and other environment-related indicators (PAI 1-9, Table 1)
- Violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1)
- Activities negatively affecting biodiversity sensitive areas (PAI 7, Table 1). The consideration of this PAI is currently restricted to applying exclusions to palm oil producing companies and for any breaches to the UNGC, UNGP and OECD Guidelines for Multinational Enterprises in relation to biodiversity.
- In addition, based on a yearly review of Robeco's performance on all mandatory and selected voluntary indicators, holdings of the Sub-fund that cause adverse impact might be selected for engagement.

More information is available via Robeco's Principal Adverse Impact Statement, published on Robeco's website. The Sub-fund will periodically report how it has considered the principal adverse impacts of its investments in the Company's annual report, which will be made available each year on or before 30 April at the Sub-fund page highlighted in final section of this document.

No

What investment strategy does this financial product follow?

RobecoSAM Climate Global Credits is an actively managed fund that invests mainly in nongovernment bonds all around the world. The selection of these bonds is based on fundamental

The investment strategy guides investment decisions based on factors such as investment objectives and risk tolerance.

analysis as described in the Investment policy strategy paragraph in Appendix I of this Prospectus. The strategy integrates sustainability indicators on a continuous basis as part of the bond selection process. Amongst others, the Sub-fund applies norms-based and activity-based exclusions, Robeco's good governance policy, Robeco's SDG framework and considers Principal Adverse Impacts in the investment process. More product-specific information can be found on our website and the links provided in the final question of this disclosure.

● **What are the binding elements of the investment strategy used to select the investments to attain the sustainable investment objective?**

The Sub-fund has the following binding elements:

1. The Sub-fund's weighted carbon footprint is better than the Paris aligned benchmark.
2. The Sub-fund invests a minimum of 5% in green, social, sustainability, and/or sustainability-linked bonds.
3. The Sub-fund does not invest in activities that are excluded on the basis of Article 12 of the EU regulation Climate Transition Benchmarks, EU Paris-aligned Benchmarks and sustainability-related disclosures for benchmarks as applicable. In addition, the Sub-fund's portfolio complies with Robeco's Exclusion Policy (<https://www.robeco.com/files/docm/docu-exclusion-policy.pdf>), that is based on exclusion criteria with regards to products and business practices that Robeco believes are detrimental to society and incompatible with sustainable investment strategies. This means that the Sub-fund has 0% exposure to excluded securities, taking into account a grace period. Information with regards to the effects of the exclusions on the Sub-fund's universe can be found at <https://www.robeco.com/files/docm/docu-exclusion-list.pdf>.
4. The Sub-fund avoids investment in companies that are in breach of the ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises. Companies that breach the international norms will be excluded from the investment universe.

● **What is the policy to assess good governance practices of the investee companies?**

Robeco has a Good Governance policy to assess governance practices of companies. The policy describes how Robeco determines if and when a company does not follow good governance practices and is therefore excluded from the initial investment universe for Article 8 and 9 products. Robeco's Good Governance policy applies to the Sub-fund and tests on a set of governance criteria that reflect widely recognized industry established norms and include topics as employee relations, management structure, tax compliance and remuneration.

The Good Governance test consists of criteria on such topics that are examined for investee companies and further explained in Robeco's Good Governance policy <https://www.robeco.com/files/docm/docu-robeco-good-governance-policy.pdf>. Additionally, the companies that do not pass the good governance test are reflected in the exclusion list that can be accessed here - <https://www.robeco.com/files/docm/docu-exclusion-list.pdf>.

Good governance practices include sound management structures, employee relations, remuneration of staff and tax compliance.

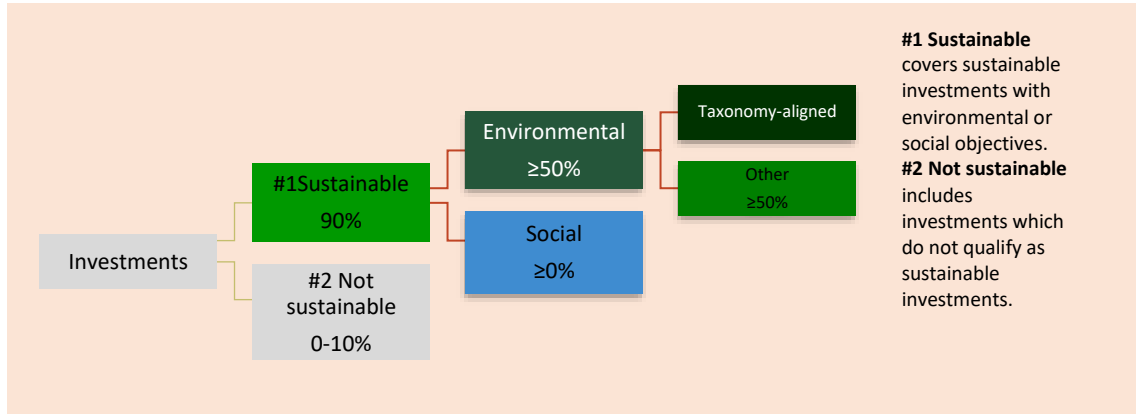

What is the asset allocation and the minimum share of sustainable investments?

Asset allocation describes the share of investments in specific assets.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

The Sub-fund plans to make a minimum of 90% sustainable investments, with a minimum portion of 50% sustainable investments with an environmental objective, measured by the by issuers that are part of the Paris Aligned Benchmark. The investments in the category non-sustainable, estimated between 0-10%, are in cash and cash equivalents. The planned asset allocation is monitored continuously, and evaluated on a yearly basis.

● **How does the use of derivatives attain the sustainable investment objective?**

The Sub-fund does not make use of derivatives to attain the sustainable objective promoted by the financial product. The Sub-fund may make use of derivatives for hedging as well as liquidity management. This includes the usage of derivatives to manage currency and duration exposures in a cost-effective manner. To that purpose exchange traded and over-the-counter derivatives linked to sovereign bonds (treasuries), interest rates, swap rates and currencies are permitted. Derivatives linked to corporate exposure are not allowed.

In case the Sub-fund uses derivatives, the underlying shall comply with the investment policy. Where relevant, minimum environmental or social safeguards are taken into account.

To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

The Sub-fund intends to contribute to the climate change mitigation objective under the EU Taxonomy. The Sub-fund commits to a minimum share of 0% of Taxonomy-aligned activities. The Sub-fund intends to increase the minimum share of Taxonomy aligned activities for the Sub-fund once data availability in relation to the EU Taxonomy improves and stabilises.

The Sub-fund will report on Taxonomy-aligned investment in the periodic disclosures. In the future, once data-availability in relation to the EU Taxonomy will improve, Robeco might consider setting a target based on turnover or CAPEX. Robeco currently relies on third-party data in relation to the EU Taxonomy, including data in relation to companies that do not disclose on the EU Taxonomy alignment of their activities. EU Taxonomy-alignment data is not yet subject to a review by third parties. Given the current commitment, the expected level of alignment with and without sovereign bonds is the same.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

 are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities

● **Does the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy⁸¹?**

Yes:

In fossil gas

In nuclear energy

No

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.*

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

** As the investments are not Taxonomy-aligned, the exclusion of sovereign bonds has no impact on the graph and therefore no such percentage is shown here.

● **What is the minimum share of investments in transitional and enabling activities?**

0%.

What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?

The Sub-fund makes sustainable investments with environmental objectives that do not qualify as Taxonomy-aligned. The Sub-fund commit to a minimum share of sustainable investments of 50% with an environmental objective because the Sub-fund's investment strategy does have a specific environmental investment objective. The environmental objectives of the Sub-fund are attained by investing in companies with a low carbon footprint, in line with a low carbon scenario. However, some of these companies with a low carbon footprint may not be exposed to activities that are eligible under the EU Taxonomy. The sum of socially sustainable investments and sustainable investments with an

⁸¹ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

under the EU
Taxonomy.

environmental objective will always add up to the Sub-fund's minimum proportion of 90% sustainable investments.

What is the minimum share of sustainable investments with a social objective?

Social, sustainable or sustainability-linked bonds may invest (part of) their use of proceeds in economic activities that contribute to a social objective. In addition, it could be possible that some companies contribute to social objectives either by being a part of the Paris Aligned Benchmark or having a positive score via Robeco's SDG Framework.

While the sum of socially sustainable investments and sustainable investments with an environmental objective always adds up to the Sub-fund's minimum proportion of 90% sustainable investments, we do not commit to a minimum share of socially sustainable investments because the Sub-fund's investment strategy does not have a specific socially sustainable investment objective. Therefore, the minimum share of socially sustainable investments is 0%.

What investments are included under "#2 Not sustainable", what is their purpose and are there any minimum environmental or social safeguards?

The type of instruments included under "#2 Not Sustainable" and their purpose are outlined in Annex I of this Prospectus under the header 'Financial instruments and investment restrictions'. They include cash, cash equivalents, as well as investment funds and eligible asset classes (other than bonds and equities) that do not specifically promote E/S characteristics. As indicated above, the Sub-fund does not make use of derivatives to attain its sustainable objective. The Sub-fund may make use of derivatives for hedging and liquidity management. This includes the usage of derivatives to manage the duration around the benchmark duration and currency exposures in a cost-effective manner. For the management of currency exposure FX Forwards are allowed. Furthermore exchange traded and over-the-counter derivatives linked to sovereign bonds (treasuries), interest rates, swap rates and currencies are permitted. In case the Sub-fund uses derivatives, the underlying shall comply with the investment policy and the exposure through the use of derivatives must fit the investment universe of the Sub-fund. Where relevant, minimum environmental or social safeguards are taken into account by monitoring and applying Robeco's Exclusion Policy for the use of derivatives linked to sovereigns. Additionally, derivatives linked to corporate exposure are not allowed.

Is a specific index designated as a reference benchmark to meet the sustainable investment objective?

Yes, the Sub-fund follows the Solactive Paris Aligned Global Corporate Index as a reference index to meet the carbon footprint reduction objective of the Sub-fund and thereby keeping the maximum global temperature rise well-below 2°C.

How does the reference benchmark take into account sustainability factors in a way that is continuously aligned with the sustainable investment objective?

The reference index is aligned with the carbon reduction objective of the Sub-fund by applying a methodology with clearly defined rules for evaluating securities on their carbon footprint.

The methodology of the reference index is designed in accordance with the requirements of point (d) of Article 13 (1) of the Benchmark Regulation and of the Commission Delegated Regulation (EU) 2020/1817. This means that amongst others, the reference index complies with those criteria set out in Article 12 of the EU Climate Transition Benchmarks, EU Paris-aligned Benchmarks and sustainability-related disclosures for benchmarks.

Reference benchmarks are indexes to measure whether the financial product attains the sustainable investment objective.

The Sub-fund also applies the aforementioned exclusion criteria, and the Sub-fund's weighted carbon footprint score is always equal to or better than the Solactive Paris Aligned Global Corporate Index.

● ***How is the alignment of the investment strategy with the methodology of the index ensured on a continuous basis?***

The methodology of the reference index follows rebalancing rules on a monthly basis which ensures alignment with the investment strategy and objective of the Sub-fund. The data used is sourced externally from Institutional Shareholder Services Inc.

The Sub-fund follows a rebalancing strategy which ensures that the carbon footprint of the Sub-fund is better than that of the reference index. This in turn ensures that the investment strategy of the Sub-fund aligns with the methodology of the reference index. The methodology of the reference index takes into account a decarbonization trajectory of at least 7% GHG intensity per annum along with specific sector or activity exclusions and including involvement in controversial weapons.

● ***How does the designated index differ from a relevant broad market index?***

The benchmark differs from a broad general market index in that the latter does not take into account in its methodology any criteria for alignment with the Paris Agreement on greenhouse gas emission reduction and related exclusions.

● ***Where can the methodology used for the calculation of the designated index be found?***

The index methodology can be found on the relevant webpages by the index provider: <https://www.solactive.com/indices/>

Where can I find more product specific information online?

m) RobecoSAM Climate Global Bonds

Pre-contractual disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Product name: RobecoSAM Climate Global Bonds

Legal entity identifier: 213800QNYW5DK72HBO97

Environmental and/or social characteristics

Does this financial product have a sustainable investment objective?

Yes

No

It will make a minimum of **sustainable investments with an environmental objective:** ___%

- in economic activities that qualify as environmentally sustainable under the EU Taxonomy
- in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

It will make a minimum of **sustainable investments with a social objective:** ___%

It promotes **Environmental/Social (E/S) characteristics** and while it does not have as its objective a sustainable investment, it will have a minimum proportion of 2.5% of sustainable investments

- with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy
- with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy
- with a social objective

It promotes E/S characteristics, but **will not make any sustainable investments**

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

What environmental and/or social characteristics are promoted by this financial product?

The Sub-fund has the following E/S characteristics:

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

1. The Sub-fund aims to contribute to the United Nations Sustainable Development Goals by investing in green, social, sustainability and/or sustainability-linked bonds that are used to finance environmental and social projects.

The Sub-fund has the following E/S characteristics as promoted by the Sub-fund for the corporate bonds:

1. The Sub-fund aims to reduce the carbon footprint of the portfolio and thereby contribute towards the goals of the Paris agreement to keep the maximum global temperature rise well-below 2°C.
2. The Sub-fund promotes certain minimum environmental and social safeguards through applying exclusion criteria with regards to products and business practices that Robeco believes are detrimental to society and incompatible with sustainable investment strategies, such as exposure to controversial behaviour, controversial weapons, and fossil fuels.
3. The Sub-fund promotes adherence to and conducting business activities in accordance with the United Nations Universal Declaration of Human Rights, the International Labor Organization's (ILO) labor standards, the United Nations Guiding Principles for Business and Human Rights (UNGPs), the United Nations Global Compact (UNGC) and the OECD Guidelines for Multinational Enterprises.

The Sub-fund has the following E/S characteristics as promoted by the Sub-fund for government bonds:

1. The Sub-fund aims to reduce the carbon footprint of the portfolio and thereby contribute towards the goals of the Paris agreement to keep the maximum global temperature rise well-below 2°C.
2. The Sub-fund promotes certain minimum environmental and social safeguards through applying exclusion criteria with regards to products and business practices that Robeco believes are detrimental to society and incompatible with sustainable investment strategies, such as exposure to controversial behaviour, controversial weapons, and fossil fuels.

The sustainable investments made by the Sub-fund will contribute partly to the environmental objective of Climate Mitigation under the Taxonomy regulation. The Sub-fund follows the Solactive Paris Aware Global Aggregate Index as a reference index to meet the carbon footprint reduction objective of the Sub-fund.

● ***What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?***

1. The % of the Sub-fund invested in green, social, sustainability and/or sustainability-linked bonds. The Sub-fund has the following sustainability indicators to measure the attainment of environmental or social characteristics promoted by the Sub-fund for the corporate bonds:

1. The Sub-fund's weighted carbon footprint compared to the Paris Aware Benchmark.
2. The % of investments in securities that are on Robeco's Exclusion list as result of the application of Robeco's Exclusion Policy.
3. The number of companies that are in violation of the UNGPs or OECD Guidelines for Multinational Enterprises.

The Sub-fund has the following sustainability indicators to measure the attainment of environmental or social characteristics promoted by the Sub-fund for government bonds:

1. The Sub-fund's weighted carbon emissions per capita compared to the Paris Aware benchmark.
2. The % of investments in securities that are on Robeco's Exclusion list as result of the application of Robeco's Exclusion Policy.

What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?

The sustainable investments of the Sub-fund contribute to the sustainable investment objective of keeping the maximum global temperature rise below 2°C by reducing the carbon footprint of its portfolio.

The sustainable investments contribute partly to the environmental objective of Climate Mitigation under the EU Taxonomy regulation.

How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?

The sustainable investments do no significant harm to any environmental or social sustainable investment objective by considering a principal adverse impact and aligning with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights. In addition, sustainable investments made through the Paris Aligned Benchmark follow eligibility requirements as per Article 12 of the EU regulation EU Paris-aligned Benchmarks and sustainability-related disclosures for benchmarks and follows Robeco's Exclusion policy. For corporate investments, in accordance with Robeco's SDG framework, any off benchmark investments are only considered by the Sub-fund when they have a positive contribution to the UN SDGs and therefore not cause significant harm to any environmental or social sustainable investment objective.

How have the indicators for adverse impacts on sustainability factors been taken into account?

All sustainable investments in corporates are constituents of the Paris-Aware Benchmark, or follow the benchmark methodology. The benchmark methodology directly assesses the following PAI indicators:

- Table 1, PAI 2 (Carbon Footprint)
- Table 1, PAI 4 (Exposure to companies in the fossil fuel sector)
- Table 1, PAI 10 (Violations of the UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises)
- Table 1, PAI 14 (Exposure to controversial weapons)

Post-investment, the Sub-fund assesses the performance on all mandatory PAI indicators on a regular basis. More information on how this is done is explained in question B.1.

A detailed description of the incorporation of principal adverse impact is available via Robeco's Principal Adverse Impact Statement published on the Robeco website (<https://www.robeco.com/files/docm/docu-principal-adverse-impact-statement-summary-entity-level.pdf>).

How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The sustainable investments in corporates are aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights via Robeco's Exclusion Policy. Robeco's Exclusion Policy includes an explanation of how Robeco acts in accordance with the International Labor Organization (ILO) standards, United Nations Guiding Principles (UNGPs), United Nations Global Compact (UNGC) Principles and the Organization for Economic Co-operation and Development (OECD) Guidelines for Multinational Enterprises and is guided by these international treaties to assess the behavior of companies. Robeco continuously screens its investments for breaches of these principles. In case of a breach, the company will be excluded or engaged with, and is not considered a sustainable investment.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

Does this financial product consider principal adverse impacts on sustainability factors?

Yes, _____

The Sub-fund considers principal adverse impacts on sustainability factors as referred to in Annex 1 of the SFDR Delegated Act.

Pre-investment, for corporates the following principal adverse impacts on sustainability factors are considered.

- Via the applied normative and activity-based exclusions, the following PAIs are considered:
 - Exposure to companies active in the fossil fuel sector (PAI 4, Table 1)
 - Violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1)
 - Activities negatively affecting biodiversity-sensitive areas (PAI 7, Table 1). The consideration of this PAI is currently restricted to applying exclusions to palm oil producing companies and for any breaches to the UNGC, UNGP and OECD Guidelines for Multinational Enterprises in relation to biodiversity.
 - Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons (PAI 14, Table 1)

Via the carbon footprint performance target of the Sub-fund, the PAI on Carbon footprint (PAI 2, Table 1) is considered via the Paris-Aligned Benchmark.

Post-investment, the following principal adverse impacts on sustainability factors are taken into account via Robeco's entity engagement program:

- All indicators related to Climate and other environment-related indicators (PAI 1-9, Table 1)
- Violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1)
- Activities negatively affecting biodiversity sensitive areas (PAI 7, Table 1). The consideration of this PAI is currently restricted to applying exclusions to palm oil producing companies and for any breaches to the UNGC, UNGP and OECD Guidelines for Multinational Enterprises in relation to biodiversity.
- In addition, based on a yearly review of Robeco's performance on all mandatory and selected voluntary indicators, holdings of the Sub-fund that cause adverse impact might be selected for engagement.

More information is available via Robeco's Principal Adverse Impact Statement, published on Robeco's website. The Sub-fund will periodically report how it has considered the principal adverse impacts of its

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

investments in the Company's annual report, which will be made available each year on or before 30 April at the Sub-fund page highlighted in final section of this document.

No

The investment strategy guides investment decisions based on factors such as investment objectives and risk tolerance.

What investment strategy does this financial product follow?

RobecoSAM Climate Global bonds is an actively managed fund that invests in bonds globally. The selection of these bonds is based on fundamental analysis as described in the Investment policy strategy paragraph in Appendix I of this Prospectus. The strategy integrates sustainability indicators on a continuous basis as part of the bond selection process. Amongst others, the Sub-fund applies norms-based and activity-based exclusions, Robeco's good governance policy, Robeco's SDG framework and considers Principal Adverse Impacts in the investment process. More product-specific information can be found on our website and the links provided in the final question of this disclosure.

What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?

1. The Sub-fund invests a minimum of 2.5% in green, social, sustainability, and/or sustainability-linked bonds

The Sub-fund has the following binding elements to attain the environmental or social characteristics promoted by the corporate bonds:

1. The Sub-fund's weighted carbon footprint score is equal to or better than the Paris Aware Benchmark.
2. The Sub-fund does not invest in activities that are excluded on the basis of Article 12 of the EU regulation Climate Transition Benchmarks, EU Paris-aligned Benchmarks and sustainability-related disclosures for benchmarks as applicable. In addition, the Sub-fund's portfolio complies with Robeco's Exclusion Policy (<https://www.robeco.com/files/docm/docu-exclusion-policy.pdf>), that is based on exclusion criteria with regards to products and business practices that Robeco believes are detrimental to society and incompatible with sustainable investment strategies. This means that the Sub-fund has 0% exposure to excluded securities, taking into account a grace period. Information with regards to the effects of the exclusions on the Sub-fund's universe can be found at <https://www.robeco.com/files/docm/docu-exclusion-list.pdf>.
3. The Sub-fund avoids investment in companies that are in breach of the ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises. Companies that breach these international norms will be excluded from the investment universe.

The Sub-fund has the following binding elements to attain the sustainable investment objective for government bonds:

1. The Sub-fund's weighted carbon emissions per capita is equal to or better than that of the Paris Aware Benchmark
2. The Sub-fund does not invest in activities that are excluded on the basis of Article 12 of the EU regulation Climate Transition Benchmarks, EU Paris-aligned Benchmarks and sustainability-related disclosures for benchmarks as applicable. In addition, the Sub-fund's portfolio complies with Robeco's Exclusion Policy (<https://www.robeco.com/files/docm/docu-exclusion-policy.pdf>), that is based on exclusion criteria with regards to products and business practices that Robeco believes are detrimental to society and incompatible with sustainable investment strategies. This means that the Sub-fund has 0% exposure to excluded securities, taking into account a grace period. Information with regards to the effects of the exclusions on the Sub-fund's universe can be found at <https://www.robeco.com/files/docm/docu-exclusion-list.pdf>.

● ***What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?***

The Sub-fund does not commit to a minimum rate to reduce the scope of investments prior to the application of the investment strategy.

● ***What is the policy to assess good governance practices of the investee companies?***

Robeco has a Good Governance policy to assess governance practices of companies. The policy describes how Robeco determines if and when a company does not follow good governance practices and is therefore excluded from the initial investment universe for Article 8 and 9 products. Robeco's Good Governance policy applies to the Sub-fund and tests on a set of governance criteria that reflect widely recognized industry established norms and include topics as employee relations, management structure, tax compliance and remuneration.

The Good Governance test consists of criteria on such topics that are examined for investee companies and further explained in Robeco's Good Governance policy <https://www.robeco.com/files/docm/docu-robeco-good-governance-policy.pdf>. Additionally, the companies that do not pass the good governance test are reflected in the exclusion list that can be accessed here - <https://www.robeco.com/files/docm/docu-exclusion-list.pdf>.

● ***What is the asset allocation planned for this financial product?***

The Sub-fund plans to make a minimum of 2.5% sustainable investments, measured by the proportion of the green, social, sustainability, and/or sustainability-linked bonds. The investments in the category non-sustainable, estimated between 0-10%, are mostly in cash, cash equivalents and derivatives as further described below. The planned asset allocation is monitored continuously, and evaluated on a yearly basis.

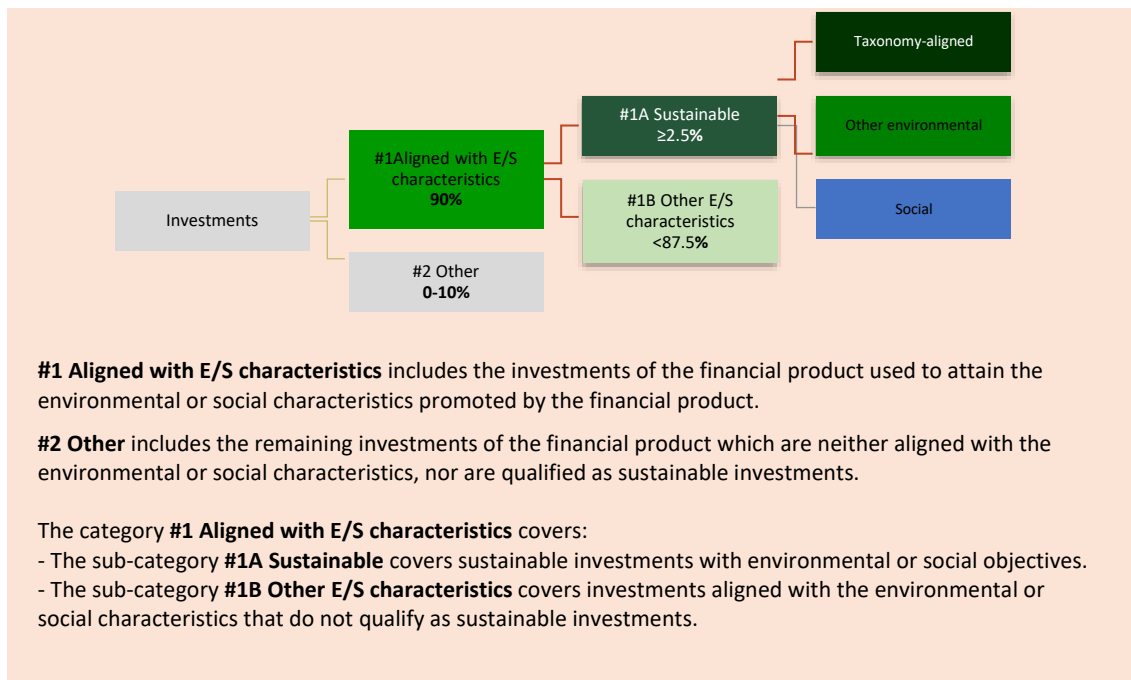

Good governance practices include sound management structures, employee relations, remuneration of staff and tax compliance.

Asset allocation describes the share of investments in specific assets.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers sustainable investments with environmental or social objectives.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

● **How does the use of derivatives attain the environmental or social characteristics promoted by the financial product?**

The Sub-fund does not make use of derivatives to attain the environmental or social characteristics promoted by the financial product. The Sub-fund may make use of derivatives for hedging, liquidity management and efficient portfolio management as well as investment purposes in the global fixed income, money market, interest rates and currency markets. As and when the Sub-fund uses derivatives, the underlying shall comply with the investment policy of the Sub-fund. Where relevant, minimum environmental or social safeguards are taken into account as described below.

To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

The Sub-fund intends to contribute to the climate change mitigation objective under the EU Taxonomy. The Sub-fund commits to a minimum share of 0% of Taxonomy-aligned activities. The Sub-fund intends to increase the minimum share of Taxonomy aligned activities for the Sub-fund once data availability in relation to the EU Taxonomy improves and stabilises.

The Sub-fund will report on Taxonomy-aligned investment in the periodic disclosures. In the future, once data-availability in relation to the EU Taxonomy will improve, Robeco might consider setting a target based on turnover or CAPEX. Robeco currently relies on third-party data in relation to the EU Taxonomy, including data in relation to companies that do not disclose on the EU Taxonomy alignment of their activities. EU Taxonomy-alignment data is not yet subject to a review by third parties. Given the current commitment, the expected level of alignment with and without sovereign bonds is the same.

To comply with the EU Taxonomy, the

● **Does the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy⁸²?**

⁸² Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

criteria for **fossil gas** include limitations on emissions and switching to renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

 are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

- Yes
- In fossil gas
- In nuclear energy
- No

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.*

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

** As the investments are not Taxonomy-aligned, the exclusion of sovereign bonds has no impact on the graph and therefore no such percentage is shown here.

● **What is the minimum share of investments in transitional and enabling activities?**

0%.

What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?

Green bonds may invest (part of) their use of proceeds in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy, however the Sub-fund does not intend to set a minimum target.

While the sum of sustainable investments with an environmental objective and socially sustainable investments always adds up to the Sub-fund's minimum proportion of 2.5% sustainable investments, we do not commit to a minimum share of sustainable investments with an environmental objective because the Sub-fund's investment strategy does not have a specific environmental investment objective. Therefore, the minimum share of sustainable investments with an environmental objective is 0%.

What is the minimum share of socially sustainable investments?

Social, sustainable or sustainability-linked bonds may invest (part of) their use of proceeds in economic activities that contribute to a social objective, however the Sub-fund does not intend to set a minimum target. While the sum of socially sustainable investments and sustainable investments with an environmental objective always adds up to the Sub-fund's minimum proportion of sustainable investments, we do not commit to a minimum share of socially sustainable investments because the Sub-fund's investment strategy does not have a specific socially sustainable investment objective. Therefore, the minimum share of socially sustainable investments is 0%.

What investments are included under "#2 Other", what is their purpose and are there any minimum environmental or social safeguards?

The type of instruments included under "#2 Other" and their purpose are outlined in Annex I of this Prospectus under the header 'Financial instruments and investment restrictions'. They include cash, cash equivalents, as well as investment funds and eligible asset classes (other than bonds and equities) that do not specifically promote E/S characteristics. As indicated above, the Sub-fund does not make use of derivatives to attain the environmental or social characteristics promoted. The Sub-fund may make use of derivatives, which thus always fall under the category "#2 Other", for hedging, liquidity management and efficient portfolio management as well as investment purposes. Exchange traded and over-the-counter derivatives are permitted, including but not limited to futures, swaps, options and currency forwards. In case the Sub-fund uses derivatives, the underlying shall comply with the investment policy. Where relevant, minimum environmental or social safeguards are taken into account, by, for example, applying Robeco's Exclusion Policy for any single security derivative.

Is a specific index designated as a reference benchmark to determine whether this financial product is aligned with the environmental and/or social characteristics that it promotes?

The Sub-fund follows the Solactive Paris Aware Global Aggregate Index as a reference index to meet the carbon footprint reduction objective of the Sub-fund and thereby keeping the maximum global temperature rise below 2°C.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

How is the reference benchmark continuously aligned with each of the environmental or social characteristics promoted by the financial product?

The reference index is aligned with the carbon reduction objective of the Sub-fund by applying a methodology with clearly defined rules for evaluating securities on their carbon footprint. The methodology of the reference index is designed in accordance with the requirements of point (d) of Article 13 (1) of the Benchmark Regulation and of the Commission Delegated Regulation (EU) 2020/1817. This means that amongst others for the corporate bond part, the reference index is aligned with those criteria set out in Article 12 of the EU Climate Transition Benchmarks, EU Paris-aligned Benchmarks and sustainability-related disclosures for benchmarks. The Sub-fund also applies the aforementioned exclusion criteria, and the Sub-fund's overall weighted carbon footprint score in each of the government part and the corporate part is always equal to or better than the respective part of the Solactive Paris Aware Global Aggregate Index.

How is the alignment of the investment strategy with the methodology of the index ensured on a continuous basis?

The methodology of the reference index follows rebalancing rules on a monthly basis for index eligibility and rebalances on a six month basis for decarbonization, which ensures alignment with the investment strategy and objective of the Sub-fund. The index uses data sourced from Institutional Shareholder Services Inc for corporate issuers and from the Emissions Database for Global Atmospheric Research (EDGAR) for sovereign issuers.

The Sub-fund follows a rebalancing strategy which ensures that the carbon footprint of the Sub-fund is better than that of the reference index. This in turn ensures that the investment strategy of the Sub-fund aligns with the methodology of the reference index. The methodology of the reference index takes into

account a decarbonization trajectory of at least 7% GHG intensity per annum along with specific sector or activity exclusions and including involvement in controversial weapons.

● ***How does the designated index differ from a relevant broad market index?***

The benchmark differs from a broad general market index in that the latter does not take into account in its methodology any criteria for alignment with the Paris Agreement on decarbonization and on greenhouse gas emission reduction and related exclusions.

● ***Where can the methodology used for the calculation of the designated index be found?***

The index methodology can be found on the relevant webpages by the index provider:
<https://www.solactive.com/indices/>

Where can I find more product specific information online?

n) RobecoSAM QI Global SDG & Climate Multi-Factor Credits

Pre-contractual disclosure for the financial products referred to in Article 9, paragraphs 1 to 4a, of Regulation (EU) 2019/2088 and Article 5, first paragraph, of Regulation (EU) 2020/852

Product name: RobecoSAM QI Global SDG & Climate Multi-Factor Credits

Legal entity identifier: 213800RF9TE5E4ZIIN66

Sustainable investment objective

Does this financial product have a sustainable investment objective?

Yes

No

It will make a minimum of **sustainable investments with an environmental objective: 50%**

in economic activities that qualify as environmentally sustainable under the EU Taxonomy

in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

It will make a minimum of **sustainable investments with a social objective: 10%**

It **promotes Environmental/Social (E/S) characteristics** and while it does not have as its objective a sustainable investment, it will have a minimum proportion of ___% of sustainable investments

with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with a social objective

It promotes E/S characteristics, but **will not make any sustainable investments**

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

What is the sustainable investment objective of this financial product?

The Sub-fund advances the United Nation's Sustainable Development Goals (SDGs) and the Sub-fund aims to reduce the carbon footprint of the portfolio and thereby contribute towards the goals of the Paris agreement to keep the maximum global temperature rise well-below 2°C

Sustainability indicators measure how the sustainable objectives of this financial product are attained.

The Sub-fund has a carbon-reduction objective and uses the Solactive Paris Aligned Global Corporate Index to monitor the carbon profile of the Sub-fund.

A part of the investments made by the Sub-fund contribute to the environmental objective of Climate Mitigation under the EU Taxonomy regulation.

● ***What sustainability indicators are used to measure the attainment of the sustainable investment objective of this financial product?***

The Sub-fund has the following sustainability indicators:

1. The Sub-fund's weighted carbon footprint score compared to the Paris Aligned Benchmark.
2. The Sub-fund's weighted environmental footprint score compared to the Paris Aligned Benchmark.
3. The % of investments in securities that are on Robeco's Exclusion list as result of the application of Robeco's Exclusion Policy.
4. The % of holdings that are in violation of the ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises.
5. The proportion of companies that hold a high or medium negative SDG score (-3 or -2) based on the internally developed SDG Framework.
6. The Sub-fund's weighted average ESG score compared to the Paris Aligned Benchmark.
7. The Sub-fund's weight in companies with a positive SDG score (1,2,3) compared to the general market index weight in companies with a positive SDG score (1,2,3).

● ***How do sustainable investments not cause significant harm to any environmental or social sustainable investment objective?***

The sustainable investments do no significant harm to any environmental or social sustainable investment objective by considering a principal adverse impact and aligning with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights. In addition, sustainable investments made through the Paris Aligned Benchmark follow eligibility requirements as per Article 12 of the EU regulation EU Paris-aligned Benchmarks and sustainability-related disclosures for benchmarks and follows Robeco's Exclusion policy. In accordance with Robeco's SDG framework, any off benchmark investments are only considered by the Sub-fund when they have a positive contribution to the UN SDGs and therefore not cause significant harm to any environmental or social sustainable investment objective.

How have the indicators for adverse impacts on sustainability factors been taken into account?

Sustainable investments can be constituents of Paris-Aligned Benchmark. The benchmark methodology directly assesses the following PAI indicators:

- Table 1, PAI 2 (Carbon Footprint)
- Table 1, PAI 4 (Exposure to companies in the fossil fuel sector)
- Table 1, PAI 10 (Violations of the UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises)
- Table 1, PAI 14 (Exposure to controversial weapons)

Post-investment, the Sub-fund assesses the performance on all mandatory PAI indicators on a regular basis.

Sustainable investments that are not constituents of Paris-Aligned Benchmark, should all have a positive score on Robeco's SDG Framework. Robeco's SDG Framework assesses the contribution of companies to the Sustainable Development Goals (SDGs). Many PAI indicators are either directly or indirectly included in the SDG Framework to determine whether a company has significant impacts on

the SDGs related to the PAI indicators. A detailed description of the incorporation of principal adverse impacts is available via Robeco's Principal Adverse Impact Statement published on the Robeco website (<https://www.robeco.com/files/docm/docu-principal-adverse-impact-statement-summary-entity-level.pdf>).

How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights?

The sustainable investments are aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights via Robeco's Exclusion Policy, Robeco's SDG Framework, and the methodology of the benchmark provider.

Does this financial product consider principal adverse impacts on sustainability factors?

Yes, _____

The Sub-fund considers principal adverse impacts on sustainability factors as referred to in Annex 1 of the SFDR Delegated Act.

Pre-investment, the following principal adverse impacts on sustainability factors are considered:

- Via the applied normative and activity-based exclusions, the following PAIs are considered:
 - Exposure to companies active in the fossil fuel sector (PAI 4, Table 1)
 - Violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1)
 - Activities negatively affecting biodiversity-sensitive areas (PAI 7, Table 1). The consideration of this PAI is currently restricted to applying exclusions to palm oil producing companies and for any breaches to the UNGC, UNGP and OECD Guidelines for Multinational Enterprises in relation to biodiversity.
 - Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons (PAI 14, Table 1)
- Via the environmental footprint performance targets of the Sub-fund, the following PAIs are considered:
 - Carbon footprint (PAI 2, Table 1), via the Paris-Aligned Benchmark
 - Water and waste indicators (PAI 8-9, Table 1). Robeco will use on water and waste footprint until data quality and coverage of the PAIs will improve.

Post-investment, the following principal adverse impacts on sustainability factors are taken into account:

- Via Robeco's entity engagement program, the following PAIs are considered:
 - All indicators related to Climate and other environment-related indicators (PAI 1-9, Table 1)
 - Violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1)
 - Activities negatively affecting biodiversity sensitive areas (PAI 7, Table 1). The consideration of this PAI is currently restricted to applying exclusions to palm oil producing companies and

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

for any breaches to the UNGC, UNGP and OECD Guidelines for Multinational Enterprises in relation to biodiversity.

- In addition, based on a yearly review of Robeco's performance on all mandatory and selected voluntary indicators, holdings of the Sub-fund that cause adverse impact might be selected for engagement.

More information is available via Robeco's Principal Adverse Impact Statement, published on Robeco's website. The Sub-fund will periodically report how it has considered the principal adverse impacts of its investments in the Company's annual report, which will be made available each year on or before 30 April at the Sub-fund page highlighted in final section of this document.

No

What investment strategy does this financial product follow?

RobecoSAM QI Global SDG & Climate Multi-Factor Credits is an actively managed fund that invests systematically in predominantly investment grade bonds of companies that advance the United Nations Sustainable Development Goals (SDGs) and contribute to maintaining the global temperature rise below 2°C. The selection of these bonds is based on a quantitative model as described in the Investment policy strategy paragraph in Appendix I of this Prospectus. The Sub-fund focuses on offering exposure to a number of quantitative strategies in a diversified way, such as, but not limited to, a strategy focusing on bonds with (Low volatility); on bonds with an attractive valuation (Value) and a strategy focusing on bonds of companies with a medium term attractive performance trend (Momentum). The strategy integrates sustainability indicators on a continuous basis as part of the bond selection process. Amongst others, the Sub-fund applies norms-based and activity-based exclusions, Robeco's good governance policy, Robeco's SDG framework and considers Principal Adverse Impacts in the investment process. More product-specific information can be found on our website and the links provided in the final question of this disclosure. In case of a rebalancing of the portfolio, the portfolio may temporarily, but no longer than 72 hours, deviate from its binding elements, with the exception of adherence to the exclusion policy that applies at all times.

The investment strategy guides investment decisions based on factors such as investment objectives and risk tolerance.

What are the binding elements of the investment strategy used to select the investments to attain the sustainable investment objective?

The Sub-fund has the following binding elements:

1. The Sub-fund's weighted carbon footprint is better than that of the Paris Aligned Benchmark.
2. The Sub-fund's weighted water and waste footprint is better than that of the Paris Aligned Benchmark.
3. The Sub-fund fully complies with activity based exclusions with regards to products (including controversial weapons, tobacco, palm oil, and thermal coal, upstream oil and gas and electricity producers in line with Article 12 of the EU regulation Climate Transition Benchmarks, EU Paris-aligned Benchmarks and sustainability-related disclosures for benchmarks) as applicable. In addition, the Sub-fund's portfolio complies with Robeco's Exclusion Policy (<https://www.robeco.com/files/docm/docu-exclusion-policy.pdf>), that is based on exclusion criteria with regards to products and business practices that Robeco believes are detrimental to society and incompatible with sustainable investment strategies. This means that the Sub-fund has 0% exposure to excluded securities, taking into account a grace period. Information with regards to the effects of the exclusions on the Sub-fund's universe can be found at <https://www.robeco.com/files/docm/docu-exclusion-list.pdf>
4. The Sub-fund avoids investment in companies that are in breach of the ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises. Companies that breach the international norms will be excluded from the investment universe.
5. The Sub-fund excludes all high or medium negative SDG scores (-3 or -2).
6. The Sub-fund's weighted average ESG score is better than that of the Paris Aligned Benchmark.

- 7. The Sub-fund's weight in companies with a positive SDG score (1,2,3) is at least 20% better than that of the general market index, measured as a ratio.

What is the policy to assess good governance practices of the investee companies?

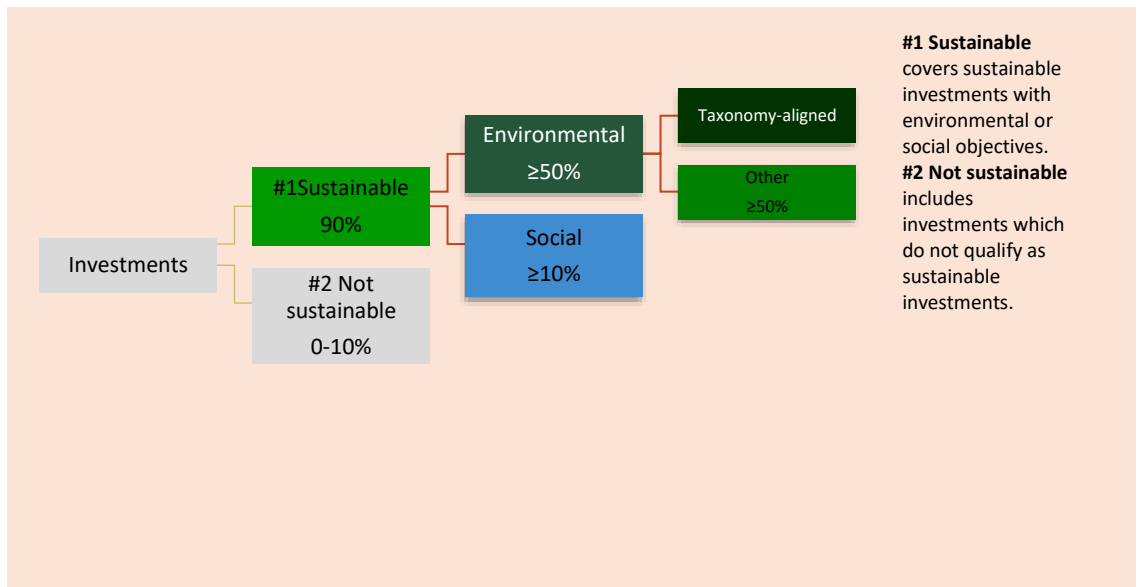

Robeco has a Good Governance policy to assess governance practices of companies. The policy describes how Robeco determines if and when a company does not follow good governance practices and is therefore excluded from the initial investment universe for Article 8 and 9 products. Robeco's Good Governance policy applies to the Sub-fund and tests on a set of governance criteria that reflect widely recognized industry established norms and include topics as employee relations, management structure, tax compliance and remuneration.

The Good Governance test consists of criteria on such topics that are examined for investee companies and further explained in Robeco's Good Governance policy <https://www.robeco.com/files/docm/docu-robeco-good-governance-policy.pdf>. Additionally, the companies that do not pass the good governance test are reflected in the exclusion list that can be accessed here - <https://www.robeco.com/files/docm/docu-exclusion-list.pdf>.

What is the asset allocation and the minimum share of sustainable investments?

The Sub-fund plans to make a minimum of 90% sustainable investments, with a minimum portion of 50% sustainable investments with an environmental objective and a minimum portion of 10% sustainable investments with a social objective, measured either by issuers that are part of the Paris Aligned Index (considered to have an environmental objective) or by holdings that have a positive score via Robeco's SDG Framework.

The sustainable investments with an environmental objective may also contribute to SDGs that attain the social objectives of the Sub-fund, and vice versa. However, following regulatory guidelines an investment will not be double counted (so not counted for both environmental and social objectives). The investments in the category non- sustainable, estimated between 0-10%, are in cash and cash equivalents.

How does the use of derivatives attain the sustainable investment objective?

Good governance practices include sound management structures, employee relations, remuneration of staff and tax compliance.

Asset allocation describes the share of investments in specific assets.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.

- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

The Sub-fund does not make use of derivatives to attain the sustainable objective promoted by the financial product. The Sub-fund may make use of derivatives for hedging as well as liquidity management. This includes the usage of derivatives to manage currency and duration exposures in a cost-effective manner. To that purpose exchange traded and over-the-counter derivatives linked to sovereign bonds (treasuries), interest rates, swap rates and currencies are permitted. Derivatives linked to corporate exposure are not allowed.

In case the Sub-fund uses derivatives, the underlying shall comply with the investment policy. Where relevant, minimum environmental or social safeguards are taken into account.

To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

The Sub-fund intends to contribute to the climate change mitigation objective under the EU Taxonomy. The Sub-fund commits to a minimum share of 0% of Taxonomy-aligned activities. The Sub-fund intends to increase the minimum share of Taxonomy aligned activities for the Sub-fund once data availability in relation to the EU Taxonomy improves and stabilises.

The Sub-fund will report on Taxonomy-aligned investment in the periodic disclosures. In the future, once data-availability in relation to the EU Taxonomy will improve, Robeco might consider setting a target based on turnover or CAPEX. Robeco currently relies on third-party data in relation to the EU Taxonomy, including data in relation to companies that do not disclose on the EU Taxonomy alignment of their activities. EU Taxonomy-alignment data is not yet subject to a review by third parties. The Sub-fund only makes investments in equity and therefore it does not have sovereign exposures. The expected level of alignment with and without sovereign bonds is the same.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power

● **Does the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy⁸³?**

Yes:

In fossil gas In nuclear energy

No

⁸³ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

 are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

*** For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures**
**** As the investments are not Taxonomy-aligned, the exclusion of sovereign bonds has no impact on the graph and therefore no such percentage is shown here.**

What is the minimum share of investments in transitional and enabling activities?

0%.

What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?

The Sub-fund makes sustainable investments with environmental objectives that do not qualify as Taxonomy-aligned. Given the Sub-fund's investment strategy and the specific environmental investment objective, the Sub-fund commits to a minimum share of sustainable investments of 50% with an environmental objective. The environmental objectives of the Sub-fund are attained by investing in companies, in line with a low carbon scenario stipulated by the Paris aligned benchmark methodology.

In addition, the Sub-fund intends to make sustainable investments off-benchmark, measured as positive scores via Robeco's SDG Framework. Among those could be sustainable investments with environmental objectives which are companies that score positively on SDG 12 (Responsible consumption and production), SDG 13 (Climate action), SDG 14 (Life below water), and SDG 15 (Life on land) in Robeco's SDG Framework.

The sum of sustainable investments with an environmental objective and socially sustainable investments will always add up to the Sub-fund's minimum proportion of 90% sustainable investments.

What is the minimum share of sustainable investments with a social objective?

Within the off-benchmark holdings (i.e. holdings that are not part of the Paris Aligned Benchmark), the Sub-fund intends to make sustainable investments with a social objective. Given the Sub-fund's investment strategy and the specific social investment objective, the Sub-fund commits to a minimum

share of sustainable investments of 10% with a social objective, measured by off-benchmark holdings that have a positive score via Robeco's SDG Framework. The social objectives of the Sub-fund are attained by investing in companies that score positively on SDG 1 (No poverty), SDG 2 (Zero hunger), SDG 3 (Good health and well-being), SDG 4 (Quality education), SDG 5 (Gender equality), SDG 6 (Clean water and sanitation), SDG 7 (Affordable and clean energy), SDG 8 (Decent work and economic growth), SDG 9 (Industry, innovation and infrastructure), SDG 10 (Reduced inequalities), SDG 11 (Sustainable cities and communities), SDG 16 (Peace, justice and strong institutions) and SDG 17 (Partnerships for the goals), in Robeco's SDG Framework.

The sum of socially sustainable investments and sustainable investments with an environmental objective will always add up to the Sub-fund's minimum proportion of 90% sustainable investments.

What investments are included under "#2 Not sustainable", what is their purpose and are there any minimum environmental or social safeguards?

The type of instruments included under "#2 Not Sustainable" and their purpose are outlined in Annex I of this Prospectus under the header 'Financial instruments and investment restrictions'. They include cash, cash equivalents, as well as investment funds and eligible asset classes (other than bonds and equities) that do not specifically promote E/S characteristics. As indicated above, the Sub-fund does not make use of derivatives to attain its sustainable objective. The Sub-fund may make use of derivatives for hedging and liquidity management. This includes the usage of derivatives to manage the duration around the benchmark duration and currency exposures in a cost-effective manner. For the management of currency exposure FX Forwards are allowed. Furthermore exchange traded and over-the-counter derivatives linked to sovereign bonds (treasuries), interest rates, swap rates and currencies are permitted. In case the Sub-fund uses derivatives, the underlying shall comply with the investment policy and the exposure through the use of derivatives must fit the investment universe of the Sub-fund. Where relevant, minimum environmental or social safeguards are taken into account by monitoring and applying Robeco's Exclusion Policy for the use of derivatives linked to sovereigns. Additionally, derivatives linked to corporate exposure are not allowed.

Is a specific index designated as a reference benchmark to meet the sustainable investment objective?

Yes, the Sub-fund follows the Solactive Paris Aligned Global Corporate Index as a reference index to meet the carbon footprint reduction objective of the Sub-fund and thereby keeping the maximum global temperature rise well-below 2°C

How does the reference benchmark take into account sustainability factors in a way that is continuously aligned with the sustainable investment objective?

The reference index is aligned with the carbon reduction objective of the Sub-fund by applying a methodology with clearly defined rules for evaluating securities on their carbon footprint. The methodology of the reference index is designed in accordance with the requirements of point (d) of Article 13 (1) of the Benchmark Regulation and of the Commission Delegated Regulation (EU) 2020/1817. This means that amongst others, the reference index complies with those criteria set out in Article 12 of the EU Climate Transition Benchmarks, EU Paris-aligned Benchmarks and sustainability-related disclosures for benchmarks. The Sub-fund also applies the aforementioned exclusion criteria, and the Sub-fund's weighted carbon footprint score is always better than the Solactive Paris Aligned Global Corporate Index.

How is the alignment of the investment strategy with the methodology of the index ensured on a continuous basis?

Reference benchmarks are indexes to measure whether the financial product attains the sustainable investment objective.

The methodology of the reference index follows rebalancing rules on a monthly basis which ensures alignment with the investment strategy and objective of the Sub-fund. The data used is sourced externally from Institutional Shareholder Services Inc.

The Sub-fund follows a rebalancing strategy which ensures that the carbon footprint of the Sub-fund is better than that of the reference index. This in turn ensures that the investment strategy of the Sub-fund aligns with the methodology of the reference index. The methodology of the reference index takes into account a decarbonization trajectory of at least 7% GHG intensity per annum along with specific sector or activity exclusions and including involvement in controversial weapons.

● ***How does the designated index differ from a relevant broad market index?***

The benchmark differs from a broad general market index in that the latter does not take into account in its methodology any criteria for alignment with the Paris Agreement on greenhouse gas emission reduction and related exclusions.

● ***Where can the methodology used for the calculation of the designated index be found?***

The index methodology can be found on the relevant webpages by the index provider: <https://www.solactive.com/indices/>

Where can I find more product specific information online?

o) Robeco Sustainable Emerging Credits

Pre-contractual disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Product name: Robeco Sustainable Emerging Credits

Legal entity identifier: 5493008QKCFW6QOH681

Environmental and/or social characteristics

Does this financial product have a sustainable investment objective?

Yes

No

It will make a minimum of **sustainable investments with an environmental objective: ___%**

- in economic activities that qualify as environmentally sustainable under the EU Taxonomy
- in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

It will make a minimum of **sustainable investments with a social objective: ___%**

It promotes **Environmental/Social (E/S) characteristics** and while it does not have as its objective a sustainable investment, it will have a minimum proportion of 50% of sustainable investments

- with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy
- with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy
- with a social objective

It promotes E/S characteristics, but **will not make any sustainable investments**

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

What environmental and/or social characteristics are promoted by this financial product?

The Sub-fund has the following E/S characteristics:

1. The Sub-fund promotes investment in a portfolio that contributes to the Sustainable Development Goals (SDGs).
2. The Sub-fund promotes investment in a portfolio that avoid significant harm to the Sustainable Development Goals (SDGs).
3. The Sub-fund promotes adherence to and conducting business activities in accordance with the United Nations Universal Declaration of Human Rights, the International Labor Organization's (ILO) labor standards, the United Nations Guiding Principles for Business and Human Rights (UNGPs), the United Nations Global Compact (UNGC) and the OECD Guidelines for Multinational Enterprises.
4. The Sub-fund promotes certain minimum environmental and social safeguards through applying exclusion criteria with regards to products and business practices that Robeco believes are detrimental to society and incompatible with sustainable investment strategies, such as exposure to controversial behaviour, controversial weapons, and fossil fuels.
5. The Sub-fund limits investing in companies with an elevated sustainability risk based on ESG risk scores whereas all such investments require separate approval of a dedicated committee that oversees that all investments are substantiated and eligible based on a fundamental review on the sustainability risk.
6. The Sub-fund aims to contribute to the United Nations Sustainable Development Goals by investing in green, social, sustainability and/or sustainability-linked bonds that are used to finance environmental and social projects.

There is no reference benchmark designated for the purpose of attaining the environmental or social characteristics promoted by the Sub-fund.

● **What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?**

The Sub-fund has the following sustainability indicators:

1. The proportion of companies that hold a positive or neutral SDG score and the Sub-fund's average company SDG score.
2. The proportion of companies that hold a high or medium negative SDG score (-3 or -2) based on the internally developed SDG Framework.
3. The number of companies that are in violation of the UNGPs or OECD Guidelines for Multinational Enterprises.
4. The % of investments in securities that are on Robeco's Exclusion list as result of the application of Robeco's Exclusion Policy.
5. The % of holdings with an elevated sustainability risk profile.
6. The % of the Sub-fund invested in green, social, sustainability and/or sustainability-linked bonds.

● **What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?**

The sustainable investments aim to contribute to the UN Sustainable Development Goals ("SDGs"), that have both social and environmental objectives. These are 17 goals that are globally recognised and include environmental goals such as climate action, clean water, life on land and water and social goals such as zero hunger, gender equality, education, etc. Robeco has developed a proprietary framework based on the UN SDGs through which an issuer's contribution to such SDGs is determined through a 3-step process. This process starts with a sector baseline on which a company's products are analysed to

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

examine contribution to the society and environment. Further, the operational processes involved in creating such products is checked along with any controversies/litigation claims and remediation actions taken which are perused before a final SDG score is determined. The final score ranges between high negative (-3) to high positive (+3) and only those issuers which achieve positive SDG scores (+1, +2 and +3) are regarded as Sustainable Investments.

● ***How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?***

The sustainable investments do no significant harm to any environmental or social sustainable investment objective by considering a principal adverse impact and aligning with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights. In addition, sustainable investments score positively on Robeco's SDG Framework, and therefore do not cause significant harm.

How have the indicators for adverse impacts on sustainability factors been taken into account?

Mandatory principal adverse impact indicators are considered through Robeco's SDG Framework, either directly or indirectly, when identifying sustainable investments for the Sub-fund. In addition, voluntary environmental and social indicators are taken into account, depending on their relevance for measuring impacts on the SDGs and the availability of data. A detailed description of the incorporation of principal adverse impacts is available via Robeco's Principal Adverse Impact Statement published on the Robeco website (<https://www.robeco.com/files/docm/docu-principal-adverse-impact-statement-summary-entity-level.pdf>). In this statement, Robeco sets out its approach to identifying and prioritizing principal adverse impacts, and how principal adverse impacts are considered as part of Robeco's investment due diligence process and procedures relating to research and analysis, exclusions and restrictions and/or voting and engagement. This description also explains how principal adverse impact indicators are considered by the SDG Framework.

How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The sustainable investments are aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights via both Robeco's Exclusion Policy and Robeco's SDG Framework.

Robeco's Exclusion Policy includes an explanation of how Robeco acts in accordance with the International Labor Organization (ILO) standards, United Nations Guiding Principles (UNGPs), United Nations Global Compact (UNGC) Principles and the Organization for Economic Co-operation and Development (OECD) Guidelines for Multinational Enterprises and is guided by these international treaties to assess the behavior of companies. Robeco continuously screens its investments for breaches of these principles. In case of a breach, the company will be excluded or engaged with, and is not considered a sustainable investment.

Robeco's SDG Framework screens for breaches on these principles in the final step of the framework. In this step, Robeco checks whether the company concerned has been involved in any controversies. Involvement in any controversy will result in a negative SDG score for the company, meaning it is not a sustainable investment.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

Does this financial product consider principal adverse impacts on sustainability factors?

Yes, _____

The Sub-fund considers principal adverse impacts on sustainability factors as referred to in Annex I of the SFDR Delegated Act.

Pre-investment, Robeco's SDG Framework assesses companies' positive and negative contributions to the Sustainable Development Goals (SDGs). Robeco's SDG Framework directly and/or indirectly screens companies on many of the topics considered by the PAI indicators.

Post-investment, the following principal adverse impacts on sustainability factors are taken into account:

- Via Robeco's entity engagement program, the following PAIs are considered:

- All indicators related to Climate and other environment-related indicators (PAI 1-9, Table 1)
- Violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1). On an ongoing basis, the investment universe is scanned for controversial behavior in relation to the aforementioned principles and guidelines.
- In addition, based on a yearly review of Robeco's performance on all mandatory and selected voluntary indicators, holdings of the Sub-fund that cause adverse impact might be selected for engagement.

More information is available via Robeco's Principal Adverse Impact Statement, published on Robeco's website. The Sub-fund will periodically report how it has considered the principal adverse impacts of its investments in the Company's annual report, which will be made available each year on or before 30 April at the Sub-fund page highlighted in final section of this document.

No

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

The investment strategy guides investment decisions based on factors such as investment objectives and risk tolerance.

What investment strategy does this financial product follow?

Robeco Sustainable Emerging Credits is an actively managed fund that invests in corporate bonds in emerging markets. The selection of these bonds is based on fundamental analysis as described in the Investment policy strategy paragraph in Appendix I of this Prospectus.

The strategy integrates sustainability indicators on a continuous basis as part of the bond selection process. Amongst others, the Sub-fund applies norms-based, activity-based and regional exclusions, Robeco's good governance policy, Robeco's SDG framework and considers Principal Adverse Impacts in the investment process. More product-specific information can be found on our website and the links provided in the final question of this disclosure.

What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?

The Sub-fund has the following binding elements:

1. For corporate bond investments, at least 80% of the Sub-fund is invested in companies with a positive or neutral SDG score. No more than 20% can be invested in a holding with a low-negative score. The average company SDG score of the Sub-fund is greater than zero.
2. For corporate bond investments, the Sub-fund excludes all high or medium negative SDG scores (-3 or -2).
3. The Sub-fund avoids investment in companies that are in breach of the ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises. Companies that breach these international norms will be excluded from the investment universe.
4. The Sub-fund's portfolio complies with Robeco's Exclusion Policy (<https://www.robeco.com/files/docm/docu-exclusion-policy.pdf>), that is based on exclusion criteria with regards to products and business practices that Robeco believes are detrimental to society and incompatible with sustainable investment strategies. This means that the Sub-fund has 0% exposure to excluded securities, taking into account a grace period. Information with regards to the effects of the exclusions on the Sub-fund's universe can be found at <https://www.robeco.com/files/docm/docu-exclusion-list.pdf>
5. Investments with an elevated sustainability risk are defined by Robeco as companies with an ESG Risk Rating of 40 and higher (the ESG Risk Rating is explained in the sustainability risk policy which can be accessed via <https://www.robeco.com/files/docm/docu-robeco-sustainability-risk-policy.pdf>). The Sub-fund is limited to a maximum exposure of 5% to investments with an elevated sustainability risk, based on the market weight in the portfolio taking into account regional differences and benchmark. Each investment with an ESG Risk rating of higher than 40 requires separate approval by a dedicated committee of sustainable investment specialists, compliance and risk management that oversees the bottom-up sustainability analysis.
6. The Sub-fund invests a minimum of 5% in green, social, sustainability, and/or sustainability-linked bonds.

What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?

The Sub-fund does not commit to a minimum rate to reduce the scope of investments prior to the application of the investment strategy.

What is the policy to assess good governance practices of the investee companies?

Good governance practices include sound management structures, employee relations, remuneration of staff and tax compliance.

Robeco has a Good Governance policy to assess governance practices of companies. The policy describes how Robeco determines if and when a company does not follow good governance practices and is therefore excluded from the initial investment universe for Article 8 and 9 products. Robeco's Good Governance policy applies to the Sub-fund and tests on a set of governance criteria that reflect widely recognized industry established norms and include topics as employee relations, management structure, tax compliance and remuneration.

The Good Governance test consists of criteria on such topics that are examined for investee companies and further explained in Robeco's Good Governance policy <https://www.robeco.com/files/docm/docu-robeco-good-governance-policy.pdf>. Additionally, the companies that do not pass the good governance test are reflected in the exclusion list that can be accessed here - <https://www.robeco.com/files/docm/docu-exclusion-list.pdf>.

What is the asset allocation planned for this financial product?

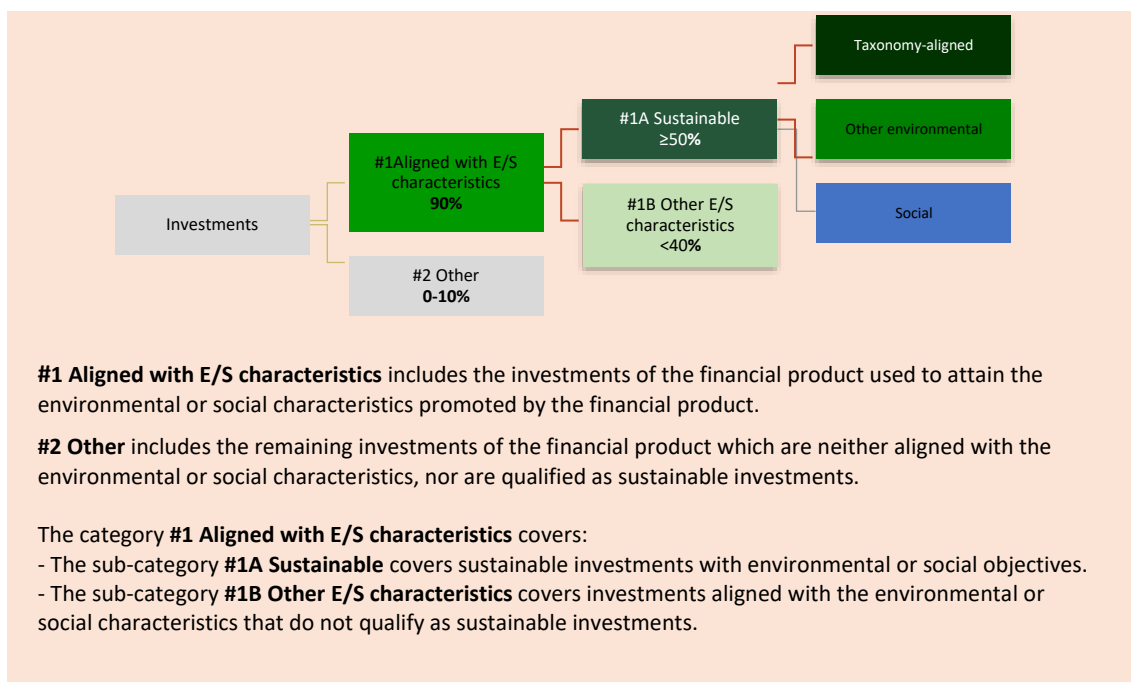

At least 90% of the investments are aligned with the E/S characteristics of the Sub-fund. The Sub-fund plans to make a minimum of 50% sustainable investments, measured by positive scores via Robeco's SDG Framework. The investments in the category Other, estimated between 0-10%, are mostly in cash, cash equivalents and derivatives as further described below. The planned asset allocation is monitored continuously, and evaluated on a yearly basis.

Asset allocation describes the share of investments in specific assets.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers sustainable investments with environmental or social objectives.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

How does the use of derivatives attain the environmental or social characteristics promoted by the financial product?

The Sub-fund does not make use of derivatives to attain the environmental or social characteristics promoted by the financial product. The Sub-fund may make use of derivatives for hedging, liquidity management and efficient portfolio management as well as investment purposes in the global fixed income, money market, interest rates and currency markets. In case the Sub-fund uses derivatives, the underlying shall comply with the investment policy of the Sub-fund. Where relevant, minimum environmental or social safeguards are taken into account as described below.

To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

0%. The Sub-fund intends to contribute to all 6 environmental objectives under the EU Taxonomy via the investments in green bonds. The Sub-fund commits to a minimum share of 0% of Taxonomy-aligned activities. The Sub-fund intends to increase the minimum share of Taxonomy aligned activities for the Sub-fund, based on use of proceeds, once data availability in relation to the EU Taxonomy for green bonds improves and stabilises.

The Sub-fund will report on Taxonomy-aligned investment in the periodic disclosures. For investments in corporate bonds, the Sub-fund will report on turnover. Given the lack of data on the EU Taxonomy for green bonds in the market, Robeco relies on internal analysis for the time being. EU Taxonomy-alignment data is not yet subject to a review by third parties. The expected level of alignment with and without sovereign bonds is the same.

Does the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy⁸⁴?

Yes

In fossil gas

In nuclear energy

No

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.*

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

** As the investments are not Taxonomy-aligned, the exclusion of sovereign bonds has no impact on the graph and therefore no such percentage is shown here.

What is the minimum share of investments in transitional and enabling activities?

0%.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

⁸⁴ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

 are sustainable investments with an environmental objective that **do not take into account the criteria for environmentally sustainable economic activities under the EU Taxonomy.**

What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?

Green bonds may invest (part of) their use of proceeds in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy. In addition, the Sub-fund intends to make sustainable investments measured as positive scores via Robeco's SDG Framework. Among those could be investments with environmental objectives that do not qualify as Taxonomy-aligned. The environmental objectives of the Sub-fund are attained by investing in companies that score positively on SDG 12 (Responsible consumption and production), SDG 13 (Climate action), SDG 14 (Life below water), and SDG 15 (Life on land) in Robeco's SDG Framework.

While the sum of sustainable investments with an environmental objective and socially sustainable investments always adds up to the Sub-fund's minimum proportion of 50% sustainable investments, we do not commit to a minimum share of sustainable investments with an environmental objective because the Sub-fund's investment strategy does not have a specific environmental investment objective. Therefore, the minimum share of sustainable investments with an environmental objective is 0%.

What is the minimum share of socially sustainable investments?

Social, sustainable or sustainability-linked bonds may invest (part of) their use of proceeds in economic activities that contribute to a social objective.

In addition, the Sub-fund intends to make sustainable investments, measured as positive scores via Robeco's SDG Framework. Among those could be investments with social objectives. The social objectives of the Sub-fund are attained by investing in companies that score positively on SDG 1 (No poverty), SDG 2 (Zero hunger), SDG 3 (Good health and well-being), SDG 4 (Quality education), SDG 5 (Gender equality), SDG 6 (Clean water and sanitation), SDG 7 (Affordable and clean energy), SDG 8 (Decent work and economic growth), SDG 9 (Industry, innovation and infrastructure), SDG 10 (Reduced inequalities), SDG 11 (Sustainable cities and communities), SDG 16 (Peace, justice and strong institutions) and SDG 17 (Partnerships for the goals), in Robeco's SDG Framework.

While the sum of socially sustainable investments and sustainable investments with an environmental objective always adds up to the Sub-fund's minimum proportion of sustainable investments, we do not commit to a minimum share of socially sustainable investments because the Sub-fund's investment strategy does not have a specific socially sustainable investment objective. Therefore, the minimum share of socially sustainable investments is 0%.

What investments are included under "#2 Other", what is their purpose and are there any minimum environmental or social safeguards?

The type of instruments included under "#2 Other" and their purpose are outlined in Annex I of this Prospectus under the header 'Financial instruments and investment restrictions'. They include cash, cash equivalents, as well as investment funds and eligible asset classes (other than bonds and equities) that do not specifically promote E/S characteristics. As indicated above, the Sub-fund does not make use of derivatives to attain the environmental or social characteristics promoted. The Sub-fund may make use of derivatives, which thus always fall under the category "#2 Other", for hedging, liquidity management and efficient portfolio management as well as investment purposes. Exchange traded and over-the-counter derivatives are permitted, including but not limited to futures, swaps, options and currency forwards. In case the Sub-fund uses derivatives, the underlying shall comply with the investment policy. Where relevant, minimum environmental or social safeguards are taken into account, by, for example, applying Robeco's Exclusion Policy for any single security derivative.

Is a specific index designated as a reference benchmark to determine whether this financial product is aligned with the environmental and/or social characteristics that it promotes?

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

Not applicable.

Where can I find more product specific information online?

p) Robeco Global Inflation Linked Bonds

Pre-contractual disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Product name: Robeco Global Inflation Linked Bonds

Legal entity identifier: 213800K2LONFCP5YQV06

Environmental and/or social characteristics

Does this financial product have a sustainable investment objective?

Yes

No

It will make a minimum of **sustainable investments with an environmental objective: ___%**

- in economic activities that qualify as environmentally sustainable under the EU Taxonomy
- in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

It will make a minimum of **sustainable investments with a social objective: ___%**

It promotes **Environmental/Social (E/S) characteristics** and while it does not have as its objective a sustainable investment, it will have a minimum proportion of 10% of sustainable investments

- with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy
- with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy
- with a social objective

It promotes E/S characteristics, but **will not make any sustainable investments**

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

What environmental and/or social characteristics are promoted by this financial product?

The Sub-fund has the following general E/S characteristic:

1. The Sub-fund aims to contribute to the United Nations Sustainable Development Goals by investing in green, social, sustainability and/or sustainability-linked bonds that are used to finance environmental and social projects.

The Sub-fund has the following E/S characteristics for investments in corporate bonds:

1. The Sub-fund promotes certain minimum environmental and social safeguards through applying exclusion criteria with regards to products and business practices that Robeco believes are detrimental to society and incompatible with sustainable investment strategies, such as exposure to controversial behaviour, controversial weapons, and fossil fuels. Robeco deems investing in government bonds (federal or local) of countries where serious violations of human rights or a collapse of the governance structure take place as unsustainable. In addition, Robeco will follow applicable sanctions of the UN, EU or US to which it is subject and follows any mandatory (investment) restrictions deriving therefrom.
2. The Sub-fund limits investing in companies with an elevated sustainability risk based on ESG risk scores whereas all such investments require separate approval of a dedicated committee that oversees that all investments are substantiated and eligible based on a fundamental review on the sustainability risk.
3. The Sub-fund promotes adherence to and conducting business activities in accordance with the United Nations Universal Declaration of Human Rights, the International Labor Organization's (ILO) labor standards, the United Nations Guiding Principles for Business and Human Rights (UNGPs), the United Nations Global Compact (UNGC) and the OECD Guidelines for Multinational Enterprises, by scrutinizing companies that violate these principles.
4. The Sub-fund promotes investment in a portfolio that contributes to the UN Sustainable Development Goals.

The Sub-fund has the following E/S characteristics for investments in government bonds:

1. The Sub-fund promotes certain minimum environmental and social safeguards through applying exclusion criteria with regards to products and business practices that Robeco believes are detrimental to society and incompatible with sustainable investment strategies, such as exposure to controversial behaviour, controversial weapons, and fossil fuels. Robeco deems investing in government bonds (federal or local) of countries where serious violations of human rights or a collapse of the governance structure take place as unsustainable. In addition, Robeco will follow applicable sanctions of the UN, EU or US to which it is subject and follows any mandatory (investment) restrictions deriving therefrom.
2. The Sub-fund promotes investment in countries that perform well on the RobecoSAM Country Sustainability Ranking. The RobecoSAM Country Sustainability Ranking incorporates a wide range of ESG factors such as aging, corruption, social unrest, political risks and environmental risks.
3. The Sub-fund promotes investment in countries with policies and institutional frameworks to prevent and combat corruption.

What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?

1. The % of the Sub-fund invested in green, social, sustainability or sustainability-linked bonds.
The Sub-fund has the following sustainability indicators to measure the attainment of the E/S characteristics of the corporate bonds:

1. The % of investments in securities that are on Robeco's Exclusion list as result of the application of Robeco's Exclusion Policy.
2. The % of holdings with an elevated sustainability risk profile.

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

3. The number of companies that are in violation of the ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises and therefore part of the Enhanced Engagement program.
4. The proportion of companies that hold a positive SDG score.

The Sub-fund has the following sustainability indicators to measure the attainment of the E/S characteristics of government bonds:

1. The % of investments in securities that are on Robeco's Exclusion list as result of the application of Robeco's Exclusion Policy.
2. The weighted average score on Robeco's Country Sustainability Ranking.
3. The % of investments excluded from the Worldwide Governance Indicators (WGI) - Control of Corruption ranking.

● ***What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?***

The portion of the sustainable investments are green, social, sustainability and sustainability-linked bonds, and therefore contribute to the environmental objectives under EU Taxonomy. The Sub-fund does not have an explicit goal for contribution to UN SDGs. If there are corporate investments made then Robeco will use its proprietary SDG framework to examine which issuers make a positive contribution to the UN SDGs and which can be regarded as Sustainable investments as defined under Article 2(17) of SFDR. Positive SDG scores (+1, +2, +3) are regarded as sustainable investments.

● ***How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?***

For sustainable investments that are either green, social, sustainability or sustainability-linked bonds, significant harm is avoided by the application of the Robeco's green, social, sustainability or sustainability-linked bond eligibility frameworks.

For corporate investments, Robeco's SDG Framework is considered for the analysis of sustainable investments determined by positive scores on this framework. Robeco's SDG Framework assesses the contribution of companies to the Sustainable Development Goals (SDGs). Many PAI indicators are either directly or indirectly included in the SDG Framework to determine whether a company has significant impacts on the SDGs related to the PAI indicators. A detailed description of the incorporation of principal adverse impacts is available via Robeco's Principal Adverse Impact Statement published on the Robeco website.

How have the indicators for adverse impacts on sustainability factors been taken into account?

For sustainable investments that are either green, social, sustainability or sustainability-linked bonds, significant harm is avoided by the application of the Robeco's green, social, sustainability or sustainability-linked bond eligibility framework.

Robeco's SDG Framework is considered for the analysis of sustainable investments determined by positive scores on this framework. Robeco's SDG Framework assesses the contribution of companies to the Sustainable Development Goals (SDGs). Many PAI indicators are either directly or indirectly included in the SDG Framework to determine whether a company has significant impacts on the SDGs related to the PAI indicators. A detailed description of the incorporation of Principal Adverse Impact is available via Robeco's Principal Adverse Impact Statement published on the Robeco website (<https://www.robeco.com/files/docm/docu-principal-adverse-impact-statement-summary-entity-level.pdf>).

How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The sustainable investments are aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights via Robeco's Exclusion Policy.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

Does this financial product consider principal adverse impacts on sustainability factors?

Yes, _____

The Sub-fund considers principal adverse impacts on sustainability factors as referred to in Annex I of the SFDR Delegated Act.

Pre-investment, the following principal adverse impacts on sustainability factors are considered:

- Via the applied normative and activity-based exclusions, the following PAIs are considered:
 - Exposure to companies active in the fossil fuel sector (PAI 4, Table 1)
 - Violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1)
 - Activities negatively affecting biodiversity-sensitive areas (PAI 7, Table 1). The consideration of this PAI is currently restricted to applying exclusions to palm oil producing companies and for any breaches to the UNGC, UNGP and OECD Guidelines for Multinational Enterprises in relation to biodiversity.
 - Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons (PAI 14, Table 1)

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

- Via the ESG integration process, as part of the investment due diligence policies and procedures, the following PAIs are considered:
 - All indicators related to GHG emissions, as part of the required Climate Risk analysis (PAI 1-6, Table 1, PAI 4, Table 2)
 - Water and waste indicators (PAI 7-9, Table 1)

Post-investment, the following principal adverse impacts on sustainability factors are taken into account via Robeco's entity engagement program:

- All indicators related to Climate and other environment-related indicators (PAI 1-9, Table 1)
- Violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1). On an ongoing basis, the investment universe is scanned for controversial behavior in relation to the aforementioned principles and guidelines.
- In addition, based on a yearly review of Robeco's performance on all mandatory and selected voluntary indicators, holdings of the Sub-fund that cause adverse impact might be selected for engagement.

More information is available via Robeco's Principal Adverse Impact Statement, published on Robeco's website. The Sub-fund will periodically report how it has considered the principal adverse impacts of its investments in the Company's annual report, which will be made available each year on or before 30 April at the Sub-fund page highlighted in final section of this document.

No

What investment strategy does this financial product follow?

Robeco Global Inflation Linked Bonds is an actively managed Sub-fund that invests globally in inflation-linked government bonds and other marketable inflation-linked securities and instruments of issuers from any member State of the OECD or (supranational) issuers guaranteed by one or more member States of the OECD.

The selection of these bonds is based on fundamental analysis as described in the Investment policy strategy paragraph in Appendix I of this Prospectus. The strategy integrates sustainability indicators on a continuous basis as part of the bond selection process. Amongst others, the Sub-fund applies norms-based, activity-based and regional exclusions, Robeco's good governance policy, Robeco's SDG framework and considers Principal Adverse Impacts in the investment process. More product-specific information can be found on our website and the links provided in the final question of this disclosure.

What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?

1. The Sub-fund invests a minimum of 10% in green, social, sustainability or sustainability-linked bonds.

The Sub-fund has the following binding elements to measure the attainment of the E/S characteristics of the corporate bonds:

1. The Sub-fund's portfolio complies with Robeco's Exclusion Policy (<https://www.robeco.com/files/docm/docu-exclusion-policy.pdf>), that is based on exclusion criteria with regards to products and business practices that Robeco believes are detrimental to society and incompatible with sustainable investment strategies. This means that the Sub-fund has 0% exposure to excluded securities, taking into account a grace period. Information with regards

The investment strategy guides investment decisions based on factors such as investment objectives and risk tolerance.

to the effects of the exclusions on the Sub-fund's universe can be found at <https://www.robeco.com/files/docm/docu-exclusion-list.pdf>.

2. Investments with an elevated sustainability risk are defined by Robeco as companies with an ESG Risk Rating of 40 and higher (the ESG Risk Rating is explained in the sustainability risk policy which can be accessed via <https://www.robeco.com/files/docm/docu-robeco-sustainability-risk-policy.pdf>). The Sub-fund is limited to a maximum exposure of 3% to investments with an elevated sustainability risk, based on the market weight in the portfolio taking into account regional differences and benchmark. Each investment with an ESG Risk rating of higher than 40 requires separate approval by a dedicated committee of sustainable investment specialists, compliance and risk management that oversees the bottom-up sustainability analysis.
3. The Sub-fund scrutinizes investment in companies that are in breach of the ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises. If a company in the portfolio breaches one of the international guidelines during the investment period, the company will become part of the Enhanced Engagement program.
4. The Sub-fund is solely invested in companies that hold a positive SDG score.

The Sub-fund has the following binding elements to measure the attainment of the E/S characteristics for government bonds:

1. The Sub-fund's portfolio complies with Robeco's Exclusion Policy (<https://www.robeco.com/files/docm/docu-exclusion-policy.pdf>) that is based on exclusion criteria that Robeco believes are detrimental to society and incompatible with sustainable investment strategies. This means that the Sub-fund has 0% exposure to excluded securities, taking into account a grace period. Information with regards to the impact of the exclusions on the Sub-fund's universe can be found at <https://www.robeco.com/files/docm/docu-exclusion-list.pdf>.
2. The Sub-fund's portfolio has a minimum weighted average score of at least 7.5 on Robeco's Country Sustainability Ranking.
3. The Sub-fund excludes the bottom 15% of the Worldwide Governance Indicators (WGI) - Control of Corruption ranking.

● ***What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?***

The Sub-fund does not commit to a minimum rate to reduce the scope of investments prior to the application of the investment strategy.

● ***What is the policy to assess good governance practices of the investee companies?***

Robeco has a Good Governance policy to assess governance practices of companies. The policy describes how Robeco determines if and when a company does not follow good governance practices and is therefore excluded from the initial investment universe for Article 8 and 9 products. Robeco's Good Governance policy applies to the Sub-fund and tests on a set of governance criteria that reflect widely recognized industry established norms and include topics as employee relations, management structure, tax compliance and remuneration.

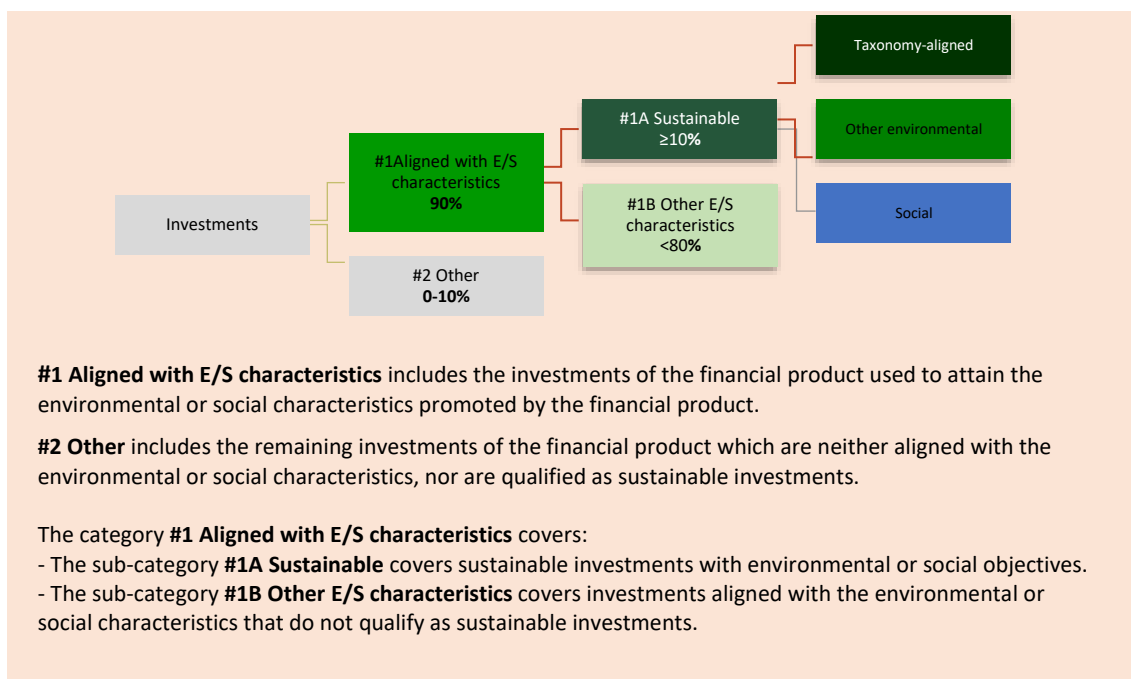

The Good Governance test consists of criteria on such topics that are examined for investee companies and further explained in Robeco's Good Governance policy <https://www.robeco.com/files/docm/docu-robeco-good-governance-policy.pdf>. Additionally, the companies that do not pass the good governance test are reflected in the exclusion list that can be accessed here - <https://www.robeco.com/files/docm/docu-exclusion-list.pdf>.

Good governance practices include sound management structures, employee relations, remuneration of staff and tax compliance.

What is the asset allocation planned for this financial product?

At least 90% of the investments are aligned with the E/S characteristics of the Sub-fund. The Sub-fund plans to make a minimum of 10% sustainable investments, measured by either being positive scores via Robeco's SDG Framework or investments in green, social, sustainability or sustainability-linked bonds. The investments in the category Other, estimated between 0-10%, are mostly in cash, cash equivalents and derivatives as further described below. The planned asset allocation is monitored continuously, and evaluated on a yearly basis.

How does the use of derivatives attain the environmental or social characteristics promoted by the financial product?

The Sub-fund does not make use of derivatives to attain the environmental or social characteristics promoted by the financial product. The Sub-fund may make use of derivatives for hedging, liquidity management and efficient portfolio management as well as investment purposes in the global fixed income, money market, interest rates and currency markets. In case the Sub-fund uses derivatives, the underlying shall comply with the investment policy of the Sub-fund. Where relevant, minimum environmental or social safeguards are taken into account as described below.

To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

0%. The Sub-fund intends to contribute to all 6 environmental objectives under the EU Taxonomy via the investments in green bonds. The Sub-fund commits to a minimum share of 0% of Taxonomy-aligned activities. The Sub-fund intends to increase the minimum share of Taxonomy aligned activities for the Sub-fund, based on use of proceeds, once data availability in relation to the EU Taxonomy for green bonds improves and stabilises.

The Sub-fund will report on Taxonomy-aligned investment in the periodic disclosures. Given the lack of data on the EU Taxonomy for green bonds in the market, Robeco relies on internal analysis for the time being. EU Taxonomy-alignment data is not yet subject to a review by third parties. The expected level of alignment with and without sovereign bonds is the same.

Asset allocation describes the share of investments in specific assets.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

 are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

● **Does the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy⁸⁵?**

Yes

In fossil gas

In nuclear energy

No

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.*

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

** As the investments are not Taxonomy-aligned, the exclusion of sovereign bonds has no impact on the graph and therefore no such percentage is shown here.

● **What is the minimum share of investments in transitional and enabling activities?**

0%.

What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?

The Sub-fund intends to make sustainable investments, measured as positive scores via Robeco's SDG Framework. Among those could be investments with environmental objectives that do not qualify as Taxonomy-aligned. The environmental objectives of the Sub-fund are attained by investing in companies that score positively on SDG 12 (Responsible consumption and production), SDG 13 (Climate action), SDG 14 (Life below water), and SDG 15 (Life on land) in Robeco's SDG Framework. Although the SDG Framework aims to further incorporate the EU Taxonomy once data availability improves, it can be the case sustainable investments with an environmental objective that are aligned with the EU Taxonomy. In addition, the Sub-fund intends to make sustainable investments as measured by being green bonds or sustainable bonds. Given the current data challenges in relation to green and sustainable bonds, it could be that the Sub-fund is invested in sustainable investments with an environmental objective that are not aligned with the EU Taxonomy.

⁸⁵ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

What is the minimum share of socially sustainable investments?

0%. The Sub-fund intends to make sustainable investments, measured as positive scores via Robeco's SDG Framework. Among those could be investments with social objectives. The social objectives of the Sub-fund are attained by investing in companies that score positively on SDG 1 (No poverty), SDG 2 (Zero hunger), SDG 3 (Good health and well-being), SDG 4 (Quality education), SDG 5 (Gender equality), SDG 6 (Clear water and sanitation), SDG 7 (Affordable and clean energy), SDG 8 (Decent work and economic growth), SDG 9 (Industry, innovation and infrastructure), SDG 10 (Reduced inequalities), SDG 11 (Sustainable cities and communities), SDG 16 (Peace, justice and strong institutions) and SDG 17 (Partnerships for the goals), in Robeco's SDG Framework.

In addition, the social, sustainable or sustainability-linked bonds may invest (part of) their use of proceeds in economic activities that contribute to a social objective, however the Sub-fund does not intend to set a minimum target. While the sum of socially sustainable investments and sustainable investments with an environmental objective always adds up to the Sub-fund's minimum proportion of sustainable investments, we do not commit to a minimum share of socially sustainable investments because the Sub-fund's investment strategy does not have a specific socially sustainable investment objective. Therefore, the minimum share of socially sustainable investments is 0%.

What investments are included under "#2 Other", what is their purpose and are there any minimum environmental or social safeguards?

The type of instruments included under "#2 Other" and their purpose are outlined in Annex I of this Prospectus under the header 'Financial instruments and investment restrictions'. They include cash, cash equivalents, as well as investment funds and eligible asset classes (other than bonds and equities) that do not specifically promote E/S characteristics. As indicated above, the Sub-fund does not make use of derivatives to attain the environmental or social characteristics promoted. The Sub-fund may make use of derivatives, which thus always fall under the category "#2 Other", for hedging, liquidity management and efficient portfolio management as well as investment purposes. Exchange traded and over-the-counter derivatives are permitted, including but not limited to futures, swaps, options and currency forwards. In case the Sub-fund uses derivatives, the underlying shall comply with the investment policy. Where relevant, minimum environmental or social safeguards are taken into account, by, for example, applying Robeco's Exclusion Policy for any single security derivative.

Is a specific index designated as a reference benchmark to determine whether this financial product is aligned with the environmental and/or social characteristics that it promotes?

Not applicable.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

q) Robeco Climate Global High Yield Bonds

Pre-contractual disclosure for the financial products referred to in Article 9, paragraphs 1 to 4a, of Regulation (EU) 2019/2088 and Article 5, first paragraph, of Regulation (EU) 2020/852

Product name: Robeco Climate Global High Yield Bonds

Legal entity identifier: 2138005J7Y35MUMDFU85

Sustainable investment objective

Does this financial product have a sustainable investment objective?

Yes

No

It will make a minimum of **sustainable investments with an environmental objective: 50%**

in economic activities that qualify as environmentally sustainable under the EU Taxonomy

in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

It will make a minimum of **sustainable investments with a social objective: ___%**

It **promotes Environmental/Social (E/S) characteristics** and while it does not have as its objective a sustainable investment, it will have a minimum proportion of ___% of sustainable investments

with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with a social objective

It promotes E/S characteristics, but **will not make any sustainable investments**

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices. The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

What is the sustainable investment objective of this financial product?

The sustainable investments of the Sub-fund aims to reduce the carbon footprint of the portfolio and thereby contribute towards the goals of the Paris agreement to keep the maximum global temperature rise well-below 2°C.

Sustainability indicators measure how the sustainable objectives of this financial product are attained.

The Sub-fund also promotes investment in green, social, sustainability and/or sustainability-linked bonds used to finance environmental and social projects.

● ***What sustainability indicators are used to measure the attainment of the sustainable investment objective of this financial product?***

The Sub-fund has the following sustainability indicators:

1. The Sub-fund's weighted carbon footprint compared to the Paris aligned benchmark.
2. The % of the Sub-fund invested in green, social, sustainability and/or sustainability-linked bonds.
3. The % of investments in securities that are on Robeco's Exclusion list as result of the application of Robeco's Exclusion Policy.
4. The number of companies that are in violation of the UNGPs or OECD Guidelines for Multinational Enterprises.

● ***How do sustainable investments not cause significant harm to any environmental or social sustainable investment objective?***

The sustainable investments do no significant harm to any environmental or social sustainable investment objective by considering a principal adverse impact and aligning with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights. In addition, sustainable investments made through the Paris Aligned Benchmark follow eligibility requirements as per Article 12 of the EU regulation EU Paris-aligned Benchmarks and sustainability-related disclosures for benchmarks and follows Robeco's Exclusion policy. In accordance with Robeco's SDG framework, any off benchmark investments are only considered by the Sub-fund when they have a positive contribution to the UN SDGs and therefore not cause significant harm to any environmental or social sustainable investment objective.

How have the indicators for adverse impacts on sustainability factors been taken into account?

All sustainable investments are constituents of Solactive Global High Yield Corporate PAB Select Index or follow the benchmark methodology. The benchmark methodology directly assesses the following PAI indicators:

- Table 1, PAI 2 (Carbon Footprint)
- Table 1, PAI 4 (Exposure to companies in the fossil fuel sector)
- Table 1, PAI 10 (Violations of the UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises)
- Table 1, PAI 14 (Exposure to controversial weapons)

Post-investment, the Sub-fund assesses performance on all mandatory PAI indicators on a regular basis. A detailed description of the incorporation of principal adverse impacts is available via Robeco's Principal Adverse Impact Statement published on the Robeco website (<https://www.robeco.com/files/docm/docu-principal-adverse-impact-statement-summary-entity-level.pdf>).

How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights?

The sustainable investments are aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights via both Robeco's Exclusion Policy as well as the methodology of the benchmark provider.

Does this financial product consider principal adverse impacts on sustainability factors?

Yes, _____

Yes, the Sub-fund considers principal adverse impacts on sustainability factors as referred to in Annex 1 of the SFDR Delegated Act.

Pre-investment, the following principal adverse impacts on sustainability factors are considered via the applied normative and activity-based exclusions:

- Exposure to companies active in the fossil fuel sector (PAI 4, Table 1)
- Violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1)
- Activities negatively affecting biodiversity-sensitive areas (PAI 7, Table 1). The consideration of this PAI is currently restricted to applying exclusions to palm oil producing companies and for any breaches to the UNGC, UNGP and OECD Guidelines for Multinational Enterprises in relation to biodiversity.
- Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons (PAI 14, Table 1)

Via the carbon footprint performance target of the Sub-fund, the PAI on Carbon footprint (PAI 2, Table 1) is considered via the Paris-Aligned Benchmark.

Post-investment, the following principal adverse impacts on sustainability factors are taken into account via Robeco's entity engagement program:

- All indicators related to Climate and other environment-related indicators (PAI 1-9, Table 1)
- Violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1)
- Activities negatively affecting biodiversity sensitive areas (PAI 7, Table 1). The consideration of this PAI is currently restricted to applying exclusions to palm oil producing companies and for any breaches to the UNGC, UNGP and OECD Guidelines for Multinational Enterprises in relation to biodiversity.
- In addition, based on a yearly review of Robeco's performance on all mandatory and selected voluntary indicators, holdings of the Sub-fund that cause adverse impact might be selected for engagement.

More information is available via Robeco's Principal Adverse Impact Statement, published on Robeco's website. The Sub-fund will periodically report how it has considered the principal adverse impacts of its investments in the Company's annual report, which will be made available each year on or before 30 April at the Sub-fund page highlighted in final section of this document.

No

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

The investment strategy guides investment decisions based on factors such as investment objectives and risk tolerance.

What investment strategy does this financial product follow?

Robeco Climate Global High Yield Bonds is an actively managed fund that invests mainly in high yield corporate bonds all around the world. The selection of these bonds is based on fundamental analysis as described in the Investment policy strategy paragraph in Appendix I of this Prospectus. The strategy integrates sustainability indicators on a continuous basis as part of the bond selection process. Amongst others, the Sub-fund applies norms-based and activity-based exclusions, Robeco's good governance policy, Robeco's SDG framework and considers Principal Adverse Impacts in the investment process. More product-specific information can be found on our website and the links provided in the final question of this disclosure.

What are the binding elements of the investment strategy used to select the investments to attain the sustainable investment objective?

The Sub-fund has the following binding elements:

1. The Sub-fund's weighted carbon footprint is better than the Paris aligned benchmark.
2. The Sub-fund invests a minimum of 2% in green, social, sustainability, and/or sustainability-linked bonds.
3. The Sub-fund does not invest in activities that are excluded on the basis of Article 12 of the EU regulation Climate Transition Benchmarks, EU Paris-aligned Benchmarks and sustainability-related disclosures for benchmarks as applicable. In addition, the Sub-fund's portfolio complies with Robeco's Exclusion Policy (<https://www.robeco.com/files/docm/docu-exclusion-policy.pdf>), that is based on exclusion criteria with regards to products and business practices that Robeco believes are detrimental to society and incompatible with sustainable investment strategies. This means that the Sub-fund has 0% exposure to excluded securities, taking into account a grace period. Information with regards to the effects of the exclusions on the Sub-fund's universe can be found at <https://www.robeco.com/files/docm/docu-exclusion-list.pdf>.
4. The Sub-fund avoids investment in companies that are in breach of the ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises. Companies that breach the international norms will be excluded from the investment universe.

What is the policy to assess good governance practices of the investee companies?

Robeco has a Good Governance policy to assess governance practices of companies. The policy describes how Robeco determines if and when a company does not follow good governance practices and is therefore excluded from the initial investment universe for Article 8 and 9 products. Robeco's Good Governance policy applies to the Sub-fund and tests on a set of governance criteria that reflect widely recognized industry established norms and include topics as employee relations, management structure, tax compliance and remuneration.

The Good Governance test consists of criteria on such topics that are examined for investee companies and further explained in Robeco's Good Governance policy <https://www.robeco.com/files/docm/docu-robeco-good-governance-policy.pdf>. Additionally, the companies that do not pass the good governance test are reflected in the exclusion list that can be accessed here - <https://www.robeco.com/files/docm/docu-exclusion-list.pdf>.

What is the asset allocation and the minimum share of sustainable investments?

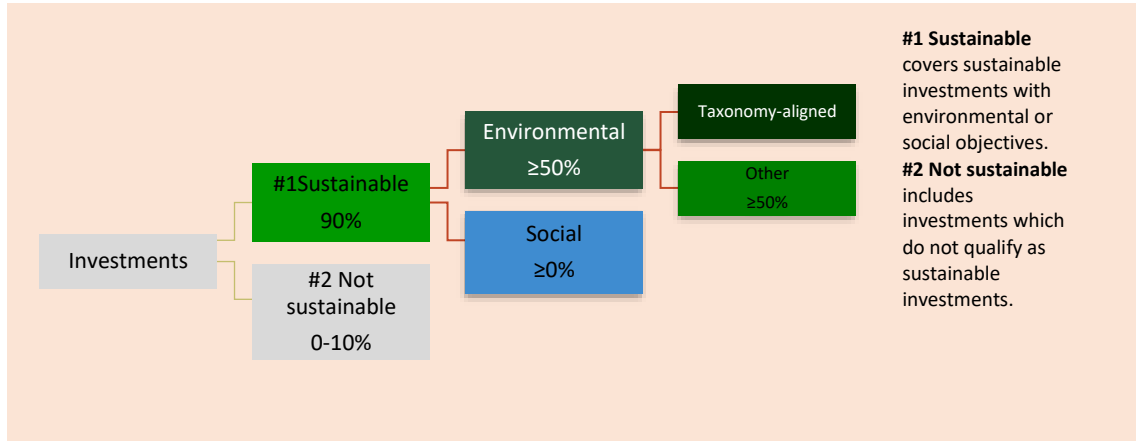

Good governance practices include sound management structures, employee relations, remuneration of staff and tax compliance.

Asset allocation describes the share of investments in specific assets.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

The Sub-fund plans to make a minimum of 90% sustainable investments, with a minimum portion of 50% sustainable investments with an environmental objective, measured by the by holdings that are part of the Paris Aligned Benchmark. The investments in the category non-sustainable, estimated between 0-10%, are in cash and cash equivalents. The planned asset allocation is monitored continuously, and evaluated on a yearly basis.

How does the use of derivatives attain the sustainable investment objective?

The Sub-fund does not make use of derivatives to attain the sustainable objective promoted by the financial product. The Sub-fund may make use of derivatives for hedging as well as liquidity management. This includes the usage of derivatives to manage currency and duration exposures in a cost-effective manner. To that purpose exchange traded and over-the-counter derivatives linked to sovereign bonds (treasuries), interest rates, swap rates and currencies are permitted. Derivatives linked to corporate exposure are not allowed.

In case the Sub-fund uses derivatives, the underlying shall comply with the investment policy. Where relevant, minimum environmental or social safeguards are taken into account.

To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

The Sub-fund commits to a minimum share of 0% of Taxonomy-aligned activities. The Sub-fund intends to contribute to all environmental objectives under the EU Taxonomy via the investments in Green Bonds. The Sub-fund intends to increase the minimum share of Taxonomy aligned activities for the Sub-fund, based on use of proceeds, once data availability in relation to the EU Taxonomy for Green bonds improves and stabilises.

The Sub-fund will report on Taxonomy-aligned investment in the periodic disclosures. In the future, once data-availability in relation to the EU Taxonomy will improve, Robeco might consider setting a target based on turnover or CAPEX. Robeco currently relies on third-party data in relation to the EU Taxonomy, including data in relation to companies that do not disclose on the EU Taxonomy alignment of their activities. EU Taxonomy-alignment data is not yet subject to a review by third parties. Given the current commitment, the expected level of alignment with and without sovereign bonds is the same.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

 are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally

● **Does the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy⁸⁶?**

Yes:

In fossil gas

In nuclear energy

No

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.*

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

** As the investments are not Taxonomy-aligned, the exclusion of sovereign bonds has no impact on the graph and therefore no such percentage is shown here.

● **What is the minimum share of investments in transitional and enabling activities?**

0%.

What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?

The Sub-fund makes sustainable investments with environmental objectives that do not qualify as Taxonomy-aligned. The Sub-fund commit to a minimum share of sustainable investments of 50% with an environmental objective because the Sub-fund's investment strategy does have a specific environmental investment objective. The environmental objectives of the Sub-fund are attained by investing in companies with a low carbon footprint, in line with a low carbon scenario. However, some

⁸⁶ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

sustainable economic activities under the EU Taxonomy.

of these companies with a low carbon footprint may not be exposed to activities that are eligible under the EU Taxonomy.

In addition, green bonds may invest (part of) their use of proceeds in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy, however the Sub-fund does not intend to set a minimum target. The sum of socially sustainable investments and sustainable investments with an environmental objective will always add up to the Sub-fund's minimum proportion of 90% sustainable investments.

What is the minimum share of sustainable investments with a social objective?

Social, sustainable or sustainability-linked bonds may invest (part of) the proceeds in economic activities that contribute to a social objective. In addition, it could be possible that some companies contribute to social objectives either by being a part of the Paris Aligned Benchmark or having a positive score via Robeco's SDG Framework.

While the sum of socially sustainable investments and sustainable investments with an environmental objective always adds up to the Sub-fund's minimum proportion of 90% sustainable investments, we do not commit to a minimum share of socially sustainable investments because the Sub-fund's investment strategy does not have a specific socially sustainable investment objective. Therefore, the minimum share of socially sustainable investments is 0%.

What investments are included under "#2 Not sustainable", what is their purpose and are there any minimum environmental or social safeguards?

The type of instruments included under "#2 Not Sustainable" and their purpose are outlined in Annex I of this Prospectus under the header 'Financial instruments and investment restrictions'. They include cash, cash equivalents, as well as investment funds and eligible asset classes (other than bonds and equities) that do not specifically promote E/S characteristics. As indicated above, the Sub-fund does not make use of derivatives to attain its sustainable objective. The Sub-fund may make use of derivatives for hedging and liquidity management. This includes the usage of derivatives to manage the duration around the benchmark duration and currency exposures in a cost-effective manner. For the management of currency exposure FX Forwards are allowed. Furthermore exchange traded and over-the-counter derivatives linked to sovereign bonds (treasuries), interest rates, swap rates and currencies are permitted. In case the Sub-fund uses derivatives, the underlying shall comply with the investment policy and the exposure through the use of derivatives must fit the investment universe of the Sub-fund. Where relevant, minimum environmental or social safeguards are taken into account by monitoring and applying Robeco's Exclusion Policy for the use of derivatives linked to sovereigns. Additionally, derivatives linked to corporate exposure are not allowed.

Is a specific index designated as a reference benchmark to meet the sustainable investment objective?

Yes, the Sub-fund follows the Solactive Global High Yield Corporate PAB Select Index as a reference index to meet the carbon footprint reduction objective of the Sub-fund and thereby keeping the maximum global temperature rise well-below 2°C.

Reference benchmarks are indexes to measure whether the financial product attains the sustainable investment objective.

How does the reference benchmark take into account sustainability factors in a way that is continuously aligned with the sustainable investment objective?

The reference index is aligned with the carbon reduction objective of the Sub-fund by applying a methodology with clearly defined rules for evaluating securities on their carbon footprint. The methodology of the reference index is designed in accordance with the requirements of point (d) of

Article 13 (1) of the Benchmark Regulation and of the Commission Delegated Regulation (EU) 2020/1817. This means that amongst others for the corporate bond part, the reference index is aligned with those criteria set out in Article 12 of the EU Climate Transition Benchmarks, EU Paris-aligned Benchmarks and sustainability-related disclosures for benchmarks. The Sub-fund also applies the aforementioned exclusion criteria, and the Sub-fund's overall weighted carbon footprint score in each of the government part and the corporate part is always equal to or better than the respective part of the Solactive Global High Yield Corporate PAB Select Index.

● ***How is the alignment of the investment strategy with the methodology of the index ensured on a continuous basis?***

The methodology of the reference index follows rebalancing rules on a monthly basis for index eligibility and rebalances on a six month basis for decarbonization, which ensures alignment with the investment strategy and objective of the Sub-fund. The index uses data sourced from Institutional Shareholder Services Inc for corporate issuers and from the Emissions Database for Global Atmospheric Research (EDGAR) for sovereign issuers.

The Sub-fund follows a rebalancing strategy which ensures that the carbon footprint of the Sub-fund is better than that of the reference index. This in turn ensures that the investment strategy of the Sub-fund aligns with the methodology of the reference index. The methodology of the reference index takes into account a decarbonization trajectory of at least 7% GHG intensity per annum along with specific sector or activity exclusions and including involvement in controversial weapons.

● ***How does the designated index differ from a relevant broad market index?***

The benchmark differs from a broad general market index in that the latter does not take into account in its methodology any criteria for alignment with the Paris Agreement on decarbonization and on greenhouse gas emission reduction and related exclusions.

● ***Where can the methodology used for the calculation of the designated index be found?***

The index methodology can be found on the relevant webpages by the index provider: <https://www.solactive.com/indices/>

Where can I find more product specific information online?

More product-specific information can be found on the website:

5. REGIONAL BOND SUB-FUNDS

a) Robeco Euro Government Bonds

Pre-contractual disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Product name: Robeco Euro Government Bonds

Legal entity identifier: 2138004UVBQIDUAW9R66

Environmental and/or social characteristics

Does this financial product have a sustainable investment objective?

Yes

No

It will make a minimum of **sustainable investments with an environmental objective:** ___%

- in economic activities that qualify as environmentally sustainable under the EU Taxonomy
- in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

It will make a minimum of **sustainable investments with a social objective:** ___%

It **promotes Environmental/Social (E/S) characteristics** and while it does not have as its objective a sustainable investment, it will have a minimum proportion of 10% of sustainable investments

- with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy
- with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy
- with a social objective

It promotes E/S characteristics, but **will not make any sustainable investments**

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

What environmental and/or social characteristics are promoted by this financial product?

The Sub-fund has the following E/S characteristics:

1. The Sub-fund promotes certain minimum environmental and social safeguards through applying exclusion criteria with regards to products and business practices that Robeco believes are detrimental to society and incompatible with sustainable investment strategies, such as exposure to controversial behaviour, controversial weapons, and fossil fuels. Robeco deems investing in government bonds (federal or local) of countries where serious violations of human rights or a collapse of the governance structure take place as unsustainable. In addition, Robeco will follow applicable sanctions of the UN, EU or US to which it is subject and follows any mandatory (investment) restrictions deriving therefrom.
2. The Sub-fund promotes investment in countries that perform well on the RobecoSAM Country Sustainability Ranking. The RobecoSAM Country Sustainability Ranking incorporates a wide range of ESG factors such as aging, corruption, social unrest, political risks and environmental risks.
3. The Sub-fund aims to contribute to the United Nations Sustainable Development Goals by investing in green, social, sustainability and/or sustainability-linked bonds that are used to finance environmental and social projects.
4. The Sub-fund promotes investment in countries with policies and institutional frameworks to prevent and combat corruption.

There is no reference benchmark designated for the purpose of attaining the environmental or social characteristics promoted by the Sub-fund.

What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?

The Sub-fund has the following sustainability indicators:

1. The % of investments in securities that are on Robeco's Exclusion list as result of the application of Robeco's Exclusion Policy.
2. The weighted average score on Robeco's Country Sustainability Ranking.
3. The % of the Sub-fund invested in green, social, sustainability and/or sustainability-linked bonds.
4. The % of investments excluded based on the Worldwide Governance Indicators (WGI) - Control of Corruption ranking.

What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?

The Sub-fund invests in Green bonds, Social bonds, Sustainable bonds and/or Sustainability-linked bonds used to finance environmental and social projects. A description of Green bonds, Social Bonds, Sustainable bonds and Sustainability-linked bonds is included in the Glossary of Defined Terms section of this Prospectus.

How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?

The sustainable investments do no significant harm to any environmental or social sustainable investment objective by applying Robeco's ESG bond eligibility frameworks in the selection process. Robeco's ESG bond eligibility frameworks require that international norms related to social and governance issues are met. Under the frameworks, ESG bond investments are assessed on (i) social

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

safeguards – the issuer respects international Human and Labor Rights, (ii) controversial behavior – the issuer is not in violation of the UN Global Compact, and (iii) sanctions – the issuer is not subject to international sanctions.

To identify whether an issuer is involved in a controversy, ratings and data from external providers are used to aid our in-house monitoring. If a controversy is found, the analyst determines whether this has material impacts on the ESG bond analysis and/or the SDG score. If the controversy is deemed material, the issuer receives a negative SDG Score and the investment is not sustainable.

How have the indicators for adverse impacts on sustainability factors been taken into account?

For sustainable investments that are either Green, Social, Sustainability or Sustainability-linked bonds, significant harm is avoided by the application of Robeco's green, social, sustainability or sustainability-linked bond eligibility framework. As a result, the following adverse impacts are taken into account during the investment analysis as part of Robeco's green, social, sustainability or sustainability-linked bond eligibility frameworks:

- Table 1, PAI 15 (GHG intensity)
- Table 1, PAI 16 (Investee countries subject to social violations)
- Table 2, PAI 17 (Share of bonds not certified as green under a future EU act setting up an EU Green Bond Standard)

As a first step, ESG bonds are assessed in their alignment with standards or principles that exist in the market, such as the International Capital Market Association (ICMA) Green bond principles, the Climate bond initiative (CBI) or international standards as the EU Green Bond Standard (Table 2, PAI 17). As a second step, amongst others, GHG intensity (Table 1, PAI 15) is assessed in the project evaluation that considers the allocation of proceeds. In addition, the ESG bonds are assessed on their compliance with international norms related to social and governance issues (in relation to Table 1, PAI 16). A detailed description of the incorporation of principal adverse impacts is available via Robeco's Principal Adverse Impact Statement published on the Robeco website (<https://www.robeco.com/files/docm/docu-principal-adverse-impact-statement-summary-entity-level.pdf>).

How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

As the Sub-fund invest in sovereigns and supranationals, the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights are not applicable.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

Does this financial product consider principal adverse impacts on sustainability factors?

Yes, _____

The Sub-fund considers principal adverse impacts on sustainability factors as referred to in Annex 1 of the SFDR Delegated Act.

Pre-investment, the following principal adverse impacts on sustainability factors are considered:

As part of Country Sustainability ranking, used for The Sub-fundamental analysis of bonds, the following PAIs are considered:

- Table 1, PAI 15 (GHG intensity)
- Table 1, PAI 16 (Investee countries subject to social violations)

In addition, the Sub-fund has E/S promoting characteristics in relation to:

- Table 2, PAI 17 (Share of bonds not certified as green under a future EU act setting up an EU Green Bond Standard)
- Table 3, PAI 21 (Control of Corruption)

Post-investment, the following principal adverse impacts on sustainability factors are taken into account:

- Table 1, PAI 15 (GHG intensity), via Robeco's engagement program

More information is available via Robeco's Principal Adverse Impact Statement, published on Robeco's website. The Sub-fund will periodically report how it has considered the principal adverse impacts of its investments in the Company's annual report, which will be made available each year on or before 30 April at the Sub-fund page highlighted in final section of this document.

No

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

What investment strategy does this financial product follow?

Robeco Euro Government Bonds is an actively managed fund that invests predominantly in euro government bonds. The selection of these bonds is based on fundamental analysis as described in the Investment policy strategy paragraph in Appendix I of this Prospectus. The strategy integrates sustainability indicators on a continuous basis as part of the bond selection process. Amongst others, the Sub-fund applies country-based exclusions, Robeco's good governance policy, Robeco's SDG framework and considers Principal Adverse Impacts in the investment process. More product-specific information can be found on our website and the links provided in the final question of this disclosure.

The investment strategy guides investment decisions based on factors such as investment objectives and risk tolerance.

What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?

The Sub-fund has the following binding elements:

1. The Sub-fund's portfolio complies with Robeco's Exclusion Policy (<https://www.robeco.com/files/docm/docu-exclusion-policy.pdf>) that is based on exclusion criteria that Robeco believes are detrimental to society and incompatible with sustainable investment strategies. This means that the Sub-fund has 0% exposure to excluded securities, taking into account a grace period. Information with regards to the materiality of the exclusions on the Sub-fund's universe can be found at <https://www.robeco.com/files/docm/docu-exclusion-list.pdf>.
2. The Sub-fund's portfolio has a minimum weighted average score of at least 6.5 on Robeco's Country Sustainability Ranking.
3. The Sub-fund invests a minimum of 10% in green, social, sustainability and/or sustainability-linked bonds.
4. The Sub-fund excludes sovereign bonds issued by the bottom 15% of the Worldwide Governance Indicators (WGI) - Control of Corruption ranking.

What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?

The Sub-fund does not commit to a minimum rate to reduce the scope of investments prior to the application of the investment strategy.

What is the policy to assess good governance practices of the investee companies?

Robeco has a Good Governance policy to assess governance practices of companies. The policy describes how Robeco determines if and when a company does not follow good governance practices and is therefore excluded from the initial investment universe for Article 8 and 9 products. Robeco's Good Governance policy applies to the Sub-fund and tests on a set of governance criteria that reflect widely recognized industry established norms and include topics as employee relations, management structure, tax compliance and remuneration.

The Good Governance test consists of criteria on such topics that are examined for investee companies and further explained in Robeco's Good Governance policy <https://www.robeco.com/files/docm/docu-robeco-good-governance-policy.pdf>. Additionally, the companies that do not pass the good governance test are reflected in the exclusion list that can be accessed here - <https://www.robeco.com/files/docm/docu-exclusion-list.pdf>.

Good governance practices include sound management structures, employee relations, remuneration of staff and tax compliance.

What is the asset allocation planned for this financial product?

At least 90% of the investments are aligned with the E/S characteristics of the Sub-fund. The Sub-fund plans to make a minimum of 10% sustainable investments, measured by the investments in Green, or Sustainable Bonds. The investments in the category Other, estimated between 0-10%, are mostly in cash, cash equivalents and derivatives as further described below. The planned asset allocation is monitored continuously, and evaluated on a yearly basis.

How does the use of derivatives attain the environmental or social characteristics promoted by the financial product?

The Sub-fund does not make use of derivatives to attain the environmental or social characteristics promoted by the financial product. The Sub-fund may make use of derivatives for hedging, liquidity management and efficient portfolio management as well as investment purposes in the global fixed income, money market, interest rates and currency markets. In case the Sub-fund uses derivatives, the underlying shall comply with the investment policy of the Sub-fund. Where relevant, minimum environmental or social safeguards are taken into account as described below.

To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

The Sub-fund intends to contribute to the environmental objectives under the EU Taxonomy, given the planned investments in Green bonds. The Sub-fund commits to a minimum share of 0% of Taxonomy-aligned activities. The Sub-fund intends to increase the minimum share of Taxonomy aligned activities for the Sub-fund once data availability in relation to the EU Taxonomy for Green bonds improves and stabilizes.

The Sub-fund will report on Taxonomy-aligned investment in the periodic disclosures, based on use of proceeds. Given the lack of data on the EU Taxonomy for green bonds in the market, Robeco relies on internal analysis for the time being. EU Taxonomy-alignment data is not yet subject to a review by third parties. The expected level of alignment with and without sovereign bonds is the same.

Asset allocation describes the share of investments in specific assets.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

 are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

● **Does the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy⁸⁷?**

- Yes
 - In fossil gas
 - In nuclear energy
- No

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.*

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures
 ** As the investments are not Taxonomy-aligned, the exclusion of sovereign bonds has no impact on the graph and therefore no such percentage is shown here.

● **What is the minimum share of investments in transitional and enabling activities?**

0%.

What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?

Green bonds may invest (part of) their use of proceeds in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy, however the Sub-fund does not intend to set a minimum target. While the sum of sustainable investments with an environmental objective and socially sustainable investments always adds up to the Sub-fund's minimum proportion of 10% sustainable investments, we do not commit to a minimum share of sustainable investments with an environmental objective because the Sub-fund's investment strategy does not have a specific environmental investment objective. Therefore, the minimum share of sustainable investments with an environmental objective is 0%.

What is the minimum share of socially sustainable investments?

⁸⁷ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

Social, sustainable or sustainability-linked bonds may invest (part of) their use of proceeds in economic activities that contribute to a social objective, however the Sub-fund does not intend to set a minimum target. While the sum of socially sustainable investments and sustainable investments with an environmental objective always adds up to the Sub-fund's minimum proportion of sustainable investments, we do not commit to a minimum share of socially sustainable investments because the Sub-fund's investment strategy does not have a specific socially sustainable investment objective. Therefore, the minimum share of socially sustainable investments is 0%.

What investments are included under "#2 Other", what is their purpose and are there any minimum environmental or social safeguards?

The type of instruments included under "#2 Other" and their purpose are outlined in Annex I of this Prospectus under the header 'Financial instruments and investment restrictions'. They include cash, cash equivalents, as well as investment funds and eligible asset classes (other than bonds and equities) that do not specifically promote E/S characteristics. As indicated above, the Sub-fund does not make use of derivatives to attain the environmental or social characteristics promoted. The Sub-fund may make use of derivatives, which thus always fall under the category "#2 Other", for hedging, liquidity management and efficient portfolio management as well as investment purposes. Exchange traded and over-the-counter derivatives are permitted, including but not limited to futures, swaps, options and currency forwards. In case the Sub-fund uses derivatives, the underlying shall comply with the investment policy. Where relevant, minimum environmental or social safeguards are taken into account, by, for example, applying Robeco's Exclusion Policy for any single security derivative.

Is a specific index designated as a reference benchmark to determine whether this financial product is aligned with the environmental and/or social characteristics that it promotes?

Not applicable.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

b) Robeco Euro Credit Bonds

Pre-contractual disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Product name: Robeco Euro Credit Bonds

Legal entity identifier: 213800CVNA3PA3BONW52

Environmental and/or social characteristics

Does this financial product have a sustainable investment objective?

Yes

No

It will make a minimum of **sustainable investments with an environmental objective:** ___%

- in economic activities that qualify as environmentally sustainable under the EU Taxonomy
- in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

It will make a minimum of **sustainable investments with a social objective:** ___%

It promotes **Environmental/Social (E/S) characteristics** and while it does not have as its objective a sustainable investment, it will have a minimum proportion of 30% of sustainable investments

- with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy
- with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy
- with a social objective

It promotes E/S characteristics, but **will not make any sustainable investments**

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

What environmental and/or social characteristics are promoted by this financial product?

The Sub-fund has the following E/S characteristics:

1. The Sub-fund aims to contribute to the United Nations Sustainable Development Goals by investing in green, social, sustainability and/or sustainability-linked bonds that are used to finance environmental and social projects.
2. The Sub-fund promotes certain minimum environmental and social safeguards through applying exclusion criteria with regards to products and business practices that Robeco believes are detrimental to society and incompatible with sustainable investment strategies, such as exposure to controversial behaviour, controversial weapons, and fossil fuels. Robeco deems investing in government bonds (federal or local) of countries where serious violations of human rights or a collapse of the governance structure take place as unsustainable. In addition, Robeco will follow applicable sanctions of the UN, EU or US to which it is subject and follows any mandatory (investment) restrictions deriving therefrom.
3. The Sub-fund limits investing in companies with an elevated sustainability risk based on ESG risk scores whereas all such investments require separate approval of a dedicated committee that oversees that all investments are substantiated and eligible based on a fundamental review on the sustainability risk.
4. The Sub-fund promotes adherence to and conducting business activities in accordance with the United Nations Universal Declaration of Human Rights, the International Labor Organization's (ILO) labor standards, the United Nations Guiding Principles for Business and Human Rights (UNGPs), the United Nations Global Compact (UNGC) and the OECD Guidelines for Multinational Enterprises, by scrutinizing companies that violate these principles.

What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?

The Sub-fund has the following sustainability indicators:

1. The % of the Sub-fund invested in green, social, sustainability and/or sustainability-linked bonds.
2. The % of investments in securities that are on Robeco's Exclusion list as result of the application of Robeco's Exclusion Policy.
3. The % of holdings with an elevated sustainability risk profile.
4. The number of companies that are in violation of the ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises and hence are a part of the Enhanced Engagement program.

What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?

The sustainable investments aim to contribute to the UN Sustainable Development Goals ("SDGs"), that have both social and environmental objectives. These are 17 goals that are globally recognised and include environmental goals such as climate action, clean water, life on land and water and social goals such as zero hunger, gender equality, education, etc. Robeco has developed a proprietary framework based on the UN SDGs through which an issuer's contribution to such SDGs is determined through a 3-step process. This process starts with a sector baseline on which a company's products are analysed to examine contribution to the society and environment. Further, the operational processes involved in creating such products is checked along with any controversies/litigation claims and remediation actions taken which are perused before a final SDG score is determined. The final score ranges between high negative (-3) to high positive (+3) and only those issuers which achieve positive SDG scores (+1, +2 and, +3) are regarded as Sustainable Investments. Some of the sustainable investments are green bonds, and therefore contribute to the environmental objectives under EU Taxonomy.

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

● ***How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?***

The sustainable investments do no significant harm to any environmental or social sustainable investment objective by considering a principal adverse impact and aligning with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights. In addition, sustainable investments score positively on Robeco's SDG Framework or are assessed by either Robeco's Green Bond Framework or Social Bond Framework, and therefore do not cause significant harm.

How have the indicators for adverse impacts on sustainability factors been taken into account?

For sustainable investments that are either green, social, sustainability or sustainability-linked bonds, significant harm is avoided by the application of the Robeco's green, social, sustainability or sustainability-linked bond eligibility framework.

Robeco's SDG Framework is considered for the analysis of sustainable investments determined by positive scores on this framework. Robeco's SDG Framework assesses the contribution of companies to the Sustainable Development Goals (SDGs). Many PAI indicators are either directly or indirectly included in the SDG Framework to determine whether a company has significant impacts on the SDGs related to the PAI indicators. A detailed description of the incorporation of principal adverse impacts is available via Robeco's Principal Adverse Impact Statement published on the Robeco website (<https://www.robeco.com/files/docm/docu-principal-adverse-impact-statement-summary-entity-level.pdf>).

How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The sustainable investments are aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights via Robeco's Exclusion Policy.

Robeco's Exclusion Policy includes an explanation of how Robeco acts in accordance with the International Labor Organization (ILO) standards, United Nations Guiding Principles (UNGPs), United Nations Global Compact (UNGC) Principles and the Organization for Economic Co-operation and Development (OECD) Guidelines for Multinational Enterprises and is guided by these international treaties to assess the behavior of companies. Robeco continuously screens its investments for breaches of these principles. In case of a breach, the company will be excluded or engaged with, and is not considered a sustainable investment.

Robeco's SDG Framework screens for breaches on these principles in the final step of the framework. In this step, Robeco checks whether the company concerned has been involved in any controversies. Involvement in any controversy will result in a negative SDG score for the company, meaning it is not a sustainable investment.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

Does this financial product consider principal adverse impacts on sustainability factors?

✘ Yes, _____

The Sub-fund considers principal adverse impacts on sustainability factors as referred to in Annex I of the SFDR Delegated Act.

Pre-investment, the following principal adverse impacts on sustainability factors are considered:

- Via the applied normative and activity-based exclusions, the following PAIs are considered:
 - Exposure to companies active in the fossil fuel sector (PAI 4, Table 1)
 - Violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1)
 - Activities negatively affecting biodiversity-sensitive areas (PAI 7, Table 1). The consideration of this PAI is currently restricted to applying exclusions to palm oil producing companies and for any breaches to the UNGC, UNGP and OECD Guidelines for Multinational Enterprises in relation to biodiversity.
 - Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons (PAI 14, Table 1)
- Via the ESG integration process, as part of the investment due diligence policies and procedures, the following PAIs are considered:
 - All indicators related to GHG emissions, as part of the required Climate Risk analysis (PAI 1-6, Table 1, PAI 4, Table 2)
 - Water and waste indicators (PAI 7-9, Table 1)

Post-investment, the following principal adverse impacts on sustainability factors are taken into account via Robeco's entity engagement program:

- All indicators related to Climate and other environment-related indicators (PAI 1-9, Table 1)
- Violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1). On an ongoing basis, the investment universe is scanned for controversial behavior in relation to the aforementioned principles and guidelines.
- In addition, based on a yearly review of Robeco's performance on all mandatory and selected voluntary indicators, holdings of the Sub-fund that cause adverse impact might be selected for engagement.

More information is available via Robeco's Principal Adverse Impact Statement, published on Robeco's website. The Sub-fund will periodically report how it has considered the principal adverse impacts of its investments in the Company's annual report, which will be made available each year on or before 30 April at the Sub-fund page highlighted in final section of this document.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

No

What investment strategy does this financial product follow?

Robeco Euro Credit Bonds is an actively managed fund that provides a diversified exposure to the euro investment grade credit market. The selection of these bonds is based on fundamental analysis as described in the Investment policy strategy paragraph in Appendix I of this Prospectus. The strategy integrates sustainability indicators on a continuous basis as part of the bond selection process. Amongst others, the Sub-fund applies norms-based, activity-based and regional exclusions, Robeco's good governance policy, Robeco's SDG framework and considers Principal Adverse Impacts in the investment process. More product-specific information can be found on our website and the links provided in the final question of this disclosure.

What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?

The Sub-fund has the following binding elements:

1. The Sub-fund's portfolio complies with Robeco's Exclusion Policy (<https://www.robeco.com/files/docm/docu-exclusion-policy.pdf>), that is based on exclusion criteria with regards to products and business practices that Robeco believes are detrimental to society and incompatible with sustainable investment strategies. This means that the Sub-fund has 0% exposure to excluded securities, taking into account a grace period. Information with regards to the effects of the exclusions on the Sub-fund's universe can be found at <https://www.robeco.com/files/docm/docu-exclusion-list.pdf>.
2. The Sub-fund scrutinizes investment in companies that are in breach of the ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises. If a company in the portfolio breaches one of the international guidelines during the investment period, the company will become part of the Enhanced Engagement program.
3. Investments with an elevated sustainability risk are defined by Robeco as companies with an ESG Risk Rating of 40 and higher (the ESG Risk Rating is explained in the sustainability risk policy which can be accessed via <https://www.robeco.com/files/docm/docu-robeco-sustainability-risk-policy.pdf>). The Sub-fund is limited to a maximum exposure of 3% to investments with an elevated sustainability risk, based on the market weight in the portfolio taking into account regional differences and benchmark. Each investment with an ESG Risk rating of higher than 40 requires separate approval by a dedicated committee of sustainable investment specialists, compliance and risk management that oversees the bottom-up sustainability analysis.
4. The Sub-fund invests a minimum of 5% in green, social, sustainability, and/or sustainability-linked bonds.

What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?

The Sub-fund does not commit to a minimum rate to reduce the scope of investments prior to the application of the investment strategy.

What is the policy to assess good governance practices of the investee companies?

The investment strategy guides investment decisions based on factors such as investment objectives and risk tolerance.

Good governance practices include sound management structures, employee relations, remuneration of staff and tax compliance.

Robeco has a Good Governance policy to assess governance practices of companies. The policy describes how Robeco determines if and when a company does not follow good governance practices and is therefore excluded from the initial investment universe for Article 8 and 9 products. Robeco's Good Governance policy applies to the Sub-fund and tests on a set of governance criteria that reflect widely recognized industry established norms and include topics as employee relations, management structure, tax compliance and remuneration.

The Good Governance test consists of criteria on such topics that are examined for investee companies and further explained in Robeco's Good Governance policy <https://www.robeco.com/files/docm/docu-robeco-good-governance-policy.pdf>. Additionally, the companies that do not pass the good governance test are reflected in the exclusion list that can be accessed here - <https://www.robeco.com/files/docm/docu-exclusion-list.pdf>.

What is the asset allocation planned for this financial product?

At least 90% of the investments are aligned with the E/S characteristics of the Sub-fund. The Sub-fund plans to make a minimum of 30% sustainable investments, measured by either being positive scores via Robeco's SDG Framework or investments in green, social, sustainability or sustainability-linked bonds. The investments in the category Other, estimated between 0-10%, are mostly in cash, cash equivalents and derivatives as further described below. The planned asset allocation is monitored continuously, and evaluated on a yearly basis.

Asset allocation describes the share of investments in specific assets.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers sustainable investments with environmental or social objectives.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

How does the use of derivatives attain the environmental or social characteristics promoted by the financial product?

The Sub-fund does not make use of derivatives to attain the environmental or social characteristics promoted by the financial product. The Sub-fund may make use of derivatives for hedging, liquidity management and efficient portfolio management as well as investment purposes in the global fixed income, money market, interest rates and currency markets. In case the Sub-fund uses derivatives, the underlying shall comply with the investment policy of the Sub-fund. Where relevant, minimum environmental or social safeguards are taken into account as described below.

To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

0%. The Sub-fund intends to contribute to all 6 environmental objectives under the EU Taxonomy via the investments in green bonds. The Sub-fund commits to a minimum share of 0% of Taxonomy-aligned activities. The Sub-fund intends to increase the minimum share of Taxonomy aligned activities for the Sub-fund, based on use of proceeds, once data availability in relation to the EU Taxonomy for green bonds improves and stabilises.

The Sub-fund will report on Taxonomy-aligned investment in the periodic disclosures. For investments in corporate bonds, the Sub-fund will report on turnover. Given the lack of data on the EU Taxonomy for green bonds in the market, Robeco relies on internal analysis for the time being. EU Taxonomy-alignment data is not yet subject to a review by third parties. The expected level of alignment with and without sovereign bonds is the same.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

● **Does the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy⁸⁸?**

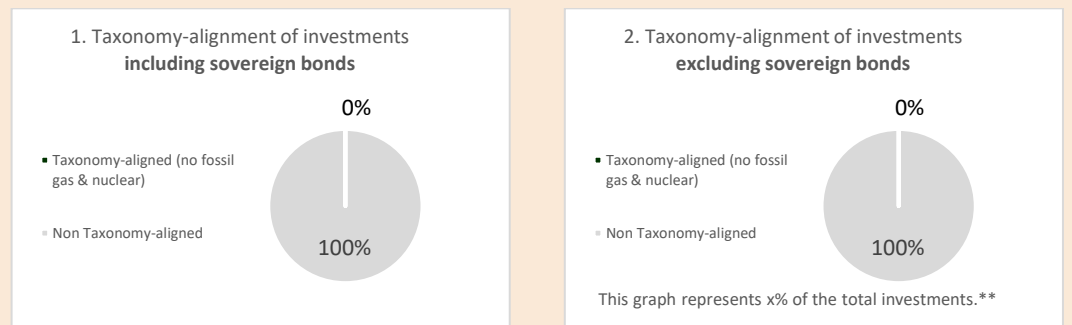

Yes

In fossil gas

In nuclear energy

No

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.*

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures
 ** As the investments are not Taxonomy-aligned, the exclusion of sovereign bonds has no impact on the graph and therefore no such percentage is shown here.

● **What is the minimum share of investments in transitional and enabling activities?**

0%.

What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?

⁸⁸ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

Green bonds may invest (part of) their use of proceeds in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy. In addition, the Sub-fund intends to make sustainable investments measured as positive scores via Robeco's SDG Framework. Among those could be investments with environmental objectives that do not qualify as Taxonomy-aligned. The environmental objectives of the Sub-fund are attained by investing in companies that score positively on SDG 12 (Responsible consumption and production), SDG 13 (Climate action), SDG 14 (Life below water), and SDG 15 (Life on land) in Robeco's SDG Framework.

While the sum of sustainable investments with an environmental objective and socially sustainable investments always adds up to the Sub-fund's minimum proportion of 30% sustainable investments, we do not commit to a minimum share of sustainable investments with an environmental objective because the Sub-fund's investment strategy does not have a specific environmental investment objective. Therefore, the minimum share of sustainable investments with an environmental objective is 0%.

 are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

What is the minimum share of socially sustainable investments?

Social, sustainable or sustainability-linked bonds may invest (part of) their use of proceeds in economic activities that contribute to a social objective.

In addition, the Sub-fund intends to make sustainable investments, measured as positive scores via Robeco's SDG Framework. Among those could be investments with social objectives. The social objectives of the Sub-fund are attained by investing in companies that score positively on SDG 1 (No poverty), SDG 2 (Zero hunger), SDG 3 (Good health and well-being), SDG 4 (Quality education), SDG 5 (Gender equality), SDG 6 (Clean water and sanitation), SDG 7 (Affordable and clean energy), SDG 8 (Decent work and economic growth), SDG 9 (Industry, innovation and infrastructure), SDG 10 (Reduced inequalities), SDG 11 (Sustainable cities and communities), SDG 16 (Peace, justice and strong institutions) and SDG 17 (Partnerships for the goals), in Robeco's SDG Framework.

While the sum of socially sustainable investments and sustainable investments with an environmental objective always adds up to the Sub-fund's minimum proportion of sustainable investments, we do not commit to a minimum share of socially sustainable investments because the Sub-fund's investment strategy does not have a specific socially sustainable investment objective. Therefore, the minimum share of socially sustainable investments is 0%.

What investments are included under "#2 Other", what is their purpose and are there any minimum environmental or social safeguards?

The type of instruments included under "#2 Other" and their purpose are outlined in Annex I of this Prospectus under the header 'Financial instruments and investment restrictions'. They include cash, cash equivalents, as well as investment funds and eligible asset classes (other than bonds and equities) that do not specifically promote E/S characteristics. As indicated above, the Sub-fund does not make use of derivatives to attain the environmental or social characteristics promoted. The Sub-fund may make use of derivatives, which thus always fall under the category "#2 Other", for hedging, liquidity management and efficient portfolio management as well as investment purposes. Exchange traded and over-the-counter derivatives are permitted, including but not limited to futures, swaps, options and currency forwards. In case the Sub-fund uses derivatives, the underlying shall comply with the investment policy. Where relevant, minimum environmental or social safeguards are taken into account, by, for example, applying Robeco's Exclusion Policy for any single security derivative.

Is a specific index designated as a reference benchmark to determine whether this financial product is aligned with the environmental and/or social characteristics that it promotes?

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

Not applicable.

c) Robeco All Strategy Euro Bonds

Pre-contractual disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Product name: Robeco All Strategy Euro Bonds

Legal entity identifier: 213800PDS63NUN165C09

Environmental and/or social characteristics

Does this financial product have a sustainable investment objective?

Yes

No

It will make a minimum of **sustainable investments with an environmental objective:** ___%

- in economic activities that qualify as environmentally sustainable under the EU Taxonomy
- in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

It will make a minimum of **sustainable investments with a social objective:** ___%

It promotes **Environmental/Social (E/S) characteristics** and while it does not have as its objective a sustainable investment, it will have a minimum proportion of 5% of sustainable investments

- with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy
- with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy
- with a social objective

It promotes E/S characteristics, but **will not make any sustainable investments**

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

What environmental and/or social characteristics are promoted by this financial product?

The Sub-fund aims to contribute to the United Nations Sustainable Development Goals by investing in green, social, sustainability and/or sustainability-linked bonds that are used to finance environmental and social projects.

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

The Sub-fund has the following E/S characteristics for investments in corporate bonds:

1. The Sub-fund promotes certain minimum environmental and social safeguards through applying exclusion criteria with regards to products and business practices that Robeco believes are detrimental to society and incompatible with sustainable investment strategies, such as exposure to controversial behaviour, controversial weapons, and fossil fuels. Robeco deems investing in government bonds (federal or local) of countries where serious violations of human rights or a collapse of the governance structure take place as unsustainable. In addition, Robeco will follow applicable sanctions of the UN, EU or US to which it is subject and follows any mandatory (investment) restrictions deriving therefrom.
2. The Sub-fund limits investing in companies with an elevated sustainability risk based on ESG risk scores whereas all such investments require separate approval of a dedicated committee that oversees that all investments are substantiated and eligible based on a fundamental review on the sustainability risk.
3. The Sub-fund promotes adherence to and conducting business activities in accordance with the United Nations Universal Declaration of Human Rights, the International Labor Organization's (ILO) labor standards, the United Nations Guiding Principles for Business and Human Rights (UNGPs), the United Nations Global Compact (UNGC) and the OECD Guidelines for Multinational Enterprises, by scrutinizing companies that violate these principles.

The Sub-fund has the following E/S characteristics for investments in government bonds:

1. The Sub-fund promotes certain minimum environmental and social safeguards through applying exclusion criteria with regards to products and business practices that Robeco believes are detrimental to society and incompatible with sustainable investment strategies, such as exposure to controversial behaviour, controversial weapons, and fossil fuels. Robeco deems investing in government bonds (federal or local) of countries where serious violations of human rights or a collapse of the governance structure take place as unsustainable. In addition, Robeco will follow applicable sanctions of the UN, EU or US to which it is subject and follows any mandatory (investment) restrictions deriving therefrom.
2. The Sub-fund promotes investment in countries that perform well on the RobecoSAM Country Sustainability Ranking. The RobecoSAM Country Sustainability Ranking incorporates a wide range of ESG factors such as aging, corruption, social unrest, political risks and environmental risks.
3. The Sub-fund promotes investment in countries with policies and institutional frameworks to prevent and combat corruption.

● ***What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?***

1. The % of the Sub-fund invested in green, social, sustainability and/or sustainability-linked bonds. The Sub-fund has the following sustainability indicators to measure the attainment of the E/S characteristics of the corporate bonds:

1. The % of investments in securities that are on Robeco's Exclusion list as result of the application of Robeco's Exclusion Policy.
2. The % of corporate holdings with an elevated sustainability risk profile.
3. The number of companies that are in violation of the ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises and hence are a part of the Enhanced Engagement program.

The Sub-fund has the following sustainability indicators to measure the attainment of the E/S characteristics of the government bonds:

1. The % of investments in securities that are on Robeco's Exclusion list as result of the application of Robeco's Exclusion Policy.
2. The minimum weighted average score on Robeco's Country Sustainable Ranking.
3. The % of investments excluded from the Worldwide Governance Indicators (WGI) - Control of Corruption ranking.

● ***What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?***

The portion of the sustainable investments are green, social, sustainability and sustainability-linked bonds, and therefore contribute to the environmental objectives under EU Taxonomy. The Sub-fund does not have an explicit goal for contribution to UN SDGs. If there are corporate investments made then Robeco will use its proprietary SDG framework to examine which issuers make a positive contribution to the UN SDGs and which can be regarded as Sustainable investments as defined under Article 2(17) of SFDR. Positive SDG scores (+1, +2, +3) are regarded as sustainable investments.

● ***How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?***

For sustainable investments that are either green, social, sustainability or sustainability-linked bonds, significant harm is avoided by the application of the Robeco's green, social, sustainability or sustainability-linked bond eligibility frameworks.

For corporate investments, Robeco's SDG Framework is considered for the analysis of sustainable investments determined by positive scores on this framework. Robeco's SDG Framework assesses the contribution of companies to the Sustainable Development Goals (SDGs). Many PAI indicators are either directly or indirectly included in the SDG Framework to determine whether a company has significant impacts on the SDGs related to the PAI indicators. A detailed description of the incorporation of principal adverse impacts is available via Robeco's Principal Adverse Impact Statement published on the Robeco website.

How have the indicators for adverse impacts on sustainability factors been taken into account?

For sustainable investments that are either green, social, sustainability or sustainability-linked bonds, significant harm is avoided by the application of the Robeco's green, social, sustainability or sustainability-linked bond eligibility framework. As a result, the following adverse impacts are taken into account:

- Table 1, PAI 15 (GHG intensity)
- Table 1, PAI 16 (Investee countries subject to social violations)
- Table 2, PAI 17 (Share of bonds not certified as green under a future EU act setting up an EU Green Bond Standard)

For corporates, Robeco's SDG Framework is considered for the analysis of sustainable investments determined by positive scores on this framework. Robeco's SDG Framework assesses the contribution of companies to the Sustainable Development Goals (SDGs). Many PAI indicators are either directly or indirectly included in the SDG Framework to determine whether a company has significant impacts on the SDGs related to the PAI indicators. A detailed description of the incorporation of Principal Adverse Impact is available via Robeco's Principal Adverse Impact Statement published on the Robeco website (<https://www.robeco.com/files/docm/docu-principal-adverse-impact-statement-summary-entity-level.pdf>).

How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

For the corporate investments, the sustainable investments are aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights via Robeco's Exclusion Policy.

Robeco's Exclusion Policy includes an explanation of how Robeco acts in accordance with the International Labor Organization (ILO) standards, United Nations Guiding Principles (UNGPs), United Nations Global Compact (UNGC) Principles and the Organization for Economic Co-operation and Development (OECD) Guidelines for Multinational Enterprises and is guided by these international treaties to assess the behavior of companies. Robeco continuously screens its investments for breaches of these principles. In case of a breach, the company will be excluded or engaged with, and is not considered a sustainable investment.

Robeco's SDG Framework screens for breaches on these principles in the final step of the framework. In this step, Robeco checks whether the company concerned has been involved in any controversies. Involvement in any controversy will result in a negative SDG score for the company, meaning it is not a sustainable investment.

In addition, the Sub-fund invest in sovereigns and supranationals, for which sustainable investments defined as green, social, sustainability and/or sustainability-linked bonds from these issuers are not aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

Does this financial product consider principal adverse impacts on sustainability factors?

Yes, _____

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

The Sub-fund considers principal adverse impacts on sustainability factors as referred to in Annex 1 of the SFDR Delegated Act.

Pre-investment, the following principal adverse impacts on sustainability factors are considered:

As part of Country Sustainability ranking, used for The Sub-fundamental analysis of bonds, the following PAIs are considered:

- Table 1, PAI 15 (GHG intensity)
- Table 1, PAI 16 (Investee countries subject to social violations)

In addition, the Sub-fund has E/S promoting characteristics in relation to:

- Table 2, PAI 17 (Share of bonds not certified as green under a future EU act setting up an EU Green Bond Standard)
- Table 3, PAI 21 (Control of Corruption)

Post-investment, the following principal adverse impacts on sustainability factors are taken into account:

- Table 1, PAI 15 (GHG intensity), via Robeco's engagement program

More information is available via Robeco's Principal Adverse Impact Statement, published on Robeco's website. The Sub-fund will periodically report how it has considered the principal adverse impacts of its investments in the Company's annual report, which will be made available each year on or before 30 April at the Sub-fund page highlighted in final section of this document.

No

What investment strategy does this financial product follow?

Robeco All Strategy Euro Bonds is an actively managed fund that invests primarily in euro-denominated government and non-government bonds. The selection of these bonds is based on fundamental analysis as described in the Investment policy strategy paragraph in Appendix I of this Prospectus.

The strategy integrates sustainability indicators on a continuous basis as part of the bond selection process. Amongst others, the Sub-fund applies norms-based, activity-based and country-based exclusions, Robeco's good governance policy, Robeco's SDG framework and considers Principal Adverse Impacts in the investment process. More product-specific information can be found on our website and the links provided in the final question of this disclosure.

What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?

1. The Sub-fund invests a minimum of 5% in green, social, sustainability, and/or sustainability-linked bonds.

The Sub-fund has the following binding elements to attain the E/S characteristics for the corporate bonds:

1. The Sub-fund's portfolio complies with Robeco's Exclusion Policy (<https://www.robeco.com/files/docm/docu-exclusion-policy.pdf>) that is based on exclusion criteria that Robeco believes are detrimental to society and incompatible with sustainable investment strategies. This means that the Sub-fund has 0% exposure to excluded securities, taking into account a grace period. Information with regards to the effects of the exclusions on the Sub-fund's universe can be found at <https://www.robeco.com/files/docm/docu-exclusion-list.pdf>.
2. Investments with an elevated sustainability risk are defined by Robeco as companies with an ESG Risk Rating of 40 and higher (the ESG Risk Rating is explained in the sustainability risk policy which

The investment strategy guides investment decisions based on factors such as investment objectives and risk tolerance.

can be accessed via <https://www.robeco.com/files/docm/docu-robeco-sustainability-risk-policy.pdf>). The Sub-fund is limited to a maximum exposure of 3% to investments with an elevated sustainability risk, based on the market weight in the portfolio taking into account regional differences and benchmark. Each investment with an ESG Risk rating of higher than 40 requires separate approval by a dedicated committee of sustainable investment specialists, compliance and risk management that oversees the bottom-up sustainability analysis.

3. The Sub-fund scrutinizes investment in companies that are in breach of the ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises. If a company in the portfolio breaches one of the international guidelines during the investment period, the company will become part of the Enhanced Engagement program. When engagement is deemed highly unlikely to succeed, the company might be excluded directly.

The Sub-fund has the following binding elements to attain the E/S characteristics for government bonds:

1. The Sub-fund's portfolio complies with Robeco's Exclusion Policy (<https://www.robeco.com/files/docm/docu-exclusion-policy.pdf>) that is based on exclusion criteria that Robeco believes are detrimental to society and incompatible with sustainable investment strategies. This means that the Sub-fund has 0% exposure to excluded securities, taking into account a grace period. Information with regards to the effects of the exclusions on the Sub-fund's universe can be found at <https://www.robeco.com/files/docm/docu-exclusion-list.pdf>.
2. The Sub-fund's portfolio has a minimum weighted average score of at least 6 on Robeco's Country Sustainability Ranking.
3. The Sub-fund excludes sovereign bonds issued by the bottom 15% of the Worldwide Governance Indicators (WGI) - Control of Corruption ranking.

● ***What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?***

The Sub-fund does not commit to a minimum rate to reduce the scope of investments prior to the application of the investment strategy.

● ***What is the policy to assess good governance practices of the investee companies?***

Robeco has a Good Governance policy to assess governance practices of companies. The policy describes how Robeco determines if and when a company does not follow good governance practices and is therefore excluded from the initial investment universe for Article 8 and 9 products. Robeco's Good Governance policy applies to the Sub-fund and tests on a set of governance criteria that reflect widely recognized industry established norms and include topics as employee relations, management structure, tax compliance and remuneration.

The Good Governance test consists of criteria on such topics that are examined for investee companies and further explained in Robeco's Good Governance policy <https://www.robeco.com/files/docm/docu-robeco-good-governance-policy.pdf>. Additionally, the companies that do not pass the good governance test are reflected in the exclusion list that can be accessed here - <https://www.robeco.com/files/docm/docu-exclusion-list.pdf>.

● ***What is the asset allocation planned for this financial product?***

At least 90% of the investments are aligned with the E/S characteristics of the Sub-fund. The Sub-fund plans to make a minimum of 5% sustainable investments, measured by either being positive scores via Robeco's SDG Framework or investments in green, social, sustainability or sustainability-linked bonds. The investments in the category Other, estimated between 0-10%, are mostly in cash, cash equivalents and derivatives as further described below. The planned asset allocation is monitored continuously, and evaluated on a yearly basis.

Good governance practices include sound management structures, employee relations, remuneration of staff and tax compliance.

Asset allocation describes the share of investments in specific assets.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure (CapEx)** showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure (OpEx)** reflecting green operational activities of investee companies.

● **How does the use of derivatives attain the environmental or social characteristics promoted by the financial product?**

The Sub-fund does not make use of derivatives to attain the environmental or social characteristics promoted by the financial product. The Sub-fund may make use of derivatives for hedging, liquidity management and efficient portfolio management as well as investment purposes in the global fixed income, money market, interest rates and currency markets. As and when the Sub-fund uses derivatives, the underlying shall comply with the investment policy of the Sub-fund. Where relevant, minimum environmental or social safeguards are taken into account as described below.

To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

0%. The Sub-fund intends to contribute to all environmental objectives under the EU Taxonomy via the investments in Green Bonds. The Sub-fund commits to a minimum share of 0% of Taxonomy-aligned activities. The Sub-fund intends to increase the minimum share of Taxonomy aligned activities for the Sub-fund, based on use of proceeds, once data availability in relation to the EU Taxonomy for Green bonds improves and stabilises.

The Sub-fund will report on Taxonomy-aligned investment in the periodic disclosures. Given the lack of data on the EU Taxonomy for green bonds in the market, Robeco relies on internal analysis for the time being. EU Taxonomy-alignment data is not yet subject to a review by third parties. The expected level of alignment with and without sovereign bonds is the same.

To comply with the EU Taxonomy, the criteria for **fossil gas** include

● **Does the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy⁸⁹?**

Yes

⁸⁹ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

limitations on emissions and switching to renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

 are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

In fossil gas In nuclear energy
 No

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.*

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures
 ** As the investments are not Taxonomy-aligned, the exclusion of sovereign bonds has no impact on the graph and therefore no such percentage is shown here.

● **What is the minimum share of investments in transitional and enabling activities?**

0%.

What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?

Green bonds may invest (part of) their use of proceeds in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy, however the Sub-fund does not intend to set a minimum target. While the sum of sustainable investments with an environmental objective and socially sustainable investments always adds up to the Sub-fund's minimum proportion of 5% sustainable investments, we do not commit to a minimum share of sustainable investments with an environmental objective because the Sub-fund's investment strategy does not have a specific environmental investment objective. Therefore, the minimum share of sustainable investments with an environmental objective is 0%.

What is the minimum share of socially sustainable investments?

Social, sustainable or sustainability-linked bonds may invest (part of) their use of proceeds in economic activities that contribute to a social objective, however the Sub-fund does not intend to set a minimum target. While the sum of socially sustainable investments and sustainable investments with an environmental objective always adds up to the Sub-fund's minimum proportion of sustainable investments, we do not commit to a minimum share of socially sustainable investments because the Sub-fund's investment strategy does not have a specific socially sustainable investment objective. Therefore, the minimum share of socially sustainable investments is 0%.

What investments are included under "#2 Other", what is their purpose and are there any minimum environmental or social safeguards?

The type of instruments included under "#2 Other" and their purpose are outlined in Annex I of this Prospectus under the header 'Financial instruments and investment restrictions'. They include cash, cash equivalents, as well as investment funds and eligible asset classes (other than bonds and equities) that do not specifically promote E/S characteristics. As indicated above, the Sub-fund does not make use of derivatives to attain the environmental or social characteristics promoted. The Sub-fund may make use of derivatives, which thus always fall under the category "#2 Other", for hedging, liquidity management and efficient portfolio management as well as investment purposes. Exchange traded and over-the-counter derivatives are permitted, including but not limited to futures, swaps, options and currency forwards. In case the Sub-fund uses derivatives, the underlying shall comply with the investment policy. Where relevant, minimum environmental or social safeguards are taken into account, by, for example, applying Robeco's Exclusion Policy for any single security derivative.

Is a specific index designated as a reference benchmark to determine whether this financial product is aligned with the environmental and/or social characteristics that it promotes?

Not applicable.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

d) Robeco European High Yield Bonds

Pre-contractual disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Product name: Robeco European High Yield Bonds

Legal entity identifier: 21380033AH4QAGYE2R38

Environmental and/or social characteristics

Does this financial product have a sustainable investment objective?

Yes

No

It will make a minimum of **sustainable investments with an environmental objective:** ___%

- in economic activities that qualify as environmentally sustainable under the EU Taxonomy
- in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

It will make a minimum of **sustainable investments with a social objective:** ___%

It promotes **Environmental/Social (E/S) characteristics** and while it does not have as its objective a sustainable investment, it will have a minimum proportion of 30% of sustainable investments

- with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy
- with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy
- with a social objective

It promotes E/S characteristics, but **will not make any sustainable investments**

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

What environmental and/or social characteristics are promoted by this financial product?

The Sub-fund has the following E/S characteristics:

1. The Sub-fund promotes certain minimum environmental and social safeguards through applying exclusion criteria with regards to products and business practices that Robeco believes are detrimental to society and incompatible with sustainable investment strategies, such as exposure to controversial behaviour, controversial weapons, and fossil fuels.
2. The Sub-fund promotes adherence to and conducting business activities in accordance with the United Nations Universal Declaration of Human Rights, the International Labor Organization's (ILO) labor standards, the United Nations Guiding Principles for Business and Human Rights (UNGPs), the United Nations Global Compact (UNGC) and the OECD Guidelines for Multinational Enterprises, by scrutinizing companies that violate these principles.
3. The Sub-fund limits investing in companies with an elevated sustainability risk based on ESG risk scores whereas all such investments require separate approval of a dedicated committee that oversees that all investments are substantiated and eligible based on a fundamental review on the sustainability risk.
4. The Sub-fund aims to contribute to the United Nations Sustainable Development Goals by investing in green, social, sustainability and/or sustainability-linked bonds that are used to finance environmental and social projects.

● ***What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?***

The Sub-fund has the following sustainability indicators:

1. The % of investments in securities that are on Robeco's Exclusion list as result of the application of Robeco's Exclusion Policy.
2. The number of companies that are in violation of the ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises and hence are a part of the Enhanced Engagement program.
3. The % of holdings with an elevated sustainability risk profile.
4. The % of the Sub-fund invested in green, social, sustainability and/or sustainability-linked bonds.

● ***What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?***

The sustainable investments aim to contribute to the UN Sustainable Development Goals ("SDGs"), that have both social and environmental objectives. These are 17 goals that are globally recognised and include environmental goals such as climate action, clean water, life on land and water and social goals such as zero hunger, gender equality, education, etc. Robeco has developed a proprietary framework based on the UN SDGs through which an issuer's contribution to such SDGs is determined through a 3-step process. This process starts with a sector baseline on which a company's products are analysed to examine contribution to the society and environment. Further, the operational processes involved in creating such products is checked along with any controversies/litigation claims and remediation actions taken which are perused before a final SDG score is determined. The final score ranges between high negative (-3) to high positive (+3) and only those issuers which achieve positive SDG scores (+1, +2 and, +3) are regarded as Sustainable Investments. Some of the sustainable investments are green bonds, and therefore contribute to the environmental objectives under EU Taxonomy.

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

● ***How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?***

The sustainable investments do no significant harm to any environmental or social sustainable investment objective by considering a principal adverse impact and aligning with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights. In addition, sustainable investments score positively on Robeco's SDG Framework or are assessed by either Robeco's Green Bond Framework or Social Bond Framework, and therefore do not cause significant harm.

How have the indicators for adverse impacts on sustainability factors been taken into account?

For sustainable investments that are either green, social, sustainability or sustainability-linked bonds, significant harm is avoided by the application of the Robeco's green, social, sustainability or sustainability-linked bond eligibility frameworks.

Robeco's SDG Framework is considered for the analysis of sustainable investments determined by positive scores on this framework. Robeco's SDG Framework assesses the contribution of companies to the Sustainable Development Goals (SDGs). Many PAI indicators are either directly or indirectly included in the SDG Framework to determine whether a company has significant impacts on the SDGs related to the PAI indicators. A detailed description of the incorporation of principal adverse impacts is available via Robeco's Principal Adverse Impact Statement published on the Robeco website (<https://www.robeco.com/files/docm/docu-principal-adverse-impact-statement-summary-entity-level.pdf>).

How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The sustainable investments are aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights via both Robeco's Exclusion Policy and Robeco's SDG Framework.

Robeco's Exclusion Policy includes an explanation of how Robeco acts in accordance with the International Labor Organization (ILO) standards, United Nations Guiding Principles (UNGPs), United Nations Global Compact (UNGC) Principles and the Organization for Economic Co-operation and Development (OECD) Guidelines for Multinational Enterprises and is guided by these international treaties to assess the behavior of companies. Robeco continuously screens its investments for breaches of these principles. In case of a breach, the company will be excluded or engaged with, and is not considered a sustainable investment.

Robeco's SDG Framework screens for breaches on these principles in the final step of the framework. In this step, Robeco checks whether the company concerned has been involved in any controversies. Involvement in any controversy will result in a negative SDG score for the company, meaning it is not a sustainable investment.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

Does this financial product consider principal adverse impacts on sustainability factors?

✘ Yes, _____

The Sub-fund considers principal adverse impacts on sustainability factors as referred to in Annex I of the SFDR Delegated Act.

Pre-investment, the following principal adverse impacts on sustainability factors are considered:

- Via the applied normative and activity-based exclusions, the following PAIs are considered:
 - Exposure to companies active in the fossil fuel sector (PAI 4, Table 1)
 - Violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1)
 - Activities negatively affecting biodiversity-sensitive areas (PAI 7, Table 1). The consideration of this PAI is currently restricted to applying exclusions to palm oil producing companies and for any breaches to the UNGC, UNGP and OECD Guidelines for Multinational Enterprises in relation to biodiversity.
 - Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons (PAI 14, Table 1)
- Via the ESG integration process, as part of the investment due diligence policies and procedures, the following PAIs are considered:
 - All indicators related to GHG emissions, as part of the required Climate Risk analysis (PAI 1-6, Table 1, PAI 4, Table 2)
 - Water and waste indicators (PAI 7-9, Table 1)

Post-investment, the following principal adverse impacts on sustainability factors are taken into account via Robeco's entity engagement program:

- All indicators related to Climate and other environment-related indicators (PAI 1-9, Table 1)
- Violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1). On an ongoing basis, the investment universe is scanned for controversial behavior in relation to the aforementioned principles and guidelines.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

- In addition, based on a yearly review of Robeco's performance on all mandatory and selected voluntary indicators, holdings of the Sub-fund that cause adverse impact might be selected for engagement.

More information is available via Robeco's Principal Adverse Impact Statement, published on Robeco's website. The Sub-fund will periodically report how it has considered the principal adverse impacts of its investments in the Company's annual report, which will be made available each year on or before 30 April at the Sub-fund page highlighted in final section of this document.

No

What investment strategy does this financial product follow?

Robeco European High Yield Bonds is an actively managed fund that invests in bonds with a sub-investment grade rating, issued primarily by European and US issuers. The selection of these bonds is based on fundamental analysis as described in the Investment policy strategy paragraph in Appendix I of this Prospectus. The strategy integrates sustainability indicators on a continuous basis as part of the bond selection process. Amongst others, the Sub-fund applies norms-based, activity-based and regional exclusions, Robeco's good governance policy, Robeco's SDG framework and considers Principal Adverse Impacts in the investment process. More product-specific information can be found on our website and the links provided in the final question of this disclosure.

The investment strategy guides investment decisions based on factors such as investment objectives and risk tolerance.

What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?

The Sub-fund has the following binding elements:

1. The Sub-fund's portfolio complies with Robeco's Exclusion Policy (<https://www.robeco.com/files/docm/docu-exclusion-policy.pdf>), that is based on exclusion criteria with regards to products and business practices that Robeco believes are detrimental to society and incompatible with sustainable investment strategies. This means that the Sub-fund has 0% exposure to excluded securities, taking into account a grace period. Information with regards to the effects of the exclusions on the Sub-fund's universe can be found at <https://www.robeco.com/files/docm/docu-exclusion-list.pdf>.
2. The Sub-fund scrutinizes investment in companies that are in breach of the ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises. If a company in the portfolio breaches one of the international guidelines during the investment period, the company will become part of the Enhanced Engagement program.
3. Investments with an elevated sustainability risk are defined by Robeco as companies with an ESG Risk Rating of 40 and higher (the ESG Risk Rating is explained in the sustainability risk policy which can be accessed via <https://www.robeco.com/files/docm/docu-robeco-sustainability-risk-policy.pdf>). The Sub-fund is limited to a maximum exposure of 10% to investments with an elevated sustainability risk, based on the market weight in the portfolio taking into account regional differences and benchmark. Each investment with an ESG Risk rating of higher than 40 requires separate approval by a dedicated committee of sustainable investment specialists, compliance and risk management that oversees the bottom-up sustainability analysis.
4. The Sub-fund invests a minimum of 2% in green, social, sustainability, and/or sustainability-linked bonds.

● **What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?**

The Sub-fund does not commit to a minimum rate to reduce the scope of investments prior to the application of the investment strategy.

● **What is the policy to assess good governance practices of the investee companies?**

Robeco has a Good Governance policy to assess governance practices of companies. The policy describes how Robeco determines if and when a company does not follow good governance practices and is therefore excluded from the initial investment universe for Article 8 and 9 products. Robeco's Good Governance policy applies to the Sub-fund and tests on a set of governance criteria that reflect widely recognized industry established norms and include topics as employee relations, management structure, tax compliance and remuneration.

The Good Governance test consists of criteria on such topics that are examined for investee companies and further explained in Robeco's Good Governance policy <https://www.robeco.com/files/docm/docu-robeco-good-governance-policy.pdf>. Additionally, the companies that do not pass the good governance test are reflected in the exclusion list that can be accessed here - <https://www.robeco.com/files/docm/docu-exclusion-list.pdf>.

What is the asset allocation planned for this financial product?

At least 90% of the investments are aligned with the E/S characteristics of the Sub-fund. The Sub-fund plans to make a minimum of 30% sustainable investments, measured by either being positive scores via Robeco's SDG Framework or investments in green, social, sustainability or sustainability-linked bonds. The investments in the category Other, estimated between 0-10%, are mostly in cash, cash equivalents and derivatives as further described below. The planned asset allocation is monitored continuously, and evaluated on a yearly basis.

Good governance practices include sound management structures, employee relations, remuneration of staff and tax compliance.

Asset allocation describes the share of investments in specific assets.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green

operational activities of investee companies.

● **How does the use of derivatives attain the environmental or social characteristics promoted by the financial product?**

The Sub-fund does not make use of derivatives to attain the environmental or social characteristics promoted by the financial product. The Sub-fund may make use of derivatives for hedging, liquidity management and efficient portfolio management as well as investment purposes in the global fixed income, money market, interest rates and currency markets. In case the Sub-fund uses derivatives, the underlying shall comply with the investment policy of the Sub-fund. Where relevant, minimum environmental or social safeguards are taken into account as described below.

● **To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?**

0%. The Sub-fund intends to contribute to all 6 environmental objectives under the EU Taxonomy via the investments in green bonds. The Sub-fund commits to a minimum share of 0% of Taxonomy-aligned activities. The Sub-fund intends to increase the minimum share of Taxonomy aligned activities for the Sub-fund, based on use of proceeds, once data availability in relation to the EU Taxonomy for green bonds improves and stabilises.

The Sub-fund will report on Taxonomy-aligned investment in the periodic disclosures. For investments in corporate bonds, the Sub-fund will report on turnover. Given the lack of data on the EU Taxonomy for green bonds in the market, Robeco relies on internal analysis for the time being. EU Taxonomy-alignment data is not yet subject to a review by third parties. The expected level of alignment with and without sovereign bonds is the same.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to renewable power

● **Does the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy⁹⁰?**

Yes

In fossil gas

In nuclear energy

No

⁹⁰ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

or low-carbon fuels by the end of 2035. For nuclear energy, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

 are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

** As the investments are not Taxonomy-aligned, the exclusion of sovereign bonds has no impact on the graph and therefore no such percentage is shown here.

 **What is the minimum share of investments in transitional and enabling activities?**

0%.

What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?

Green bonds may invest (part of) their use of proceeds in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy. In addition, the Sub-fund intends to make sustainable investments measured as positive scores via Robeco's SDG Framework. Among those could be investments with environmental objectives that do not qualify as Taxonomy-aligned. The environmental objectives of the Sub-fund are attained by investing in companies that score positively on SDG 12 (Responsible consumption and production), SDG 13 (Climate action), SDG 14 (Life below water), and SDG 15 (Life on land) in Robeco's SDG Framework.

While the sum of sustainable investments with an environmental objective and socially sustainable investments always adds up to the Sub-fund's minimum proportion of 30% sustainable investments, we do not commit to a minimum share of sustainable investments with an environmental objective because the Sub-fund's investment strategy does not have a specific environmental investment objective. Therefore, the minimum share of sustainable investments with an environmental objective is 0%.

What is the minimum share of socially sustainable investments?

Social, sustainable or sustainability-linked bonds may invest (part of) their use of proceeds in economic activities that contribute to a social objective.

In addition, the Sub-fund intends to make sustainable investments, measured as positive scores via Robeco's SDG Framework. Among those could be investments with social objectives. The social objectives of the Sub-fund are attained by investing in companies that score positively on SDG 1 (No poverty), SDG 2 (Zero hunger), SDG 3 (Good health and well-being), SDG 4 (Quality education), SDG 5 (Gender equality), SDG 6 (Clean water and sanitation), SDG 7 (Affordable and clean energy), SDG 8

(Decent work and economic growth), SDG 9 (Industry, innovation and infrastructure), SDG 10 (Reduced inequalities), SDG 11 (Sustainable cities and communities), SDG 16 (Peace, justice and strong institutions) and SDG 17 (Partnerships for the goals), in Robeco's SDG Framework.

While the sum of socially sustainable investments and sustainable investments with an environmental objective always adds up to the Sub-fund's minimum proportion of sustainable investments, we do not commit to a minimum share of socially sustainable investments because the Sub-fund's investment strategy does not have a specific socially sustainable investment objective. Therefore, the minimum share of socially sustainable investments is 0%.

What investments are included under "#2 Other", what is their purpose and are there any minimum environmental or social safeguards?

The type of instruments included under "#2 Other" and their purpose are outlined in Annex I of this Prospectus under the header 'Financial instruments and investment restrictions'. They include cash, cash equivalents, as well as investment funds and eligible asset classes (other than bonds and equities) that do not specifically promote E/S characteristics. As indicated above, the Sub-fund does not make use of derivatives to attain the environmental or social characteristics promoted. The Sub-fund may make use of derivatives, which thus always fall under the category "#2 Other", for hedging, liquidity management and efficient portfolio management as well as investment purposes. Exchange traded and over-the-counter derivatives are permitted, including but not limited to futures, swaps, options and currency forwards. In case the Sub-fund uses derivatives, the underlying shall comply with the investment policy. Where relevant, minimum environmental or social safeguards are taken into account, by, for example, applying Robeco's Exclusion Policy for any single security derivative.

Is a specific index designated as a reference benchmark to determine whether this financial product is aligned with the environmental and/or social characteristics that it promotes?

Not applicable.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

e) Robeco Sustainable Asian Bonds

Pre-contractual disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Product name: Robeco Sustainable Asian Bonds

Legal entity identifier: 21380096HMIZ4YU8CM47

Environmental and/or social characteristics

Does this financial product have a sustainable investment objective?

Yes

No

It will make a minimum of **sustainable investments with an environmental objective:** ___%

- in economic activities that qualify as environmentally sustainable under the EU Taxonomy
- in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

It will make a minimum of **sustainable investments with a social objective:** ___%

It promotes **Environmental/Social (E/S) characteristics** and while it does not have as its objective a sustainable investment, it will have a minimum proportion of 50% of sustainable investments

- with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy
- with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy
- with a social objective

It promotes E/S characteristics, but **will not make any sustainable investments**

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

What environmental and/or social characteristics are promoted by this financial product?

The Sub-fund has the following E/S characteristics:

1. The Sub-fund promotes investment in a portfolio that contributes to the Sustainable Development Goals (SDGs).
2. The Sub-fund promotes investing in companies that are making efforts in improving their contribution to the UN SDGs with a specific focus on Climate change and Paris agreement goals.
3. The Sub-fund promotes adherence to and conducting business activities in accordance with the United Nations Universal Declaration of Human Rights, the International Labor Organization's (ILO) labor standards, the United Nations Guiding Principles for Business and Human Rights (UNGPs), the United Nations Global Compact (UNGC) and the OECD Guidelines for Multinational Enterprises.
4. The Sub-fund promotes certain minimum environmental and social safeguards through applying exclusion criteria with regards to products and business practices that Robeco believes are detrimental to society and incompatible with sustainable investment strategies, such as exposure to controversial behaviour, controversial weapons, and fossil fuels.
5. The Sub-fund limits investing in companies with an elevated sustainability risk based on ESG risk scores whereas all such investments require separate approval of a dedicated committee that oversees that all investments are substantiated and eligible based on a fundamental review on the sustainability risk.
6. The Sub-fund aims to contribute to the United Nations Sustainable Development Goals by investing in green, social, sustainability and/or sustainability-linked bonds that are used to finance environmental and social projects.

There is no reference benchmark designated for the purpose of attaining the environmental or social characteristics promoted by the Sub-fund.

● **What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?**

The Sub-fund has the following sustainability indicators:

1. The proportion of companies that hold a positive or neutral SDG score and the Sub-fund's average company SDG score.
2. The proportion of companies that hold a negative SDG score (-3, -2 or -1) based on the internally developed SDG Framework but are aligned or aligning as per Robeco Traffic Light.
3. The number of companies that are in violation of the UNGPs or OECD Guidelines for Multinational Enterprises.
4. The % of investments in securities that are on Robeco's Exclusion list as result of the application of Robeco's Exclusion Policy.
5. The % of holdings with an elevated sustainability risk profile.
6. The % of the Sub-fund invested in green, social, sustainability and/or sustainability-linked bonds.

● **What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?**

The sustainable investments aim to contribute to the UN Sustainable Development Goals ("SDGs"), that have both social and environmental objectives. These are 17 goals that are globally recognised and include environmental goals such as climate action, clean water, life on land and water and social goals such as zero hunger, gender equality, education, etc. Robeco has developed a proprietary framework based on the UN SDGs through which an issuer's contribution to such SDGs is determined through a 3-step process. This process starts with a sector baseline on which a company's products are analysed to examine contribution to the society and environment. Further, the operational processes involved in

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

creating such products is checked along with any controversies/litigation claims and remediation actions taken which are perused before a final SDG score is determined. The final score ranges between high negative (-3) to high positive (+3) and only those issuers which achieve positive SDG scores (+1, +2 and +3) are regarded as Sustainable Investments.

● ***How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?***

The sustainable investments do no significant harm to any environmental or social sustainable investment objective by considering a principal adverse impact and aligning with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights. In addition, sustainable investments score positively on Robeco's SDG Framework, and therefore do not cause significant harm.

How have the indicators for adverse impacts on sustainability factors been taken into account?

Mandatory principal adverse impact indicators are considered through Robeco's SDG Framework, either directly or indirectly, when identifying sustainable investments for the Sub-fund. In addition, voluntary environmental and social indicators are taken into account, depending on their relevance for measuring impacts on the SDGs and the availability of data. A detailed description of the incorporation of principal adverse impacts is available via Robeco's Principal Adverse Impact Statement published on the Robeco website (<https://www.robeco.com/files/docm/docu-principal-adverse-impact-statement-summary-entity-level.pdf>). In this statement, Robeco sets out its approach to identifying and prioritizing principal adverse impacts, and how principal adverse impacts are considered as part of Robeco's investment due diligence process and procedures relating to research and analysis, exclusions and restrictions and/or voting and engagement. This description also explains how principal adverse impact indicators are considered by the SDG Framework.

How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The sustainable investments are aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights via both Robeco's Exclusion Policy and Robeco's SDG Framework.

Robeco's Exclusion Policy includes an explanation of how Robeco acts in accordance with the International Labor Organization (ILO) standards, United Nations Guiding Principles (UNGPs), United Nations Global Compact (UNGC) Principles and the Organization for Economic Co-operation and Development (OECD) Guidelines for Multinational Enterprises and is guided by these international treaties to assess the behavior of companies. Robeco continuously screens its investments for breaches of these principles. In case of a breach, the company will be excluded or engaged with, and is not considered a sustainable investment.

Robeco's SDG Framework screens for breaches on these principles in the final step of the framework. In this step, Robeco checks whether the company concerned has been involved in any controversies. Involvement in any controversy will result in a negative SDG score for the company, meaning it is not a sustainable investment.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

Does this financial product consider principal adverse impacts on sustainability factors?

Yes, _____

The Sub-fund considers principal adverse impacts on sustainability factors as referred to in Annex I of the SFDR Delegated Act.

Pre-investment, Robeco's SDG Framework assesses companies' positive and negative contributions to the Sustainable Development Goals (SDGs). Robeco's SDG Framework directly and/or indirectly screens companies on many of the topics considered by the PAI indicators.

Post-investment, the following principal adverse impacts on sustainability factors are taken into account:

- Via Robeco's entity engagement program, the following PAIs are considered:
 - All indicators related to Climate and other environment-related indicators (PAI 1-9, Table 1)
 - Violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1). On an ongoing basis, the investment universe is scanned for controversial behavior in relation to the aforementioned principles and guidelines.
 - In addition, based on a yearly review of Robeco's performance on all mandatory and selected voluntary indicators, holdings of the Sub-fund that cause adverse impact might be selected for engagement.

More information is available via Robeco's Principal Adverse Impact Statement, published on Robeco's website. The Sub-fund will periodically report how it has considered the principal adverse impacts of its investments in the Company's annual report, which will be made available each year on or before 30 April at the Sub-fund page highlighted in final section of this document.

No

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

The investment strategy guides investment decisions based on factors such as investment objectives and risk tolerance.

What investment strategy does this financial product follow?

Robeco Sustainable Asian Bonds is an actively managed fund that invests in corporate and government bonds in Asia. The selection of these bonds is based on fundamental analysis as described in the Investment policy strategy paragraph in Appendix I of this Prospectus.

The strategy integrates sustainability indicators on a continuous basis as part of the bond selection process. Amongst others, the Sub-fund applies norms-based, activity-based and regional exclusions, Robeco's good governance policy, Robeco's SDG framework and considers Principal Adverse Impacts in the investment process. More product-specific information can be found on our website and the links provided in the final question of this disclosure.

What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?

The Sub-fund has the following binding elements:

1. For corporate bond investments, at least 50% of the Sub-fund is invested in companies with a positive or neutral SDG score. The average company SDG score of the Sub-fund is greater than zero.
2. For corporate bond investments, the Sub-fund can invest in negative SDG scoring companies up to a maximum cap of 20% if the issuer has a corresponding Climate traffic light (based on Robeco internal IP) that is aligned or aligning. Robeco's Paris Alignment Assessment (traffic light) is a forward looking assessment of a company's alignment with a below 2°C scenario and more information of the methodology can be found here <https://www.robeco.com/files/docm/docu-robeco-paris-alignment-assessment.pdf>.
3. The Sub-fund avoids investment in companies that are in breach of the ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises. Companies that breach these international norms will be excluded from the investment universe.
4. The Sub-fund's portfolio complies with Robeco's Exclusion Policy (<https://www.robeco.com/files/docm/docu-exclusion-policy.pdf>), that is based on exclusion criteria with regards to products and business practices that Robeco believes are detrimental to society and incompatible with sustainable investment strategies. This means that the Sub-fund has 0% exposure to excluded securities, taking into account a grace period. Information with regards to the effects of the exclusions on the Sub-fund's universe can be found at <https://www.robeco.com/files/docm/docu-exclusion-list.pdf>
5. Investments with an elevated sustainability risk are defined by Robeco as companies with an ESG Risk Rating of 40 and higher (the ESG Risk Rating is explained in the sustainability risk policy which can be accessed via <https://www.robeco.com/files/docm/docu-robeco-sustainability-risk-policy.pdf>). The Sub-fund is limited to a maximum exposure of 10% to investments with an elevated sustainability risk, based on the market weight in the portfolio taking into account regional differences and benchmark. Each investment with an ESG Risk rating of higher than 40 requires separate approval by a dedicated committee of sustainable investment specialists, compliance and risk management that oversees the bottom-up sustainability analysis.
6. The Sub-fund invests a minimum of 15% in green, social, sustainability, and/or sustainability-linked bonds.

What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?

The Sub-fund does not commit to a minimum rate to reduce the scope of investments prior to the application of the investment strategy.

What is the policy to assess good governance practices of the investee companies?

Good governance practices include sound management structures, employee relations, remuneration of staff and tax compliance.

Robeco has a Good Governance policy to assess governance practices of companies. The policy describes how Robeco determines if and when a company does not follow good governance practices and is therefore excluded from the initial investment universe for Article 8 and 9 products. Robeco's Good Governance policy applies to the Sub-fund and tests on a set of governance criteria that reflect widely recognized industry established norms and include topics as employee relations, management structure, tax compliance and remuneration.

The Good Governance test consists of criteria on such topics that are examined for investee companies and further explained in Robeco's Good Governance policy <https://www.robeco.com/files/docm/docu-robeco-good-governance-policy.pdf>. Additionally, the companies that do not pass the good governance test are reflected in the exclusion list that can be accessed here - <https://www.robeco.com/files/docm/docu-exclusion-list.pdf>.

What is the asset allocation planned for this financial product?

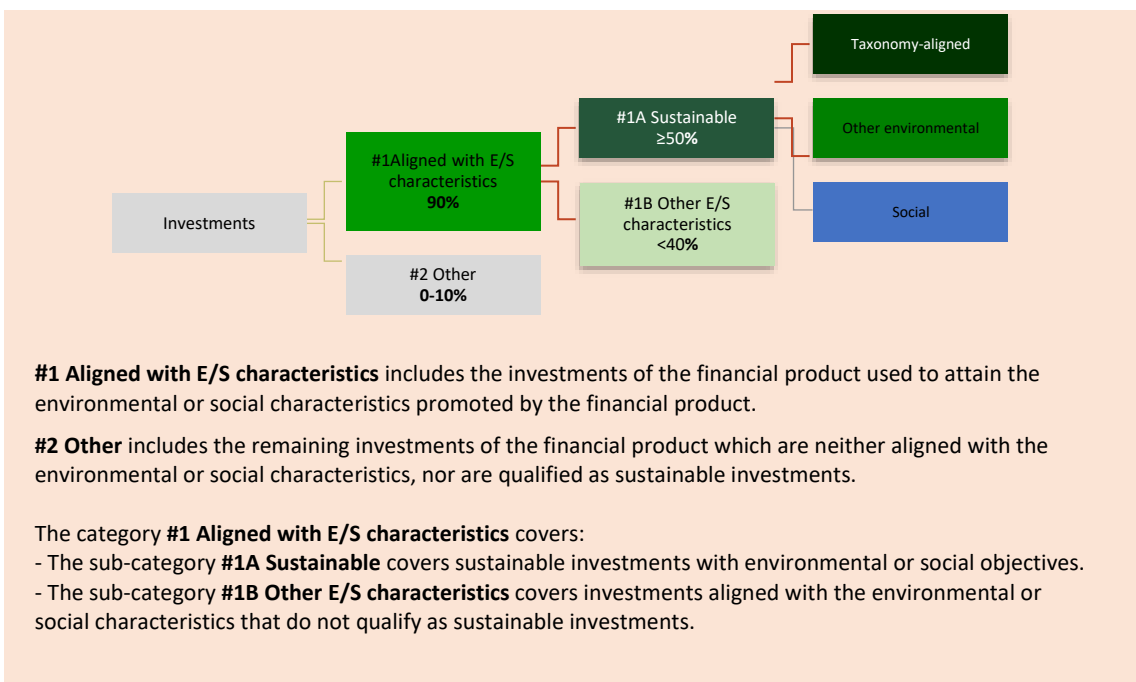

At least 90% of the investments are aligned with the E/S characteristics of the Sub-fund. The Sub-fund plans to make a minimum of 50% sustainable investments, measured by positive scores via Robeco's SDG Framework. The investments in the category Other, estimated between 0-10%, are mostly in cash, cash equivalents and derivatives as further described below. The planned asset allocation is monitored continuously, and evaluated on a yearly basis.

Asset allocation describes the share of investments in specific assets.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers sustainable investments with environmental or social objectives.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

How does the use of derivatives attain the environmental or social characteristics promoted by the financial product?

The Sub-fund does not make use of derivatives to attain the environmental or social characteristics promoted by the financial product. The Sub-fund may make use of derivatives for hedging, liquidity management and efficient portfolio management as well as investment purposes in the global fixed income, money market, interest rates and currency markets. In case the Sub-fund uses derivatives, the underlying shall comply with the investment policy of the Sub-fund. Where relevant, minimum environmental or social safeguards are taken into account as described below.

To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

0%. The Sub-fund does not intend to make Taxonomy-aligned investments. It cannot be excluded that among the Sub-fund's holdings certain investments are Taxonomy aligned. The Sub-fund will report on Taxonomy-aligned investment in the periodic disclosures. In the future, once data-availability in relation to the EU Taxonomy will improve, Robeco might consider setting a target based on turnover or CAPEX. Robeco currently relies on third-party data in relation to the EU Taxonomy, including data in relation to companies that do not disclose on the EU Taxonomy alignment of their activities. EU Taxonomy-alignment data is not yet subject to a review by third parties. At this moment, the expected level of alignment with and without sovereign bonds is the same.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

 are sustainable investments with an environmental objective that **do not take into account the**

● **Does the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy⁹¹?**

Yes

In fossil gas

In nuclear energy

No

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.*

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

** As the investments are not Taxonomy-aligned, the exclusion of sovereign bonds has no impact on the graph and therefore no such percentage is shown here.

● **What is the minimum share of investments in transitional and enabling activities?**

0%.

● **What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?**

Green bonds may invest (part of) their use of proceeds in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy. In addition, the Sub-fund intends to make sustainable investments measured as positive scores via Robeco's SDG Framework. Among those could

⁹¹ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

criteria for environmentally sustainable economic activities under the EU Taxonomy.

be investments with environmental objectives that do not qualify as Taxonomy-aligned. The environmental objectives of the Sub-fund are attained by investing in companies that score positively on SDG 12 (Responsible consumption and production), SDG 13 (Climate action), SDG 14 (Life below water), and SDG 15 (Life on land) in Robeco's SDG Framework.

While the sum of sustainable investments with an environmental objective and socially sustainable investments always adds up to the Sub-fund's minimum proportion of 50% sustainable investments, we do not commit to a minimum share of sustainable investments with an environmental objective because the Sub-fund's investment strategy does not have a specific environmental investment objective. Therefore, the minimum share of sustainable investments with an environmental objective is 0%.

What is the minimum share of socially sustainable investments?

Social, sustainable or sustainability-linked bonds may invest (part of) their use of proceeds in economic activities that contribute to a social objective.

In addition, the Sub-fund intends to make sustainable investments, measured as positive scores via Robeco's SDG Framework. Among those could be investments with social objectives. The social objectives of the Sub-fund are attained by investing in companies that score positively on SDG 1 (No poverty), SDG 2 (Zero hunger), SDG 3 (Good health and well-being), SDG 4 (Quality education), SDG 5 (Gender equality), SDG 6 (Clean water and sanitation), SDG 7 (Affordable and clean energy), SDG 8 (Decent work and economic growth), SDG 9 (Industry, innovation and infrastructure), SDG 10 (Reduced inequalities), SDG 11 (Sustainable cities and communities), SDG 16 (Peace, justice and strong institutions) and SDG 17 (Partnerships for the goals), in Robeco's SDG Framework.

While the sum of socially sustainable investments and sustainable investments with an environmental objective always adds up to the Sub-fund's minimum proportion of sustainable investments, we do not commit to a minimum share of socially sustainable investments because the Sub-fund's investment strategy does not have a specific socially sustainable investment objective. Therefore, the minimum share of socially sustainable investments is 0%.

What investments are included under "#2 Other", what is their purpose and are there any minimum environmental or social safeguards?

The type of instruments included under "#2 Other" and their purpose are outlined in Annex I of this Prospectus under the header 'Financial instruments and investment restrictions'. They include cash, cash equivalents, as well as investment funds and eligible asset classes (other than bonds and equities) that do not specifically promote E/S characteristics. As indicated above, the Sub-fund does not make use of derivatives to attain the environmental or social characteristics promoted. The Sub-fund may make use of derivatives, which thus always fall under the category "#2 Other", for hedging, liquidity management and efficient portfolio management as well as investment purposes. Exchange traded and over-the-counter derivatives are permitted, including but not limited to futures, swaps, options and currency forwards. In case the Sub-fund uses derivatives, the underlying shall comply with the investment policy. Where relevant, minimum environmental or social safeguards are taken into account, by, for example, applying Robeco's Exclusion Policy for any single security derivative.

Is a specific index designated as a reference benchmark to determine whether this financial product is aligned with the environmental and/or social characteristics that it promotes?

Not applicable.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or

social characteristics
that they promote.

f) RobecoSAM Euro SDG Credits

Pre-contractual disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Product name: RobecoSAM Euro SDG Credits

Legal entity identifier: 213800MOYJBFHGNZW597

Environmental and/or social characteristics

Does this financial product have a sustainable investment objective?

Yes

No

It will make a minimum of **sustainable investments with an environmental objective:** ___%

- in economic activities that qualify as environmentally sustainable under the EU Taxonomy
- in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

It will make a minimum of **sustainable investments with a social objective:** ___%

It promotes **Environmental/Social (E/S) characteristics** and while it does not have as its objective a sustainable investment, it will have a minimum proportion of 70% of sustainable investments

- with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy
- with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy
- with a social objective

It promotes E/S characteristics, but **will not make any sustainable investments**

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

What environmental and/or social characteristics are promoted by this financial product?

The Sub-fund has the following E/S characteristics:

1. The Sub-fund promotes investment in a portfolio that contributes to the Sustainable Development Goals.
2. The Sub-fund promotes certain minimum environmental and social safeguards through applying exclusion criteria with regards to products and business practices that Robeco believes are detrimental to society and incompatible with sustainable investment strategies, such as exposure to controversial behaviour, controversial weapons, and fossil fuels.
3. The Sub-fund promotes adherence to and conducting business activities in accordance with the United Nations Universal Declaration of Human Rights, the International Labor Organization's (ILO) labor standards, the United Nations Guiding Principles for Business and Human Rights (UNGPs), the United Nations Global Compact (UNGC) and the OECD Guidelines for Multinational Enterprises.
4. The Sub-fund aims to contribute to the United Nations Sustainable Development Goals by investing in green, social, sustainability and/or sustainability-linked bonds that are used to finance environmental and social projects.

There is no reference benchmark designated for the purpose of attaining the environmental or social characteristics promoted by the Sub-fund.

● **What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?**

The Sub-fund has the following sustainability indicators:

1. The number of companies that hold a positive or neutral SDG score based on the internally developed SDG Framework.
2. The % of investments in securities that are on Robeco's Exclusion list as result of the application of Robeco's Exclusion Policy.
3. The number of holdings that are in violation of the ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises.
4. The % of the Sub-fund invested in green, social, sustainability and/or sustainability-linked bonds.

● **What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?**

The sustainable investments aim to contribute to the UN Sustainable Development Goals ("SDGs"), that have both social and environmental objectives. These are 17 goals that are globally recognised and include environmental goals such as climate action, clean water, life on land and water and social goals such as zero hunger, gender equality, education, etc. Robeco has developed a proprietary framework based on the UN SDGs through which an issuer's contribution to such SDGs is determined through a 3-step process. This process starts with a sector baseline on which a company's products are analysed to examine contribution to the society and environment. Further, the operational processes involved in creating such products is checked along with any controversies/litigation claims and remediation actions taken which are perused before a final SDG score is determined. The final score ranges between high negative (-3) to high positive (+3) and only those issuers which achieve positive SDG scores (+1, +2 and, +3) are regarded as Sustainable Investments.

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

● ***How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?***

The sustainable investments do no significant harm to any environmental or social sustainable investment objective by considering a principal adverse impact and aligning with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights. In addition, sustainable investments score positively on Robeco's SDG Framework, and therefore do not cause significant harm.

How have the indicators for adverse impacts on sustainability factors been taken into account?

Mandatory principal adverse impact indicators are considered through Robeco's SDG Framework, either directly or indirectly, when identifying sustainable investments for the Sub-fund. In addition, voluntary environmental and social indicators are taken into account, depending on their relevance for measuring impacts on the SDGs and the availability of data. A detailed description of the incorporation of principal adverse impacts is available via Robeco's Principal Adverse Impact Statement published on the Robeco website (<https://www.robeco.com/files/docm/docu-principal-adverse-impact-statement-summary-entity-level.pdf>). In this statement, Robeco sets out its approach to identifying and prioritizing principal adverse impacts, and how principal adverse impacts are considered as part of Robeco's investment due diligence process and procedures relating to research and analysis, exclusions and restrictions and/or voting and engagement. This description also explains how principal adverse impact indicators are considered by the SDG Framework.

How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The sustainable investments are aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights via both Robeco's Exclusion Policy as well as Robeco's SDG Framework.

Robeco's Exclusion Policy includes an explanation of how Robeco acts in accordance with the International Labor Organization (ILO) standards, United Nations Guiding Principles (UNGPs), United Nations Global Compact (UNGC) Principles and the Organization for Economic Co-operation and Development (OECD) Guidelines for Multinational Enterprises and is guided by these international treaties to assess the behavior of companies. Robeco continuously screens its investments for breaches of these principles. In case of a breach, the company will be excluded or engaged with, and is not considered a sustainable investment.

Robeco's SDG Framework screens for breaches on these principles in the final step of the framework. In this step, Robeco checks whether the company concerned has been involved in any controversies. Involvement in any controversy will result in a negative SDG score for the company, meaning it is not a sustainable investment.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

Does this financial product consider principal adverse impacts on sustainability factors?

Yes, _____

The Sub-fund considers principal adverse impacts on sustainability factors as referred to in Annex I of the SFDR Delegated Act.

Pre-investment, Robeco's SDG Framework assesses companies' positive and negative contributions to the Sustainable Development Goals (SDGs). Robeco's SDG Framework directly and/or indirectly screens companies on many of the topics considered by the PAI indicators.

Post-investment, the following principal adverse impacts on sustainability factors are taken into account:

- Via Robeco's entity engagement program, the following PAIs are considered:
 - All indicators related to Climate and other environment-related indicators (PAI 1-9, Table 1)
 - Violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1). On an ongoing basis, the investment universe is scanned for controversial behavior in relation to the aforementioned principles and guidelines.
 - In addition, based on a yearly review of Robeco's performance on all mandatory and selected voluntary indicators, holdings of the Sub-fund that cause adverse impact might be selected for engagement.

More information is available via Robeco's Principal Adverse Impact Statement, published on Robeco's website. The Sub-fund will periodically report how it has considered the principal adverse impacts of its investments in the Company's annual report, which will be made available each year on or before 30 April at the Sub-fund page highlighted in final section of this document.

No

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

What investment strategy does this financial product follow?

RobecoSAM Euro SDG Credits is an actively managed fund and provides a diversified exposure to the Euro investment grade credit market. The selection of these bonds is based on fundamental analysis as described in the Investment policy strategy paragraph in Appendix I of this Prospectus. The strategy integrates sustainability indicators on a continuous basis as part of the bond selection process. Amongst others, the Sub-fund applies norms-based, activity-based and regional exclusions, Robeco's good governance policy, Robeco's SDG framework and considers Principal Adverse Impacts in the investment process. More product-specific information can be found on our website and the links provided in the final question of this disclosure.

The investment strategy guides investment decisions based on factors such as investment objectives and risk tolerance.

What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?

The Sub-fund has the following binding elements:

1. The Sub-fund is solely invested in companies that hold a positive or neutral SDG score.
2. The Sub-fund's portfolio complies with Robeco's Exclusion Policy (<https://www.robeco.com/files/docm/docu-exclusion-policy.pdf>), that is based on exclusion criteria with regards to products and business practices that Robeco believes are detrimental to society and incompatible with sustainable investment strategies. This means that the Sub-fund has 0% exposure to excluded securities, taking into account a grace period. Information with regards to the effects of the exclusions on the Sub-fund's universe can be found at <https://www.robeco.com/files/docm/docu-exclusion-list.pdf>.
3. The Sub-fund avoids investment in companies that are in breach of the ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises. Companies that breach the international norms will be excluded from the investment universe.
4. The Sub-fund invests a minimum of 10% in green, social, sustainability, and/or sustainability-linked bonds.

What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?

The Sub-fund does not commit to a minimum rate to reduce the scope of investments prior to the application of the investment strategy.

What is the policy to assess good governance practices of the investee companies?

Robeco has a Good Governance policy to assess governance practices of companies. The policy describes how Robeco determines if and when a company does not follow good governance practices and is therefore excluded from the initial investment universe for Article 8 and 9 products. Robeco's Good Governance policy applies to the Sub-fund and tests on a set of governance criteria that reflect widely recognized industry established norms and include topics as employee relations, management structure, tax compliance and remuneration.

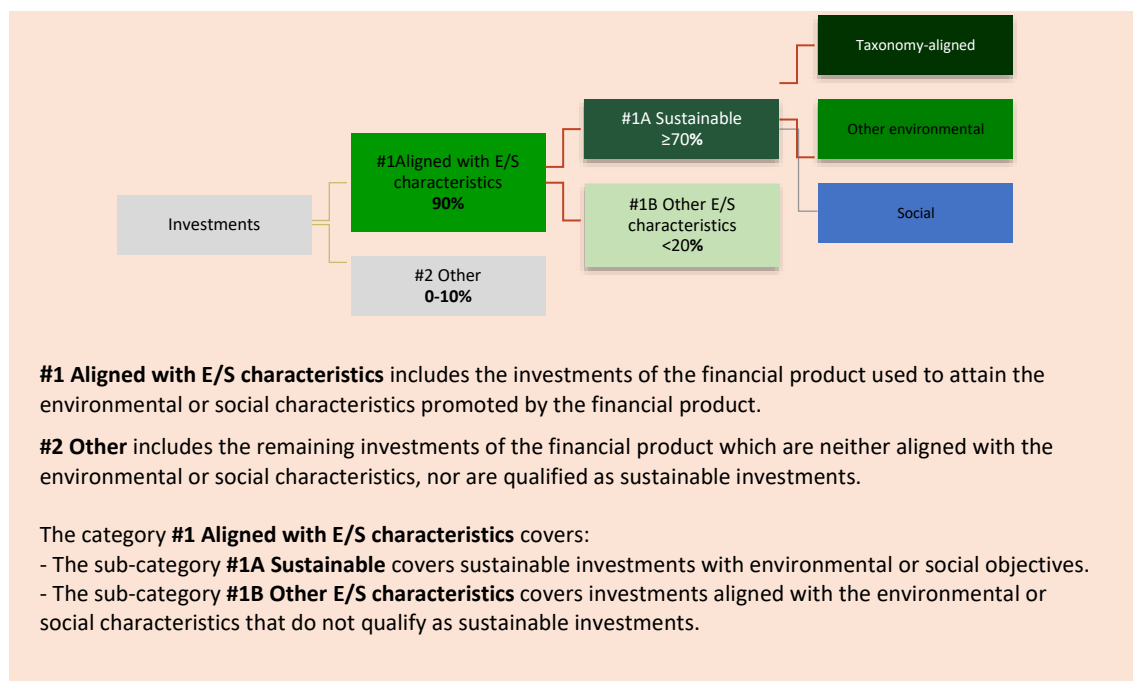

The Good Governance test consists of criteria on such topics that are examined for investee companies and further explained in Robeco's Good Governance policy <https://www.robeco.com/files/docm/docu-robeco-good-governance-policy.pdf>. Additionally, the companies that do not pass the good governance test are reflected in the exclusion list that can be accessed here - <https://www.robeco.com/files/docm/docu-exclusion-list.pdf>.

Good governance practices include sound management structures, employee relations, remuneration of staff and tax compliance.

What is the asset allocation planned for this financial product?

At least 90% of the investments are aligned with the E/S characteristics of the Sub-fund. The Sub-fund plans to make a minimum of 70% sustainable investments, measured by positive scores via Robeco's SDG Framework. The investments in the category Other, estimated between 0-10%, are mostly in cash, cash equivalents and derivatives as further described below. The planned asset allocation is monitored continuously, and evaluated on a yearly basis.

How does the use of derivatives attain the environmental or social characteristics promoted by the financial product?

The Sub-fund does not make use of derivatives to attain the environmental or social characteristics promoted by the financial product. The Sub-fund may make use of derivatives for hedging, liquidity management and efficient portfolio management as well as investment purposes. Exchange traded and over-the-counter derivatives are permitted, including but not limited to futures, swaps, options and currency forwards. Whilst the Sub-fund may use derivatives both for investment purposes as well as for hedging and efficient portfolio management, it does not utilize derivatives for such purposes outside the intended share of investments allocated to the 'Other' category.

In case the Sub-fund uses derivatives, the underlying shall comply with the investment policy. Where relevant, minimum environmental or social safeguards are taken into account as described below.

To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

0%. The Sub-fund intends to contribute to all 6 environmental objectives under the EU Taxonomy via the investments in green bonds. The Sub-fund commits to a minimum share of 0% of Taxonomy-aligned activities. The Sub-fund intends to increase the minimum share of Taxonomy aligned activities for the Sub-fund, based on use of proceeds, once data availability in relation to the EU Taxonomy for green bonds improves and stabilises.

The Sub-fund will report on Taxonomy-aligned investment in the periodic disclosures. For investments in corporate bonds, the Sub-fund will report on turnover. Given the lack of data on the EU Taxonomy for green bonds in the market, Robeco relies on internal analysis for the time being. EU Taxonomy-

Asset allocation describes the share of investments in specific assets.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.

operational expenditure (OpEx) reflecting green operational activities of investee companies.

alignment data is not yet subject to a review by third parties. The expected level of alignment with and without sovereign bonds is the same.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

 are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

● **Does the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy⁹²?**

- Yes
 - In fossil gas
 - In nuclear energy
- No

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.*

*** For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures**
**** As the investments are not Taxonomy-aligned, the exclusion of sovereign bonds has no impact on the graph and therefore no such percentage is shown here.**

● **What is the minimum share of investments in transitional and enabling activities?**

0%.

● **What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?**

Green bonds may invest (part of) their use of proceeds in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy. In addition, the Sub-fund intends to make sustainable investments measured as positive scores via Robeco's SDG Framework. Among those could be investments with environmental objectives that do not qualify as Taxonomy-aligned. The environmental objectives of the Sub-fund are attained by investing in companies that score positively on SDG 12 (Responsible consumption and production), SDG 13 (Climate action), SDG 14 (Life below water), and SDG 15 (Life on land) in Robeco's SDG Framework.

⁹² Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

While the sum of sustainable investments with an environmental objective and socially sustainable investments always adds up to the Sub-fund's minimum proportion of 70% sustainable investments, we do not commit to a minimum share of sustainable investments with an environmental objective because the Sub-fund's investment strategy does not have a specific environmental investment objective. Therefore, the minimum share of sustainable investments with an environmental objective is 0%.

What is the minimum share of socially sustainable investments?

Social, sustainable or sustainability-linked bonds may invest (part of) their use of proceeds in economic activities that contribute to a social objective. In addition, the Sub-fund intends to make sustainable investments, measured as positive scores via Robeco's SDG Framework. Among those could be investments with social objectives. The social objectives of the Sub-fund are attained by investing in companies that score positively on SDG 1 (No poverty), SDG 2 (Zero hunger), SDG 3 (Good health and well-being), SDG 4 (Quality education), SDG 5 (Gender equality), SDG 6 (Clear water and sanitation), SDG 7 (Affordable and clean energy), SDG 8 (Decent work and economic growth), SDG 9 (Industry, innovation and infrastructure), SDG 10 (Reduced inequalities), SDG 11 (Sustainable cities and communities), SDG 16 (Peace, justice and strong institutions) and SDG 17 (Partnerships for the goals), in Robeco's SDG Framework.

While the sum of socially sustainable investments and sustainable investments with an environmental objective always adds up to the Sub-fund's minimum proportion of sustainable investments, we do not commit to a minimum share of socially sustainable investments because the Sub-fund's investment strategy does not have a specific socially sustainable investment objective. Therefore, the minimum share of socially sustainable investments is 0%.

What investments are included under "#2 Other", what is their purpose and are there any minimum environmental or social safeguards?

The type of instruments included under "#2 Other" and their purpose are outlined in Annex I of this Prospectus under the header 'Financial instruments and investment restrictions'. They include cash, cash equivalents, as well as investment funds and eligible asset classes (other than bonds and equities) that do not specifically promote E/S characteristics. As indicated above, the Sub-fund does not make use of derivatives to attain the environmental or social characteristics promoted. The Sub-fund may make use of derivatives, which thus always fall under the category "#2 Other", for hedging, liquidity management and efficient portfolio management as well as investment purposes. Exchange traded and over-the-counter derivatives are permitted, including but not limited to futures, swaps, options and currency forwards. In case the Sub-fund uses derivatives, the underlying shall comply with the investment policy. Where relevant, minimum environmental or social safeguards are taken into account, by, for example, applying Robeco's Exclusion Policy for any single security derivative.

Is a specific index designated as a reference benchmark to determine whether this financial product is aligned with the environmental and/or social characteristics that it promotes?

Not applicable.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

g) Robeco Financial Institutions Bonds

Pre-contractual disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Product name: Robeco Financial Institutions Bonds

Legal entity identifier: 213800M7K3R9AYOXVL19

Environmental and/or social characteristics

Does this financial product have a sustainable investment objective?

Yes

No

It will make a minimum of **sustainable investments with an environmental objective:** ___%

- in economic activities that qualify as environmentally sustainable under the EU Taxonomy
- in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

It will make a minimum of **sustainable investments with a social objective:** ___%

It promotes **Environmental/Social (E/S) characteristics** and while it does not have as its objective a sustainable investment, it will have a minimum proportion of 30% of sustainable investments

- with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy
- with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy
- with a social objective

It promotes E/S characteristics, but **will not make any sustainable investments**

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

What environmental and/or social characteristics are promoted by this financial product?

The Sub-fund has the following E/S characteristics:

1. The Sub-fund promotes certain minimum environmental and social safeguards through applying exclusion criteria with regards to products and business practices that Robeco believes are detrimental to society and incompatible with sustainable investment strategies, such as exposure to controversial behaviour, controversial weapons, and fossil fuels.
2. The Sub-fund promotes adherence to and conducting business activities in accordance with the United Nations Universal Declaration of Human Rights, the International Labor Organization's (ILO) labor standards, the United Nations Guiding Principles for Business and Human Rights (UNGPs), the United Nations Global Compact (UNGC) and the OECD Guidelines for Multinational Enterprises, by scrutinizing companies that violate these principles.
3. The Sub-fund limits investing in companies with an elevated sustainability risk based on ESG risk scores whereas all such investments require separate approval of a dedicated committee that oversees that all investments are substantiated and eligible based on a fundamental review on the sustainability risk.
4. The Sub-fund aims to contribute to the United Nations Sustainable Development Goals by investing in green, social, sustainability and/or sustainability-linked bonds that are used to finance environmental and social projects.

● **What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?**

The Sub-fund has the following sustainability indicators:

1. The % of investments in securities that are on Robeco's Exclusion list as result of the application of Robeco's Exclusion Policy.
2. The number of companies that are in violation of the ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises and hence are a part of the Enhanced Engagement program.
3. The % of holdings with an elevated sustainability risk profile.
4. The % of the Sub-fund invested in green, social, sustainability and/or sustainability-linked bonds.

● **What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?**

The sustainable investments aim to contribute to the UN Sustainable Development Goals ("SDGs"), that have both social and environmental objectives. These are 17 goals that are globally recognised and include environmental goals such as climate action, clean water, life on land and water and social goals such as zero hunger, gender equality, education, etc. Robeco has developed a proprietary framework based on the UN SDGs through which an issuer's contribution to such SDGs is determined through a 3-step process. This process starts with a sector baseline on which a company's products are analysed to examine contribution to the society and environment. Further, the operational processes involved in creating such products is checked along with any controversies/litigation claims and remediation actions taken which are perused before a final SDG score is determined. The final score ranges between high negative (-3) to high positive (+3) and only those issuers which achieve positive SDG scores (+1, +2 and, +3) are regarded as Sustainable Investments. Some of the sustainable investments are green bonds, and therefore contribute to the environmental objectives under EU Taxonomy.

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

● ***How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?***

The sustainable investments do no significant harm to any environmental or social sustainable investment objective by considering a principal adverse impact and aligning with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights. In addition, sustainable investments score positively on Robeco's SDG Framework or are assessed by either Robeco's Green Bond Framework or Social Bond Framework, and therefore do not cause significant harm.

How have the indicators for adverse impacts on sustainability factors been taken into account?

For sustainable investments that are either green, social, sustainability or sustainability-linked bonds, significant harm is avoided by the application of the Robeco's green, social, sustainability or sustainability-linked bond eligibility frameworks.

Robeco's SDG Framework is considered for the analysis of sustainable investments determined by positive scores on this framework. Robeco's SDG Framework assesses the contribution of companies to the Sustainable Development Goals (SDGs). Many PAI indicators are either directly or indirectly included in the SDG Framework to determine whether a company has significant impacts on the SDGs related to the PAI indicators. A detailed description of the incorporation of principal adverse impacts is available via Robeco's Principal Adverse Impact Statement published on the Robeco website (<https://www.robeco.com/files/docm/docu-principal-adverse-impact-statement-summary-entity-level.pdf>).

How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The sustainable investments are aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights via both Robeco's Exclusion Policy and Robeco's SDG Framework.

Robeco's Exclusion Policy includes an explanation of how Robeco acts in accordance with the International Labor Organization (ILO) standards, United Nations Guiding Principles (UNGPs), United Nations Global Compact (UNGC) Principles and the Organization for Economic Co-operation and Development (OECD) Guidelines for Multinational Enterprises and is guided by these international treaties to assess the behavior of companies. Robeco continuously screens its investments for breaches of these principles. In case of a breach, the company will be excluded or engaged with, and is not considered a sustainable investment.

Robeco's SDG Framework screens for breaches on these principles in the final step of the framework. In this step, Robeco checks whether the company concerned has been involved in any controversies. Involvement in any controversy will result in a negative SDG score for the company, meaning it is not a sustainable investment.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

Does this financial product consider principal adverse impacts on sustainability factors?

Yes, _____

The Sub-fund considers principal adverse impacts on sustainability factors as referred to in Annex I of the SFDR Delegated Act.

Pre-investment, the following principal adverse impacts on sustainability factors are considered:

- Via the applied normative and activity-based exclusions, the following PAIs are considered:
 - Exposure to companies active in the fossil fuel sector (PAI 4, Table 1)
 - Violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1)
 - Activities negatively affecting biodiversity-sensitive areas (PAI 7, Table 1). The consideration of this PAI is currently restricted to applying exclusions to palm oil producing companies and for any breaches to the UNGC, UNGP and OECD Guidelines for Multinational Enterprises in relation to biodiversity.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

- Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons (PAI 14, Table 1)
- o Via the ESG integration process, as part of the investment due diligence policies and procedures, the following PAIs are considered:
 - All indicators related to GHG emissions, as part of the required Climate Risk analysis (PAI 1-6, Table 1, PAI 4, Table 2)
 - Water and waste indicators (PAI 7-9, Table 1)

Post-investment, the following principal adverse impacts on sustainability factors are taken into account via Robeco's entity engagement program:

- All indicators related to Climate and other environment-related indicators (PAI 1-9, Table 1)
- Violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1). On an ongoing basis, the investment universe is scanned for controversial behavior in relation to the aforementioned principles and guidelines.
- In addition, based on a yearly review of Robeco's performance on all mandatory and selected voluntary indicators, holdings of the Sub-fund that cause adverse impact might be selected for engagement.

More information is available via Robeco's Principal Adverse Impact Statement, published on Robeco's website. The Sub-fund will periodically report how it has considered the principal adverse impacts of its investments in the Company's annual report, which will be made available each year on or before 30 April at the Sub-fund page highlighted in final section of this document.

No

What investment strategy does this financial product follow?

Robeco Financial Institutions Bonds is an actively managed fund that mainly invests in subordinated euro-denominated bonds issued by financial institutions. The selection of these bonds is based on fundamental analysis as described in the Investment policy strategy paragraph in Appendix I of this Prospectus. The strategy integrates sustainability indicators on a continuous basis as part of the bond selection process. Amongst others, the Sub-fund applies norms-based, activity-based and regional exclusions, Robeco's good governance policy, Robeco's SDG framework and considers Principal Adverse Impacts in the investment process. More product-specific information can be found on our website and the links provided in the final question of this disclosure.

What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?

The Sub-fund has the following binding elements:

1. The Sub-fund's portfolio complies with Robeco's Exclusion Policy (<https://www.robeco.com/files/docm/docu-exclusion-policy.pdf>), that is based on exclusion criteria with regards to products and business practices that Robeco believes are detrimental to society and incompatible with sustainable investment strategies. This means that the Sub-fund has 0% exposure to excluded securities, taking into account a grace period. Information with regards to the effects of the exclusions on the Sub-fund's universe can be found at <https://www.robeco.com/files/docm/docu-exclusion-list.pdf>.
2. The Sub-fund scrutinizes investment in companies that are in breach of the ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises. If a company in the portfolio

The investment strategy guides investment decisions based on factors such as investment objectives and risk tolerance.

- breaches one of the international guidelines during the investment period, the company will become part of the Enhanced Engagement program.
3. Investments with an elevated sustainability risk are defined by Robeco as companies with an ESG Risk Rating of 40 and higher (the ESG Risk Rating is explained in the sustainability risk policy which can be accessed via <https://www.robeco.com/files/docm/docu-robeco-sustainability-risk-policy.pdf>). The Sub-fund is limited to a maximum exposure of 3% to investments with an elevated sustainability risk, based on the market weight in the portfolio taking into account regional differences and benchmark. Each investment with an ESG Risk rating of higher than 40 requires separate approval by a dedicated committee of sustainable investment specialists, compliance and risk management that oversees the bottom-up sustainability analysis.
 4. The Sub-fund invests a minimum of 5% in green, social, sustainability, and/or sustainability-linked bonds.

● ***What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?***

The Sub-fund does not commit to a minimum rate to reduce the scope of investments prior to the application of the investment strategy.

● ***What is the policy to assess good governance practices of the investee companies?***

Robeco has a Good Governance policy to assess governance practices of companies. The policy describes how Robeco determines if and when a company does not follow good governance practices and is therefore excluded from the initial investment universe for Article 8 and 9 products. Robeco's Good Governance policy applies to the Sub-fund and tests on a set of governance criteria that reflect widely recognized industry established norms and include topics as employee relations, management structure, tax compliance and remuneration.

The Good Governance test consists of criteria on such topics that are examined for investee companies and further explained in Robeco's Good Governance policy <https://www.robeco.com/files/docm/docu-robeco-good-governance-policy.pdf>. Additionally, the companies that do not pass the good governance test are reflected in the exclusion list that can be accessed here - <https://www.robeco.com/files/docm/docu-exclusion-list.pdf>.

● ***What is the asset allocation planned for this financial product?***

At least 90% of the investments are aligned with the E/S characteristics of the Sub-fund. The Sub-fund plans to make a minimum of 30% sustainable investments, measured by either being positive scores via Robeco's SDG Framework or investments in green, social, sustainability or sustainability-linked bonds. The investments in the category Other, estimated between 0-10%, are mostly in cash, cash equivalents and derivatives as further described below. The planned asset allocation is monitored continuously, and evaluated on a yearly basis.

Good governance practices include sound management structures, employee relations, remuneration of staff and tax compliance.

Asset allocation describes the share of investments in specific assets.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure (CapEx)** showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure (OpEx)** reflecting green operational activities of investee companies.

● **How does the use of derivatives attain the environmental or social characteristics promoted by the financial product?**

The Sub-fund does not make use of derivatives to attain the environmental or social characteristics promoted by the financial product. The Sub-fund may make use of derivatives for hedging, liquidity management and efficient portfolio management as well as investment purposes in the global fixed income, money market, interest rates and currency markets. In case the Sub-fund uses derivatives, the underlying shall comply with the investment policy of the Sub-fund. Where relevant, minimum environmental or social safeguards are taken into account as described below.

To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

0%. The Sub-fund intends to contribute to all 6 environmental objectives under the EU Taxonomy via the investments in green bonds. The Sub-fund commits to a minimum share of 0% of Taxonomy-aligned activities. The Sub-fund intends to increase the minimum share of Taxonomy aligned activities for the Sub-fund, based on use of proceeds, once data availability in relation to the EU Taxonomy for green bonds improves and stabilises.

The Sub-fund will report on Taxonomy-aligned investment in the periodic disclosures. For investments in corporate bonds, the Sub-fund will report on turnover. Given the lack of data on the EU Taxonomy for green bonds in the market, Robeco relies on internal analysis for the time being. EU Taxonomy-alignment data is not yet subject to a review by third parties. The expected level of alignment with and without sovereign bonds is the same.

To comply with the EU Taxonomy, the

● **Does the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy⁹³?**

⁹³ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

criteria for **fossil gas** include limitations on emissions and switching to renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

 are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

- Yes
- In fossil gas
- In nuclear energy
- No

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.*

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

** As the investments are not Taxonomy-aligned, the exclusion of sovereign bonds has no impact on the graph and therefore no such percentage is shown here.

What is the minimum share of investments in transitional and enabling activities?

0%.

What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?

Green bonds may invest (part of) their use of proceeds in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy. In addition, the Sub-fund intends to make sustainable investments measured as positive scores via Robeco's SDG Framework. Among those could be investments with environmental objectives that do not qualify as Taxonomy-aligned. The environmental objectives of the Sub-fund are attained by investing in companies that score positively on SDG 12 (Responsible consumption and production), SDG 13 (Climate action), SDG 14 (Life below water), and SDG 15 (Life on land) in Robeco's SDG Framework.

While the sum of sustainable investments with an environmental objective and socially sustainable investments always adds up to the Sub-fund's minimum proportion of 30% sustainable investments, we do not commit to a minimum share of sustainable investments with an environmental objective because the Sub-fund's investment strategy does not have a specific environmental investment objective. Therefore, the minimum share of sustainable investments with an environmental objective is 0%.

What is the minimum share of socially sustainable investments?

Social, sustainable or sustainability-linked bonds may invest (part of) their use of proceeds in economic activities that contribute to a social objective.

In addition, the Sub-fund intends to make sustainable investments, measured as positive scores via Robeco's SDG Framework. Among those could be investments with social objectives. The social objectives of the Sub-fund are attained by investing in companies that score positively on SDG 1 (No poverty), SDG 2 (Zero hunger), SDG 3 (Good health and well-being), SDG 4 (Quality education), SDG 5 (Gender equality), SDG 6 (Clean water and sanitation), SDG 7 (Affordable and clean energy), SDG 8 (Decent work and economic growth), SDG 9 (Industry, innovation and infrastructure), SDG 10 (Reduced inequalities), SDG 11 (Sustainable cities and communities), SDG 16 (Peace, justice and strong institutions) and SDG 17 (Partnerships for the goals), in Robeco's SDG Framework.

While the sum of socially sustainable investments and sustainable investments with an environmental objective always adds up to the Sub-fund's minimum proportion of sustainable investments, we do not commit to a minimum share of socially sustainable investments because the Sub-fund's investment strategy does not have a specific socially sustainable investment objective. Therefore, the minimum share of socially sustainable investments is 0%.

What investments are included under "#2 Other", what is their purpose and are there any minimum environmental or social safeguards?

The type of instruments included under "#2 Other" and their purpose are outlined in Annex I of this Prospectus under the header 'Financial instruments and investment restrictions'. They include cash, cash equivalents, as well as investment funds and eligible asset classes (other than bonds and equities) that do not specifically promote E/S characteristics. As indicated above, the Sub-fund does not make use of derivatives to attain the environmental or social characteristics promoted. The Sub-fund may make use of derivatives, which thus always fall under the category "#2 Other", for hedging, liquidity management and efficient portfolio management as well as investment purposes. Exchange traded and over-the-counter derivatives are permitted, including but not limited to futures, swaps, options and currency forwards. In case the Sub-fund uses derivatives, the underlying shall comply with the investment policy. Where relevant, minimum environmental or social safeguards are taken into account, by, for example, applying Robeco's Exclusion Policy for any single security derivative.

Is a specific index designated as a reference benchmark to determine whether this financial product is aligned with the environmental and/or social characteristics that it promotes?

Not applicable.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

h) Robeco Investment Grade Corporate Bonds

Pre-contractual disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Product name: Robeco Investment Grade Corporate Bonds

Legal entity identifier: 213800ZDFG81MWTU5M51

Environmental and/or social characteristics

Does this financial product have a sustainable investment objective?

Yes

No

It will make a minimum of **sustainable investments with an environmental objective:** ___%

- in economic activities that qualify as environmentally sustainable under the EU Taxonomy
- in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

It will make a minimum of **sustainable investments with a social objective:** ___%

It promotes **Environmental/Social (E/S) characteristics** and while it does not have as its objective a sustainable investment, it will have a minimum proportion of 30% of sustainable investments

- with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy
- with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy
- with a social objective

It promotes E/S characteristics, but **will not make any sustainable investments**

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

What environmental and/or social characteristics are promoted by this financial product?

The Sub-fund has the following E/S characteristics:

1. The Sub-fund promotes certain minimum environmental and social safeguards through applying exclusion criteria with regards to products and business practices that Robeco believes are detrimental to society and incompatible with sustainable investment strategies, such as exposure to controversial behaviour, controversial weapons, and fossil fuels.
2. The Sub-fund promotes adherence to and conducting business activities in accordance with the United Nations Universal Declaration of Human Rights, the International Labor Organization's (ILO) labor standards, the United Nations Guiding Principles for Business and Human Rights (UNGPs), the United Nations Global Compact (UNGC) and the OECD Guidelines for Multinational Enterprises, by scrutinizing companies that violate these principles.
3. The Sub-fund limits investing in companies with an elevated sustainability risk based on ESG risk scores whereas all such investments require separate approval of a dedicated committee that oversees that all investments are substantiated and eligible based on a fundamental review on the sustainability risk.
4. The Sub-fund aims to contribute to the United Nations Sustainable Development Goals by investing in green, social, sustainability and/or sustainability-linked bonds that are used to finance environmental and social projects.

● ***What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?***

The Sub-fund has the following sustainability indicators:

1. The % of investments in securities that are on Robeco's Exclusion list as result of the application of Robeco's Exclusion Policy.
2. The number of companies that are in violation of the ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises and hence are a part of the Enhanced Engagement program.
3. The % of holdings with an elevated sustainability risk profile.
4. The % of the Sub-fund invested in green, social, sustainability and/or sustainability-linked bonds.

● ***What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?***

The sustainable investments aim to contribute to the UN Sustainable Development Goals ("SDGs"), that have both social and environmental objectives. These are 17 goals that are globally recognised and include environmental goals such as climate action, clean water, life on land and water and social goals such as zero hunger, gender equality, education, etc. Robeco has developed a proprietary framework based on the UN SDGs through which an issuer's contribution to such SDGs is determined through a 3-step process. This process starts with a sector baseline on which a company's products are analysed to examine contribution to the society and environment. Further, the operational processes involved in creating such products is checked along with any controversies/litigation claims and remediation actions taken which are perused before a final SDG score is determined. The final score ranges between high negative (-3) to high positive (+3) and only those issuers which achieve positive SDG scores (+1, +2 and +3) are regarded as Sustainable Investments. Some of the sustainable investments are green bonds, and therefore contribute to the environmental objectives under EU Taxonomy.

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

● ***How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?***

The sustainable investments do no significant harm to any environmental or social sustainable investment objective by considering a principal adverse impact and aligning with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights. In addition, sustainable investments score positively on Robeco's SDG Framework or are assessed by either Robeco's Green Bond Framework or Social Bond Framework, and therefore do not cause significant harm.

How have the indicators for adverse impacts on sustainability factors been taken into account?

For sustainable investments that are either green, social, sustainability or sustainability-linked bonds, significant harm is avoided by the application of the Robeco's green, social, sustainability or sustainability-linked bond eligibility frameworks.

Robeco's SDG Framework is considered for the analysis of sustainable investments determined by positive scores on this framework. Robeco's SDG Framework assesses the contribution of companies to the Sustainable Development Goals (SDGs). Many PAI indicators are either directly or indirectly included in the SDG Framework to determine whether a company has significant impacts on the SDGs related to the PAI indicators. A detailed description of the incorporation of principal adverse impacts is available via Robeco's Principal Adverse Impact Statement published on the Robeco website (<https://www.robeco.com/files/docm/docu-principal-adverse-impact-statement-summary-entity-level.pdf>).

How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The sustainable investments are aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights via both Robeco's Exclusion Policy and Robeco's SDG Framework.

Robeco's Exclusion Policy includes an explanation of how Robeco acts in accordance with the International Labor Organization (ILO) standards, United Nations Guiding Principles (UNGPs), United Nations Global Compact (UNGC) Principles and the Organization for Economic Co-operation and Development (OECD) Guidelines for Multinational Enterprises and is guided by these international treaties to assess the behavior of companies. Robeco continuously screens its investments for breaches of these principles. In case of a breach, the company will be excluded or engaged with, and is not considered a sustainable investment.

Robeco's SDG Framework screens for breaches on these principles in the final step of the framework. In this step, Robeco checks whether the company concerned has been involved in any controversies. Involvement in any controversy will result in a negative SDG score for the company, meaning it is not a sustainable investment.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

Does this financial product consider principal adverse impacts on sustainability factors?

✘ Yes, _____

The Sub-fund considers principal adverse impacts on sustainability factors as referred to in Annex I of the SFDR Delegated Act.

Pre-investment, the following principal adverse impacts on sustainability factors are considered:

- Via the applied normative and activity-based exclusions, the following PAIs are considered:
 - Exposure to companies active in the fossil fuel sector (PAI 4, Table 1)
 - Violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1)
 - Activities negatively affecting biodiversity-sensitive areas (PAI 7, Table 1). The consideration of this PAI is currently restricted to applying exclusions to palm oil producing companies and for any breaches to the UNGC, UNGP and OECD Guidelines for Multinational Enterprises in relation to biodiversity.
 - Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons (PAI 14, Table 1)
- Via the ESG integration process, as part of the investment due diligence policies and procedures, the following PAIs are considered:
 - All indicators related to GHG emissions, as part of the required Climate Risk analysis (PAI 1-6, Table 1, PAI 4, Table 2)
 - Water and waste indicators (PAI 7-9, Table 1)

Post-investment, the following principal adverse impacts on sustainability factors are taken into account via Robeco's entity engagement program:

- All indicators related to Climate and other environment-related indicators (PAI 1-9, Table 1)
- Violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1). On an ongoing basis, the investment universe is scanned for controversial behavior in relation to the aforementioned principles and guidelines.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

- In addition, based on a yearly review of Robeco's performance on all mandatory and selected voluntary indicators, holdings of the Sub-fund that cause adverse impact might be selected for engagement.

More information is available via Robeco's Principal Adverse Impact Statement, published on Robeco's website. The Sub-fund will periodically report how it has considered the principal adverse impacts of its investments in the Company's annual report, which will be made available each year on or before 30 April at the Sub-fund page highlighted in final section of this document.

No

What investment strategy does this financial product follow?

Robeco Investment Grade Corporate Bonds is an actively managed fund that invests in euro-denominated securities. The selection of these bonds is based on fundamental analysis as described in the Investment policy strategy paragraph in Appendix I of this Prospectus. The strategy integrates sustainability indicators on a continuous basis as part of the bond selection process. Amongst others, the Sub-fund applies norms-based, activity-based and regional exclusions, Robeco's good governance policy, Robeco's SDG framework and considers Principal Adverse Impacts in the investment process. More product-specific information can be found on our website and the links provided in the final question of this disclosure.

What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?

The Sub-fund has the following binding elements:

1. The Sub-fund's portfolio complies with Robeco's Exclusion Policy (<https://www.robeco.com/files/docm/docu-exclusion-policy.pdf>), that is based on exclusion criteria with regards to products and business practices that Robeco believes are detrimental to society and incompatible with sustainable investment strategies. This means that the Sub-fund has 0% exposure to excluded securities, taking into account a grace period. Information with regards to the effects of the exclusions on the Sub-fund's universe can be found at <https://www.robeco.com/files/docm/docu-exclusion-list.pdf>.
2. The Sub-fund scrutinizes investment in companies that are in breach of the ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises. If a company in the portfolio breaches one of the international guidelines during the investment period, the company will become part of the Enhanced Engagement program.
3. Investments with an elevated sustainability risk are defined by Robeco as companies with an ESG Risk Rating of 40 and higher (the ESG Risk Rating is explained in the sustainability risk policy which can be accessed via <https://www.robeco.com/files/docm/docu-robeco-sustainability-risk-policy.pdf>). The Sub-fund is limited to a maximum exposure of 3% to investments with an elevated sustainability risk, based on the market weight in the portfolio taking into account regional differences and benchmark. Each investment with an ESG Risk rating of higher than 40 requires separate approval by a dedicated committee of sustainable investment specialists, compliance and risk management that oversees the bottom-up sustainability analysis.
4. The Sub-fund invests a minimum of 5% in green, social, sustainability, and/or sustainability-linked bonds.

What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?

The Sub-fund does not commit to a minimum rate to reduce the scope of investments prior to the application of the investment strategy.

The investment strategy guides investment decisions based on factors such as investment objectives and risk tolerance.

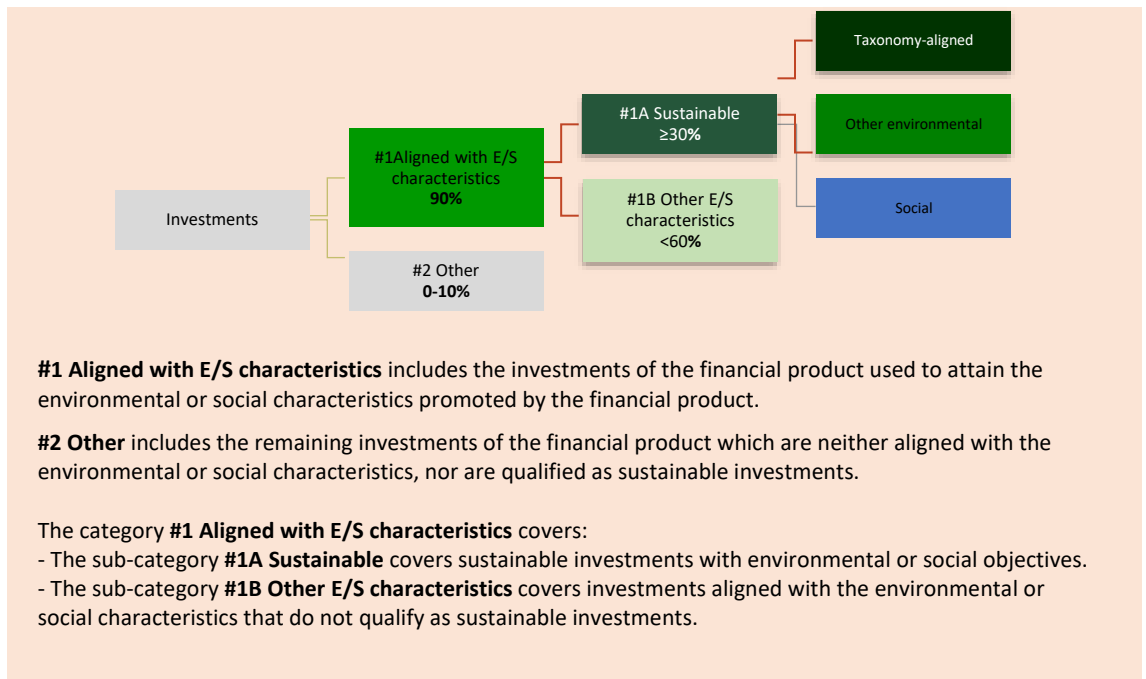

What is the policy to assess good governance practices of the investee companies?

Robeco has a Good Governance policy to assess governance practices of companies. The policy describes how Robeco determines if and when a company does not follow good governance practices and is therefore excluded from the initial investment universe for Article 8 and 9 products. Robeco's Good Governance policy applies to the Sub-fund and tests on a set of governance criteria that reflect widely recognized industry established norms and include topics as employee relations, management structure, tax compliance and remuneration.

The Good Governance test consists of criteria on such topics that are examined for investee companies and further explained in Robeco's Good Governance policy <https://www.robeco.com/files/docm/docu-robeco-good-governance-policy.pdf>. Additionally, the companies that do not pass the good governance test are reflected in the exclusion list that can be accessed here - <https://www.robeco.com/files/docm/docu-exclusion-list.pdf>.

What is the asset allocation planned for this financial product?

At least 90% of the investments are aligned with the E/S characteristics of the Sub-fund. The Sub-fund plans to make a minimum of 30% sustainable investments, measured by either being positive scores via Robeco's SDG Framework or investments in green, social, sustainability or sustainability-linked bonds. The investments in the category Other, estimated between 0-10%, are mostly in cash, cash equivalents and derivatives as further described below. The planned asset allocation is monitored continuously, and evaluated on a yearly basis.

How does the use of derivatives attain the environmental or social characteristics promoted by the financial product?

The Sub-fund does not make use of derivatives to attain the environmental or social characteristics promoted by the financial product. The Sub-fund may make use of derivatives for hedging, liquidity management and efficient portfolio management as well as investment purposes in the global fixed income, money market, interest rates and currency markets. In case the Sub-fund uses derivatives, the underlying shall comply with the investment policy of the Sub-fund. Where relevant, minimum environmental or social safeguards are taken into account as described below.

Good governance practices include sound management structures, employee relations, remuneration of staff and tax compliance.

Asset allocation describes the share of investments in specific assets.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure (CapEx)** showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure (OpEx)** reflecting green operational activities of investee companies.

To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

0%. The Sub-fund intends to contribute to all 6 environmental objectives under the EU Taxonomy via the investments in green bonds. The Sub-fund commits to a minimum share of 0% of Taxonomy-aligned activities. The Sub-fund intends to increase the minimum share of Taxonomy aligned activities for the Sub-fund, based on use of proceeds, once data availability in relation to the EU Taxonomy for green bonds improves and stabilises.

The Sub-fund will report on Taxonomy-aligned investment in the periodic disclosures. For investments in corporate bonds, the Sub-fund will report on turnover. Given the lack of data on the EU Taxonomy for green bonds in the market, Robeco relies on internal analysis for the time being. EU Taxonomy-alignment data is not yet subject to a review by third parties. The expected level of alignment with and without sovereign bonds is the same.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

Does the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy⁹⁴?

Yes

In fossil gas

In nuclear energy

No

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.*

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

** As the investments are not Taxonomy-aligned, the exclusion of sovereign bonds has no impact on the graph and therefore no such percentage is shown here.

What is the minimum share of investments in transitional and enabling activities?

0%.

⁹⁴ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?

Green bonds may invest (part of) their use of proceeds in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy. In addition, the Sub-fund intends to make sustainable investments measured as positive scores via Robeco's SDG Framework. Among those could be investments with environmental objectives that do not qualify as Taxonomy-aligned. The environmental objectives of the Sub-fund are attained by investing in companies that score positively on SDG 12 (Responsible consumption and production), SDG 13 (Climate action), SDG 14 (Life below water), and SDG 15 (Life on land) in Robeco's SDG Framework.

While the sum of sustainable investments with an environmental objective and socially sustainable investments always adds up to the Sub-fund's minimum proportion of 30% sustainable investments, we do not commit to a minimum share of sustainable investments with an environmental objective because the Sub-fund's investment strategy does not have a specific environmental investment objective. Therefore, the minimum share of sustainable investments with an environmental objective is 0%.

What is the minimum share of socially sustainable investments?

Social, sustainable or sustainability-linked bonds may invest (part of) their use of proceeds in economic activities that contribute to a social objective.

In addition, the Sub-fund intends to make sustainable investments, measured as positive scores via Robeco's SDG Framework. Among those could be investments with social objectives. The social objectives of the Sub-fund are attained by investing in companies that score positively on SDG 1 (No poverty), SDG 2 (Zero hunger), SDG 3 (Good health and well-being), SDG 4 (Quality education), SDG 5 (Gender equality), SDG 6 (Clean water and sanitation), SDG 7 (Affordable and clean energy), SDG 8 (Decent work and economic growth), SDG 9 (Industry, innovation and infrastructure), SDG 10 (Reduced inequalities), SDG 11 (Sustainable cities and communities), SDG 16 (Peace, justice and strong institutions) and SDG 17 (Partnerships for the goals), in Robeco's SDG Framework.

While the sum of socially sustainable investments and sustainable investments with an environmental objective always adds up to the Sub-fund's minimum proportion of sustainable investments, we do not commit to a minimum share of socially sustainable investments because the Sub-fund's investment strategy does not have a specific socially sustainable investment objective. Therefore, the minimum share of socially sustainable investments is 0%.

What investments are included under "#2 Other", what is their purpose and are there any minimum environmental or social safeguards?

The type of instruments included under "#2 Other" and their purpose are outlined in Annex I of this Prospectus under the header 'Financial instruments and investment restrictions'. They include cash, cash equivalents, as well as investment funds and eligible asset classes (other than bonds and equities) that do not specifically promote E/S characteristics. As indicated above, the Sub-fund does not make use of derivatives to attain the environmental or social characteristics promoted. The Sub-fund may make use of derivatives, which thus always fall under the category "#2 Other", for hedging, liquidity management and efficient portfolio management as well as investment purposes. Exchange traded and over-the-counter derivatives are permitted, including but not limited to futures, swaps, options and currency forwards. In case the Sub-fund uses derivatives, the underlying shall comply with the investment policy. Where relevant, minimum environmental or social safeguards are taken into account, by, for example, applying Robeco's Exclusion Policy for any single security derivative.

Is a specific index designated as a reference benchmark to determine whether this financial product is aligned with the environmental and/or social characteristics that it promotes?

are sustainable investments with an environmental objective that do not take into account the criteria for environmentally sustainable economic activities under the EU Taxonomy.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

Not applicable.

Where can I find more product specific information online?

i) RobecoSAM US Green Bonds

Pre-contractual disclosure for the financial products referred to in Article 9, paragraphs 1 to 4a, of Regulation (EU) 2019/2088 and Article 5, first paragraph, of Regulation (EU) 2020/852

Product name: RobecoSAM US Green Bonds

Legal entity identifier: 213800N8SFP1LXXF4380

Sustainable investment objective

Does this financial product have a sustainable investment objective?

Yes

No

It will make a minimum of **sustainable investments with an environmental objective: 70%**

in economic activities that qualify as environmentally sustainable under the EU Taxonomy

in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

It will make a minimum of **sustainable investments with a social objective: ___%**

It **promotes Environmental/Social (E/S) characteristics** and while it does not have as its objective a sustainable investment, it will have a minimum proportion of ___% of sustainable investments

with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with a social objective

It promotes E/S characteristics, but **will not make any sustainable investments**

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

What is the sustainable investment objective of this financial product?

The Sub-fund invests predominantly in green bonds, as well as in social and sustainable bonds.

With these investments, The Sub-fund finances investments that contribute to environmental goals like:

- Climate change mitigation and adaptation
- Sustainable use and protection of water and marine resources
- Transition to a circular economy
- Waste prevention and recycling
- Pollution prevention
- Protection of healthy ecosystems.

There is a reference benchmark designated for the purpose of attaining the sustainable objectives promoted by the Sub-fund.

● **What sustainability indicators are used to measure the attainment of the sustainable investment objective of this financial product?**

The Sub-fund has the following sustainability indicators:

1. The % of the Sub-fund invested in green bonds.
2. The % of investments in securities that are on Robeco's Exclusion list as result of the application of Robeco's Exclusion Policy.
3. The % of holdings that are in violation of the ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises.

● **How do sustainable investments not cause significant harm to any environmental or social sustainable investment objective?**

The sustainable investments do no significant harm to any environmental or social sustainable investment objective by considering a principal adverse impact and aligning with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights.

How have the indicators for adverse impacts on sustainability factors been taken into account?

For sustainable investments that are either Green, Social or Sustainable Bonds, significant harm is avoided by the application of Green Bonds Principles.

For a large share of Green, Social and Sustainable bonds, Robeco adds an extra assessment on sustainability factors by applying Robeco's Green Bonds Framework or Social Bond Framework.

Via these frameworks, the following adverse impacts are directly considered:

- Table 1, PAI 10 (Violations of the UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises)
- Table 1, PAI 14 (Exposure to controversial weapons)

For Green bonds, there is no disclosures on GHG emissions. Yet, avoided emissions (scope 4 emissions) are considered. For Social bonds, Robeco considers board gender diversity (Table 1, PAI 13) depending on whether the use of proceeds of the social bond will tackle gender diversity issues.

Lastly, Robeco's SDG Framework is considered for the analysis of green, social or sustainable bonds. Robeco's SDG Framework assesses the contribution of companies to the Sustainable Development Goals (SDGs). Many PAI indicators are either directly or indirectly included in the SDG Framework to determine whether a company has significant impacts on the SDGs related to the PAI indicators. A detailed description of the incorporation of Principal Adverse Impact is available via Robeco's Principal Adverse Impact Statement published on the Robeco website

Sustainability indicators measure how the sustainable objectives of this financial product are attained.

(<https://www.robeco.com/files/docm/docu-principal-adverse-impact-statement-summary-entity-level.pdf>).

How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights?

The sustainable investments are aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights via Robeco's Exclusion Policy.

Does this financial product consider principal adverse impacts on sustainability factors?

Yes, _____

The Sub-fund considers principal adverse impacts on sustainability factors as referred to in Annex I of the SFDR Delegated Act.

Pre-investment, green, social and sustainable bonds are assessed via Robeco's Green Bond Framework and Social Framework, as well as via Robeco's SDG Framework. These framework directly and indirectly assess PAI indicators

Robeco's SDG Framework assesses companies' positive and negative contributions to the Sustainable Development Goals (SDGs). Robeco's SDG Framework directly and/or indirectly screens companies on many of the topics considered by the PAI indicators.

Post-investment, the following principal adverse impacts on sustainability factors are taken into account via Robeco's entity engagement program:

- All indicators related to Climate and other environment-related indicators (PAI 1-9, Table 1)
- Violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1). On an ongoing basis, the investment universe is scanned for controversial behavior in relation to the aforementioned principles and guidelines.
- In addition, based on a yearly review of Robeco's performance on all mandatory and selected voluntary indicators, holdings of the Sub-fund that cause adverse impact might be selected for engagement.

More information is available via Robeco's Principal Adverse Impact Statement, published on Robeco's website. The Sub-fund will periodically report how it has considered the principal adverse impacts of its investments in the Company's annual report, which will be made available each year on or before 30 April at the Sub-fund page highlighted in final section of this document.

No

What investment strategy does this financial product follow?

RobecoSAM US Green Bonds is an actively managed fund that invests in USD-denominated green bonds issued by governments, government-related agencies and corporates. Other bonds invested in are either social bonds, sustainable bonds, or sustainability-linked bonds. The selection of these bonds is based on fundamental analysis as described in the Investment policy strategy paragraph in Appendix I of this Prospectus. The strategy integrates sustainability indicators on a continuous basis as part of the stock selection process. Amongst others, the Sub-fund applies norms-based and activity-based exclusions, Robeco's good governance policy, Robeco's SDG framework and considers Principal

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

The investment strategy guides investment decisions based on factors such as investment

objectives and risk tolerance.

Adverse Impacts in the investment process. More product-specific information can be found on our website and the links provided in the final question of this disclosure.

● **What are the binding elements of the investment strategy used to select the investments to attain the sustainable investment objective?**

The Sub-fund has the following binding elements:

1. The Sub-fund allocates a minimum 80% of the bond exposure ex government bonds in the green bonds based on external vendor data or the internally developed framework by Robeco.
2. The Sub-fund's portfolio complies with Robeco's Exclusion Policy (<https://www.robeco.com/docm/docu-exclusion-policy.pdf>), that is based on exclusion criteria with regards to products and business practices that Robeco believes are detrimental to society and incompatible with sustainable investment strategies. This means that the Sub-fund has 0% exposure to excluded securities, taking into account a grace period. Information with regards to the effects of the exclusions on the Sub-fund's universe can be found at <https://www.robeco.com/files/docm/docu-exclusion-list.pdf>
3. The Sub-fund avoids investment in companies that are in breach of the ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises. Companies that breach these international norms will be excluded from the investment universe.

● **What is the policy to assess good governance practices of the investee companies?**

Robeco has a Good Governance policy to assess governance practices of companies. The policy describes how Robeco determines if and when a company does not follow good governance practices and is therefore excluded from the initial investment universe for Article 8 and 9 products. Robeco's Good Governance policy applies to the Sub-fund and tests on a set of governance criteria that reflect widely recognized industry established norms and include topics as employee relations, management structure, tax compliance and remuneration.

The Good Governance test consists of criteria on such topics that are examined for investee companies and further explained in Robeco's Good Governance policy <https://www.robeco.com/files/docm/docu-robeco-good-governance-policy.pdf>. Additionally, the companies that do not pass the good governance test are reflected in the exclusion list that can be accessed here - <https://www.robeco.com/files/docm/docu-exclusion-list.pdf>.

● **What is the asset allocation and the minimum share of sustainable investments?**

The Sub-fund plans to make a minimum of 90% sustainable investments, with a minimum portion of 70% sustainable investments with an environmental objective, defined as investments in Green, Social or Sustainable bonds. The investments in the category non-sustainable, estimated between 0-10%, are in cash and cash equivalents. The planned asset allocation is monitored continuously, and evaluated on a yearly basis.

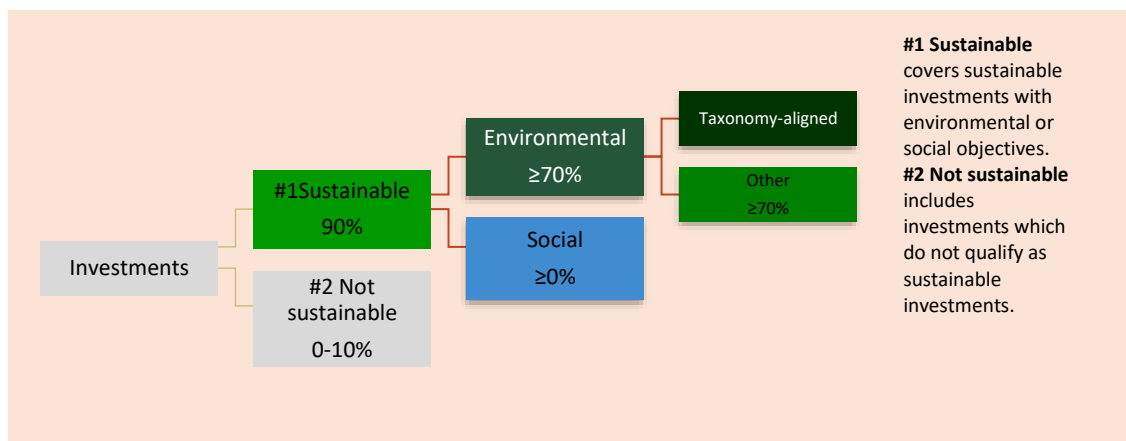

Good governance practices include sound management structures, employee relations, remuneration of staff and tax compliance.

Asset allocation describes the share of investments in specific assets.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

#1 Sustainable covers sustainable investments with environmental or social objectives. **#2 Not sustainable** includes investments which do not qualify as sustainable investments.

● **How does the use of derivatives attain the sustainable investment objective?**

The Sub-fund does not make use of derivatives to attain the sustainable objective promoted by the financial product. The Sub-fund may make use of derivatives for hedging as well as liquidity management. This includes the usage of derivatives to manage currency and duration exposures in a cost-effective manner. To that purpose exchange traded and over-the-counter derivatives linked to sovereign bonds (treasuries), interest rates, swap rates and currencies are permitted. Derivatives linked to corporate exposure are not allowed.

In case the Sub-fund uses derivatives, the underlying shall comply with the investment policy. Where relevant, minimum environmental or social safeguards are taken into account.

● **To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?**

The Sub-fund intends to contribute to all environmental objectives under the EU Taxonomy. The Sub-fund commits to a minimum share of 0% of Taxonomy-aligned activities. The Sub-fund intends to increase the minimum share of Taxonomy aligned activities for the Sub-fund, based on use of proceeds, once data availability in relation to the EU Taxonomy for Green bonds improves and stabilizes.

The Sub-fund will report on Taxonomy-aligned investment in the periodic disclosures. Given the lack of data on the EU Taxonomy for green bonds in the market, Robeco relies on internal analysis for the time being. EU Taxonomy-alignment data is not yet subject to a review by third parties. The Sub-fund only makes investments in Green, Social and Sustainable bonds and therefore it does not have sovereign exposures. The expected level of alignment with and without sovereign bonds is the same.

● **Does the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy⁹⁵?**

- Yes:
 - In fossil gas
 - In nuclear energy
- No

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power

⁹⁵ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

 are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

*** For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures**
**** As the investments are not Taxonomy-aligned, the exclusion of sovereign bonds has no impact on the graph and therefore no such percentage is shown here.**

● **What is the minimum share of investments in transitional and enabling activities?**

0%.

 **What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?**

Green bonds may invest (part of) their use of proceeds in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy. The Sub-fund commits to a minimum share of sustainable investments of 70% with an environmental objective because the Sub-fund's investment strategy does have a specific environmental investment objective. The sum of sustainable investments with an environmental objective and socially sustainable investments always adds up to the Sub-fund's minimum proportion of 90% sustainable investments.

 **What is the minimum share of sustainable investments with a social objective?**

Social, sustainable or sustainability-linked bonds may invest (part of) their use of proceeds in economic activities that contribute to a social objective. We do not commit to a minimum share of socially sustainable investments because the Sub-fund's investment strategy does have a specific social investment objective. The sum of socially sustainable investments and sustainable investments with an environmental objective always adds up to the Sub-fund's minimum proportion of 90% sustainable investments, we do not commit to a minimum share of socially sustainable investments because the

Sub-fund's investment strategy does not have a specific socially sustainable investment objective. Therefore, the minimum share of socially sustainable investments is 0%.

What investments are included under "#2 Not sustainable", what is their purpose and are there any minimum environmental or social safeguards?

The type of instruments included under "#2 Not Sustainable" and their purpose are outlined in Annex I of this Prospectus under the header 'Financial instruments and investment restrictions'. They include cash, cash equivalents, as well as investment funds and eligible asset classes (other than bonds and equities) that do not specifically promote E/S characteristics. As indicated above, the Sub-fund does not make use of derivatives to attain its sustainable objective. The Sub-fund may make use of derivatives for hedging and liquidity management. This includes the usage of derivatives to manage the duration around the benchmark duration and currency exposures in a cost-effective manner. For the management of currency exposure FX Forwards are allowed. Furthermore exchange traded and over-the-counter derivatives linked to sovereign bonds (treasuries), interest rates, swap rates and currencies are permitted. In case the Sub-fund uses derivatives, the underlying shall comply with the investment policy and the exposure through the use of derivatives must fit the investment universe of the Sub-fund. Where relevant, minimum environmental or social safeguards are taken into account by monitoring and applying Robeco's Exclusion Policy for the use of derivatives linked to sovereigns. Additionally, derivatives linked to corporate exposure are not allowed.

Is a specific index designated as a reference benchmark to meet the sustainable investment objective?

Yes, the Sub-fund uses the Bloomberg MSCI US Green Bond Index as a reference index to meet the sustainable investment objective of the Sub-fund.

Reference benchmarks are indexes to measure whether the financial product attains the sustainable investment objective.

- ***How does the reference benchmark take into account sustainability factors in a way that is continuously aligned with the sustainable investment objective?***

Given that sustainable investment objective of the Sub-fund is to finance investment in green bonds, the reference index is aligned with such objective of the Sub-fund by applying clearly defined rules for evaluating green bonds composition in the index.

Bloomberg MSCI evaluates green bonds to ensure adherence to established Green Bond Principles (GBP) and to examine bonds by their environmental use of proceeds. The index provider follows an eligibility criteria along four dimensions as per the GBP for assessing eligibility to index. In this way The Sub-fund's investment objective is aligned with the reference index.

- ***How is the alignment of the investment strategy with the methodology of the index ensured on a continuous basis?***

The methodology of the reference index follows rebalancing rules which ensures alignment with the investment strategy of the Sub-fund.

The Bloomberg MSCI US Green Bond Index is rebalanced on the last business day of each month. New bond issues are not added to the Projected Universe until after the Green Bond Evaluation. On the 25th calendar day of each month, the list of green bonds that are evaluated is updated by MSCI ESG Research which are taken into consideration before rebalancing.

- **How does the designated index differ from a relevant broad market index?**

The benchmark differs from a broad general market index in that the latter does not take into account in its methodology any criteria for eligibility and inclusion of green bonds.

- **Where can the methodology used for the calculation of the designated index be found?**

The index methodology can be found on the relevant webpages by the index provider: <https://www.msci.com>

j) Robeco Euro SDG Short Duration Bonds

Pre-contractual disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Product name: Robeco Euro SDG Short Duration Bonds

Legal entity identifier: N/A

Environmental and/or social characteristics

Does this financial product have a sustainable investment objective?

Yes

No

It will make a minimum of **sustainable investments with an environmental objective:** ____%

in economic activities that qualify as environmentally sustainable under the EU Taxonomy

in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

It will make a minimum of **sustainable investments with a social objective:** ____%

It **promotes Environmental/Social (E/S) characteristics** and while it does not have as its objective a sustainable investment, it will have a minimum proportion of 30% of sustainable investments

with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with a social objective

It promotes E/S characteristics, but **will not make any sustainable investments**

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

What environmental and/or social characteristics are promoted by this financial product?

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

The Sub-fund has the following E/S characteristics:

1. The Sub-fund promotes investment in a portfolio that contributes to the Sustainable Development Goals (SDGs).
2. The Sub-fund promotes adherence to and conducting business activities in accordance with the United Nations Universal Declaration of Human Rights, the International Labor Organization's (ILO) labor standards, the United Nations Guiding Principles for Business and Human Rights (UNGPs), the United Nations Global Compact (UNGC) and the OECD Guidelines for Multinational Enterprises.
3. The Sub-fund promotes certain minimum environmental and social safeguards through applying exclusion criteria with regards to products and business practices that Robeco believes are detrimental to society and incompatible with sustainable investment strategies, such as exposure to controversial behaviour, controversial weapons, and fossil fuels.
4. The Sub-fund promotes investment in countries with policies and institutional frameworks to prevent and combat corruption.
5. The Sub-fund promotes investment in green, social, sustainability and/or sustainability-linked bonds used to finance environmental and social projects.

There is no reference benchmark designated for the purpose of attaining the environmental or social characteristics promoted by the Sub-fund.

● **What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?**

The Sub-fund has the following sustainability indicators:

1. The proportion of issuers that holds a positive or neutral SDG score and the Sub-fund's average issuer SDG score.
2. The number of companies that are in violation of the UNGPs or OECD Guidelines for Multinational Enterprises.
3. The % of investments in securities that are on Robeco's Exclusion list as result of the application of Robeco's Exclusion Policy.
4. The % of investments excluded from the Worldwide Governance Indicators (WGI) - Control of Corruption ranking.
5. The % of the Sub-fund invested in green, social, sustainability and/or sustainability-linked bonds.

● **What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?**

The sustainable investments aim to contribute to the UN Sustainable Development Goals ("SDGs"), that have both social and environmental objectives. These are 17 goals that are globally recognised and include environmental goals such as climate action, clean water, life on land and water and social goals such as zero hunger, gender equality, education, etc. Robeco has developed a proprietary framework based on the UN SDGs through which an issuer's contribution to such SDGs is determined through a 3-step process. This process starts with a sector baseline on which a company's products are analysed to examine contribution to the society and environment. Further, the operational processes involved in creating such products is checked along with any controversies/litigation claims and remediation actions taken which are perused before a final SDG score is determined. The final score ranges between high negative (-3) to high positive (+3) and only those issuers which achieve positive SDG scores (+1, +2 and +3) are regarded as Sustainable Investments.

● ***How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?***

The sustainable investments do no significant harm to any environmental or social sustainable investment objective by considering a principal adverse impact and aligning with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights. In addition, sustainable investments score positively on Robeco's SDG Framework, and therefore do not cause significant harm.

How have the indicators for adverse impacts on sustainability factors been taken into account?

Mandatory principal adverse impact indicators are considered through Robeco's SDG Framework, either directly or indirectly, when identifying sustainable investments for the Sub-fund. In addition, voluntary environmental and social indicators are taken into account, depending on their relevance for measuring impacts on the SDGs and the availability of data. A detailed description of the incorporation of principal adverse impacts is available via Robeco's Principal Adverse Impact Statement published on the Robeco website (<https://www.robeco.com/files/docm/docu-principal-adverse-impact-statement-summary-entity-level.pdf>). In this statement, Robeco sets out its approach to identifying and prioritizing principal adverse impact, and how principal adverse impacts are considered as part of Robeco's investment due diligence process and procedures relating to research and analysis, exclusions and restrictions and/or voting and engagement. This description also explains how principal adverse impact indicators are considered by the SDG Framework.

How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The sustainable investments are aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights via both Robeco's Exclusion Policy and Robeco's SDG Framework.

Robeco's Exclusion Policy includes an explanation of how Robeco acts in accordance with the International Labor Organization (ILO) standards, United Nations Guiding Principles (UNGPs), United Nations Global Compact (UNGC) Principles and the Organization for Economic Co-operation and Development (OECD) Guidelines for Multinational Enterprises and is guided by these international treaties to assess the behavior of companies. Robeco continuously screens its investments for breaches of these principles. In case of a breach, the company will be excluded or engaged with, and is not considered a sustainable investment.

Robeco's SDG Framework screens for breaches on these principles in the final step of the framework. In this step, Robeco checks whether the issuer concerned has been involved in any controversies. Involvement in any controversy will result in a negative SDG score for the issuer, meaning it is not a sustainable investment.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

Does this financial product consider principal adverse impacts on sustainability factors?

Yes, _____

The Sub-fund considers principal adverse impacts on sustainability factors as referred to in Annex I of the SFDR Delegated Act.

Pre-investment, Robeco's SDG Framework assesses issuer's positive and negative contributions to the Sustainable Development Goals (SDGs). Robeco's SDG Framework directly and/or indirectly screens issuers on many of the topics considered by the PAI indicators.

Post-investment, the following principal adverse impacts on sustainability factors are taken into account:

- Via Robeco's entity engagement program, the following PAIs are considered:
 - All indicators related to Climate and other environment-related indicators (PAI 1-9, Table 1)
 - Violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1). On an ongoing basis, the investment universe is scanned for controversial behavior in relation to the aforementioned principles and guidelines.
 - In addition, based on a yearly review of Robeco's performance on all mandatory and selected voluntary indicators, holdings of the Sub-fund that cause adverse impact might be selected for engagement.

More information is available via Robeco's Principal Adverse Impact Statement, published on Robeco's website. The Sub-fund will periodically report how it has considered the principal adverse impacts of its investments in the Company's annual report, which will be made available each year on or before 30 April at the Sub-fund page highlighted in final section of this document.

No

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

The investment strategy guides investment decisions based on factors such as investment objectives and risk tolerance.

What investment strategy does this financial product follow?

Robeco Euro SDG Short Duration Bonds is an actively managed fund that invests in bonds denominated in the EURO currency. The selection of these bonds is based on fundamental analysis as described in the Investment policy strategy paragraph in Appendix I of this Prospectus.

The strategy integrates sustainability indicators on a continuous basis as part of the bond selection process. Amongst others, the Sub-fund applies norms-based, activity-based and regional exclusions, Robeco's good governance policy, Robeco's SDG framework and considers Principal Adverse Impacts in the investment process. More product-specific information can be found on our website and the links provided in the final question of this disclosure.

What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?

The Sub-fund has the following binding elements:

1. All bond investments, must have a positive or neutral SDG score.
2. The Sub-fund avoids investment in companies that are in breach of the ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises. Companies that breach these international norms will be excluded from the investment universe.
3. The Sub-fund's portfolio complies with Robeco's Exclusion Policy (<https://www.robeco.com/files/docm/docu-exclusion-policy.pdf>), that is based on exclusion criteria that Robeco believes are detrimental to society and incompatible with sustainable investment strategies. This means that the Sub-fund has 0% exposure to excluded securities, taking into account a grace period. Information with regards to the effects of the exclusions on the Sub-fund's universe can be found at <https://www.robeco.com/files/docm/docu-exclusion-list.pdf>
4. The Sub-fund excludes sovereign bonds issued by the bottom 15% of the Worldwide Governance Indicators (WGI) - Control of Corruption ranking.
5. The Sub-fund invests a minimum of 2.5% in green, social, sustainable, and/or sustainability-linked bonds (ESG-labelled bonds). As a second step, amongst others, GHG intensity (Table 1, PAI 15) is assessed in the project evaluation that considers the allocation of proceeds. In addition, the ESG bonds are assessed on their compliance with international norms related to social and governance issues (in relation to Table 1, PAI 16).

What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?

The Sub-fund does not commit to a minimum rate to reduce the scope of investments prior to the application of the investment strategy.

What is the policy to assess good governance practices of the investee companies?

Robeco has a Good Governance policy to assess governance practices of companies. The policy describes how Robeco determines if and when a company does not follow good governance practices and is therefore excluded from the initial investment universe for Article 8 and 9 products. Robeco's Good Governance policy applies to the Sub-fund and tests on a set of governance criteria that reflect widely recognized industry established norms and include topics as employee relations, management structure, tax compliance and remuneration.

The Good Governance test consists of criteria on such topics that are examined for investee companies and further explained in Robeco's Good Governance policy <https://www.robeco.com/files/docm/docu-robeco-good-governance-policy.pdf>. Additionally, the companies that do not pass the good governance

Good governance practices include sound management structures, employee relations, remuneration of staff and tax compliance.

test are reflected in the exclusion list that can be accessed here - <https://www.robeco.com/files/docm/docu-exclusion-list.pdf>.

What is the asset allocation planned for this financial product?

At least 90% of the investments are aligned with the E/S characteristics of the Fund, which aims to invest at least 30% of its assets in sustainable investments. The sustainable investments aim to contribute to the UN Sustainable Development Goals. The Sub-fund targets a minimum portion of 30% of its sustainable objectives with a social objective (as measured by positive scores via Robeco's SDG Framework).

The Sub-fund does not specifically target a minimum percentage of its sustainable investments with an environmental objective but it cannot be ruled out that sustainable investments may include those with an environmental objective. The investments in the category "Other", estimated between 0-10%, are mostly in cash, cash equivalents and derivatives as further described below. The planned asset allocation is monitored continuously, and evaluated on a yearly basis.

How does the use of derivatives attain the environmental or social characteristics promoted by the financial product?

The Sub-fund does not make use of derivatives to attain the environmental or social characteristics promoted by the financial product. The Sub-fund may make use of derivatives for hedging, liquidity management and efficient portfolio management as well as investment purposes in the global fixed income, money market, interest rates and currency markets. In case the Sub-fund uses derivatives, the underlying shall comply with the investment policy of the Sub-fund. Where relevant, minimum environmental or social safeguards are taken into account as described below.

To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

0%. The Sub-fund intends to contribute to all 6 environmental objectives under the EU Taxonomy via the investments in green bonds. The Sub-fund commits to a minimum share of 0% of Taxonomy-aligned activities. The Sub-fund intends to increase the minimum share of Taxonomy aligned activities for the Sub-fund, based on use of proceeds, once data availability in relation to the EU Taxonomy for green bonds improves and stabilises.

Asset allocation describes the share of investments in specific assets.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

The Sub-fund will report on Taxonomy-aligned investment in the periodic disclosures. For investments in corporate bonds, the Sub-fund will report on turnover. Given the lack of data on the EU Taxonomy for green bonds in the market, Robeco relies on internal analysis for the time being. EU Taxonomy-alignment data is not yet subject to a review by third parties. The expected level of alignment with and without sovereign bonds is the same.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

 are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic

● **Does the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy⁹⁶?**

Yes

In fossil gas In nuclear energy

No

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.*

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

** As the investments are not Taxonomy-aligned, the exclusion of sovereign bonds has no impact on the graph and therefore no such percentage is shown here.

● **What is the minimum share of investments in transitional and enabling activities?**

0%.

What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?

Green bonds may invest (part of) their use of proceeds in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy. In addition, the Sub-fund intends to make sustainable investments measured as positive scores via Robeco's SDG Framework. Among those could be investments with environmental objectives that do not qualify as Taxonomy-aligned. The Sub-fund commits to a minimum share of sustainable investments of 2.5% with an environmental objective because the Sub-fund's investment strategy does have a specific environmental investment objective.

⁹⁶ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

activities under the EU Taxonomy.

The environmental objectives of the Sub-fund are attained by investing in issuers that score positively on SDG 12 (Responsible consumption and production), SDG 13 (Climate action), SDG 14 (Life below water), and SDG 15 (Life on land) in Robeco's SDG Framework.

While the sum of sustainable investments with an environmental objective and socially sustainable investments always adds up to the Sub-fund's minimum proportion of 30% sustainable investments, we do not commit to a minimum share of sustainable investments with an environmental objective because the Sub-fund's investment strategy does not have a specific environmental investment objective. Therefore, the minimum share of sustainable investments with an environmental objective is 0%.

What is the minimum share of socially sustainable investments?

Social, sustainable or sustainability-linked bonds may invest (part of) their use of proceeds in economic activities that contribute to a social objective.

In addition, the Sub-fund intends to make sustainable investments, measured as positive scores via Robeco's SDG Framework.

We commit to a minimum share of sustainable investments of 20% with a social objective because the Sub-fund's investment strategy does have a specific social investment objective.

The social objectives of the Sub-fund are attained by investing in issuers that score positively on SDG 1 (No poverty), SDG 2 (Zero hunger), SDG 3 (Good health and well-being), SDG 4 (Quality education), SDG 5 (Gender equality), SDG 6 (Clean water and sanitation), SDG 7 (Affordable and clean energy), SDG 8 (Decent work and economic growth), SDG 9 (Industry, innovation and infrastructure), SDG 10 (Reduced inequalities), SDG 11 (Sustainable cities and communities), SDG 16 (Peace, justice and strong institutions) and SDG 17 (Partnerships for the goals), in Robeco's SDG Framework.

The sum of socially sustainable investments and sustainable investments with an environmental objective always adds up to the Sub-fund's minimum proportion of sustainable investments.

What investments are included under "#2 Other", what is their purpose and are there any minimum environmental or social safeguards?

The type of instruments included under "#2 Other" and their purpose are outlined in Annex I of this Prospectus under the header 'Financial instruments and investment restrictions'. They include cash, cash equivalents, as well as investment funds and eligible asset classes (other than bonds and equities) that do not specifically promote E/S characteristics. As indicated above, the Sub-fund does not make use of derivatives to attain the environmental or social characteristics promoted. The Sub-fund may make use of derivatives, which thus always fall under the category "#2 Other", for hedging, liquidity management and efficient portfolio management as well as investment purposes. Exchange traded and over-the-counter derivatives are permitted, including but not limited to futures, swaps, options and currency forwards. In case the Sub-fund uses derivatives, the underlying shall comply with the investment policy. Where relevant, minimum environmental or social safeguards are taken into account, by, for example, applying Robeco's Exclusion Policy for any single security derivative.

Is a specific index designated as a reference benchmark to determine whether this financial product is aligned with the environmental and/or social characteristics that it promotes?

Not applicable.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

Where can I find more product specific information online?

S

6. ASSET ALLOCATION SUB-FUNDS

a) Robeco QI Multi Factor Absolute Return

Pre-contractual disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Product name: Robeco QI Multi Factor Absolute Return

Legal entity identifier: 213800AERXVYQM6ZR607

Environmental and/or social characteristics

Does this financial product have a sustainable investment objective?

Yes

No

It will make a minimum of **sustainable investments with an environmental objective:** ___%

- in economic activities that qualify as environmentally sustainable under the EU Taxonomy
- in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

It will make a minimum of **sustainable investments with a social objective:** ___%

It **promotes Environmental/Social (E/S) characteristics** and while it does not have as its objective a sustainable investment, it will have a minimum proportion of 30% of sustainable investments

- with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy
- with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy
- with a social objective

It promotes E/S characteristics, but **will not make any sustainable investments**

What environmental and/or social characteristics are promoted by this financial product?

The Sub-fund has the following E/S characteristics:

1. The Sub-fund invests mainly in strategies, including investment funds, with E/S promoting characteristics (article 8). The Sub-fund considers investment funds promoting at least the same E/S characteristics which the Sub-fund promotes for the direct holdings, as depicted below.

For direct holdings in government bonds:

1. The Sub-fund promotes certain minimum environmental and social safeguards through applying exclusion criteria with regards to products and business practices that Robeco believes are detrimental to society and incompatible with sustainable investment strategies, such as exposure to controversial behaviour, controversial weapons, and fossil fuels. Robeco deems investing in government bonds (federal or local) of countries where serious violations of human rights or a collapse of the governance structure take place as unsustainable. In addition, Robeco will follow applicable sanctions of the UN, EU or US to which it is subject and follows any mandatory (investment) restrictions deriving therefrom.
2. The Sub-fund promotes investments in countries that perform well on the RobecoSAM Country Sustainability Ranking. The RobecoSAM Country Sustainability Ranking incorporates a wide range of ESG factors such as aging, corruption, social unrest, political risks and environmental risks.
3. The Sub-fund promotes investment in countries with policies and institutional frameworks to prevent and combat corruption.

For direct holdings in corporate bonds:

1. The Sub-fund promotes certain minimum environmental and social safeguards through applying exclusion criteria and therefore applies exclusion criteria with regards to products and business practices that Robeco believes are detrimental to society and incompatible with sustainable investment strategies, such as exposure to controversial behaviour, controversial weapons, and fossil fuels.
2. The Sub-fund promotes adherence to and conducting business activities in accordance with the United Nations Universal Declaration of Human Rights, the International Labor Organization's (ILO) labor standards, the United Nations Guiding Principles for Business and Human Rights (UNGPs), the United Nations Global Compact (UNGC) and the OECD Guidelines for Multinational Enterprises, by scrutinizing companies that violate these principles.
3. The Sub-fund promotes having a weighted average ESG score that is better than that of the corporate bonds in the general market index referred to in Appendix VI – Benchmarks (the "General Market Index").

For direct holdings in equities:

1. The Sub-fund promotes certain minimum environmental and social safeguards through applying exclusion criteria and therefore applies exclusion criteria with regards to products and business practices that Robeco believes are detrimental to society and incompatible with sustainable investment strategies, such as exposure to controversial behaviour, controversial weapons, and fossil fuels.
2. The Sub-fund promotes adherence to and conducting business activities in accordance with the United Nations Universal Declaration of Human Rights, the International Labor Organization's (ILO) labor standards, the United Nations Guiding Principles for Business and Human Rights (UNGPs), the United Nations Global Compact (UNGC) and the OECD Guidelines for Multinational Enterprises, by scrutinizing companies that violate these principles.
3. The Sub-fund promotes investment in a portfolio that avoid significant harm to the Sustainable Development Goals (SDGs).

There is no reference benchmark designated for the purpose of attaining the environmental or social characteristics promoted by the Sub-fund.

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

● ***What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?***

The Sub-fund has the following sustainability indicators to measure the attainment of the E/S characteristics:

1. The % of investments in investment funds that meet the selection criteria for the E/S characteristics promoted by the Sub-fund, including direct holdings in equities and bonds subject to the binding elements below.

For direct holdings in government bonds, the Sub-fund has the following sustainability indicators to measure the attainment of the E/S characteristics:

1. The % of investments in securities that are on the exclusion list as result of the application of Robeco's Exclusion Policy.
2. The average ESG score on Robeco's Country Sustainable Ranking.
3. The % of investments excluded based on the WGI Control of Corruption ranking.

For direct holdings in corporate bonds, the Sub-fund has the following sustainability indicators to measure the attainment of the E/S characteristics:

1. The % of investments in securities that are on the exclusion list as result of the application of Robeco's Exclusion Policy.
2. The number of companies that are in violation of the UNGPs or OECD Guidelines for Multinational Enterprises and hence are a part of the Enhanced Engagement program.
3. The Sub-fund's weighted average ESG score compared to the corporate bonds in the General Market Index.

For direct holdings in equities, the Sub-fund has the following sustainability indicators to measure the attainment of the E/S characteristics:

1. The % of investments in securities that are on the exclusion list as result of the application of Robeco's Exclusion Policy.
2. The number of companies that are in violation of the UNGPs or OECD Guidelines for Multinational Enterprises and hence are a part of the Enhanced Engagement program.
3. The proportion of companies that hold a high or medium negative SDG score (-3 or -2) based on the internally developed SDG Framework.

● ***What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?***

The sustainable investments aim to contribute to the UN Sustainable Development Goals ("SDGs"), that have both social and environmental objectives. These are 17 goals that are globally recognised and include environmental goals such as climate action, clean water, life on land and water and social goals such as zero hunger, gender equality, education, etc. Robeco has developed a proprietary framework based on the UN SDGs through which an issuer's contribution to such SDGs is determined through a 3-step process. This process starts with a sector baseline on which a company's products are analysed to examine contribution to the society and environment. Further, the operational processes involved in creating such products is checked along with any controversies/litigation claims and remediation actions taken which are perused before a final SDG score is determined. The final score ranges between high negative (-3) to high positive (+3) and only those issuers which achieve positive SDG scores (+1, +2 and +3) are regarded as Sustainable Investments.

● ***How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?***

The sustainable investments do no significant harm to any environmental or social sustainable investment objective by considering a principal adverse impact and aligning with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights. In addition,

sustainable investments score positively on Robeco's SDG Framework, and therefore do not cause significant harm.

How have the indicators for adverse impacts on sustainability factors been taken into account?

Mandatory principal adverse impact indicators are considered through Robeco's SDG Framework, either directly or indirectly, when identifying sustainable investments for the Sub-fund. In addition, voluntary environmental and social indicators are taken into account, depending on their relevance for measuring impacts on the SDGs and the availability of data. A detailed description of the incorporation of principal adverse impacts is available via Robeco's Principal Adverse Impact Statement published on the Robeco website (<https://www.robeco.com/files/docm/docu-principal-adverse-impact-statement-summary-entity-level.pdf>). In this statement, Robeco sets out its approach to identifying and prioritizing principal adverse impacts, and how principal adverse impacts are considered as part of Robeco's investment due diligence process and procedures relating to research and analysis, exclusions and restrictions and/or voting and engagement. This description also explains how principal adverse impact indicators are considered by the SDG Framework.

How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The sustainable investments are aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights via both Robeco's Exclusion Policy and Robeco's SDG Framework.

Robeco's Exclusion Policy includes an explanation of how Robeco acts in accordance with the International Labor Organization (ILO) standards, United Nations Guiding Principles (UNGPs), United Nations Global Compact (UNGC) Principles and the Organization for Economic Co-operation and Development (OECD) Guidelines for Multinational Enterprises and is guided by these international treaties to assess the behavior of companies. Robeco continuously screens its investments for breaches of these principles. In case of a breach, the company will be excluded or engaged with, and is not considered a sustainable investment.

Robeco's SDG Framework screens for breaches on these principles in the final step of the framework. In this step, Robeco checks whether the company concerned has been involved in any controversies. Involvement in any controversy will result in a negative SDG score for the company, meaning it is not a sustainable investment.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

Does this financial product consider principal adverse impacts on sustainability factors?

Yes, _____

The Sub-fund considers principal adverse impacts on sustainability factors as referred to in Annex I of the SFDR Delegated Act.

Pre-investment, the following principal adverse impacts on sustainability factors are considered:

- Via the applied normative and activity-based exclusions, the following PAIs are considered:
 - Exposure to companies active in the fossil fuel sector (PAI 4, Table 1)
 - Violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1)
 - Activities negatively affecting biodiversity-sensitive areas (PAI 7, Table 1). The consideration of this PAI is currently restricted to applying exclusions to palm oil producing companies and for any breaches to the UNGC, UNGP and OECD Guidelines for Multinational Enterprises in relation to biodiversity.
 - Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons (PAI 14, Table 1)
- Via the environmental footprint performance targets of the Sub-fund, the following PAIs are considered:
 - Carbon footprint (PAI 2, Table 1)
 - Water and waste indicators (PAI 7-9, Table 1). Robeco will use on water and waste footprint until data quality and coverage of the PAIs will improve.

Post-investment, the following principal adverse impacts on sustainability factors are taken into account via Robeco's entity engagement program:

- All indicators related to Climate and other environment-related indicators (PAI 1-9, Table 1)
- Violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1). On an ongoing basis, the investment universe is scanned for controversial behavior in relation to the aforementioned principles and guidelines.
- In addition, based on a yearly review of Robeco's performance on all mandatory and selected voluntary indicators, holdings of the Sub-fund that cause adverse impact might be selected for engagement.

More information is available via Robeco's Principal Adverse Impact Statement, published on Robeco's website. The Sub-fund will periodically report how it has considered the principal adverse impacts of its investments in the Company's annual report, which will be made available each year on or before 30 April at the Sub-fund page highlighted in final section of this document.

No

What investment strategy does this financial product follow?

The investment strategy guides investment decisions based on factors such as investment objectives and risk tolerance.

Robeco QI Multi Factor Absolute Return is an actively managed Sub-fund that invests in a mix of asset classes across the world. The portfolio selection is based on a quantitative model as described in the Investment policy strategy paragraph in Appendix I of this Prospectus. The Sub-fund applies an absolute return strategy and harvests a highly diversifying set of factor premiums across a wide set of asset classes.

The strategy integrates sustainability indicators on a continuous basis as part of the stock and bond selection process. Amongst others, the Sub-fund applies norms-based and activity-based exclusions, Robeco's good governance policy, Robeco's SDG framework and considers Principal Adverse Impacts in the investment process. More product-specific information can be found on our website and the links provided in the final question of this disclosure. In case of a rebalancing of the portfolio, the portfolio may temporarily, but no longer than 72 hours, deviate from its binding elements, with the exception of adherence to the exclusion policy that applies at all times.

● ***What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?***

The Sub-fund has the following binding elements:

1. The Sub-fund invests a minimum of 70% of its assets that meet the selection criteria for the E/S characteristics promoted by the Sub-fund, either through the investments in funds or through sub-strategies using direct lines. The Sub-fund may hold a maximum of 30% in asset classes other than bonds and equities, e.g., for liquidity purposes, including investment funds that do not meet the selection criteria for the E/S characteristics promoted by the Sub-fund.

The Sub-fund has the following binding elements for direct holdings in government bonds:

1. The Sub-fund's portfolio complies with Robeco's Exclusion Policy (<https://www.robeco.com/files/docm/docu-exclusion-policy.pdf>), that is based on certain exclusion criteria that Robeco believes are detrimental to society and incompatible with sustainable investment strategies. This means that the Sub-fund has 0% exposure to excluded securities, taking into account a grace period. Information with regards to the impact of the exclusions on the Sub-fund's universe can be found at <https://www.robeco.com/files/docm/docu-exclusion-list.pdf>.
2. The Sub-fund's investments have a minimum average ESG score of 6 on the Country Sustainability Ranking.
3. The Sub-fund excludes sovereign bonds issued by the bottom 15% of the WGI Control of Corruption ranking.

The Sub-fund has the following binding elements for direct holdings in corporate bonds:

1. The Sub-fund's portfolio complies with Robeco's Exclusion Policy (<https://www.robeco.com/files/docm/docu-exclusion-policy.pdf>) that is based on certain exclusion criteria with regards to products (including controversial weapons, tobacco, palm oil, and fossil fuel) and business practices that Robeco believes are detrimental to society and incompatible with sustainable investment strategies. This means that the Sub-fund has 0% exposure to excluded securities, taking into account a grace period. Information with regards to the impact of the exclusions on the Sub-fund's universe can be found at <https://www.robeco.com/files/docm/docu-exclusion-list.pdf>.
2. The Sub-fund scrutinizes investment in companies that are in breach of the ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises. If a company in the portfolio breaches one of the international guidelines during the investment period, the company will become part of the Enhanced Engagement program.
3. The Sub-fund's weighted average ESG score of the corporate bonds in portfolio is better than that of the corporate bonds in the General Market Index.

The Sub-fund has the following binding elements for direct holdings in equities:

1. The Sub-fund's portfolio complies with Robeco's Exclusion Policy (<https://www.robeco.com/files/docm/docu-exclusion-policy.pdf>) that is based on certain exclusion criteria with regards to products (including controversial weapons, tobacco, palm oil, and fossil fuel) and business practices that Robeco believes are detrimental to society and incompatible with sustainable investment strategies. This means that the Sub-fund has 0% exposure to excluded

securities, taking into account a grace period. Information with regards to the impact of the exclusions on the Sub-fund's universe can be found at <https://www.robeco.com/files/docm/docu-exclusion-list.pdf>.

2. The Sub-fund scrutinizes investment in companies that are in breach of the ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises. If a company in the portfolio breaches one of the international guidelines during the investment period, the company will become part of the Enhanced Engagement program.
3. For equity investments, the Sub-fund excludes all high or medium negative SDG scores (-3 or -2).

● **What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?**

The Sub-fund does not commit to a minimum rate to reduce the scope of investments prior to the application of the investment strategy.

● **What is the policy to assess good governance practices of the investee companies?**

Robeco has a Good Governance policy to assess governance practices of companies. The policy describes how Robeco determines if and when a company does not follow good governance practices and is therefore excluded from the initial investment universe for Article 8 and 9 products. Robeco's Good Governance policy applies to the Sub-fund and tests on a set of governance criteria that reflect widely recognized industry established norms and include topics as employee relations, management structure, tax compliance and remuneration.

The Good Governance test consists of criteria on such topics that are examined for investee companies and further explained in Robeco's Good Governance policy <https://www.robeco.com/files/docm/docu-robeco-good-governance-policy.pdf>. Additionally, the companies that do not pass the good governance test are reflected in the exclusion list that can be accessed here - <https://www.robeco.com/files/docm/docu-exclusion-list.pdf>.

● **What is the asset allocation planned for this financial product?**

At least 70% of the investments are aligned with the E/S characteristics of the Sub-fund. The Sub-fund plans to make a minimum of 30% sustainable investments, measured by positive scores via Robeco's SDG Framework. The investments in the category Other, estimated between 20-30%, are mostly in cash, cash equivalents and derivatives as further described below. The planned asset allocation is monitored continuously, and evaluated on a yearly basis.

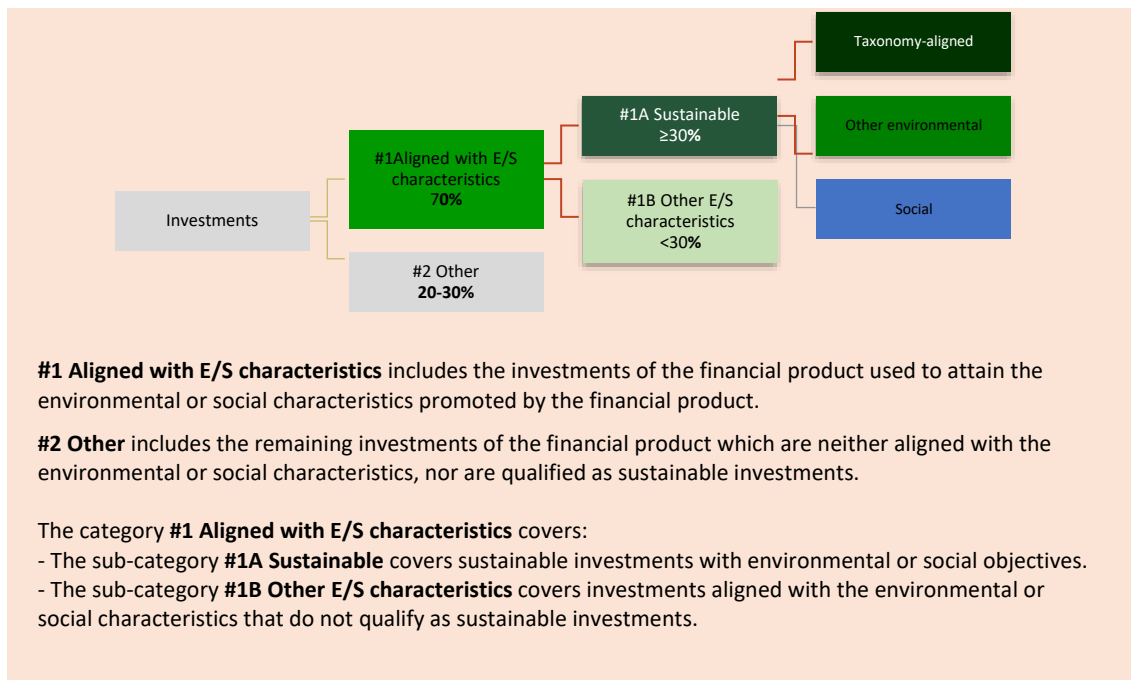

Good governance practices include sound management structures, employee relations, remuneration of staff and tax compliance.

Asset allocation describes the share of investments in specific assets.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure (CapEx)** showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure (OpEx)** reflecting green operational activities of investee companies.

● **How does the use of derivatives attain the environmental or social characteristics promoted by the financial product?**

The Sub-fund does not make use of derivatives to attain the environmental or social characteristics promoted by the financial product. The Sub-fund may make use of derivatives for hedging, liquidity management and efficient portfolio management as well as investment purposes in the global fixed income, money market, interest rates and currency markets. In case the Sub-fund uses derivatives, the underlying shall comply with the investment policy of the Sub-fund. Where relevant, minimum environmental or social safeguards are taken into account as described below.

To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

0%. The Sub-fund does not intend to make Taxonomy-aligned investments. It cannot be excluded that among the Sub-fund's holdings certain investments are Taxonomy aligned. The Sub-fund will report on Taxonomy-aligned investment in the periodic disclosures. In the future, once data-availability in relation to the EU Taxonomy will improve, Robeco might consider setting a target based on turnover or CAPEX. Robeco currently relies on third-party data in relation to the EU Taxonomy, including data in relation to companies that do not disclose on the EU Taxonomy alignment of their activities. EU Taxonomy-alignment data is not yet subject to a review by third parties. The Sub-fund makes investments in equities and bonds and therefore it does not have sovereign exposures. At this moment, the expected level of alignment with and without sovereign bonds is the same.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and

● **Does the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy⁹⁷?**

Yes

In fossil gas In nuclear energy

⁹⁷ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

switching to renewable power or low-carbon fuels by the end of 2035. For nuclear energy, the criteria include comprehensive safety and waste management rules.

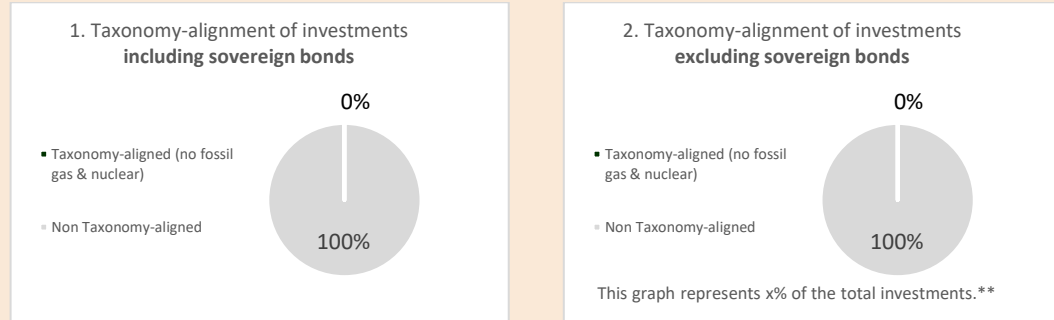

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

 are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

 No

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.*

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

** As the investments are not Taxonomy-aligned, the exclusion of sovereign bonds has no impact on the graph and therefore no such percentage is shown here.

 **What is the minimum share of investments in transitional and enabling activities?**

0%.

 **What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?**

The Sub-fund intends to make sustainable investments, measured as positive scores via Robeco's SDG Framework. Among those could be investments with environmental objectives that do not qualify as Taxonomy-aligned. The environmental objectives of the Sub-fund are attained by investing in companies that score positively on SDG 12 (Responsible consumption and production), SDG 13 (Climate action), SDG 14 (Life below water), and SDG 15 (Life on land) in Robeco's SDG Framework. While the sum of sustainable investments with an environmental objective and socially sustainable investments always adds up to the Sub-fund's minimum proportion of 30% sustainable investments, we do not commit to a minimum share of sustainable investments with an environmental objective because the Sub-fund's investment strategy does not have a specific environmental investment objective. Therefore, the minimum share of sustainable investments with an environmental objective is 0%.

 **What is the minimum share of socially sustainable investments?**

The Sub-fund intends to make sustainable investments, measured as positive scores via Robeco's SDG Framework. Among those could be investments with social objectives. The social objectives of the Sub-fund are attained by investing in companies that score positively on SDG 1 (No poverty), SDG 2 (Zero hunger), SDG 3 (Good health and well-being), SDG 4 (Quality education), SDG 5 (Gender equality), SDG 6 (Clear water and sanitation), SDG 7 (Affordable and clean energy), SDG 8 (Decent work and economic growth), SDG 9 (Industry, innovation and infrastructure), SDG 10 (Reduced inequalities), SDG 11 (Sustainable cities and communities), SDG 16 (Peace, justice and strong institutions) and SDG 17 (Partnerships for the goals), in Robeco's SDG Framework. While the sum of socially sustainable investments and sustainable investments with an environmental objective always adds up to the Sub-fund's minimum proportion of sustainable investments, we do not commit to a minimum share of

socially sustainable investments because the Sub-fund's investment strategy does not have a specific socially sustainable investment objective. Therefore, the minimum share of socially sustainable investments is 0%.

What investments are included under "#2 Other", what is their purpose and are there any minimum environmental or social safeguards?

The type of instruments included under "#2 Other" and their purpose are outlined in Annex I of this Prospectus under the header 'Financial instruments and investment restrictions'. They include cash, cash equivalents, as well as investment funds and eligible asset classes (other than bonds and equities) that do not specifically promote E/S characteristics. As indicated above, the Sub-fund does not make use of derivatives to attain the environmental or social characteristics promoted. The Sub-fund may make use of derivatives, which thus always fall under the category "#2 Other", for hedging, liquidity management and efficient portfolio management as well as investment purposes. Exchange traded and over-the-counter derivatives are permitted, including but not limited to futures, swaps, options and currency forwards. In case the Sub-fund uses derivatives, the underlying shall comply with the investment policy. Where relevant, minimum environmental or social safeguards are taken into account, by, for example, applying Robeco's Exclusion Policy for any single security derivative.

Is a specific index designated as a reference benchmark to determine whether this financial product is aligned with the environmental and/or social characteristics that it promotes?

Not applicable.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

b) Robeco Sustainable Dynamic Allocation

Pre-contractual disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Product name: Robeco Sustainable Dynamic Allocation

Legal entity identifier: N/A

Environmental and/or social characteristics

Does this financial product have a sustainable investment objective?

Yes

 No

<input type="checkbox"/> It will make a minimum of sustainable investments with an environmental objective: ___% <ul style="list-style-type: none"> <input type="checkbox"/> in economic activities that qualify as environmentally sustainable under the EU Taxonomy <input type="checkbox"/> in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy <input type="checkbox"/> It will make a minimum of sustainable investments with a social objective: ___%	<input checked="" type="checkbox"/> It promotes Environmental/Social (E/S) characteristics and while it does not have as its objective a sustainable investment, it will have a minimum proportion of 40% of sustainable investments <ul style="list-style-type: none"> <input type="checkbox"/> with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy <input checked="" type="checkbox"/> with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy <input checked="" type="checkbox"/> with a social objective <input type="checkbox"/> It promotes E/S characteristics, but will not make any sustainable investments
-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------	------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

What environmental and/or social characteristics are promoted by this financial product?

- The Sub-fund has the following E/S characteristics for direct holdings in government bonds:
- The Sub-fund promotes certain minimal environmental and social standards and therefore applies exclusion criteria with regards to products and business practices that Robeco believes are detrimental to society and incompatible with sustainable investment strategies, such as exposure to controversial behaviour, controversial weapons, and fossil fuels. Robeco deems investing in government bonds (federal or local) of countries where serious violations of human rights or a collapse of the governance structure take place as unsustainable. In addition, Robeco will follow applicable sanctions of the UN, EU or US to which it is subject and follows any mandatory (investment) restrictions deriving therefrom.
 - The Sub-fund promotes investment in countries with minimum average scores on the

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

RobecoSAM Country Sustainability Ranking. The RobecoSAM Country Sustainability Ranking incorporates around 50 ESG factors such as aging, corruption, social unrest, political risks and environmental risks.

3. The Sub-fund promotes investment in countries with policies and institutional frameworks to prevent and combat corruption.
4. The Sub-fund limits investments in countries that do the most harm to peaceful and inclusive societies for sustainable development.

The Sub-fund has the following E/S characteristics for direct holdings in corporate investments, i.e. equity or bonds:

1. The Sub-fund applies certain exclusion criteria with regards to products and business practices that Robeco believes are detrimental to society and incompatible with sustainable investment strategies, such as exposure to controversial behaviour, controversial weapons, and fossil fuels.
2. The Sub-fund promotes adherence to and conducting business activities in accordance with: the United Nations Universal Declaration of Human Rights, the International Labor Organization's (ILO) labor standards, the United Nations Guiding Principles for Business and Human Rights (UNGPs), the United Nations Global Compact (UNGC) and the OECD Guidelines for Multinational Enterprises, by scrutinizing companies that violate these principles.
3. The Sub-fund promotes investment in a portfolio that avoid significant harm to the Sustainable Development Goals (SDGs).

● ***What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?***

The Sub-fund has the following sustainability indicators:

The Sub-fund has the following sustainability indicators to measure the attainment of the E/S characteristics of the direct holdings in government bonds:

1. The % of investments in securities that are on the exclusion list as result of the application of Robeco's Exclusion Policy.
2. The average ESG score on Robeco's Country Sustainable Ranking.
3. The % of investments excluded based on the WGI Control of Corruption ranking.
4. The proportion of countries that hold a high negative score (-3) on SDG 16, based on the internally developed Country SDG Framework.

The Sub-fund has the following sustainability indicators to measure the attainment of the E/S characteristics of the direct holdings in corporate investments, i.e. equity or bonds:

1. The % of investments in securities that are on the exclusion list as result of the application of Robeco's Exclusion Policy.
2. The number of companies that are in violation of the UNGPs or OECD Guidelines for Multinational Enterprises and hence are a part of the Enhanced Engagement program.
3. The proportion of companies that hold a high or medium negative SDG score (-3 or -2) based on the internally developed SDG Framework.

● ***What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?***

The sustainable investments aim to contribute to the UN Sustainable Development Goals ("SDGs"), that have both social and environmental objectives. These are 17 goals that are globally recognised and include environmental goals such as climate action, clean water, life on land and water and social goals such as zero hunger, gender equality, education, etc. Robeco has developed a proprietary framework based on the UN SDGs through which an issuer's contribution to such SDGs is determined through a 3-step process. This process starts with a sector baseline on which a company's products are analysed to examine contribution to the society and environment. Further, the operational processes involved in creating such products is checked along with any controversies/litigation claims and remediation actions taken which are perused before a final SDG score is determined. The final score ranges between high negative (-3) to high positive (+3) and only those issuers which achieve positive SDG scores (+1, +2 and +3) are regarded as Sustainable Investments.

How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?

The sustainable investments do no significant harm to any environmental or social sustainable investment objective by considering principal adverse impacts and aligning with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights. In addition, sustainable investments score positively on Robeco's SDG Framework, and therefore do not cause significant harm.

How have the indicators for adverse impacts on sustainability factors been taken into account?

Mandatory principal adverse impact indicators are considered through Robeco's SDG Framework, either directly or indirectly, when identifying sustainable investments for the Sub-fund. In addition, voluntary environmental and social indicators are taken into account, depending on their relevance for measuring impacts on the SDGs and the availability of data. A detailed description of the incorporation of principal adverse impacts is available via Robeco's Principal Adverse Impact Statement published on the Robeco website (<https://www.robeco.com/files/docm/docu-robeco-principal-adverse-impact-statement-summary-entity-level.pdf>). In this statement, Robeco sets out its approach to identifying and prioritizing principal adverse impacts, and how principal adverse impacts are considered as part of Robeco's investment due diligence process and procedures relating to research and analysis, exclusions and restrictions and/or voting and engagement. This description also explains how principal adverse impact indicators are considered by the SDG Framework.

How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The sustainable investments are aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights via both Robeco's Exclusion Policy and Robeco's SDG Framework.

Robeco's Exclusion Policy includes an explanation of how Robeco acts in accordance with the International Labor Organization (ILO) standards, United Nations Guiding Principles (UNGPs), United Nations Global Compact (UNGC) Principles and the Organization for Economic Co-operation and Development (OECD) Guidelines for Multinational Enterprises and is guided by these international treaties to assess the behaviour of companies. Robeco continuously screens its investments for breaches of these principles. In case of a breach, the company will be excluded or engaged with, and is not considered a sustainable investment.

Robeco's SDG Framework screens for breaches on these principles in the final step of the framework. In this step, Robeco checks whether the company concerned has been involved in any controversies. Involvement in any controversy will result in a negative SDG score for the company, meaning it is not a sustainable investment.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

Does this financial product consider principal adverse impacts on sustainability factors?

Yes, _____

The Sub-fund considers principal adverse impacts on sustainability factors as referred to in Annex I of the SFDR Delegated Regulation for the direct line investments.

Pre-investment, the following principal adverse impacts on sustainability factors are considered:

- Via the applied normative and activity-based exclusions, the following PAIs are considered:
 - Exposure to companies active in the fossil fuel sector (PAI 4, Table 1)
 - Violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1)
 - Activities negatively affecting biodiversity-sensitive areas (PAI 7, Table 1). The consideration of this PAI is currently restricted to applying exclusions to palm oil producing companies and for any breaches to the UNGC, UNGP and OECD Guidelines for Multinational Enterprises in relation to biodiversity.
 - Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons (PAI 14, Table 1)

Post-investment, the following principal adverse impacts on sustainability factors are taken into account:

- Via the application of the voting policy, the following PAIs are considered:
 - All indicators related to GHG emissions (PAI 1-6, Table 1)
 - Indicators related to social and employee matters (PAI 10-13, Table 1; PAI 5-8, Table 3)
- Via Robeco's entity engagement program, the following PAIs are considered:
 - All indicators related to Climate and other environment-related indicators (PAI 1-13, Table 1)
 - Violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1). On an ongoing basis, the investment universe is scanned for controversial behaviour in relation to the aforementioned principles and guidelines.
 - In addition, based on a yearly review of Robeco's performance on all mandatory and selected voluntary indicators, holdings of the Sub-fund that cause adverse impact might be selected for engagement.

More information is available via Robeco's Principal Adverse Impact Statement, published on Robeco's website. The Sub-fund will periodically report how it has considered the principal adverse impacts of its investments in the Company's annual report, which will be made available each year on or before 30 April at the Sub-fund page highlighted in final section of this document.

No

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

The investment strategy guides investment decisions based on factors such as investment objectives and risk tolerance.

What investment strategy does this financial product follow?

Robeco Sustainable Dynamic Allocation is an actively managed global multi asset fund. The Sub-fund's objective is to achieve a better return than the index. The Sub-fund has a relatively high risk profile and uses asset allocation strategies mainly investing directly in equities and taking exposure to other asset classes such as, but not exclusively, bonds, deposits and money market instruments. The strategy integrates sustainability indicators on a continuous basis as part of the direct line investments or underlying fund due diligence process. Amongst others, the Sub-fund applies norms-based and activity-based exclusions, Robeco's good governance policy, Robeco's SDG framework and considers Principal Adverse Impacts in the investment process, and considers those elements in the due diligence of external funds. More product-specific information can be found on our website and the links provided in the final question of this disclosure.

What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?

The Sub-fund has the following binding elements for direct holdings in government bonds:

1. The Sub-fund's portfolio complies with Robeco's Exclusion Policy (<https://www.robeco.com/files/docm/docu-exclusion-policy.pdf>), based on certain exclusion criteria that Robeco believes are detrimental to society and incompatible with sustainable investment strategies. This means that the Sub-fund has 0% exposure to excluded securities, taking into account a grace period. Information with regards to the impact of the exclusions on the Sub-fund's universe can be found at <https://www.robeco.com/files/docm/docu-exclusion-list.pdf>.
2. The Sub-fund's investments have a minimum average ESG score of 6 on the Country Sustainability Ranking.
3. The Sub-fund excludes sovereign bonds issued by the bottom 15% of the WGI Control of Corruption ranking.
4. The Sub-fund excludes all countries which have a high negative score (-3) on SDG 16.

The Sub-fund has the following binding elements for direct holdings in corporate investments, i.e. equity or bonds:

1. The Sub-fund's portfolio complies with Robeco's Exclusion Policy (<https://www.robeco.com/files/docm/docu-exclusion-policy.pdf>) that is based on certain exclusion criteria with regards to products (including controversial weapons, tobacco, palm oil, and fossil fuel) and business practices that Robeco believes are detrimental to society and incompatible with sustainable investment strategies. This means that the Sub-fund has 0% exposure to excluded securities, taking into account a grace period. Information with regards to the impact of the exclusions on the Sub-fund's universe can be found at <https://www.robeco.com/files/docm/docu-exclusion-list.pdf>.
2. The Sub-fund scrutinizes investment in companies that are in breach of the ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises. If a company in the portfolio breaches one of the international guidelines during the investment period, the company will become part of the Enhanced Engagement program.
3. For corporate bond and equity investments, the Sub-fund excludes all high or medium negative SDG scores (-3 or -2).

What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?

The Sub-fund does not commit to a minimum rate to reduce the scope of investments prior to the application of the investment strategy.

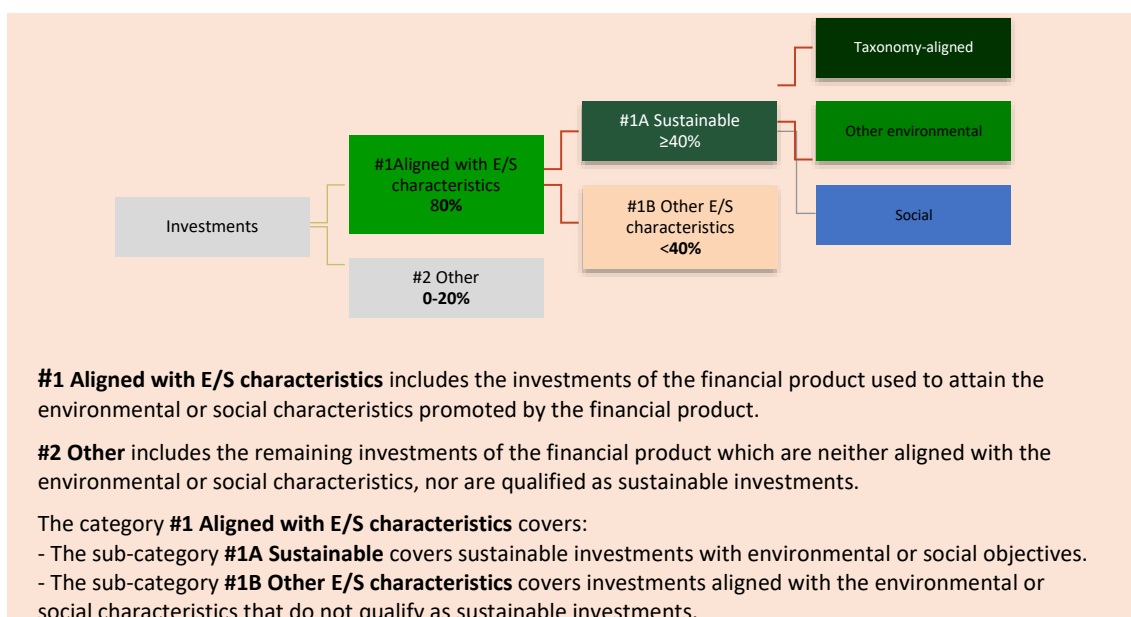

What is the policy to assess good governance practices of the investee companies?

Robeco has a Good Governance policy to assess governance practices of companies. The policy describes how Robeco determines if and when a company does not follow good governance practices and is therefore excluded from the initial investment universe for Article 8 and 9 products. Robeco's Good Governance policy applies to the Sub-fund and tests on a set of governance criteria that reflect widely recognized industry established norms and include topics as employee relations, management structure, tax compliance and remuneration.

The Good Governance test consists of criteria on such topics that are examined for investee companies and further explained in Robeco's Good Governance policy <https://www.robeco.com/files/docm/docu-robeco-good-governance-policy.pdf>. Additionally, the companies that do not pass the good governance test are reflected in the exclusion list that can be accessed here - <https://www.robeco.com/files/docm/docu-exclusion-list.pdf>.

What is the asset allocation planned for this financial product?

At least 80% of the investments are aligned with the E/S characteristics of the Sub-fund. The Sub-fund plans to make a minimum of 40% sustainable investments, measured by positive scores via Robeco's SDG Framework. The investments in the category Other, estimated between 0-20%, are mostly in cash, cash equivalents and derivatives as further described below. The planned asset allocation is monitored continuously, and evaluated on a yearly basis.

How does the use of derivatives attain the environmental or social characteristics promoted by the financial product?

Good governance practices include sound management structures, employee relations, remuneration of staff and tax compliance.

Asset allocation describes the share of investments in specific assets. Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

The Sub-fund does not make use of derivatives to attain the environmental or social characteristics promoted by the financial product. The Sub-fund may make use of derivatives for hedging, liquidity management and efficient portfolio management as well as investment purposes. Exchange traded and over-the-counter derivatives are permitted, including but not limited to futures, swaps, options and currency forwards. Whilst the Sub-fund may use derivatives both for investment purposes as well as for hedging and efficient portfolio management, it does not utilize derivatives for such purposes outside the intended share of investments allocated to the 'Other' category. In case the Sub-fund uses derivatives, the underlying shall comply with the investment policy. Where relevant, minimum environmental or social safeguards are taken into account as described below.

To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

0%. The Sub-fund does not intend to make Taxonomy-aligned investments. It cannot be excluded that among the Sub-fund's holdings certain investments are Taxonomy aligned. The Sub-fund will report on Taxonomy-aligned investment in the periodic disclosures. In the future, once data-availability in relation to the EU Taxonomy will improve, Robeco might consider setting a target based on turnover or CAPEX. Robeco currently relies on third-party data, including data in relation to companies that do not disclose on the EU Taxonomy alignment of their activities. EU Taxonomy-alignment data is not yet subject to a review by third parties. The Sub-fund only makes investments in equity and therefore it does not have sovereign exposures. The expected level of alignment with and without sovereign bonds is the same.

Does the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy?⁹⁸

Yes

In fossil gas In nuclear energy

No

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.*

*** For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures**
**** As the investments are not Taxonomy-aligned, the exclusion of sovereign bonds has no impact on the graph and therefore no such percentage is shown here.**

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels

⁹⁸ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

corresponding to the best performance.

 are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

 are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

● **What is the minimum share of investments in transitional and enabling activities?**

0%.

 **What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?**

The Sub-fund intends to make sustainable investments, measured as positive scores via Robeco's SDG Framework. Among those could be investments with environmental objectives that do not qualify as Taxonomy-aligned. The environmental objectives of the Sub-fund are attained by investing in companies that score positively on SDG 12 (Responsible consumption and production), SDG 13 (Climate action), SDG 14 (Life below water), and SDG 15 (Life on land) in Robeco's SDG Framework. While the sum of sustainable investments with an environmental objective and socially sustainable investments always adds up to the Sub-fund's minimum proportion of 40% sustainable investments, we do not commit to a minimum share of sustainable investments with an environmental objective because the Sub-fund's investment strategy does not have a specific environmental investment objective. Therefore, the minimum share of sustainable investments with an environmental objective is 0%.

 **What is the minimum share of socially sustainable investments?**

The Sub-fund intends to make sustainable investments, measured as positive scores via Robeco's SDG Framework. Among those could be investments with social objectives. The social objectives of the Sub-fund are attained by investing in companies that score positively on SDG 1 (No poverty), SDG 2 (Zero hunger), SDG 3 (Good health and well-being), SDG 4 (Quality education), SDG 5 (Gender equality), SDG 6 (Clean water and sanitation), SDG 7 (Affordable and clean energy), SDG 8 (Decent work and economic growth), SDG 9 (Industry, innovation and infrastructure), SDG 10 (Reduced inequalities), SDG 11 (Sustainable cities and communities), SDG 16 (Peace, justice and strong institutions) and SDG 17 (Partnerships for the goals), in Robeco's SDG Framework. While the sum of socially sustainable investments and sustainable investments with an environmental objective always adds up to the Sub-fund's minimum proportion of 40% sustainable investments, we do not commit to a minimum share of socially sustainable investments because the Sub-fund's investment strategy does not have a specific socially sustainable investment objective. Therefore, the minimum share of socially sustainable investments is 0%.

 **What investments are included under "#2 Other", what is their purpose and are there any minimum environmental or social safeguards?**

The type of instruments included under "#2 Other" and their purpose are outlined in Annex I of this Prospectus under the header 'Financial instruments and investment restrictions'. They include cash, cash equivalents, as well as investment funds and eligible asset classes (other than bonds and equities) that do not specifically promote E/S characteristics. As indicated above, the Sub-fund does not make use of derivatives to attain the environmental or social characteristics promoted. The Sub-fund may make use of derivatives, which thus always fall under the category "#2 Other", for hedging, liquidity management and efficient portfolio management as well as investment purposes. Exchange traded and over-the-counter derivatives are permitted, including but not limited to futures, swaps, options and currency forwards. In case the Sub-fund uses derivatives, the underlying shall comply with the investment policy. Where relevant, minimum environmental or social safeguards are taken into account, by, for example, applying Robeco's Exclusion Policy for any single security derivative.

Is a specific index designated as a reference benchmark to determine whether this financial product is aligned with the environmental and/or social characteristics that it promotes?

Not applicable.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

c) Robeco Sustainable Income Allocation

Pre-contractual disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Product name: Robeco Sustainable Income Allocation

Legal entity identifier: N/A

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Environmental and/or social characteristics

Does this financial product have a sustainable investment objective?

Yes

 No

What environmental and/or social characteristics are promoted by this financial product?

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

The Sub-fund has the following E/S characteristics for direct holdings in government bonds:

1. The Sub-fund promotes certain minimal environmental and social standards and therefore applies exclusion criteria with regards to products and business practices that Robeco believes are detrimental to society and incompatible with sustainable investment strategies, such as exposure to controversial behaviour, controversial weapons, and fossil fuels. Robeco deems investing in government bonds (federal or local) of countries where serious violations of human rights or a collapse of the governance structure take place as unsustainable. In addition, Robeco will follow applicable sanctions of the UN, EU or US to which it is subject and follows any mandatory (investment) restrictions deriving therefrom.
2. The Sub-fund promotes investment in countries with minimum average scores on the RobecoSAM Country Sustainability Ranking. The RobecoSAM Country Sustainability Ranking incorporates around 50 ESG factors such as aging, corruption, social unrest, political risks and environmental risks.
3. The Sub-fund promotes investment in countries with policies and institutional frameworks to prevent and combat corruption.
4. The Sub-fund limits investments in countries that do the most harm to peaceful and inclusive societies for sustainable development.

The Sub-fund has the following E/S characteristics for direct holdings in corporate investments, i.e. equity or bonds:

1. The Sub-fund applies certain exclusion criteria with regards to products and business practices that Robeco believes are detrimental to society and incompatible with sustainable investment strategies, such as exposure to controversial behaviour, controversial weapons, and fossil fuels.
2. The Sub-fund promotes adherence to and conducting business activities in accordance with: the United Nations Universal Declaration of Human Rights, the International Labor Organization's (ILO) labor standards, the United Nations Guiding Principles for Business and Human Rights (UNGPs), the United Nations Global Compact (UNGC) and the OECD Guidelines for Multinational Enterprises, by scrutinizing companies that violate these principles.
3. The Sub-fund promotes investment in a portfolio that avoid significant harm to the Sustainable Development Goals (SDGs).

What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?

The Sub-fund has the following sustainability indicators:

The Sub-fund has the following sustainability indicators to measure the attainment of the E/S characteristics of the direct holdings in government bonds:

1. The % of investments in securities that are on the exclusion list as result of the application of Robeco's Exclusion Policy.
2. The average ESG score on Robeco's Country Sustainable Ranking.
3. The % of investments excluded based on the WGI Control of Corruption ranking.
4. The proportion of countries that hold a high negative score (-3) on SDG 16, based on the internally developed Country SDG Framework.

The Sub-fund has the following sustainability indicators to measure the attainment of the E/S characteristics of the direct holdings in corporate investments, i.e. equity or bonds:

1. The % of investments in securities that are on the exclusion list as result of the application of Robeco's Exclusion Policy.
2. The number of companies that are in violation of the UNGPs or OECD Guidelines for Multinational Enterprises and hence are a part of the Enhanced Engagement program.
3. The proportion of companies that hold a high or medium negative SDG score (-3 or -2) based on the internally developed SDG Framework.

● ***What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?***

The sustainable investments aim to contribute to the UN Sustainable Development Goals ("SDGs"), that have both social and environmental objectives. These are 17 goals that are globally recognised and include environmental goals such as climate action, clean water, life on land and water and social goals such as zero hunger, gender equality, education, etc. Robeco has developed a proprietary framework based on the UN SDGs through which an issuer's contribution to such SDGs is determined through a 3-step process. This process starts with a sector baseline on which a company's products are analysed to examine contribution to the society and environment. Further, the operational processes involved in creating such products is checked along with any controversies/litigation claims and remediation actions taken which are perused before a final SDG score is determined. The final score ranges between high negative (-3) to high positive (+3) and only those issuers which achieve positive SDG scores (+1, +2 and, +3) are regarded as Sustainable Investments.

● ***How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?***

The sustainable investments do no significant harm to any environmental or social sustainable investment objective by considering principal adverse impacts and aligning with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights. In addition, sustainable investments score positively on Robeco's SDG Framework, and therefore do not cause significant harm.

How have the indicators for adverse impacts on sustainability factors been taken into account?

Mandatory principal adverse impact indicators are considered through Robeco's SDG Framework, either directly or indirectly, when identifying sustainable investments for the Sub-fund. In addition, voluntary environmental and social indicators are taken into account, depending on their relevance for measuring impacts on the SDGs and the availability of data. A detailed description of the incorporation of principal adverse impacts is available via Robeco's Principal Adverse Impact Statement published on the Robeco website (<https://www.robeco.com/files/docm/docu-robeco-principal-adverse-impact-statement-summary-entity-level.pdf>). In this statement, Robeco sets out its approach to identifying and prioritizing principal adverse impacts, and how principal adverse impacts are considered as part of Robeco's investment due diligence process and procedures relating to research and analysis, exclusions and restrictions and/or voting and engagement. This description also explains how principal adverse impact indicators are considered by the SDG Framework.

How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The sustainable investments are aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights via both Robeco's Exclusion Policy and Robeco's SDG Framework.

Robeco's Exclusion Policy includes an explanation of how Robeco acts in accordance with the International Labor Organization (ILO) standards, United Nations Guiding Principles (UNGPs), United Nations Global Compact (UNGC) Principles and the Organization for Economic Co-operation and Development (OECD) Guidelines for Multinational Enterprises and is guided by these international treaties to assess the behaviour of companies. Robeco continuously screens its investments for breaches of these principles. In case of a breach, the company will be excluded or engaged with, and is not considered a sustainable investment.

Robeco's SDG Framework screens for breaches on these principles in the final step of the framework. In this step, Robeco checks whether the company concerned has been involved in any controversies. Involvement in any controversy will result in a negative SDG score for the company, meaning it is not a sustainable investment.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

Does this financial product consider principal adverse impacts on sustainability factors?

Yes, _____

The Sub-fund considers principal adverse impacts on sustainability factors as referred to in Annex I of the SFDR Delegated Regulation for the direct line investments.

Pre-investment, the following principal adverse impacts on sustainability factors are considered:

- Via the applied normative and activity-based exclusions, the following PAIs are considered:
 - Exposure to companies active in the fossil fuel sector (PAI 4, Table 1)
 - Violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1)
 - Activities negatively affecting biodiversity-sensitive areas (PAI 7, Table 1). The consideration of this PAI is currently restricted to applying exclusions to palm oil producing companies and for any breaches to the UNGC, UNGP and OECD Guidelines for Multinational Enterprises in relation to biodiversity.
 - Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons (PAI 14, Table 1)

Post-investment, the following principal adverse impacts on sustainability factors are taken into account:

- Via the application of the voting policy, the following PAIs are considered:
 - All indicators related to GHG emissions (PAI 1-6, Table 1)
 - Indicators related to social and employee matters (PAI 10-13, Table 1; PAI 5-8, Table 3)
- Via Robeco's entity engagement program, the following PAIs are considered:
 - All indicators related to Climate and other environment-related indicators (PAI 1-13, Table 1)
 - Violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1). On an ongoing basis, the investment universe is scanned for controversial behaviour in relation to the aforementioned principles and guidelines.
 - In addition, based on a yearly review of Robeco's performance on all mandatory and selected voluntary indicators, holdings of the Sub-fund that cause adverse impact might be selected for engagement.

More information is available via Robeco's Principal Adverse Impact Statement, published on Robeco's website. The Sub-fund will periodically report how it has considered the principal adverse impacts of its

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

investments in the Company's annual report, which will be made available each year on or before 30 April at the Sub-fund page highlighted in final section of this document.

No

What investment strategy does this financial product follow?

Robeco Sustainable Income Allocation is an actively managed fund that invests in a mix of asset classes across the world. The Sub-fund's objective is to achieve long term capital growth whilst maintaining a consistent level of income. The Sub-fund has a relatively low risk profile and uses asset allocation strategies mainly investing directly in bonds and taking exposure to other asset classes such as, but not exclusively, equities. The asset allocation strategy is subject to investments and volatility restrictions. The strategy integrates sustainability indicators on a continuous basis as part of the direct line investments or underlying fund due diligence process. Amongst others, the Sub-fund applies norms-based and activity-based exclusions, Robeco's good governance policy, Robeco's SDG framework and considers Principal Adverse Impacts in the investment process, and considers those elements in the due diligence of external funds. More product-specific information can be found on our website and the links provided in the final question of this disclosure.

What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?

The Sub-fund has the following binding elements for direct holdings in government bonds:

1. The Sub-fund's portfolio complies with Robeco's Exclusion Policy (<https://www.robeco.com/files/docm/docu-exclusion-policy.pdf>), based on certain exclusion criteria that Robeco believes are detrimental to society and incompatible with sustainable investment strategies. This means that the Sub-fund has 0% exposure to excluded securities, taking into account a grace period. Information with regards to the impact of the exclusions on the Sub-fund's universe can be found at <https://www.robeco.com/files/docm/docu-exclusion-list.pdf>.
2. The Sub-fund's investments have a minimum average ESG score of 6 on the Country Sustainability Ranking.
3. The Sub-fund excludes sovereign bonds issued by the bottom 15% of the WGI Control of Corruption ranking.
4. The Sub-fund excludes all countries which have a high negative score (-3) on SDG 16.

The Sub-fund has the following binding elements for direct holdings in corporate investments, i.e. equity or bonds:

1. The Sub-fund's portfolio complies with Robeco's Exclusion Policy (<https://www.robeco.com/files/docm/docu-exclusion-policy.pdf>) that is based on certain exclusion criteria with regards to products (including controversial weapons, tobacco, palm oil, and fossil fuel) and business practices that Robeco believes are detrimental to society and incompatible with sustainable investment strategies. This means that the Sub-fund has 0% exposure to excluded securities, taking into account a grace period. Information with regards to the impact of the exclusions on the Sub-fund's universe can be found at <https://www.robeco.com/files/docm/docu-exclusion-list.pdf>.
2. The Sub-fund scrutinizes investment in companies that are in breach of the ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises. If a company in the portfolio breaches one of the international guidelines during the investment period, the company will become part of the Enhanced Engagement program.
3. For corporate bond and equity investments, the Sub-fund excludes all high or medium negative SDG scores (-3 or -2).

What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?

The investment strategy guides investment decisions based on factors such as investment objectives and risk tolerance.

The Sub-fund does not commit to a minimum rate to reduce the scope of investments prior to the application of the investment strategy.

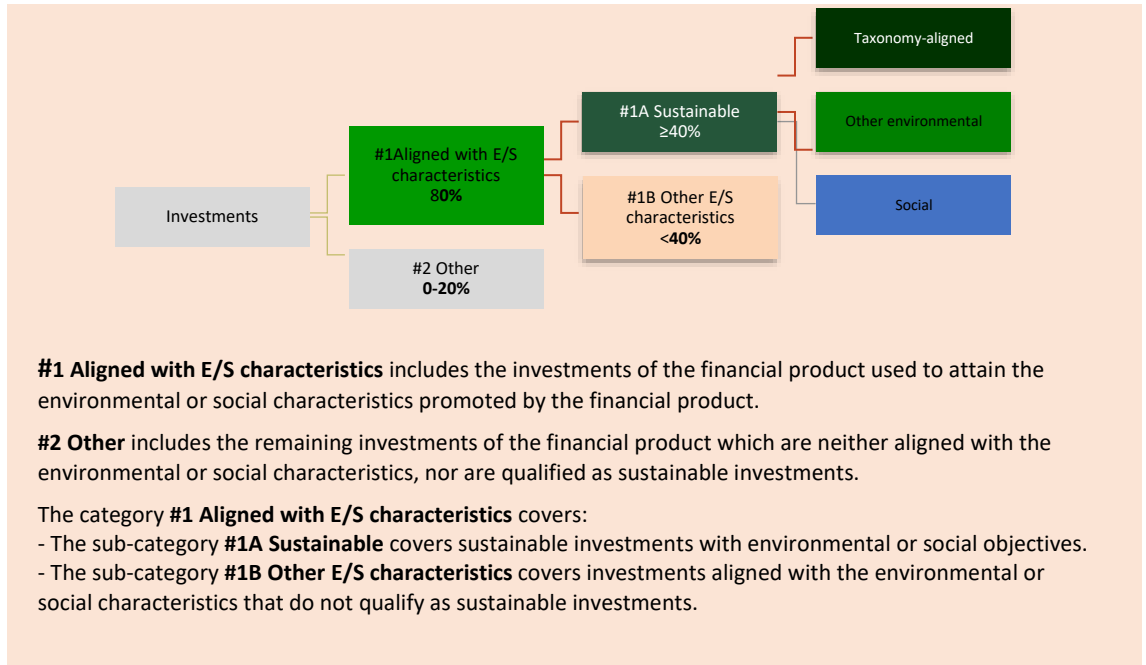

What is the policy to assess good governance practices of the investee companies?

Robeco has a Good Governance policy to assess governance practices of companies. The policy describes how Robeco determines if and when a company does not follow good governance practices and is therefore excluded from the initial investment universe for Article 8 and 9 products. Robeco's Good Governance policy applies to the Sub-fund and tests on a set of governance criteria that reflect widely recognized industry established norms and include topics as employee relations, management structure, tax compliance and remuneration.

The Good Governance test consists of criteria on such topics that are examined for investee companies and further explained in Robeco's Good Governance policy <https://www.robeco.com/files/docm/docu-robeco-good-governance-policy.pdf>. Additionally, the companies that do not pass the good governance test are reflected in the exclusion list that can be accessed here - <https://www.robeco.com/files/docm/docu-exclusion-list.pdf>.

What is the asset allocation planned for this financial product?

At least 80% of the investments are aligned with the E/S characteristics of the Sub-fund. The Sub-fund plans to make a minimum of 40% sustainable investments, measured by positive scores via Robeco's SDG Framework. The investments in the category Other, estimated between 0-20%, are mostly in cash, cash equivalents and derivatives as further described below. The planned asset allocation is monitored continuously, and evaluated on a yearly basis.

How does the use of derivatives attain the environmental or social characteristics promoted by the financial product?

Good governance practices include sound management structures, employee relations, remuneration of staff and tax compliance.

Asset allocation describes the share of investments in specific assets.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure (CapEx)** showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure (OpEx)** reflecting green operational activities of investee companies.

The Sub-fund does not make use of derivatives to attain the environmental or social characteristics promoted by the financial product. The Sub-fund may make use of derivatives for hedging, liquidity management and efficient portfolio management as well as investment purposes. Exchange traded and over-the-counter derivatives are permitted, including but not limited to futures, swaps, options and currency forwards. Whilst the Sub-fund may use derivatives both for investment purposes as well as for hedging and efficient portfolio management, it does not utilize derivatives for such purposes outside the intended share of investments allocated to the 'Other' category.

In case the Sub-fund uses derivatives, the underlying shall comply with the investment policy. Where relevant, minimum environmental or social safeguards are taken into account as described below.

To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

0%. The Sub-fund does not intend to make Taxonomy-aligned investments. It cannot be excluded that among the Sub-fund's holdings certain investments are Taxonomy aligned. The Sub-fund will report on Taxonomy-aligned investment in the periodic disclosures. In the future, once data-availability in relation to the EU Taxonomy will improve, Robeco might consider setting a target based on turnover or CAPEX. Robeco currently relies on third-party data, including data in relation to companies that do not disclose on the EU Taxonomy alignment of their activities. EU Taxonomy-alignment data is not yet subject to a review by third parties. The Sub-fund only makes investments in equity and therefore it does not have sovereign exposures. The expected level of alignment with and without sovereign bonds is the same.

Does the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy?⁹⁹

Yes

In fossil gas In nuclear energy

No

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.*

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures
 ** As the investments are not Taxonomy-aligned, the exclusion of sovereign bonds has no impact on the graph and therefore no such percentage is shown here.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and

⁹⁹ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

among others have greenhouse gas emission levels corresponding to the best performance.

 are sustainable investments with an environmental objective that **do not take into account the criteria for environmentally sustainable economic activities under the EU Taxonomy.**

 **What is the minimum share of investments in transitional and enabling activities?**

0%.

What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?

The Sub-fund intends to make sustainable investments, measured as positive scores via Robeco's SDG Framework. Among those could be investments with environmental objectives that do not qualify as Taxonomy-aligned. The environmental objectives of the Sub-fund are attained by investing in companies that score positively on SDG 12 (Responsible consumption and production), SDG 13 (Climate action), SDG 14 (Life below water), and SDG 15 (Life on land) in Robeco's SDG Framework. While the sum of sustainable investments with an environmental objective and socially sustainable investments always adds up to the Sub-fund's minimum proportion of 40% sustainable investments, we do not commit to a minimum share of sustainable investments with an environmental objective because the Sub-fund's investment strategy does not have a specific environmental investment objective. Therefore, the minimum share of sustainable investments with an environmental objective is 0%.

What is the minimum share of socially sustainable investments?

The Sub-fund intends to make sustainable investments, measured as positive scores via Robeco's SDG Framework. Among those could be investments with social objectives. The social objectives of the Sub-fund are attained by investing in companies that score positively on SDG 1 (No poverty), SDG 2 (Zero hunger), SDG 3 (Good health and well-being), SDG 4 (Quality education), SDG 5 (Gender equality), SDG 6 (Clean water and sanitation), SDG 7 (Affordable and clean energy), SDG 8 (Decent work and economic growth), SDG 9 (Industry, innovation and infrastructure), SDG 10 (Reduced inequalities), SDG 11 (Sustainable cities and communities), SDG 16 (Peace, justice and strong institutions) and SDG 17 (Partnerships for the goals), in Robeco's SDG Framework. While the sum of socially sustainable investments and sustainable investments with an environmental objective always adds up to the Sub-fund's minimum proportion of 40% sustainable investments, we do not commit to a minimum share of socially sustainable investments because the Sub-fund's investment strategy does not have a specific socially sustainable investment objective. Therefore, the minimum share of socially sustainable investments is 0%.

What investments are included under "#2 Other", what is their purpose and are there any minimum environmental or social safeguards?

The type of instruments included under "#2 Other" and their purpose are outlined in Annex I of this Prospectus under the header 'Financial instruments and investment restrictions'. They include cash, cash equivalents, as well as investment funds and eligible asset classes (other than bonds and equities) that do not specifically promote E/S characteristics. As indicated above, the Sub-fund does not make use of derivatives to attain the environmental or social characteristics promoted. The Sub-fund may make use of derivatives, which thus always fall under the category "#2 Other", for hedging, liquidity management and efficient portfolio management as well as investment purposes. Exchange traded and over-the-counter derivatives are permitted, including but not limited to futures, swaps, options and currency forwards. In case the Sub-fund uses derivatives, the underlying shall comply with the investment policy. Where relevant, minimum environmental or social safeguards are taken into account, by, for example, applying Robeco's Exclusion Policy for any single security derivative.

Is a specific index designated as a reference benchmark to determine whether this financial product is aligned with the environmental and/or social characteristics that it promotes?

Not applicable.

Reference benchmarks are indexes to measure

whether the financial product attains the environmental or social characteristics that they promote.

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

What environmental and/or social characteristics are promoted by this financial product?

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

The Sub-fund has the following E/S characteristics for direct holdings in government bonds:

1. The Sub-fund promotes certain minimal environmental and social standards and therefore applies exclusion criteria with regards to products and business practices that Robeco believes are detrimental to society and incompatible with sustainable investment strategies, such as exposure to controversial behaviour, controversial weapons, and fossil fuels. Robeco deems investing in government bonds (federal or local) of countries where serious violations of human rights or a collapse of the governance structure take place as unsustainable. In addition, Robeco will follow applicable sanctions of the UN, EU or US to which it is subject and follows any mandatory (investment) restrictions deriving therefrom.
2. The Sub-fund promotes investment in countries with minimum average scores on the RobecoSAM Country Sustainability Ranking. The RobecoSAM Country Sustainability Ranking incorporates around 50 ESG factors such as aging, corruption, social unrest, political risks and environmental risks.
3. The Sub-fund promotes investment in countries with policies and institutional frameworks to prevent and combat corruption.
4. The Sub-fund limits investments in countries that do the most harm to peaceful and inclusive societies for sustainable development.

The Sub-fund has the following E/S characteristics for direct holdings in corporate investments, i.e. equity or bonds:

1. The Sub-fund applies certain exclusion criteria with regards to products and business practices that Robeco believes are detrimental to society and incompatible with sustainable investment strategies, such as exposure to controversial behaviour, controversial weapons, and fossil fuels.
2. The Sub-fund promotes adherence to and conducting business activities in accordance with: the United Nations Universal Declaration of Human Rights, the International Labor Organization's (ILO) labor standards, the United Nations Guiding Principles for Business and Human Rights (UNGPs), the United Nations Global Compact (UNGC) and the OECD Guidelines for Multinational Enterprises, by scrutinizing companies that violate these principles.
3. The Sub-fund promotes investment in a portfolio that avoid significant harm to the Sustainable Development Goals (SDGs).

What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?

The Sub-fund has the following sustainability indicators:

The Sub-fund has the following sustainability indicators to measure the attainment of the E/S characteristics of the direct holdings in government bonds:

1. The % of investments in securities that are on the exclusion list as result of the application of Robeco's Exclusion Policy.
2. The average ESG score on Robeco's Country Sustainable Ranking.
3. The % of investments excluded based on the WGI Control of Corruption ranking.
4. The proportion of countries that hold a high negative score (-3) on SDG 16, based on the internally developed Country SDG Framework.

The Sub-fund has the following sustainability indicators to measure the attainment of the E/S characteristics of the direct holdings in corporate investments, i.e. equity or bonds:

1. The % of investments in securities that are on the exclusion list as result of the application of Robeco's Exclusion Policy.
2. The number of companies that are in violation of the UNGPs or OECD Guidelines for Multinational Enterprises and hence are a part of the Enhanced Engagement program.
3. The proportion of companies that hold a high or medium negative SDG score (-3 or -2) based on

the internally developed SDG Framework.

What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?

The sustainable investments aim to contribute to the UN Sustainable Development Goals ("SDGs"), that have both social and environmental objectives. These are 17 goals that are globally recognised and include environmental goals such as climate action, clean water, life on land and water and social goals such as zero hunger, gender equality, education, etc. Robeco has developed a proprietary framework based on the UN SDGs through which an issuer's contribution to such SDGs is determined through a 3-step process. This process starts with a sector baseline on which a company's products are analysed to examine contribution to the society and environment. Further, the operational processes involved in creating such products is checked along with any controversies/litigation claims and remediation actions taken which are perused before a final SDG score is determined. The final score ranges between high negative (-3) to high positive (+3) and only those issuers which achieve positive SDG scores (+1, +2 and, +3) are regarded as Sustainable Investments.

How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?

The sustainable investments do no significant harm to any environmental or social sustainable investment objective by considering principal adverse impacts and aligning with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights. In addition, sustainable investments score positively on Robeco's SDG Framework, and therefore do not cause significant harm.

How have the indicators for adverse impacts on sustainability factors been taken into account?

Mandatory principal adverse impact indicators are considered through Robeco's SDG Framework, either directly or indirectly, when identifying sustainable investments for the Sub-fund. In addition, voluntary environmental and social indicators are taken into account, depending on their relevance for measuring impacts on the SDGs and the availability of data. A detailed description of the incorporation of principal adverse impacts is available via Robeco's Principal Adverse Impact Statement published on the Robeco website (<https://www.robeco.com/files/docm/docu-robeco-principal-adverse-impact-statement-summary-entity-level.pdf>). In this statement, Robeco sets out its approach to identifying and prioritizing principal adverse impacts, and how principal adverse impacts are considered as part of Robeco's investment due diligence process and procedures relating to research and analysis, exclusions and restrictions and/or voting and engagement. This description also explains how principal adverse impact indicators are considered by the SDG Framework.

How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The sustainable investments are aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights via both Robeco's Exclusion Policy and Robeco's SDG Framework.

Robeco's Exclusion Policy includes an explanation of how Robeco acts in accordance with the International Labor Organization (ILO) standards, United Nations Guiding Principles (UNGPs), United Nations Global Compact (UNGC) Principles and the Organization for Economic Co-operation and Development (OECD) Guidelines for Multinational Enterprises and is guided by these international treaties to assess the behaviour of companies. Robeco continuously screens its investments for breaches of these principles. In case of a breach, the company will be excluded or engaged with, and is not considered a sustainable investment.

Robeco's SDG Framework screens for breaches on these principles in the final step of the framework. In this step, Robeco checks whether the company concerned has been involved in any controversies. Involvement in any controversy will result in a negative SDG score for the company, meaning it is not a sustainable investment.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

Does this financial product consider principal adverse impacts on sustainability factors?

Yes, _____

The Sub-fund considers principal adverse impacts on sustainability factors as referred to in Annex I of the SFDR Delegated Regulation for the direct line investments.

Pre-investment, the following principal adverse impacts on sustainability factors are considered:

- Via the applied normative and activity-based exclusions, the following PAIs are considered:
 - Exposure to companies active in the fossil fuel sector (PAI 4, Table 1)
 - Violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1)
 - Activities negatively affecting biodiversity-sensitive areas (PAI 7, Table 1). The consideration of this PAI is currently restricted to applying exclusions to palm oil producing companies and for any breaches to the UNGC, UNGP and OECD Guidelines for Multinational Enterprises in relation to biodiversity.
 - Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons (PAI 14, Table 1)

Post-investment, the following principal adverse impacts on sustainability factors are taken into account:

- Via the application of the voting policy, the following PAIs are considered:
 - All indicators related to GHG emissions (PAI 1-6, Table 1)
 - Indicators related to social and employee matters (PAI 10-13, Table 1; PAI 5-8, Table 3)
- Via Robeco's entity engagement program, the following PAIs are considered:
 - All indicators related to Climate and other environment-related indicators (PAI 1-13, Table 1)
 - Violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1). On an ongoing basis, the investment universe is scanned for controversial behaviour in relation to the aforementioned principles and guidelines.
 - In addition, based on a yearly review of Robeco's performance on all mandatory and selected voluntary indicators, holdings of the Sub-fund that cause adverse impact might be selected for engagement.

More information is available via Robeco's Principal Adverse Impact Statement, published on Robeco's website. The Sub-fund will periodically report how it has considered the principal adverse impacts of its investments in the Company's annual report, which will be made available each year on or before 30 April at the Sub-fund page highlighted in final section of this document.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

No

What investment strategy does this financial product follow?

Robeco Sustainable Diversified Allocation is an actively managed fund that invests in a mix of asset classes across the world. The Sub-fund's objective is to achieve a better return than the index. The Sub-fund has a balanced risk profile and uses asset allocation strategies mainly investing directly in equities and bonds and taking exposure to other asset classes such as, but not exclusively, derivatives, deposits and money market instruments. The strategy integrates sustainability indicators on a continuous basis as part of the direct line investments or underlying fund due diligence process.

Amongst others, the Sub-fund applies norms-based and activity-based exclusions, Robeco's good governance policy, Robeco's SDG framework and considers Principal Adverse Impacts in the investment process, and considers those elements in the due diligence of external funds. More product-specific information can be found on our website and the links provided in the final question of this disclosure.

What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?

The Sub-fund has the following binding elements for direct holdings in government bonds:

1. The Sub-fund's portfolio complies with Robeco's Exclusion Policy (<https://www.robeco.com/files/docm/docu-exclusion-policy.pdf>), based on certain exclusion criteria that Robeco believes are detrimental to society and incompatible with sustainable investment strategies. This means that the Sub-fund has 0% exposure to excluded securities, taking into account a grace period. Information with regards to the impact of the exclusions on the Sub-fund's universe can be found at <https://www.robeco.com/files/docm/docu-exclusion-list.pdf>.
2. The Sub-fund's investments have a minimum average ESG score of 6 on the Country Sustainability Ranking.
3. The Sub-fund excludes sovereign bonds issued by the bottom 15% of the WGI Control of Corruption ranking.
4. The Sub-fund excludes all countries which have a high negative score (-3) on SDG 16.

The Sub-fund has the following binding elements for direct holdings in corporate investments, i.e. equity or bonds:

1. The Sub-fund's portfolio complies with Robeco's Exclusion Policy (<https://www.robeco.com/files/docm/docu-exclusion-policy.pdf>) that is based on certain exclusion criteria with regards to products (including controversial weapons, tobacco, palm oil, and fossil fuel) and business practices that Robeco believes are detrimental to society and incompatible with sustainable investment strategies. This means that the Sub-fund has 0% exposure to excluded securities, taking into account a grace period. Information with regards to the impact of the exclusions on the Sub-fund's universe can be found at <https://www.robeco.com/files/docm/docu-exclusion-list.pdf>.
2. The Sub-fund scrutinizes investment in companies that are in breach of the ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises. If a company in the portfolio breaches one of the international guidelines during the investment period, the company will become part of the Enhanced Engagement program.
3. For corporate bond and equity investments, the Sub-fund excludes all high or medium negative SDG scores (-3 or -2).

What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?

The investment strategy guides investment decisions based on factors such as investment objectives and risk tolerance.

The Sub-fund does not commit to a minimum rate to reduce the scope of investments prior to the application of the investment strategy.

What is the policy to assess good governance practices of the investee companies?

Robeco has a Good Governance policy to assess governance practices of companies. The policy describes how Robeco determines if and when a company does not follow good governance practices and is therefore excluded from the initial investment universe for Article 8 and 9 products. Robeco's Good Governance policy applies to the Sub-fund and tests on a set of governance criteria that reflect widely recognized industry established norms and include topics as employee relations, management structure, tax compliance and remuneration.

The Good Governance test consists of criteria on such topics that are examined for investee companies and further explained in Robeco's Good Governance policy <https://www.robeco.com/files/docm/docu-robeco-good-governance-policy.pdf>. Additionally, the companies that do not pass the good governance test are reflected in the exclusion list that can be accessed here - <https://www.robeco.com/files/docm/docu-exclusion-list.pdf>.

What is the asset allocation planned for this financial product?

At least 80% of the investments are aligned with the E/S characteristics of the Sub-fund. The Sub-fund plans to make a minimum of 40% sustainable investments, measured by positive scores via Robeco's SDG Framework. The investments in the category Other, estimated between 0-20%, are mostly in cash, cash equivalents and derivatives as further described below. The planned asset allocation is monitored continuously, and evaluated on a yearly basis.

How does the use of derivatives attain the environmental or social characteristics promoted by the financial product?

Good governance practices include sound management structures, employee relations, remuneration of staff and tax compliance.

Asset allocation describes the share of investments in specific assets. Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

The Sub-fund does not make use of derivatives to attain the environmental or social characteristics promoted by the financial product. The Sub-fund may make use of derivatives for hedging, liquidity management and efficient portfolio management as well as investment purposes. Exchange traded and over-the-counter derivatives are permitted, including but not limited to futures, swaps, options and currency forwards. Whilst the Sub-fund may use derivatives both for investment purposes as well as for hedging and efficient portfolio management, it does not utilize derivatives for such purposes outside the intended share of investments allocated to the 'Other' category. In case the Sub-fund uses derivatives, the underlying shall comply with the investment policy. Where relevant, minimum environmental or social safeguards are taken into account as described below.

To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

0%. The Sub-fund does not intend to make Taxonomy-aligned investments. It cannot be excluded that among the Sub-fund's holdings certain investments are Taxonomy aligned. The Sub-fund will report on Taxonomy-aligned investment in the periodic disclosures. In the future, once data-availability in relation to the EU Taxonomy will improve, Robeco might consider setting a target based on turnover or CAPEX. Robeco currently relies on third-party data, including data in relation to companies that do not disclose on the EU Taxonomy alignment of their activities. EU Taxonomy-alignment data is not yet subject to a review by third parties. The Sub-fund only makes investments in equity and therefore it does not have sovereign exposures. The expected level of alignment with and without sovereign bonds is the same.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to renewable power

Does the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy?¹⁰⁰

Yes

In fossil gas In nuclear energy

No

¹⁰⁰ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

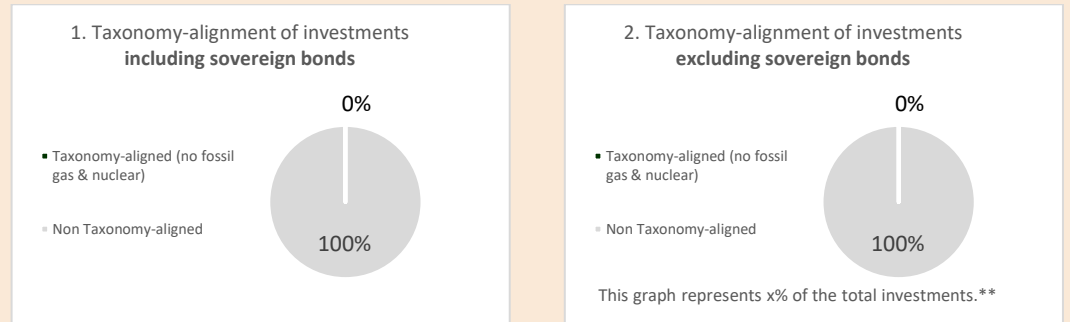

or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

 are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.*

*** For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures**
**** As the investments are not Taxonomy-aligned, the exclusion of sovereign bonds has no impact on the graph and therefore no such percentage is shown here.**

What is the minimum share of investments in transitional and enabling activities?

0%.

What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?

The Sub-fund intends to make sustainable investments, measured as positive scores via Robeco's SDG Framework. Among those could be investments with environmental objectives that do not qualify as Taxonomy-aligned. The environmental objectives of the Sub-fund are attained by investing in companies that score positively on SDG 12 (Responsible consumption and production), SDG 13 (Climate action), SDG 14 (Life below water), and SDG 15 (Life on land) in Robeco's SDG Framework. While the sum of sustainable investments with an environmental objective and socially sustainable investments always adds up to the Sub-fund's minimum proportion of 40% sustainable investments, we do not commit to a minimum share of sustainable investments with an environmental objective because the Sub-fund's investment strategy does not have a specific environmental investment objective. Therefore, the minimum share of sustainable investments with an environmental objective is 0%.

What is the minimum share of socially sustainable investments?

The Sub-fund intends to make sustainable investments, measured as positive scores via Robeco's SDG Framework. Among those could be investments with social objectives. The social objectives of the Sub-fund are attained by investing in companies that score positively on SDG 1 (No poverty), SDG 2 (Zero hunger), SDG 3 (Good health and well-being), SDG 4 (Quality education), SDG 5 (Gender equality), SDG 6 (Clear water and sanitation), SDG 7 (Affordable and clean energy), SDG 8 (Decent work and economic growth), SDG 9 (Industry, innovation and infrastructure), SDG 10 (Reduced inequalities), SDG 11 (Sustainable cities and communities), SDG 16 (Peace, justice and strong institutions) and SDG 17 (Partnerships for the goals), in Robeco's SDG Framework. While the sum of socially sustainable investments and sustainable investments with an environmental objective always adds up to the Sub-fund's minimum proportion of 40% sustainable investments, we do not commit to a minimum share of

socially sustainable investments because the Sub-fund's investment strategy does not have a specific socially sustainable investment objective. Therefore, the minimum share of socially sustainable investments is 0%.

What investments are included under "#2 Other", what is their purpose and are there any minimum environmental or social safeguards?

The type of instruments included under "#2 Other" and their purpose are outlined in Annex I of this Prospectus under the header 'Financial instruments and investment restrictions'. They include cash, cash equivalents, as well as investment funds and eligible asset classes (other than bonds and equities) that do not specifically promote E/S characteristics. As indicated above, the Sub-fund does not make use of derivatives to attain the environmental or social characteristics promoted. The Sub-fund may make use of derivatives, which thus always fall under the category "#2 Other", for hedging, liquidity management and efficient portfolio management as well as investment purposes. Exchange traded and over-the-counter derivatives are permitted, including but not limited to futures, swaps, options and currency forwards. In case the Sub-fund uses derivatives, the underlying shall comply with the investment policy. Where relevant, minimum environmental or social safeguards are taken into account, by, for example, applying Robeco's Exclusion Policy for any single security derivative.

Is a specific index designated as a reference benchmark to determine whether this financial product is aligned with the environmental and/or social characteristics that it promotes?

Not applicable.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

Where can I find more product specific information online?

This Addendum is only valid if accompanied by a Prospectus dated 17 December 2023.

ADDENDUM DATED 16 APRIL 2024 TO THE PROSPECTUS OF ROBECO CAPITAL GROWTH FUNDS DATED 17 DECEMBER 2023

This document is an addendum dated 16 April 2024 (the "**Addendum**") to the prospectus of Robeco Capital Growth Funds (the "**Company**") dated 17 December 2023 (the "**Prospectus**"), and may not be distributed without the Prospectus.

Potential investors shall refer to the Prospectus in respect of any item or information not included in this Addendum. Terms not defined in this Addendum have the same meaning as in the Prospectus.

This Addendum contains information on the changes made to the Prospectus and the Sub-fund **Robeco Emerging Markets Ex China SDG Engagement Equities** (the "**Sub-fund**") with effect from 16 April 2024.

1) Change of Name

The Sub-fund will be renamed "**Robeco Emerging Markets Asia Select Equities**".

2) Replacement of the sub-fund specific information under Appendix I

Section 1. dd) of "Appendix I – Information per Sub-fund" will be amended so as to read as follows:

dd) Robeco Emerging Markets Asia Select Equities

Investment policy

Objective The Sub-fund aims to provide long term capital growth while at the same time promoting certain ESG (i.e. Environmental, Social and corporate Governance) characteristics and integrating sustainability risks in the investment process.

Strategy The Sub-fund will take exposure of at least two-thirds of its total assets to equities of companies incorporated in Asian Emerging Countries with the exception of China or exercising a preponderant part of their economic activities in that region.

The portfolio of the Sub-fund is constructed via bottom-up and valuation oriented stock selection. The Sub-fund has a focused, regionally concentrated, portfolio. However, it is well diversified in terms of the number of holdings (typically containing 30-60 names). The reference to "Select" in the name of the Sub-fund refers to an approach whereby certain countries are excluded from the investment universe in line with the Benchmark.

The Sub-fund promotes environmental and/or social characteristics within the meaning of Article 8 of the Regulation (EU) 2019/2088 of 27 November 2019 on sustainability-related disclosures in the financial sector. The Sub-fund strives for economic results, while at the same time taking into account environmental, social and governance characteristics which are further explained in Appendix VIII.

The Sub-fund is actively managed. The securities selected for the Sub-fund's investment universe may be components of the Benchmark, but securities outside the Benchmark may be selected too. The Sub-fund can deviate substantially from the weightings of the Benchmark. The Portfolio Manager has discretion over the composition of the portfolio subject to the investment objectives. The Sub-fund aims to outperform the Benchmark over the long run, whilst still controlling relative risk through the applications of limits (on VaR Ratio) to the extent of deviation from the Benchmark. This will consequently limit the deviation of the performance relative to the Benchmark.

The Benchmark is a broad market weighted index that is not consistent with the environmental, social and governance characteristics promoted by the Sub-fund.

Financial Instruments and Investment Restrictions With due consideration given to the investment restrictions and to the extent permitted by the applicable legislation, the Sub-fund may invest in equities, convertible bonds, bonds and derivatives to achieve the investment goals of the Sub-fund.

The Sub-fund is allowed to invest in money market instruments, bank deposits (other than deposits at sight) and other eligible liquid assets for treasury purposes and in case of unfavourable market conditions.

The Sub-fund may hold up to 20% of its net assets in ancillary liquid assets (bank deposits at sight, such as cash held in current accounts). Under exceptionally unfavourable market conditions and if justified in the interest of the Shareholders, the Sub-fund may temporarily exceed the aforementioned limit for investment in ancillary liquid assets and other liquid instruments.

Except for a maximum of 10% of its net assets (as permitted by investment restriction I (2) in Appendix II), the Sub-fund will (without limiting the possibility to invest in compliance with its investment policy in assets referred to under investment restrictions I (1) c), d), e) and f)) only invest in transferable securities and money market instruments traded or listed on markets falling under investment restrictions I (1) a) and b).

Exchange traded and over-the-counter derivatives are permitted, including but not limited to futures, swaps, options, currency forwards and/or combinations of the above. Whilst the Sub-fund may use derivatives for investment purposes as well as for hedging and efficient portfolio management, it does not intend to utilize derivatives extensively for such purposes.

Currency The Sub-fund is exposed to the exchange rate movements of the currencies in which the assets of the Sub-fund are denominated. For the management of the Sub-fund, expectations of currency returns will be taken into consideration when making country allocations/stock selection decisions.

Profile of the typical Investor The Sub-fund is suitable for Investors who seek ESG considerations to be integrated as binding element in the investment process, while still seeking optimum returns. It is also suitable for informed and/or experienced Investors wishing to attain defined investment objectives. The Sub-fund does not provide a capital guarantee. The Investor must be able to accept volatility. This Sub-fund is suitable for Investors who can afford to set aside the capital for at least 5-7 years. It can accommodate the investment objective of capital growth, income and/or portfolio diversification.

Please note that such information is provided for reference only and Investors should consider their own circumstances, including without limitation, their own risk tolerance level, financial circumstance, investment objective etc., before making any investment decisions. If in doubt, Investors should seek professional advice.

Risk profile of the Sub-fund In emerging and less developed markets the legal, judicial and regulatory infrastructure is still developing and there may be legal uncertainty both for local market participants and their overseas counterparts. Some markets may carry higher risks for Investors who should therefore ensure that, before investing, they understand the risks involved and are satisfied that despite the substantial risk of loss of investment, their investment is suitable as part of their portfolio.

Also, the investments in equity of companies may involve risks (for example linked to transferable securities and stock markets), such as exchange rates and volatility risks. The Sub-fund's investments are subject to market fluctuations. No assurance can, therefore, be given that the Sub-fund's investment objective will be achieved. It cannot be guaranteed either that the value of a Share in the Sub-fund will not fall below its value at the time of acquisition.

The sustainability risk profile can be split into different sustainability risk sources and is expressed using categories ranging from lowest risk till highest risk. The risk classification relates to both the probability and potential negative impact of sustainability risk on the portfolio return. The classification relates to the portfolio only: there is no comparison to any benchmark.

Robeco distinguishes between sustainability risk of companies and governments. For companies, there is a total risk classification, a classification of environmental risks, a

classification of social risks, and a classification of governance risk. The classifications are based on a variety of Environmental, Social, and Governance (ESG) issues provided by a third party that is specialized in the assessment of sustainability risks. The classification provides an indication of the probability and potential impact of an ESG event in the period of one year.

<i>Company Risk</i>	← <i>Lowest</i>	<i>Highest</i> →
Sustainability Risk (Overall)		X
Environmental Risk	X	
Social Risk		X
Governance Risk		X

Robeco makes use of a climate risk metric provided by a third party specialized in climate risk. Based on a 1.5-degrees decarbonization pathway, the potential impact of climate transition risk is estimated. This is a reflection of the potential decarbonization costs for the next 80 years, of which the heavy point is estimated to be approximately in 15 years. This impact on return is compared to the market risk profile of the Sub-fund and turned into risk classification.

<i>Company Risk</i>	← <i>Lowest</i>	<i>Highest</i>
Climate Transition Risk		X

Climate change leads to extreme weather events that may have a negative economic impact on investments. Based on a climate risk model provided by a third party specialized in climate risk, the physical risks that the portfolio is most vulnerable to are assessed. This Sub-fund's primary physical risks are (1) Extreme Heat, (2) Coastal Flooding, and (3) Extreme Precipitation.

Climate risk models are complex and surrounded by a high degree of uncertainty as result of assumptions and availability of data. As result, a change in the methodology may lead to a change in the risk classification. The climate risk model assesses the potential costs for decarbonizing for companies. Active policies and ambitions of companies are not taken into account contrary to the 'ESG' scores that focus on policies and ambitions.

Risk considerations for the Sub-fund	<p>Investors should note that, in addition to the above mentioned risks, the Sub-fund may use derivatives as part of its investment strategy and such investments are inherently volatile and the Sub-fund could potentially be exposed to additional risks and costs should the market move against it. Such market conditions could mean that Investors could, in certain circumstances, face minimal or no returns, or may even suffer a loss on such investments.</p> <p>The investment risk will be measured using quantitative techniques. The investment risk of using derivatives is also incorporated in these quantitative techniques. For more information regarding e.g. the exposure calculation method, the maximum leverage or the expected levels of leverage as a result of the use of derivatives as well as a brief explanation as to the basis for such calculation, please consult APPENDIX III – RISK MANAGEMENT PROCESS.</p>
Portfolio Manager	The Management Company has appointed Robeco Hong Kong Ltd. as Portfolio Manager. Accordingly, Robeco Hong Kong Ltd. may be in charge of all or part of the day-to-day management of the assets of the Sub-fund. The agreement with Robeco Hong Kong Ltd. shall terminate immediately on termination of the Management Company Services Agreement.

In addition, the Management Company is entitled to charge a Performance Fee to the applicable Share Classes of this Sub-fund. The Index is the MSCI Emerging Markets Asia Ex China Ex Thailand Index-net.

For further details, please consult Section 3.1 [Fees and Expenses](#) and [APPENDIX V – PERFORMANCE FEE](#). Please see above the Performance Fee portion.

3) Amendment of Appendix VI

The information contained in Appendix VI in relation to the Sub-fund will be amended as follows:

APPENDIX VI – BENCHMARKS

Sub-fund	Benchmark used	Asset allocation	Performance fee calculation	Not in scope of the Benchmark Regulation	ESG characteristics
<i>Global Equity Sub-funds</i>					
Robeco Emerging Markets Asia Select Equities	MSCI Emerging Markets Asia Ex China Ex Thailand Index		X		

4) Replacement of pre-contractual disclosures in Appendix VIII

The pre-contractual disclosures for the Sub-fund under "Appendix VIII – Sustainability Disclosures per Sub-fund" will be replaced as follows:

dd) Robeco Emerging Markets Asia Select Equities

Pre-contractual disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Product name: Robeco Emerging Markets Asia Select Equities

Legal entity identifier: 213800Q93GTW1W513C42

Environmental and/or social characteristics

Does this financial product have a sustainable investment objective?

Yes No

<p><input type="checkbox"/> It will make a minimum of sustainable investments with an environmental objective: ___%</p> <ul style="list-style-type: none"> <input type="checkbox"/> in economic activities that qualify as environmentally sustainable under the EU Taxonomy <input type="checkbox"/> in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy <p><input type="checkbox"/> It will make a minimum of sustainable investments with a social objective: ___%</p>	<p><input checked="" type="checkbox"/> It promotes Environmental/Social (E/S) characteristics and while it does not have as its objective a sustainable investment, it will have a minimum proportion of 35% of sustainable investments</p> <ul style="list-style-type: none"> <input type="checkbox"/> with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy <input type="checkbox"/> with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy <input checked="" type="checkbox"/> with a social objective <p><input type="checkbox"/> It promotes E/S characteristics, but will not make any sustainable investments</p>
-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------	---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

What environmental and/or social characteristics are promoted by this financial product?

- The Sub-fund has the following E/S characteristics:
- The Sub-fund promotes certain minimum environmental and social safeguards through applying exclusion criteria with regards to products and business practices that Robeco believes are detrimental to society and incompatible with sustainable investment strategies, such as exposure to controversial behavior, controversial weapons, and fossil fuels.
 - The Sub-fund promotes adherence to and conducting business activities in accordance with the United Nations Universal Declaration of Human Rights, the International Labor Organization's (ILO) labor standards, the United Nations Guiding Principles for Business and Human Rights (UNGPs), the

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

United Nations Global Compact (UNGC) and the OECD Guidelines for Multinational Enterprises, by scrutinizing companies that violate these principles.

3. The Sub-fund promotes good governance and sustainable corporate practices through proxy voting, which contributes to long-term shareholder value creation. This includes taking an active stance on social and environmental topics through Robeco's proxy voting policy.
4. The Sub-fund limits investing in companies with an elevated sustainability risk based on ESG risk scores whereas all such investments require separate approval of a dedicated committee that oversees that all investments are substantiated and eligible based on a fundamental review on the sustainability risk.

There is no reference benchmark designated for the purpose of attaining the environmental or social characteristics promoted by the Sub-fund.

● ***What sustainability indicators are used to measure the attainment of each of the environmental or social characteristics promoted by this financial product?***

The Sub-fund has the following sustainability indicators:

1. The % of investments in securities that are on Robeco's Exclusion list as result of the application of Robeco's Exclusion Policy.
2. The number of companies that are in violation of the ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises and hence are a part of the Enhanced Engagement program.
3. The number of holdings and agenda items voted.
4. The % of holdings with an elevated sustainability risk profile.

● ***What are the objectives of the sustainable investments that the financial product partially intends to make and how does the sustainable investment contribute to such objectives?***

The sustainable investments aim to contribute to the UN Sustainable Development Goals ("SDGs"), that have both social and environmental objectives. These are 17 goals that are globally recognised and include environmental goals such as climate action, clean water, life on land and water and social goals such as zero hunger, gender equality, education, etc. Robeco has developed a proprietary framework based on the UN SDGs through which an issuer's contribution to such SDGs is determined through a 3-step process. This process starts with a sector baseline on which a company's products are analysed to examine contribution to the society and environment. Further, the operational processes involved in creating such products is checked along with any controversies/litigation claims and remediation actions taken which are perused before a final SDG score is determined. The final score ranges between high negative (-3) to high positive (+3) and only those issuers which achieve positive SDG scores (+1,+2 and, +3) are regarded as Sustainable Investments.

● ***How do the sustainable investments that the financial product partially intends to make, not cause significant harm to any environmental or social sustainable investment objective?***

The sustainable investments do no significant harm to any environmental or social sustainable investment objective by considering a principal adverse impact and aligning with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights. In addition, sustainable investments score positively on Robeco's SDG Framework, and therefore do not cause significant harm.

How have the indicators for adverse impacts on sustainability factors been taken into account?

Mandatory principal adverse impact indicators are considered through Robeco's SDG Framework, either directly or indirectly, when identifying sustainable investments for the Sub-fund. In addition, voluntary environmental and social indicators are taken into account, depending on their relevance for measuring impacts on the SDGs and the availability of data. A detailed description of the incorporation of principal adverse impacts is available via Robeco's Principal Adverse Impact Statement published on the Robeco website (<https://www.robeco.com/files/docm/docu-principal-adverse-impact-statement-summary-entity-level.pdf>). In this statement, Robeco sets out its approach to identifying and prioritizing principal adverse impacts, and how principal adverse impacts are considered as part of Robeco's investment due diligence process and procedures relating to research and analysis, exclusions and restrictions and/or

voting and engagement. This description also explains how principal adverse impact indicators are considered by the SDG Framework.

How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The sustainable investments are aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights via both Robeco's Exclusion Policy and Robeco's SDG Framework.

Robeco's Exclusion Policy includes an explanation of how Robeco acts in accordance with the International Labor Organization (ILO) standards, United Nations Guiding Principles (UNGPs), United Nations Global Compact (UNGC) Principles and the Organization for Economic Co-operation and Development (OECD) Guidelines for Multinational Enterprises and is guided by these international treaties to assess the behavior of companies. Robeco continuously screens its investments for breaches of these principles. In case of a breach, the company will be excluded or engaged with, and is not considered a sustainable investment.

Robeco's SDG Framework screens for breaches on these principles in the final step of the framework. In this step, Robeco checks whether the company concerned has been involved in any controversies. Involvement in any controversy will result in a negative SDG score for the company, meaning it is not a sustainable investment.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

Does this financial product consider principal adverse impacts on sustainability factors?

Yes, _____

The Sub-fund considers principal adverse impacts on sustainability factors as referred to in Annex I of the SFDR Delegated Act.

Pre-investment, the following principal adverse impacts on sustainability factors are considered:

- Via the applied normative and activity-based exclusions, the following PAIs are considered:
 - Exposure to companies active in the fossil fuel sector (PAI 4, Table 1)
 - Violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1)
 - Activities negatively affecting biodiversity-sensitive areas (PAI 7, Table 1). The consideration of this PAI is currently restricted to applying exclusions to palm oil producing companies and for any breaches to the UNGC, UNGP and OECD Guidelines for Multinational Enterprises in relation to biodiversity.
 - Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons (PAI 14, Table 1)

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

- Via the ESG integration process, as part of the investment due diligence policies and procedures, the following PAIs are considered:
 - All indicators related to GHG emissions, as part of the required Climate Risk analysis (PAI 1-6, Table 1, PAI 4, Table 2)
 - Biodiversity, water and waste indicators (PAI 7-9, Table 1)
 - Board gender diversity (PAI 13, Table 1)

Post-investment, the following principal adverse impacts on sustainability factors are taken into account:

- Via the application of the voting policy, the following PAIs are considered:
 - All indicators related to GHG emissions (PAI 1-6, Table 1)
 - Indicators related to social and employee matters (PAI 10-13, Table 1; PAI 5-8, Table 3)
- Via Robeco's entity engagement program, the following PAIs are considered:
 - All indicators related to Climate and other environment-related indicators (PAI 1-9, Table 1)
 - Violations of the UN Global Compact Principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises (PAI 10, Table 1). On an ongoing basis, the investment universe is scanned for controversial behavior in relation to the aforementioned principles and guidelines.
 - In addition, based on a yearly review of Robeco's performance on all mandatory and selected voluntary indicators, holdings of the Sub-fund that cause adverse impact might be selected for engagement.

More information is available via Robeco's Principal Adverse Impact Statement, published on Robeco's website. The Sub-fund will periodically report how it has considered the principal adverse impacts of its investments in the Company's annual report, which will be made available each year on or before 30 April at the Sub-fund page highlighted in final section of this document.

No

The investment strategy guides investment decisions based on factors such as investment objectives and risk tolerance.

What investment strategy does this financial product follow?

Robeco Emerging Markets Asia Select Equities is an actively managed fund that invests in a concentrated selection of Asian emerging markets (ex China) stocks. Stock selection is based on fundamental analysis, as described in the Investment policy strategy paragraph in Appendix I of this Prospectus. The strategy integrates sustainability indicators on a continuous basis as part of the stock selection process. Amongst others, the Sub-fund applies norms-based and activity-based exclusions, Robeco's good governance policy, Robeco's SDG framework and considers Principal Adverse Impacts in the investment process. More product-specific information can be found on our website and the links provided in the final question of this disclosure.

What are the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this financial product?

The Sub-fund has the following binding elements:

1. The Sub-fund's portfolio complies with Robeco's Exclusion Policy (<https://www.robeco.com/docm/docu-exclusion-policy.pdf>), that is based on exclusion criteria with regards to products and business practices that Robeco believes are detrimental to society and incompatible with sustainable investment strategies. This means that the Sub-fund has 0% exposure to excluded securities, taking into account a grace period. Information with regards to the effects of the exclusions on the Sub-fund's universe can be found at <https://www.robeco.com/docm/docu-exclusion-list.pdf>.
2. The Sub-fund scrutinizes investment in companies that are in breach of the ILO standards, UNGPs, UNGC or OECD Guidelines for Multinational Enterprises. If a company in the portfolio breaches one of the international guidelines during the investment period, the company will become part of the Enhanced Engagement program.
3. All equity holdings have a granted right to vote and Robeco exerts that right by voting according to Robeco's Proxy Voting Policy, unless impediments occur (e.g. share blocking or when not

considered cost efficient). Robeco's Proxy Voting Policy can be found at <https://www.robeco.com/files/docm/docu-robeco-stewardship-policy.pdf>.

4. Investments with an elevated sustainability risk are defined by Robeco as companies with an ESG Risk Rating of 40 and higher. The Sub-fund is limited to a maximum exposure of 10% to investments with an elevated sustainability risk, based on the market weight in the portfolio taking into account regional differences and benchmark. Each investment with an ESG Risk rating of higher than 40 requires separate approval by a dedicated committee of SI specialists, compliance and risk management that oversees the bottom-up sustainability analysis.

● **What is the committed minimum rate to reduce the scope of the investments considered prior to the application of that investment strategy?**

The Sub-fund does not commit to a minimum rate to reduce the scope of investments prior to the application of the investment strategy.

● **What is the policy to assess good governance practices of the investee companies?**

Robeco has a Good Governance policy to assess governance practices of companies. The policy describes how Robeco determines if and when a company does not follow good governance practices and is therefore excluded from the initial investment universe for Article 8 and 9 products. Robeco's Good Governance policy applies to the Sub-fund and tests on a set of governance criteria that reflect widely recognized industry established norms and include topics as employee relations, management structure, tax compliance and remuneration.

The Good Governance test consists of criteria on such topics that are examined for investee companies and further explained in Robeco's Good Governance policy <https://www.robeco.com/files/docm/docu-robeco-good-governance-policy.pdf>. Additionally, the companies that do not pass the good governance test are reflected in the exclusion list that can be accessed here - <https://www.robeco.com/files/docm/docu-exclusion-list.pdf>.

● **What is the asset allocation planned for this financial product?**

At least 90% of the investments are aligned with the E/S characteristics of the Sub-fund. The Sub-fund plans to make a minimum of 35% sustainable investments, measured by positive scores via Robeco's SDG Framework. The investments in the category Other, estimated between 0-10%, are mostly in cash, cash equivalents and derivatives as further described below. The planned asset allocation is monitored continuously, and evaluated on a yearly basis.

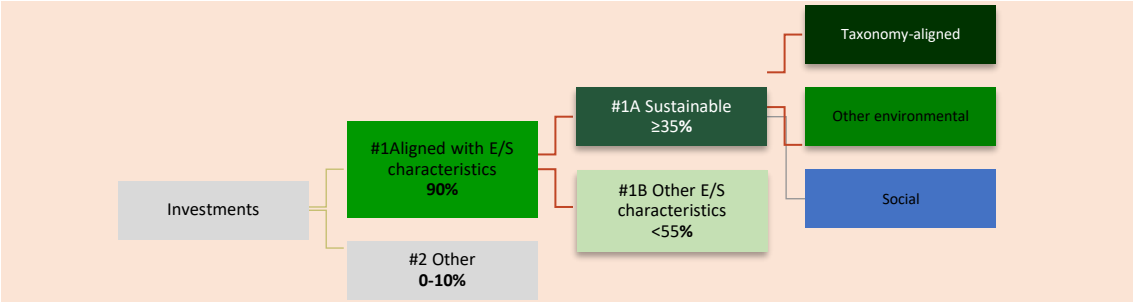

Good governance practices include sound management structures, employee relations, remuneration of staff and tax compliance.

Asset allocation describes the share of investments in specific assets.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers sustainable investments with environmental or social objectives.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

● **How does the use of derivatives attain the environmental or social characteristics promoted by the financial product?**

The Sub-fund does not make use of derivatives to attain the environmental or social characteristics promoted by the financial product. The Sub-fund may make use of derivatives for hedging, liquidity management and efficient portfolio management as well as investment purposes. Exchange traded and over-the-counter derivatives are permitted, including but not limited to futures, swaps, options and currency forwards. Whilst the Sub-fund may use derivatives both for investment purposes as well as for hedging and efficient portfolio management, it does not utilize derivatives for such purposes outside the intended share of investments allocated to the 'Other' category.

In case the Sub-fund uses derivatives, the underlying shall comply with the investment policy. Where relevant, minimum environmental or social safeguards are taken into account as described below.

To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

0%. The Sub-fund does not intend to make Taxonomy-aligned investments. It cannot be excluded that among the Sub-fund's holdings certain investments are Taxonomy aligned. The Sub-fund will report on Taxonomy-aligned investment in the periodic disclosures. In the future, once data-availability in relation to the EU Taxonomy will improve, Robeco might consider setting a target based on turnover or CAPEX. Robeco currently relies on third-party data, including data in relation to companies that do not disclose on the EU Taxonomy alignment of their activities. EU Taxonomy-alignment data is not yet subject to a review by third parties. The Sub-fund only makes investments in equity and therefore it does not have sovereign exposures. The expected level of alignment with and without sovereign bonds is the same.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to renewable power

● **Does the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy?¹**

- Yes
 - In fossil gas
 - In nuclear energy
- No

¹ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

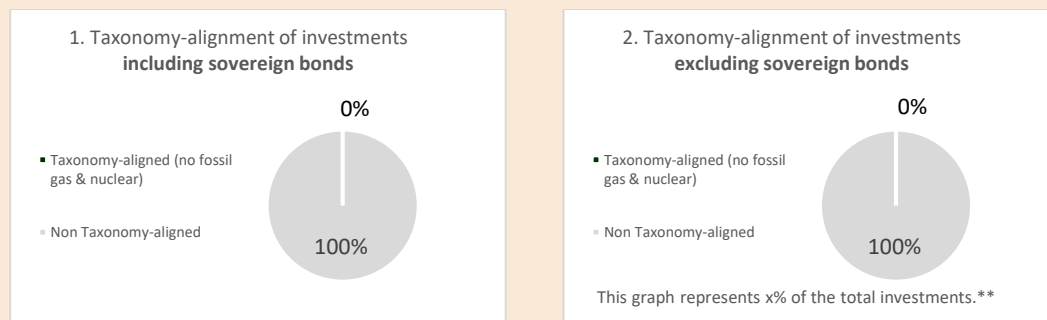

or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.*

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

** As the investments are not Taxonomy-aligned, the exclusion of sovereign bonds has no impact on the graph and therefore no such percentage is shown here.

● **What is the minimum share of investments in transitional and enabling activities?**

0%.

What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?

The Sub-fund intends to make sustainable investments, measured as positive scores via Robeco's SDG Framework. Among those could be investments with environmental objectives that do not qualify as Taxonomy-aligned. The environmental objectives of the Sub-fund are attained by investing in companies that score positively on SDG 12 (Responsible consumption and production), SDG 13 (Climate action), SDG 14 (Life below water), and SDG 15 (Life on land) in Robeco's SDG Framework. While the sum of sustainable investments with an environmental objective and socially sustainable investments always adds up to the Sub-fund's minimum proportion of 35% sustainable investments, we do not commit to a minimum share of sustainable investments with an environmental objective because the Sub-fund's investment strategy does not have a specific environmental investment objective. Therefore, the minimum share of sustainable investments with an environmental objective is 0%.

What is the minimum share of socially sustainable investments?

The Sub-fund intends to make sustainable investments, measured as positive scores via Robeco's SDG Framework. Among those could be investments with social objectives. The social objectives of the Sub-fund are attained by investing in companies that score positively on SDG 1 (No poverty), SDG 2 (Zero hunger), SDG 3 (Good health and well-being), SDG 4 (Quality education), SDG 5 (Gender equality), SDG 6 (Clear water and sanitation), SDG 7 (Affordable and clean energy), SDG 8 (Decent work and economic growth), SDG 9 (Industry, innovation and infrastructure), SDG 10 (Reduced inequalities), SDG 11 (Sustainable cities and communities), SDG 16 (Peace, justice and strong institutions) and SDG 17 (Partnerships for the goals), in Robeco's SDG Framework. While the sum of socially sustainable investments and sustainable investments with an environmental objective always adds up to the Sub-fund's minimum proportion of sustainable investments, we do not commit to a minimum share of socially sustainable investments because the Sub-fund's investment strategy does not have a specific socially sustainable investment objective. Therefore, the minimum share of socially sustainable investments is 0%.

What investments are included under "#2 Other", what is their purpose and are there any minimum environmental or social safeguards?

The type of instruments included under "#2 Other" and their purpose are outlined in Annex I of this Prospectus under the header 'Financial instruments and investment restrictions'. They include cash, cash equivalents, as well as investment funds and eligible asset classes (other than bonds and equities) that do not specifically promote E/S characteristics. As indicated above, the Sub-fund does not make use of derivatives to attain the environmental or social characteristics promoted. The Sub-fund may make use of derivatives, which thus always fall under the category "#2 Other", for hedging, liquidity management and efficient portfolio management as well as investment purposes. Exchange traded and over-the-counter derivatives are permitted, including but not limited to futures, swaps, options and currency forwards. In case the Sub-fund uses derivatives, the underlying shall comply with the investment policy. Where relevant, minimum environmental or social safeguards are taken into account, by, for example, applying Robeco's Exclusion Policy for any single security derivative.

Is a specific index designated as a reference benchmark to determine whether this financial product is aligned with the environmental and/or social characteristics that it promotes?

Not applicable.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.
