

THIS PRODUCT LEVEL DOCUMENT HAS BEEN REPRODUCED FROM THE SCHRODER INTERNATIONAL SELECTION FUND PROSPECTUS. THIS DOCUMENT IS ONLY VALID IN CONJUNCTION WITH THE PROSPECTUS.

Pre-contractual disclosure for the financial products referred to in Article 9, paragraphs 1 to 4a, of Regulation (EU) 2019/2088 and Article 5, first paragraph, of Regulation (EU) 2020/852

Product name: Schroder International Selection Fund Global Energy Transition

Legal entity identifier: 549300IS8ME9YA6EM043

Sustainable investment objective

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good Governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. For the time being, it does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Does this financial product have a sustainable investment objective?	
●● <input checked="" type="checkbox"/> Yes	●○ <input type="checkbox"/> No
<input checked="" type="checkbox"/> It will make a minimum of sustainable investments with an environmental objective: 75.00% <ul style="list-style-type: none"> <input type="checkbox"/> in economic activities that qualify as environmentally sustainable under the EU Taxonomy <input checked="" type="checkbox"/> in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy 	<input type="checkbox"/> It promotes Environmental/Social (E/S) characteristics and while it does not have as its objective a sustainable investment, it will have a minimum proportion of __% of sustainable investments <ul style="list-style-type: none"> <input type="checkbox"/> with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy <input type="checkbox"/> with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy <input type="checkbox"/> with a social objective
<input type="checkbox"/> It will make a minimum of sustainable investments with a social objective __%	<input type="checkbox"/> It promotes E/S characteristics, but will not make any sustainable investments

The Fund commits to invest at least 90% of its assets in sustainable investments. Within this overall commitment, there is a minimum commitment to invest at least 75% of its assets in sustainable investments with an environmental objective.

What is the sustainable investment objective of this financial product?

The Fund's sustainable investment objective is to invest its assets in sustainable investments which are investments in companies worldwide that (i) generate at least 50% of their revenue from activities that contribute towards the global transition towards lower-carbon and more sustainable sources of energy, such as lower-carbon energy production, distribution, storage, transport and associated supply chain, material provider and technology companies or (ii) generate a lower percentage of their revenue from these activities where the Investment Manager considers they are playing critical roles in the energy transition based on the company's capital expenditure, operating expenditure or market share. At least 75% of the Fund's assets will be invested in companies of the type described in (i). The Fund may also invest in investments that the Investment Manager deems to be neutral under its sustainability criteria, such as cash and Money Market Investments and derivatives used with the aim of reducing risk (hedging) or managing the Fund more efficiently.

No reference benchmark has been designated for the purpose of attaining the sustainable investment objective.

At the date of this Prospectus, it is not yet possible to commit to the Fund maintaining a minimum alignment with the Taxonomy, as the Investment Manager is currently not in a position to accurately determine to what extent the Fund's investments are in taxonomy-aligned environmentally sustainable activities. Taxonomy alignment of this Fund's investments has therefore not been calculated and has as a result been deemed to constitute 0% of the Fund's portfolio. However, it is expected that the Fund invests in companies and economic activities that contribute to the environmental objectives of climate change mitigation and climate change adaptation within the meaning of the Taxonomy.

In future it is therefore expected that the Fund will assess and report on the extent to which its underlying investments are in economic activities that qualify as environmentally sustainable under the Taxonomy, along with information relating to the proportion of enabling and transitional activities. This Prospectus will be updated once it is possible in the Investment Manager's opinion to accurately disclose to what extent the Fund's investments are in Taxonomy-aligned environmentally sustainable activities, including the proportions of investments in enabling and transitional activities selected for the Fund.

Sustainability indicators measure how the sustainable objectives of this financial product are attained.

● ***What sustainability indicators are used to measure the attainment of the sustainable investment objective of this financial product?***

The Investment Manager is responsible for determining whether an investment meets the criteria of a sustainable investment. The Investment Manager's approach in this assessment considers whether a certain percentage of the relevant issuer's revenues, capital expenditure, operating expenditure or market share contributes to an environmental or social objective (as applicable). The output of the Investment Strategy outlined below is the production of the list of investments that meet the selection criteria, this represents the investment universe. Compliance with the minimum percentage in sustainable investments is monitored daily via our automated compliance controls. The Fund also applies certain exclusions, with which the Investment Manager monitors compliance on an ongoing basis via its portfolio compliance framework.

The Investment Manager uses different sustainability indicators to measure the impact contribution at an investee company level. In particular, the Investment Manager use a quantitative screening tool to identify companies that derive a certain percentage of their revenues, capital expenditure, operating expenditure or market share from their main activity that is associated with specific energy transition activities: including (1) renewable energy equipment; (2) renewable energy generation; (3) transmission and distribution; (4) batteries, storage and other equipment; (5) hydrogen; (6) electrical equipment and energy; and (7) clean mobility.

Subsequently, the Investment Manager uses a number of indicators to derive a sustainability score out of ten for each company. Based on this score, each company is placed within one of the following categories: (1) Best-in-class, (2) Neutral and (3) Laggard. The indicators used to determine the score include but are not limited to metrics such as carbon intensity, board gender diversity and management remuneration. The information is drawn from company management meetings, publicly available corporate information as well as the Investment Manager's internal proprietary tools.

● ***How do sustainable investments not cause significant harm to any environmental or social sustainable investment objective?***

The Investment Manager's approach to investing in issuers that do not cause significant harm to any environmental or social sustainable investment objective includes the following:

- Firm-wide investment exclusions apply to Schroders funds. These relate to international conventions on cluster munitions, anti-personnel mines, and chemical and biological weapons and a list of those companies that are excluded is available at <https://www.schroders.com/en/sustainability/active-ownership/group-exclusions/>. Firm-wide exclusions also apply to companies generating more than 20% of their revenue from thermal coal mining.
- The Fund excludes companies that derive revenues above certain thresholds from activities related to tobacco and thermal coal.
- The Fund excludes companies that are assessed by Schroders to have breached one or more 'global norms' thereby causing significant environmental or social harm; these companies comprise Schroders' 'global norms' breach list. Schroders' determination of whether a company has been involved in such a breach considers relevant principles such as those contained in the UN Global Compact (UNGC) principles, the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights. The 'global norms' breach list may be informed by assessments performed by third party providers and by proprietary research, where relevant to a particular situation.
- The Fund may also apply certain other exclusions in addition to those summarised above.

Further information on all of the Fund's investment exclusions is to be found under "Sustainability -Related Disclosure" on the Fund's webpage <https://www.schroders.com/en-lu/lu/individual/fund-centre> .

● ***How have the indicators for adverse impacts on sustainability factors been taken into account?***

When seeking to identify significant harm, Schroders' approach to taking into account the Principal Adverse Impacts (PAI) indicators involves a quantitative and a qualitative assessment. Where it is not considered appropriate or feasible to set quantitative thresholds, the Investment Manager engages, where relevant. Investee companies deemed not to satisfy the quantitative thresholds would generally be excluded, unless on a case-by-case basis the data is deemed not representative of a company's performance in the relevant area.

This framework is subject to ongoing review, particularly as the availability and quality of the data evolves.

Our approach includes:

1. **Quantitative:** this includes indicators where specific thresholds have been established:

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anticorruption and antibribery matters.

- Via the application of exclusions. This approach is relevant to **PAI 4** (Exposure to companies active in the fossil fuel sector), **PAI 5** (Share of non-renewable energy consumption and production) and **PAI 14** (Exposure to controversial weapons). Further, the following PAIs are assessed as part of Schroders' 'global norms' breach list exclusion (which seeks to exclude companies where significant harm is occurring):
 - **PAI 7** (Activities negatively affecting biodiversity-sensitive areas)
 - **PAI 8** (Emissions to water)
 - **PAI 9** (Hazardous waste and radioactive waste ratio)
 - **PAI 10** (Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development Guidelines for Multinational Enterprises)
 - **PAI 11** (Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises and Voluntary)
 - **PAI 14** in Table 3 (Number of identified cases of severe human rights issues and incidents)
- Via the application of an alert system flag if the relevant indicator(s) exceeds a threshold. These quantitative thresholds to assess significant harm are established centrally by our Sustainable Investment team and monitored systematically. This approach applies to indicators where we have segmented the population into harm groups to establish a threshold, such as carbon related PAI metrics, **PAI 1** (GHG emissions), **PAI 2** (Carbon footprint) and **Voluntary PAI 4 in Table 2** (Investing in companies without carbon emission reduction initiatives). **PAI 3** (GHG intensity of investee companies) operates in a similar way but the threshold is based on a revenue metric. A threshold for **PAI 6** (Energy consumption intensity per high impact climate sector) is established based on the above-mentioned carbon measures. A similar approach has been taken for **PAI 15** (GHG intensity). **PAI 16** (Investee countries subject to social violations) also operates in the same way but based on data availability regarding social violations. Through this process the relevant issuer(s) that is/are deemed not to satisfy the quantitative thresholds is/are flagged to the Investment Manager for consideration, whose response may involve selling the holdings(s) or maintaining the position if on a case-by-case basis the data is deemed not representative of a company's performance in the relevant area. Investee companies deemed to cause significant harm are excluded from the Fund.
- 2. **Qualitative:** This includes PAI indicators where Schroders' believes that the data available does not enable us to make a quantitative determination regarding whether significant harm is done so as to warrant excluding an investment. In such cases, the Investment Manager engages wherever possible with the company or companies held, in accordance with the priorities documented in Schroders' Engagement Blueprint and/or voting policy. This approach applies to indicators such as **PAI 12** (Unadjusted gender pay gap) and **PAI 13** (Board gender diversity), where we engage and may use our voting rights where we consider appropriate. Both board gender diversity and disclosure of gender pay gap information are captured in our Engagement Blueprint.

● ***How are the sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights?***

Companies on Schroders' 'global norms' breach list cannot be categorised as sustainable investments. Schroders' determination of whether a company should be included on such list considers the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights, among other relevant principles. The 'global norms' breach list is informed by third party providers and proprietary research, where relevant.

Does this financial product consider principal adverse impacts on sustainability factors?

Yes.

The Investment Manager's approach to considering principal adverse impacts on sustainability factors differs depending on the relevant indicator. Some indicators are considered via the application of exclusions, some are considered via the investment process (where data is available via Schroders PAI dashboard and via other external data sources) and some are considered via engagement. Further details are provided below.

PAIs are considered as part of pre-investment through the application of exclusions. These include:

- Controversial weapons: PAI 14 (Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons))
- Schroders' 'global norms' breach list, which covers: PAI 7 (Activities negatively affecting biodiversity-sensitive areas), PAI 8 (Emissions to water), PAI 9 (Hazardous waste and radioactive waste ratio), PAI 10 (Violations of UN Global Compact principles and OECD Guidelines for Multinational Enterprises), PAI 11 (Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises) and PAI 16 (Investee countries subject to social violations)
- Companies that derive revenues above certain thresholds from activities related to thermal coal: PAI 4

(Exposure to companies active in the fossil fuel sector) and PAI 5 (Share of non-renewable energy consumption and production)

The Fund's exclusions regarding:

Fossil fuels: PAI 4 (Exposure to companies active in the fossil fuel sector) and PAI 5 (Share of non-renewable energy consumption and production). The Fund will not invest in any company directly involved in fossil fuels. Compliance with these thresholds is monitored via the Investment Manager's portfolio compliance framework. PAIs are also considered through integration in the investment process.

The Fund considers climate change criteria in its analysis as part of the 'environmental management' component of the stakeholder analysis. This covers greenhouse gas emissions, avoided emissions, carbon footprint and greenhouse gas intensity of investment companies: PAIs 1,2 & 3.

As part of our analysis, we consider how a firm is managing its environmental footprint (including its impact on the climate), as well as its potential exposure to the effects of long-term climate change. While no single climate change metric determines the overall assessment of a company's environmental management score, the Fund evaluates a variety of different metrics – from both internal and external data sources (including the internal a Schroders' proprietary tool) – to determine whether a company is adequately managing its climate and environmental risks.

PAIs 12 (Unadjusted gender pay gap) and 13 (Board gender diversity) are considered as part of our investment process using data from a Schroders' proprietary tool.

All PAI indicators are monitored via Schroders' PAI dashboard.

PAIs are also considered post-investment through engagement where the Investment Manager engages in line with the approach and expectations set out in Schroders Engagement Blueprint, which outlines our approach to active ownership.

The investment team aims to engage with several issuers on net zero carbon emissions targets (PAI 1,2).

Through our engagement activity we seek to understand different areas, such as the speed and scale of emission reduction targets and steps being taken to meet climate goals. We are encouraging companies to set clear emissions reduction targets for all three scopes of emissions and where targets are already set, to confirm these targets are properly integrated into company remuneration policies.

Where issuers are flagged on lack of data availability for any PAIs, the Investment Manager may engage with issuers where the primary focus is to increase reporting.

Our approach is subject to ongoing review, particularly as the availability, and quality, of PAI data evolves. The Management Company's statement on principal adverse impacts on sustainability factors is available at <https://api.schroders.com/document-store/id/ffcb39bb-96cb-4e56-9461-deba9a493e85>. The Fund level information is disclosed or will be disclosed (as applicable) in the Fund's annual report.

No

What investment strategy does this financial product follow?

The investment strategy guides investment decisions based on factors such as investment objectives and risk tolerance.

The sustainable investment strategy used by the Investment Manager is as follows:

The Fund is actively managed and invests its assets in (i) sustainable investments, which are investments in companies that (a) generate at least 50% of their revenue from activities that contribute towards the global transition towards lower-carbon sources of energy, such as lower carbon energy production, distribution, storage, transport and associated supply chain, material provider and technology companies or (b) generate a lower percentage of their revenue from these activities where the Investment Manager considers they are playing critical roles in the transition based on the company's capital expenditure, operating expenditure or market share, and (ii) investments that the Investment Manager deems to be neutral under its sustainability criteria such as cash and Money Market Investments and derivatives used with the aim of reducing risk (hedging) or managing the Fund more efficiently.

The Fund does not directly invest in certain activities, industries or groups of issuers above the limits listed under "Sustainability-Related Disclosure" on the Fund's webpage, accessed via <https://www.schroders.com/en-lu/lu/individual/fund-centre> which includes companies that generate any revenue from fossil fuel and nuclear power.

The Fund invests in companies that do not cause significant environmental or social harm and have good governance practices, as determined by the Investment Manager's rating criteria.

The Investment Manager may also engage with companies held by the Fund to challenge identified areas of weakness on sustainability issues. More details on the Investment Manager's approach to sustainability and its engagement with companies are available on the webpage <https://www.schroders.com/en-lu/lu/individual/what-we-do/sustainable-investing/our-sustainable-investment-policies-disclosures-voting-reports/disclosures-and-statements/>

The Fund invests at least two-thirds of its assets in a concentrated range of equity and equity related securities of companies worldwide. The Fund typically holds fewer than 60 companies.

The Fund may also invest up to one-third of its assets directly or indirectly in other securities (including other asset classes), countries, regions, industries or currencies, Investment Funds, warrants and Money Market Investments, and hold cash.

The Fund may use derivatives with the aim of reducing risk or managing the Fund more efficiently.

The Investment Manager applies sustainability criteria when selecting investments for the Fund.

Companies are assessed against eight ESG criteria: (1) management quality; (2) balance sheet sustainability; (3) corporate governance; (4) regulatory risk management; (5) supply chain management; (6) customer management; (7) employee management; and (8) environmental management. The company will receive an overall score out of ten and is placed within one of the following categories based on this score:

- 'Lagging' (score of 1 – 3): Companies that show poor corporate governance, unconvincing management, weak balance sheets, poor stakeholder relations, and fail to demonstrate an awareness of ESG issues they face;
- 'Neutral' (score of 4 – 6): Companies that show adequate corporate governance, suitable management, reasonably robust balance sheets, have reasonable relationships with stakeholders and some awareness of ESG issues. These companies do not exhibit ESG risks necessarily, but at the same time are not best in class companies with the potential to maintain market leading growth;
- 'Best-in-class' (score of 7 – 10): Companies that have strong corporate governance, quality management, strong balance sheets, good relationships with stakeholders and a good awareness and management of ESG issues. These companies should be able to attract the best employees, to continue to lead the industry in terms of productivity, have strong supply chain links, acting as the 'supplier of choice' for customers, and are mindful of their environmental impact.

The Fund will generally only invest in companies that are rated as 'neutral' or 'best-in-class'.

The Investment Manager performs its own analysis of information provided by the companies, including information provided in company sustainability reports and other relevant company material. Third party research is used by the team as a secondary consideration, and generally provides a source of challenge or endorsement for their own view.

The Investment Manager ensures that at least 90% of the portion of the Fund's Net Asset Value composed of investments in companies is rated against the sustainability criteria.

● **What are the binding elements of the investment strategy used to select the investments to attain the sustainable investment objective?**

The following binding elements are applied throughout the investment process:

- The Fund invests at least 90% of its assets in sustainable investments, which are investments in companies that (i) generate at least 50% of their revenue from activities that contribute towards the global transition towards lower-carbon and more sustainable sources of energy, such as lower carbon energy production, distribution, storage, transport and associated supply chain, material provider and technology companies or (ii) generate a lower percentage of their revenue from these activities where the Investment Manager considers they are playing critical roles in the energy transition based on the company's capital expenditure, operating expenditure or market share. At least 75% of the Fund's assets will be invested in companies of the type described in (i).
- Exclusions are applied to direct investments in companies. The Fund applies certain exclusions relating to international conventions on cluster munitions, anti-personnel mines, and chemical and biological weapons. The Fund also excludes companies that derive revenues above certain thresholds from activities related to tobacco and thermal coal, especially companies that generate revenues from tobacco production or any other part of the tobacco value chain (suppliers, distributors, retailers, licensors), and companies that generate revenues from thermal coal mining and coal fired power generation. The Fund excludes companies that are assessed by Schroders to have breached one or more 'global norms' thereby causing significant environmental or social harm; these companies comprise Schroders' 'global norms' breach list. Details of the revenue thresholds together with certain other exclusions the Fund applies are listed under "Sustainability-Related Disclosure" on the Fund's webpage <https://www.schroders.com/en-lu/lu/individual/fund-centre>
- The Fund invests in companies that do not cause significant environmental or social harm and have good governance practices, as determined by the Investment Manager's rating criteria.
- The Investment Manager ensures that at least 90% of the portion of the Fund's Net Asset Value composed of investments in companies is rated against the sustainability criteria.

● **What is the policy to assess good governance practices of the investee companies?**

In order to assess good governance practices, a central Good Governance Test is applied. This test is based on a data-driven quantitative framework, which uses a scorecard to assess companies across the categories of sound management structures, employee relations, remuneration of staff, and tax compliance. Schroders has defined a number of criteria across these pillars.

Compliance with the test is monitored centrally and companies which do not pass this test cannot be held by the Fund, unless the Investment Manager has agreed that the issuer demonstrates good governance based on additional insights beyond that quantitative analysis.

Good governance practices include sound management structures, employee relations, remuneration of staff and tax compliance.

What is the asset allocation and the minimum share of sustainable investments?

Asset allocation describes the share of investments in specific assets.

The planned composition of the Fund's investments that are used to meet its sustainable investment objective are summarised below. The Fund invests at least 90% of its assets in sustainable investments, which means included in **#1 Sustainable** are investments in companies worldwide that (i) generate at least 50% of their revenue from activities that contribute towards the global transition towards lower-carbon sources of energy, such as lower-carbon energy production, distribution, storage, transport and associated supply chain, material provider and technology companies or (ii) generate a lower percentage of their revenue from these activities where the Investment Manager considers they are playing critical roles in the energy transition based on the company's capital expenditure, operating expenditure or market share. The minimum proportion stated applies in normal market conditions.

#2 Not sustainable includes investments that are treated as neutral for sustainability purposes, such as cash and Money Market Investments and derivatives used with the aim of reducing risk (hedging) or managing the Fund more efficiently.

Minimum safeguards are applied where relevant to Money Market Investments and derivatives used with the aim of reducing risk (hedging) by restricting (as appropriate) investments in counterparties where there are ownership links or exposure to higher risk countries (for the purpose of money laundering, terrorist financing, bribery, corruption, tax evasion and sanctions risks). A firm-wide risk assessment considers the risk rating of each jurisdiction; which includes reference to a number of public statements, indices and world governance indicators issued by the UN, the European Union, the UK Government, the Financial Action Task Force and several Non-Government Organisations (NGOs), such as Transparency International and the Basel Committee.

In addition, new counterparties are reviewed by Schroders' credit risk team and approval of a new counterparty is based on a holistic review of the various sources of information available, including, but not limited to, quality of management, ownership structure, location, regulatory and social environment to which each counterparty is subject, and the degree of development of the local banking system and its regulatory framework. Ongoing monitoring is performed through a Schroders' proprietary tool, which supports the analysis of a counterparty's management of environmental, social and governance trends and challenges. Any significant deterioration in the profile of the counterparty in Schroders' proprietary tool would lead to further analysis and potential exclusion by Schroders' credit risk team.

● **How does the use of derivatives attain the sustainable investment objective?**

This question is not applicable for the Fund.

To what minimum extent are sustainable investments with an environmental objective aligned with the EU Taxonomy?

There is no minimum extent to which the Fund's sustainable investments with an environmental objective are aligned with the Taxonomy. Consequently, taxonomy alignment of this Fund's investments has not been calculated and has as a result been deemed to constitute 0% of the Fund's portfolio.

At the date of this prospectus, it is not yet possible to commit to the Fund maintaining a minimum alignment with the Taxonomy, as the Investment Manager is currently not in a position to accurately determine to what extent the Fund's investments are in taxonomy-aligned environmentally

sustainable activities. However it is expected that the Fund invests in companies and economic activities that contribute to the environmental objectives of climate change mitigation and climate change adaptation within the meaning of the Taxonomy.

In future it is expected that the Fund will assess and report on the extent to which its underlying investments are in economic activities that qualify as environmentally sustainable under the Taxonomy, along with information relating to the proportion of enabling and transitional activities. This Prospectus will be updated once it is possible in the Investment Manager’s opinion to accurately disclose to what extent the Fund’s investments are in Taxonomy-aligned environmentally sustainable activities, including the proportions of investments in enabling and transitional activities selected for the Fund.

● **Does the financial product invest in fossil gas and/or nuclear energy related activities that comply with the EU Taxonomy¹?**

- Yes:
 In fossil gas In nuclear energy
 No

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Taxonomy-aligned activities are expressed as a share of:
 - **turnover** reflecting the share of revenue from green activities of investee companies
 - **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
 - **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

The two graphs below show in green the minimum percentage of investments that are aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy-alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy-alignment only in relation to the investments of the financial product other than sovereign bonds.

● **What is the minimum share of investments in transitional and enabling activities?**

As per the above, at the date of this Prospectus the share of investments by the Fund in transitional and enabling activities is currently deemed to constitute 0% of the Fund’s portfolio.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas

¹ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change (“climate change mitigation”) and do not significantly harm any EU Taxonomy objective – see explanatory note in the left-hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

² As there is no Taxonomy-alignment, there is no impact on the graph if sovereign bonds are excluded (i.e. the percentage of Taxonomy-aligned investments remains 0%) and the Management Company therefore believes that there is no need to mention this information.

emission levels corresponding to the best performance.

What is the minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy?

The minimum share of sustainable investments with an environmental objective that are not aligned with the EU Taxonomy is 75%. As stated above this Prospectus will be updated once it is possible in the Investment Manager's opinion to accurately disclose to what extent the Fund's sustainable investments with an environmental objective are aligned with the EU Taxonomy.

are environmentally sustainable investments that **do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

What is the minimum share of sustainable investments with a social objective?

This question is not applicable for the Fund.

What investments are included under “#2 Not sustainable”, what is their purpose and are there any minimum environmental or social safeguards?

#2 Not Sustainable includes investments that are treated as neutral for sustainability purposes, such as cash and Money Market Investments and derivatives used with the aim of reducing risk (hedging) or managing the Fund more efficiently.

Minimum safeguards are applied where relevant to Money Market Investments and derivatives used with the aim of reducing risk (hedging) by restricting (as appropriate) investments in counterparties where there are ownership links or exposure to higher risk countries (for the purpose of money laundering, terrorist financing, bribery, corruption, tax evasion and sanctions risks). A firm-wide risk assessment considers the risk rating of each jurisdiction; which includes reference to a number of public statements, indices and world governance indicators issued by the UN, the European Union, the UK Government, the Financial Action Task Force and several Non-Government Organisations (NGOs), such as Transparency International and the Basel Committee.

In addition, new counterparties are reviewed by Schroders' credit risk team and approval of a new counterparty is based on a holistic review of the various sources of information available, including, but not limited to, quality of management, ownership structure, location, regulatory and social environment to which each counterparty is subject, and the degree of development of the local banking system and its regulatory framework. Ongoing monitoring is performed through a Schroders' proprietary tool, which supports the analysis of a counterparty's management of environmental, social and governance trends and challenges. Any significant deterioration in the profile of the counterparty in Schroders' proprietary tool would lead to further analysis and potential exclusion by Schroders' credit risk team.

Is a specific index designated as a reference benchmark to meet the sustainable investment objective?

Reference benchmarks are indexes to measure whether the financial product attains the sustainable investment objective.

- **How does the reference benchmark take into account sustainability factors in a way that is continuously aligned with the sustainable investment objective?**

This question is not applicable for the Fund.

- ***How is the alignment of the investment strategy with the methodology of the index ensured on a continuous basis?***
This question is not applicable for the Fund.
- ***How does the designated index differ from a relevant broad market index?***
This question is not applicable for the Fund.
- ***Where can the methodology used for the calculation of the designated index be found?***
This question is not applicable for the Fund.

Where can I find more product specific information online?

More product-specific information can be found on the webpage: <https://www.schroders.com/en-lu/lu/individual/fund-centre>
